Email Routing Rules

Emails are routed using keywords or phrases in the subject line. Create Routing Rules that map subject lines to Email Queues. Rules are executed in the order they appear below, starting with rule 1. Drag the email routing rules to change their order.

+ Add Routing Rule

Order	Rule Name	IF Email Subject Contains	THEN Queue To	Action
There are no Email Routing rules. The default Rule will be used for now.				

Default Routing Rule

A Default Routing Rule is required to handle email's that don't satisfy any Rule

Default Routing Rule will Queue To: Email_TAC_Test_Queue

Save Cancel

 Exchange Online Custom Domains DNS Connectivity Test This test will check the external domain name settings for your verified domain in Office 365. The test will look for issues with mail delivery such as not receiving incoming email from the Internet and Outlook client connectivity issues that involve connecting to Outlook and Exchange Online.	 Exchange Online Outbound Connector EDNS Connectivity Test This will use Extension mechanisms for DNS (EDNS) to resolve the smart host FQDN you intend to use in an outbound connector. The test will look for potential issues with mail delivery to this smart host domain once EDNS is enabled in Exchange Online.	 Skype for Business Online DNS Connectivity Test This test will check the external domain name settings for your custom domain user in Office 365.
 Office 365 Single Sign-on Test This test will validate your ability to log on to Office 365 with your on-premises credentials. It also validates some basic Active Directory Federated Services (ADFS) configuration.	 Exchange ActiveSync This test simulates the steps a mobile device uses to connect to an Exchange server using Exchange ActiveSync.	 Synchronization, Notification, Availability, and Automatic Replies These tests walk through many basic Exchange Web Services tasks to confirm they're working. This is useful for IT administrators who want to troubleshoot external access using Entourage EWS or other Web Services clients.
 Service Account Access (Developers) This test verifies a service account's ability to access a specified mailbox, create and delete items in it, and access it via Exchange Impersonation. This test is primarily used by application developers to test the ability to access mailboxes with alternate credentials.	 Outlook Connectivity This test walks through the steps Outlook uses to connect from the internet. It tests connectivity using both the RPC over HTTP and the MAPI over HTTP protocols.	 Inbound SMTP Email This test walks through the steps an Internet email server uses to send inbound SMTP email to your domain.
 Outbound SMTP Email This test checks your outbound IP address for certain requirements. This includes Reverse DNS, Sender ID, and RBL checks.	 POP Email This test walks through the steps an email client uses to connect to a mailbox using POP3.	 IMAP Email This test walks through the steps an email client uses to connect to a mailbox using IMAP4.
 Free/Busy This test verifies that an Office 365 mailbox can access the free/busy information of an on-premises mailbox, and vice versa (one direction per test run). For advanced deployment scenarios, have you viewed the guidance for the Hybrid Configuration Wizard?	 Outlook Mobile Hybrid Modern Authentication Test This test allows you to check if your on-premises Exchange environment is configured correctly to use Hybrid Modern Authentication (HMA) with Outlook for iOS and Android.	 Mailbox Provisioning Test This test verifies for a given email address if a user mailbox, recipient or user object exists and if the object is provisioned in Azure AD and Exchange Online.

IMAP Email

* indicates a required field.

IMAP server host name: *

Connection security: *

Service port number: *

Authentication type: *

Modern Authentication (OAuth) credentials *

 Sign in

Alternate mailbox (optional)

Ignore Trust for SSL

Verification

 New  Audio

Enter the characters you see *

Note: The verification code is not case-sensitive.

IMAP Server

Enter the host name of your IMAP4 server. In many cases, this will be something like mail.contoso.com or imap.contoso.com.
