CSPC Flow Chart

Introduction

Note: RADKit is now supported on the CSPC VM

Cisco RADKit is a network-wide orchestrator. Experience a radical new way of addressing your equipment, boost your Cisco Services, and expand your capabilities. It is now supported to run on the same VM as your CSPC collector. For more information visit: <https://radkit.cisco.com>

Introduction to CSPC Collection Platform Software

The Cisco Common Service Platform Collector (CSPC) is an SNMP-based tool that discovers and collects information from the Cisco devices installed on your network. The CSPC software provides an extensive collection mechanism to gather various aspects of customer device data. Information gathered by the collector is used by several Cisco Service offers, such as Smart Net Total Care, Partner Support Service, and Business Critical Services. The data is used to provide inventory reports, product alerts, configuration best practices, technical service coverage, lifecycle information, and many other detailed reports and analytics for both the hardware and operating system (OS) software.

This User Guide explains how to use CSPC software version 2.11. Refer to **CSPC Release Notes** for program updates, important notes, image location and other information.

CSPC 2.10 and earlier releases are no longer supported. If you experience problems with an earlier release you are recommended to update the collector software version to latest available.

Who Should Use This Guide?

This guide is written for Network and Security Administrators and Cisco Network Engineers who want to collect information on heterogeneous networks comprised of network devices such as routers, switches, firewalls, wireless devices, intrusion prevention systems, and so forth.

You should be familiar with network fundamentals, connectivity, network device configuration and administrative tasks you want to perform over your network.

About this Guide

The *CSPC User Guide* covers all available functionality in CSPC user interface.

CSPC EOL Versions

ALL CSPC < 2.11 have reached EDoS. Upgrade your collectors!

For continued effective delivery of services, customers are required to be on the supported versions of the collectors. You are running into issues; you may be required to update the collector software version before TAC helps in diagnosing the problem.

Figure 2-1 *CSPC EOL Info*

EOL Date	EOL Version	EoSWM Date	LDoS Date
Dec, 2012	CSPC 2.0.3	Jan, 2013	Apr, 2013
July, 2013	CSPC 2.1	Aug, 2013	Nov, 2013
April, 2014	CSPC 2.2	May, 2014	Aug, 2014
June, 2015	CSPC 2.3	July, 2015	Oct, 2015
March 3, 2016	CSPC 2.4	April 3, 2016	July 3, 2016
March 20, 2017	CSPC 2.5	April 20, 2017	July 20, 2017
May 9, 2018	CSPC 2.6	June 9, 2018	Oct 10, 2018
September 25, 2020	CSPC 2.7	October 25,2020	January 25, 2021
September 30, 2021	CSPC 2.8	Oct 30, 2021	January 30, 2022
March 31, 2023	CSPC 2.9	March 31, 2023	March 31, 2023
June 30, 2024	CSPC 2.10	July 30, 2024	Oct 30, 2024

Accessing the CSPC Collector

CSPC 2.11 is a web based application and can be accessed by using a URL.

**Note**

Supported browsers are Microsoft Internet Explorer 11, Chrome 85, and Mozilla Firefox 80. It is recommended to use Mozilla Firefox.

Follow the steps given below to access the CSPC application:

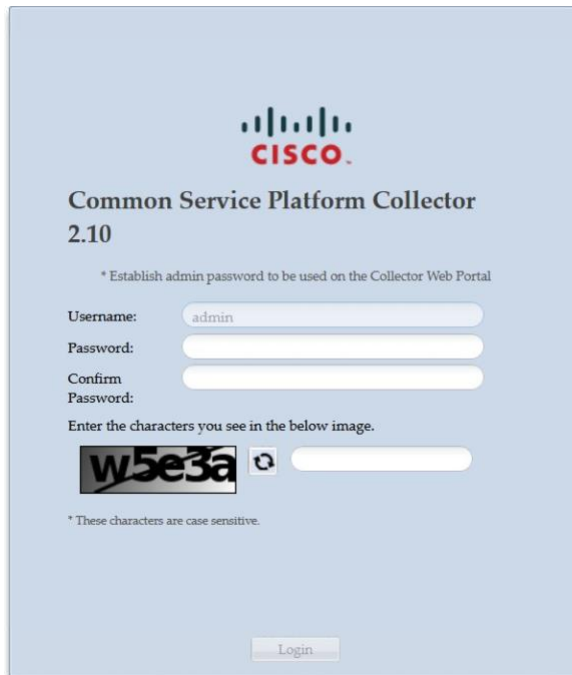

Step 1 In a web browser, open the URL:

<https://<cspc-server-ip>:8001/cspcxt>

**Note**

- CSPC-server-ip in the above URL is the IP address of the machine on which CSPC is installed.
- Certificate Error showing the website's security certificate message is displayed when you access the above URL. Click **Continue** to this website link or Upload the SSL Certificate to proceed for login. Refer [Uploading Valid SSL Certificate](#)
- You can use the default username and default username is **admin**. You have set the password for the first login.
- User account password will expire in 3 to 12 months and default is 6 months. Maximum password reset time is 12 months.
- All the failed logins are detected and audited
- Number of failed user password entries that can be tried before that user account or IP address is locked and default values is 5 times
- Number of minutes that a user's account or IP address remains inaccessible after being locked in response to several invalid login attempts within the amount of time specified by the Lockout Reset Duration attribute and default values is 60 minutes.
- Time frame within which invalid login attempts must occur in order to lock the user account and default value is 5 minutes.

Step 2 Setup the password for admin user and enter characters in the image, this is only for first login and screen appears as shown below.

Figure 2-2 Setup Password

The screenshot shows the Cisco Common Service Platform Collector 2.10 password setup interface. At the top is the Cisco logo. Below it, the text reads "Common Service Platform Collector 2.10". A note states: "* Establish admin password to be used on the Collector Web Portal". The form includes fields for "Username:" (with "admin" entered), "Password:", "Confirm Password:", and a CAPTCHA field. The CAPTCHA image shows the characters "w5e3a" and a refresh button. A note below the CAPTCHA says: "* These characters are case sensitive." At the bottom is a "Login" button.

Recommendations on Password Usage

Password Creation

- All passwords, passphrases, and PINs ("passwords") must comply with the [Password Construction Standard](#).
- Users must not use the same password for Cisco accounts and for other non-Cisco access (for example, users must not use the same password (CEC) for Cisco accounts as for other non-Cisco access (for example, personal accounts, option trading, banking). Users must not store Cisco account passwords in external locations such as cloud service providers (for example, personal banking, email, and social media).
- Accounts used for administration with system-level privileges granted through group memberships or programs such as "Sudo", must have a unique password from all other accounts held by that user to access system-level privileges.

Password Change

- All user-level passwords (CSPC UI, SSH and CLI) must be changed at minimum every six months.
- All system-level passwords (privileged administration accounts or user-level accounts with privileged administration access) must be changed at minimum every 90 days.
- All production system-level passwords must be part of the Corporate Information Security administered global password management database
- If a password is guessed or cracked during period or random scans, the password must be changed to comply with this policy.

Password Protection

- Passwords must not be shared with anyone, including administrative assistants, managers, coworkers, and family members. All passwords must be classified Cisco Restricted data and handled according to the Data Protection Standard.
- Systems, applications, devices, and services must not store or transmit passwords in clear text or in any easily reversible form.
- Passwords must not be inserted into email messages, support cases, or other forms of electronic communication.
- Do not write passwords down and store them anywhere in your office. Do not store passwords in an unencrypted file on a computing device, mobile phone, or tablet.
- Do not use the "Remember Password" feature of applications (for example, web browsers) on non-trusted devices.
- Users must report any suspected password compromise and reset all passwords immediately.

Password Retrieval

- Password retrieval questions must be entered at the time of first log-in
- At least three security questions to be answered out of 20
- Lost passwords cannot be retrieved without answering the security questions

Default Password

- Number of default user/Password shall be limited to bare minimum, depending on the application need.
- All default password if/when needed shall be dynamic. In other words, attempt shall be made to make the default passwords installation specific so that it cannot be used to compromise more than one system
- Default user ID and password shall also follow Cisco InfoSec policy as defined above
- Strong passwords and passphrases must meet the following requirements:
- Contain at least eight alphanumeric characters.
- Contain both upper and lower case letters.
- Contain at least one number (for example, 0-9).
- Contain at least one special character (for example: !\$%^&*()_+|~-=\`{ }[]:"';<>?,/).
- In CLI Prefix all these characters (! \$ & () | \ ; ' >) with escape character (for example: \!).
- In CLI these characters (" < ' ?) are not accepted.

Not Permitted Characters

The following characters are not permitted because they may conflict with some Cisco applications:

- Special 8-bit characters (for example, £, Á, ë, ô, Ñ, ÿ, ß)
- Spaces

Not Permitted Password or Passphrase

The following password or passphrase characteristics are not permitted:

- Match previous ten password or passphrases.
- Contain less than eight characters.
- Can be found in a dictionary, including foreign language, or exist in a language slang, dialect, or jargon
- Contain personal information such as birth dates, addresses, phone numbers, or names of family members, pets, friends, and fantasy characters
- Contain work-related information such as building names, system commands, sites, companies, hardware, or software
- Contain the words cisco, sanjose, sanfran or a derivation
- Contain number patterns such as aaabbb, qwerty, zyxwvuts, or 123321
- Contain common words spelled backward, or preceded or followed by a number (for example, terces, secret1 or 1secret).

Step 3 Enter the credential and characters in the image, click **Login**.

Figure 2-3 *CSPC Collector*

CISCO

**Common Service Platform Collector 2.10
(CSPC)**

* Enter your CSPC credentials

Username:

Password:

Enter the characters you see in the below image.

Step 4 Answer the questions and click **OK** button to save the password reset questions.

Figure 2-4 Password Reset Questions

First login requires user to answer the questioner

Password Reset Questions

* Question 1: Car I wished I owned?

* Answer 1: ●●●

* Question 2: Favorite game or sport to play?

* Answer 2: ●●●●

* Question 3: First vehicle I drove?

* Answer 3: ●●●●

OK Cancel

Figure 2-5 End User License Agreement

Cisco Systems
TERMS OF USE

Legal Agreement

Thank you for using the Cisco Systems Product **CSP Collector** (the "Product"). These Terms of Use apply to all users of the Product ("Users"), and constitute a binding, legal agreement ("Agreement") between User and Cisco Systems, Inc. ("Cisco Systems").

License

This License sets forth User's rights to use the software provided through the Appliance (the "Software"), related content (the "Content"), and all associated documentation (the "Documentation"), all of which are the proprietary and copyrighted material of Cisco Systems. Collectively, the Software, Content, and Documentation are referred to in this Agreement as the "Licensed Product." Upon receipt of the applicable license fee, Cisco Systems grants to User the non-exclusive, non-transferable right to use the Licensed Product solely for Users benefit.

Proprietary Rights

I ACCEPT I DECLINE

Step 5 Click **Accept** button to accept the terms of use.

Step 6 Enter the required fields to configure CSPC to collect devices. Click **Next**.

Table 2-1 Wizard Parameters

Parameter	Description
DNS Server	IP Address of DNS Server
NTP Server	IP Address of NTP Server
Time zone	Time zone of the collector
Set Time	Sets the appliance time, and time should match the actual time of the selected time zone
Host Name	Name of the host

Parameter	Description
IP Address/Host Name	IP Address or Host Name of Proxy Server
Port	Port number of Proxy Server
Username	Credentials of Proxy Server
Password	

**Note**

Proxy server is optional. It takes 30 second to configure.

Figure 2-6 *Install CSPC*

Common Service Platform Collector 2.10

This wizard walks you through the steps to install CSP-C and configure it for device collection.

Phases

- Install
- Register
- Add Devices
- Access Credentials
- Collect

DNS Server/Hostname:

* Timezone:

Set Time (24 Hour Format):

NTP Server:

Hostname:

Proxy Server

* Ip Address/Hostname:

* Port:

Username:

Password:

* Denotes Mandatory Fields

Next >

Step 7 You can register using one of following:

- Browser to upload the **Service Certificate File**.

Figure 2-7 Service Certificate File

Common Service Platform Collector 2.10

Phases

- Install
- Register**
- Add Devices
- Access Credentials
- Collect

Now you need to register this collector to the respective service. Below options are available

Provide Service Certificate from the service portal you plan to use this collector with. This registers CSPC with the service

Refer to [Collector to Service Registration Guide](#) for information on downloading the certificate.

Service Certificate File:

Register the collector without registering with any service (trial) ?

Restore the registration and the data from backed up file

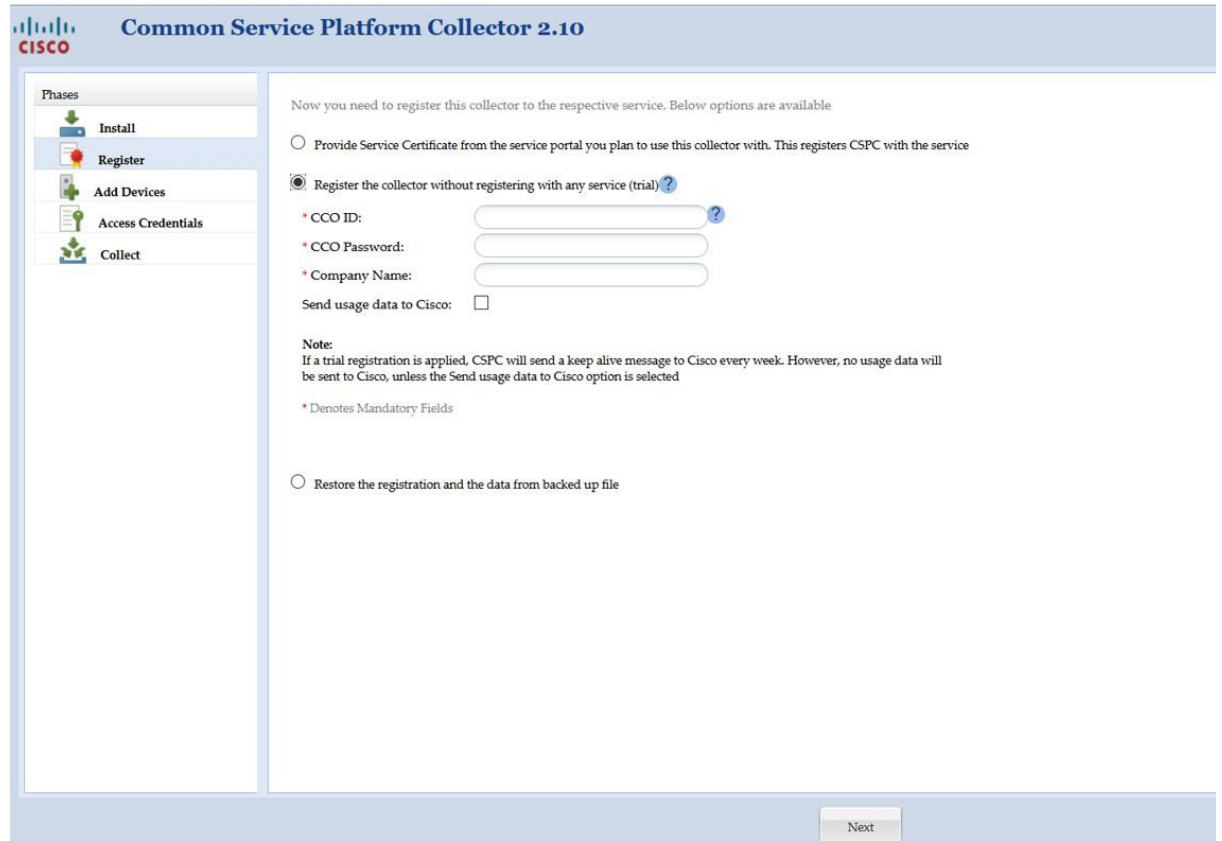

OR

- Enter COO Credentials to get trail license. Select **Send Usage Data to Cisco** only if required and click **Next**

**Note**

- You can download the CSPC and install using trail license, but CSPC needs to register with Cisco before start using it. You can configure CSPC using the wizard as the first option.
- If you like to login to Cisco pages and get benefits, then you have create Cisco.com ID (CCO ID) this is the user ID

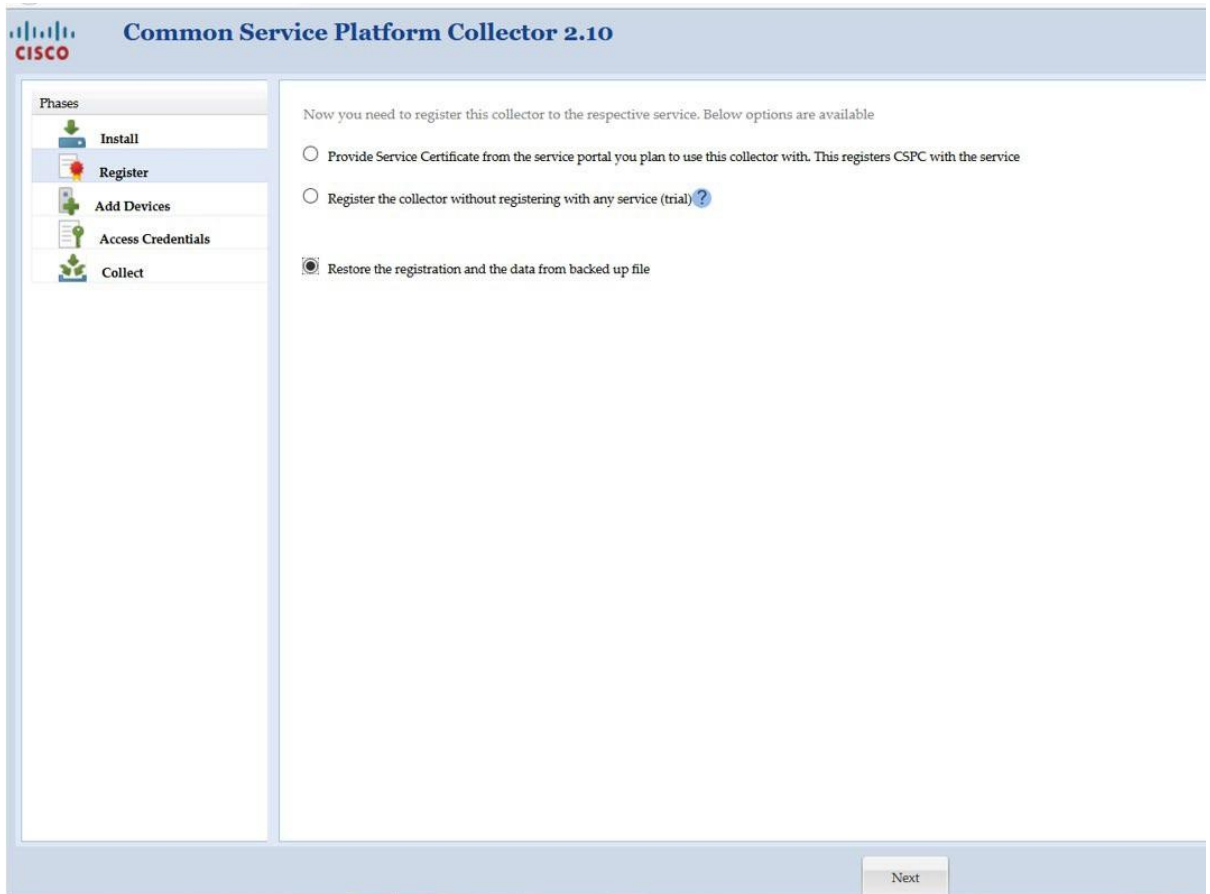

Figure 2-8 COO Credential

OR

- To restore the backup select **Restore the registration and the data from backed up file.**

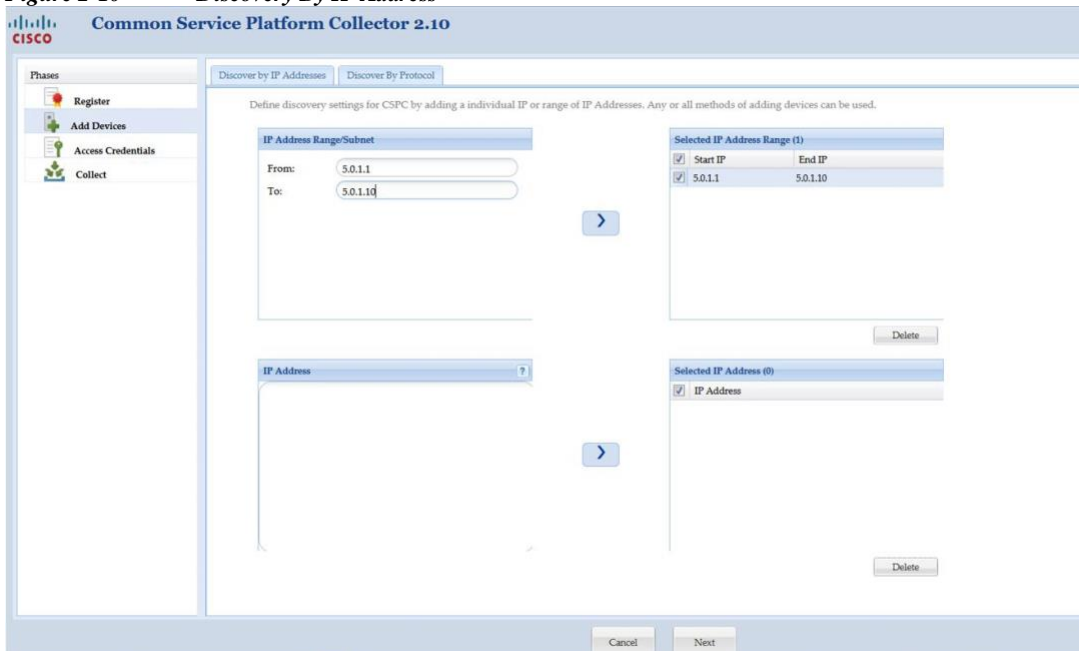

Figure 2-9 Restore Backup

Step 8 You can add device using one of following and click **Add Device**:

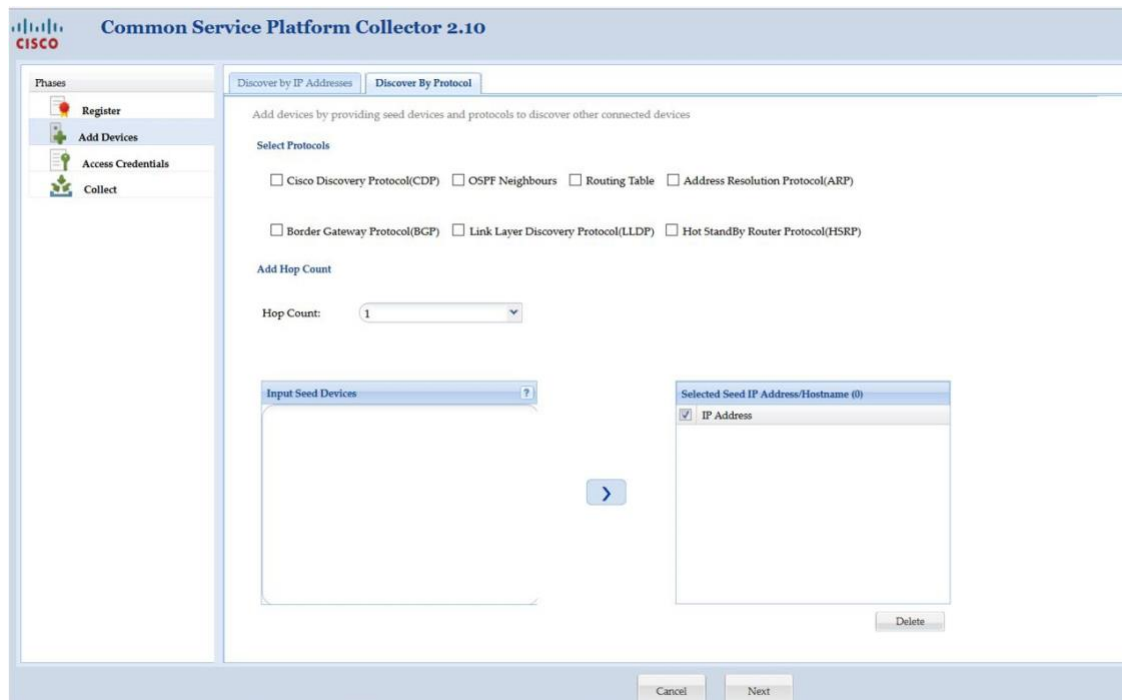

- Enter **IP Address** and use > to select the IP Address or range of IP Address.

Figure 2-10 Discovery By IP Address

- Select the required **Protocol(s)**, **HOP Count**, and **Seed IP Address**. Use > to select seed IP Address.

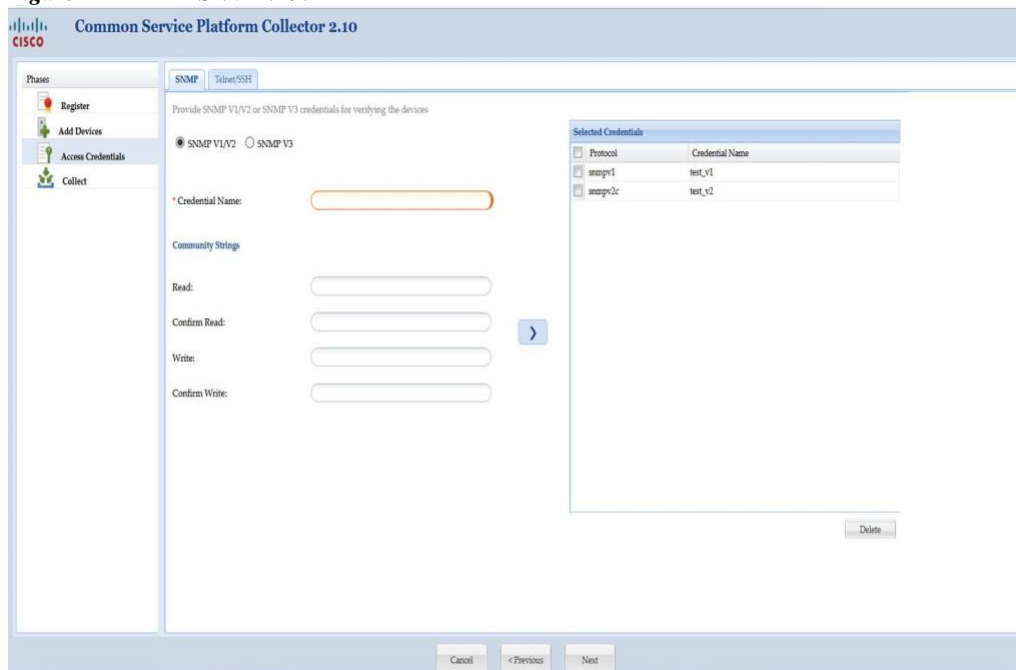

Figure 2-11 Discovery By Protocol

Step 9 You can add credential using one of following and click **Add Credential**:

- If you select **SNMPV1/V2** enter **Credential Name, Read, and Write Community String**. Use > to select credential.

Figure 2-12 SNMPV1/V2

If you select **SNMPV3** enter **Credential Name, User Name, Engine ID, Auth Algorithm, Password, Privacy Algorithm, Password**. Use > to select credential.

Note

It is recommended to use unique SNMP V3 engine ID and ID should not be null. Reference: RFC - 2571.

Figure 2-13 SNMPV3

- If you select **Telnet** enter **Credential Name**, **User Name**, **Password**, **Enable User Name**, **Enable Password**, and **Pass Phrase**. Use > to select credential
- If you select **SSH** enter **Telnet** enter **Credential Name**, **User Name**, **Password**, **Enable User Name**, **Enable Password**, and **Pass Phrase**. Use > to select credential

Figure 2-14 Telnet and SSH

- Step 10** Select **Start Collection now** and click **Collect Now** to start collection instantly or click **Schedule Periodic Collection** and click **Schedule** to collect at a later time. You can schedule Start and End Date/Time or select the Recurrence pattern as Minutely, Daily, Weekly, Monthly, or Yearly as shown in [Figure 2-16](#).

Figure 2-15 Collect Now

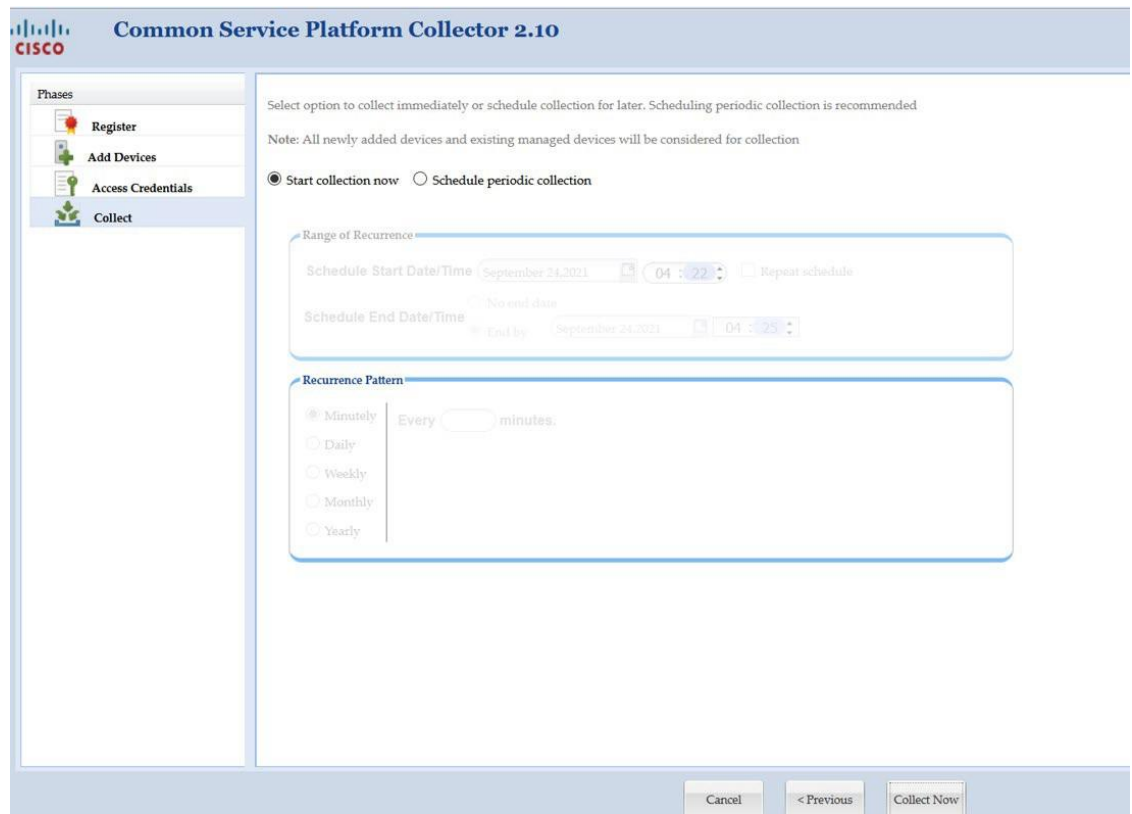

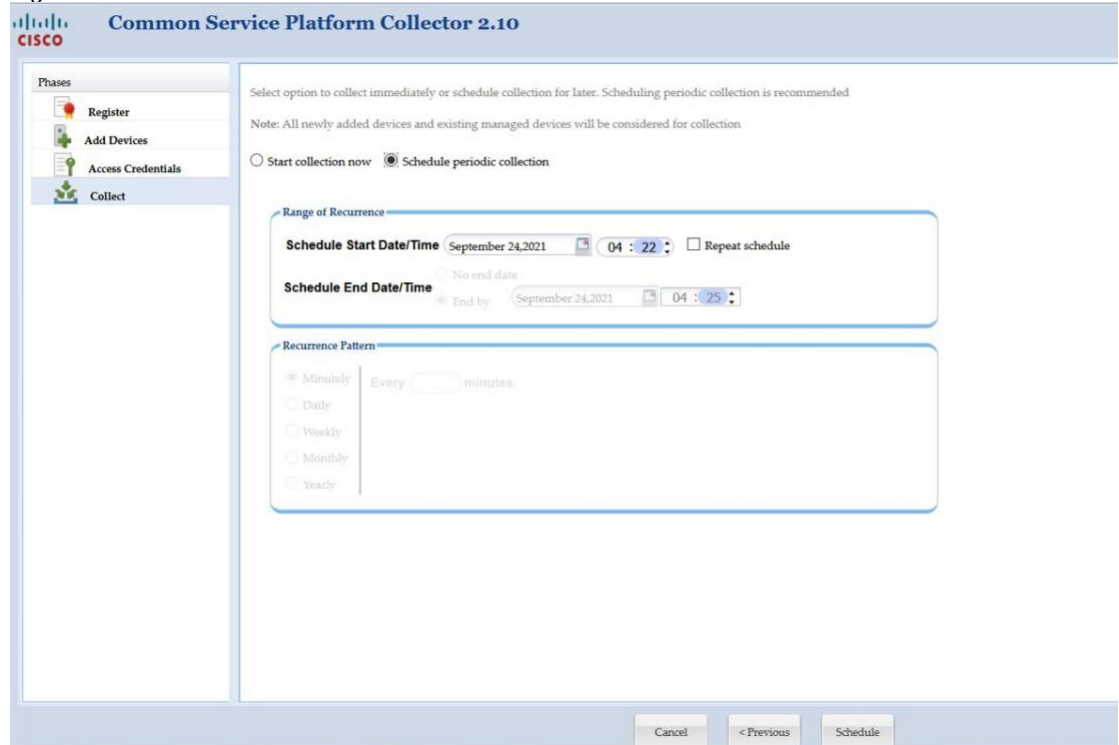

Figure 2-16 Schedule Collection

After logging in to the CSPC Collector, Dashboard screen is displayed

Note

If the session is idle for 15 minutes or more, the user is logged out of the application.

Go back to [CSPC Flow Chart](#)

Forgot Password

If you forget password, click **Forgot Password?** link on the login screen. A dialog box as shown below is displayed.

If you select security question option. Answer the set of questions and enter a new password in the **New Password** text box. Enter the characters in the image.

Click **OK** button and the password is reset.

Figure 2-17 Password Reset

Verify either security answers or One Time Password and set new password

Reset Option

Reset By: Security Questions One Time Passcode

Security Questions

* Question 1: Car I wished I owned?

* Answer 1:

* Question 2: Favorite radio station (number on the dial - NN)

* Answer 2:

* Question 3: Favorite game or sport to play?

* Answer 3:

Please specify new password

* New Password:

Enter the characters you see in the below image.

7fw6h

OK Cancel

If you select One Time Passcode option. Click **Generate OTP** and click **I have OTP** and enter the OTP that was sent to the registered mail ID set in [Email Settings](#) and enter a new password in the **New Password** text box. Enter the characters in the image.

Click **OK** button and the password is reset.

Figure 2-18 OTP Generation

The screenshot shows a 'Password Reset' dialog box with the following sections:

- Reset Option:** Radio buttons for 'Security Questions' and 'One Time Passcode'. 'One Time Passcode' is selected.
- One Time Passcode:** A note states 'Mail settings must be configured in order to use this feature'. Below it, radio buttons for 'Generate' and 'I have OTP'. 'Generate' is selected. A 'Generate One Time Passcode' button is present.
- Please specify new password:** A text input field for the new password.
- OTP Input:** A visual captcha showing the characters '7fw6h' in a distorted font. Below it is an empty input field for the user to enter these characters. A note below states '* These characters are case sensitive.'

At the bottom of the dialog are 'OK' and 'Cancel' buttons.

Figure 2-19 OTP Input

This screenshot is identical to Figure 2-18, but with the following changes:

- Reset Option:** 'One Time Passcode' remains selected.
- One Time Passcode:** Radio buttons for 'Generate' and 'I have OTP'. 'I have OTP' is now selected. The 'Generate One Time Passcode' button is no longer visible.
- OTP Input:** The input field next to the '7fw6h' captcha is now filled with the characters '7fw6h'.

The rest of the dialog, including the new password field and the 'OK'/'Cancel' buttons, remains the same.

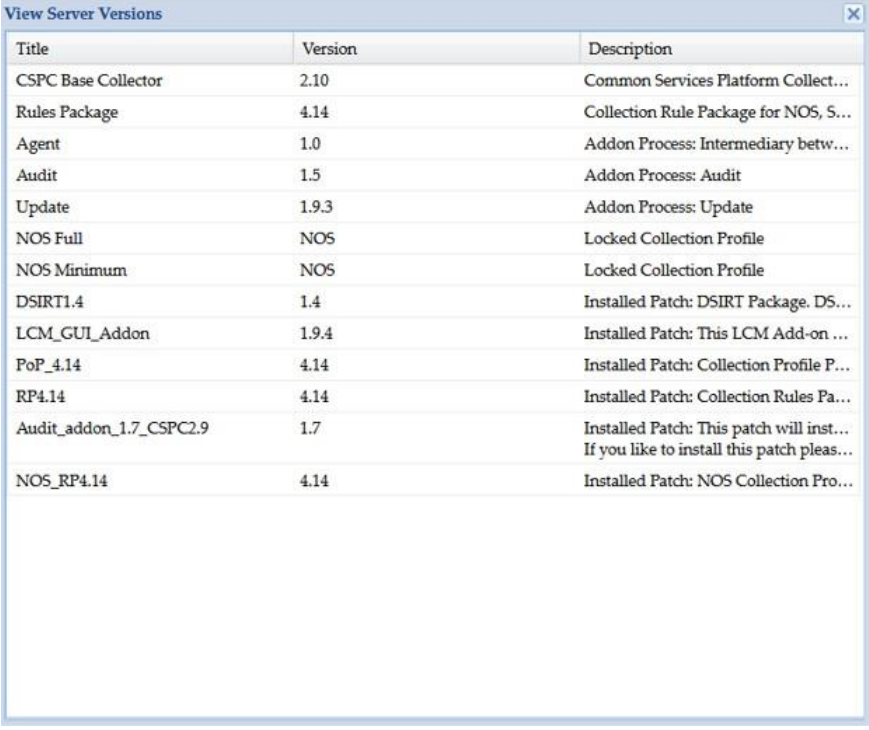

Server And Package Versions

You can view the version of CSPC base collector, add-ons and other optional packages installed on CSPC on View Server Versions screen.

Once you are logged into CSPC, click **Help** menu > **About** > **View Versions**.

A screen showing the version information as shown in [Figure 2-20](#) is displayed.

Figure 2-20 View Server Version

CSPC Dashboard

Dashboard

The dashboard is the primary screen of the CSP Collector. This screen is completely customizable for each user. After the layout is specified, it can be saved, and the next time you log in, you can see the customized layout.

Use the Dashboard to access menu options, Device Explorer Tree, Server Activity Log Messages, and the graphs. The dashboard consists of a menu bar (*User, Settings, Management, Reports, Administration, and Help*), Quick menu bar helps to get easy access to important features, and the two tabs (Dashboard and Applications). A search option is provided for easy navigation to CSPC Application. CSPC Notification communicator on the right corner detects various types of events such as, Job Completion that includes discovery, collection, DAV, upload, and so on. Customer name with certificate name is shown. Once the event is detected CSPC sends an event completion notification to UI and one or more email recipients as configured. Each event can have its own set of recipients. History of events is not maintained. Also, you can view the Server Activity Log Messages. **Disable Secure Browsing for CSPC** disable the Encryption of Communication between browser and server only if require as this might make the application vulnerable to security issues.

The node explorer on the left side of the screen displays all the managed devices by CSPC. Right clicking on any device opens a popup menu displaying selected device properties. Server Activity Log Messages window displays the status messages on both discovery and data collection.

Figure 3-1 CSCP Dashboard (NOS/ CSPT)

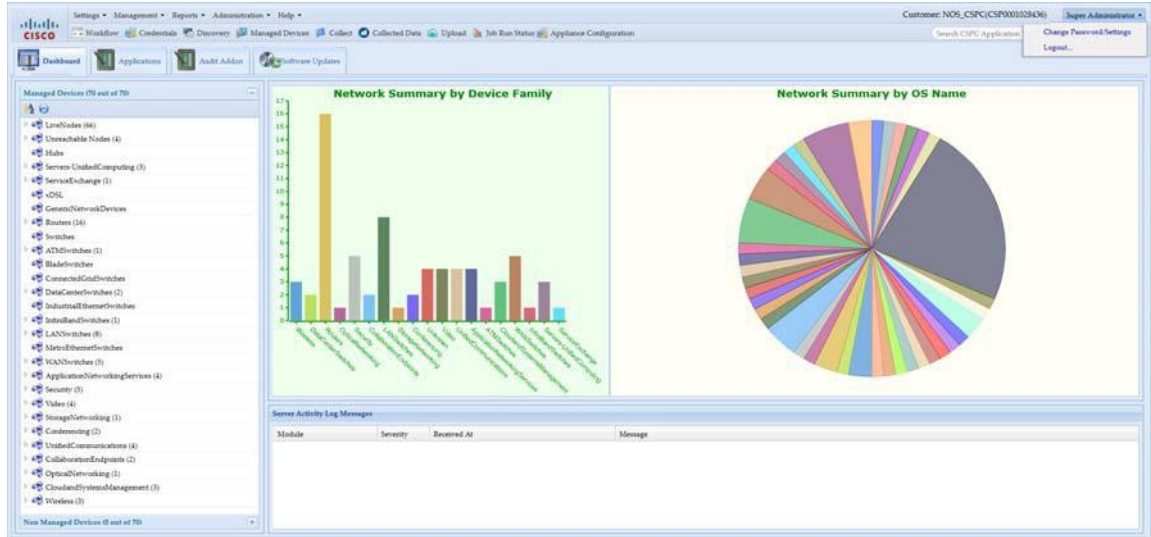

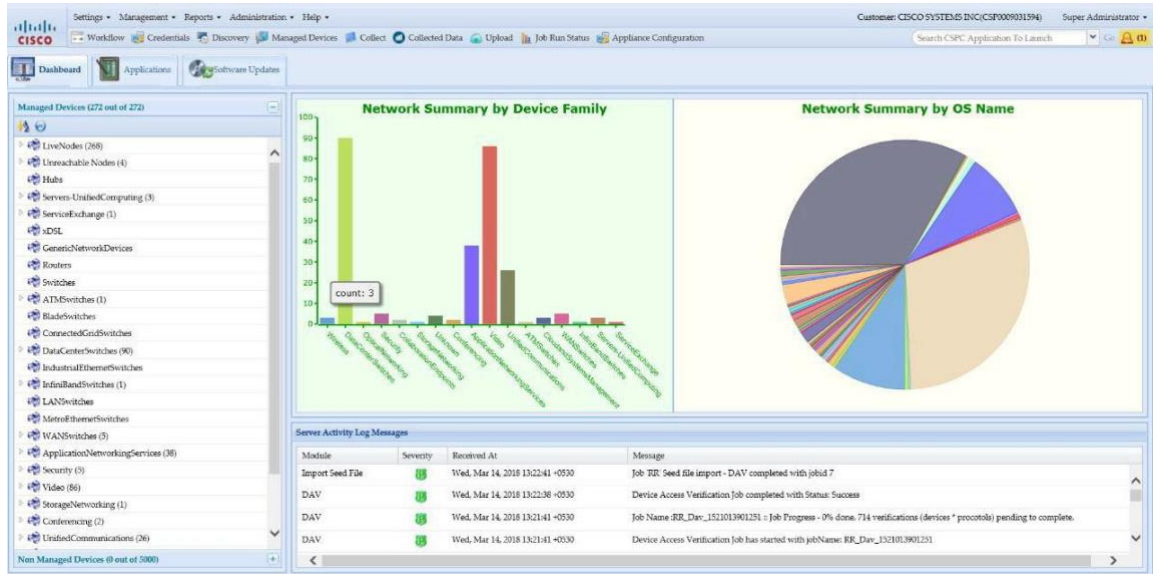

Figure 3-2 CSCP Dashboard

Appliance configuration tab helps you in modifying and configure OS related configurations that was done during installation wizard also see [Figure 2-6](#).

Figure 3-3 Appliance configuration

The screenshot shows a dialog box titled "Appliance OS related configurations" with a close button (X) in the top right corner. The dialog contains the following fields and options:

- Instruction: "Use the below options to configure your Appliance."
- DNS Server/Hostname: A text input field with the placeholder "Enter DNS server name" and an information icon (i).
- Timezone: A dropdown menu with the placeholder "Select timezone .." and an information icon (i).
- Set Time (24 Hour Format): Two dropdown menus for "HH" and "mm", each with an information icon (i).
- NTP Server: A text input field with the placeholder "Enter NTP server IP" and an information icon (i).
- Hostname: A text input field with the placeholder "Enter hostname" and an information icon (i).
- Proxy Server: A checkbox labeled "Proxy Server".
- Legend: "* Denotes Mandatory Fields".
- Buttons: "OK" and "Cancel" buttons at the bottom right.

To Change the password click **Change Password/setting** form drop down on top right of dashboard. Change all the required fields and click **OK**.

Figure 3-4 *Change Password*

The screenshot shows a 'User Account Settings' dialog box with the following sections and fields:

- User Identification:**
 - * Login Id:
 - * Auth Type:
 - Password:
 - Full Name:
- Group Membership:**
 - * Group Name:
- Password Reset Questions:**
 - * Question 1:
 - * Answer 1:
 - * Question 2:
 - * Answer 2:
 - * Question 3:
 - * Answer 3:
- Contact Information:**
 - Email Address:
 - Phone Number:
 - Pager:

Buttons at the bottom: Help..., OK, Cancel

Managed Devices

The *Managed Devices* displays the list of the managed network devices, for which data collection is being performed by CSPC. Click on the arrow key next to the device name to expand the list. In the Managed Device Tree at a given time, only up to 50 devices are shown under each network device in the list. Click next button icon in the pagination bar to see more devices.

Figure 3-5 Managed Device Tree

If you right click on any device, a menu as shown in [Figure 3-6](#) is displayed.

Figure 3-6 Managed Devices Menu

Menu option shows the following options:

- [View Device Properties](#)
- [View Latest Collection Details](#)
- [View Managed Devices](#)
- [Device Access Verification Summary](#)
- [Device Access Verification Summary](#)
- [View Access Verification Results](#)
- [Disabled Protocol Report](#)
- [Device Timeout Configuration](#)
- [Unmanage Devices](#)
- [Verify Device Access](#)
- [Device Prompt Collection](#)
- [Export](#)

View Device Properties

To view the Device Properties, double-click any device or right click and select View Device Properties option. Device Properties screen as shown in [Figure 3-7](#) is displayed.

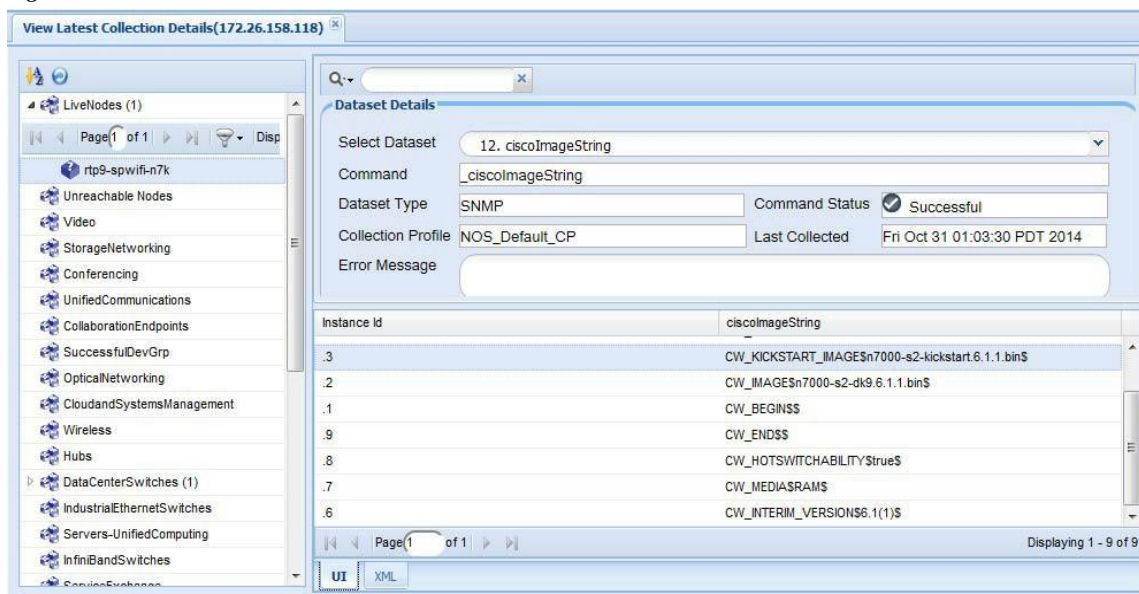

Figure 3-7 Device Properties

View Latest Collection Details

To view the Latest Collection details right click any collection and select Latest Collection Details option. Latest Collection Details screen as shown in [Figure 3-8](#) is displayed. You have select Dataset name from the drop down to view the details such as Command, Dataset Type, Command Status, Collection Profile, Last Collected, and Error Message. UI Commands have both UI and XML tabs and CLI commands have only CLI tab at the bottom of the page. You can also use search to open the dataset details.

Figure 3-8 Latest Collection Details

Export

To download the Managed Devices DAV Results file, right click on the folder or the device as shown in Figure 3-6 and select Export option. `ManagedDevicesCredentials.csv` file is downloaded to your system. You can view this file in Microsoft Excel or any similar application.

Non Managed Devices

The *Non Managed Devices* displays the list of the non managed network devices, for which data collection is being performed by CSPC. Click on the arrow key next to the device name to expand the list.

Figure 3-9 Non Managed Devices

CSPC Workflow

This is a powerful feature that helps you to discovery, add credentials, and collect device in one go. There are two types to add devices such as, Discovery by IP Address or Discovery by Protocol. You can access credential using SNMP V1/V2, V3, Telnet, or SSH and collect now or schedule it later.

To start the workflow, follow the steps below:

Step 1 Click **Workflow** from menu bar.

Figure 4-1 Workflow Menu

Step 2 You can add device using one of following and click **Next**:

- Enter **IP Address** and use > to select the IP Address. You can also give range of IP Address.

Figure 4-2 Discovery By IP Address

- Select the required **Protocol(s)**, **HOP Count**, and **Seed IP Address**. Use > to select seed IP Address.

Figure 4-3 Discovery By Protocol

Common Service Platform Collector 2.10

Phases: Add Devices, Access Credentials, Collect

Discover by IP Addresses | Discover By Protocol

Add devices by providing seed devices and protocols to discover other connected devices

Select Protocols

Quick Access Applications - Device Management

Common Application

You can use the Common Application tab to access tools with which you can specify, collect, and store software and hardware information about the network devices.

Figure 5-1 Device Management

This section describes the Common Application tools in the following topics:

- [Add/Import Credentials](#)
- [Discover Devices](#)
- [View Managed Devices](#)
- [Verify Device Access](#)
- [Collect Data](#)
- [View Collected Data](#)
- [Upload Data](#)

Use the links for navigation..

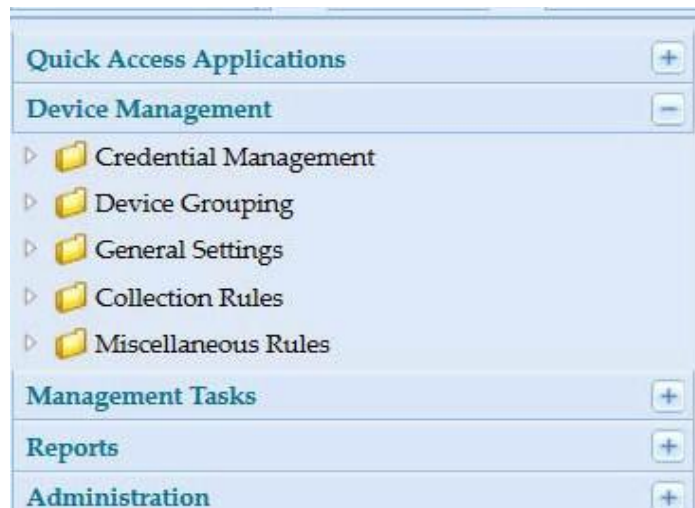

Applications - Device Management

Device Management

You can use the Device Management tab to access tools with which you can specify, collect, and store software and hardware information about the network devices.

Figure 6-1 Device Management

This section describes the Device Management tools in the following topics:

- [Credential Management](#)
- [Device Grouping](#)
- [General Settings](#)
- [Collection Rules](#)
- [Miscellaneous Rules](#)

Credential Management

Use the Credential Management sub tab of the Device Management tab to set up device or module credentials and manage seed file.

This section describes the Credential Management options in the following topics:

- [Add/Import Credentials](#)
- [Manage Sub Module Credentials](#)
- [Manage Seed File](#)
- [Imported Seed file](#)
- [Do Not Manage Device List](#)

Add/Import Credentials

In order to discover network devices and collect the data from the devices, you need to enter the credentials first. Device credentials set up in the CSPC is used for two purposes. The SNMP credentials are used only for initial discovery of the devices.

The remaining credentials like Telnet, SSH, HTTP, HTTPS, WMI, TL1, IIOP and SNMP are used for data collection from the discovered devices.

Use the Device Credentials Configuration wizard to add the credentials. Follow the wizard to choose your parameters for the credentials.

Figure 6-2 Device Credentials Configuration

You can add, modify, delete, or clone an existing credential. To remove all the credentials from CSPC server, click **Delete All** button.

You can import credentials from applications like:

- Cisco Works DCR XML File (.xml)
- Pari Networks Credential Repository (.xml)
- Cisco Works DCR CSV File (.csv)
- CNC CSV File (.csv)
- Simplified CSV File (.csv)

Importing a Seed File

Seed file can be imported as a job. Any error or information messages for each device entry from the seed file being imported are captured as part of job log details. You can view the job log to check these messages.

When importing a seed file, save the original seed file by providing it a name. This helps users to get these files from database when required.

Create a new device group or select an existing device group to get the discovered devices added to them, as part of import seed file discovery process. Discovery and DAV are optional and are only applicable for DCR CSV and CNC CSV formats. DAV can be triggered only when Discovery option is checked. You can map the devices to default entitlement or to the entitlements in the drop down, using Map Devices option. Trigger DAV is enabled only for NOS and CSPT services. Create a group device during Discovery.

Figure 6-3 *Import Option*

Note Default mapping and Map Devices to options is available to NOS services

Follow the steps given below to import a seed file:

- Step 1** In the Device Credentials Configuration window, click **Import** button
- Step 2** From the Import drop down box, select any of the following files:
 - Cisco Works DCR XML File (.xml)
 - Pari Networks Credential Repository (.xml)
 - Cisco Works DCR CSV File (.csv)
 - CNC CSV File (.csv)
 - Simplified CSV File (.csv)
- Step 3** Click Browse button and select the seed file that you want to import
- Step 4** Enter the job name, job description and seed file description in the respective fields

Note Step 5 and 6 are applicable only if you select CNC or CSV file format.

- Step 5** Choose **Default Mapping** or **Map Devices To**. If **Map Devices To** is selected, then select the entitlement from drop down
- Step 6** Choose **Create Groups By User Fields** or/and **Add device Add devices to user defined groups**. Select and enter **New Device Group Name** or **Select Existing Device Group** from the drop down.

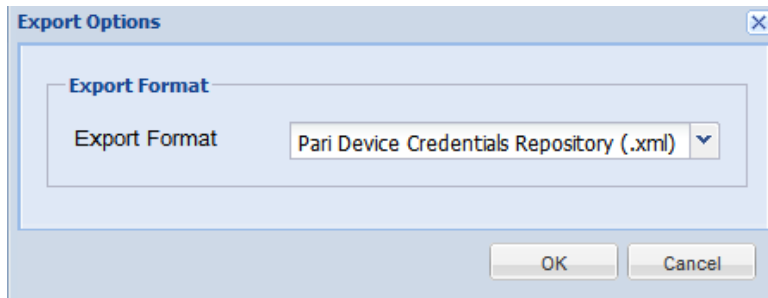

Note Job Name is a mandatory field.

- Step 7** Click **OK** button. Seed file is imported.

Export

Export option is provided to export the existing credentials.

Figure 6-4 Export Options

Follow the steps given below to export the contents:

- Step 1** In the Device Credentials Configuration window, click **Export** button
- Step 2** You are prompted to verify the password.

- Step 3** Enter the password that you used to login to CSPC
- Step 4** From the Export Format drop down box, select any of the following formats:
- Pari Networks Credential Repository (.xml)
 - CNC CSV File (.csv)
- Step 5** Press **OK** button
- Step 6** Save the file on your system

- Note**
- All devices in seed file imported by you are considered as managed devices even if the devices are unreachable at the time of CSPC discovery.
 - You can export seed file with Unreachable devices and the status of unreachable devices is shown as *Valid_Unreachable:Status* in this seed file *ManageDevicesCredentials.csv*

Trigger Discovery And DAV Jobs

While importing the seed file you can also trigger the Discovery and DAV jobs. To do so, follow the steps given below:

-
- Step 1** Enter the details for importing seed file as given above
- Step 2** From the Import drop down box, select any of the following two options:
- Cisco Works DCR CSV File (.csv)
 - CNC CSV File (.csv)
- Step 3** Check **Trigger Discovery** and/or **Trigger DAV** check boxes
- Step 4** You can start Discovery now or to Schedule Discovery at a later time, select **Schedule Discovery** option and then click **Configure Schedule** button.
- Step 5** You can schedule Start and End Date/Time or select the Recurrence pattern as Minutely, Daily, Weekly, Monthly, or Yearly as shown in [Figure 6-5](#).

Figure 6-5 Configure Schedule

Range of Recurrence

Schedule Start Date/Time April 21, 2021 17 : 35 Repeat schedule

Schedule End Date/Time No end date End by April 21, 2021 17 : 38

Recurrence Pattern

Minutely Every minutes.

Daily

Weekly

Monthly

Yearly

OK Cancel

- Step 6** Enter the device group name in Device Group Name field
- Step 7** Or click Select Device Group Name radio button and select the device group name from the drop down box
- Step 8** Click **OK** button
Go back to [CSPC Flow Chart](#)

Adding Credentials

To add credentials, click **Add** from the Device Credentials screen.

Figure 6-6 Add Credentials

Follow the steps given below to add the credentials:

Step 1 Enter the following information for creating a new Credential:

- Name of the credential (user selected name to identify the credential)

Note

The best practice is to set the credential name to "SNMP_Profile_1" or a generic name that you prefer.

- Transport protocol (CSPC supports various protocols for data collection that includes Telnet, SSHv1, SSHv2, HTTP, HTTPS, SNMPv1, SNMPv2c, SNMPv3, WMI, TL1, LDAP, LDAPS, SQL and IIOP)
- Specify the port number for SSH, Telnet, SQL, LDAP, LDAPS. Default port number for SSH is 22, Telnet is 23, LDAP is 389, LDAPS is 636, and SQL is 1433. This port number is considered during DAV, collection, apply IPS request, and connecting via jump server
- Authentication (depending on the protocol selected use the following authentication mechanisms:
 - Provide User Name, Password, Enable User Name and Enable Password for Telnet, SSH, HTTP, HTTPS, and TLI protocols
 - Provide User Name and Certificate (With/Without Pass Phrase) for SSH protocol certificate based authentication
 - Provide User Name, Password for WMI, LDAP, LDAPS, IIOP protocol
 - Provide User Name, Password for SQL protocol along with the Database details.
 - For SNMP V1 and V2, provide the READ and WRITE community strings
 - For SNMP V3 provide information on User Name, Engine ID, Authentication Algorithm to use and Authentication Password along with Privacy Algorithm and Privacy Password

- Include IP Address Range and Exclude IP Address Range.

The *Include IP Address Range* option allows you to enter either a set of IP Addresses or a wildcard IP Addresses like 10.*.*.*, notifying any IP Address starting with 10. The Exclude IP Address Range works only for data collection.

You can enter IP addresses by clicking IP Address List Editor, and give multiple IP addresses with comma separated in IP Address List field.

Step 2 Click **OK**.

You can also edit an existing credential by clicking **Modify**. Click **Delete** to delete a selected credential. Click **Clone** to create a copy of the selected credential for modification.

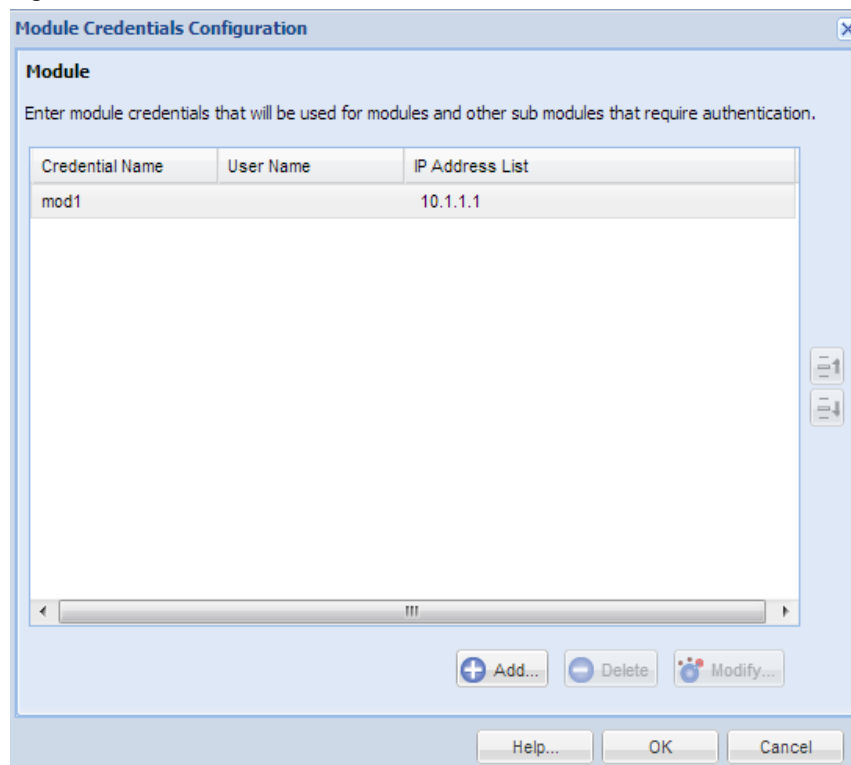

Go back to [CSPC Flow Chart](#)

Manage Sub Module Credentials

In order to collect the data from the modules you need to enter the credentials first. Module credentials are used to collect data from modules or sub modules that require additional authentication.

Use the Module Credentials wizard to add credentials. Follow the wizard to choose your parameters for credentials.

Figure 6-7 *Module Credentials Main Window*

You can add, modify, or delete an existing credential. Vertical scroll bars are provided to move to either the previous or the next credential set in the table.

To add credentials, click **Add** from the Module Credentials screen as shown in [Figure 6-8](#).

Figure 6-8 Module Credentials

Follow the steps given below to add the module credentials:

- Step 1** Enter the following information for creating a new Credential:
- Name of the credential (user selected name to identify the credential)
 - Module/Sub Mode Matching expression (expression used to match whether to use this credential on the module or not)
 - Authentication (depending on the protocol selected use the following authentication mechanisms:
 - Provide User Name, Password, Enable User Name and Enable Password to access the module
 - Include IP Address Range and Exclude IP Address Range.

The *Include IP Address Range* option allows you to enter either a set of IP Addresses or a wildcard IP Addresses like 10.*.*, notifying any IP Address starting with 10. The Exclude IP Address Range works only for data collection.

You can enter IP addresses by clicking IP Address List Editor.

- Step 2** Click **OK**.
- You can also edit an existing credential by clicking **Modify**. Click **Delete** to delete a credential.

Go back to [CSPC Flow Chart](#)

Manage Seed File

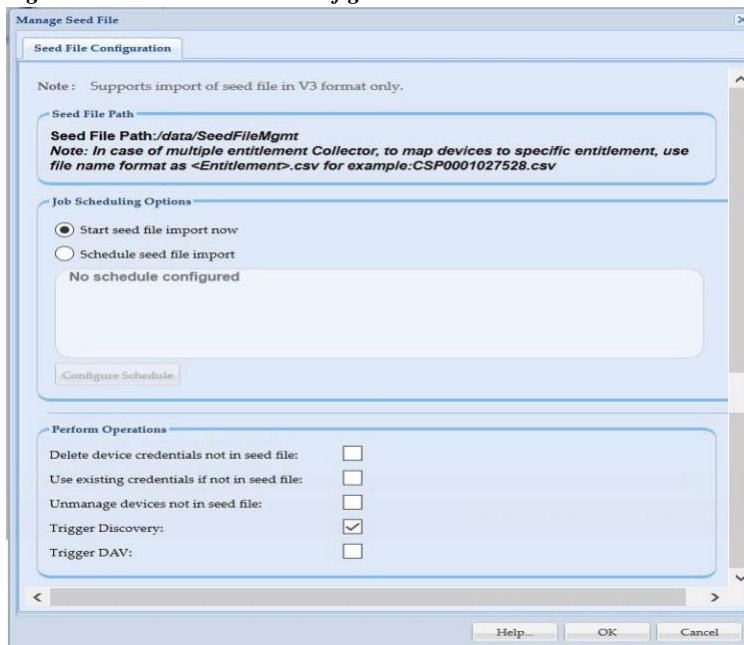

You can import the seed file with the latest credentials and devices by placing the seed file manually in the default path. It determines what devices will be removed, updated, or added then perform the necessary actions. Devices not present in the seed file that is in CSPC will be deleted.

Note

In case of Multiple entitlement collector, to map devices to specific entitlement use file name format as <entitlement>.csv example: CSP0001027528.csv

Figure 6-9 Seed File Configuration

To import the seed file, perform these steps:

- Step 1** Place the CNC V3 format seed file in the default location as shown on the screen. It is mandatory to place the seed file in the location as shown on the screen and read permission should be allowed to the file for CSPC users.
- Step 2** You can start Seed File Import now or to Schedule Seed File Import at a later time, select **Schedule Seed File Import** option and then click **Configure Schedule** button.
- Step 3** You can schedule Start and End Date/Time or select the Recurrence pattern as Minutely, Daily, Weekly, Monthly, or Yearly as shown in [Figure 6-10](#).

Figure 6-10 Configure Schedule

Step 4 Check the required operation. click **OK**

Figure 6-11 Operations

Options	Description
Delete device credentials not in seed file	This removes only the device credentials which are not in seed file
Use existing credentials if not in seed file	If credentials are not present in the seed file, then CSPC uses the existing ones.
Unmanage devices not in seed file	This Unmanages the devices not in the seed file
Trigger Discovery	This Triggers Device Discover. By default, Trigger Discovery is selected.
Trigger DAV	This Triggers Device Access Verification

Imported Seed file

When you import a seed file, the information is captured in the imported seed file screen. Each row on the screen corresponds to one Import.

Seed file name field acts as a hyperlink as shown in Figure 6-12, on clicking this link you can download (or export) original seed file saved in the system. Screen captures all the details related to that import, like the file format, user info, file size and so on, along with the job log details of that import run.

You can also delete single or multiple rows from the screen.

Figure 6-12 Imported Seed file

Page 1 of 1 | Displaying 1 - 5 of 5

Do Not Manage Device List

This provides you with an option to select a set of devices that should not be managed by the collector. If a device is added to Do Not Manage Device List then that device will not be discovered and will not be added to CSPC.

Figure 6-13 Do Not Manage Devices List

Click **Add** to add the device IP address.

As specified in the above screen, these three devices with IP Addresses *10.*.*.**, *1.1.1.1*, and *10.1.2.43* are not inventoried even though they are all discovered devices.

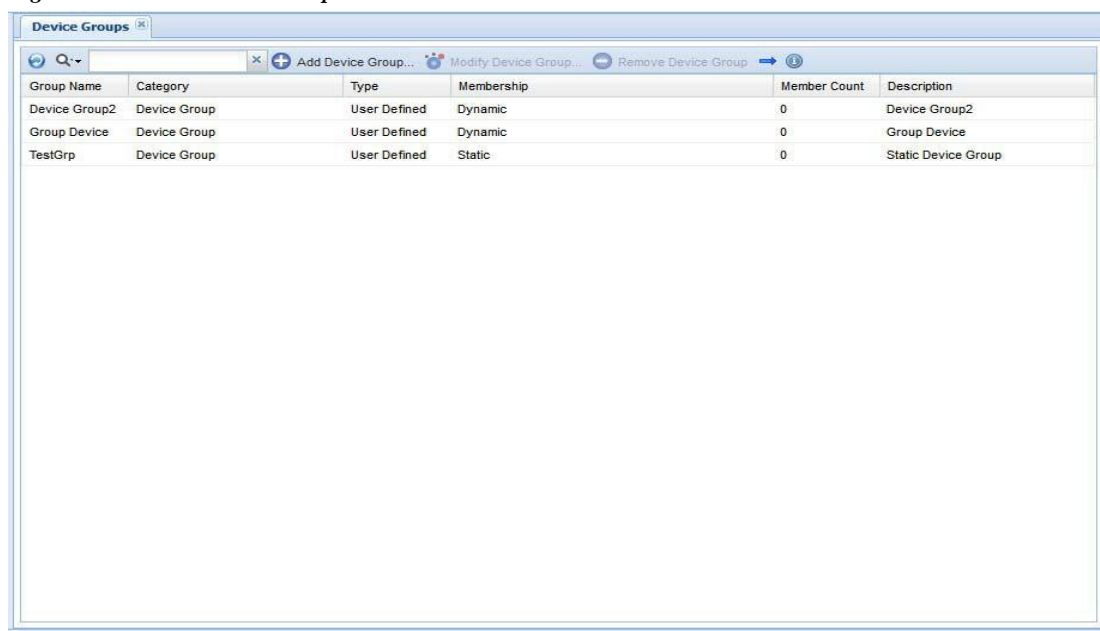

Device Grouping

Use the Device Groups sub tab of the Device Management tab to create and manage device groups.

Device Groups

Device Groups option is used for Adding, Modifying or Deleting device groups. There are certain default system generated groups in CSPC. In addition, if you want to create device groups, then you can use these settings. Device groups can be Static or Dynamic. In static device groups you have to manually select the devices that are part of a given group. In dynamic group you will define a criterion and all devices that match the criterion (either currently managed or not) will automatically appear in this group.

Figure 6-14 Device Groups Main Window

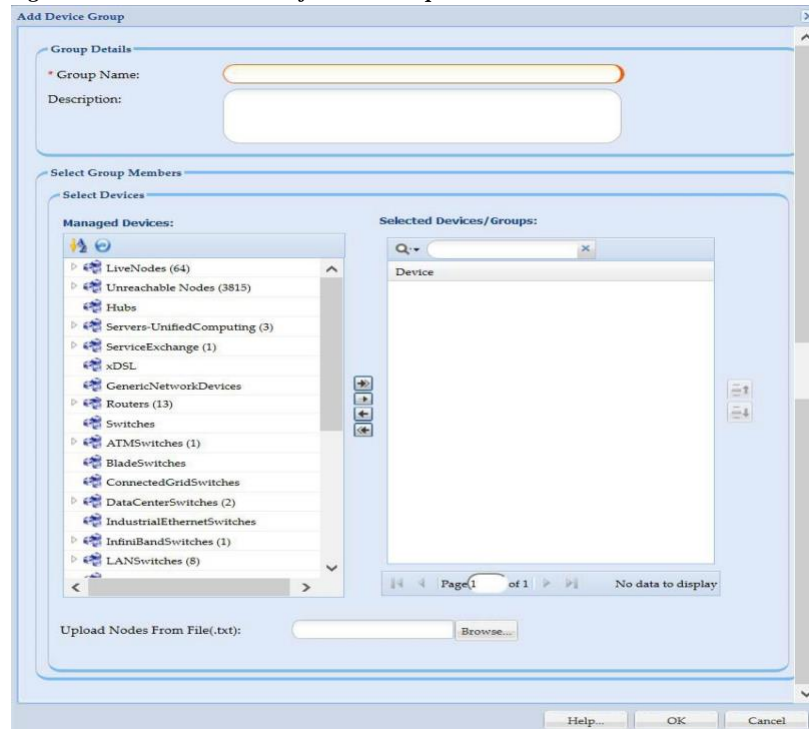

When you select *Add Device Group* you choose whether to create a static group or dynamic group.

Figure 6-15 Add Device Group

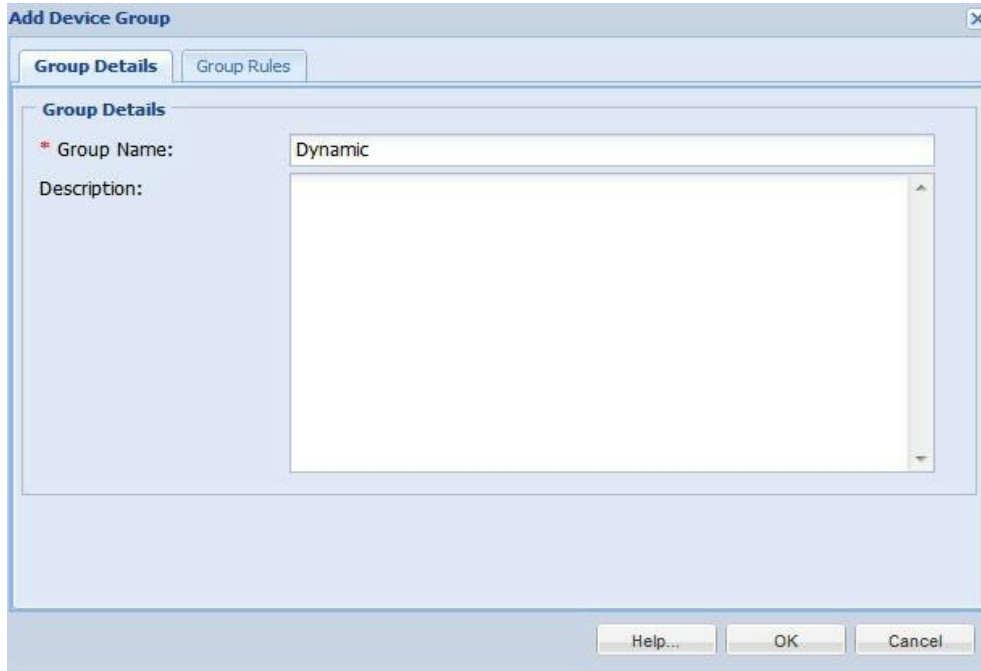

Creation of static group is defined below.

Figure 6-16 Creation of Static Groups

Enter the group name and description, and select group members by moving the devices/groups to the selected list. Once the devices/groups are selected or click browse to upload .txt file containing the devices/groups, click **OK** to create the static device group.

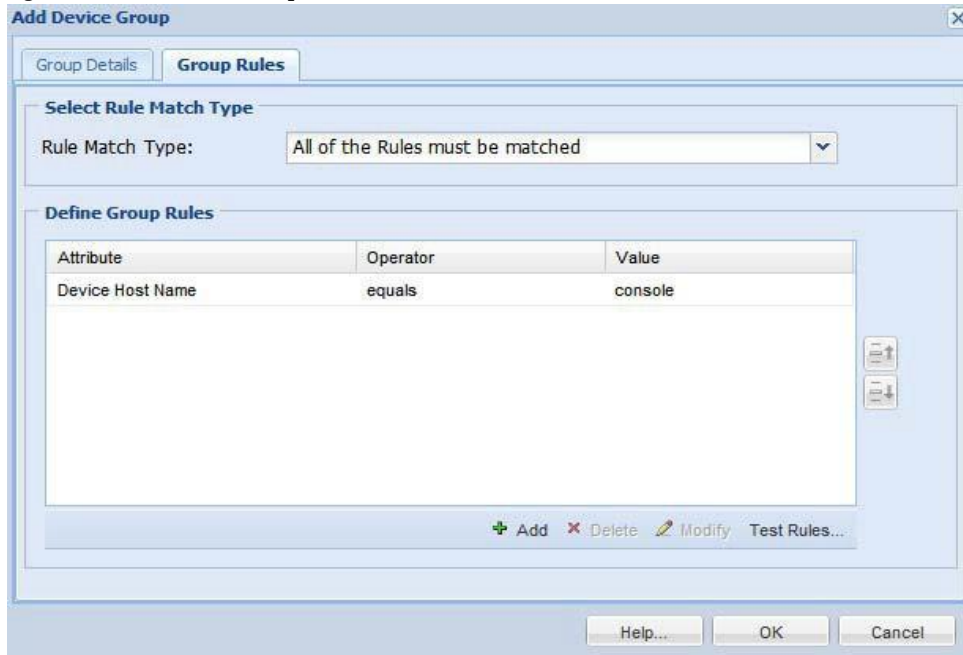

Similarly, when you select the *Dynamic Group* option while creating new device groups you can define the heuristics used to identify which devices belong to that specific group. This is shown in [Figure 6-17](#).

Figure 6-17 Add a Dynamic Group

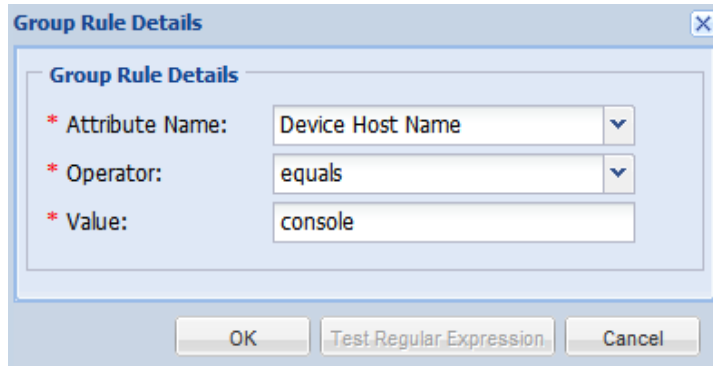

Once you define the group name and description you are ready to define the Group Rules, as shown below.

Figure 6-18 Add Group Rules

Define the conditions or rules that must be matched or not matched based on the attributes and values. Add these conditions by clicking **Add**.

Figure 6-19 Group Rule Details

Select any of the Attributes like Device Host Name, Device IP Address, Device OS Name, Device OS Version, Device Vendor Name, Device Product Module, Device Family, Device OS Type, Device Technology, UserField1, UserField1, or UserField1 and use one of the Operator like equals, contains in the list and so on, and provide a Value. You can create any number of rules.

Newly discovered devices are matched for these conditions automatically and are added to the dynamic groups.

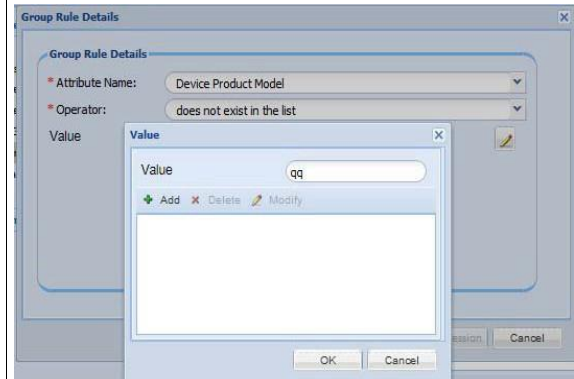

Table 6-1 Special Cases in Group Rule

Special Cases	Figures
<p>If you select Device OS Name as Attribute Name, then you need to select the value form the drop down</p>	
<p>If you select Device Ip Address as Attribute Name and Operator as does not belong to the range, then you need to enter Start Ip Address and End Ip Address</p>	

Special Cases

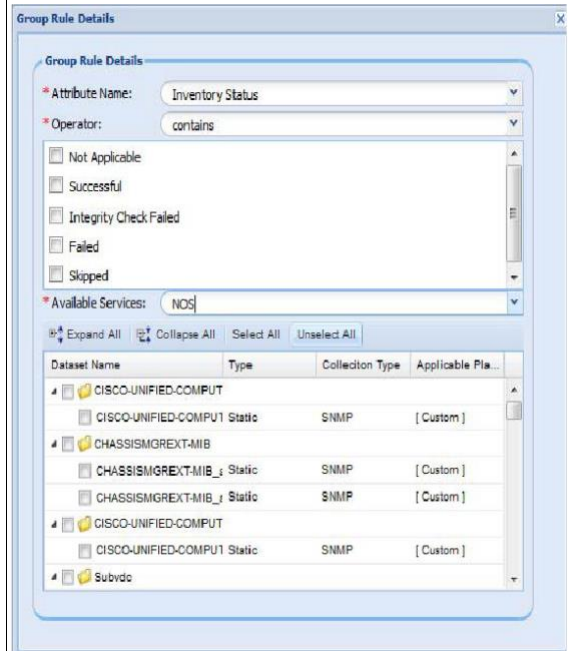

For any of the **Attribute Name** if you select **does not exist in the list** as **Operator**, then you need to add the **Value** manually using the edit icon on the screen.

Figures

If you select **Inventory Status** or **Config Status** as **Attribute Name** and **Operator** as **contains** or **does not contain**. Select the required status on the screen and Select the **Available Services** from the drop down. Only for **Inventory Status NOS** lists all the dataset name and you can select for the list.

Inventory status provides you granular information. It is recommended to create the rule based on inventory status if you want to create a group based on dataset specific.

General Settings

Use the General Settings sub tab of the Device Management tab to set Application, Discovery, Inventory, and Advance Job.

This section describes the General Settings options in the following topics:

- [Application Settings](#)
- [Discovery Settings](#)
- [Access Verification Settings](#)
- [Inventory Settings](#)
- [Advanced Job Settings](#)

Application Settings

Application settings is used to set device inventory data collection preferences like Device prompt, Submode and Data export settings.

General Settings:

IP Host Mask Settings: If device IP Address and Hostname data privacy is enabled, customer device IP address and Hostname that is sent back to Cisco will be replaced by a set of user defined IP address and Hostname.

In *IP Address Mask* field, you can define the IP address range that is used to replace the real IP address of the customer, and define a prefix in *Hostname Mask* field that is used to replace the real customer hostname.

Figure 6-20 General Settings

Table 6-2 General Settings

Field Name	Description
Start IP	IP to be used as start value while masking IPv4 data. IP will be incremented from this value for each of the IP's to be masked
Start IPV6	IP to be used as start value while masking IPv6 data. IP will be incremented from this value for each of the IP's to be masked
Start Hostname	Prefix used for masking hostnames
Global Display Type	Device attribute to be shown for distinct devices
Platform List	List of platforms for Telnet echo is enabled.
SysObject ID List	SystemObject ID for the Telnet echo enabled devices
Total User Session Count	Maximum number of unique CSPP user sessions

Prompt Settings:

Figure 6-21 Prompt Settings

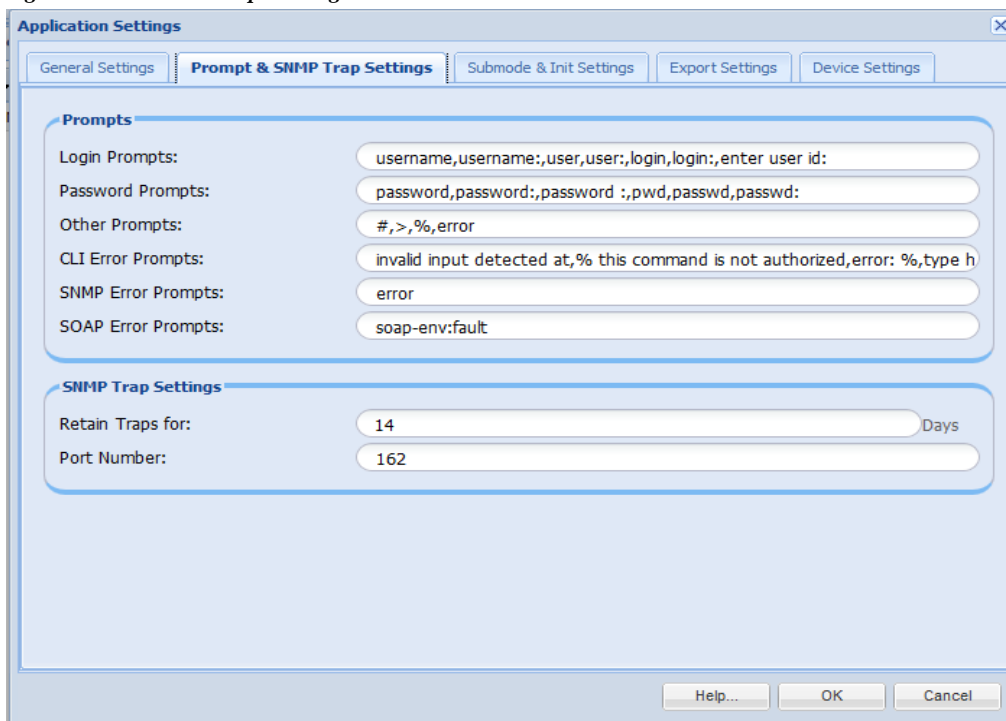

Table 6-3 Prompt Settings

Field Name	Description
Prompts	
Login Prompts	Used for extra Login prompts that needs to be handled by CSPC
Password Prompts	Used for extra Password prompts that needs to be handled by CSPC
Other Prompts	Used for other prompts that needs to be handled by CSPC
CLI Error Prompts	Used for extra CLI error prompts that needs to be handled by CSPC
SNMP Error Prompts	Used for extra SNMP error prompts that needs to be handled by CSPC
SOAP Error Prompts	Used for extra SOPA error prompts that needs to be handled by CSPC
SNMP Trap Settings	
Retain Traps for	Mention the number of days to retain traps.
Port Number	Configure the port to receive the SNMP trap messages. Default port is 162. Note If you configure a new in-bound port to listen the SNMP Trap messages, then you need to manually update the corresponding IP table rules and NAT router settings.

Submode and Init Settings:

Figure 6-22 Submode And Init Settings

The screenshot shows the 'Application Settings' dialog box with the 'Submode & Init Settings' tab selected. The 'Submode And Init Prompt Validations' section contains the following fields:

- OS Types: nx-os,fwsm-os,pixos,fwsm,acsw,nxos,asa,
- IP Address List: (empty)
- SH Version Command: show version
- SH Version Lines: 5,12
- SH Version Ignore Strings: hours,seconds,minutes,uptime,
- Execute New Line For Submode Login Prompt: (empty)

Buttons at the bottom include Help..., OK, and Cancel.

Table 6-4 Submode and Init Settings

Field Name	Description
OS Type	Type of OS
IP Address List	List of IP addresses
SH Version Command	If show version needs to be executed while in submode
SH Version Lines	Number of lines in show version that need to be taken
SH Version Ignore Strings	Whether to consider or ignore show version settings
Execute New Line for Submode Login Prompt	Whether new line has to be executed at the end of submode login prompt

Export Settings:

Figure 6-23 *Export Settings*

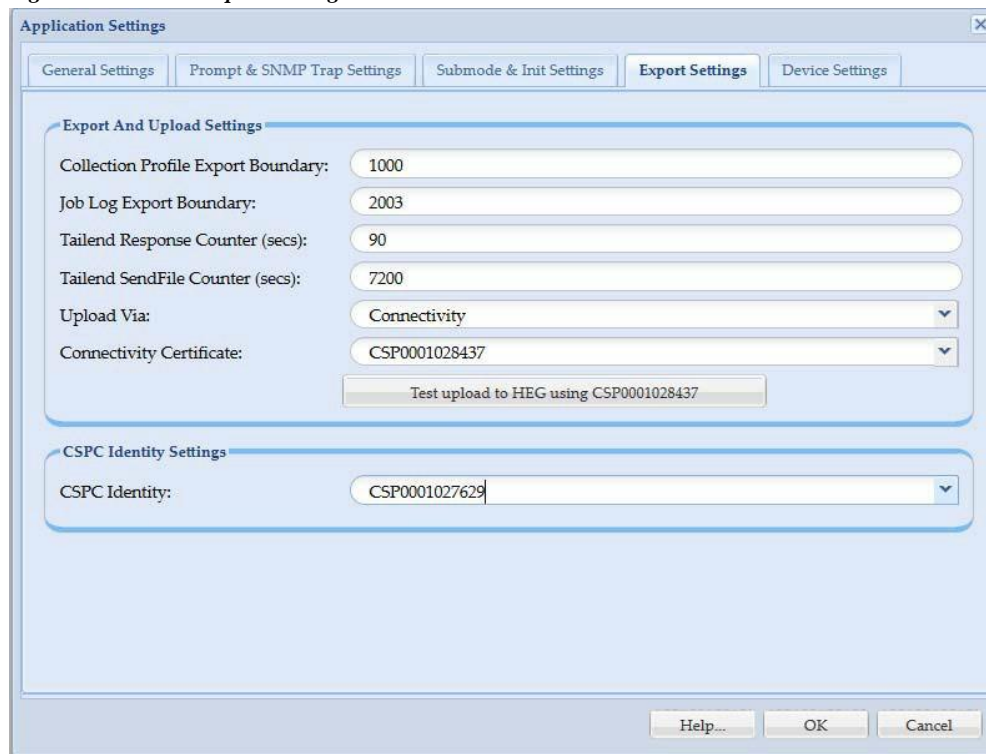

Table 6-5 *Export Settings*

Field Name	Description
Collection Profile Export Boundary	Number of devices processed in batch during VSEM export. Default values are as follows: <ul style="list-style-type: none"> • Large - 100 devices • Medium - 50 devices • Small or ultra-small - 25 devices
Job Log Export boundary	Job log export boundary
TailEnd Response Counter	Response counter for TailEnd is maximum wait time for entitlement registration and limit is 90 seconds
TailEnd SeedFile Counter	Seed file counter for TailEnd is maximum wait time for connectivity file upload.
Connectivity Certificate	Certificate used for connection
Upload Via	Set the Upload via option to either of these: <ul style="list-style-type: none"> • Transport Gateway (Only for NOS services) • Connectivity upload supports AES 256 encryption with strong RSA key length of 2048bits. • Disabled

Field Name	Description
CSPC Identity	Select the valid CSPC certificate
Test Upload button	Check the connectivity using a certificate

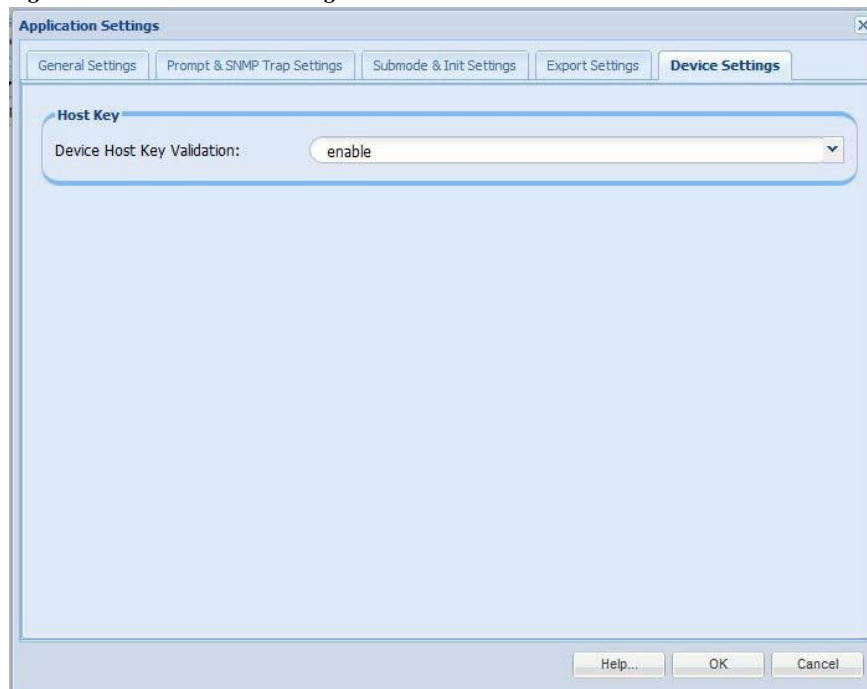

**Note**

- If Connectivity certificate changes, the new certificate is applied to connectivity. This takes 5-7 minutes to restart connectivity and apply the new certificate.
- Connectivity certificate gets modified based on the preference of the applied certificates. For Example, NOS uses connectivity for upload. All other services use Websocket. Since Web socket has higher preference, though you add NOS as connectivity certificate, it changes to the one that has higher preference like PSS, SNTC or SC.

Device Settings:

This enables or disables the key on the device during SSH communication. If it is disabled, then same key is being used repeatedly or else it generates new key.

Figure 6-24 *Device Settings*

Discovery Settings

In Discovery Settings you can set preferences of device discovery. You can set values for Discovery timeout, Include platform, and Exclude platform.

In Preference tab, enter the values as shown in [Table 6-6](#).

Figure 6-25 Discovery Settings

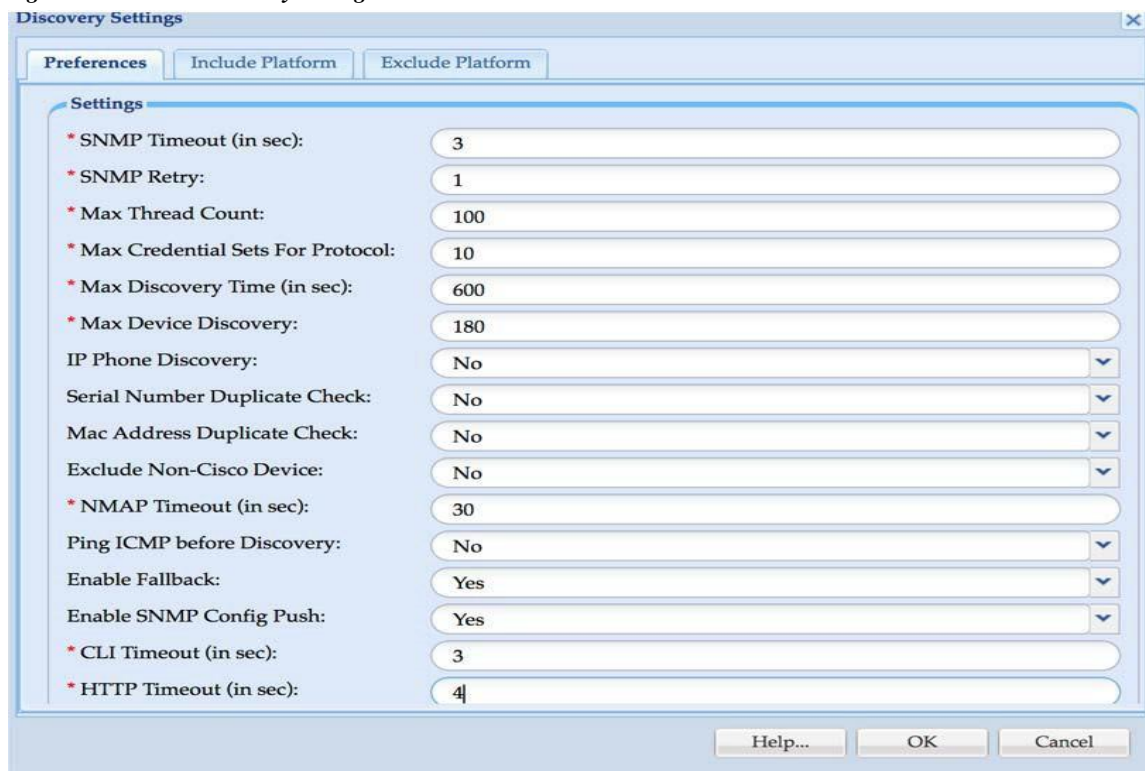

Table 6-6 Discovery Timeout

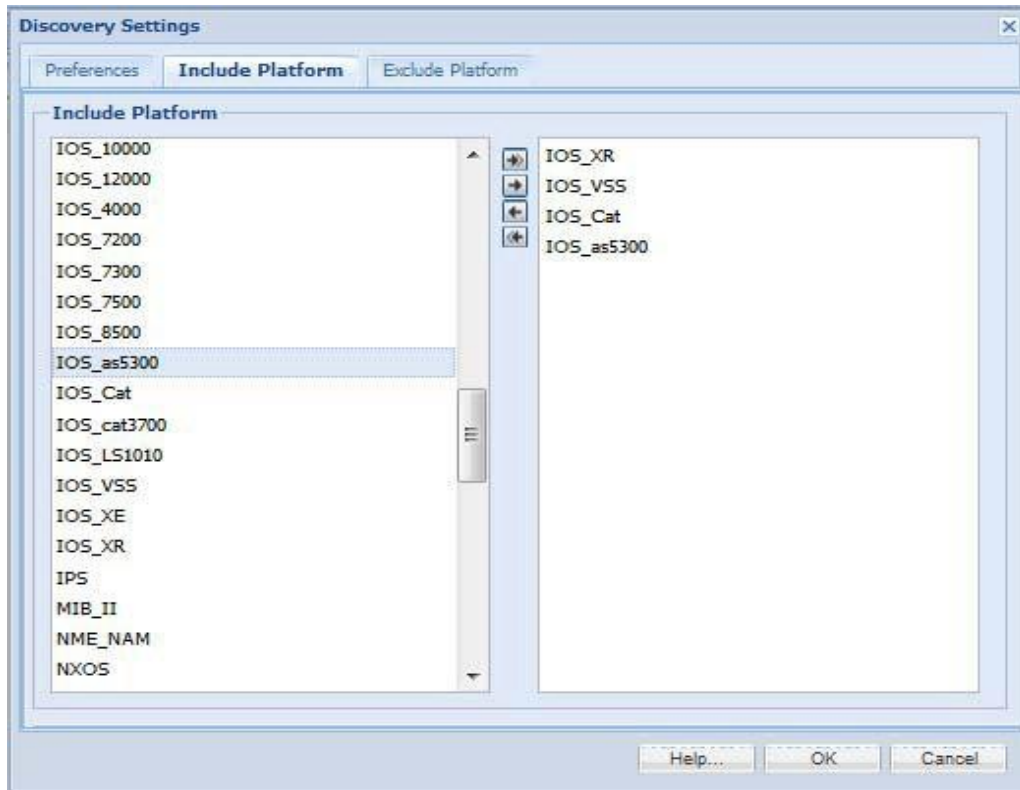

Field Name	Description
SNMP Timeout (in sec)	SNMP connection timeout value in seconds. Default value is 3 seconds
SNMP Retry	SNMP connection retry count. Default value is 1
Max Thread Count	Thread pool size for each discovery job. Default value is 100.
Max Credential Sets For Protocol	Maximum number of Credential Sets to use for each protocol. Default value is 10.
Max Discovery Time (in sec)	Maximum discovery time in seconds per device. Default value is 600 seconds. Valid values 0 or >= 60. Zero no window time will be enforced. If value is set between 0 and 60, default value 600 will be used.
Max Device Discovery	Maximum discovery time in seconds for a single device. Default value is 180 seconds. Valid values: 5 seconds and above. If value is < 5, then 5 is enforced.

Field Name	Description
IP Phone Discovery	Option to enable/disable IP Phone discovery.
Serial Number Duplicate Check	Checks for the duplicate's serial numbers. If not enabled, then serial number will not be polled for the device.
Mac Address Duplicate Check	Checks for the duplicate MAC Address.
Exclude Non-Cisco Device	If enabled excludes all the non-cisco devices from discovery
Ping ICMP before Discovery	Option is to enable/disable. If enabled pings the device before Discovery.
Enable Fallback	If discovery of selected protocols fails, and if fall back is selected discovery is tried for other protocols as per discovery properties file. <code> \$CSPCHOME/resources/discovery/properties/discovery-cso-startup.properties </code> For properties name: PRIMARY_COMM_PROTOCOL This is applicable only for known discovery and rediscovery.
Enable SNMP Config Push	If enable fallback option is selected and discovery happens using CLI protocols (telnet, SSHv1, and SSHv2), then SNMP Config push for RO string is applied.
CLI Timeout	CLI connection timeout value in seconds. Default value is 3 seconds.
HTTP Timeout	HTTP connection timeout value in seconds. Default value is 4 seconds

Include Platform (optional):

As to any platform that is specified in *include platform* list, only those specific platform devices will be discovered, and all other devices will be discarded.

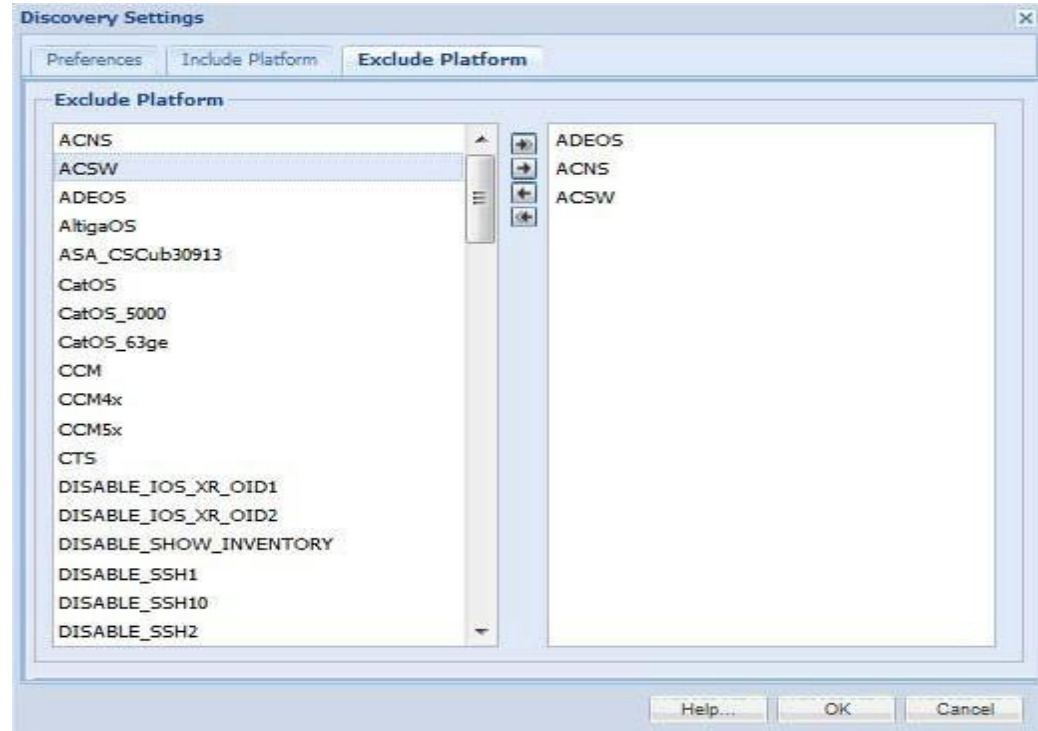

Figure 6-26 Include Platform

Exclude Platform (optional):

Any platform is specified in exclude platform list, all devices belonging to that platform will be ignored.

Figure 6-27 Exclude Platform

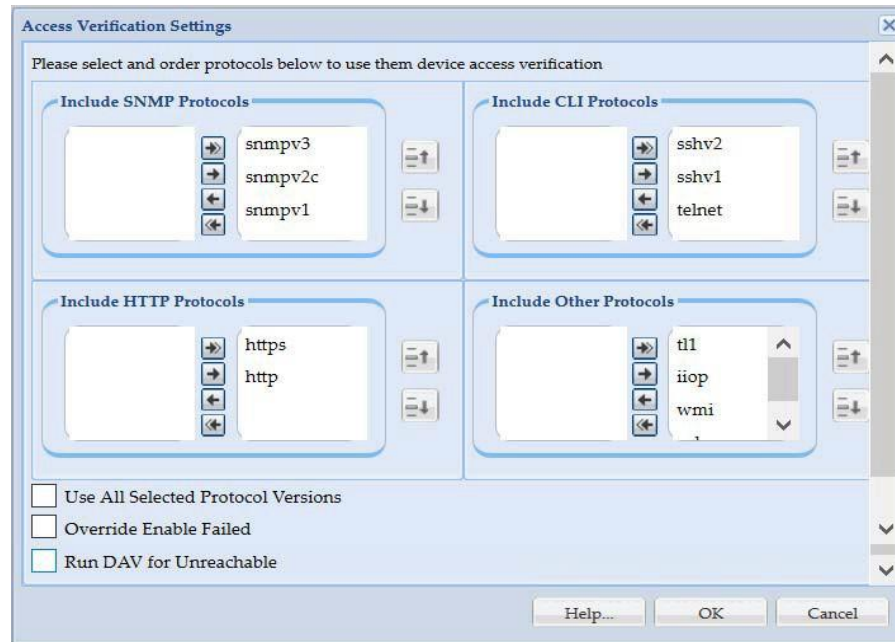

Access Verification Settings

This setting is used to select and order protocols to use them in device access verification. This is global settings that is used in DAV.

Select the protocols order to be used for access verification using side arrows and reorder them using the up and down arrows. To avoid failure, you can use the option **Use All Selected Protocol Versions** and to override the failed protocol select the option **Override Enable Failed**. If Use all selected protocol version is selected, then all the selected protocol are used even if the first protocol passes. If Override enable failed is selected, then status is shown as enabled by default even if device do not enter enable mode. If **Run DAV for Unreachable** is selected, then DAV job is triggered for all the unmanaged devices.

Figure 6-28 Access Verification Settings

Inventory Settings

Inventory Settings allows you to set some advanced collection settings.

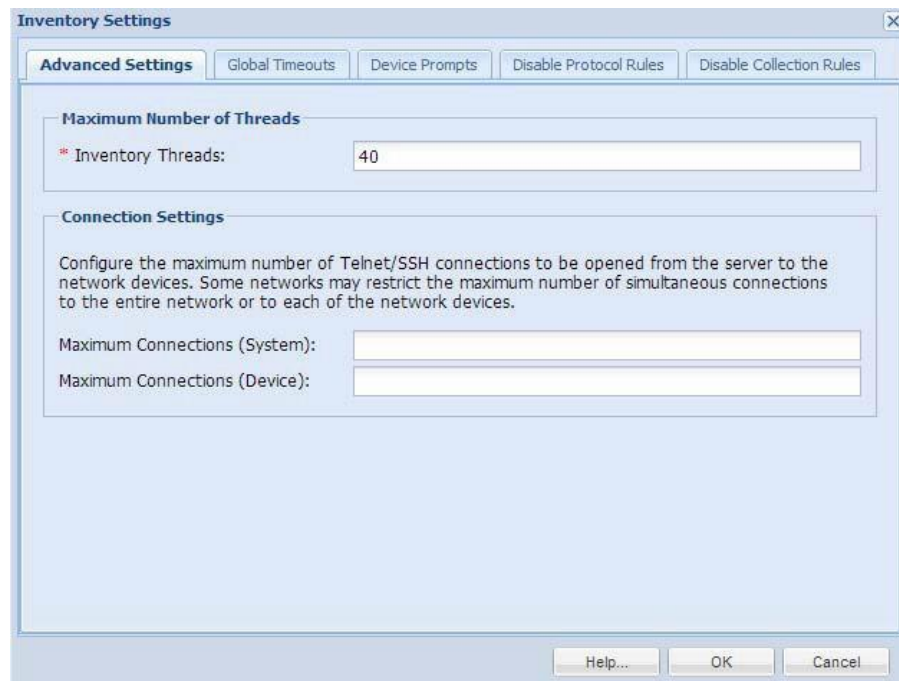

These include setting up inventory threads, device connectivity options, time out options, device prompts, disable protocol rules and disable collection rules.

Advanced Settings:

The *Advanced Settings* tab of Inventory Settings screen provides the following options:

- **Inventory Threads:** To set up the maximum number of inventory threads you would like the collector to use. By default, the value for Microsoft Windows is 40 and for Linux it varies from 40 - 100 based on the hardware configuration. Maximum value that can be set is for both Microsoft Windows and Linux is 200.
- **Connection Settings:** To set up the maximum number of connections a device can have, or the maximum number of connections per the whole collector. These settings apply only for Telnet or SSH credentials. In some networks, authentication servers provide a limit on the number of connections of either an application or a device, so this needs to be set. By default, there is only one connection per device, and no connection limit for the whole collector.

Figure 6-29 Inventory Settings

The screenshot shows a dialog box titled "Inventory Settings" with a close button (X) in the top right corner. It has five tabs: "Advanced Settings" (selected), "Global Timeouts", "Device Prompts", "Disable Protocol Rules", and "Disable Collection Rules".

Under the "Advanced Settings" tab, there are two sections:

- Maximum Number of Threads:** A sub-section containing a field labeled "* Inventory Threads:" with the value "40" entered.
- Connection Settings:** A sub-section with a descriptive paragraph: "Configure the maximum number of Telnet/SSH connections to be opened from the server to the network devices. Some networks may restrict the maximum number of simultaneous connections to the entire network or to each of the network devices." Below this are two empty text input fields: "Maximum Connections (System):" and "Maximum Connections (Device):".

At the bottom of the dialog are three buttons: "Help...", "OK", and "Cancel".

**Note**

Inventory Thread count vary based on system configurations. It is 100 for large OVA

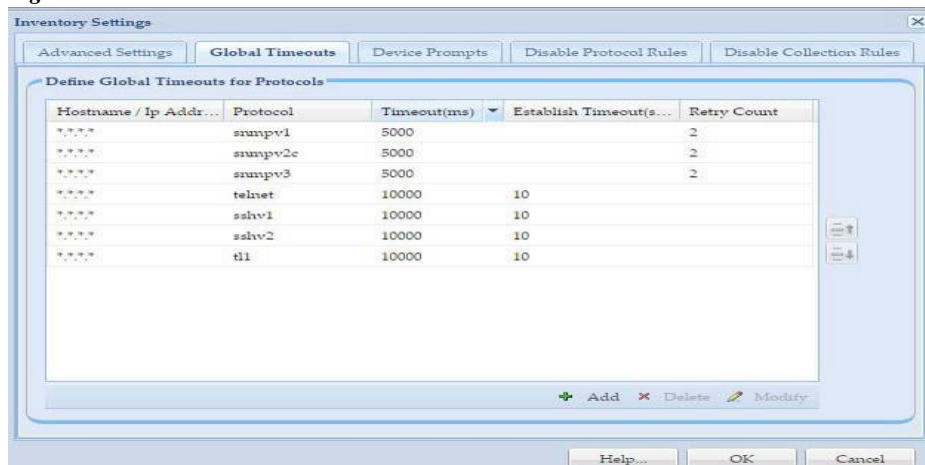

Go back to [CSPC Flow Chart](#)

Global Timeouts:

The *Global Timeouts* tab allows you to select the time out options for a given IP address or a range of IP addresses. This is where you can specify a time out option for any given protocol like Telnet, SSH, SNMP or HTTP and so on.

Vertical scroll bars are provided to move to either the previous or the next timeout option on the window. Use up and down arrow to prioritize the custom timeouts set by user.

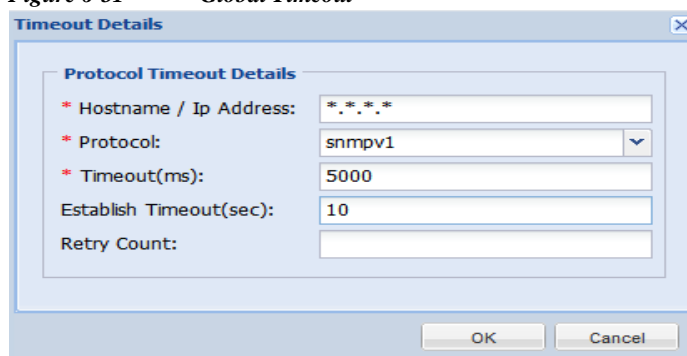

Figure 6-30 Global Timeouts

You can enter these timeouts by clicking **Add** button. On Timeout Details screen, you can enter the following details:

- Hostname / IP Address: You can select the IP Address Expression like 10.*.* (to represent all IP Addresses that start with a 10)
- Protocol: Select the protocol (Telnet, SSHv1 or SSHv2, HTTP, HTTPS, TL1, SNMPv1, SNMPv2 or SNMPv3 or WMI, IIOP)
- Timeout (ms): Type timeout in milliseconds (ranging from 1000 milliseconds (1 second) to 600000 milliseconds (10 minutes))
- Establish Timeout (sec): Time taken to establish a connection for a device. By default, it is 10seconds.
- Retry Count: You can select the “retry” count as well

Figure 6-31 Global Timeout

Use the **Modify** button to modify the global time out value. Use the **Delete** button to delete a time out value.

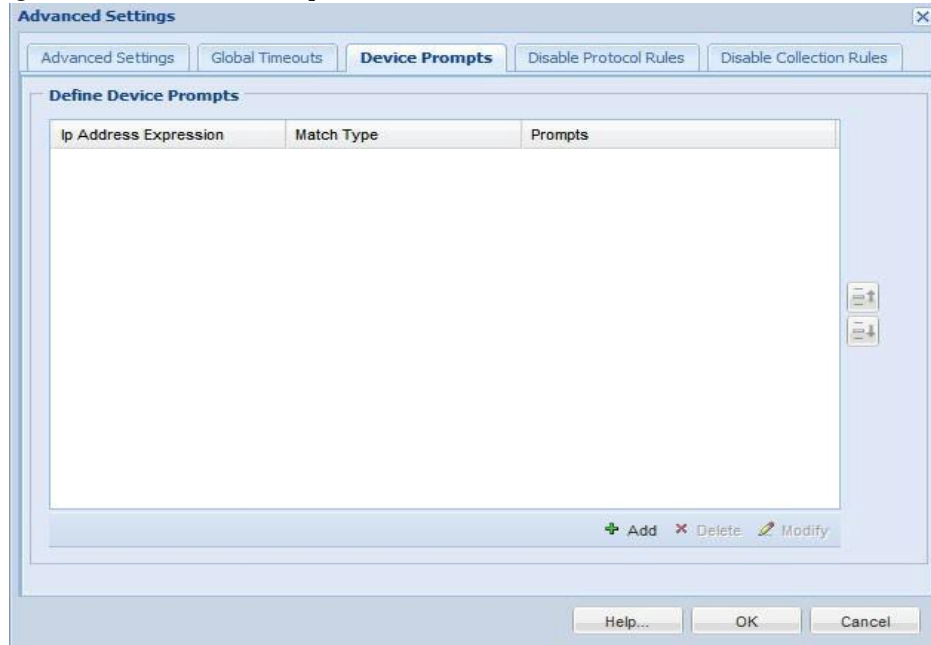

Go back to [CSPC Flow Chart](#)

Device Prompts:

The *Device Prompts* tab allows you to select specific prompt options for any given device or device group. Device prompts are used when the data collection is done on a device or device group where the prompts are changed (through an authentication server for security reasons). When the device prompts change, the collector must be able to process those prompts in order to perform data collection successfully.

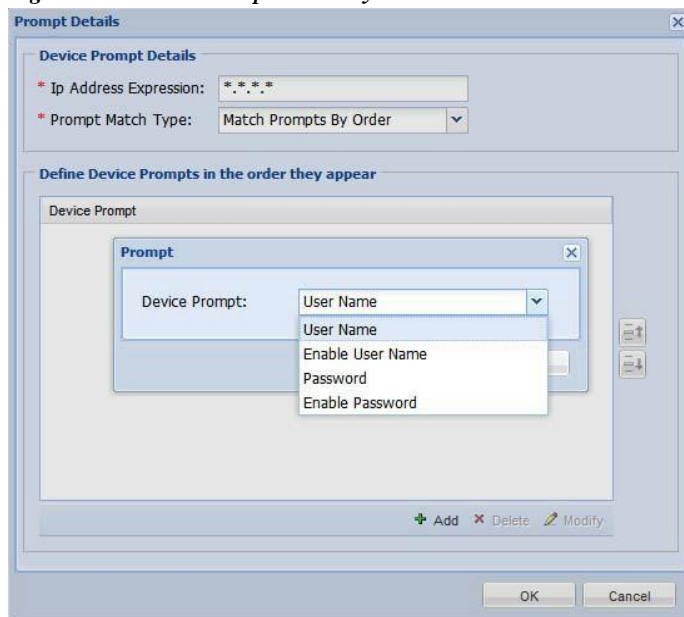

There are two ways of setting up these options; the first one is based on matching prompts by order and the second one on matching a specific string/regular expression.

Figure 6-32 *Device Prompts*

Both *Order* and *Regular Expression* are explained below.

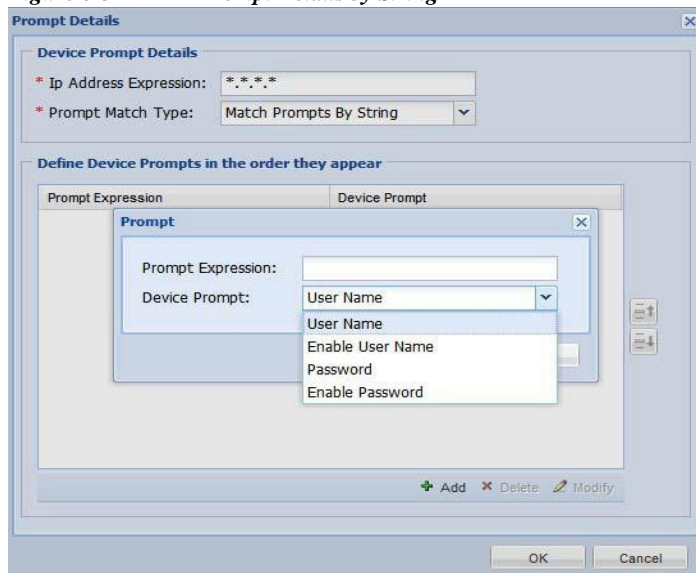

Figure 6-33 Prompt Details by Order

In the first method the device or a device group is expecting the collector to send the credential information in a particular order. For example, if the device expects to see the Password and Enable User Name and Enable Password in that order, you can change those as shown in Figure 6-33.

Similarly, if the prompts are to be matched by prompting a string, you can select that as shown in Figure 6-34.

Figure 6-34 Prompt Details by String

In this example for the device with IP Address 1.1.1.1 the User Name must have an expression of `user:` as the device prompt.

Use the **Modify** button to modify any prompts value. Use the **Delete** button to delete any prompts.

Go back to [CSPC Flow Chart](#)

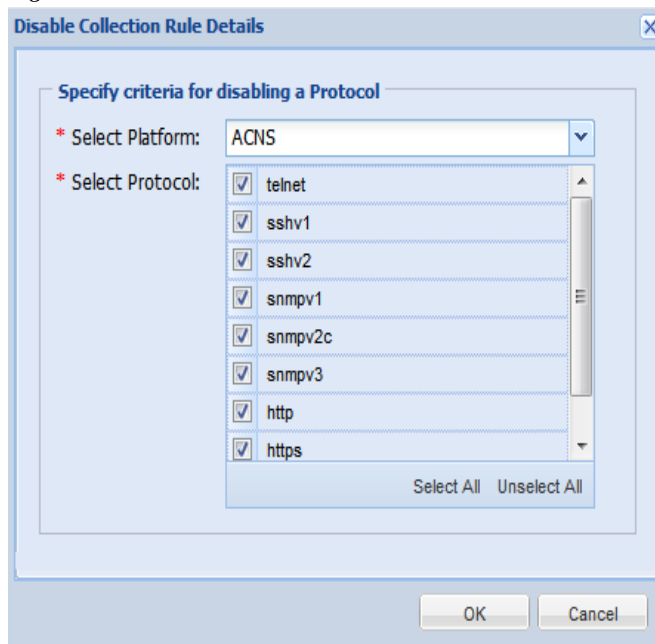

Disable Protocol Rules:

The *Disable Protocol Rules* tab allows you to configure the protocols that need to be disabled for a specific platform. Inventory and Device Access Verification will not run for the disabled protocol for the specified platform. This helps in enabling/disabling protocols without modifying the datasets. All DSIRT protocols rules are locked.

Figure 6-35 Device Protocol Rules

You can add, modify, or delete an existing disable protocol rule. Vertical scroll bars are provided to move to either the previous or the next rule in the table. To add disable protocol rule, click **Add** in the Disable Protocol Rules screen.

Figure 6-36 Disable Protocol Rule Details

Follow the steps given below to create a new disable protocol rule:

Step 1 Enter the following information:

- **Select Platform:** Select a platform for which protocol needs to be disabled from the combo list. All the configured platforms, both system and custom defined are displayed here
- **Select Protocols:** Select the protocol that has to be disabled for the above selected platform. All the supported protocols (Telnet, SSHv1,SSHv2, HTTP, HTTPS, SNMPv1, SNMPv2c, SNMPv3, WMI, TL1, LDAP, LDAPS, SQL and IIOP) will be displayed here

Step 2 You can also select or unselect all the protocols using Select All/Unselect All buttons

Step 3 Click **OK** to add the configured rule to CSPC

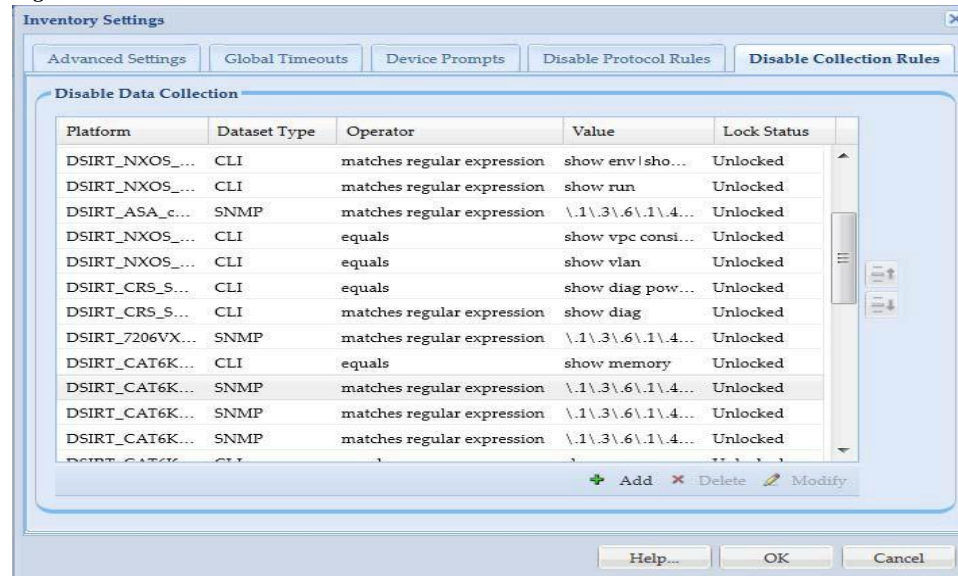

Disable Collection Rules:

The *Disable Collection Rules* tab will allow you to disable specific commands/OIDs on a specific platform. Inventory will not run for the disabled command/OIDs.

If in a given dataset, there are multiple OIDs then inventory will run for dataset and results will be displayed for OIDs which are not disabled, but collection will not happen for disabled OID.

All DSIRT collection rules are locked.

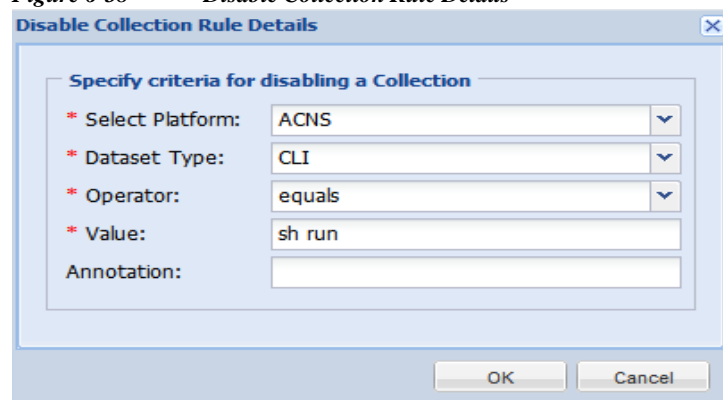

Figure 6-37 *Disable Collection Rules*

You can add, modify, or delete an existing disable collection rule. Vertical scroll bars are provided to move to either the previous or the next rule in the table.

To add disable collection rule, click **Add** on the Disable Collection Rules screen.

Figure 6-38 *Disable Collection Rule Details*

Follow the steps given below to create a new disable collection rule:

Step 1 Enter the following information:

- **Select Platform:** Select a platform for which protocol needs to be disabled from the combo list. All the configured platforms, both system and custom defined will be displayed here
- **Select Dataset Type:** Supported Dataset types are CLI or SNMP
- **Operator:** Operator can be any of equals, does not equals, matches regular expression, does not match regular expression
- **Value:** The exact CLI command or OID to be disabled
- **Annotation:** You can add a note here

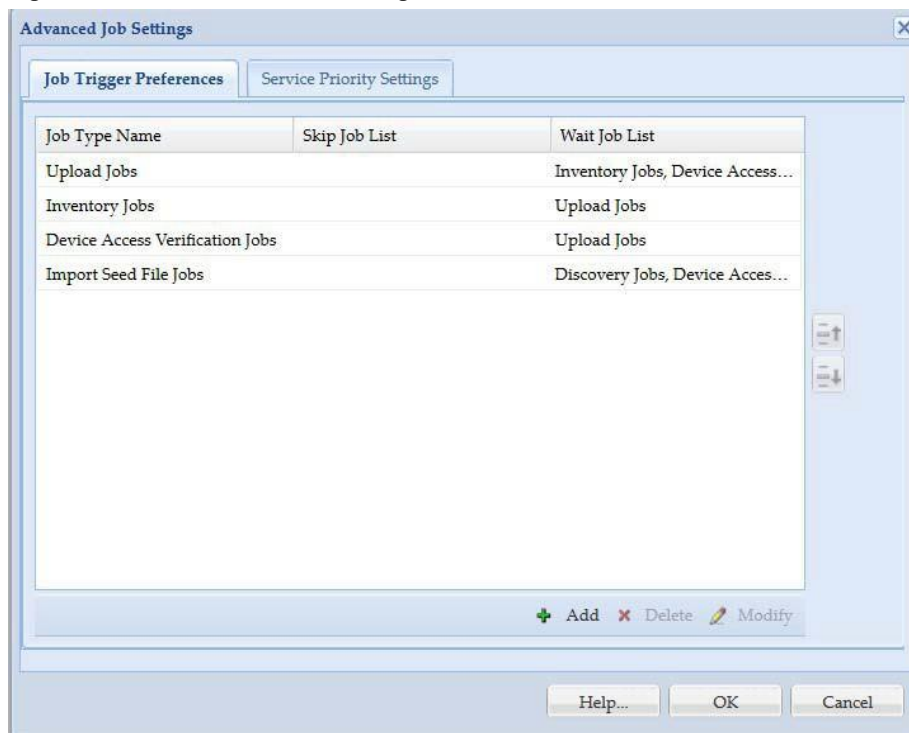

Step 2 Click **OK** to add the configured rule to CSPC

Go back to [CSPC Flow Chart](#)

Advanced Job Settings

This setting provides with an option to configure various jobs. You can define preferences for triggering a job, as well as define what jobs can be skipped and what jobs needs to wait based on a trigger preference. You can add new job trigger preferences by selecting *Add* button in the Advanced Job Settings window.

Figure 6-39 Advanced Job Settings

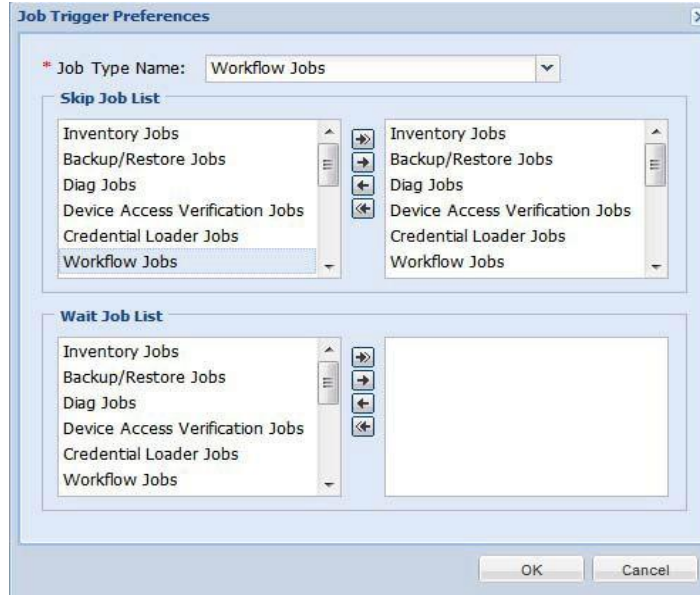

You can add jobs to Wait Job List and Skip Job List:

Wait Job List: Any job specified in Job Type Name will start only after the job specified in Wait Job list completes.

Skip Job List: Any job specified in Job Type Name will not start if any job specified in Skip Job is running.

Figure 6-40 Add a Job Trigger Preferences

To set the service priority list click **Service Priority Settings** and use arrows to add the services to the services priority list and set the priority using up and down arrows.

Figure 6-41 Service Priority Settings

Collection Rules

You can use the Collection Rules sub tab of the Device Management tab to set up data collection profiles, create new datasets, manage data integrity and masking rules.

This section describes the Collection Rules options in the following topics:

- [Manage Data Collection Profiles](#)
- [Manage Multiservice Collection Profiles](#)
- [Manage Upload Profiles](#)
- [Manage Datasets](#)
- [Manage Platform Definitions](#)
- [Manage Data Integrity Rules](#)
- [Manage Data Masking Rules](#)
- [Manage Syslog Source Files](#)

Manage Data Collection Profiles

Collection profile defines what data to collect, from what devices that data needs to be collected and how often the data needs to be collected.

Figure 6-42 Collection Profile Main Window

Name	Lock Status	Scheduled	Device Selection	Dataset Count
config	UnLocked	⊗	Selected	1
test1	UnLocked	⊗	Selected	1
dsirt	UnLocked	⊗	Selected	4
rr	UnLocked	⊗	Selected	1
ccm	UnLocked	⊗	1 device(s) Selected	1
context	UnLocked	⊗	Selected	4
Default_CP	UnLocked	⊗	All Devices Selected	260
xml	UnLocked	⊗	Selected	2
test	UnLocked	⊗	1 group(s) Selected	2

Note Based on service entitlement(s) CP are added.

If there are no collection profiles created, CSPC does not collect any data from any device.

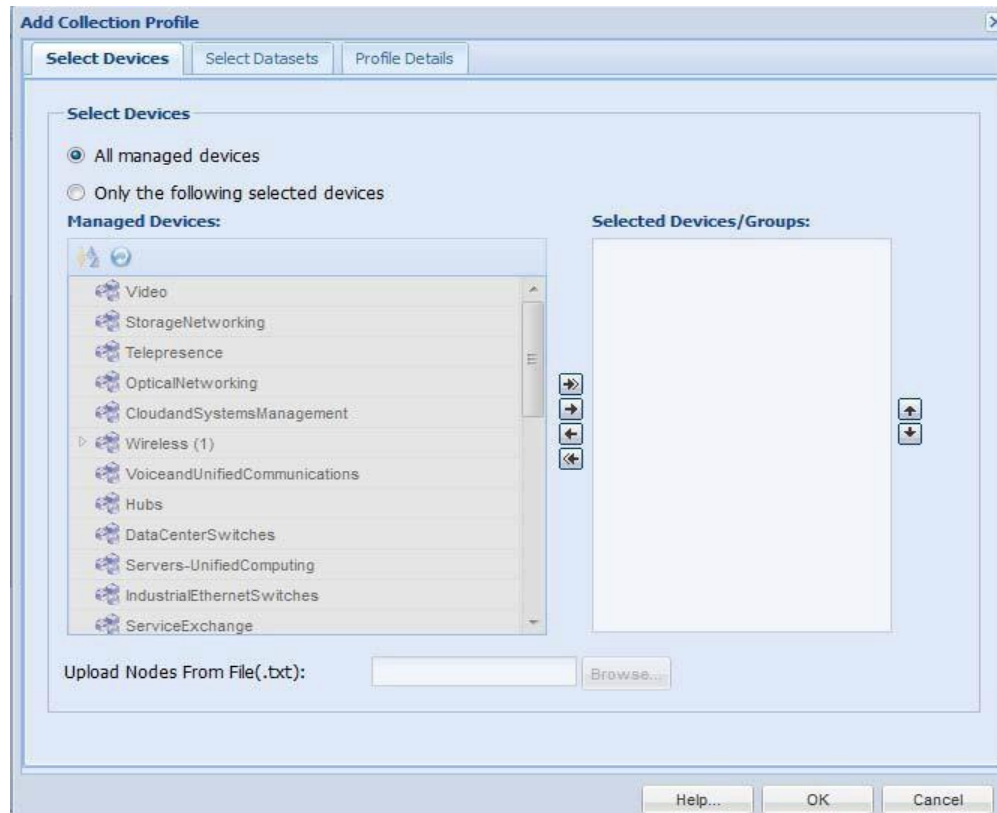

New data collection profiles can be created by clicking *Add Collection Profile* from Manage Data Collection Profiles window.

You can also import collection profiles from a zip file stored locally on your system. To do so, click *Import Collection Profile from Zip File* button and select the zip file with collection profiles.

To add a new data collection profile, follow the steps given below:

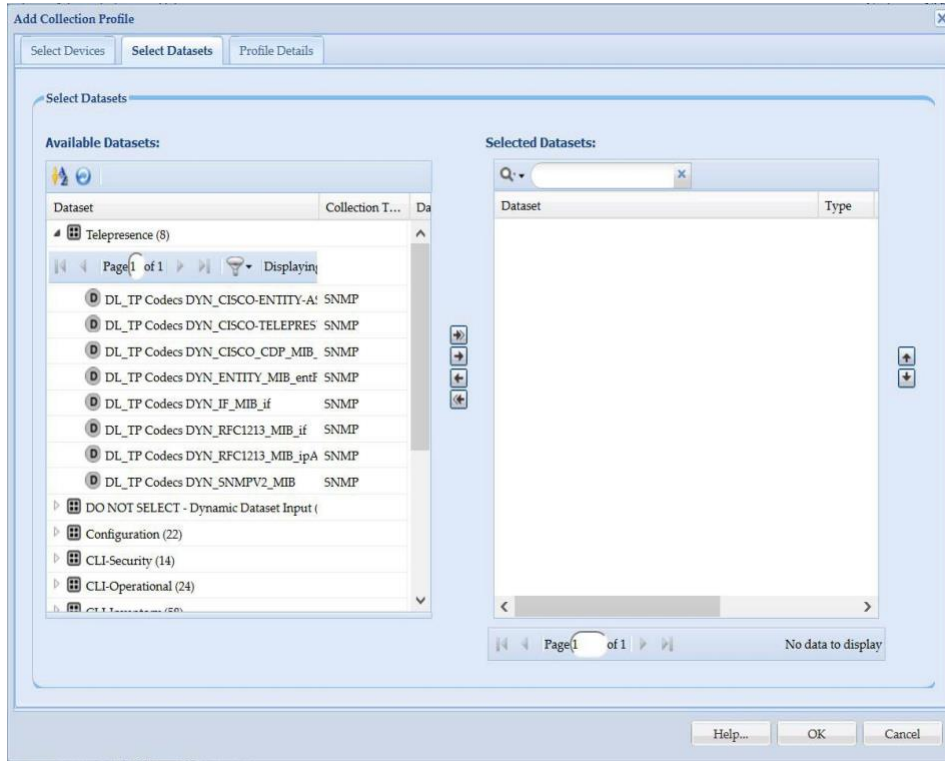

- Step 1** Select the Devices
- Step 2** Select Datasets
- Step 3** Select Profile details
- Step 4** Click **OK**

Figure 6-43 Select Devices for a Collection Profile

To start the collection, select a device or a set of devices or import the .txt file which has IP address of devices and each IP should be enter in the consecutive line, from which the data is to be collected as shown in the above figure. Once you select the devices, the second step in creating a profile is to select some datasets. A dataset in CSPP is an output of a command (CLI), a SNMP request, a SOAP/XML request, or a File. *Datasets* are explained in the *Manage Datasets* chapter.

Figure 6-44 Select Datasets

Use arrows to add the datasets to the Selected datasets list and to move the selected datasets use up and down arrows, click **OK**. Once the required Datasets are selected, select the profile options that define how often you want to collect the data, as shown below.

Figure 6-45 Profile Details

Add Collection Profile

Resume this job automatically if its interrupted due to a CSPC server restart

Export Options

Export upon successful execution of collection profile

* Export Format:

* File Name Prefix:

Upload To Remote Server:

This provides an option to select the priority of the profile itself, and how many versions of this profile run data need to be preserved and finally how often the profile is executed to collect data. You need to provide a title that identifies this profile as well as an identifier (which is used by the XML APIs to uniquely identify this profile). If no identifier is provided, the system generates an automatic identifier for this profile.

Tag is an information that get appends to VSEM file, select the option from drop-down or enter the tag manually to tag the profile.

Each profile is set up with a specific priority. Higher priority profiles always take precedence when there is a contention for resources.

You can specify the *Service Name* and *Service Version* for the profile created. Service version is for the specific service program that collects and uploads the data. Service name is mandatory to creating collections profiles. Without service name collection profiles can be created, but it will get upload as it is necessary to be mapped to any of services that you have uploaded.

Specify the *Rule package version*.

Select the data *Aging Mode* from drop-down:

If you select *Default Aging*, then it takes time interval that is already available. This option is enabled by default and uses the aging interval specified in the dataset.

If you select *Disable Aging*, then data aging is disabled. This option disables data aging, and the collection happens directly from the device.

If you select *Custom Aging*, then you have to define the Collection Interval in milliseconds. This option refers to CP level data aging (milliseconds) and this will override the aging defined in the dataset, also enables *Disable Collection From Device* option to use.

Use *Disable Collection From Device* option to disable collection from devices. If enabled, it does not collect missing/aging expired dataset data directly from the devices. The data for those datasets will be shown as 'Skipped' in the CP summary report. If disabled, it collects missing/aging expired dataset data from the device.

The *Use Fallback Credentials* option is provided in case the credential that is being used for data collection fails (typically if you are using the Discovery Credentials for the data collection as well, it might not work on all the devices). CSPC picks up the next credential that passed Device Access Verification as a fall back credential to collect the data.

Use the *Run Discovery before Collection* option to rediscover the devices before running the inventory.

Use *Include Non Managed devices for discovery* option to discovery the non managed devices.

The *Run Prompt Discovery before Collection* option is used to collect the prompts before running the inventory.

Use the *Run DAV before Collection* option to verify the credentials before running the inventory.

Use *Disable Mask Rule* option not to mask the data collection as per the rules set.

Use the *Mask IP Address* option to mask the IP addresses collected from the customer before uploading them to Cisco.

Use the *Mask Domain Name* option to mask the domain names collected from the customer before uploading them to Cisco.

Mask IP Address and *Mask Domain Name* options are for data privacy and their usage depends on customer needs. You can specify the mask settings in *Advanced Settings* option under *Settings* menu.

Use the *Export Seed File* option, if you want to upload all the original seed files saved in the system along with the Collection profile. You can also export Unreachable devices. This option is disabled if masking/DPA is enabled.

Use *Export Options* if you would like to export the collection profile data after the successful execution of the collection profile. You can export the data to the following format:

- Cisco VSEM(.zip)

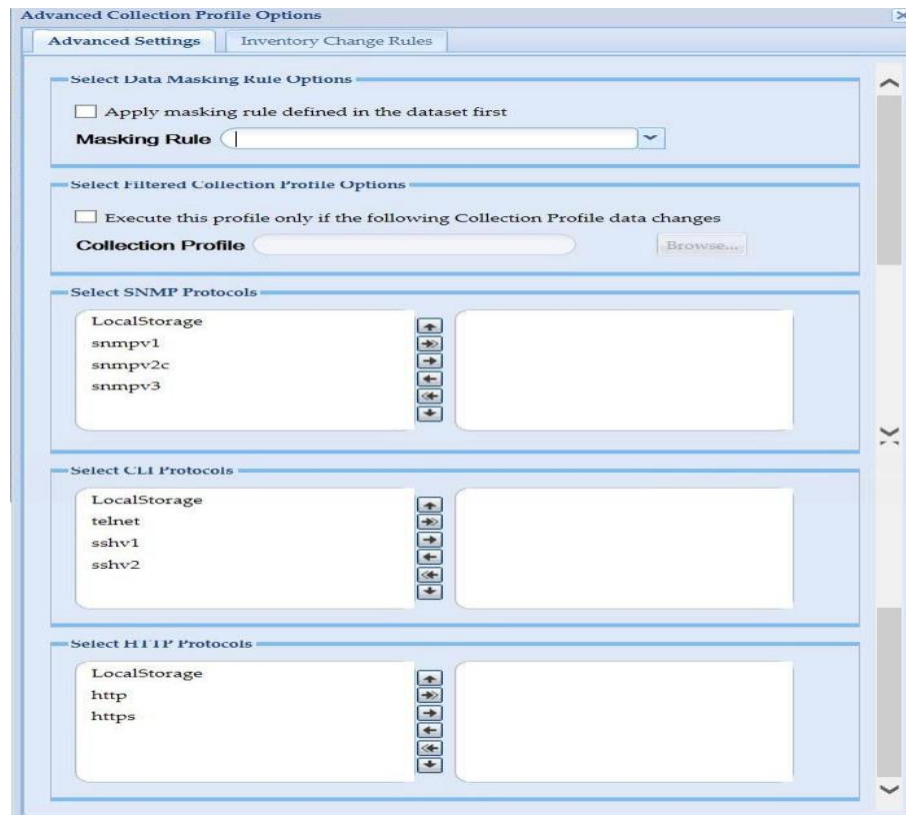

Check the Upload to Remote Server checkbox, if you would like to upload the collection profile details to the remote server. If the Upload to Remote Server box is left unchecked the collection profile data is not uploaded to remote server.

Once these steps are finished, click **OK** and the Data Collection Profile is created and ready for use.

When a Collection Profile is scheduled to run at later time, 'Resume this job automatically if it's interrupted due to a CSPC Server restart' option will be available. If the CSPC restarts for any reason while Collection Profile is running, CSPC will resume the job upon restart.

When you click *Advanced Options* in Profile Details window, following windows is displayed.

Figure 6-46 *Advanced Collection Profile Options*

Advanced Collection Profile Options window shows the available, SNMP, CLI and HTTP protocols. You can select the desired protocol from the list and add it by clicking arrow  or select all by clicking on the double arrow .

You can move the protocol up or down by using the arrow keys next to the selected box. The protocol on top in the selected box takes precedence and is run first as compared to the ones below it.

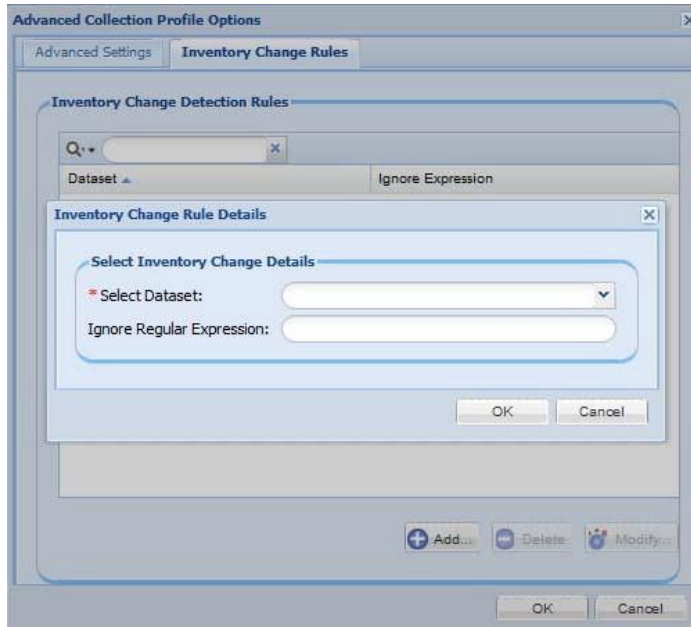

If you select *LocalStorage*, then whenever you execute for a particular device or dataset it will first check if it exists in the local database, if it is not found then based on the protocol order selected it will go to the next one.

You can also set a filter to execute the profile only if a certain collection profile changes. To set the filter, select the check box next to *Execute this profile only if the following collection profile data changes*, click **Browse** button and select the collection profile.

To apply mask rule select *Apply masking rule defined in the dataset first* and select the Masking rule from drop-down.

Click *Inventory Change Rules* to add or modify the Rule. Select Dataset and enter Ignore Regular Expression and click OK

Figure 6-47 Inventory Change Rule Details

Click **OK** button to save the selection.

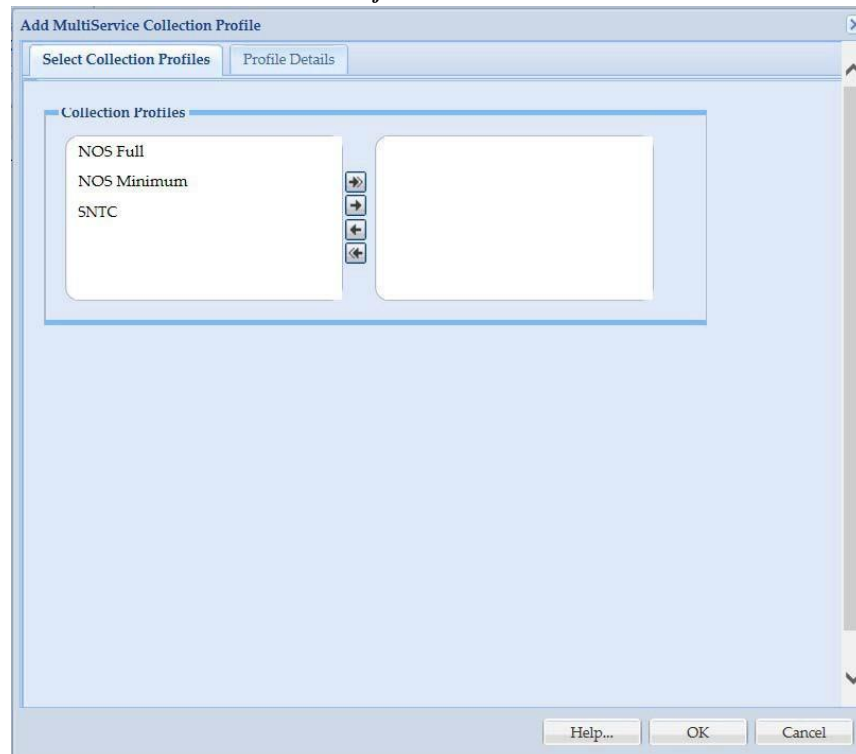

Go back to [CSPC Flow Chart](#)

Manage MultService Collection Profiles

Manage Multi Service Collection Profiles is used to define, and configure the Multi Service Collection Profile. Collection profiles that are executed together and you can Add, Modify, or Delete a collection profile. It combines devices and datasets from all the selected collection profiles and collects data in one single inventory job. If any of collection profile has run Discovery, DAV, Prompt before collection, and if any other settings are enabled then those settings are considered for multi service collection profile.

Figure 6-48 *MultService Collection Profiles*

In collection profile dialog box, select the collection profile using arrows.

Figure 6-49 *Add MultiService Collection Profile*

In Profile details dialog box, enter the Profile name and generate the identifier. You can schedule the collections periodically or run the collections now. To run collection, refer [Collect Data](#).

Figure 6-50 Profile Details

Manage Upload Profiles

In Manage Upload Profiles, you can specify the type of data which includes syslogs, inventory, and DAV that needs to be uploaded locally or to the backend.

Note

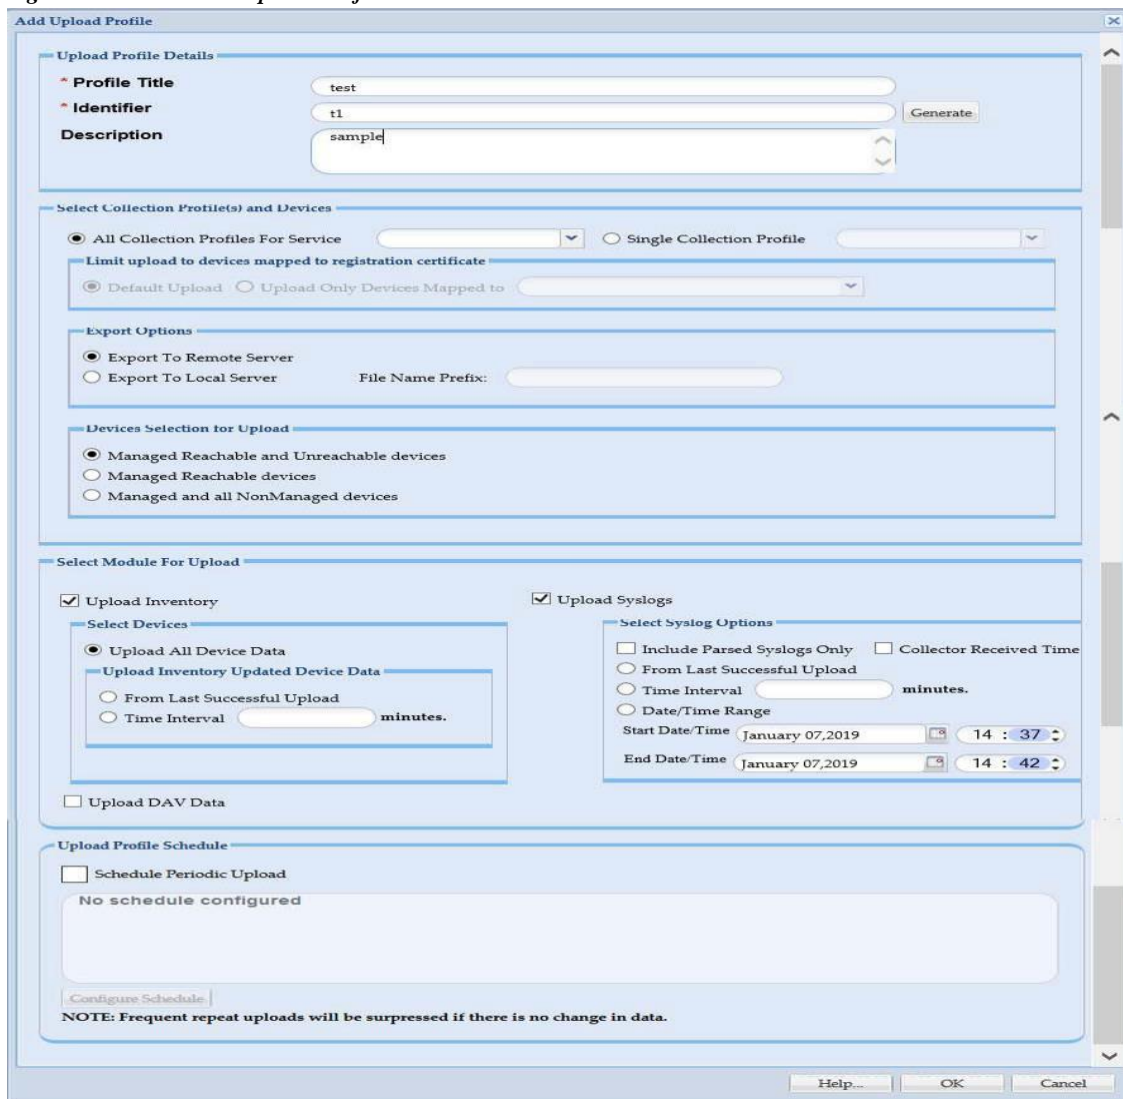

Default upload profiles are created for NOS service when a nos configurer gets installed. Below screen is only for NOS.

Figure 6-51 Manage Upload Profile

You can import an upload profile from zip file stored on your system. To do so, click **Upload Profile from a Zip file** icon on Manage Upload Profiles screen. In Upload File dialog box, browse to the file and click **Submit** button to start uploading the file.

Figure 6-52 Add Upload Profile

You can choose **All Collection Profiles For Service** or **Single Collection Profile** and select corresponding registration certificate from drop down.

You can upload devices to the default registration certificate using **Default Upload** or to a registration certificate from drop down using **Upload only devices mapped to**.

Select the required type of devices to upload such as

- Managed Reachable and Unreachable devices (Default)
- Managed Reachable devices
- Managed and all Non Managed devices (this option uploads all the devices in CSPC).

If **Upload Inventory** is selected, then you can **Upload All Device Data** (Full Inventory upload) or collected data with in specified time interval by specifying the **Time Interval** in minutes or choosing an option **From Last Successful Upload**. (Incremental Inventory upload).

If **Upload Syslogs** is selected, then you can upload Syslogs by choosing an option **From Last Successful Upload** or by providing **Date/Time Range** or specifying **Time Interval** in minutes.

Selecting **Include Parsed Syslogs Only** if this option not selected, then by default all the syslogs are considered and If **Collector Received Time** is selected, then the time selected is form collector else it is default system time

To upload DAV data, select the **Upload DAV Data**.

You can also schedule periodic uploads of the data using Configure Schedule option. This data can be exported to remote server or to a server locally.

Figure 6-53 Upload Warning Message

Note Frequent repeated uploads will be suppressed if there is no change in data. If no change in the collected data from the previous successful upload, then upload data will be suppressed by bundling only limited requiredfiles.

Manage Datasets

Manage Datasets is used for creating a new data collection point. Datasets are the building blocks of CSPC Collection Profile. Datasets contain the platform definitions, data/masking rules. You can either Add, Modify or Delete a dataset.

A Data Set in CSPC is an output of a command (CLI), SNMP request (SNMP) or XML output (SOAP/XML).

Figure 6-54 Manage Datasets

Dataset Name	Type	Collection Type	Lock Status	Applicable Platforms	Category	Created By
PhysicalPortID_ContainedIn	Dynamic	SNMP	UnLocked		PhysicalPort	admin
PhysicalPortID_Descr	Dynamic	SNMP	UnLocked		PhysicalPort	system
PhysicalPortID_HardwareRev	Dynamic	SNMP	UnLocked		PhysicalPort	system

show context start Dynamic	Dynamic	CLI	UnLocked		Subcontext	admin
show_vdc	Static	CLI	UnLocked	[Custom]	SubModule	system
show_vdc_run	Static	CLI	UnLocked	[Custom]	SubModule	system
show vdc run Dynamic	Dynamic	CLI	UnLocked		Subvdc	admin
show_vdc_start	Static	CLI	UnLocked	[Custom]	SubModule	system

Select **Add Dataset** option when you are ready to create a new data set. You can create Static and Dynamic datasets.

You can also import datasets from a zip file. To do so, click “Import Dataset from a zip file” button on the Manage Datasets window and select to the zip file to import.

Static Dataset

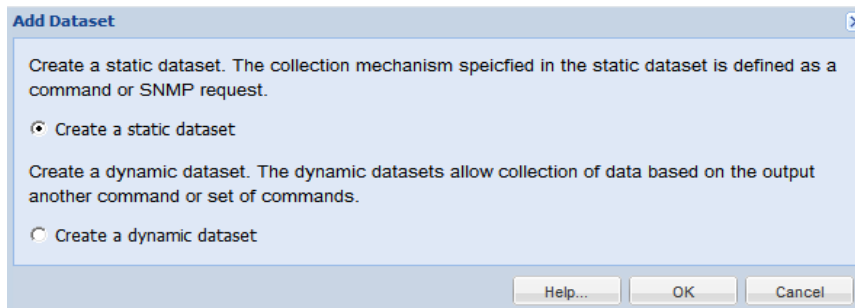

Collection mechanism specified in the static dataset is defined as a command or SNMP request

Follow the steps given below to add a new static data set:

-
- Step 1** Provide data set details
 - Step 2** Provide data set platforms
 - Step 3** Click **OK**

Select **Create static dataset** option and then click **OK** button to create a static dataset as shown in the figure below.

Figure 6-55 Add Dataset

Add/Modify Dataset is used for creating/modifying a Dataset. Dataset can be added either as locked or unlocked.

The following are the steps to add a dataset.

-
- Step 1** Provide the following dataset details:

Title: Name of the Dataset. This is a mandatory field

Identifier: This can be user defined. If this is not defined by user, this will be generated by System

Category: This is a mandatory field. This is custom defined by user. If you enter a category that does not exist, a new category is created

Collection Interval: You can specify the collection intervals in milliseconds

Tag: Select the tag from the drop down list

Description: Description for the Dataset

Figure 6-56 Provide Dataset Details

The screenshot shows a dialog box titled "Add Dataset" with two tabs: "Dataset Details" (selected) and "Dataset Platforms". The "Dataset Details" tab contains the following fields:

- Title:** datasetdetails
- Identifier:** _datasetdetails (with a "Generate" button to the right)
- Category:** CISCO-MEMORY-POOL-MIB (dropdown menu)
- Tag:** Config (dropdown menu)
- Collection Interval(ms):** 100000
- Description:** (empty text area)

At the bottom of the dialog box are three buttons: "Help...", "OK", and "Cancel".

Step 2 Once this information is provided, you can now select the applicable platforms for this dataset and the collection method using the following options:

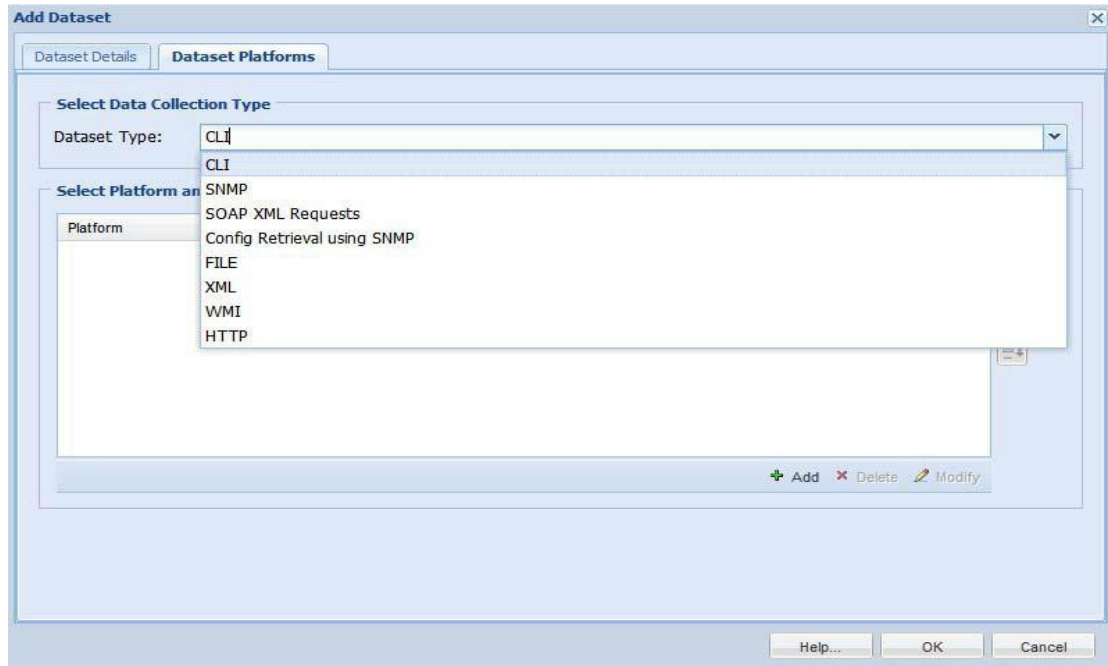

Dataset Type:

- CLI
- SNMP
- SOAP XML Requests
- Config Retrieval using SNMP
- FILE
- XML
- WMI
- HTTP
- TL1
- IIOP
- SQL
- LDAP

CLI:

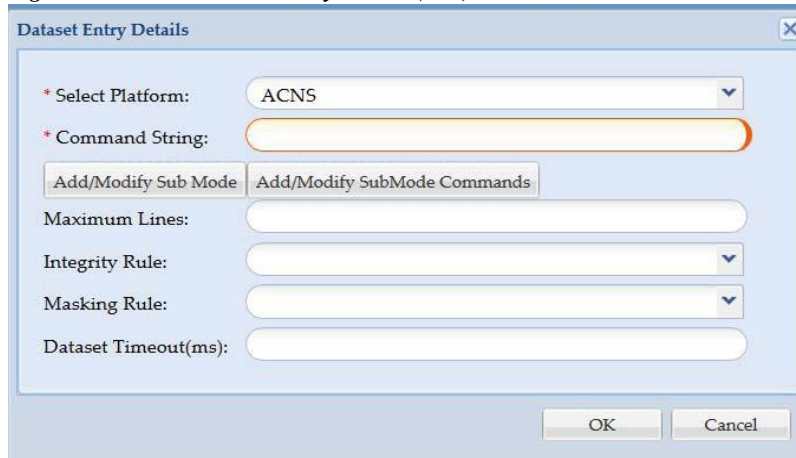

CLI is selected in this example. CLIs are the datasets which contains commands to execute on the device.

Figure 6-57 Dataset Platform Options (select CLI)

Select a specific platform for which this dataset is applicable. The list of platforms is pretty extensive, and you can select a platform based on a matching operating system, matching device group or any other format. You can also create your own platform definitions as explained in the *Manage Platform Definitions* chapter.

Figure 6-58 Dataset Entry Details (CLI)

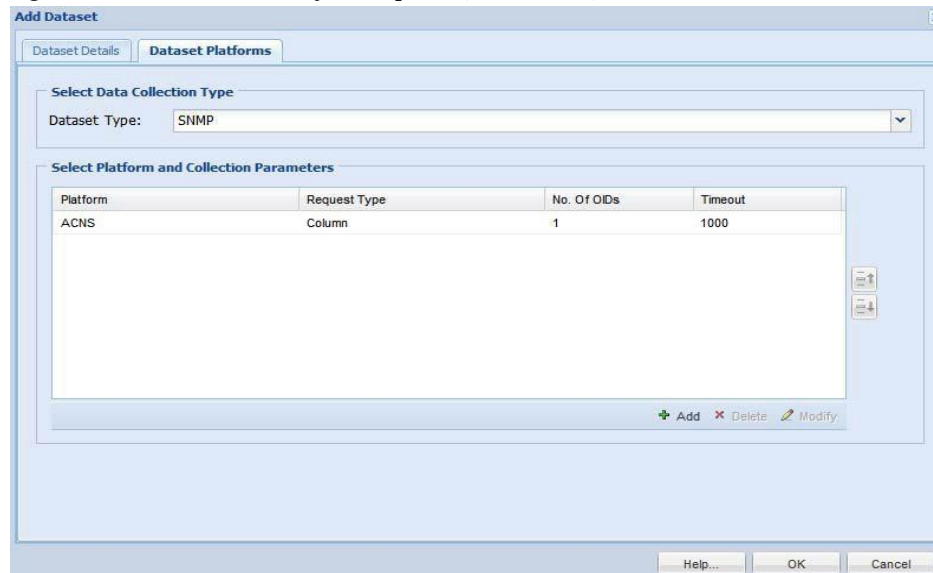

Once the platform is selected, enter a command string (as you are creating a dataset based on CLI) for NATED Appliances you need to use this format as explained in [Optional Parameter for NATED Appliances, page C-1](#), and enter other details such as:

- Sub mode is list of commands to enter and exit sub mode context
- Sub mode command is used to include all the commands that are required to executed in the sub mode context
- Maximum Lines (some command outputs might run in to thousands of lines, using this option provides a way to curtail that information to the selected number of lines)
- Integrity Rule (helps to determine if the command output returned from the device is a proper output on successful execution of the command or the output returned is an error message. You can define your own integrity rules. Integrity Rules are discussed further in *Applications->Device Management->Data Collection Settings* tab),
- Masking Rule (what specific fields in the command output needs to be masked)
- Dataset time out (how much time collector should wait for the data output).

SNMP:

Select SNMP option from Dataset Type and click **Add** button.

Figure 6-59 Dataset Platforms Options (select SNMP)

The following screen shots show adding an SNMP data set. Once you select *SNMP* in the Dataset Platform Options, add the MIB variables as shown in [Figure 6-60](#). All the MIBs that are preloaded are shown, and you can pick which MIB and which variables you would like to add to your dataset.

Figure 6-60 Dataset Entry Details (SNMP - Select the MIB Variables)

Once the selection is finished, click **OK**.
 SNMP variables are added to your new data set as shown below.

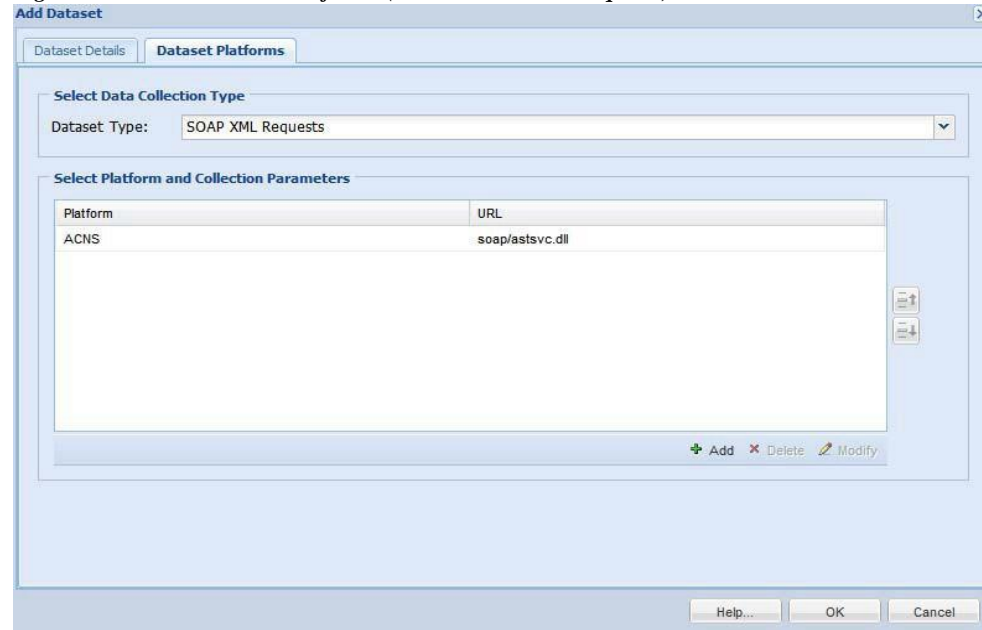

Figure 6-61 Dataset Entry Details - SNMP

SOAP XML Request:

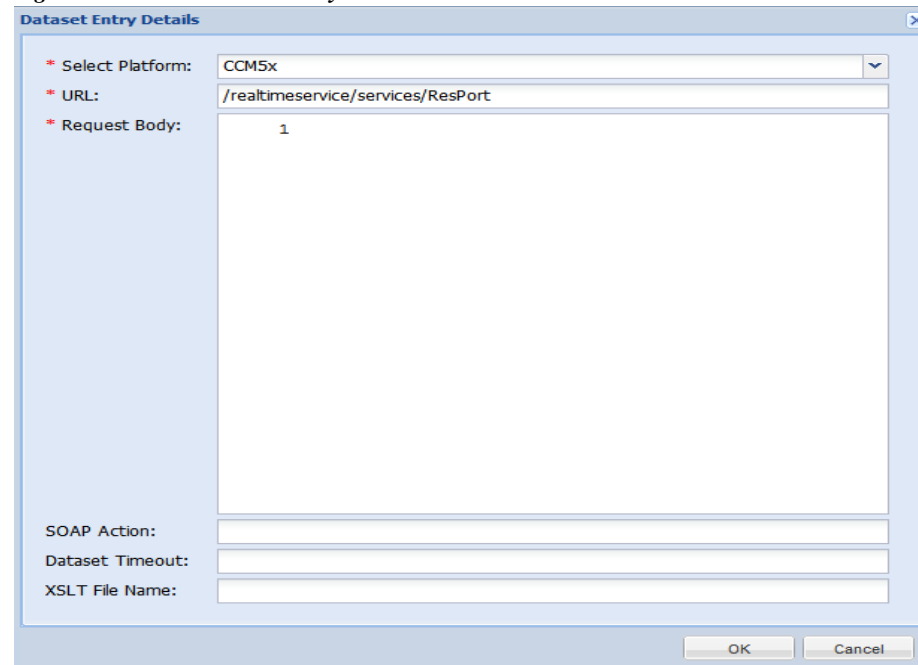

Select SOAP XML Request option from Dataset Type and click **Add** button.

Figure 6-62 Dataset Platforms (select SOAP XML Requests)

Enter the details for *SOAP XML* as defined below. Once all the data is entered you are ready to add a new *SOAP XML* dataset.

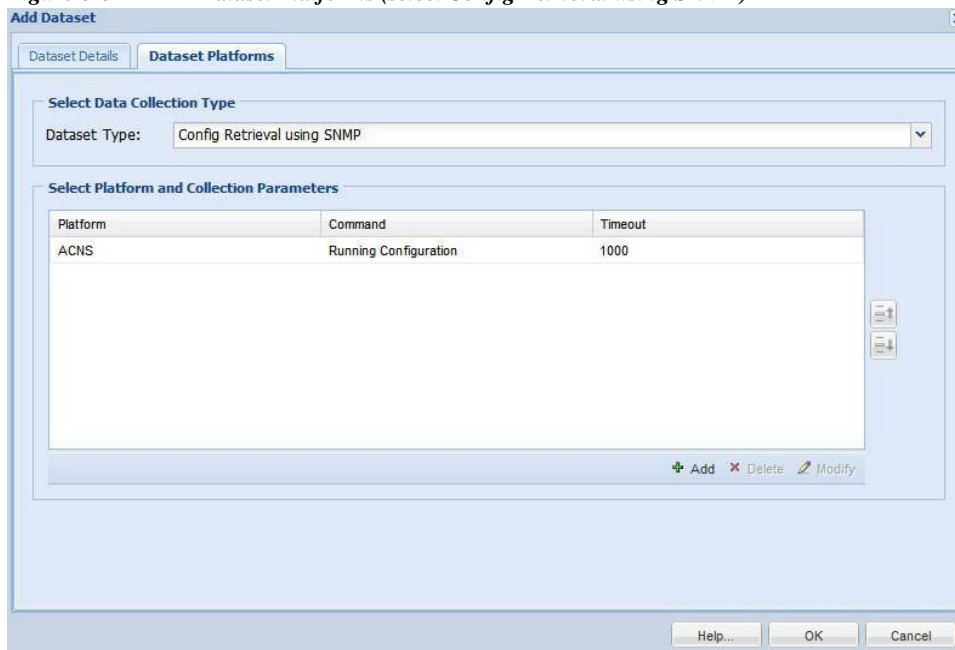

Figure 6-63 Dataset Entry Details - SOAP XML

Config Retrieval using SNMP:

Once you select Config Retrieval option, and click **Add** button you can start collecting the configuration (either running or startup) using SNMP. Once you select the type of data set you would like to create based on the protocol selected, click **Add** button to enter the details for the data set.

Figure 6-64 Dataset Platforms (select Config Retrieval using SNMP)

Enter the details for SNMP *ConfigRetrieval*. Once all the data is entered you are ready to add a new *ConfigRetrieval* using SNMP.

Figure 6-65 Config Retrieval using SNMP Details

FILE:

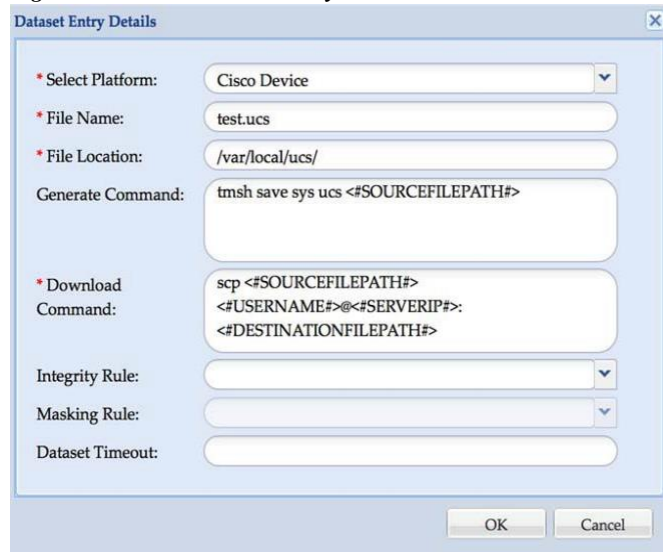

When you select FILE option, and click **Add** button, you can start collecting the data based on either a *predefined file* or *user defined file*.

Figure 6-66 Dataset Platforms (Select FILE)

Select the Platform and enter the details for File name, File location and Download Command. If required enter Generate Command and dataset timeout. Also, you can select Integrity Rule and MaskingRule. Once all the data is entered you are ready to add a new FILE dataset.

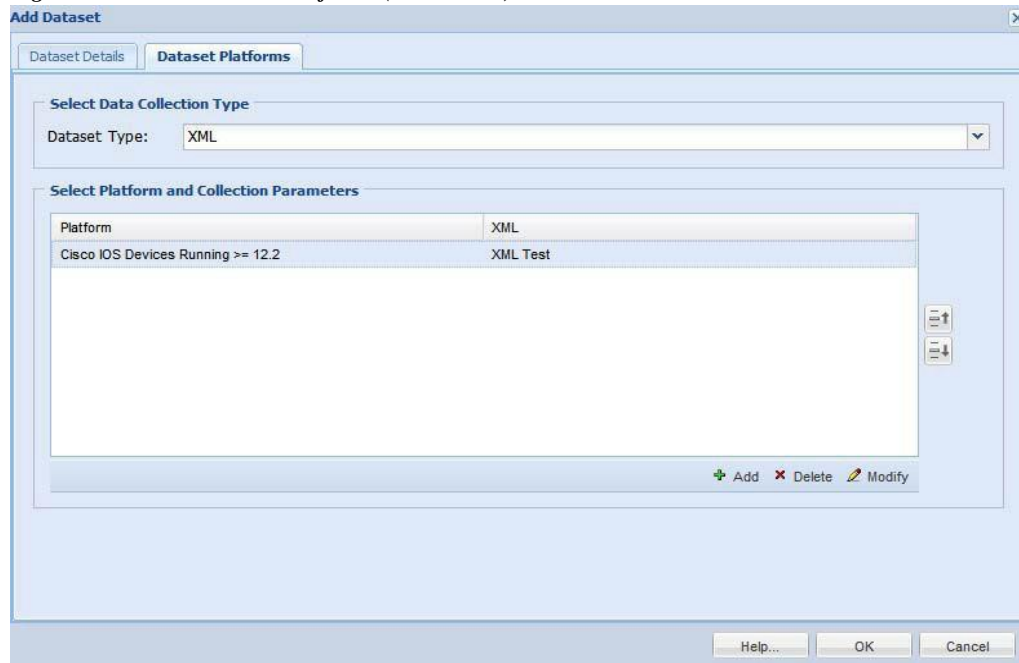

Figure 6-67 Dataset Entry Details - FILE

XML:

Once you select XML Dataset option and click **Add** button, you can start collecting data in XML format for supported platforms. Once you select the type of data set you would like to create based on the protocol selected, click **Add** button to enter the details for the data set.

Figure 6-68 Dataset Platforms (Select XML)

Enter the details for XML selection. Once all the data is entered you are ready to add a new XML dataset.

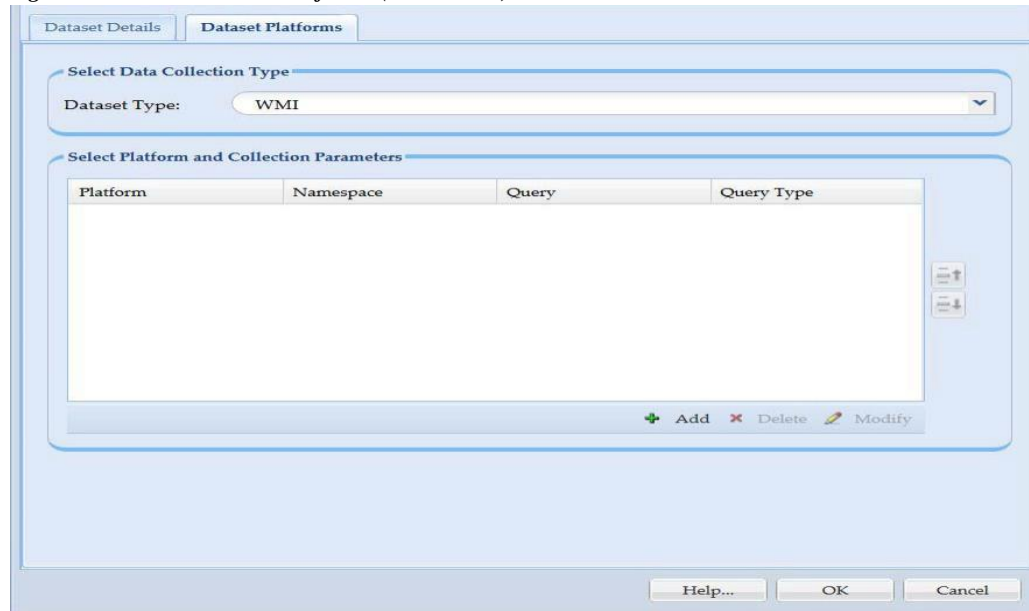

Figure 6-69 Data Entry Details - XML

WMI:

Once you select WMI Dataset option and click **Add** button, you can start collecting WMI data for supported platforms. Select the platform, enter Name space, select Query type, enter the Query. Select the masking rule and enter the Dataset Timeout (ms) Click **OK** button to add the data.

Figure 6-70 Dataset Platforms (Select WMI)

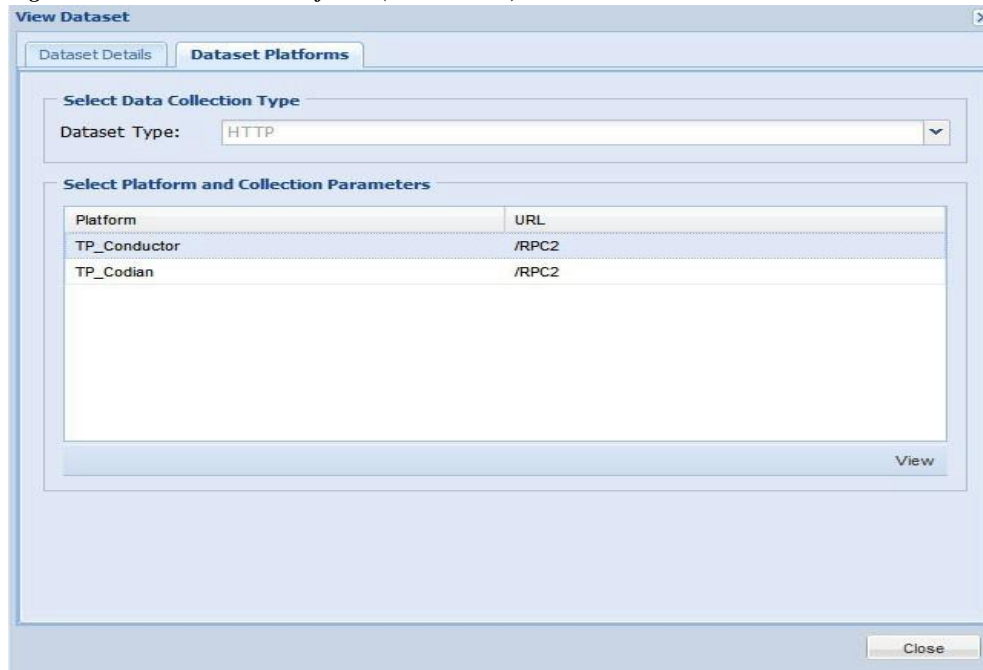

Enter the details for WMI selection. Once all the data is entered you are ready to add a new WMI dataset.

Figure 6-71 Dataset Entry Details - WMI

HTTP:

Once you select HTTP option and click **Add** button, Select the platform, and specify the URL. These are mandatory fields. Once done you can start collecting the data.

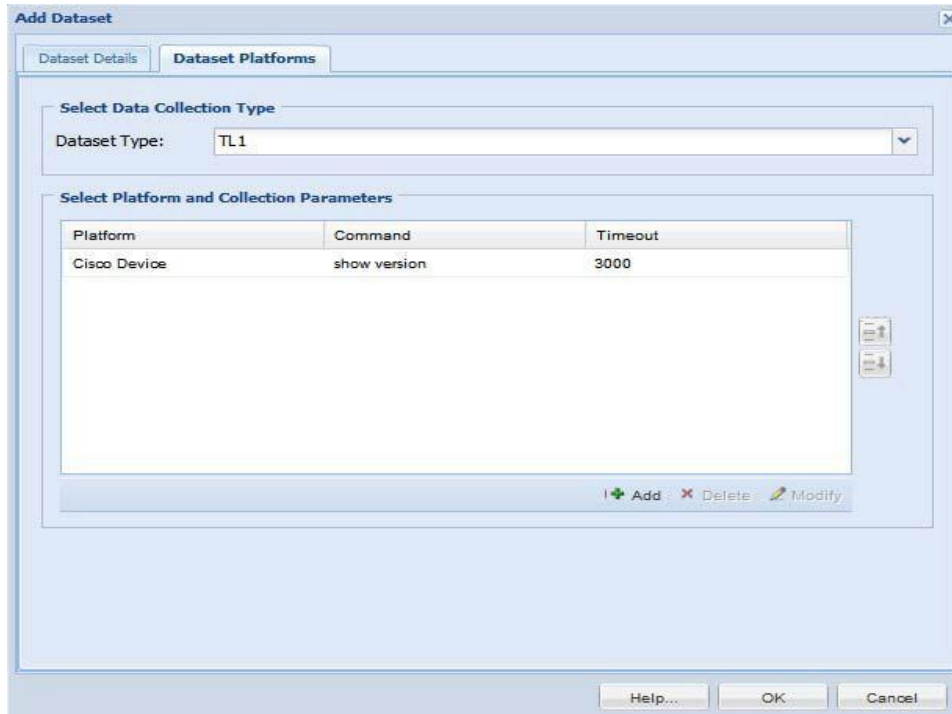

Figure 6-72 Dataset Platforms (Select HTTP)

TL1:

Once you select TL1 option and click **Add** button, Select the platform and the Command string. These are mandatory fields. You can also enter Maximum Lines, Integrity Rule, Masking Rule, Dataset Timeout. Click **OK** button to add the data.

Figure 6-73 Dataset Platforms (Select TL1)

IIOP:

Once you select IIOP option and click **Add** button, Select the platform. This is a mandatory field. You can also enter Dataset Timeout and choose APIs or All APIs. Click **OK** button to add the data.

Figure 6-74 Dataset Platforms (Select IIOP)

Figure 6-75 Dataset Entry Details

SQL:

Once you select SQL option and click **Add** button, Select the platform enter the Query. Select the masking rule and enter the Dataset Timeout (ms) Click **OK** button to add the data.

Figure 6-76 Dataset Platforms (Select SQL)

Figure 6-77 Dataset Entry Details

Go back to [CSPC Flow Chart](#)

LDAP:

Once you select LDAP option and click **Add** button, Select Platform, enter Search base, Select Search scope, enter Search filter and if required enter Attributes To Return, select Masking Rule, and Dataset Timeout (ms). Click **OK** button to add the data.

Figure 6-78 LDAP

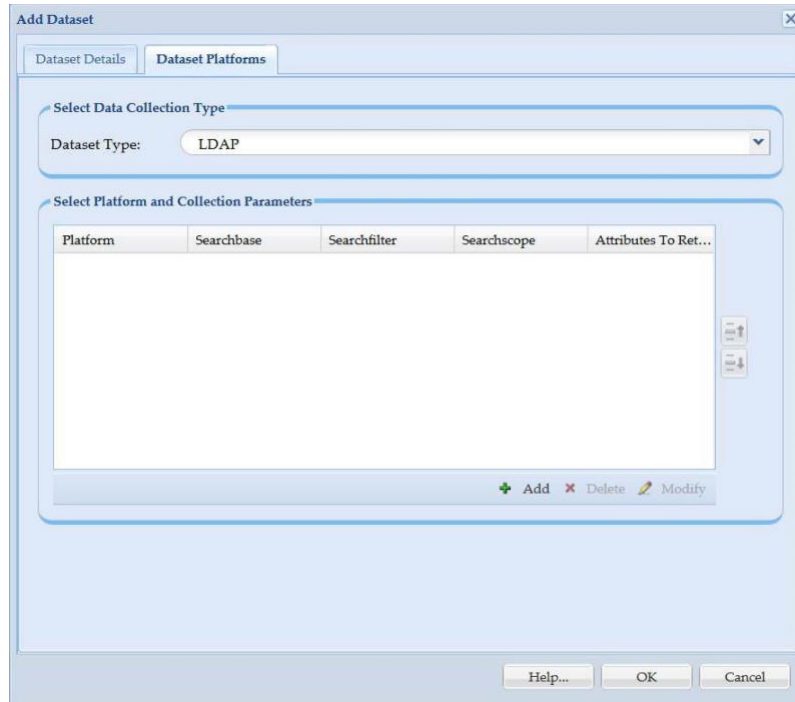

Figure 6-79 Data Entry Details

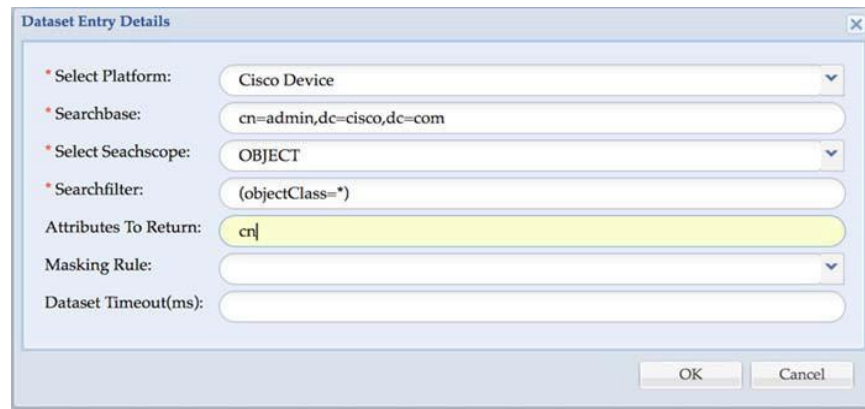

Table 6-7 LDAP Parameters

Field	Description
Search Base	The base for the search. It must be a valid distinguished name and it is mandatory otherwise a validation error is thrown.
Search Filter	The filter to use for this search and it is mandatory filed. For an invalid search filter, a validation error is thrown.

Field	Description
Search Scope	The search scope is OBJECT, ONELEVEL, or SUBTREE and it is a mandatory field.
Attributes to Return	The attributes to use for this search and it is optional. If nothing is provided, then it fetches all available attributes.

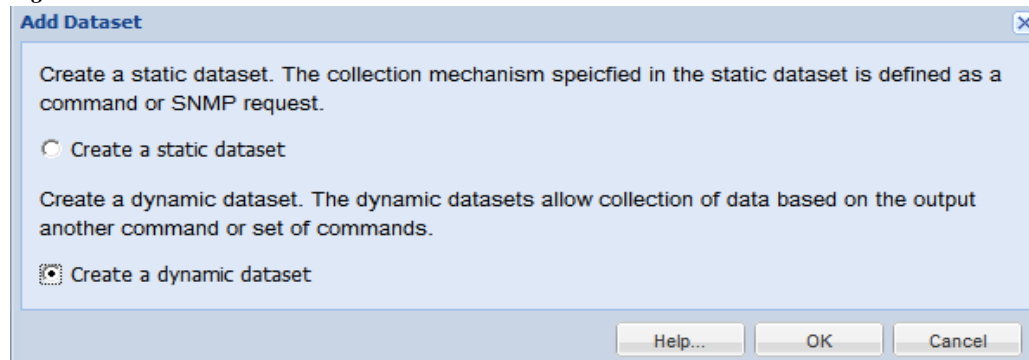

Dynamic Dataset

Dynamic datasets allow the collection of data based on the output of another command or set of commands.

To create a dynamic dataset, follow the steps given below:

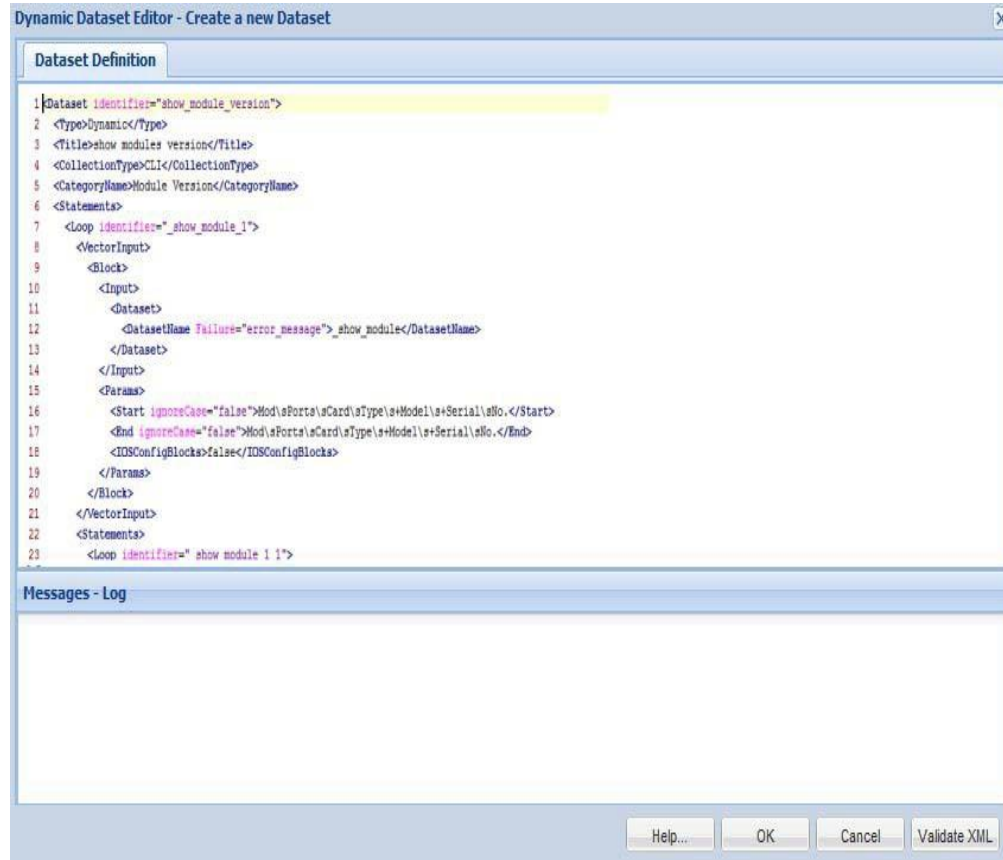

- Step 1** In **Collection Rules**, click **Manage Datasets**
- Step 2** Click **Add Dataset** button

Figure 6-80 Add Dataset

- Step 3** Select **Create Dynamic Dataset** and click **OK**
- Step 4** In Dataset Definition box, specify the dynamic dataset
XML.XML file uses the Pari API XML Schema
- Step 5** Click **OK**
Dynamic Dataset is created and added to Manage Datasets.

Figure 6-81 Create Dynamic Datasets

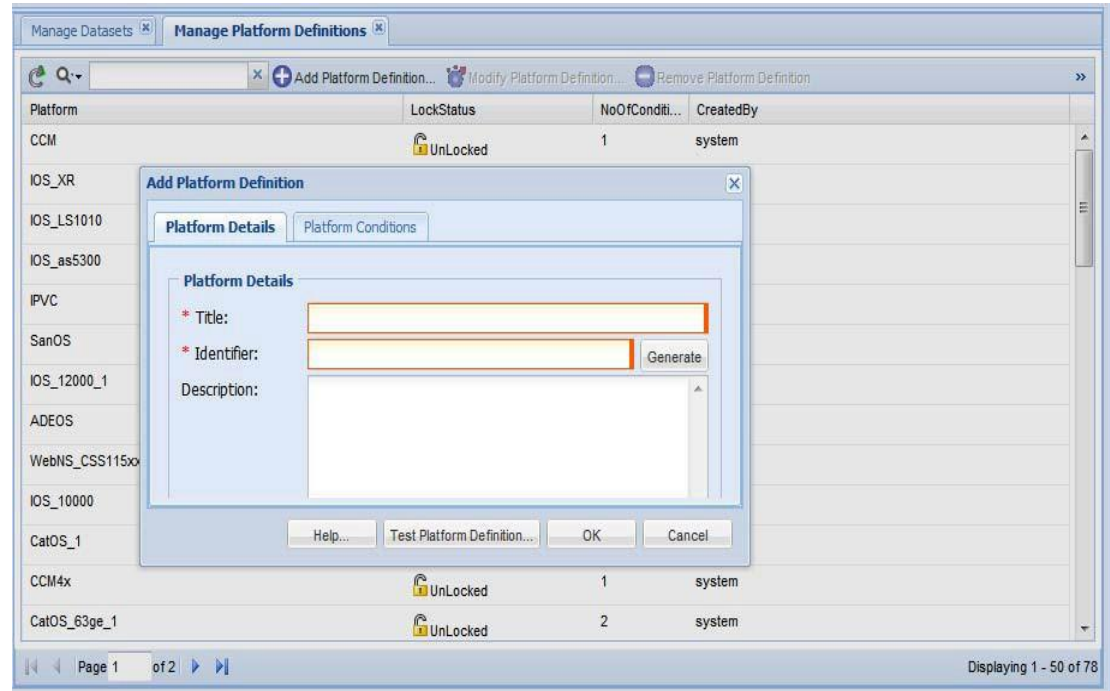

Manage Platform Definitions

Manage Platform Definitions lets you select a group of devices that match a specific condition. You can select what data is to be collected from this group of devices using *Manage Datasets*. When a new device is discovered that matches this specific condition, it automatically becomes part of this platform. Hence, the same data that is collected for other devices in this platform definition is collected from the new device.

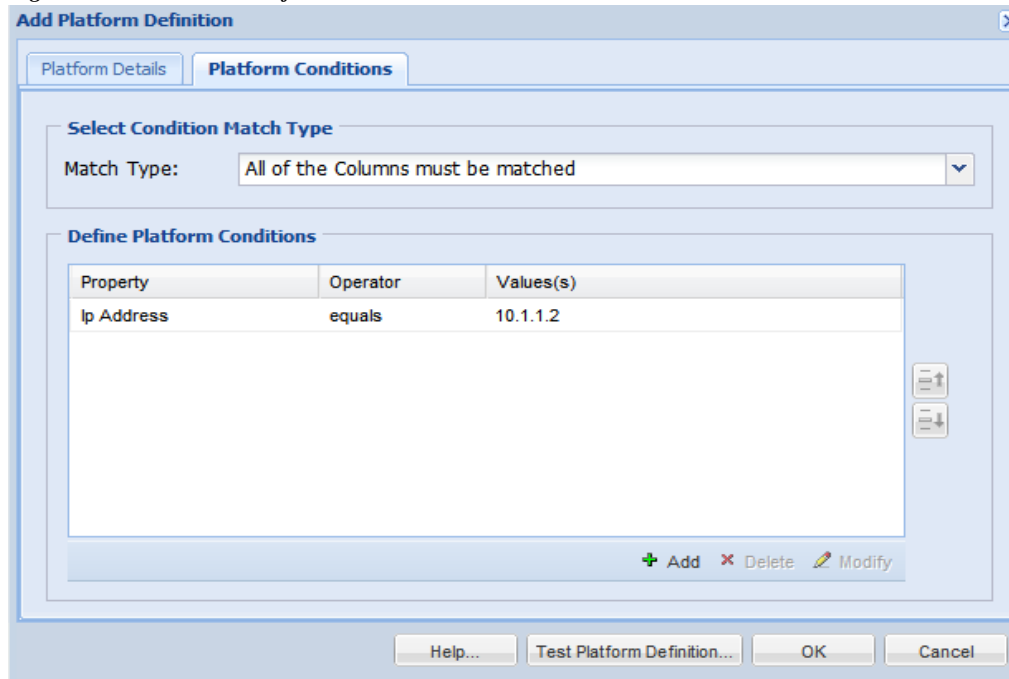

Creating new platform definitions is shown below:

Figure 6-82 Create Platform Definitions

-
- Step 1** Click Add Platform Definition button
 - Step 2** As shown in [Figure 6-82](#), enter the Title, Identifier and Description for the new platform definition
 - Step 3** Once the base data is entered, enter the conditions that make up this platform definition as shown below

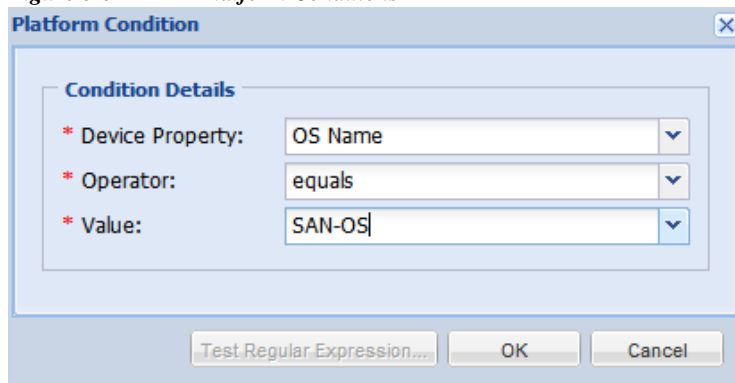

Figure 6-83 Add Platform Conditions

Step 4 Select whether all the conditions that you are defining need to match in order for a device to be part of this platform definition or some of the condition matching is sufficient.

Step 5 Click **Add** to start adding the conditions.

Figure 6-84 Platform Conditions

Step 6 When entering the conditions, you have the following options:

- You can select OS Name, OS Version, Product Model or SNMP Sys Object ID., and SNMP Sys Description
- Depending on the Device Property the *Value* field is changed (either OS Name selected from the list, or values provided for version, model, or sys object id) an *Operator* can be used to match these two
- The operator provides 6 different options: *equals*, *does not equal*, *in the list*, *not in the list*, *does not match regular expression* and *matches regular expression*.

Go back to [CSPC Flow Chart](#)

Step 7 Once the platform definition is created, use *Test Platform Definition* to check if any platforms match this definition, as shown below.

Figure 6-85 *Test Platform Definitions*

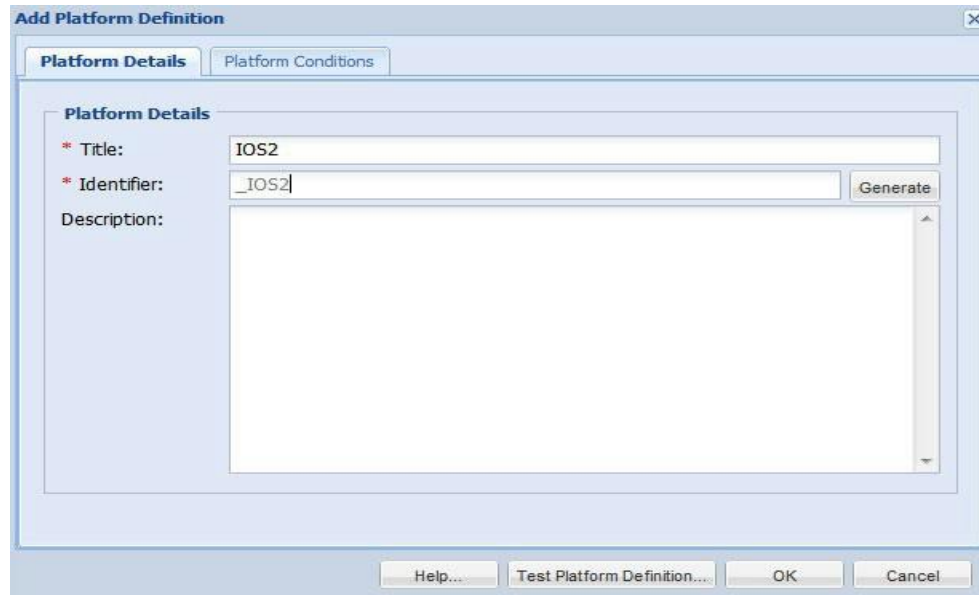

Figure 6-86 *Test Customer Platform Definition*

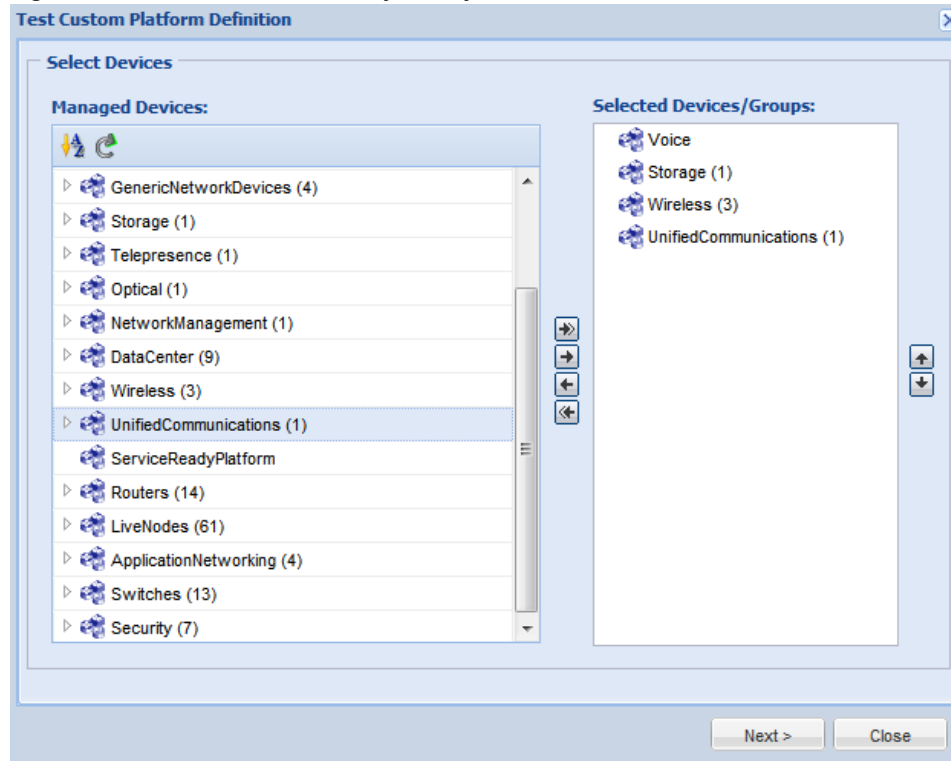

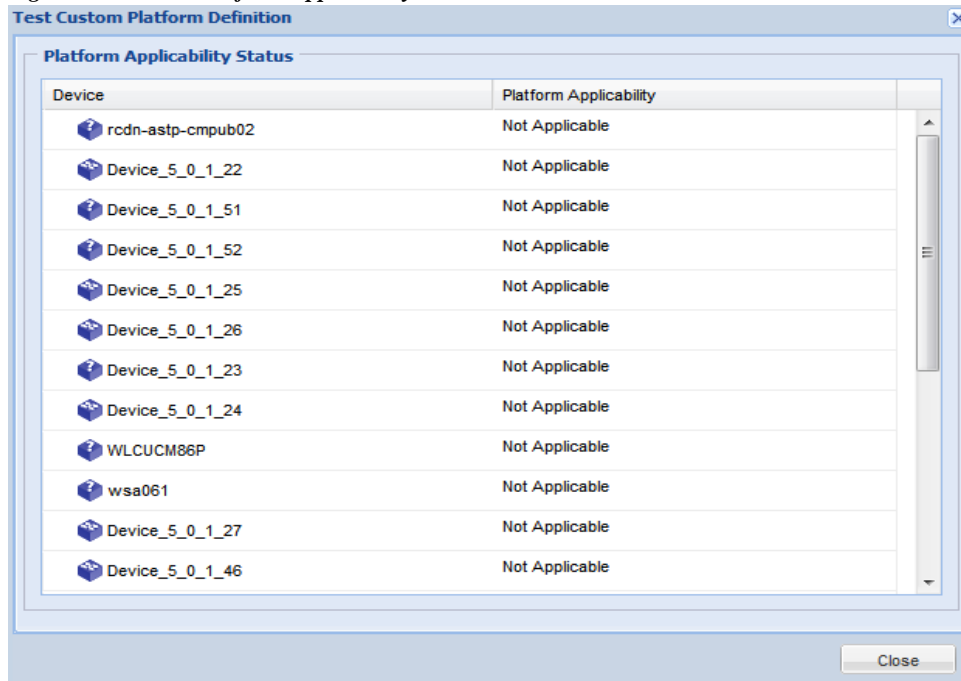

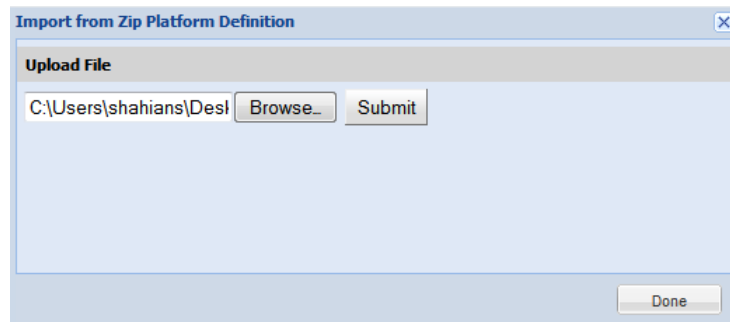

Figure 6-87 Platform Applicability Status

You can also import platform definition from a zip file stored locally on your system. To do so, right-click in the Manage Platform Definitions window and select “Import Platform Definition from Zip File” option, browse to the zip file with platform definition on your system as shown in Figure 6-88 and click **Submit**.

Figure 6-88 Import from zip file

Manage Data Integrity Rules

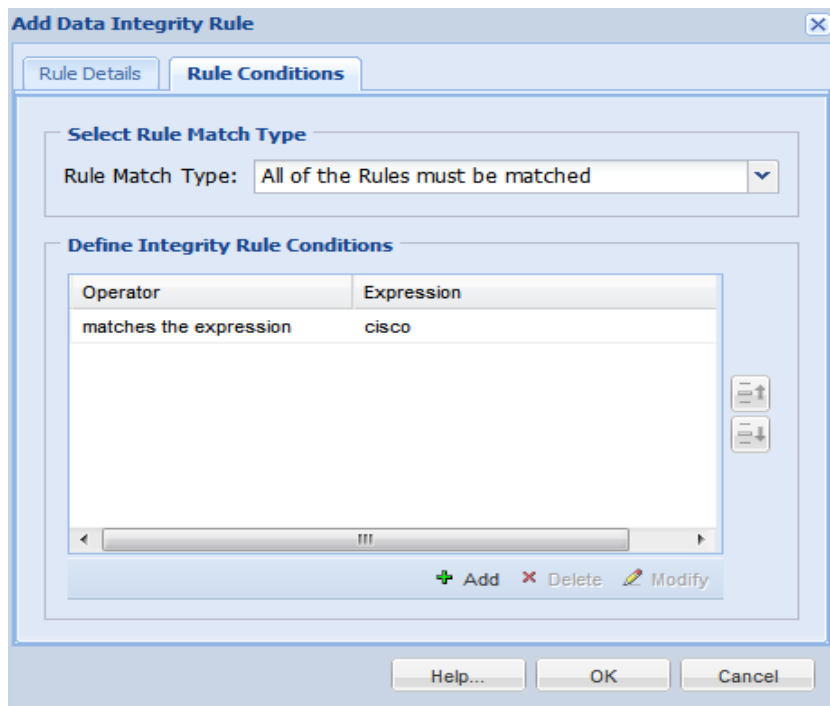

Data Integrity Rules are defined to identify whether a command execution returned a correct response or an error message. You can create new data integrity rules as shown below:

Figure 6-89 Create a New Data Integrity Rule

-
- Step 1** Click **Add Data Integrity Rules**.
 - Step 2** Enter the **Title**, **Identifier** and **Description** for the new data integrity rule
 - Step 3** Once the base data is entered, enter the rule conditions that make up this rule as shown below

Figure 6-90 Rule Conditions for Data Integrity Rules

- Step 4 Select whether all the conditions that you are defining need to match in order for a device to be part of this integrity rules or if some of the condition matching is sufficient.
- Step 5 Click **Add** to start adding the conditions.

Figure 6-91 Rule Conditions

- Step 6 When entering the conditions, select the operator (*matches the expression* or *does not match the expression*), the regular expression value and what error message to display.

You can also import platform definition from a zip file stored locally on your system. To do so, right-click in the Manage Data Integrity Rules window and select "Import Data Integrity Rules from a Zip File" option, browse to the zip file with Integrity rules on your system and click **Submit**.

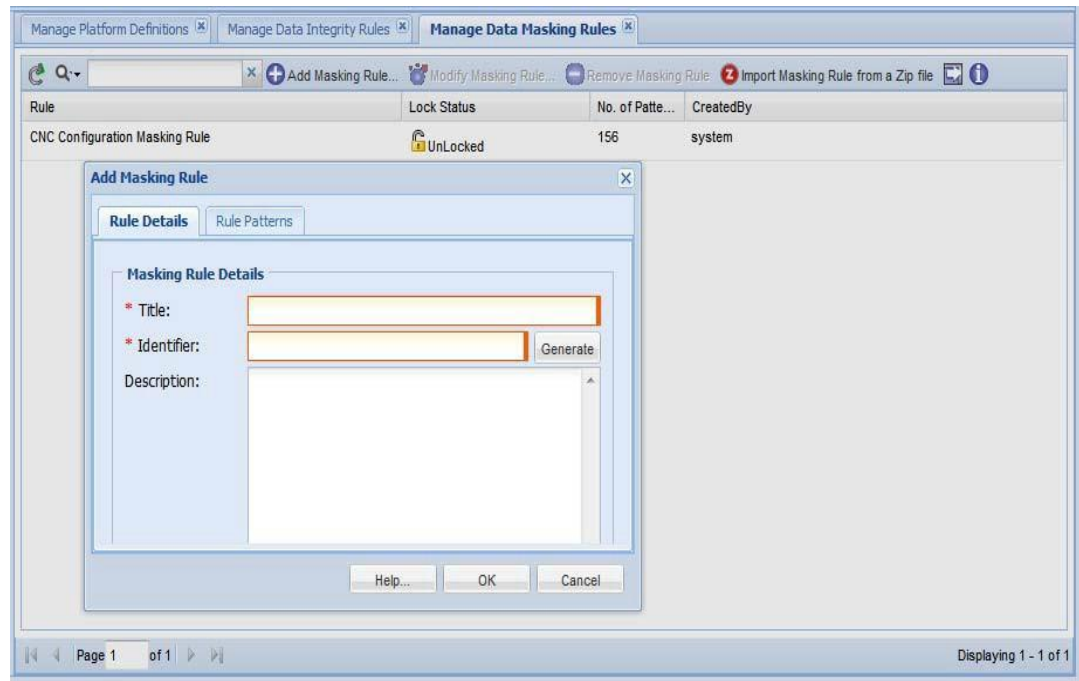

Go back to [CSPC Flow Chart](#)

Manage Data Masking Rules

Masking options are provided to mask certain sensitive information such as User Names/Passwords in the configuration files before exporting them to higher level applications. You can create data masking rules that tell the collector what data to mask before exporting it.

Create a new masking rules as shown below:

Figure 6-92 Create New Data Masking Rule

-
- Step 1** Click Add Masking Rules button
 - Step 2** In the Add Masking Rules window, enter Title, Identifier and Description for the new masking rule
 - Step 3** Once the base data is entered, enter the rule patterns that make up this rule as shown below

Figure 6-93 Rule Patterns for Data Masking Rules

Step 4 Click **Add** to start adding the conditions.

Figure 6-94 Rule Pattern Conditions

Step 5 As defined here whenever there is a Username followed by Password in the configuration files they are replaced by the string `xxxxxx`.

You can also import masking rules from a zip file stored locally on your system. To do so, right-click in the Manage Data Masking Rules window and select “Import Masking Rules from Zip File” option, browse to the zip file with masking rules on your system and click **Submit** button.

Go back to [CSPC Flow Chart](#)

Manage Syslog Source Files

Syslog Source Files options are provided to define the syslog collection from devices. You can add new settings for syslog sources.

Note

This feature is only for NOS services

Figure 6-95 *Manage Syslog Source Files*

Source File Name	Pooling Frequency(ms)	No. of Filters
SyslogSource	10000	0
Source Log	15000	0

Create new syslog source file by selecting the **Add** button.

Add Syslog Source option is provided to add a new Syslog source. There are two tabs in adding the syslog sources.

First tab is **File Details** as shown in [Figure 6-96](#). You need to provide the following information on this screen:

- **Source File Path:** The path where the Syslog source is located.
- **Identifier:** It can be either user defined, or system generated.
- **Roll Over File Name:** This is the name of the file that needs to be spooled in case the primary file rolled over.
- **Polling Frequency:** This is the polling frequency to poll the Syslog messages. The value will be in between 5000 to 3600000 milliseconds.
- **Description:** Description of the file.

Figure 6-96 Add Syslog Source

The screenshot shows a dialog box titled "Add Syslog Source Settings" with two tabs: "File Details" and "Input Filters". The "File Details" tab is selected. Under the heading "Syslog Source File Details", there are several input fields:

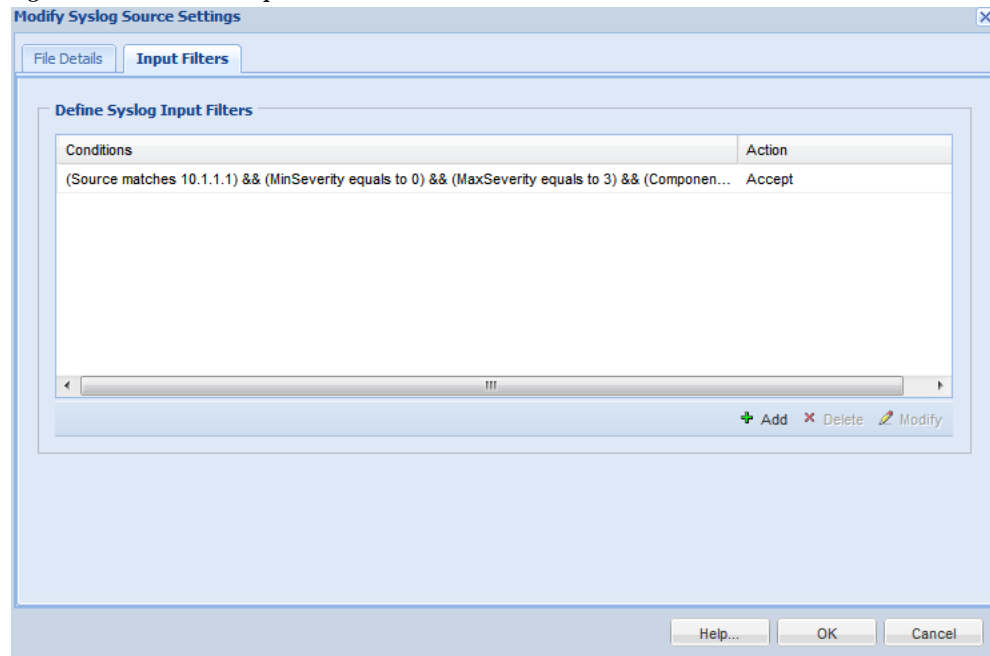

- * Source File Path:** c:\syslog_modified.txt
- * Identifier:** _csyslog_modified.txt (with a "Generate" button to its right)
- Rollover File Name:** syslogmode
- * Pooling Frequency(ms):** 5000
- Description:** (empty text area)

At the bottom of the dialog box are three buttons: "Help...", "OK", and "Cancel".

Second tab is **Input Filters**; when you select the Add button, Input Filter Details window will pop up. You need to provide the following information for this screen:

- **Source Device:** Device from which messages to be spooled.
- **Minimum Severity:** Minimum Severity that needs to be displayed.
- **Maximum Severity:** Maximum Severity that needs to be displayed.
- **Component Name:** Name of the component in the message.
- **Mnemonic Text:** Mnemonic text in the message.
- **Description:** Description in the message.
- **Action to be taken:** It can either be Accept or Drop the syslog.

Figure 6-97 Add Input Filter

Click **Add** button, a screen as shown in [Figure 7-23](#) is displayed. Enter the details as shown below.

Figure 6-98 Add Input Filter Details

Define Source Input Filter Details

Source Device: 10.1.1.1

Minimum Severity: 0 (emergency)

Maximum Severity: 3 (error)

Component Name: SYSLOG

Mnemonic Text: CPUHOG

Description:

Action to be taken

* Action: Accept

Miscellaneous Rules

Use the Miscellaneous Rule sub tab of the Device Management tab to set up rules, profiles and manage workflow.

This section describes the Miscellaneous Rules options in the following topics:

- [Export All Rules](#)
- [Import All Rules](#)
- [Import DSIRT Files](#)
- [Manage Application Discovery Profiles](#)
- [Manage SNMP Trap Profiles](#)
- [Manage Jump Server](#)
- [Credential Lock Settings](#)
- [Manage WorkFlow](#)

Export All Rules

Use Export All Rules option under Data Collection Settings to Export all rules. Click Yes to export all rules and zip file is downloaded.

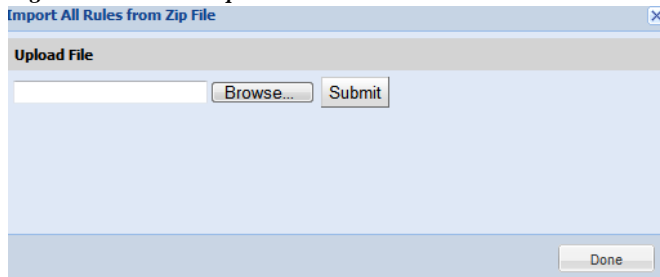

Figure 6-99 Export All Rules

Import All Rules

Use Import All Rules option under Data Collection Settings to import all rules. In the dialog box that is displayed click Browse button, select the rules file in zip format and click OK to start importing all rules.

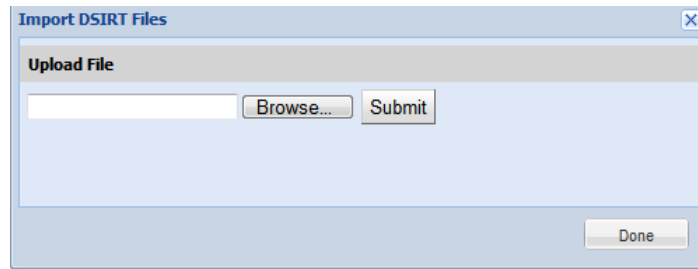

Figure 6-100 Import All Rules

Import DSIRT Files

In Import DSIRT Files, you can select a DSIRT (Device Software Issues Reporting Tool) file and import it in the tool.

Figure 6-101 Import DSIRT Files

Go back to [CSPC Flow Chart](#)

Manage Application Discovery Profiles

In Manage Application Discovery profiles you can add or edit an application discovery profile, define the devices that collect data and how often the data needs to be collected. Application discovery detects what applications are installed/running on devices (typically compute server) by collecting information from devices.

Figure 6-102 Manage Application Discovery Profiles

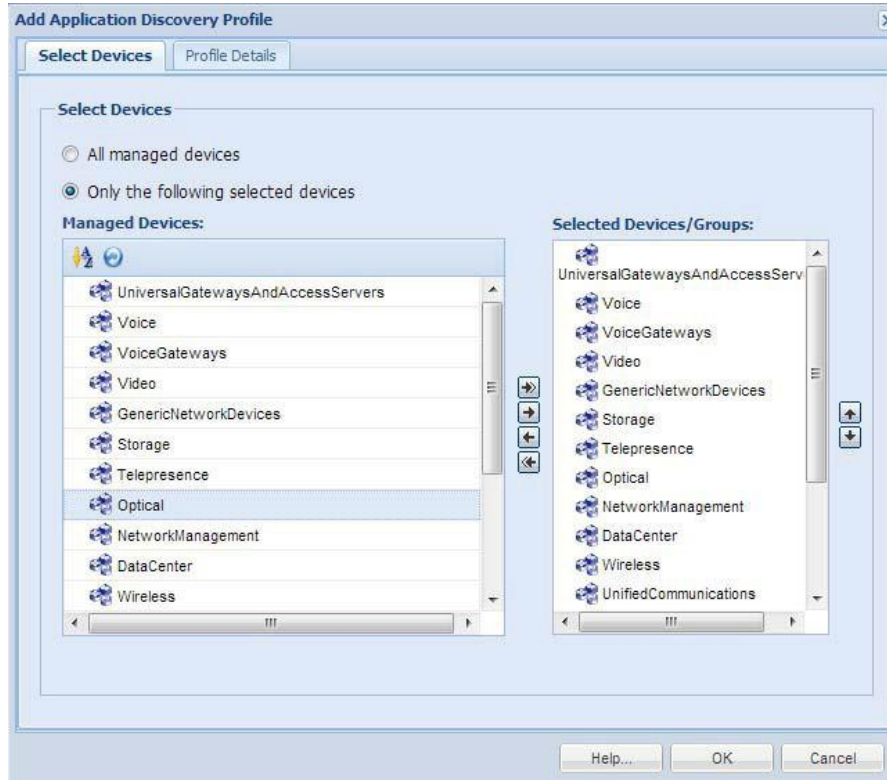

New application discovery profiles can be created by clicking *Add Application Discovery Profile* icon from Manage Application Discovery Profiles window.

To add a new application discovery profile, follow the steps given below:

-
- Step 1** Select the Devices
 - Step 2** Select Profile details
 - Step 3** Click **OK**.

Figure 6-103 Select Devices for an Application Discovery Profile

To start the collection, select a device or a set of devices from which the data is to be collected as shown in Figure 6-103. Once you select the devices, select the profile options that define how often you want to collect the data, as shown in Figure 6-104.

Figure 6-104 Profile Details

If you schedule a job for periodic collection, the job can be resumed even if the CSPC server is restarted by selecting the option "Resume this job automatically if it is interrupted due to a CSPC server restart".

Manage SNMP Trap Profiles

This helps you to add the new SNMP Trap profiles and store them depending on the filter you configure. One trap can be applied to multiple filters. You get a notification when a trap is received.

Note

This feature is only for NCCM services

Figure 6-105 Manage SNMP Trap Profiles

Profile Name	Queue Name
profile	queue

To create new SNMP Trap Profile click *Add SNMP Trap Configuration* icon from Manage SNMP Trap Profiles window.

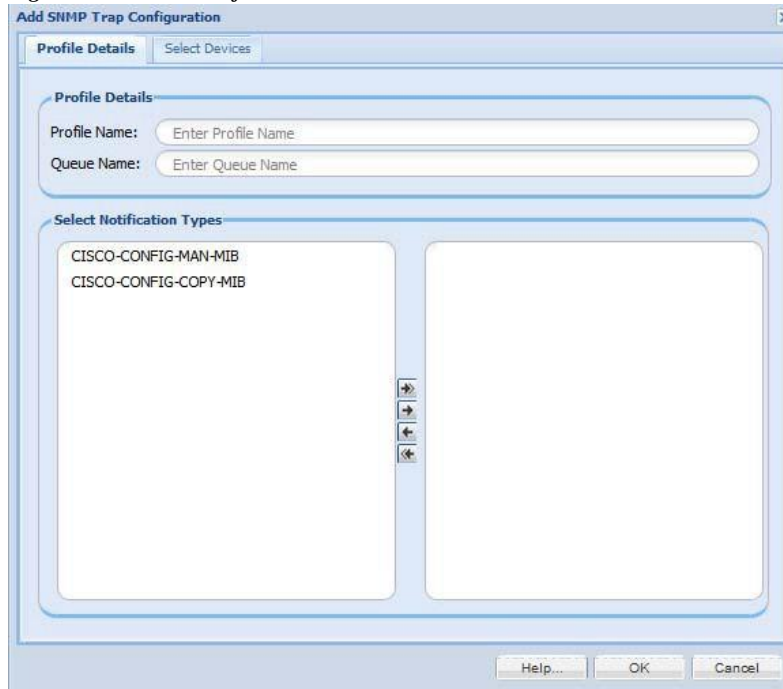

To add a new SNMP Trap Profile, follow the steps given below:

Step 1 Select Profile Details

- a. Enter the **Profile** and **Queue** name is JMF queue where add-on process should subscriber to the given JMF Queue
- b. Click arrows to select the **Notification Types**. By default, there are only two notification types required you can add as many as notifications through xml request. Refer to "[XML APIs](#)"

- Step 2** Select the **Devices**
- Step 3** Click **OK**.

Figure 6-106 Profile Details

Select Devices tab as shown in [Figure 6-110](#) allows you to map the devices to the specific Trap Profiles. There are two options to map the devices to Taps Profiles:

- All managed devices - It maps all the devices to the specified Taps Profile
- Only the following selected devices - It maps only the selected devices to the specified Taps Profile.

Figure 6-107 Select Devices

Manage Jump Server

The Jump server support allows CSPC to connect to any device CLI via a Jump Server where direct access to the device CLI is prevented. The Jump Server configuration allows you to configure the Jump Server feature. In Manage Jump Server you can add or edit a Jump server. It manages the device and the type of connection and test the connection.

Figure 6-108 Manage Jump Server

To create new Jump Server click *Add Jump Server* icon from Manage Jump Server window.

To add a new jump server, follow the steps given below:

-
- Step 1** Select Profile details
 - Step 2** Select the Devices
 - Step 3** Click OK.

Figure 6-109 Profile Details

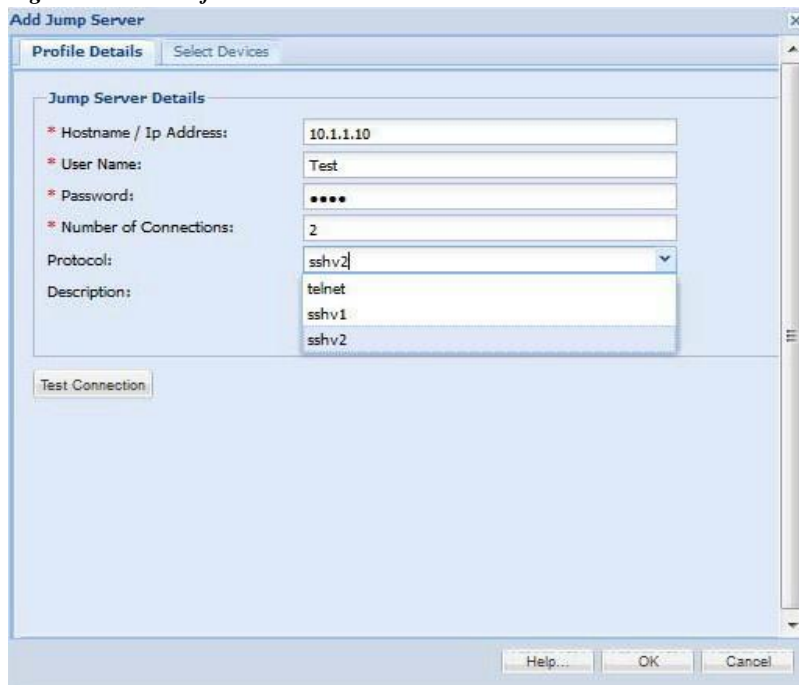

Table 6-8 Jump Server Parameters

Field Name	Description
Host name	Name defined to server
User Name	Login username
Password	Login Password
Number of Connections	No of connections to jump server.
Protocol	Select the protocol to be used
Description	Description of the server
Test Connection	To check the jump server credentials

Note: Device must be SNMP supported without jump server in order to be discovered in CSPC. If not, DAV will be skipped & Collection would fail.

Select Devices tab as shown in Figure 6-110 allows you to map the devices to the specific Jump Server.

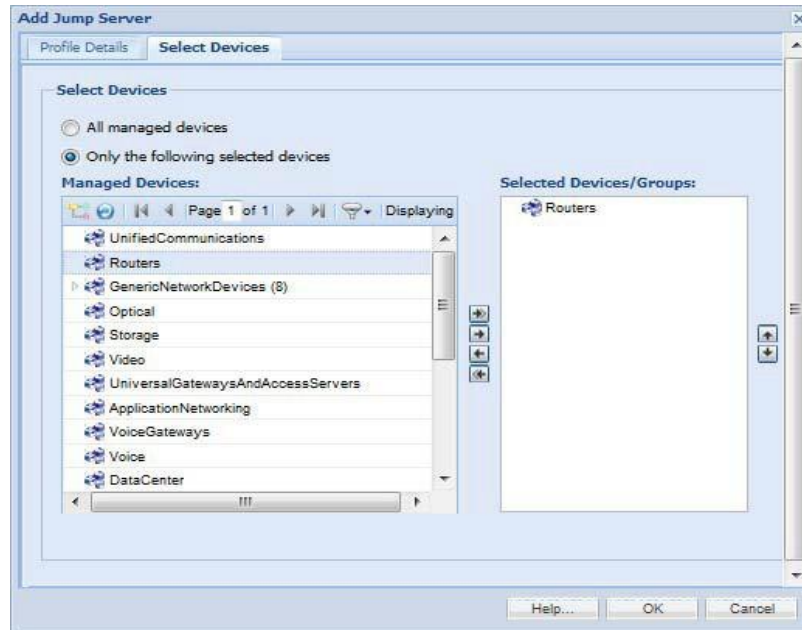

There are two options to map the devices to Jump Server:

- All managed devices - It maps all the devices to the Jump Server
- Only the following selected devices - It maps only the selected devices to the specified Jump Server.

If you select "All managed devices" option, it maps all the devices to the specified Jump Server. If you want to map all devices to specified jump server you have to make sure that no other devices are mapped to any other Jump Server.

If you select "Only the following selected devices" option, it maps only the selected devices to the specified Jump Server. If some of the devices which you are trying to map to the specified Jump Server are already mapped to any other Jump Server, then while creating the Jump Server these already mapped device will be excluded from the mapping and unique devices will be mapped.

Figure 6-110 Select Devices

Credential Lock Settings

Credential Lock Settings allows you to set the maximum number of failed attempts for any given credential. You can also specify a lock period for a credential. If a lock period is present that credential will be unlocked once the lock period expires.

There is also an option for the user to manually unlock the credential. This helps in continuation of the discovery/inventory processes even after a device fails to respond to a specific credential.

Figure 6-111 Credential Lock Settings

You can also remove the previously added lock settings by using *Remove Settings* button.

Manage WorkFlow

This Helps you to Modify, Start, Stop, Remove, Resume, and see Log. This Displays Name, Status, Created By, Created Time, and Service.

- Click **Modify** to modify the workflow
- Click **Start** to start the workflow which are in open and stop status.
- Click **Stop** to stop the workflow and click **Resume** to resume the workflow

Applications - Management Tasks

Management Tasks

You can use the Management tasks to access tools with which you can discovery, collect profile, retrieve job status.

This section describes the Management Tasks options in the following topics:

- [Device Tasks](#)
- [Common Tasks](#)
- [Job Run Status](#)
- [Job Management](#)

Device Tasks

Use the Device Tasks sub tab of the Management tasks to set up device discovery and data collection process.

This section describes the Device Tasks options in the following topics:

- [Discover Devices](#)
- [Unmanage Devices](#)
- [Verify Device Access](#)
- [Device Prompt Collection](#)

Discover Devices

The Discover Devices feature allows you to discover devices and manage them. When you double-click **Discover Devices**, a new wizard called **Discover and Manage Network Devices** appear. It allows you to select the Discovery method and the devices to be discovered by entering either the IP address or host name of the device.

Note

To overcome the exposure of the credentials to all hosts in the IP range:

- Use trusted networks for discovery based on IP ranges.
- It is recommended to add devices using individual IP address.

There are multiple ways to discover a device:

- Known Device List
- Protocol based discovery (CDP, OSPF, ARP, BGP, etc.). Not supported in UC Discovery.
- IP Address Range Scanning
- Rediscover the currently managed devices

Note A message box “Please select at least one discovery method” is displayed when you click **Next** button without selecting any Discovery method.

Figure 7-1 Rediscovery

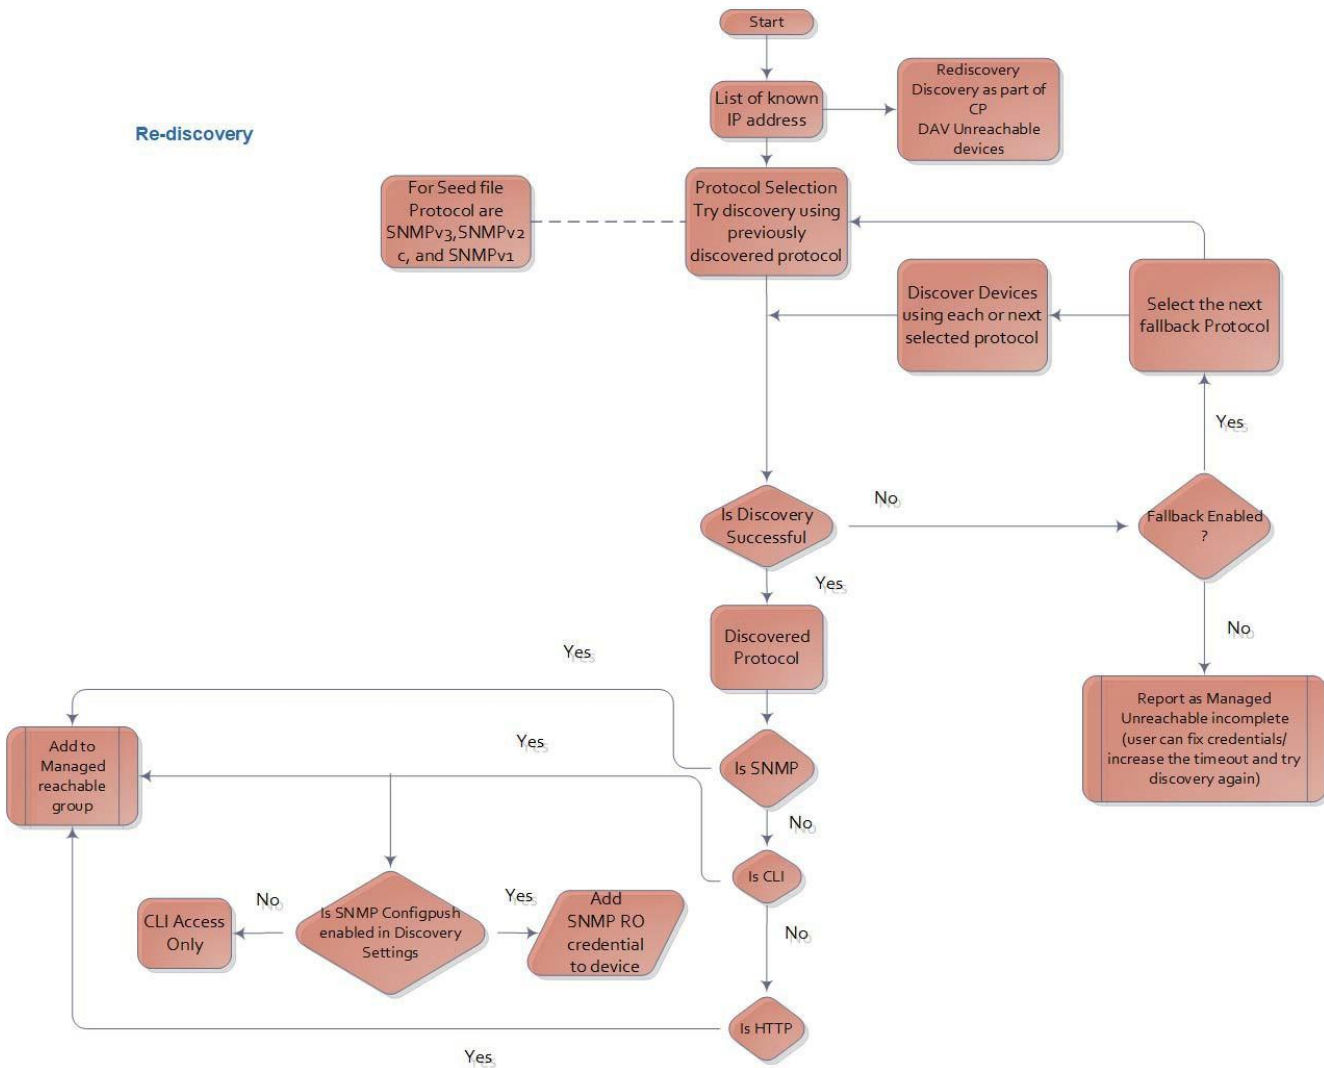

Figure 7-2 Known IP

Known IP/Seed File Discovery

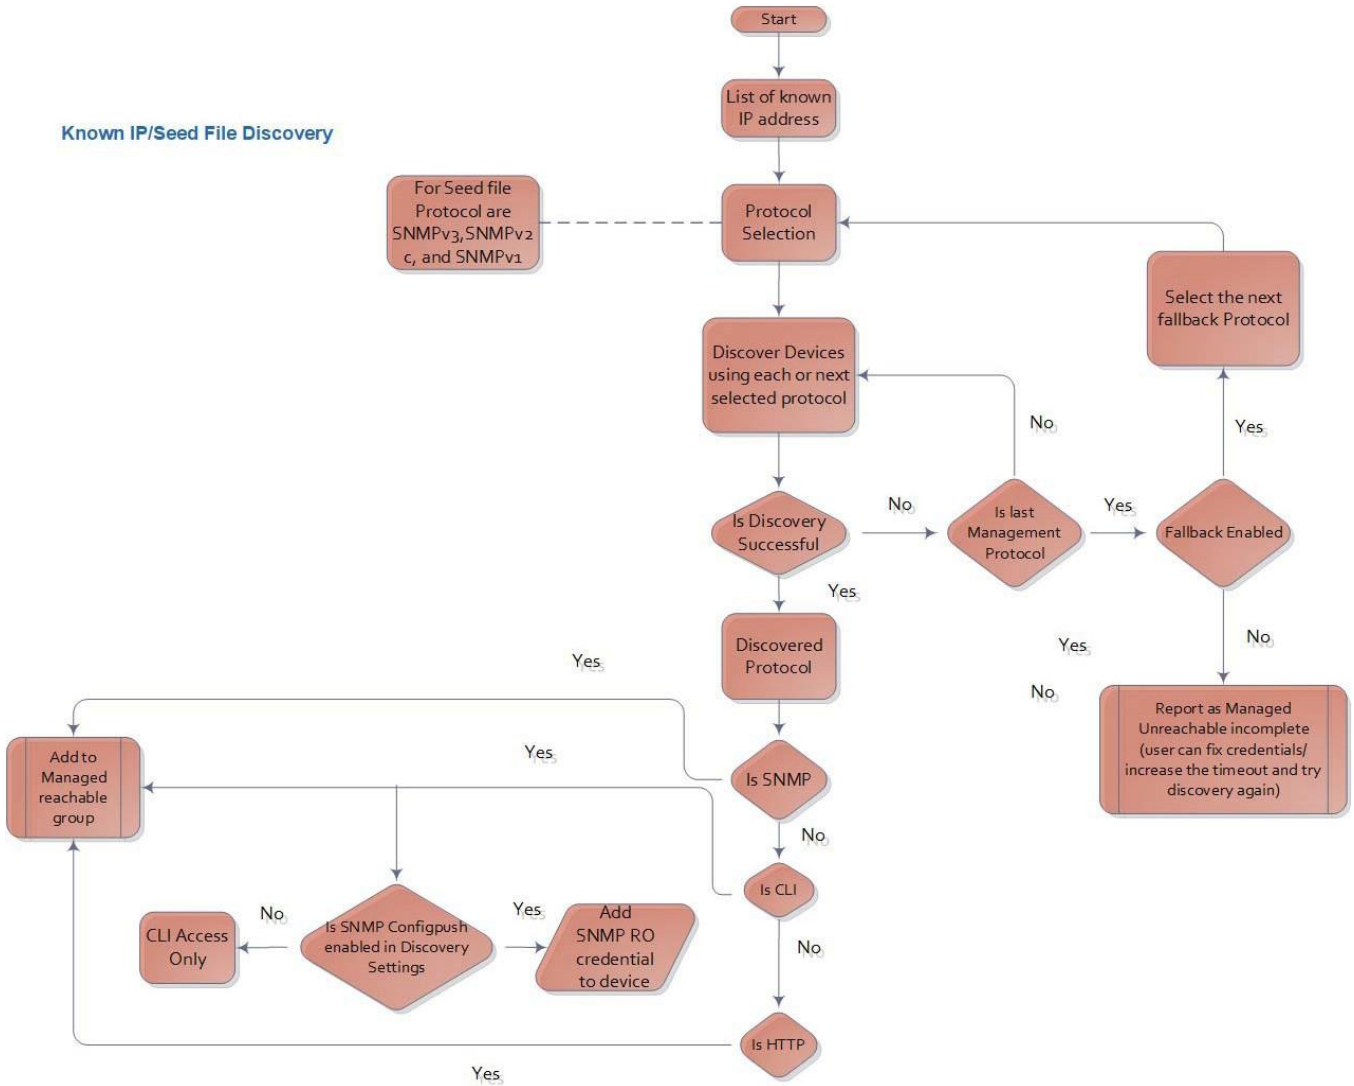

Figure 7-3 Range Discovery

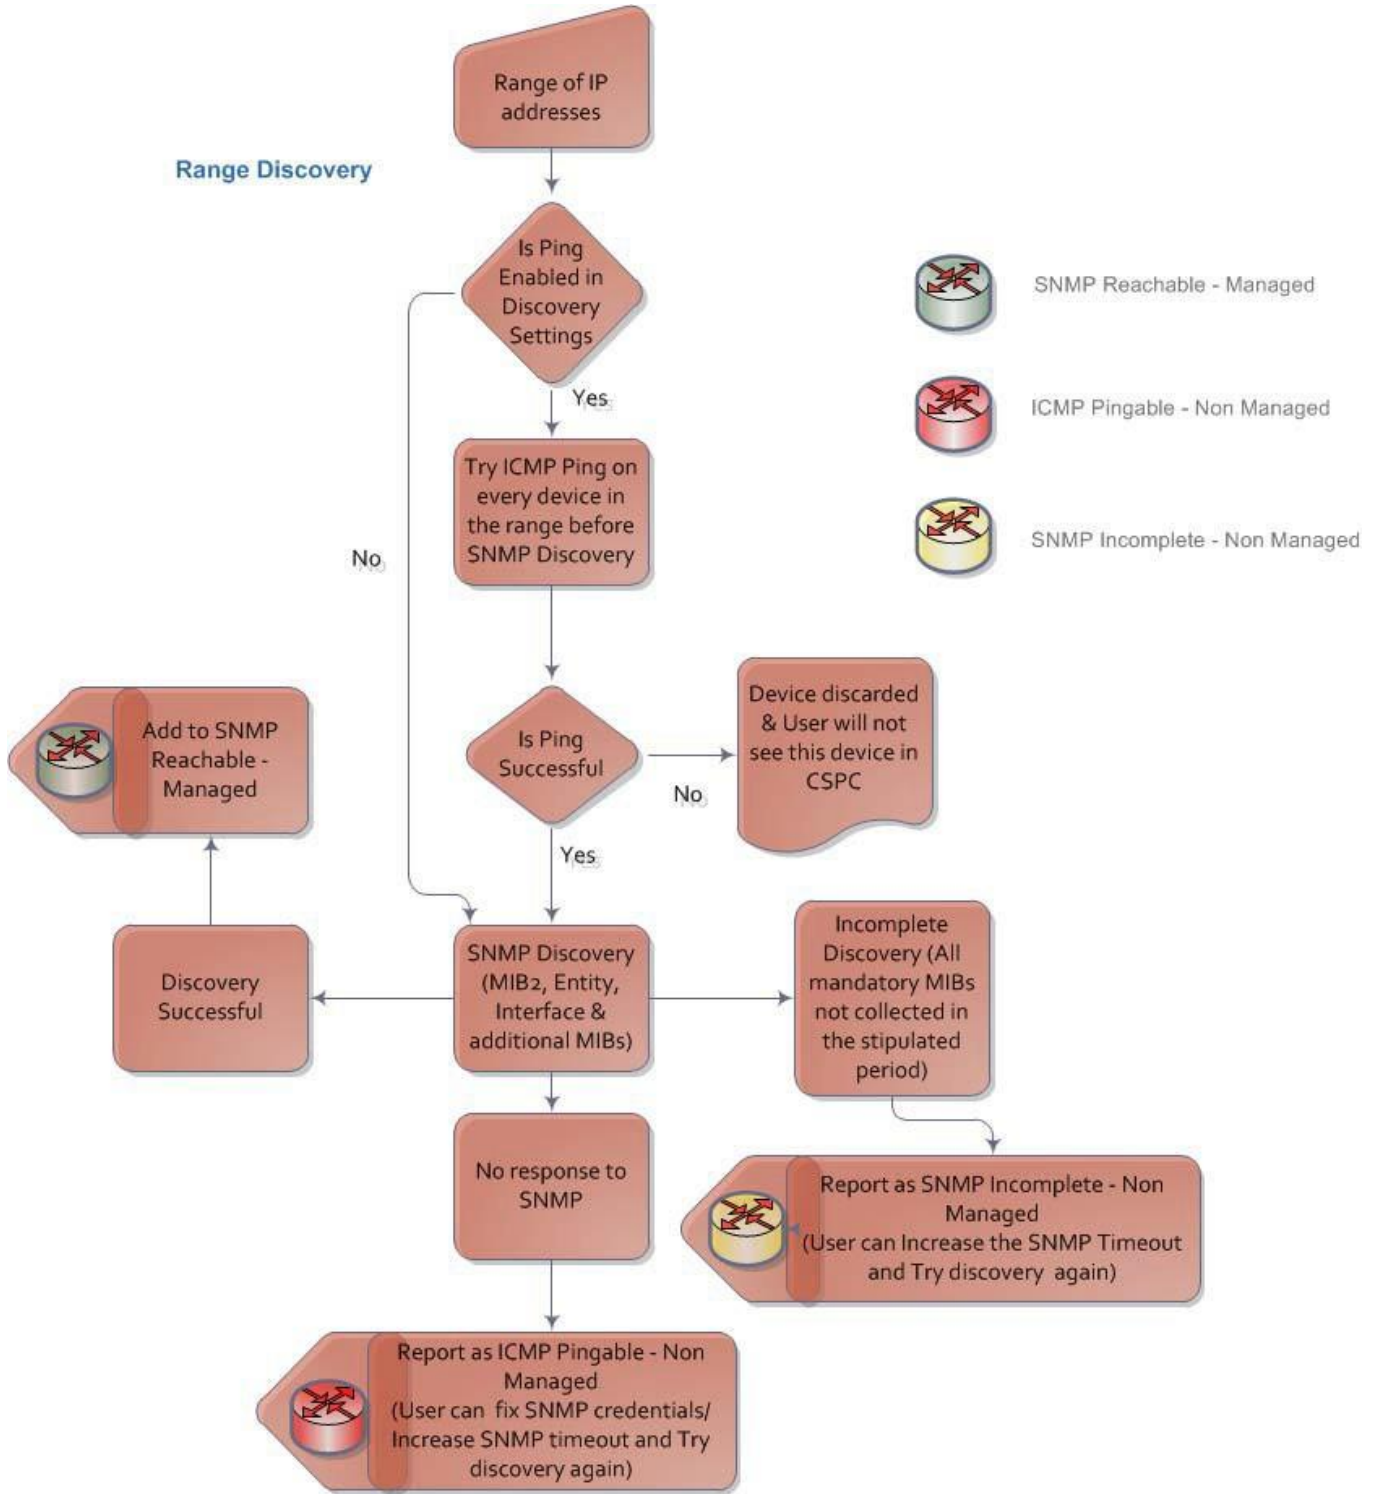

Figure 7-4 Seed IP and Protocol Based Discovery

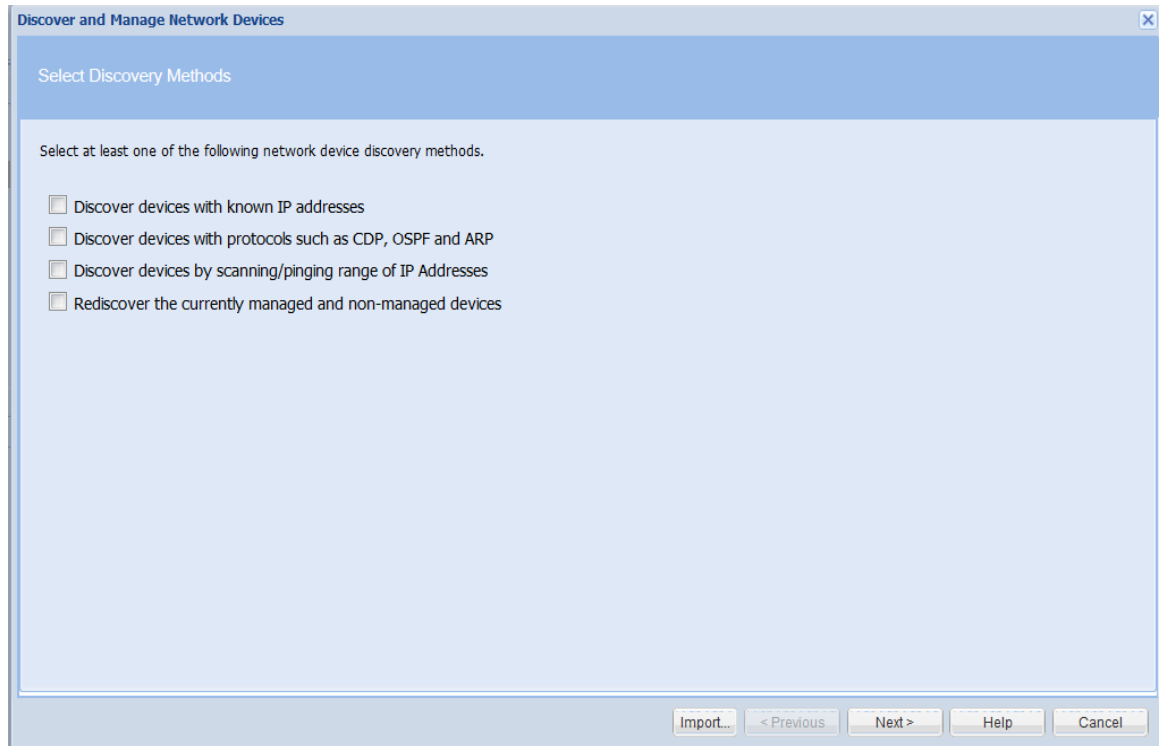

Figure 7-5 *Discover and Manage Network Devices*

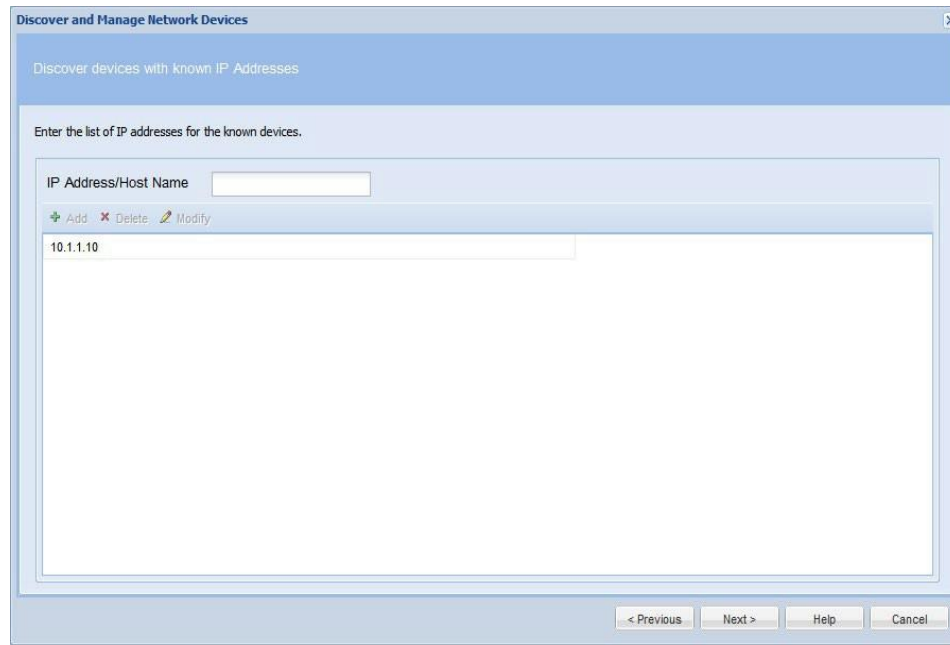

You could also import the device list from either a CiscoWorks DCR file or a Pari Discovery Options XML file.

For Known Device List discovery, enter the IP addresses or hostnames as shown in [Figure 7-6](#).

**Note**

If multiple discovery types are selected then first selected SNMP version protocol will be used for range and protocol based discovery

Figure 7-6 Discover Devices using Known IP Addresses

To include protocols, select the protocol and use the arrows to move back and forth. To change the priority of protocols, use the up and down arrows.

If you Select **Do not Manage Devices** option, then the devices are not be managed but discovered. These devices can be exported as a zip file which contains .csv files for Discovered Devices and Un-Reachable Devices. Discovered Devices csv file is of CNC CSV format. This export option is available under Discovery Jobs.

If you select **Enable Loopback** option, then discovery will prefer a loopback IP address and it will attempt to use other addresses if a loopback is not found. Loopback is tried if Mac Address Duplicate Check option is selected in Discovery Settings.

If required provide job specific SNMP timeout value in SNMP Timeout (in sec) field.

Enter the **Job Description** and select the **Service Name** from drop down.

For protocol based discovery, enter the following information:

- Protocol (CDP, Routing Table, ARP, OSPF Neighbors, BGP, HSRP, LLDP, etc.)
- Hop count (number of hops the discovery process should traverse)
- Seed IP Address(s) (Initial seed device or devices)

Figure 7-8 Protocol Based Discovery

The screenshot shows a dialog box titled "Discover and Manage Network Devices" with a close button (X) in the top right corner. The main heading is "Discover devices with protocols such as CDP, OSPF and ARP". Below this, it says "Select list of seed devices and protocols need to be used in discovery operation".

Under "Select Protocols", there are several checkboxes:

- Cisco Discovery Protocol (CDP)
- Routing Table
- Address Resolution Protocol (ARP)
- OSPF Neighbours
- Border Gateway Protocol (BGP)
- Link Layer Discovery Protocol (LLDP)
- Hot Standby Router Protocol (HSRP)

Below the protocols, there is a "Hop Count" field with a dropdown menu set to "2".

There is a "Seed IP Address/Name" text input field. Below it, there are three icons: a green plus sign for "Add", a red X for "Delete", and a pencil for "Modify".

A list box contains the IP address "10.20.1.2".

At the bottom right, there are four buttons: "< Previous", "Next >", "Help", and "Cancel".

For IP Range Scanning based discovery, provide the Start IP address and the End IP address. You can also provide the Start IP in CIDR format as show here *IP Address/subnet mask (x.x.x.x/x)* and the End IP will be auto populated. You also have “select CIDR Address” before providing Start IP Address.

Figure 7-9 IP Scanning

The screenshot shows a dialog box titled "Discover and Manage Network Devices" with a close button (X) in the top right corner. The main heading is "Discover devices by scanning/pinging range of IP Addresses". Below this, it says "Enter the list of Ip Addresses ranges for scanning. The devices at these addresses will be pinged using ICMP Ping mechanism".

There are two text input fields: "Start IP Address" and "End IP Address". To the right of the "Start IP Address" field is a checkbox labeled "CIDR Address?".

Below the input fields, there are three icons: a green plus sign for "Add", a red X for "Delete", and a pencil for "Modify".

At the bottom right, there are four buttons: "< Previous", "Next >", "Help", and "Cancel".

You can select the option **Rediscovering Currently Managed and NON Managed Devices**. It will discover with all the previous discovered protocol and for unreachable devices, and non-managed devices it will try all SNMP protocol and discovery process will rediscover all the devices that are currently managed.

Select the management protocol used for the discovery process. The current options are SNMPv1, SNMPv2 or SNMPv3.

Enter the **Job Description** and select the **Service Name** from drop down.

Once the type of discovery is specified, you are ready to discover the devices. You can schedule the discovery process either right away or at a later time.

Figure 7-10 Discovery Schedule Options

To Schedule Discovery at a later time, select Schedule Discovery option and then click **Configure Schedule** button.

You can schedule Start and End Date/Time or select the Recurrence pattern as Minutely, Daily, Weekly, Monthly, or Yearly as shown in [Figure 7-11](#).

Figure 7-11 Configure Schedule

After the *Discover and Manage* operation is finished, you see the results which include the IP Address (of the selected device), Host Name, Device Type, Status (which indicates whether or not the device is managed), and Message. Discovery operation can be closed and run in the background. You can check the *Job Log Reports*->*Discovery Jobs* to view the results of the background operation.

You can also Clone an older discovery job to use as a new discovery job to speed up discovery. Refer to *Job Log Reports* ->*Discovery Jobs* for more information on cloning a discovery operation.

In the discovery jobs report, you can create a new discovery job by right clicking on any discovered job and selecting 'Create new discovery by cloning this job'.

You can export the Discovery Settings to an XML file, as well export the discovered devices report.

Go back to [CSPC Flow Chart](#)

Unmanage Devices

Double-clicking **Unmanage Devices** opens a new window. It shows the list of devices that are already managed, and allows you to select the devices that you want to Unmanage. After selecting the devices or groups, the selected devices or groups appear on right side of the window. Then, click **Unmanage** to remove the selected devices or groups, as shown below. You can also browse to upload list of nodes from *.txt* file.

Figure 7-13 Unmanage Devices

Once this operation is completed, CSPC removes the unmanaged devices along with all the corresponding data (collection profile data and so on) from its database.

Verify Device Access

Use Device Access Verification when you want to check whether a given device is accessible through a specific credential, as shown below. All the settings are taken from [Access Verification Settings](#). You can also make the changes to settings and is applicable only for the job you change the settings.

Follow the steps given below to perform device access verification:

- Step 1** Select the devices for which data access needs to be verified. You can also browse to upload list of nodes from *.txt* file.
- Step 2** Select the protocols order to be used for verification using side arrows and reorder them using the up and down arrows. To avoid the failure, you can use the option **Use All Selected Protocol Versions** and to override the failed protocol select the option **Override Enable Failed**. If all the protocol fails, then you have an option to use ICMP for reachability of device. If Use all selected protocol version is selected, then all the selected protocol are used even if the first protocol passes. If Override enable failed is selected, then status is shown as enabled by default, even if device do not enter enable mode.
- Step 3** Start the verification process now or schedule it at a later time

Resume this job automatically if its interrupted due to a CSPP server restart

< Previous Finish Help Close

Enter the **Job Name**, **Job Description**, and select the **Service Name** from drop down.

Use the **Run Discovery before DAV** option to rediscover the unreachable device for a particular job before running DAV.

To Schedule Device Access Verification at a later time, select Schedule Device Access Verification option and then click Configure Schedule button. You can schedule Start and End Date/Time or select the Recurrence pattern as Minutely, Daily, Weekly, Monthly, or Yearly as shown in [Figure 7-16](#).

Figure 7-16 Configure Schedule

You can click on **Advanced Options** button and select the credentials to run DAV on as shown in [Figure 7-17](#).

Figure 7-17 DAV Advanced Options

Once the job is started you can view the successful and failed credentials/protocols for a given device as shown below.

There is also an option to Optimize device timeouts on successful verification. This is applicable only for SNMP. The option once enabled will automatically calculate the timeout for a specific device and add it to the Global Timeouts under the advanced settings.

When a device access verification job is scheduled to run at a later time, 'Resume this job automatically if it is interrupted due to a CSPC Server restart' option will be available. If the CSPC restarts for any reason while device access verification job is running, CSPC will resume the job upon restart.

By default, CSPC pings a device to check if it is responding. Additional ping.

If all the selected protocols have failed for DAV, by default an Additional Ping feature is triggered to check if the devices are responding.

Device Prompt Collection

You can use Device Prompt Collection option to collect the Device Prompt and DNS Names for the devices that are selected.

Follow the steps given below to perform device prompt collection:

- Step 1** Select the devices for, which device prompts needs to be collected
- Step 2** Enter the **Job name**, **Job Description**, and select the **Service Name** from drop down to create a job for collection.
- Step 3** Start the job now or schedule it at a later time

Figure 7-19 Select Devices for Prompt Collection

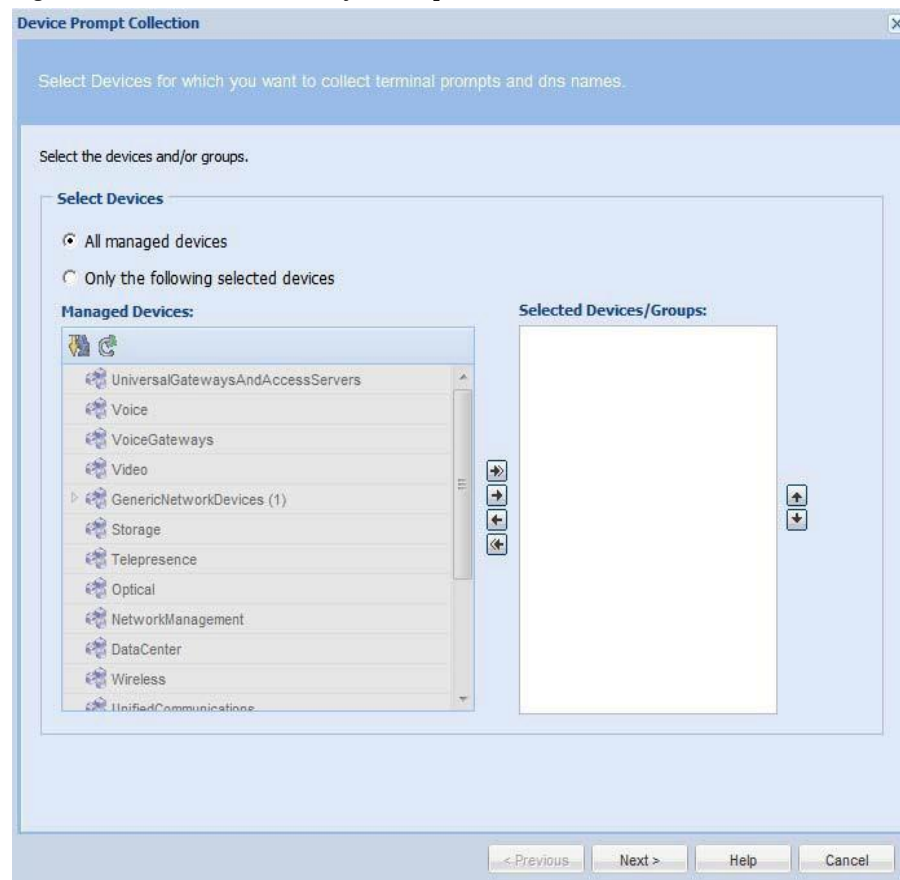

Figure 7-20 Create a job for prompt collection

The screenshot shows a window titled "Device Prompt Collection" with a close button in the top right corner. The window contains two main sections: "Job Details" and "Job Schedule Options".

Job Details:

- * Job Name: [Text input field]
- Job Description: [Text input field]
- Service Name: [Dropdown menu with a downward arrow]

Job Schedule Options:

- Start Device Prompt Collection Now
- Schedule Device Prompt Collection

Below the radio buttons, there is a large text area containing the text "No schedule configured".

At the bottom left of the "Job Schedule Options" section, there is a button labeled "Configure Schedule".

At the bottom of the window, there are four buttons: "< Previous", "Finish", "Help", and "Close".

The "Service Name" dropdown menu is open, showing three options: "NOS", "OPTIMIZATION", and "ASCNA".

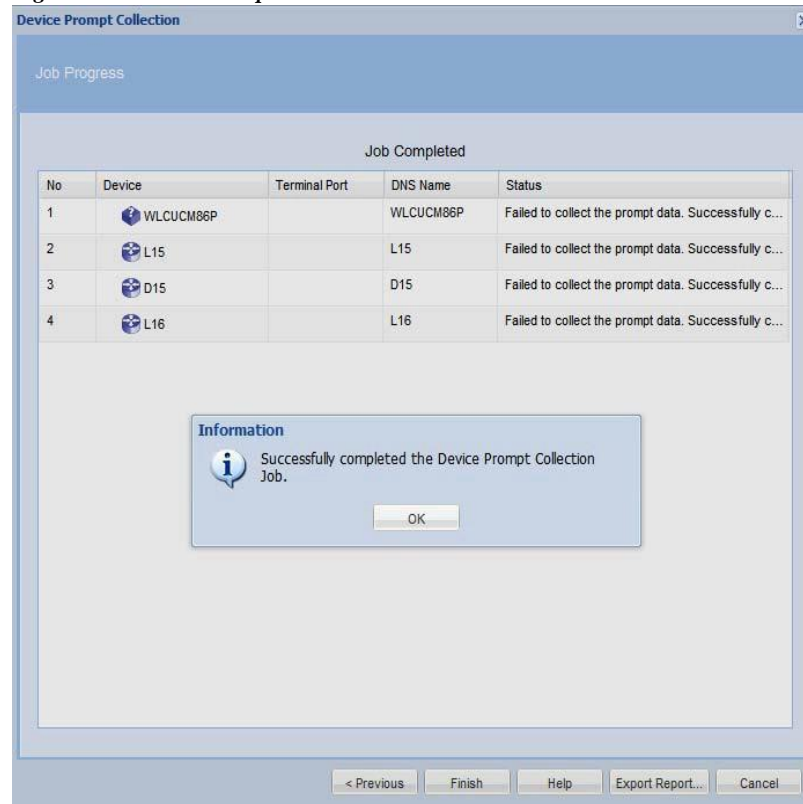

To Schedule Device Prompt Collection at a later time, select Schedule Device Prompt Collection option and then click Configure Schedule button. You can schedule Start and End Date/Time or select the Recurrence pattern as Minutely, Daily, Weekly, Monthly, or Yearly as shown in [Figure 7-21](#).

Figure 7-21 *Configure Schedule*

Once the job is started you can view the successful and failed collection for a given device as shown in [Figure 7-22](#).

Figure 7-22 *Prompt Collection Job in Action*

Common Tasks

You can use the Common Tasks sub tab of the Management Tasks tab to execute a selected collection profile. Collection Profiles are described in the [Collection Rules](#) and [Miscellaneous Rules](#) chapters.

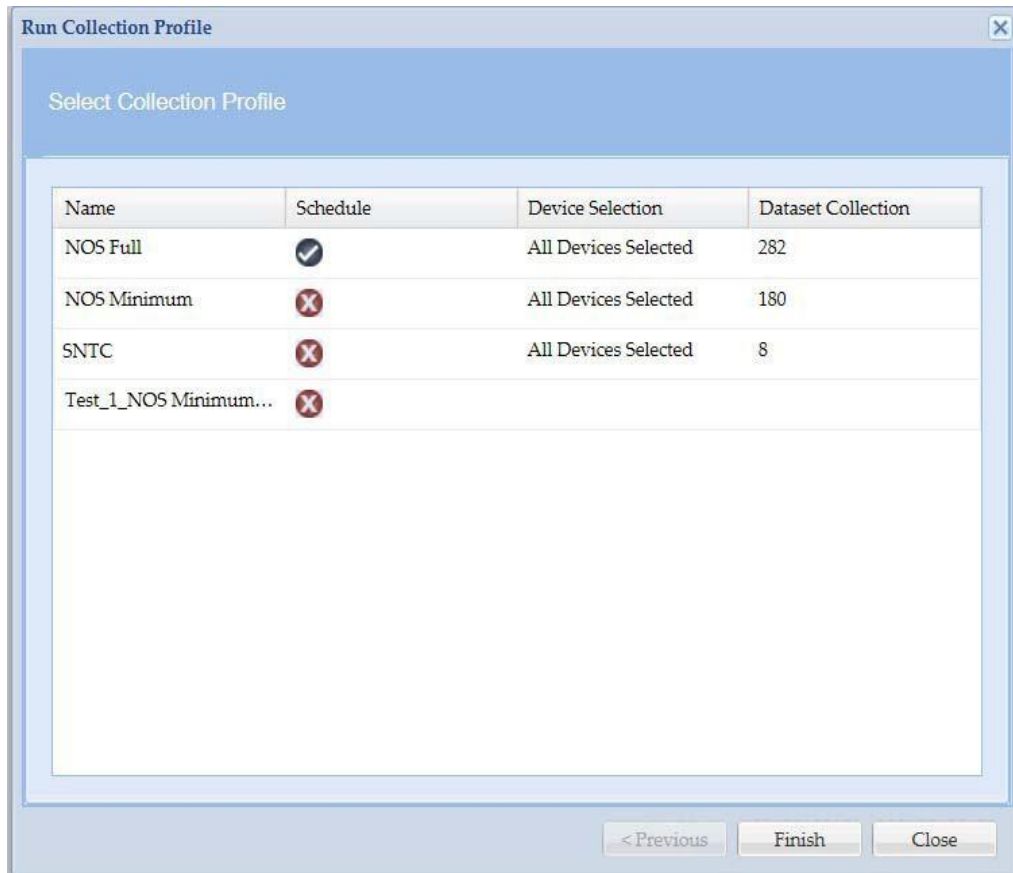

This section describes the Data Collection options in the following topics:

- [Collect Data](#)
- [Upload Data](#)
- [Adhoc Data Collection](#)
- [Collect Application Data](#)

Collect Data

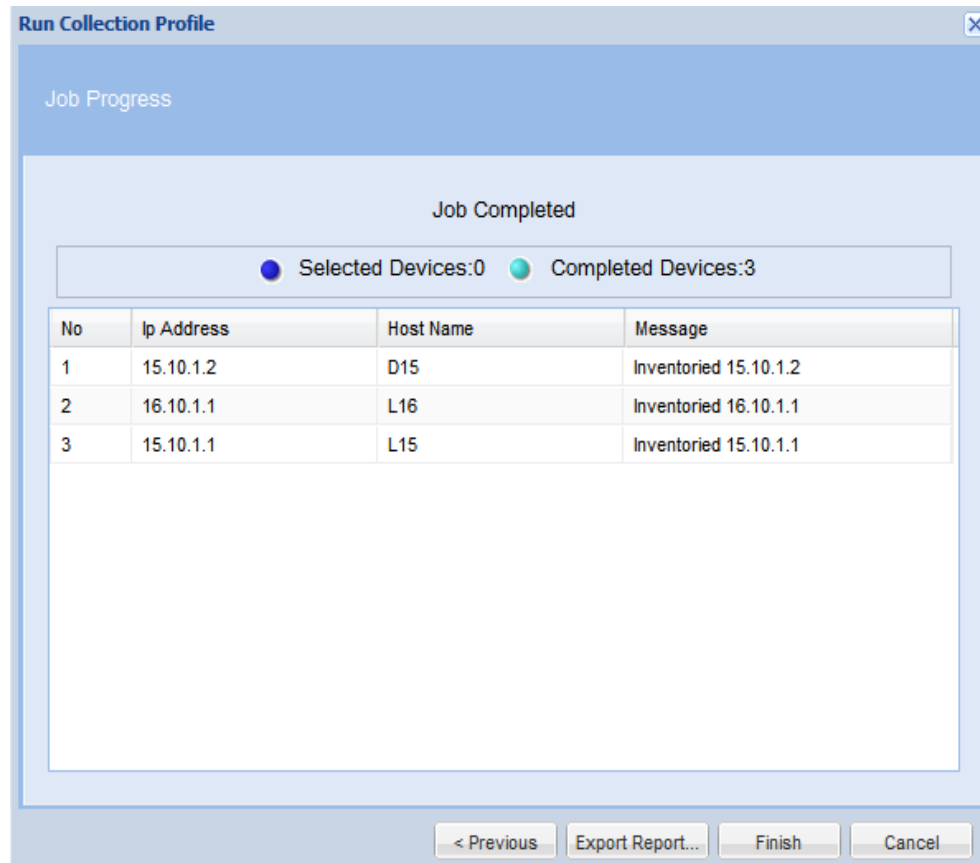

You can select any collection profile from the list of collection profiles defined and run it as needed. Select the profile and click **Finish** button to run the profile.

Figure 7-23 Select the Collection Profile

Once you start the job, the results are displayed including device name, IP address, and success or failure, as shown below.

Figure 7-24 Executed Data Collection Profile Results

Upload Data

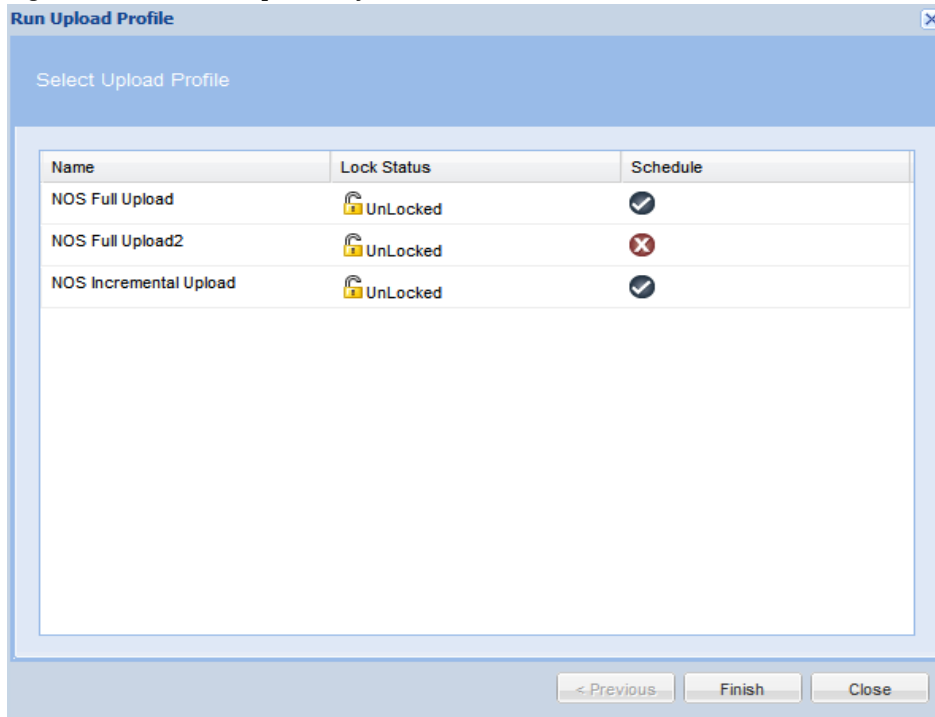

Run Upload Profile screen lists all the profiles created using Manage Upload Profiles. You can select a profile from Run Upload Profile screen and click **Finish** to start uploading the profile.

Note

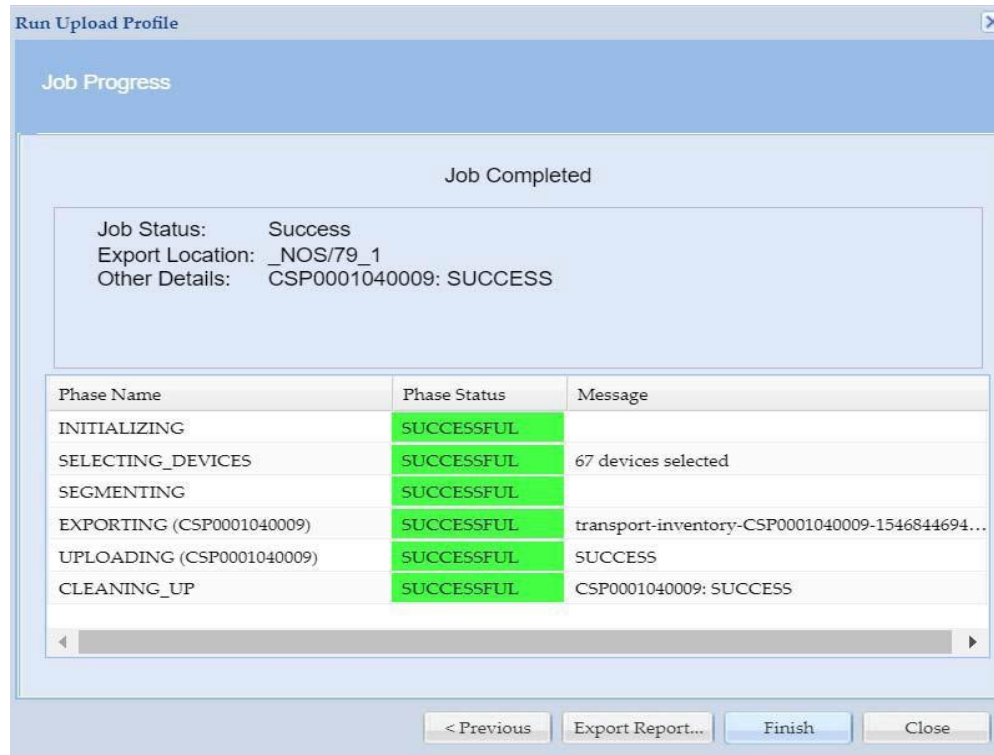

This feature is only for NOS services

Figure 7-25 *Run Upload Profile*

Job Progress screen showing the status of the uploaded profile is displayed as shown in [Figure 7-26](#).

Figure 7-26 Job Results

The status is shown in orange color if the upload is running, in green if the upload is successful and in red color if the upload failed.

If any of the phase status is failure, you have to re-run the upload profile.

Go back to [CSPC Flow Chart](#)

Ad hoc Data Collection

You can create adhoc collection profile if you want some devices to be configured to collect data based on the datasets.

In general, a collection profile will be associated with a set of devices. This means when you run collection profile, collection will be performed on devices associated with this collection profile definition.

If you wants to run a collection profile for a different set of devices other than what is present in the profile definition, an ad hoc collection profile serves this purpose.

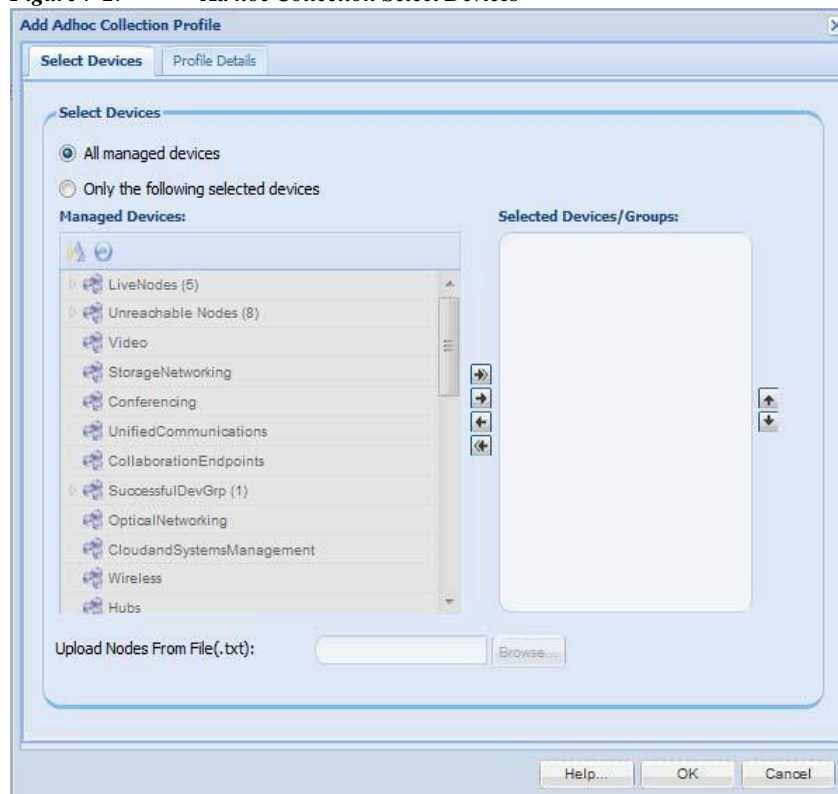

When you create ad hoc collection profile, select:

- A base collection profile
- Device details
- Scheduling information

Ad hoc collection profiles inherit collection details (like data sets) from a given base collection profile. It inherits all the details except device details and scheduling information.

On clicking “Create Ad hoc Data Collection Profiles”, screen as shown in [Figure 7-27](#) is displayed.

Figure 7-27 Ad hoc Collection Select Devices

Enter the mandatory details under the following two sections:

- Select Devices
- Profile Details

In Select Devices you can select all managed devices or only few devices. You can also browse to upload list of nodes from .txt file. Profile Details you can add the mandatory details as shown in [Figure 7-28](#).

Figure 7-28 Ad hoc Collection Profile Details

Note

If configure schedule is not provided, then ad hoc collection profile will be scheduled as soon as it is created.

The drop down box beside “Base Collection Profile” lists all the collection profiles present in the CSPC. You need to select a collection profile as a base collection profile. It is mandatory to select a base collection profile.

Configure schedule can be used to schedule ad hoc collection at a specified time and can be repeated at certain intervals by giving the required details.

Figure 7-29 *Configure Schedule*

Click **OK** to save the Profile and device details to the ad hoc collection profile. On successful completion, you will receive a message as shown in [Figure 7-30](#).

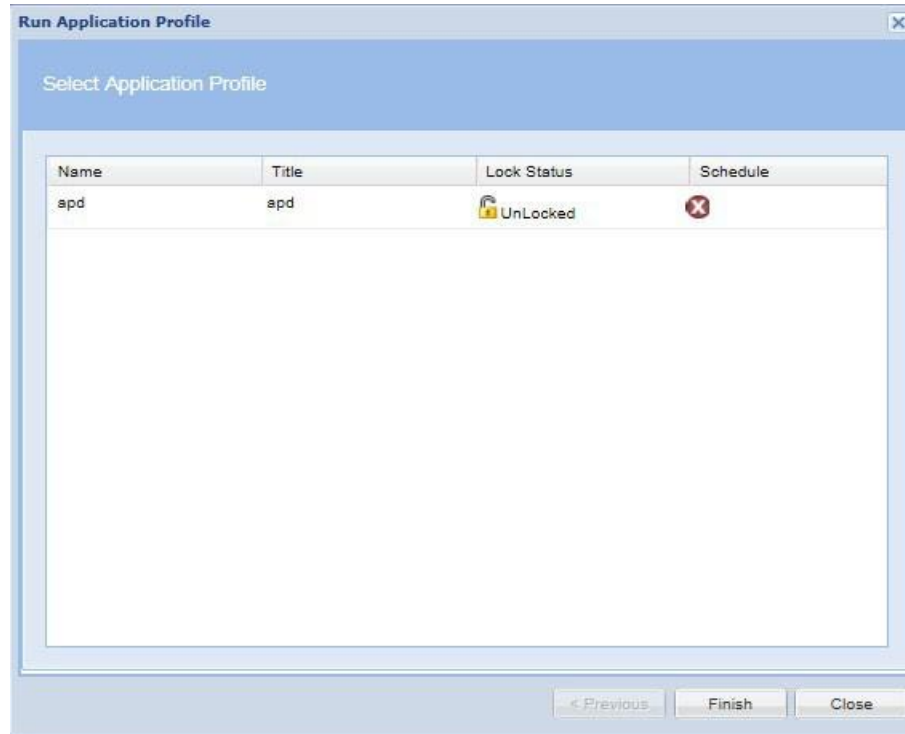

Figure 7-30 *Confirmation Message*

The ad hoc collection profile created will appear in the Manage Data Collection Profiles tab.

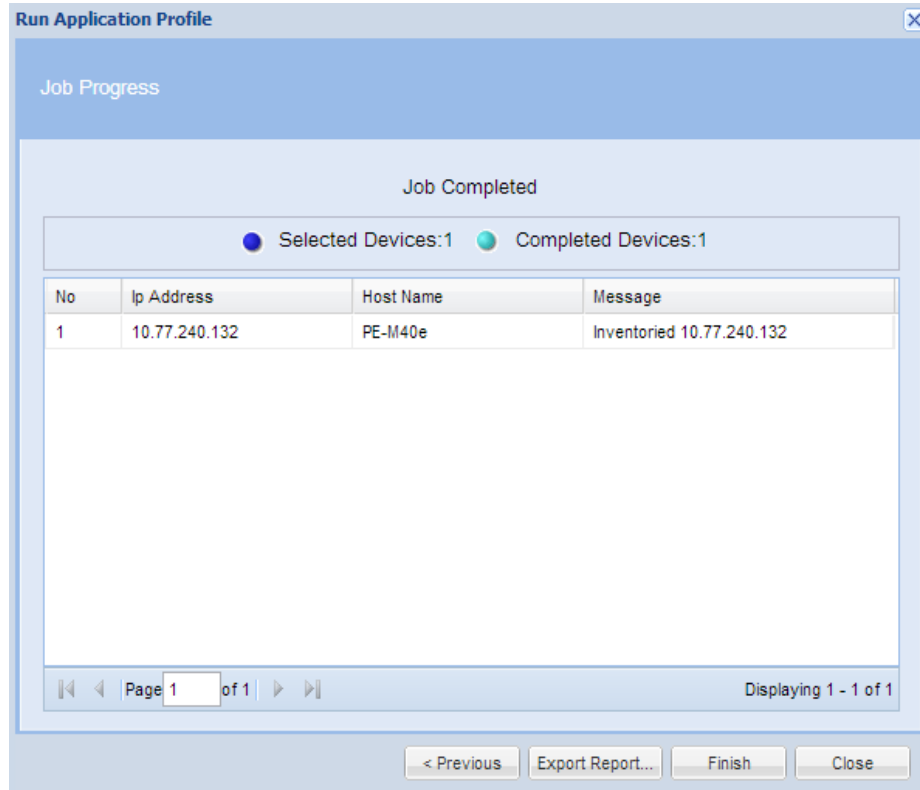

Collect Application Data

Run Application Profile shows the list of application profiles. You can select any application profile from the list of application profiles defined and run it as needed. Select the profile and click **Finish** to run the profile.

Figure 7-31 Run Application Profile

Once you start the job, the results are displayed including IP address, Host Name and success or failure, as shown in [Figure 7-32](#).

Figure 7-32 Executed Application Collection Profile Results

Job Run Status

Job Run Status

This helps you to know the status of all the jobs you run. In addition, you can see the description of each job by clicking the + symbol next to the *Job Id*. Clicking the + sign shows the *Run Id*, *State* (Successful/Aborted), *Status* (Completed/Not Completed), *Start Time*, *End Time*, and *Job Log Details* for this particular job, as shown in [Figure 7-33](#).

Job Management

Use the Job Management sub tab of the Management tasks to retrieve Job information. The job information can also be exported to an output file. The currently supported file formats are PDF, HTML, DOC, CSV (Comma delimited), TXT (Tab delimited).

This section describes the Job Management options in the following topics:

- [Manage Discovery Jobs](#)
- [Manage Device Access Verification Jobs](#)
- [Manage Workflow Jobs](#)
- [Manage Configuration Jobs](#)
- [Manage Device Prompt Collection Jobs](#)
- [Manage Health Monitor Jobs](#)

Manage Discovery Jobs

Manage Discovery Jobs provides a list of all the discovery jobs previously run, and provides you with an option to either export the job information or delete job information from the database as shown below.

Figure 7-35 Manage Discovery Jobs

The screenshot shows a web-based interface for managing discovery jobs. At the top, there are tabs for 'Device Groups' and 'Manage Discovery Jobs'. Below the tabs is a search bar and a 'Remove Job' button. The main area contains a table with the following columns: Job Id, Job Name, Created By, Description, and Created On. A context menu is open over the first row, showing options: Refresh, Help, Remove Job, and Export. The table lists 15 jobs, with the first job having Job Id 1 and Job Name 'Discover Devices1348651452504'. The bottom of the interface shows pagination: 'Page 1 of 3' and 'Displaying 1 - 50 of 132'.

Job run details can also be viewed from **Reports -> Job Management Reports**. From the drop down select Health Collection jobs and click **OK** as shown in [Figure 7-41](#).

Figure 7-41 Job Report Filter

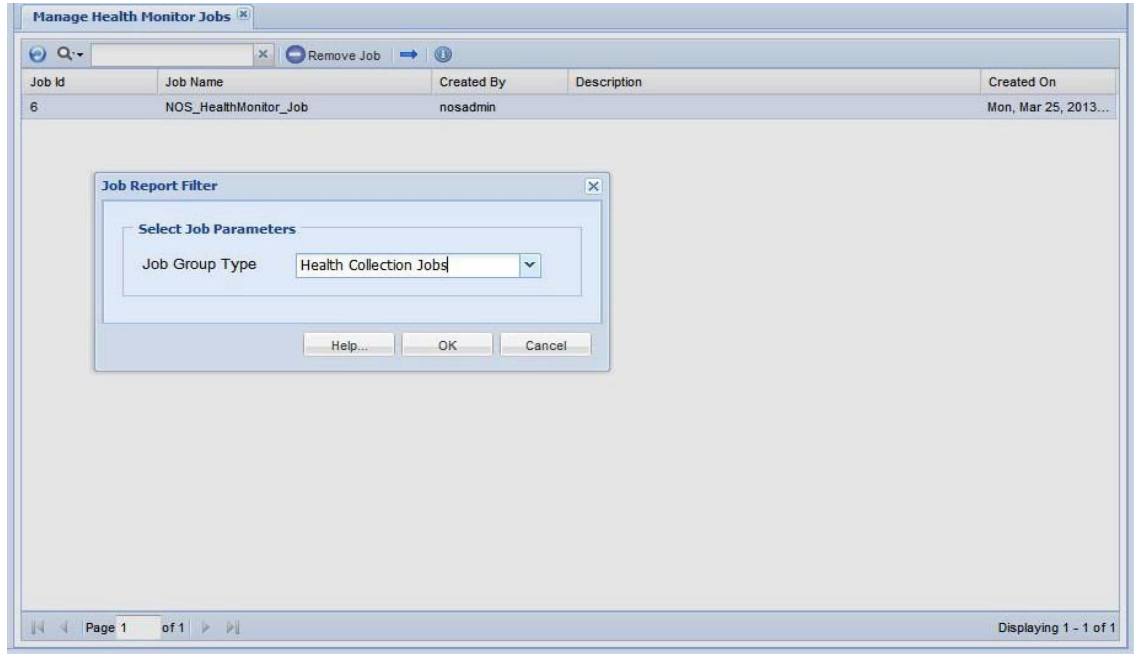

Figure 7-42 Health Collection Jobs

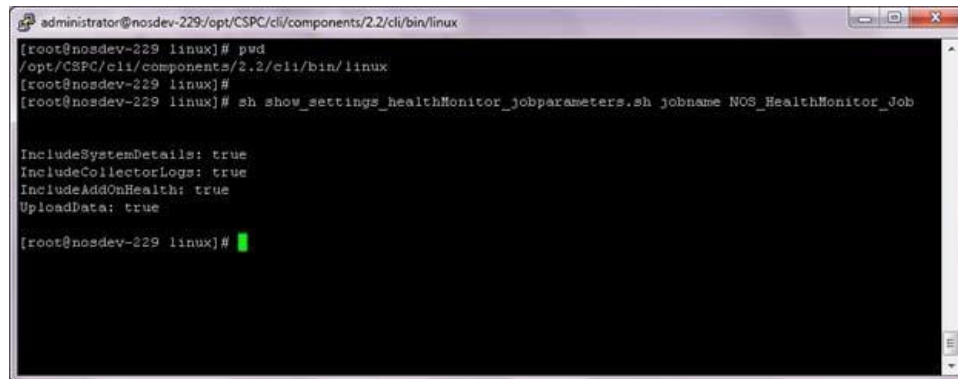

In Figure 7-42 you could see Job Id, Job Name, Created By, Created On, Modified By, Modified On, First Run Time, Last Run Time, Run Count, Next Scheduled Time. On the screen, there is no option from where the job could be triggered manually.

There are two CLI's using which this could be achieved. The CLI's are listed below:

- `job_schedule_healthMonitor_runnow.sh`
- `show_settings_healthMonitor_jobparameters.sh`

Using `show_settings_healthMonitor_jobparameters.sh` you could view any health monitor job parameters and the first CLI, `job_schedule_healthMonitor_runnow.sh` is used to create a run now job. It expects 4 parameters. [Figure 7-43](#) shows the view health monitor job parameters from CLI.

Figure 7-43 CLI Command

```

administrator@nosdev-229:/opt/CSPC/cli/components/2.2/cli/bin/linux
[root@nosdev-229 linux]# pwd
/opt/CSPC/cli/components/2.2/cli/bin/linux
[root@nosdev-229 linux]#
[root@nosdev-229 linux]# sh show_settings_healthMonitor_jobparameters.sh jobname NOS_HealthMonitor_Job

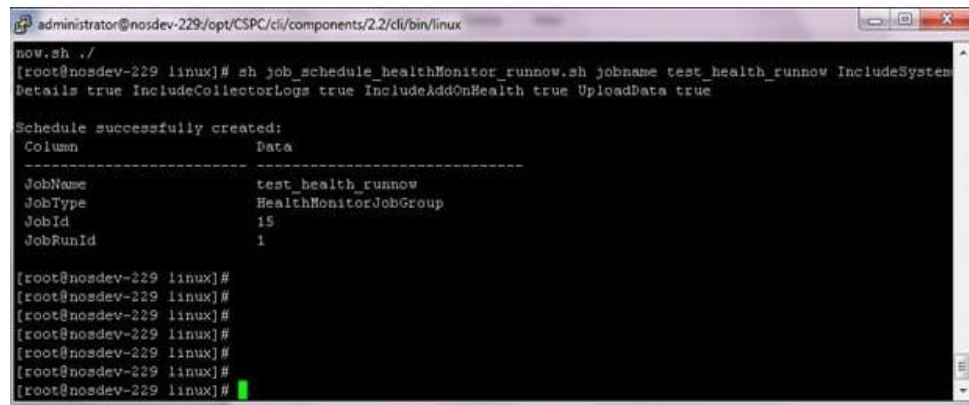

IncludeSystemDetails: true
IncludeCollectorLogs: true
IncludeAddOnHealth: true
UploadData: true

[root@nosdev-229 linux]#

```

A new health monitor runnow job can be scheduled from CLI as shown in [Figure 7-43](#).

CLI Command

```

administrator@nosdev-229:/opt/CSPC/cli/components/2.2/cli/bin/linux
now.sh ./
[root@nosdev-229 linux]# sh job_schedule_healthMonitor_runnow.sh jobname test_health_runnow IncludeSystem

```

Applications - Reports

Reports

Use the Reports tab to view the collected data and job log details for discovery, inventory, collection, and backup jobs.

This section describes the Reports options in the following topics:

- [Device Reports](#)
- [Device Access Verification Reports](#)
- [Data Collection Reports](#)
- [Services Reports](#)
- [Job Reports](#)
- [Audit Trails](#)
- [Miscellaneous](#)

All the reports can be exported to various formats such as HTML, Microsoft Word, PDF, CSV, and TXT formats, along with various graphing options. Each report is easy to navigate with filtering and report formatting options.

Device Reports

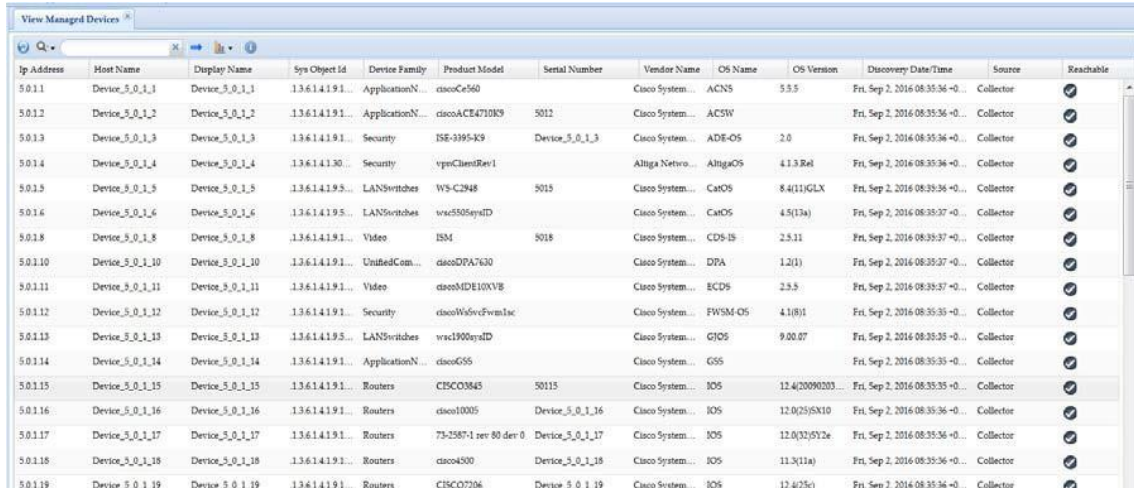

Use the Device Reports sub tab to view the collected data for the selected devices. This section describes the Reports options in the following topics:

- [View Managed Devices](#)
- [View Unreachable Devices](#)
- [View Duplicate Devices](#)
- [Discovery Report](#)
- [Device Display Properties](#)
- [Non SNMP Devices](#)
- [Interface Summary \(IOS, PIX, ASA, IOS-XR\)](#)

View Managed Devices

Discovered Devices report shows all the devices that have been discovered and managed, along with their respective details such as IP Address, Host Name, Sys Object Id, Device Family, Product Model, Serial Number, Vendor Name, OS Name, OS Version, Discovery date and time, Source, and Reachable. The report can be exported to various formats such as HTML, Microsoft Word, PDF, CSV, and TXT formats, along with various graphing options. The report is easy to navigate with filtering and report formatting options.

View Unreachable Devices

All the devices that are unreachable and are not detected while performing discovery are shown in this report. This report provides the details like host name, IP address, reason, Manage status and discovery time for each unreachable device.

To perform the rediscovery of the device, right click on any device and select Start Discovery Job option. You can also delete any unreachable device or all unreachable devices by clicking **Delete Unreachable Device** or **Delete All Unreachable Device** button respectively.

Figure 8-4 View Unreachable Devices

Device Display Properties

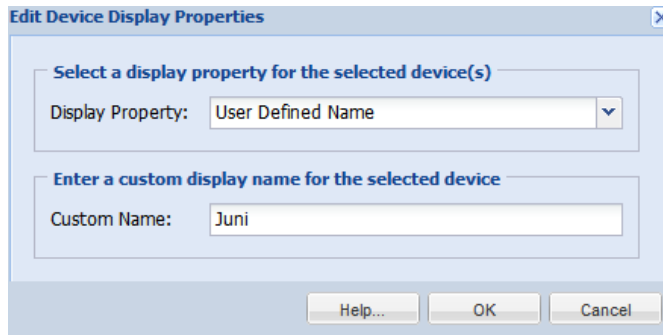

Device Display Properties report shows the display properties configured for all the devices. In addition, from this window you can configure display property for a specific device or a group of devices. You can assign a specific name for a device property such as Host Name, IP Address, DNS Name, Primary Device name and so on.

Figure 8-7 Device Display Properties

Device	Display Type	Custom Name	Ip Address	Host Name	Terminal Prompt	DNS Name	Sys Name	Sys Object Id	Mac Address	Primary Device Name
Device_5_0_1_3f			5.0.1.35	Device_5_0_1_35			Device_5_0_1_35	.136.1.41.9.12.3.1.3...		5.0.1.35

Device_5_0_1_4f	Host Name		5.0.1.40	Device_5_0_1_40			Device_5_0_1_40	.136.1.41.5655.1.3		5.0.1.40
Device_5_0_1_4f			5.0.1.41	Device_5_0_1_41			Device_5_0_1_41	.136.1.41.8164		5.0.1.41

Right click on any listed device and select *Edit Properties* option to add a custom name to the display properties of the device. The settings configured locally will override the global settings.

Figure 8-8 Edit Device Display Properties

The screenshot shows a dialog box titled "Edit Device Display Properties". It has a close button in the top right corner. The dialog is divided into two main sections. The first section is titled "Select a display property for the selected device(s)" and contains a dropdown menu labeled "Display Property:" with "User Defined Name" selected. The second section is titled "Enter a custom display name for the selected device" and contains a text input field labeled "Custom Name:" with the text "Juni" entered. At the bottom of the dialog, there are three buttons: "Help...", "OK", and "Cancel".

Interface Summary (IOS, PIX, ASA, IOS-XR)

Interface Summary report displays the list of all the interfaces available in CSPC.

Figure 8-10 Interface Summary

Node	Interface Name	MAC Address	Ip Address	Net M...	MTU (...)	Spee...	Line...	Proto...
sts-nat1760-1	Fa0/0	000c.ce05.b835	172.21.54.131	-1	-1	up	up

ciscoasa	manage	0013.c480.7a20	10.78.177.39	-1	-1	up	up	

Interface Summary data can be also seen in a graphical format, clicking on graphics icon  shows following options:

- Interface Status Summary
- Interface IP Address Summary
- Interface Type Summary

Device Access Verification Reports

- [Device Access Verification Summary](#)
- [Device Access Verification By Dataset Type](#)
- [View Access Verification Results](#)

Device Access Verification Summary

The Device Access Verification Summary report provides summary of the access verification. This report provides high level overview of the types of protocols used, and number of devices either succeeded or not along with number of devices that are not verified. This is shown in [Figure 8-11](#).

Figure 8-11 Device Access Verification Summary

Verification Protocol	Number of Devices Passed	Number of Devices Failed	Number of Devices Unverified
telnet	3873	1127	1
sshv1	0	5000	1
sshv2	0	5000	1
snmpv1	3835	1165	1
snmpv2c	3836	1165	0
snmpv3	0	5000	1
http	0	5000	1
https	0	5000	1
wmi	0	5000	1
tl1	1	5000	0

In Device Access Verification Summary, you can export the failed devices in CNC format. The data related to the selected filter type (Device, Protocol, Status and so on) and only failed credentials are exported as part of a seed file. This export option is supported for both manually added devices and devices added through seed file import.

Device Access Verification By Dataset Type

The Device Access Verification by Dataset Type shows the devices and whether they support CLI, SNMP, SNM Configuration, SOAP, XML, WMI, FILE type protocols and files.

Figure 8-12 Device Access Verification By Dataset Type

Device	CLI	SNMP	SNMP_CONFIG	SOAP	XML	WMI	FILE
Device_5_0_1_50	✗	✓	✓	✗	✗	✗	✗

dc3qa-ind10	✗	✓	✓	✗	✗	✗	✗
Device_5_0_1_32	✗	✓	✓	✗	✗	✗	✗
Device_5_0_1_30	✗	✓	✓	✗	✗	✗	✗
Device_5_0_1_29	✗	✓	✓	✗	✗	✗	✗

View Access Verification Results

The View Access Verification Report shows the latest device access verification results. It provides details on verification time and source of the verification (either part of discovery or a separate verification job) and the successful/failed protocol, Status of each protocol, Messages and status of each device, device combinations, and User defined fields. This is shown in [Figure 8-13](#).

Figure 8-13 View Access Verification Report

Device	IP Address	Verification Time	SNMPV1	SNMPV2C	SNMPV3	TELNET	SSHV1	SSHV2

Device_5_0_1_49	5.0.1.49	Thu, Jun 21, 2018 05:13:18 ...	Skipped	Skipped	Successful	Successful	Connection Failed	Con

The intelligent search options are shown in this report as well. When you start typing “tel” to list only the Telnet credentials, the report only shows those entries that match the “tel” string you entered. As shown in the above screen, the search options are quite extensive, and you can search based on any field/value in the report. You can also specify wild cards, regular expressions, matching patterns, etc. This helps to pinpoint the data you are looking for in a fast and easy way.

Figure 8-14 Device Message

Data Collection Reports

- [View Collected Data](#)
- [View Collection Run Summary](#)
- [Config Collected Devices](#)
- [Config Data Per Device](#)
- [Export Detailed Device Data](#)

View Collected Data

This report provides a summary of the completed collection profiles and the data that is collected while completing those collection profiles. You can view a specific completed collection profile data, export data to a report, look at job log status and delete the collected data.

Figure 8-15 *Collection Profile Run Summary Main Window*

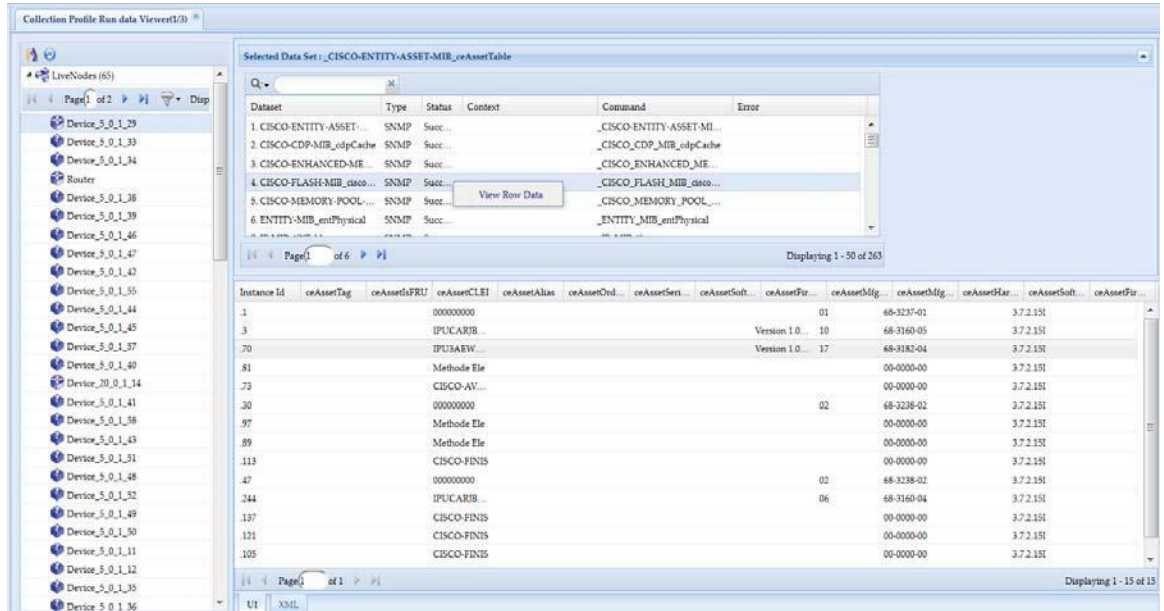

You can select any row in the report, right click on it to get all the options associated with that row:

- View Data
- Export and Upload Data
- View Device Collection Summary
- View Device Collection Details
- View Tag Collection Summary
- View Tag Collection Details
- View Job Log
- Search Results
- Delete Profile Executions
- View IP Host Masked Values

When you select *View Data*, you are provided with the data collection profile run data viewer, as shown in [Figure 8-16](#).

Figure 8-16 Collection Profile Run Data Viewer

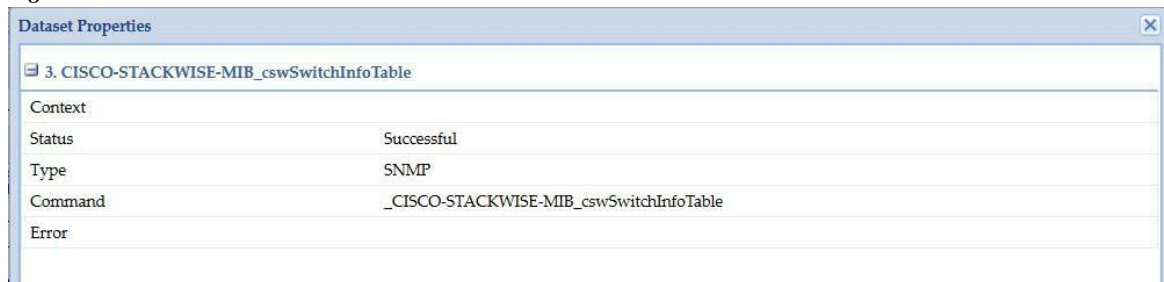

Once you select a specific dataset the output of the dataset along with, if the data collection is successful or not appears (command status). The Command Status is shown as one of these states:

- Successful
- Failed
- Not Applicable

To see the dataset properties right click on a dataset and click **View Row Data**.

Figure 8-17 View Row Data

Export and Upload data provide options to use collection profile settings, export and upload the data, as shown in [Figure 8-18](#)

Figure 8-18 Export and Upload Data

Export And Upload Data

Profile Details

Profile Name: NOS Full

Selected Device Count: 63 device(s) selected

Export Details

Export Format: Cisco VSEM (.zip)

Upload Options

Use Collection Profile Settings

Export Only

Export and Upload

Help... OK Cancel

You can select the required options on the screen

- Use Collection Profile Settings: Uses the collection profile settings.
- Export Only: Only exports the data.
- Export and Upload: Exports and uploads the data.

View Collection Summary and View Collection Details provide collection summary and details for the selected collection profile. This is shown in [Figure 8-19](#).

```

You can also delete a specific instance of the collection profile execution by selecting *Delete Profile Executions*.

To check the differences between two selected runs, select *Show Differences between selected Runs* option as shown below.

Use the *View Tag Collection Summary* option to list the summary of the commands that have been tagged earlier. Collection tag summary screen shows the device count of the tag along with the count of success, failed and not applicable devices, as shown in [Figure 8-22](#).

Figure 8-22 View Tag Collection Summary

Tag Name	Selected Device Count	Success Count	Failed Count	Not Applicable Count
Config	46	30	6	10

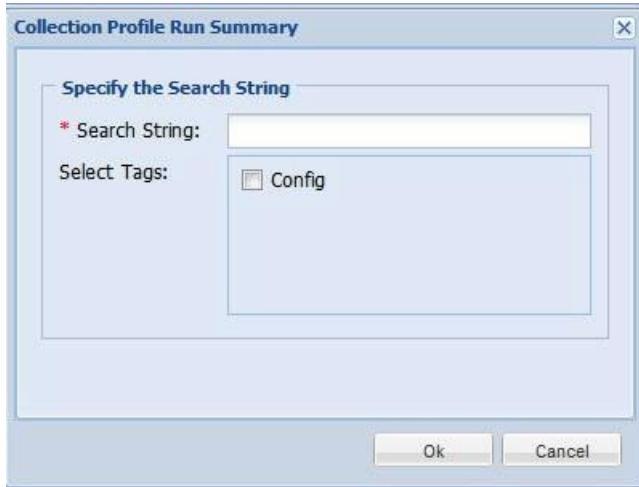

Use the *View Tag Collection Details* option to show the details of the commands that have been tagged. The screen shows the Device name, Tag name, Dataset name, Dataset type, Status and Message.

Figure 8-23 View Tag Collection Details

Device	Tag Name	Dataset Name	Dataset Type	Status	Message
dc3qa-ind10		ActiveIPPhone	SOAP	Successful	View Data
dc3qa-ind10		ConfiguredIPPhone	SOAP	Successful	View Data
dc3qa-ind10	test		HTTP	Successful	View Data
dc3qa-ind10	test1		HTTP	Successful	View Data

Use the Search Results option to search for the results. Specify the search string and select the tags to search the results, as shown in [Figure 8-24](#).

Figure 8-24 *Collection Profile Run Summary*

To remove the profile executions select Delete Profile Executions

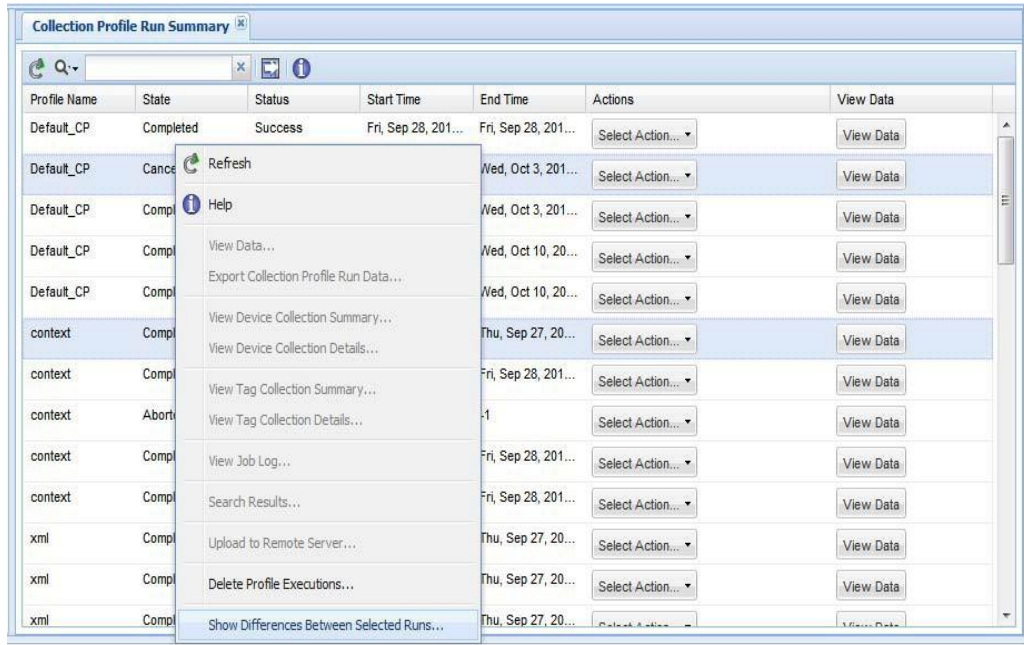

Select the View IP Host Masked Values option to view the IP hosted masked values. You can also download the file in txt format by clicking on Download button.

Figure 8-25 *View IP Host Masked Values*

To view the difference between the selected runs chose the option Show Difference Between Selected Runs as shown in [Figure 8-26](#).

Figure 8-26 Show Differences between Selected Runs

When you select two different runs, you can see what has changed between those runs in a Diff report where color codes (green-additions, red-deletions, and blue-changes) identify exactly what has changed.

Figure 8-27 Differences Between Two Collection Profile Runs

Config Collected Devices

You can filter and view the Collection Profile and devices. You can also enter the filter value in the Search String to view the config collected devices.

Figure 8-31 View Config Collected Devices Filter

Config Collected Devices screen is displayed. It shows the list of Device IP and Device Primary Name as shown in Figure 8-32.

In addition, you can see the description of each device by clicking the + symbol next to the Device Ip. Clicking the + sign shows the Collection Time, Context, Dataset Type, Error Message, and Config Command for this particular device.

Figure 8-32 Config Collected Devices

Device IP	Device Primary Name
5.0.1.1	5.0.1.1
5.0.1.2	5.0.1.2
5.0.1.3	5.0.1.3
5.0.1.8	5.0.1.8
5.0.1.11	5.0.1.11
5.0.1.12	5.0.1.12
5.0.1.13	5.0.1.13

Collection Time	Context	Dataset Type	Error Message	Config Command

Config Data Per Device

Config Data Per Devices report shows the configs collected by CSP Collector. You can select configs based on Collection Profile. Config data per device filter can be configured by providing required inputs as shown below.

Figure 8-34 Config Data Per Device Filter

The config data will be processed for the mentioned devices as shown in [Figure 8-35](#). On clicking View Data, collected config data is displayed for the specified device.

Figure 8-35 Collected Config Data

Collection Time	Context	Dataset Type	Error Message	Config Command
2012-12-03 02:00:44.0		SNMP_CONFIG	No write community string	SNMP_STARTUP View Data
2012-12-03 02:00:44.0		SNMP_CONFIG	No write community string	SNMP_RUNNING View Data
2012-12-03 02:01:15.0		CLI		show running-config View Data

Export Detailed Device Data

You can export the detailed device data such as, device, access verification config time and collection time and so on. You can select devices based on Collection Profile for service. Devices can be downloaded in csv format by providing required inputs as shown below.

Figure 8-36 Export Detailed Device Data

Services Reports

- [Alerts](#)
- [SNMP Trap Report](#)
- [Syslog Summary](#)
- [Syslog Messages](#)

Alerts

This report provides a list of all Alerts. The report contains Event ID, Module, Time of event, severity, message, and View Details. Alerts that are older than 14 days in CSPC system are purged.

There two types of alerts UI Notification and Email alerts.

- UI Notification alerts appears on the UI when a notification is received.
- Email alerts are the alerts sent via mail to the subscribed email address

Figure 8-37 Alerts

Event Id	Module	Time Of Event	Severity	Message	View Details

SNMP Trap Report

This report shows a list of traps sorted by Device, Notification types, Trap Data, and Received At.

To generate the SNMP Trap Report, do the following steps:

-
- Step 1** Select the **Trap Received Time** from drop down
 - If custom is selected, then enter the **Start Date/Time** and **End Date/Time**
 - Step 2** Browse to select the **Source Device**
 - Step 3** Select **Notification Types**
 - Step 4** Click **OK**

Syslog Summary

Syslog Summary report provides the summary of the all the syslogs collected by CSPC. You need to provide the filtering information such as when was the log(s) received, and do you want to see the summary based on severity and so on as shown in [Figure 8-40](#).

Figure 8-40 Syslog Summary Filter

Select Syslog Summary Report Type

Report Type Syslog Count By Severity

Help... OK Cancel

Once the filter is selected, the summary report matching that filter is provided.

Figure 8-41 Syslog Summary

The screenshot shows a web-based report titled "Syslog Messages" with a sub-tab "Syslog Count By Severity". Below the title bar is a navigation area with a search icon, a search input field, and several utility icons. The main content is a table with two columns: "Severity" and "Message Count".

Severity	Message Count
0 (emergency)	0
1 (alert)	0
2 (critical)	0
3 (error)	303
4 (warning)	27
5 (notification)	0
6 (informational)	0
7 (debugging)	60

Syslog Messages

Syslog messages report provides all the syslogs that are collected by CSPC. Just like the Syslog Summary report, you need to provide the filter that needs to be applied before providing the detailed syslog message report.

Figure 8-42 Syslog Filter

Job Reports

Use the Job Log Reports sub tab to view the collected logs for various operations that are performed through the CSP collector.

This section describes the Reports options in the following topics:

- [Discovery Jobs](#)
- [Job Management Reports](#)
- [Inventory Jobs](#)
- [Device Access Verification Jobs](#)
- [View Job Metrics](#)

Discovery Jobs

The discovery jobs report includes information on all the network device discovery jobs performed.

In addition, you can see the description of each job by clicking the + symbol next to the *Job Id*. Clicking the + sign shows the *Run Id*, *State* (Successful/Aborted), *Status* (Completed/Not Completed), *Start Time*, *End Time*, and *Job Log Details* for this particular job.

You can cancel any job by clicking the *View Job Details* -> *Cancel Job* button.

These details are common to all *Job Reports*.

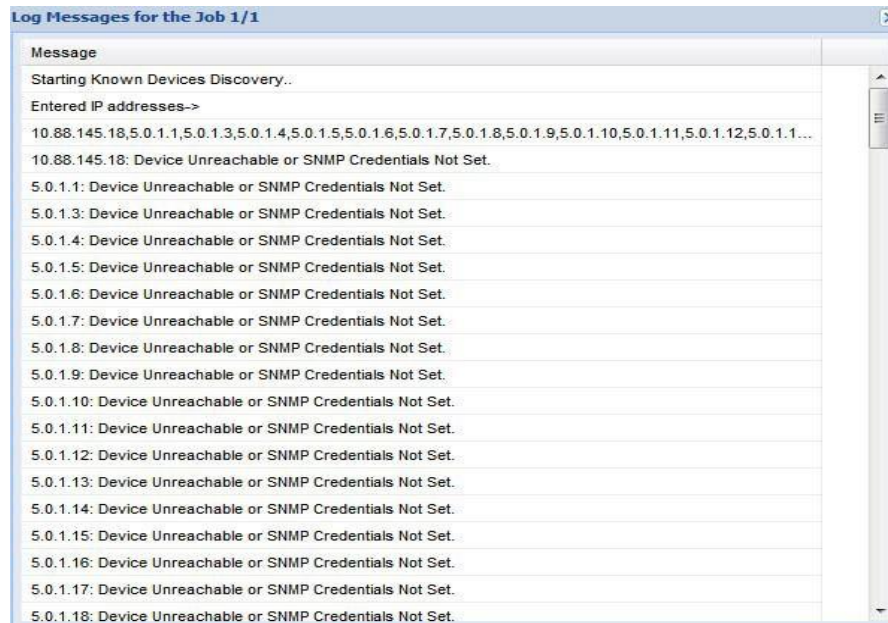

Figure 8-44 Discovery Jobs

1	Completed	Success	Thu, Jun 21, 2018 04:40:16 +0530	Thu, Jun 21, 2018 04:40:53 +0530	Select Action...																		
15	NOS_Default_C...	Collection Profil...	admin	Thu, Jun 21, 2018 05:1...					2018 05:1...		NOS												

Select the *Action* button in the report to view either the Job Log details for this particular job, look at the Job itself (what options are provided for the discovery, etc.) or you can create a new job by cloning this discovery job. [Figure 8-45](#) shows the job log details. You can also **Export Seed File** and **Export Imported Device Status**. To know the status of imported devices you can generate/export the report based on Discovery JobId and JobRunId and to export the status of imported devices into .csv file, with the name *ImportedDeviceStatus_jobid_jobrunid.csv* click **Export Imported Devices Status**.

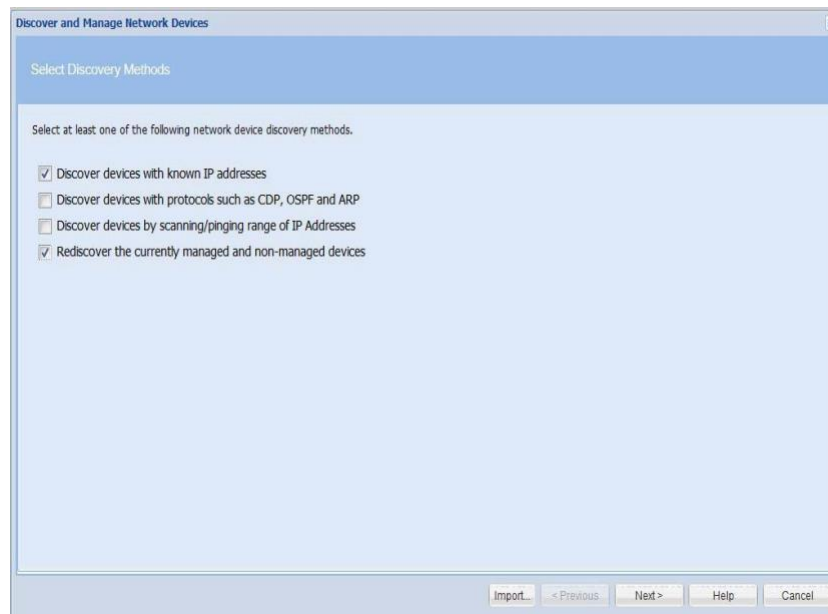

Pause and resume jobs using the **Pause Job** and **Resume Job** menu options. Pause is activated when job starts running and resume is activated once the job is paused.

Figure 8-45 Job Log Details

When you select the **Cloning** or **Modify Discovery Job** option, you see the exact job that was completed earlier, and can modify it to create another job as shown below.

Figure 8-46 Clone This Discovery Job

To **IP Address/Host Name** , click **Next** button.

Figure 8-47 Discover Devices using Known IP Addresses

The screenshot shows a dialog box titled "Discover and Manage Network Devices" with a sub-header "Discover devices with known IP Addresses". Below the sub-header, there is a text prompt: "Enter the list of IP addresses for the known devices." A text input field labeled "IP Address/Host Name" contains the value "10.1.1.10". Below the input field are three icons: a green plus sign for "Add", a red X for "Delete", and a pencil for "Modify". At the bottom of the dialog, there are four buttons: "< Previous", "Next >", "Help", and "Cancel".

To schedule discovery options, click **Next** button.

Figure 8-48 Discovery Schedule Options

The screenshot shows a dialog box titled "Discovery Schedule Options". It is divided into several sections:

- Management Protocol:** Contains two columns of protocols. The left column includes snmpv3, snmpv2c, telnet, http, and https. The right column includes sshv2, snmpv1, and sshv1. Arrows between the columns allow for moving protocols between them.
- Discovery Options:** Contains three checkboxes: "Enable NMAP Discovery" (checked), "Do not Manage Devices", and "Enable Loopback". There is also an unchecked checkbox for "Manage Devices".
- SNMP Timeout:** A field labeled "SNMP Timeout (in sec):" with the value "3".
- Job Details:** Includes a "Job Description:" text field and a "Service Name:" dropdown menu.
- Job Scheduling Options:** Contains two radio buttons: "Start discovery now" and "Schedule discovery" (selected). Below them, it says "No schedule configured" and provides a large empty text area for scheduling details.

 At the bottom of the dialog, there are buttons for "Export Settings...", "< Previous", "Finish", "Help", and "Close".

Inventory Jobs

This report includes all the network device inventory jobs performed.

In addition, you can see the description of each job by clicking the + symbol next to the *Job Id*. Clicking the + sign shows the *Run Id*, *State* (Successful/Aborted), *Status* (Completed/Not Completed), *Start Time*, *End Time*, and *Job Log Details* for this particular job, as shown in the figure below.

Figure 8-49 Inventory Jobs Main Window

Select the *Action* button in the report to view either the Job Log details for this particular job, or to cancel a job while it is still running. You can pause any running job and later resume it by using the Pause Job and Resume Job options.

By selecting *Recollect Failed Datasets* option, the data from only those devices is collected that showed an error earlier, once the data is collected it is merged with the other data before it is sent to Cisco.

Use view collection profile device status is to see the progress of device collection and it is enabled only if collection is in running state.

Figure 8-50 shows the job log details.

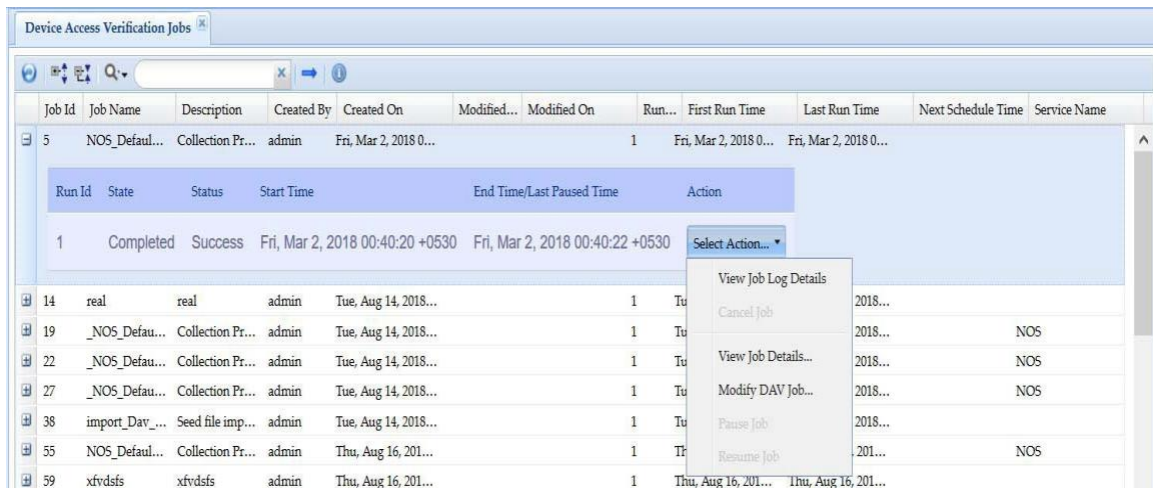

Figure 8-50 Job Log Details

Device Access Verification Jobs

The Device Access Verification Jobs report includes all the network device verification jobs performed. In addition, you can see the description of each job by clicking the + symbol next to the *Job Id*. Clicking the + sign shows the *Run Id*, *State* (Successful/Aborted), *Status* (Completed/Not Completed), *Start Time*, *End Time*, and *Job Log Details* for this particular job, as shown in Figure 8-51.

Figure 8-51 Device Access Verification Jobs Main Window

Select the *Action* button in the report to view either the Job Log details for this particular job, or to cancel a job while it is still running. You can also view and modify the job details. Pause and resume jobs using the **Pause Job** and **Resume Job** menu options. Pause is activated when job starts running and resume is activated once the job is paused.

Figure 8-53 shows the job log details.

Figure 8-52 Job Log Details

Message
All Devices (1) selected.
Protocols Selected: telnet
5.0.1.38 (telnet) : Successful with credential '5.0.1.38_telnet'
Device Access Verification Job completed with Status: Success
Updating device working credentials.

Job Management Reports

Job Management Reports option is a container from where you can select any of the supported jobs, except for discovery jobs and inventory jobs.

Job Management Reports allows to select any of the supported Job reports. You can select any job from the Job Group Type drop down list to go to the specified Job report. In addition, for all the jobs you can see the description of each job by clicking the + symbol next to the Job Id. Clicking the + sign shows the Run Id, State (Successful/Aborted), Status (Completed/Not Completed), Start Time, End Time, and Job Log Details for the particular job.

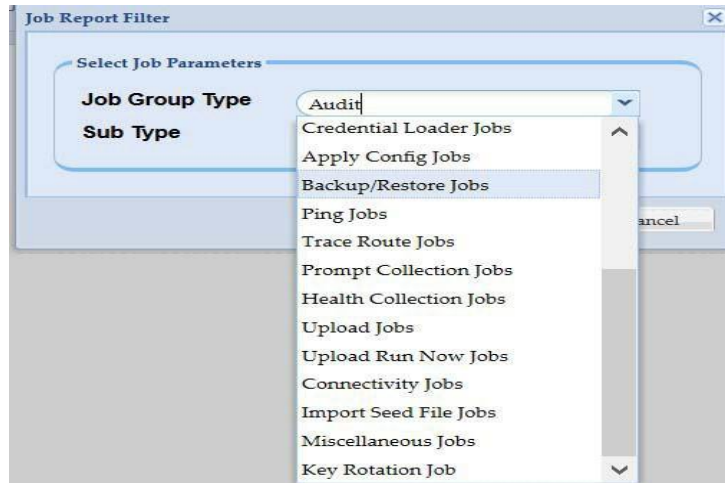

Select the Action button in the report to view either the Job Log details for this particular job, or to cancel a job while it is still running.

The currently supported jobs are:

- [Credential Loader Jobs](#)
- [Apply Config Jobs](#)
- [Backup and Restore Jobs](#)
- [Ping Jobs](#)
- [Trace Route Jobs](#)
- [Prompt Collection Jobs](#)
- [Health Collection Jobs](#)
- [Upload Jobs](#)
- [Upload Run Now Jobs](#)
- [Connectivity Jobs](#)
- [Import Seed File Jobs](#)
- [Miscellaneous Jobs](#)
- [Key Rotation Job](#)

After opening the Job Management Reports window, select the Job which you want to display and click **OK** button. More details on the Jobs are given below. Jobs can be either Unscheduled or Scheduled. Jobs can be edited by right clicking on the Job and selecting Edit Job Schedule option.

Figure 8-53 Job Management Reports

Credential Loader Jobs

Credential Loader Jobs allows you to view all the jobs runs/created using Changing Credential Import.

Figure 8-54 Credential Loader Jobs

Jobs can also be Unscheduled, or Schedules can be edited by right clicking on the Job name.

In addition, you can see the description of each job by clicking the + symbol next to the *Job Id*. Clicking the + sign shows the *Run Id*, *State* (Successful/Aborted), *Status* (Completed/Not Completed), *Start Time*, *End Time* for this particular job.

Apply Config Jobs

The Apply Config Jobs report allows you to view the configuration jobs that were applied from the CSP collector. You can view all the jobs, job creator, etc.

In addition, you can see the description of each job by clicking the + symbol next to the *Job Id*. Clicking the + sign shows the *Run Id*, *State* (Successful/Aborted), *Status* (Completed/Not Completed), *Start Time*, *End Time*, and *Job Log Details* for this particular job, as shown in [Figure 8-55](#).

Jobs can also be Scheduled or Unscheduled, and can be edited by right-clicking on the Job name.

Figure 8-55 Apply Config Jobs

The screenshot shows a web-based report titled "Apply Config Jobs". It features a table with the following columns: JobId, JobName, JobDescription, Created..., CreatedOn, Modifie..., ModifiedOn, Run..., FirstRunTime, LastRunTime, and NextScheduleTime. The table contains 12 rows of data, all with "admin" as the creator and "Thu, Sep 27, 20..." as the creation and modification dates. Each row has a small expandable icon (+) next to the JobId. At the bottom of the interface, there is a pagination control showing "Page 1 of 1" and a status indicator "Displaying 1 - 12 of 12".

JobId	JobName	JobDescription	Created...	CreatedOn	Modifie...	ModifiedOn	Run...	FirstRunTime	LastRunTime	NextScheduleTime

Backup and Restore Jobs

The Backup and Restore Jobs report allows you to view the backup and restore jobs that were applied on the CSP collector. You can view all the jobs, job creator, etc.

In addition, you can see the description of each job by clicking the + symbol next to the *Job Id*. Clicking the + sign shows the *Run Id*, *State* (Successful/Aborted), *Status* (Completed/Not Completed), *Start Time*, *End Time*, and *Job Log Details* for this particular job, as shown in the figure below.

Jobs can also be Scheduled or Unscheduled, and can be edited by right-clicking on the Job name.

Figure 8-56 Backup/Restore Jobs

Ping Jobs

Ping Jobs allows you to view the ping jobs that were applied on the CSP collector from XML API interface.

In addition, you can see the description of each job by clicking the + symbol next to the *Job Id*. Clicking the + sign shows the *Run Id*, *State* (Successful/Aborted), *Status* (Completed/Not Completed), *Start Time*, *End Time*, and *Job Log Details* for this particular job, as shown in the figure below.

Jobs can also be Scheduled or Unscheduled, and can be edited by right clicking on the Job name.

Figure 8-57 Ping Jobs

The screenshot shows a web interface titled "Ping Jobs". It features a main table with columns: Job Id, Job Name, Job Description, Created On, Modified On, First Run Time, Last Run Time, Run..., and Next Schedule Time. One job is listed with Job Id 7, Job Name TestPing2, Job Description This ping job, Created On Fri, May 31, 2013..., and Run... 1. Below this job, a sub-table is expanded showing details for Run Id 1, State Aborted, Status Failed, Start Time Fri, May 31, 2013 09:40:15 +0530, and an Action dropdown menu.

Job Id	Job Name	Job Description	Created On	Modified On	First Run Time	Last Run Time	Run...	Next Schedule Time

Trace Route Jobs

In Trace Route Jobs you can view all the trace route jobs that were performed on a CSP collector.

Figure 8-58 Trace Route Jobs

You can see the description of each job by clicking the + symbol next to the *Job Id*. Clicking the + sign shows the *Run Id*, *State* (Successful/Aborted), *Status* (Completed/Not Completed), *Start Time*, *End Time*, and *Job Log Details* for this particular job.

Jobs can also be Scheduled or Unscheduled, and can be edited by right clicking on the Job name.

Prompt Collection Jobs

The Prompt Collection Jobs report includes all the Prompt Collection jobs performed.

In addition, you can see the description of each job by clicking the + symbol next to the *Job Id*. Clicking the + sign shows the *Run Id*, *State* (Successful/Aborted), *Status* (Completed/Not Completed), *Start Time*, *End Time*, and *Job Log Details* for this particular job, as shown in the figure below.

Jobs can also be Scheduled or Unscheduled, and can be edited by right clicking on the Job name.

If you do not want to run a scheduled upload, right click on the job, and then click Unschedule Job button.

Figure 8-63 *Unschedule Job / Edit Job Schedule*

A confirmation box as shown in [Figure 8-64](#) is displayed.

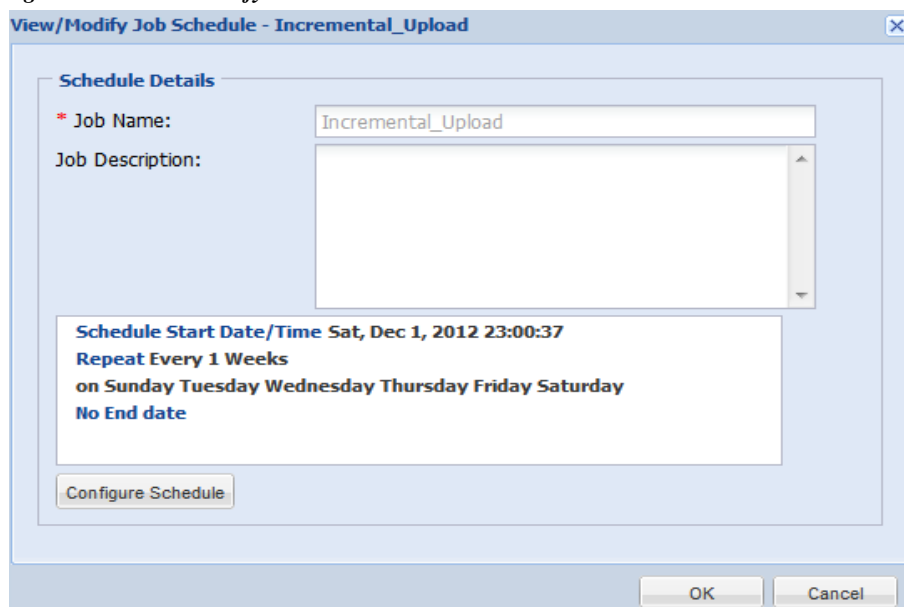

Figure 8-64 *Unschedule Job*

Click **Yes** button to unschedule the job.

If you want to edit an existing upload job schedule, right click on the job, and click Edit Job Schedule button. Modify Job Schedule screen as shown below is displayed.

Figure 8-65 *Modify Job Schedule*

You can reconfigure the schedule by clicking the Configure Schedule button. Except the Job Name all details can be modified.

Upload Run Now Jobs

In Upload Run Now Jobs you can view all the run now jobs performed with upload Profile. Upload Run Now Jobs are System upload jobs created by system with the system generated job schedule.

Figure 8-66 Upload Run Now Jobs

View Job Metrics

You can see metrics for job specific details, in Discovery job what type of job was triggered, in inventory and upload what were the service or collection profile name, and in DAV what were the protocols used. Each job metrics displays the average time taken for 100 devices

Figure 8-73 Job Metrics

Audit Trails

Audit Trail report includes all the server related logs. Use the Server Audit Trails Reports sub tab to view the audit trails of the server, data collection and device management aspects. The columns displayed are username, module, sub module, message, log time, job log details.

The sub module includes changes made to session management, patch management, user management, groups. It will also show any unauthorized connection attempts made from other hosts. This report can be exported to PDF, HTML, DOC, CSV (Comma delimited), TXT (Tab delimited) formats.

This section describes the Reports in the following topics:

- [Device Management Audit Trails](#)
- [Data Collection Audit Trail Report](#)
- [Server Audit Trail Report](#)

Device Management Audit Trails

Device Management Audit Trails report includes all device management logs. It also displays the Job Log Details for various jobs. The columns displayed include user name, module, sub module, message, log time, job log details. For some jobs, Job Log Details button is displayed. When you click on it, it displays the appropriate job log.

The sub module includes changes made to device credential, discovery subsystem, device access verification, device state change, inventory subsystem, server preferences. The contents of this report can be exported to PDF, HTML, DOC, CSV (Comma delimited), TXT (Tab delimited) formats.

Device Launch Pad

The Device Launch Pad report provides a list of all devices. You can choose what applications to launch for those devices.

Generating report is a two-step process. First you select the devices, and then you select the applications. Specific application report selected will be launched against the devices selected.

Figure 8-77 Select Devices

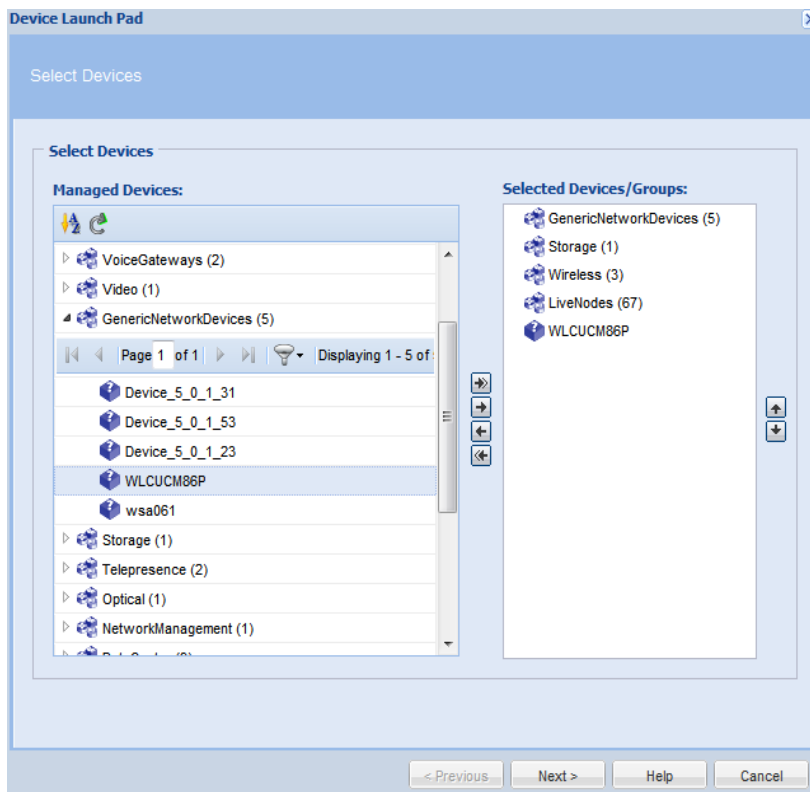

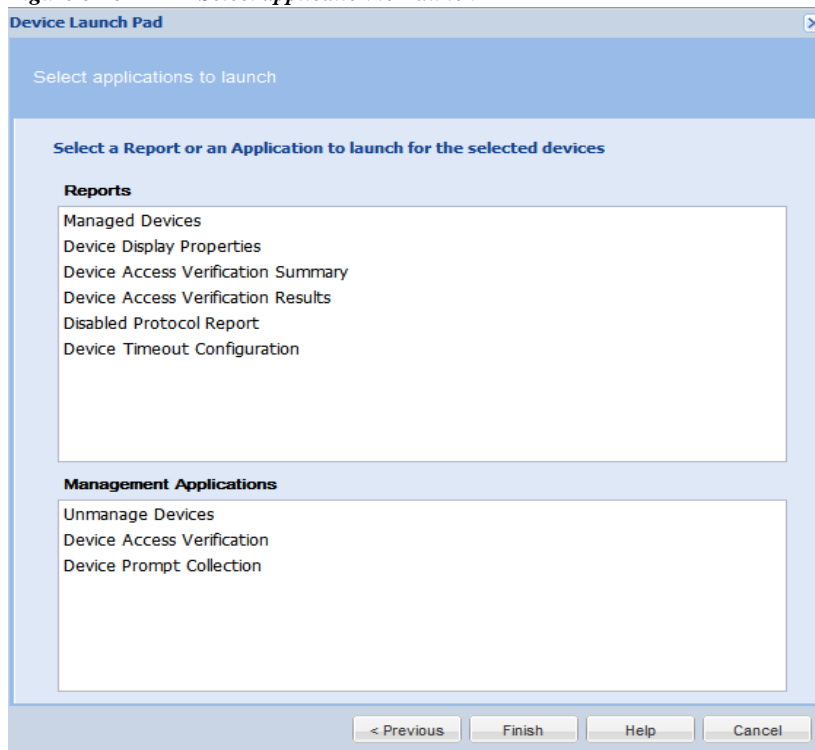

Figure 8-78 Select application to Launch

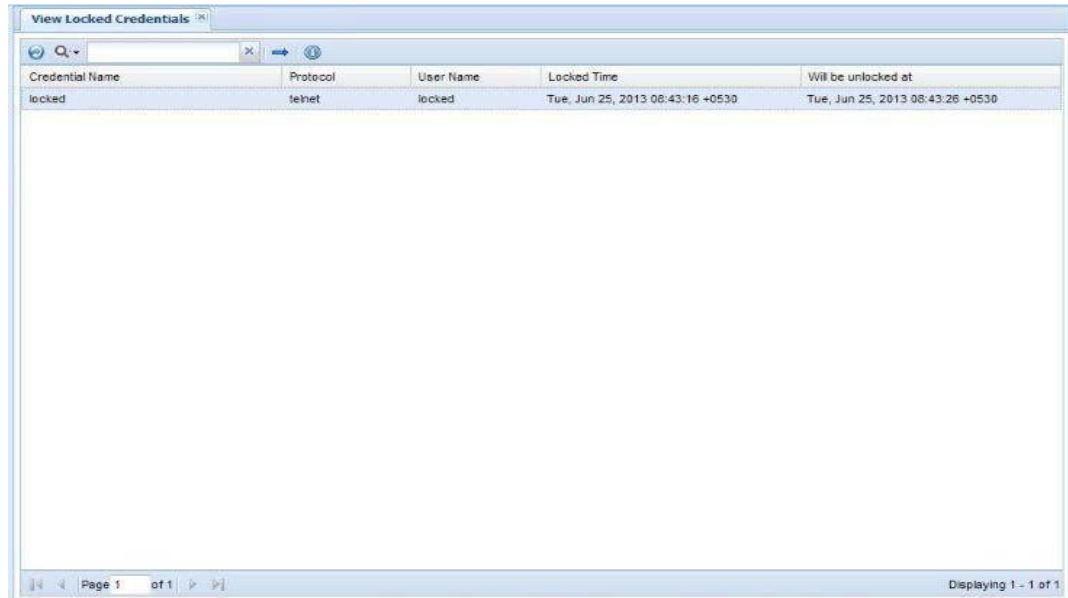

Once the selection is done, the specific application will be launched for the given devices.

View Locked Credentials

This report provides a list of all the locked credentials. The report contains Credential name, Protocol, Username, Locked time, and Will be Unlocked At (based on the configured Lock Period)

Figure 8-79 View Locked Credentials

Credential Name	Protocol	User Name	Locked Time	Will be unlocked at
locked	telnet	locked	Tue, Jun 25, 2013 08:43:16 +0530	Tue, Jun 25, 2013 08:43:26 +0530

To unlock a credential, right click on the Credential you want to unlock and select *Unlock the Credential...* option.

Disabled Protocol Report

Disabled Protocol Report shows all the protocols that are disabled for a given device/group. The report contents can be exported in one of the supported formats. The supported formats are HTML, PDF, Microsoft Word, CSV, and TXT.

Figure 8-80 Disabled Protocol Report

Device	Protocol	Status	Message
Device_5_0_1_1	snmpv2c	Disabled	The protocol 'snmpv2c' is disabled by for the platform: ACNS
Device_5_0_1_1	t11	Disabled	The protocol 't11' is disabled by for the platform: ACNS
Device_5_0_1_1	telnet	Disabled	The protocol 'telnet' is disabled by for the platform: ACNS
Device_5_0_1_1	https	Disabled	The protocol 'https' is disabled by for the platform: ACNS
Device_5_0_1_1	wmi	Disabled	The protocol 'wmi' is disabled by for the platform: ACNS
Device_5_0_1_1	sshv2	Disabled	The protocol 'sshv2' is disabled by for the platform: ACNS
Device_5_0_1_1	sshv1	Disabled	The protocol 'sshv1' is disabled by for the platform: ACNS
Device_5_0_1_1	http	Disabled	The protocol 'http' is disabled by for the platform: ACNS
Device_5_0_1_1	snmpv1	Disabled	The protocol 'snmpv1' is disabled by for the platform: ACNS
Device_5_0_1_1	snmpv3	Disabled	The protocol 'snmpv3' is disabled by for the platform: ACNS

Disable Command Report

Disabled Command Report shows the details of commands that are disabled for a given device.

Figure 8-81 Disable Command Report

Device	DatasetType	Command	Status	Message
Device_5_0_1_29	SNMP	matches regular e...	Disabled	

Device Timeout Configuration

Device Timeout Configuration report provides all the timeout configurations specified for different devices, along with retry counts. These values are populated from the timeouts configured in the Global Timeouts under Advanced Settings. This report can be exported into PDF, HTML, DOC, CSV (Comma delimited), TXT (Tab delimited) formats.

Figure 8-82 *Device Timeout Configuration*

Device	Protocol	Timeout	Retry Count
172.21.31.13	snmpv1	5000	2
172.21.31.13	snmpv2c	5000	2
172.21.31.13	snmpv3	5000	2
172.21.31.13	telnet	10000	
172.21.31.13	sshv1	10000	
172.21.31.13	sshv2	10000	
172.21.137.172	snmpv1	5000	2
172.21.137.172	snmpv2c	5000	2
172.21.137.172	snmpv3	5000	2
172.21.137.172	telnet	10000	
172.21.137.172	sshv1	10000	
172.21.137.172	sshv2	10000	

Device Jump Server Mapping

All the devices or groups that are mapped to the jump server are shown in this report as shown in [Figure 8-83](#). This report provides the details such as device/group name or IP address of the device and the Jump server IP which it is mapped to.

Figure 8-83 *Jump server Mapping*

Device	Jump Server IP Address/ Host Name
Routers	10.126.77.90
172.20.106.53	10.126.77.90

Application Profile Run Summary

Application profile run summary report provides a summary of the completed application profiles as shown in [Figure 8-84](#).

Figure 8-84 Application Profile Run Summary

Profile Name	State	Status	Start Time	End Time
test	Completed	Success	Wed, May 15, 2013 02:57:27 +0530	Wed, May 15, 2013 02:57:37 +0530

Application Discovery Report

Application Discovery Report shows the list of discovery applications installed on the server (see [list below](#)). For each installed application it shows the system level information like, OS type, OS version, CPU type, Total memory installed and so on as shown in [Figure 8-85](#).

Figure 8-85 Application Discovery Report

IP Address	Mac Address	Subnet Address	OS Name	OS Version	OS Vendor	OS Type	CPU	CPU Type	CPU Speed	Total Memory	Free Memory	Hardware Vendor	Hardware Product	Hardware Version	Hardware Serial	Hardware UUID	Is Virtual
172.21.31.13	00:50:56:99:5E:84	255.255.255.0	Linux	5.8	CentOS	GenuineIntel	Intel(R) Xeo...	2666.761	4119040	4119040 kB	2077344 kB	VMware, Inc.	VMware Virtual ...	None	VMware-42 18 ...	42196D27-C1E...	YES
172.21.137...	00:50:56:99:5F:4F	255.255.255.0	MicrosoftWindo...	6.1.7601	MicrosoftCo...	Intel64Family6...	Intel(R)Xeo...	2133	8365852	6912716	6912716	VMware, Inc.	VMwareVirtualP...	None	VMware-42190...		

Expanding each row shows a list of installed application and its details like Name of the application, Version, Vendor, Path where the application is installed, Installed date and its running state as shown in [Figure 8-86](#).

Installed Discovery Applications

Here is the list of applications that can be discovered on Microsoft Windows and Linux platforms.

Microsoft Window:

Tomact, MySQL, ArgoSoft, DB2, SQL Server, OpenLDAP, NetBIOS Session Service, EmailArchitect Super Service, JBOSS, DNS Server, MSMQ, VMWare Workstation, WebSphere, Oracle, RPC, IIS Admin, SANSurfer.

Linux:

Tomcat, MySQL, httpd, OpenLDAP, FTP Server, SendMail, Telnet, DNS Server.

Figure 8-86 Application Discovery Report Expanded

The screenshot displays an 'Application Discovery Report' for two hosts. The first host is a Linux system (CentOS 5.8) with various services installed. The second host is a Microsoft Windows system (6.1.7601) with several Windows services installed.

IP Address	Mac Address	Subnet Address	OS Name	OS Version	OS Vendor	OS Type	CPU	CPU Type	CPU Speed	Total Memory	Free Memory	Hardware Vendor	Hardware Product	Hardware Version	Hardware Serial	Hardware UUID	Is Virtu
172.21.31.13	00:50:56:99:5E:84	255.255.255.0	Linux	5.8	CentOS	GenuineIntel	Intel(R) Xeo...	2666.761	4119040 KB	2077344 KB	VMware, Inc.	VMware Virtual...	None	VMware-42 19 ...	42199027-C1E...	YES

Applications - Administration

Administration

Use the Administration tab to create users for the CSPC server, take backups of the collected data, look at the server patches, etc.

This section describes the Reports in the following topics:

- [User Management](#)
- [User Preferences](#)
- [Alert Management](#)
- [Backup and Restore](#)
- [Log Preferences](#)
- [Miscellaneous Applications](#)

User Management

The User Management sub tab is used to create users and modify user preferences for a given CSPC server.

This section describes the options in the following topics:

- [Manage Users](#)
- [Manage Remote Authentication Servers](#)
- [Login Settings](#)
- [User Session Report](#)

Manage Users

When you double-click *Manage Users*, a new Manage Users window appears which allows you to create and manage the collector users, as shown in the following screen.

Figure 9-1 Manage Users

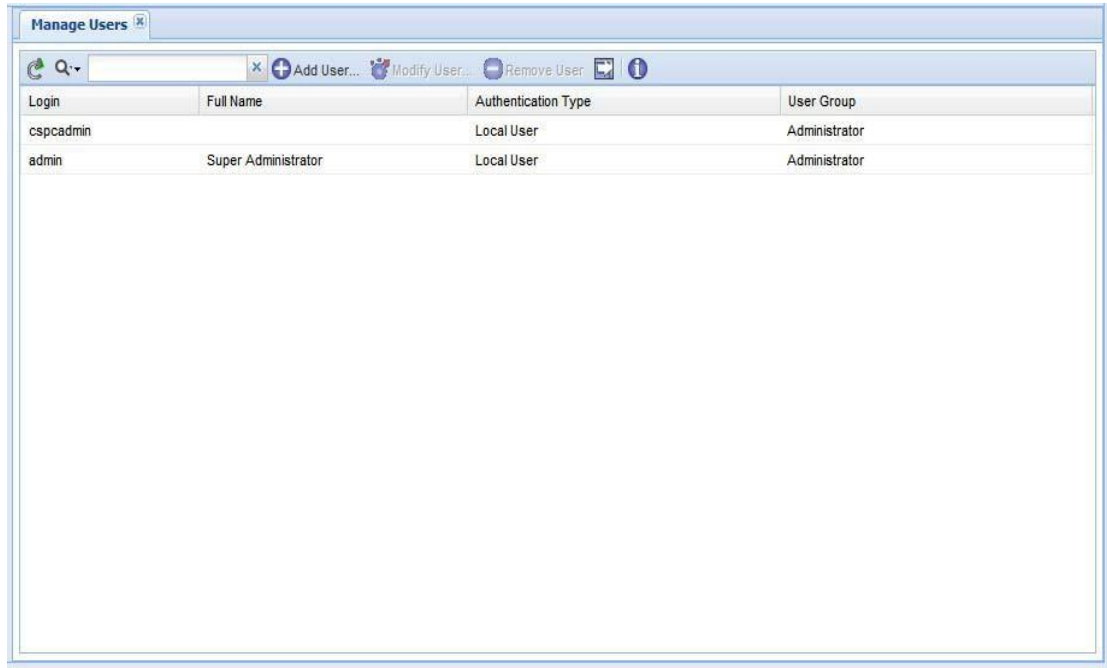

Figure 9-2 Manage Collector Users

To add a new user, click *Add User*. This window shows the following information for each defined user on the system:

- Login ID
- Authentication Type (Local, Remote User Authentication)
- Password (masked)
- Full Name
- Group Name is the group of users belonging to
 - Administrator: Administrator will have full access on the entire CSPC server.
 - External Client User: External Client User is used for the purpose of external client authentication on collector. Login access for this user through GUI and CLI interface is disabled. Security features such as password expire, user account lock, session time out are not applicable for this type of user group.
 - Network Operator: Network Operator will have full access on managed network, and he/she can configure all the settings related to management. But he can't make any changes that effect theserver.
 - Report user: Report User can only be able to view reports.
 - SFTP User: Users can be of two types:
 - Local User: User configured in the local database.
 - Remote User: User configured on some remote authentication server. For remote users, password field is not needed.
- Email Address
- Phone Number
- Pager

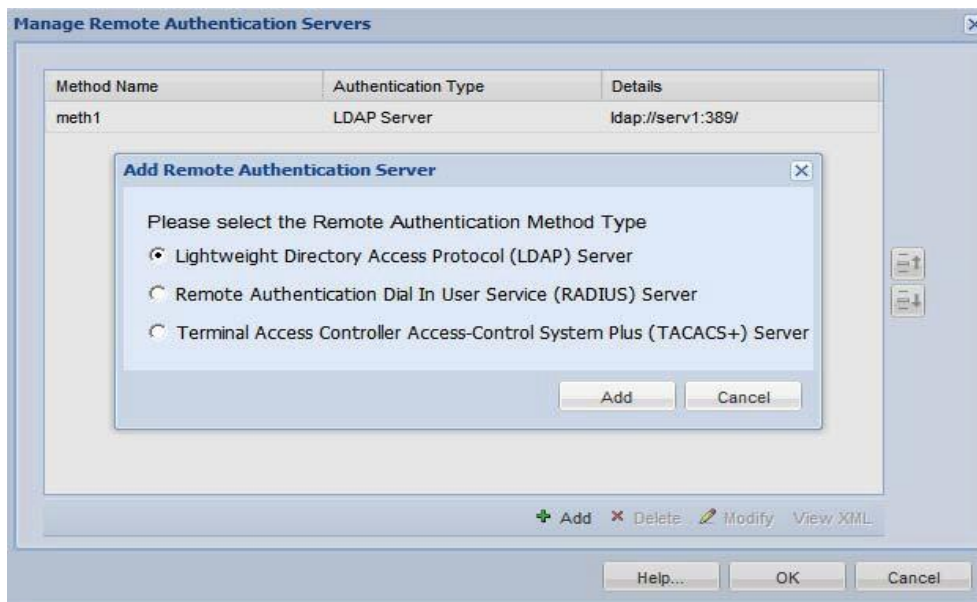

Click **Modify User** to modify the details of existing user. Click **Remove User** to delete an existing user. Click **OK** a prompt appears to verify the password. Enter the password and click **OK**.

Figure 9-3 Verify User Password

The image shows a dialog box titled "Verify User Password". It has a standard Windows-style title bar with a close button (X) in the top right corner. The dialog contains two input fields. The first is labeled "* User Name" and contains the text "admin". The second is labeled "* Password" and is currently empty. At the bottom of the dialog, there are two buttons: "OK" and "Cancel".

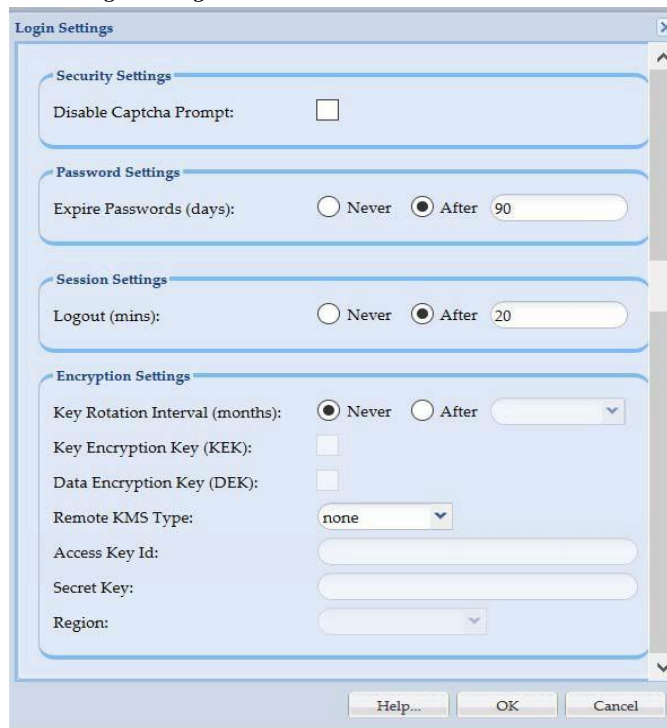

Manage Remote Authentication Servers

If the user authentication type is remote authentication, CSPC gets the user credentials from a remote authentication server. The remote authentication servers need to be set up for the server to contact for credentials as defined below.

Figure 9-4 Setup Remote Authentication Servers

Login Settings

You can select and de-select the security options as per your requirements. Key rotation helps you to change the encryption key once in 3,6,12, or 24 months as per your requirements.

Figure 9-5 Login settings

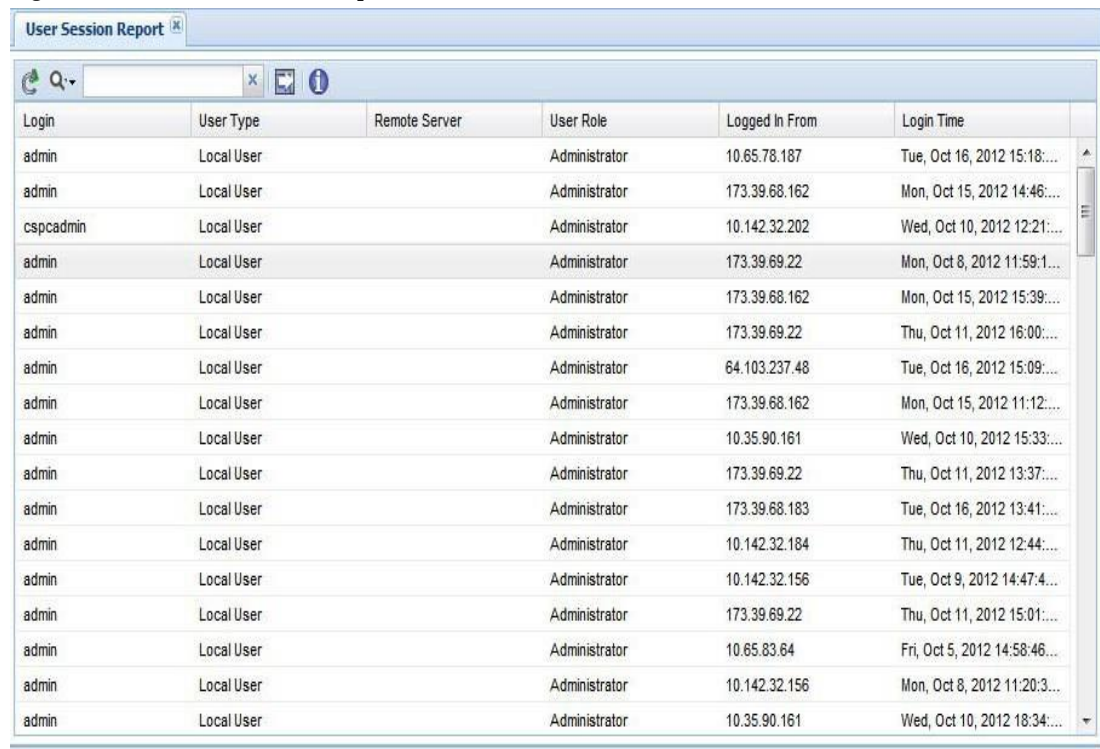

To configure the login settings, perform the following:

-
- Step 1** Select the **Disable Captcha Prompt** to remove the captcha prompt appearing on login screen
 - Step 2** Enter the number of days after the password should expires
 - Step 3** Set the session **Logout** time in minutes
 - Step 4** Select the **Key Rotation Interval** as **Never** or to occur **After** months
 - Step 5** Select **Key Encryption Key (KEK)** or/and **Data Encryption Key (DEK)**
 - Step 6** Select **Remote KMS Type** to store the data as **none** or **AWS**
 - Step 7** If AWS selected a prompt appears read it and click **OK**.
 - a. Enter **Access Key Id** and **Secret Key**.
 - b. Select the required **Region**.

User Session Report

The User Session Report window displays the list of users who are currently connected to the server.

Figure 9-6 *User Session Report*

User Preferences

The User Preferences sub tab is used to modify user preferences for a given CSPC server.

This section describes the options in the following topics:

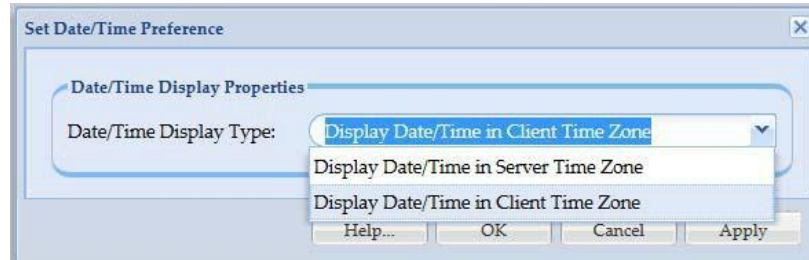

- [Modify Data/Time Preference](#)
- [Configure Default Device Display Property](#)

Modify Data/Time Preference

Modify Data/Time Preferences allows you to setup the data and time preferences. You can choose to display date and time in client time zone or in the server time zone as shown in [Figure 9-7](#).

After the changes are done, the preferences are stored for the specific user account.

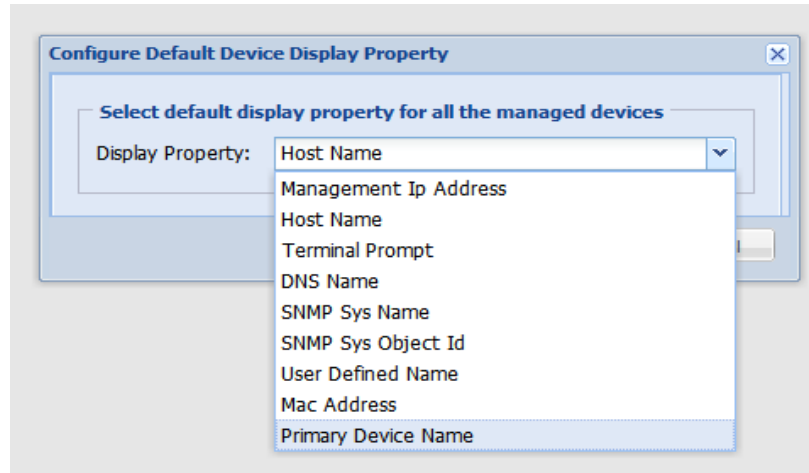

Figure 9-7 Modify User Preferences

Configure Default Device Display Property

Configure Default Device Display Property allows you to select the device property that will be the default for all managed devices.

Figure 9-8 Configure Default Device Display Property

Alert Management

The Alert Management sub tab is used to define Email settings and other alert for a given CSPC server.

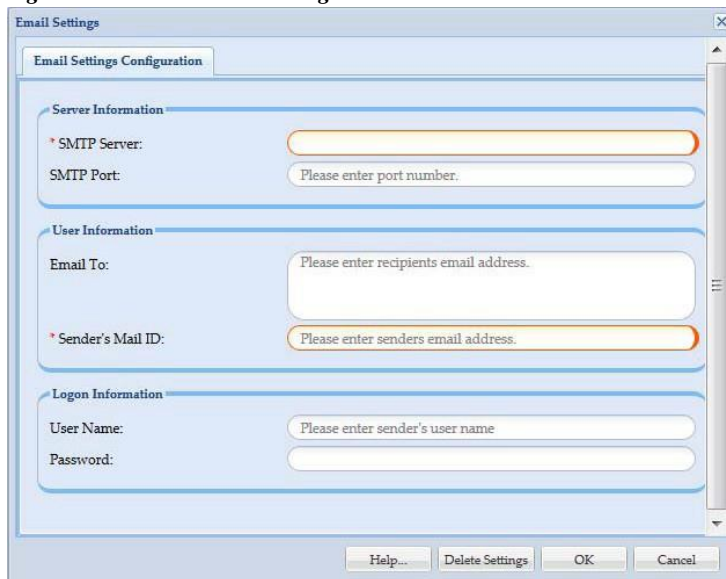

This section describes the options in the following topics:

- [Email Settings](#)
- [Manage Subscribers](#)
- [Alert Configuration](#)

Email Settings

This setting provides you with an option to configure a SMTP server for mail exchange.

Figure 9-9 Email Settings

Enter all the Mandatory fields and click **OK**

Table 9-1 SMTP Server Parameters

Field Name	Descriptions
SMTP Server	Server name or identity of the server
SMTP Port	Port number used for the server
Email To	Receiver mail address
Sender's Mail ID	Sender mail address
Username	Login name
Password	Login password

To reset the SMTP Settings to default value click **Default Settings**.

Only **Admin** user can configure/modify the email settings, however the network user can update "Email To" option if the settings are configured. Incase if the login settings are not defined, an error will be thrown for **Network** user.

Manage Subscribers

This option enables you to manage all the subscribers.

Figure 9-10 Manage Subscribers

Step 1 To add a Subscribers, click Add Subscribers the below screen appears shown in [Figure 9-11](#)

Figure 9-11 Add Subscribers

- Step 2** Enter *Module Name*, select *Notification Enabled*, and if required enter *Notification Type* and *Email To* and then click *OK*.

Alert Configuration

Alert a workflow CSPC service and pushes the notifications to the user. You do not need to login every time to see what the status of the job.

Figure 9-12 Alert Configurations

Module	Protocols	Percentage
Discovery		3
Inventory	HTTP,Telnet,SNMP,WMI,TL1,SSH,LDAP	6,6,6,6,6,6

- Step 1** To add an alert, click *Add Alert Configurations* the screen appears as shown in [Figure 9-13](#)

Figure 9-13 Add Alert Configurations

- Step 2** Select the **Module Name** from the drop down,
- If *Discovery* is selected, then enter the *Discovery success Percentage* value
 - If *Inventory* or *DAV* is selected, then select the protocol(s) and the enter the success percentage value for protocol(s)

- Step 3** Click **OK**

Note You can select *ALL* or any protocol of your choice

Backup and Restore

The Backup and Restore sub tab is used to take backups of the collector data, as well as to restore the backed up data in case of a failure.

Note To make the file transfer more secure:

- It is recommended to use the secure protocols SFTP and SCP against insecure one's such as FTP and TFTP. If SFTP server is selected, then refer to [RSA SHA 256 Fingerprint](#) to generate the corresponding host key.

This section describes the options in the following topics:

- [Backup](#)
- [Restore Backup](#)

Backup

The Backup option allows you to select the database backup at a given instant, or to specify options for periodic database backup.

To perform the backup job, follow the below steps:

Step 1 Select **FTP Server**, **SFTP Server**, or **Local Server**

- If **FTP Server** selected enter the following
 - **Server Name:** IP Address/Host Name of the FTP server
 - **User Name:** FTP server username
 - **Password:** FTP server password
- If **SFTP Server** selected enter the following
 - **Server Name:** IP Address/Host Name of the SFTP server
 - **User Name:** SFTP server username
 - **Password:** SFTP server password
 - **Fingerprint:** Authentication received from server
- If **Local Server** is selected continue

**Note**

It is recommended to use the secure protocol SFTP against insecure FTP.

Step 2 Select required options **Incremental Backup** or/and **Full Backup** or/and **Ignore Inventory Data** and enter the following:

- **Target Directory:** The directory where the backup file needs to be stored
- **Backup File prefix:** The tag that will be appended to the backed up file
- To start backup instantly select **Run Backup Now** or to schedule the job later select **Schedule Periodic Backup**. For Periodic backup, you can configure schedule to specify the range of recurrences, Schedule start date/time, Schedule end date/time and recurrences pattern for the data backup. This is shown in [Figure 9-15](#).
- **Job Name:** Enter the job name
- **Job Description:** Enter the description of the job

**Note**

To remove inventory data from backup select Ignore Inventory Data.

Figure 9-14 Backup

**Note**

To disable incremental backup click **Disable Incremental Backup** and this will prompt for the restart of the CSPC. Similarly, to enable click **Enable Incremental Backup** and it also requires restart.

Figure 9-15 Configure Schedule

Step 3 To exclude the files from **Backup** unselect the files as shown in Figure 9-16.

To see the files here you have enter the file path in properties file.

Figure 9-16 Exclude Backup Files

Restore Backup

The Restore Backup option lets you restore a previously stored data backup. You need to provide the server information, such as where the backup file resides, and CSPC loads that backup to the system. This is shown in [Figure 9-17](#).

To restore the backup file, follow the below steps:

Step 1 Select **FTP Server** or **Local Server**

- If **FTP Server** selected enter the following
 - **Server Name:** IP Address/Host Name of the FTP server
 - **User Name:** FTP server username
 - **Password:** FTP Server Password
- If **SFTP Server** selected enter the following
 - **Server Name:** IP Address/Host Name of the SFTP server
 - **User Name:** SFTP server username
 - **Password:** SFTP server password
 - **Fingerprint:** Authentication received from server
- If **Local Server** is selected continue

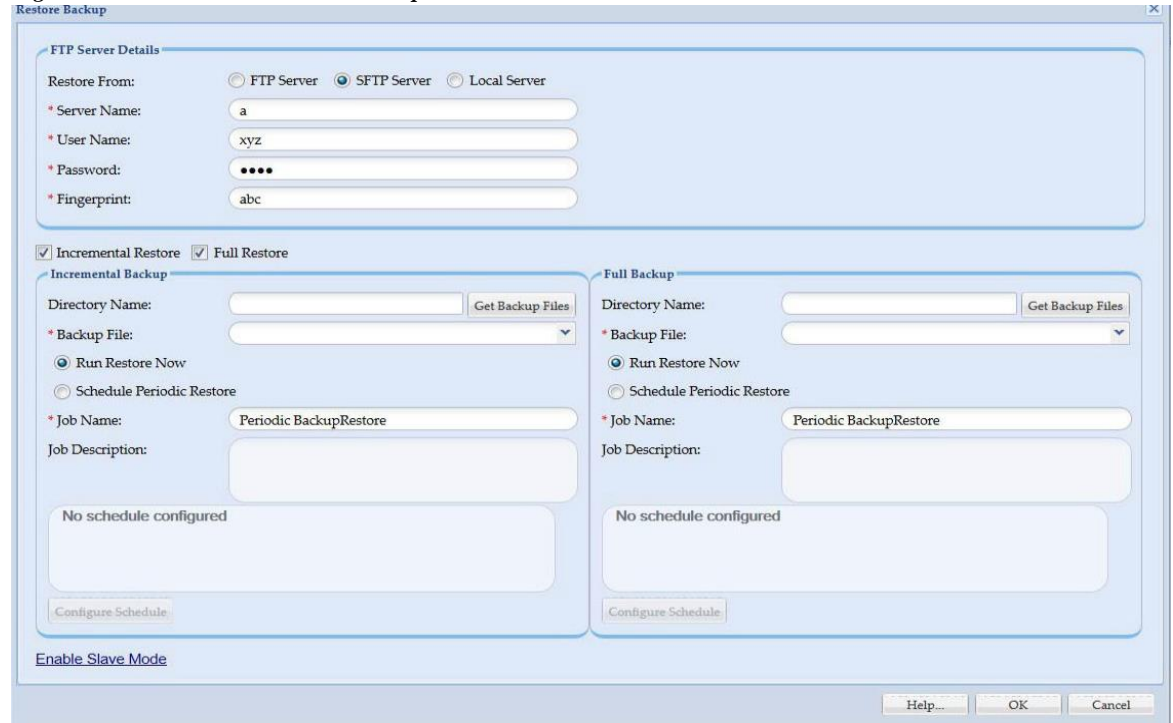

**Note**

It is recommended to use the secure protocol SFTP against insecure FTP.

Step 2 Select **Incremental Restore** or/and **Full Restore** and enter the following:

- **Directory Name:** The directory where the backup file needs to be restored
- **Backup File:** The backup file name
- To start restore instantly, select **Run Restore Now** or to schedule the job later select **Schedule Periodic Restore**. For Periodic restore, you can configure schedule to specify the range of recurrences, Schedule start date/time, Schedule end date/time and recurrences pattern for the data backup. This is shown in [Figure 9-18](#).
- **Job Name:** Enter the job name
- **Job Description:** Enter the description of the job

Figure 9-17 Restore Server Backup

Note To enable slave mode click **Enable Slave Mode** and it requires CSPC to restart. This disables all other jobs expect **Backup and Restore** jobs on CSPC. Similarly, to disable click **Disable Slave Mode** and it also requires restart.

Figure 9-18 Configure Schedule

Log Preferences

The Server Log Preference sub tab is used to manage the server logs that are helpful in identifying and fixing any support issues.

This section describes the options in the following topics:

- [Log Preferences](#)
- [Export Log Files](#)

Log Preferences

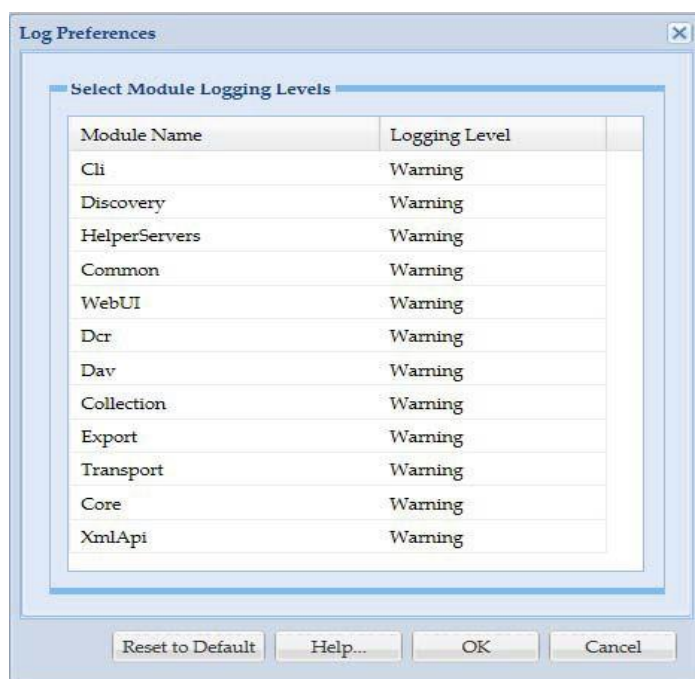

Using Log Preferences, you can select detailed logging level for each module of CSPC. Log preferences of the server as well as UI component can be changed.

Logging levels could be any one of the following:

- Fatal
- Error
- Warning
- Information
- Debug
- Trace

Log levels can be changed by clicking on the logging level and selecting the appropriate level. You can also select *none* and ignore the log for a specific module. This setting will be used for displaying the log messages in CSPC logs. Click **Reset to Default** to change all the log levels to default values.

Figure 9-19 Log Preferences

Export Log Files

The Export Log Files feature allows you to export all the server log files to the Cisco CSP support staff in case there is an error, and the support staff needs to access the server logs. Log Files can be exported both based on file name or time stamp. This is shown in the following screen.

Figure 9-20 Export Log Files by File

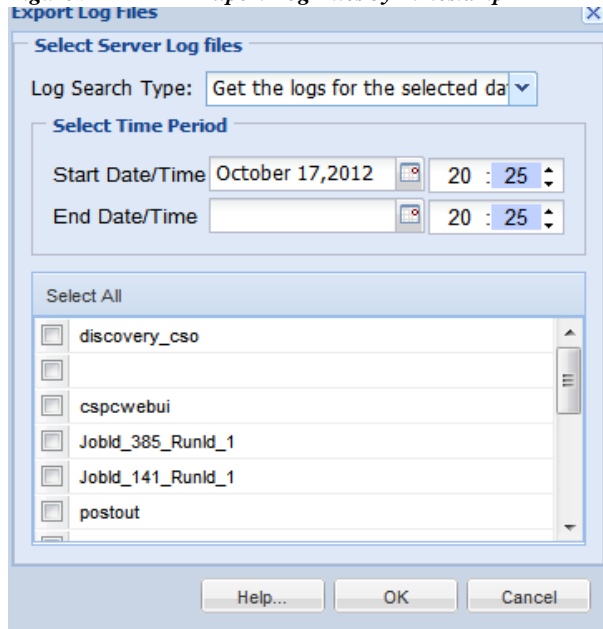

Figure 9-21 Export Log Files by Timestamp

Miscellaneous Applications

The Miscellaneous Applications sub tab shows server information, resynchronizes the client to server and provides some diagnostic tools.

This section describes the options in the following topics:

- [Manage Add-on Process](#)
- [Manage UI Add-Ons](#)
- [Server Properties](#)
- [Diagnostic Tools](#)
- [XML API Console](#)

Manage Add-on Process

Manage Add-on Process provides details on all the Server Processes including add-on processes for CSPC. This report includes Process Name, Process Type, Process State, and a Message associated with that process as shown in [Figure 9-22](#).

Note

NOS service will have audit addon process and DCOS service will have dcos addon process

Figure 9-22 View Server Process Summary

Process Name	Process Type	Process State	Message
Agent	Java Process	STARTED	Process started

Manage UI Add-Ons

Manage UI Add-Ons screen shows the list of Add-Ons, action taken on the Add-On, the user who initiated the action, time of action and next possible action.

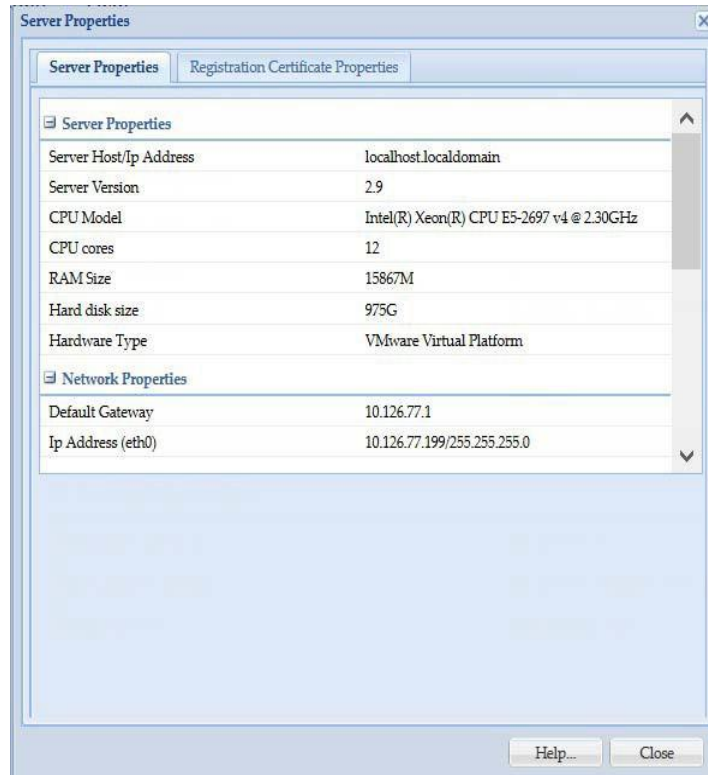

Figure 9-23 Manage UI Add-Ons

Add-on	Last Action Taken	Action Initiated By	Action Initiated At	Possible Next Action
--------	-------------------	---------------------	---------------------	----------------------

Server Properties

The View CSPC Server Properties window shows information about the server itself. The data shown in this window includes *Server Properties and License Properties*. This gives information, such, the IP address of the server, server version, default gateway, sever time zone, etc., as shown in [Figure 9-24](#).

Figure 9-24 Server Properties

- **CSPC Registration Properties:** provides details of the certificate stored in CSPC that identifies the appliance and should be constant as long as the collector has not been decommissioned (with the exception of transition from evaluation to a service certificate).
- **Connectivity Registration Properties:** provides details of the certificate stored in CSPC, that after application to connectivity enables connectivity to communicate with Cisco. Any service certificate may be selected for connectivity certificate. Certificates supporting web-sockets have precedence over those that do not support.

You can also find the Certificate information of the server by clicking *Registration Certificate Properties*. You can expand each registration certificate to see the properties and click **Add** and browse to add new certificate file and click **Replace** to upgrade or change the certificate. Click **Delete** to remove the certificate as shown in [Figure 9-25](#).

Figure 9-25 License Properties

**Note**

CSPC supports multiple service on single collector and more than 10 k devices are uploaded. You can install the certificate at any point of time. The first certificate is applied during the installation. If you add multiple registration certificates for a service, then company name should be same for all the certificate or if it is different service on the same collector then company name can differ. You can upload multiple registration certificates for different service on the same collector and configures based the certificate. Name of the service should be in accordance with the registration certificate. Old certificate created before 2.8 will not work in fresh installation, but upgrade can be done. Service specific Registration Certificate is used to upload data to backend of the specific service.

Note Maximum allowed certificates for NOS/CSPT service is four and rest can have one.

Diagnostic Tools

This option provides simple diagnostic tools like *ping* and *traceroute* to check if the device is available or connectivity to the device is established. Pick the command you want to use and select the device on which you want the diagnostics to run, and click *Run Command*. The results appear in the *Command Result* section of the window.

Figure 9-26 Diagnostic Tools - ping utility

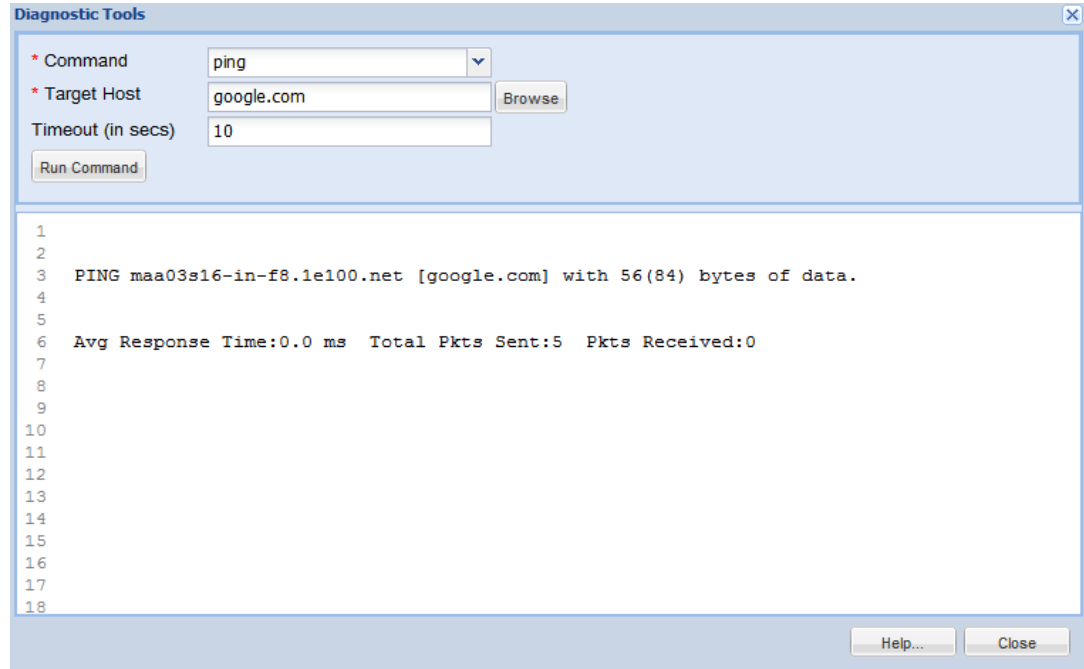

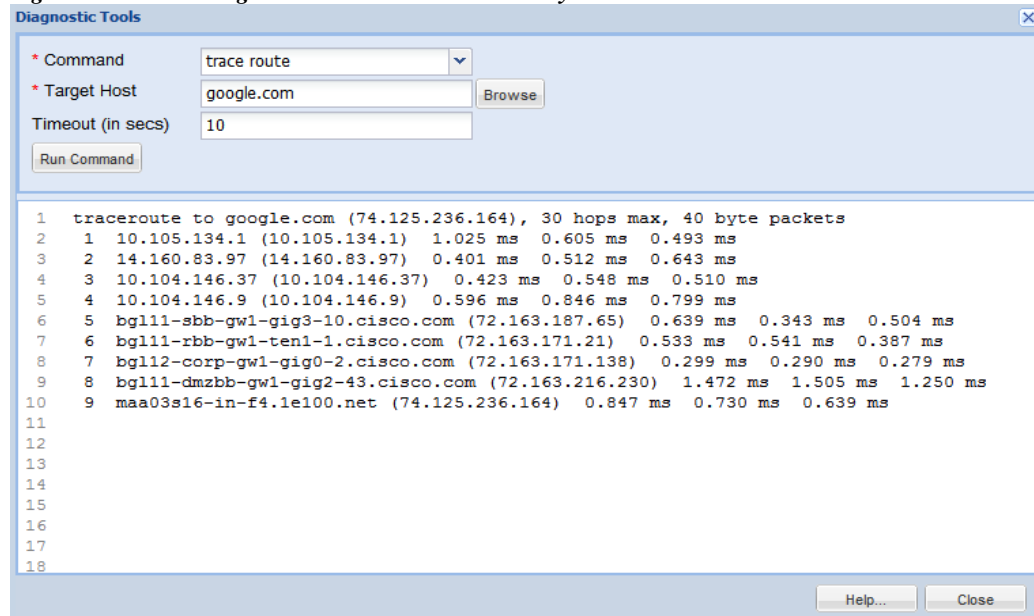

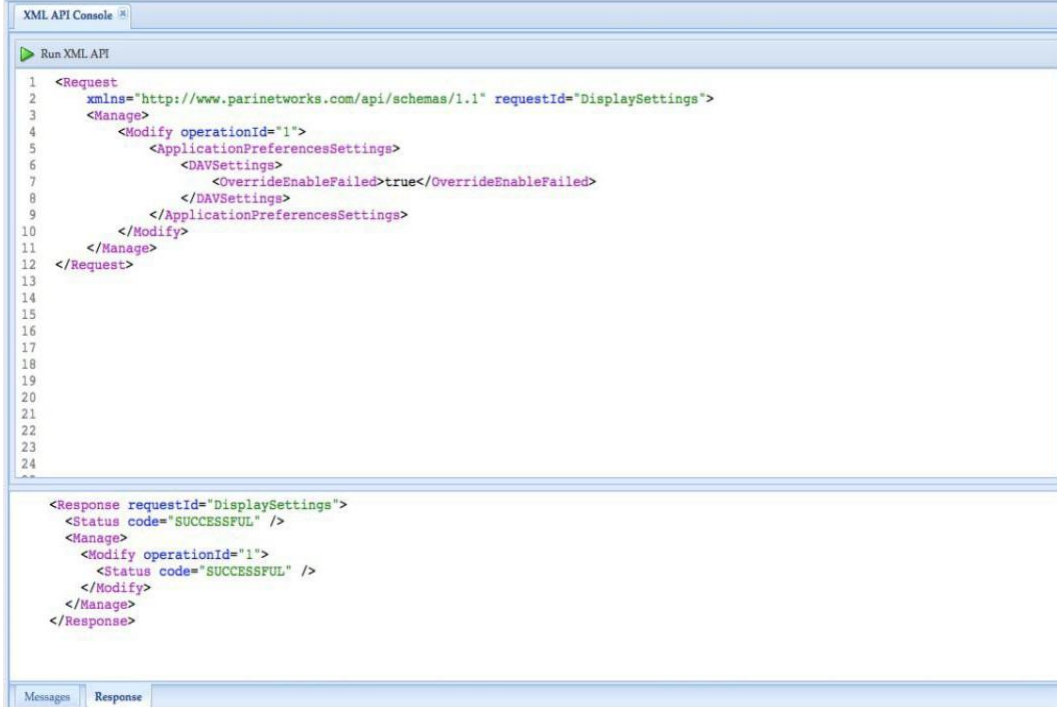

Figure 9-27 Diagnostic Tools - Trace Route Utility

XML API Console

XML API Console option is provided to execute XML APIs on the CSPC server. This option is provided for third party application integration with CSPC. This is shown in [Figure 9-28](#).

Figure 9-28 XML API Console

The screenshot shows the XML API Console interface. At the top, there is a tab labeled "XML API Console". Below the tab is a "Run XML API" button. The main area displays the XML request and response. The request is as follows:

```
1 <Request
2   xmlns="http://www.parinetworks.com/api/schemas/1.1" requestId="DisplaySettings">
3   <Manage>
4     <Modify operationId="1">
5       <ApplicationPreferencesSettings>
6         <DAVSettings>
7           <OverrideEnableFailed>true</OverrideEnableFailed>
8         </DAVSettings>
9       </ApplicationPreferencesSettings>
10    </Modify>
11  </Manage>
12 </Request>
```

The response is as follows:

```
<Response requestId="DisplaySettings">
  <Status code="SUCCESSFUL" />
  <Manage>
    <Modify operationId="1">
      <Status code="SUCCESSFUL" />
    </Modify>
  </Manage>
</Response>
```

At the bottom of the interface, there are two tabs: "Messages" and "Response". The "Response" tab is currently selected.

Menu Options

Menus

Menu options are provided as a quick way to access the applications.

Figure 10-1 *Menu Option*

The menu options provided in CSPC are:

- [User Name](#)
- [Settings](#)
- [Management](#)
- [Reports](#)
- [Administration](#)
- [Help](#)
- [Quick Menus](#)

User Name

Shows the Name/Username of the user logged into CSPC application. In the illustration shown in [Figure 10-1](#), the Super Administrator is logged in.

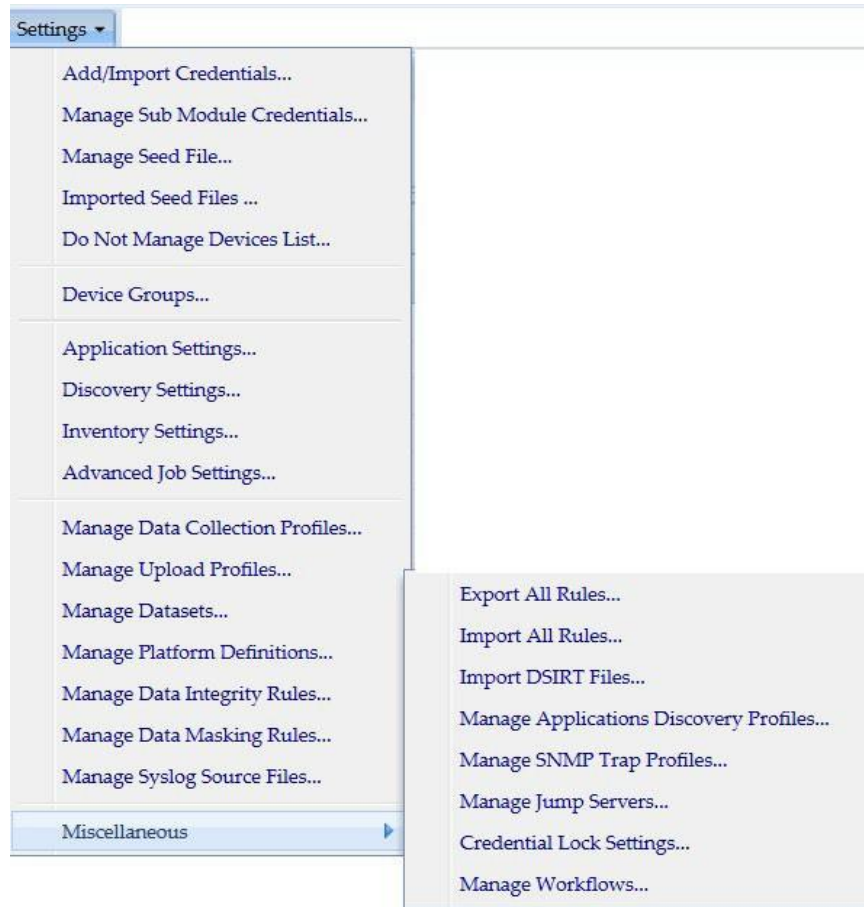

It has the following option:

- **Logout:** Logs out and closes the CSPC client application
- **Change Password/settings:** Resets the password

Settings

Settings in the menu bar provides various options for setting up device credentials and collection profiles for collecting device specific information, as displayed in the following figure. These options are described in the *Applications->Device Management Tab*.

Figure 10-2 Menu Option - Settings

Management

Management in the menu bar provides various options for discovering and managing devices and running collection profiles, as shown in the following figure. These options are described in the *Applications->Device Management Tab*.

Figure 10-3 Menu Option - Management

Reports

Reports in the menu bar provide various reporting options for viewing collected data as shown in the following figure. These options are described in the *Applications->Reports Tab*.

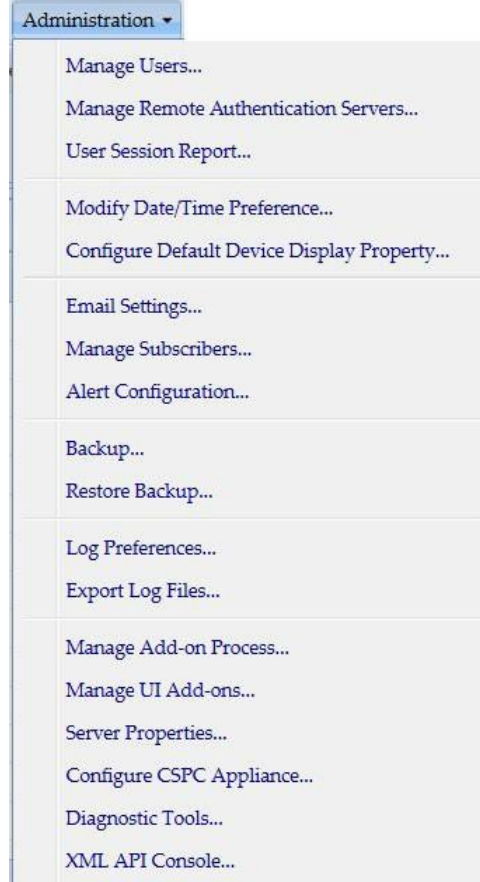

Figure 10-4 **Menu Option - Reports**

Administration

Administration in menu the bar provides various options for administrating server, device, and collection profiles, as shown in the following figure. These options are described in the *Applications->Administration Tab*.

 Job Run Status	This takes you to Job Run Status page for more info refer to: Job Run Status .

Adding Devices to CSPC

Overview

Adding devices to CSPC is a sequential, two-step process. First one adds credentials for the devices. Adding credentials for a device does not add the device, however. After the credentials have been added, the additional step of managing the device is necessary. Managing the device uses the credentials to contact the device via SNMP and collect device classification data from it.

There are two ways to add credentials. Credentials can be added individually, or through an import. You can import credentials from applications like:

- Cisco Works DCR XML File (.xml)
- Pari Networks Credential Repository (.xml)
- Cisco Works DCR CSV File (.csv)
- CNC CSV File (.csv)
- Simplified CSV File (.csv)

All the methods of adding credentials are performed on the credentials screen.

In CSPC there is a one-to-many relationship between credentials and devices. Multiple devices are stored against a single credential. The multiple devices can be specified by wildcards matching IP addresses or by IP address enumeration. Wildcards matching IP addresses is the preferred approach.

On the first collection, if the first wildcard matching the device does not succeed, the second wildcard matching the device will be tried. On subsequent collections the last successful credential will be tried first.

In addition, the protocol for the dataset type will be determined by the credentials order. For example, the choice between SSH and Telnet is controlled by the order of the SSH and Telnet credentials.

Thus, the order of credentials is important, and can be manipulated.

Credentials may be exported, but only in the Pari Credentials File Format.

After the credentials have been added, the devices can be managed. While credentials must be entered by wildcards matching IP addresses or the IP addresses themselves, the devices can be managed by either IP address or DNS name.

Examples

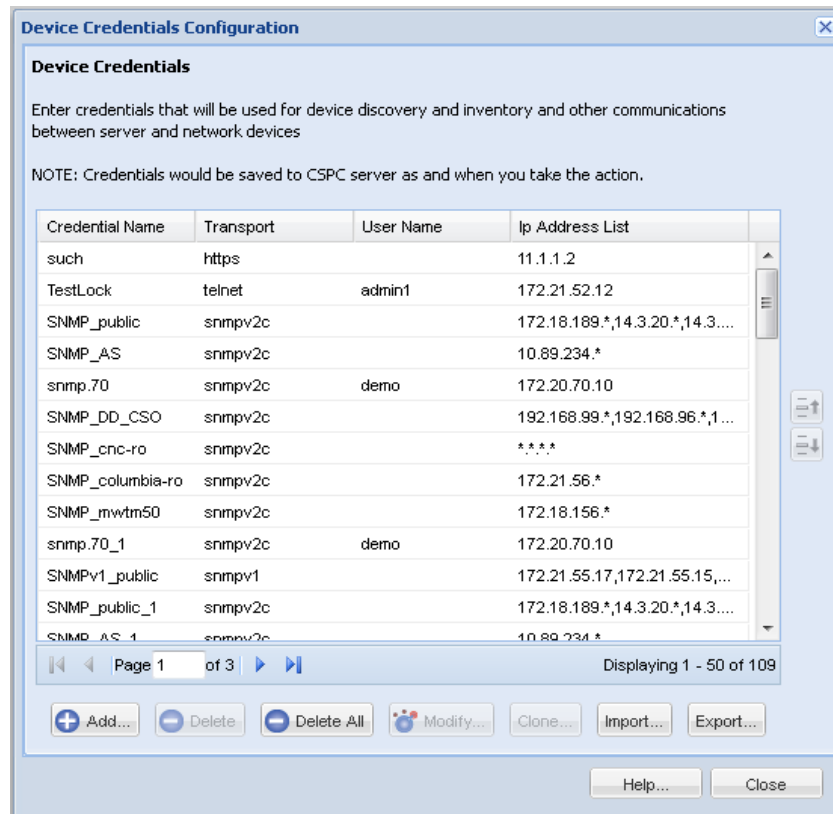

Here an SSH credential is added against a wildcard:

Figure A-1 Device Credentials

The screenshot shows the 'Device Credentials' configuration window. It is organized into two main columns. The left column contains three sections: 'Credential Identification' with a text input field for '* Name'; 'Transport' with a 'Protocol' dropdown menu (currently showing 'telnet') and a 'Port' text input field (currently showing '23'); and 'Authentication' with four text input fields: 'User Name', 'Password', 'Enable User Name', and 'Enable Password'. The right column contains two sections: 'Include Ip Address Ranges/List (For Discovery and Data Collection)' with a large empty text area and a pencil icon; and 'Exclude Ip Address Ranges/List (For Data Collection only)' with another large empty text area and a pencil icon. At the bottom right of the window, there are 'OK' and 'Cancel' buttons.

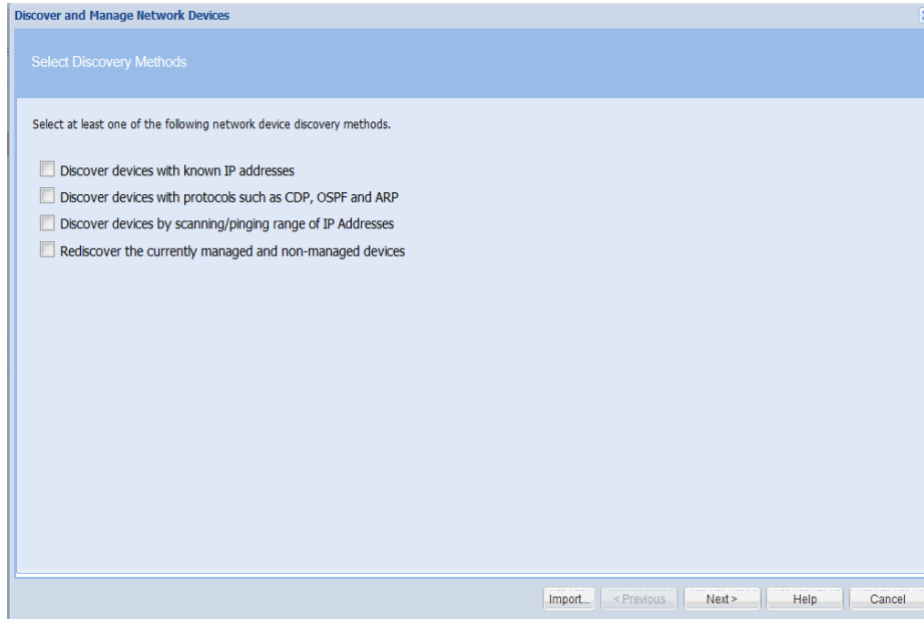

Result is shown in [Figure A-2](#):

Figure A-2 Device Credential Configuration

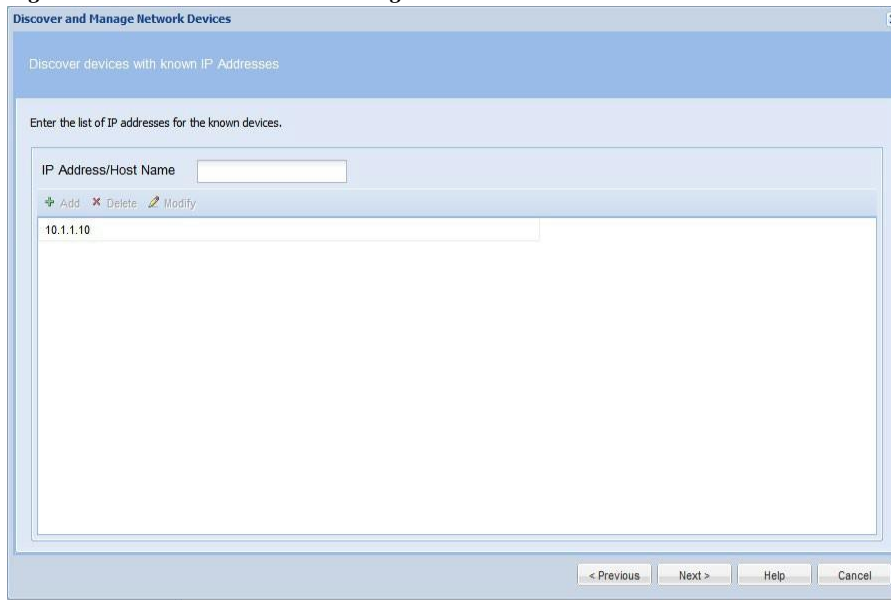

Now the devices can be managed. Devices are managed by discovery of known devices. This is a special kind of discovery that does not discover anything.

Figure A-3 Discover and Manage Network Devices

Either the IP Address or the DNS Name.

Figure A-4 Discover and Manage Network Devices

Seed File Formats

CSPC supports following seed file formats:

1. CNC Seed File Format
2. Cisco Works Seed File Format
3. Simplified Seed File Format

CNC seed file format has following three formats:

1. CNC 20-field format
2. CNC 30-field format
3. CNC 36-field format

And Cisco Works has following two formats:

1. Cisco Works 30-field format
2. Cisco Works 34-field format

Note

All the above seed file formats are of .csv type.

Simplified seed file format allows users to easily specify credentials for all devices or set of devices using wild cards.

The basic difference between Simplified Format and rest of the formats is that for the same device there are multiple entries, each entry corresponds to one protocol. In other formats same entry carries for all devices.

Header Information

CNC Seed File Format

Header in CNC 20-field format contains the fields listed below:

- ; Col# = 1: Name (including domain or simply an IP),
- ; Col# = 2: RO community string,
- ; Col# = 3: RW community string,
- ; Col# = 4: Serial Number,
- ; Col# = 5: User Field 1,
- ; Col# = 6: User Field 2,
- ; Col# = 7: User Field 3,
- ; Col# = 8: User Field 4,
- ; Col# = 9; Name = Telnet password,
- ; Col# = 10; Name = Enable password,
- ; Col# = 11; Name = Enable secret,
- ; Col# = 12; Name = Tacacs user,
- ; Col# = 13; Name = Tacacs password,
- ; Col# = 14; Name = Tacacs enable user,
- ; Col# = 15; Name = Tacacs enable password,
- ; Col# = 16; Name = Local user,
- ; Col# = 17; Name = Local password,
- ; Col# = 18; Name = Rcp user,
- ; Col# = 19; Name = Rcp password,
- ; Col# = 20; Name = Enable User,

Header in CNC 30-field format contains the fields listed below:

- ; Col# = 1: IP Address (including domain or simply an IP),
- ; Col# = 2: Host Name,
- ; Col# = 3: Domain Name,
- ; Col# = 4: Device Identity,
- ; Col# = 5: Display Name,
- ; Col# = 6: SysObjectID ,
- ; Col# = 7: DCR Device Type,
- ; Col# = 8: MDF Type,
- ; Col# = 9; Snmp RO
- ; Col# = 10; Snmp RW
- ; Col# = 11; SnmpV3 User Name

```
; Col# = 12; Snmp V3 Auth Pass
; Col# = 13; Snmp V3 Engine ID
; Col# = 14; Snmp V3 Auth Algorithm
; Col# = 15; RX Boot Mode User
; Col# = 16; RX Boot Mode Pass
; Col# = 17; Primary User (Tacacs User)
; Col# = 18; Primary Pass (Tacacs Pass)
; Col# = 19; Primary Enable Pass
; Col# = 20; Http User
; Col# = 21; Http Pass
; Col# = 22; Http Mode
; Col# = 23; Http Port
; Col# = 24; Https Port
; Col# = 25; Cert Common Name,
; Col# = 26; Secondary User,
; Col# = 27; Secondary Pass,
; Col# = 28; Secondary Enable Pass,
; Col# = 29; Secondary Http User,
; Col# = 30; Secondary Http Pass,
```

Header in CNC 36-field format contains the fields listed below:

```
; Col# = 1: IP Address (including domain or simply an IP),
; Col# = 2: Host Name,
; Col# = 3: Domain Name,
; Col# = 4: Device Identity,
; Col# = 5: Display Name,
; Col# = 6: SysObjectID,
; Col# = 7: DCR Device Type,
; Col# = 8: MDF Type,
; Col# = 9; Snmp RO
; Col# = 10; Snmp RW
; Col# = 11; SnmpV3 User Name
; Col# = 12; Snmp V3 Auth Pass
; Col# = 13; Snmp V3 Engine ID
; Col# = 14; Snmp V3 Auth Algorithm
; Col# = 15; RX Boot Mode User
; Col# = 16; RX Boot Mode Pass
```

```

; Col# = 17; Primary User (Tacacs User)
; Col# = 18; Primary Pass (Tacacs Pass)
; Col# = 19; Primary Enable Pass
; Col# = 20; Http User
; Col# = 21; Http Pass
; Col# = 22; Http Mode
; Col# = 23; Http Port
; Col# = 24; Https Port
; Col# = 25; Cert Common Name,
; Col# = 26; Secondary User,
; Col# = 27; Secondary Pass,
; Col# = 28; Secondary Enable Pass,
; Col# = 29; Secondary Http User,
; Col# = 30; Secondary Http Pass,
; Col# = 31; Snmp V3 Priv Algorithm,
; Col# = 32; Snmp V3 Priv Pass,
; Col# = 33; User Field 1,
; Col# = 34; User Field 2,
; Col# = 35; User Field 3,
; Col# = 36; User Field 4,

```

A new feature is implemented to decide the primary device name using column1, column2, and column3 of 30 and 36 column CNC seedfile. This eliminates the need of manual updating of `/etc/hosts`.

Hostname and Domain name is decided based on below scenarios:

- If seed file has defined hostname in Column 2 and domain name in Column 3, then CSPC combines both the (Hostname in Column2 + Domain name Column3) and use this as a primary device name
- If seed file has defined hostname in Column 2 and no domain name in Column 3, then CSPC uses hostname in Column2 as a primary device name
- If seed file has defined hostname in Column 1, no data in Column2, and domain name in Column3, then CSPC combines both of them (Hostname in Column1 + Domain name in Column3) and uses this as a primary device name
- If no value present in Column2 and Column3 then CSPC uses Column1 value (Ipaddress or hostname) as a primary device name

Cisco Works Seed File Format

Header in Cisco Works 30 seed file contains these fields:

- `management_ip_address`
- `host_name`

- domain_name
- device_identity
- display_name
- sysObjectID
- dcr_device_typedmdf_typesnmp_v2_ro_comm_string
- snmp_v2_rw_comm_string
- snmp_v3_user_idsnmp_v3_passwordsnmp_v3_engine_id
- snmp_v3_auth_algorithm
- rxboot_mode_username
- rxboot_mode_password
- primary_username
- primary_password
- primary_enable_password
- http_username
- http_password
- http_mode
- http_port
- https_port
- cert_common_name
- secondary_username
- secondary_password
- secondary_enable_password
- secondary_http_username
- secondary_http_password

Header in Cisco Works 34 seed file contains these fields:

- management_ip_address
- host_name
- domain_name
- device_identity
- display_name
- sysObjectID
- dcr_device_type
- mdf_type
- sysContact
- sysLocation
- snmp_v2_ro_comm_string
- snmp_v2_rw_comm_string

- snmp_v3_user_id
- snmp_v3_password
- snmp_v3_engine_id
- snmp_v3_auth_algorithm
- snmp_v3_priv_password
- snmp_v3_priv_algorithm
- rxboot_mode_username
- rxboot_mode_password
- primary_username
- primary_password
- primary_enable_password
- http_username
- http_password
- http_mode
- http_port
- https_port
- cert_common_name
- secondary_username
- secondary_password
- secondary_enable_password
- secondary_http_username
- secondary_http_password

Simplified Seed File Format

Header in Simplified Seed file contains these fields:

- IPAddress
- protocol
- port
- username
- password
- enableusername
- enablepassword
- SnmpRO
- SnmpRW
- SnmpV3Id
- SnmpV3Password
- SnmpV3EngineId

- Snmpv3AuthAlgorithm
- SnmpV3PrivAlgorithm
- SnmpVPrivPassword

Export File Format

These are the contents of the file generated by the export utility of Service Appliance 1.0:

; Col# = 1: IP Address (including domain or simply an IP)
; Col# = 2: Host Name
; Col# = 3: Domain Name
; Col# = 4: Device Identity
; Col# = 5: Display Name
; Col# = 6: SysObjectID
; Col# = 7: DCR Device Type
; Col# = 8: MDF Type
; Col# = 9; Snmp RO
; Col# = 10; Snmp RW
; Col# = 11; SnmpV3 User Name
; Col# = 12; Snmp V3 Auth Pass
; Col# = 13; Snmp V3 Engine ID
; Col# = 14; Snmp V3 Auth Algorithm
; Col# = 15; RX Boot Mode User
; Col# = 16; RX Boot Mode Pass
; Col# = 17; Primary User(Tacacs User)
; Col# = 18; Primary Pass(Tacacs Pass)
; Col# = 19; Primary Enable Pass
; Col# = 20; Http User
; Col# = 21; Http Pass
; Col# = 22; Http Mode
; Col# = 23; Http Port
; Col# = 24; Https Port
; Col# = 25; Cert Common Name
; Col# = 26; Secondary User
; Col# = 27; Secondary Pass
; Col# = 28; Secondary Enable Pass
; Col# = 29; Secondary Http User
; Col# = 30; Secondary Http Pass
; Col# = 31; Snmp V3 Priv Algorithm

■

; Col# = 32; Snmp V3 Priv Pass
; Col# = 33; User Field 1
; Col# = 34; User Field 2
; Col# = 35; User Field 3
; Col# = 36; User Field 4
; Col# = 37; Status_Msg

Optional Parameter for NATed Appliances

This feature allows TFTP dataset/CLI datasets/ ApplyIPSignature/ApplyConfig to create/execute with commands having CSPC server IP, which needs to be added dynamically while executing the TFTP dataset/CLI datasets/ApplyIPSignature/ApplyConfig. To use this feature for CLI datasets/ ApplyIPSignature/ApplyConfig ,a unique tag called <#SERVERIP#> has to be added to the command where CSPC server IP needs to be replaced. Updating TFTP dataset is not needed. By default, CSPC will replace it with its own IP but, in case the externally visible IP is not the same as the internal CSPC IP, then use the following XML to added/modify the IP to be used for replacing the <#SERVERIP#> tag

To add/modify a CSPC Server IP, use below xml API

```
<Request requestId="" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:schemaLocation="http://www.parinetworks.com/api/schemas/1.1 pari_api.xsd"
xmlns="http://www.parinetworks.com/api/schemas/1.1">
<Manage>
<Add operationId="1">
<ServerDetails>
<IPAddress>x.x.x.x</IPAddress>
</ServerDetails>
</Add>
</Manage>
</Request>
```

Conditional Collection

Conditional Collection Description

The phrase "Conditional Collection" generally refers to any collection decision (whether to collect/what to collect/how many times to collect) that is made based on the result of bunch of conditions or the results of another data collection. Other terms used for this are "Complex Collection", "Dynamic Collection", "Follow-on Collection".

What is Supported

Audit Use Case

- Execute a dataset (SNMP or CLI)
- Parse the output and capture a bunch of values
- Execute another command for each of the values captured above

Cisco Call Manager Use Case

In Cisco Call Manager detection, if the SysOID is one of a configurable set of OIDs, and an additional OID returns a value, the device is considered a Cisco Call Manager, and the CCM call manager platform applies.

Support Details:

This will be supported in Conditional collection. However, "platform definitions" in CSPC depend only on the results of discovery operation and cannot depend on the inventory collection results.

This means that you need to implement it in the following way:

1. Define a platform "Possible Call Manager" by providing the set of SysOIDs
2. Define a Conditional collection that is applicable only for the "Possible Call Manager" platforms
3. In this Conditional collection, execute the additional OIDs and based on their return value, collect the final dataset you wish to collect

SNMP/CLI Configuration Fallback Collection

There are four configurations controlling config collection from the device. CLI only and SNMP only do not require follow on collections. However, CLI fallback to SNMP and SNMP fallback to CLI configurations will issue a follow on collection if the first attempted collection protocol fails.

Support Details:

This will be supported in Conditional Collection. However, while this makes sense for collecting configuration, it may not be very useful for other collections.

For example: Interface statistics would result in completely different output based on whether you collected it using SNMP or CLI.

Collected Value Based Follow-on Collections

There are more examples of these in Audits than in Inventory. These are the cases of follow on collection controlled by the "Condition" block in the RBML, and so could be considered the "true" conditional collections.

Support Details:

These use cases are supported as part of Audit Use Cases above.

Commands Requiring Re-login

Commands Requiring Re-login to the Same Device multiple times with mutated community strings to access card in different slots

This is the case where the same OID is issued against the same device multiple times, each time after logging in to a different card in a different slot. Here it is not the command that is mutating but the community string. Log in with the password *public@SM_1* to access the card in slot module 1. These are issued against WAN switches.

Support Details:

This will be supported in Conditional Collection. However, the support will be limited to changing the community string dynamically. (We do not support changing the other credentials like username/password or device IP address etc. dynamically. That needs to be handled by the add-on module if there is such a requirement).

Condition Collection in Detail

Conditional Collection in CSPC is based on recursive algorithm where in the output from each processing units will be fed as input to the next processing unit, until the last processing is complete.

Statement

Statement is the fundamental processing units in Conditional Collection. Statements mark the starting point of each processing units. Each statement is identified with an "identifier" and can optionally have a title and Input. Statement is represented by <Statement> tag

Statements are classified into two types:

1. Condition
2. Loop

The input of each statement will depend on the type of the statement. Input will be a scalar input for condition statement and vector input for loop statements.

Condition Statement

Condition Statement is represented by <Condition> tag and is identified by the statement identifier. Each condition statements input is a scalar input. In order to process the output of input the <Operation> tag is used where the user choose what to do with the output. Based on the operation performed the <Match> and <NonMatch> tags can be used to decide whether to continue with the single unit of processing or to go to the next processing.

Under the <Match> and <NonMatch> tag, user can choose to store the values in a variable which can be used for further processing. To store the values, <Assignment> tags are used under <Match> tag. Based on the operation performed the engine can be used to:

- a. Execute the next statement (Use <Goto>)
- b. Use the next value from the processing (Use <Continue>)
- c. Exit the process (Use <Exit>)
- d. On a certain Matching situation break the recursion (Use <Break>)

Use the <Output> tag if a condition statement is the last program of execution where the output of condition collection is done. Two types of output processing are currently supported in CSPC:

1. **Dataset:** Execute another dataset with the variables populated in previous steps. Make sure the datasets uses the same variable string (case sensitive) that was used for assigning.

Example: If the variable name is "name" and if the output dataset is to login to each slot then the command will be: `session slot <name> processor 1`

2. **AddOutput:** This type of output can be used to display the processed output in the format that is desired by the user.

Scalar Input

Scalar Inputs are the integral part of condition statement and can be only used with condition statements. There are five type of scalar inputs that can be used for processing in condition statements namely:

1. **Device Property:** Used for validating the device properties
2. **Variable:** Used in initializations
3. **Datasets:** Dataset names which needs to be provided if any commands needs to use issued in the device
4. **Loop Context:** Input Datatype which communicates to the engine if the input needs to be taken from the current loop
5. **SNMPIndex / SNMPOid/SNMPValue:** Used for processing SNMP data

Operation

In order to process the output of the scalar input the <Operation> tag is used. There are two types of operations:

1. **String Operation:** Used with java regular expression. Each of the matching patterns are then compared with the java string for matches, doesnotmatch, contains, doesnotcontain, isEmpty, equals and notEquals checks
2. **Vector Operation:** Used as a normal java vector where in the output can be added to a variable and later used for processing

Assignment

The condition statement assignment is the important place where the resultant variable are populated at the end of each operation. In order to assign values to a variable, a variable is created under <Variable> tag under assignment. The variable is populated with the results based on the following important tags:

- a. **append:** Denotes if the matching result needs to be appended to the resulting variable
- b. **onlyIfNotNull:** Add the result to variable only if the result is not null
- c. **trim:** Trims the resulting string and add to the variable
- d. **vectorType:** List/Set/OrderedList are the vector types in which the result will be added in the resultant list. By default, the results will be added to a list. But if the order of insertion is needs to be maintained then OrderedList needs to be used. Use Set, if only unique result string are required in the variable
- e. **Operation:** add/remove. Add, adds the result to the resulting list and Remove, removes the string if present from the resulting list

Loop Statement

Loop statements are like while loop where each statement is executed recursively till the exit criteria is met. Loop Statement is represented by <Loop> tag and is identified by the statement identifier. Loop statement will be the first statement in any conditional collection dataset.

Each loop statements input is a vector input. Each loop-statement must terminate with a condition statement. Data collected from the vector input will be subjected to further processing using specific matching conditions and condition statement(s).

Vector Input

There are four type of vector-inputs used in conditional collection. Each of these vector inputs have discrete significance in achieving the needs of the complex collection. Four type of vector inputs are:

1. **Block Vector Input:** Block Vector Input is used whenever a block of response from the device response needs to be processed. Each of the block input has a mandatory <Input> and <Params> fields. The input used in block can be any of the scalar inputs except SNMP. The params filed has a start and end string which marks the starting and the ending of the block. Also, the start and end strings are java pattern matched. The result of matched pattern is further processed in a condition statement or in a loop statement.
2. **Line Vector Input:** Line Vector Input is used whenever the response from device needs to be processed line by line. Each of the line input has a mandatory <Input> and <Params> fields. The input used in line can be any of the scalar inputs except SNMP. The params filed has a match <Match> tag criteria which is string and is java pattern matched against the result. The result of matched pattern is further processed in a condition statement or in a loop statement.

3. **SNMP Table:** It is used for processing SNMP response from SNMP Table. Each of the SNMP input has a mandatory <Input> and <Rows> fields. The input used in SNMP must be any of the SNMP scalar inputs.
4. **Variable Vector Input:** It is used like java array-list. The input list is populated and is fed for subsequent processing units for further processing.

Actions

Actions are used in conditional collection when a specific action needs to be done before, while or after processing a request. In most cases actions do assignment to variables which will be used in further processing

Examples

CLI Complex Collection

Collection of Show interfaces from device followed by interface status of those interface which contain the string "FastEthernet".

```
<Dataset identifier="ios_show_int_accounting_dynamic">
<Type>Dynamic</Type>
<Title>ios_show_int_accounting_dynamic</Title>

Enabling/Disabling the WebSocket Connection

Now, with this XML API, you can control (enabling/disabling) WebSocket Connection from CSPC.

Enabling

```

<Request requestId="4444" xmlns="http://www.parinetworks.com/api/schemas/1.1">
  <Manage>
    <Modify operationId="1">
      <WebSocketSettings>
        <Enable>Yes</Enable>
      </WebSocketSettings>
    </Modify>
  </Manage>
</Request>

```

Disabling

```
<Request requestId="4444" xmlns="http://www.parinetworks.com/api/schemas/1.1">
  <Manage>
    <Modify operationId="1">
      <WebSocketSettings>
        <Enable>No</Enable>
      </WebSocketSettings>
    </Modify>
  </Manage>
</Request>
```

Note: If you get any error while closing the connection, try to execute same XML one more time.

GET WebSocket Status

```
<Request requestId="4444" xmlns="http://www.parinetworks.com/api/schemas/1.1">
  <Manage>
    <Get operationId="1">
      <WebSocketSettings>
      </WebSocketSettings>
    </Get>
  </Manage>
</Request>
```

Add External Platform Components Credentials

```
<Request requestId="63" xmlns="http://www.parinetworks.com/api/schemas/1.1">

        </Dataset>
      </DatasetList>
    </Add>
  </Manage>
</Request>

```

Uploading Valid SSL Certificate

To upload SSL certificate to CSPC Keystore, Perform the following :

Step 1 Choose any one the following:

- Customer who wants to upload SSL certificate of their choice may provide SSL certificate purchased from a trusted certificate authority

OR

- Customers can provide their own self signed certificate

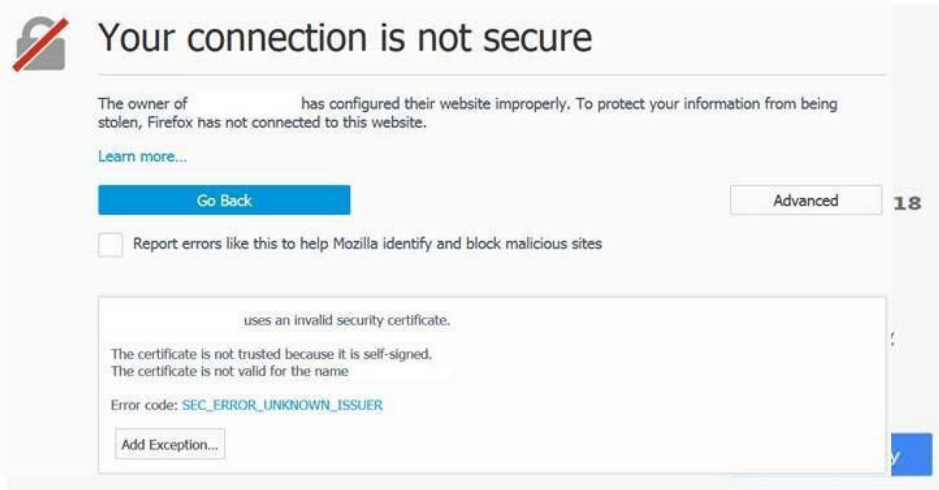

For the above two scenario's you can directly start from [Step 4](#).

Note

All the Self signed certificates provides a warning message on the browser.

Figure F-1 Warning Message

You will not get this warning if we use the SSL certificate provided by the trusted signing authority like Symantec (Verisign) or Digicert.

Generating a Self-signed certificate

Self-signed certificate needs Private key and Certificate signing request (CSR)

Step 2 Generate the Private key and Certificate Signing Request (CSR) using the below Command in CSPC CLI. Customer must provide the input field details

```
#openssl req -new -newkey rsa:2048 -nodes -keyout localhost.key -out
localhost.csr
```

Generating a 2048 bit RSA private key

```
..... +++
```

```
.....
..... +++
```

writing new private key to 'localhost.key'

```
-----
```

You are about to be asked to enter information that will be incorporated into your certificate request.

What you are about to enter is what is called a Distinguished Name or a DN.

There are quite a few fields, but you can leave some blank. For some fields there will be a default value, If you enter '.', the field will be left blank.

```
-----
```

Country Name (2 letter code) [XX]:IN

State or Province Name (full name) []:TN

Locality Name (eg, city) [Default City]:Trichy

Organization Name (eg, company) [Default Company Ltd]:KSKTech

Organizational Unit Name (eg, section) []:IT

Common Name (eg, your name or your server's hostname) []:cspc

Email Address []:ksk@wxyz.com

Please enter the following 'extra' attributes to be sent with your certificate request

A challenge password []:password

An optional company name []:AEY

Above command generates two files localhost.key (Key file) and localhost.csr (CSR file)

- Scenario 1: Some customer may request us to generate only the key & CSR file and they will create the certificate using the generated key /CSR files. Provide the above files (localhost.csr & localhost.key) to the customer, they will generate and provide the certificate. The certificate file will be either .crt or .cer. (.cer file generally belongs to Microsoft Platform) and proceed to [Step 4](#).
- Scenario 2: Customer may request us to create the certificate from the generated key and CSR file (localhost.csr & localhost.key), continue with [Step 3](#)

Step 3 Create certificate using below command

```
# openssl x509 -req -days 500 -in localhost.csr -signkey localhost.key
-out localhost.crt
```

Signature ok

```
subject=/C=IN/ST=TN/L=Trichy/O=KSKTech/OU=IT/CN=cspc/emailAddress=
ksk@wxyz.com
```

Getting Private key

Above command generates the self-signed certificate file, localhost.crt

This step is optional:

Use the following command to check the certificate provided by the customer before creating the keystore

```
/opt/cisco/ss/adminshell/applications/CSPC/jreinstall/bin/keytool
-printcert -v -file localhost.crt
```

Step 4 Creating the keystore use the following command

```
#openssl pkcs12 -export -in localhost.crt -inkey localhost.key >
localhost.p12
```

Enter ExportPassword:cspcgxt

Verifying - Enter Export Password:cspcgxt

Above command generates.p12 file

Note

Use "cspcgxt" as password (if some other password is used then you need to create a separate keystore and need to edit the server.xml file entries "keystoreFile" and "keystorePass").

Step 5 Importing the created keystore into CSPC's keystore using command

```
/opt/cisco/ss/adminshell/applications/CSPC/jreinstall/bin/keytool
-importkeystore -srckeystore localhost.p12 -srcstoretype pkcs12
-destkeystore $CSPCHOME/webui/tomcat/conf/cspcgxt -deststoretype jks
```

Enter destination keystore password:cspcgxt

Enter source keystore password:cspcgxt

Entry for alias 1 successfully imported.

Import command completed: 1 entries successfully imported, 0 entries failed or canceled

Step 6 Deleting the existing alias from the CSPC keystore

*checking the CSPC keystore for details using command

```
/opt/cisco/ss/adminshell/applications/CSPC/jreinstall/bin/keytool
-list -v -keystore $CSPCHOME/webui/tomcat/conf/cspcgxt
```

Your keystore contains 2 entries

Alias name: tomcat

Alias name: 1

You have to delete the tomcat Alias since it contains the CSPC self-signed certificate using below command

```
/opt/cisco/ss/adminshell/applications/CSPC/jreinstall/bin/keytool
-delete -alias tomcat -keystore $CSPCHOME/webui/tomcat/conf/cspcgxt
```

Enter keystore password:cspcgxt

```
/opt/cisco/ss/adminshell/applications/CSPC/jreinstall/bin/keytool
-list -v -keystore $CSPCHOME/webui/tomcat/conf/cspcgxt
```

Enter keystore password:cspcgxt

Now the CSPC keystore has only 1 Alias,

Keystore type: JKS

Keystore provider: SUN Your keystore contains 1 entry

Alias name: 1

Changing Alias name to tomcat (this step is optional) using the command below.

```
/opt/cisco/ss/adminshell/applications/CSPC/jreinstall/bin/keytool
-changealias -alias 1 -destalias tomcat -keystore
$CSPCHOME/webui/tomcat/conf/cspcgxt
```

Enter keystore password: cspcgxt

Step 7 Verifying the Alias name change,

```
/opt/cisco/ss/adminshell/applications/CSPC/jreinstall/bin/keytool
-list -v -keystore $CSPCHOME/webui/tomcat/conf/cspcgxt
```

Enter keystore password: cspcgxt

Keystore type: JKS

Keystore provider: SUN. Your keystore contains 1 entry

Alias name: tomcat

Step 8 Restart the CSPC service using below command

```
# service cspc restart
```

Step 9 Verify the uploaded SSL certificate in a browser below screen appears

Figure F-2 Certificate Information

RSA SHA 256 Fingerprint

To generate the RSA SHA 256 fingerprint for the corresponding host key, perform the following:

- Step 1** Login to the host box where you want to perform backup or restore and execute the below command
- ```
ssh-keygen -l -f /etc/ssh/ssh_host_rsa_key
```

### Sample Output

```
db:db:97:37:b9:af:df:fc:c5:af:b6:b4:1a:85:02:7f (MD5 checksum)
zU7R1r/JZaWFLmF1jKvm5ZrtuOaGvTyQzVU60RI73n0 (base64-encoded SHA256
checksum)
```

### Note

In OpenSSH 7.0 and earlier versions this fingerprint was a hexadecimal MD5 checksum. Now it is base64- encoded SHA256 checksum.

---

# CSPC - Automated Fault Management (AFM) Tool Integration

---

CloudRay deployment with CSPC, NCE should follow the steps to establish the secured SSL based communication channel between CSPC and CloudRay.

- 
- Step 1** Create a new user with group type "**External Client User**", on CSPC.
  - Step 2** Configure the above created user's username and password, on CloudRay JMS client.
  - Step 3** Replace the existing `pariTrustStore` with the latest one available in `$CSPCHOME/bin.` on CloudRay JMS client. This step is mandatory only if the `pariTrustStore` is modified on CSPC.
  - Step 4** Add the below firewall rule just before the loopback interface rules that would allow to accept the connections from CloudRay on port 61617, on CSPC.
  - Step 5** This should be a permanent entry and finally restart the iptables.

```
iptables -A INPUT -p tcp -m tcp --dport 61617 -j ACCEPT
```

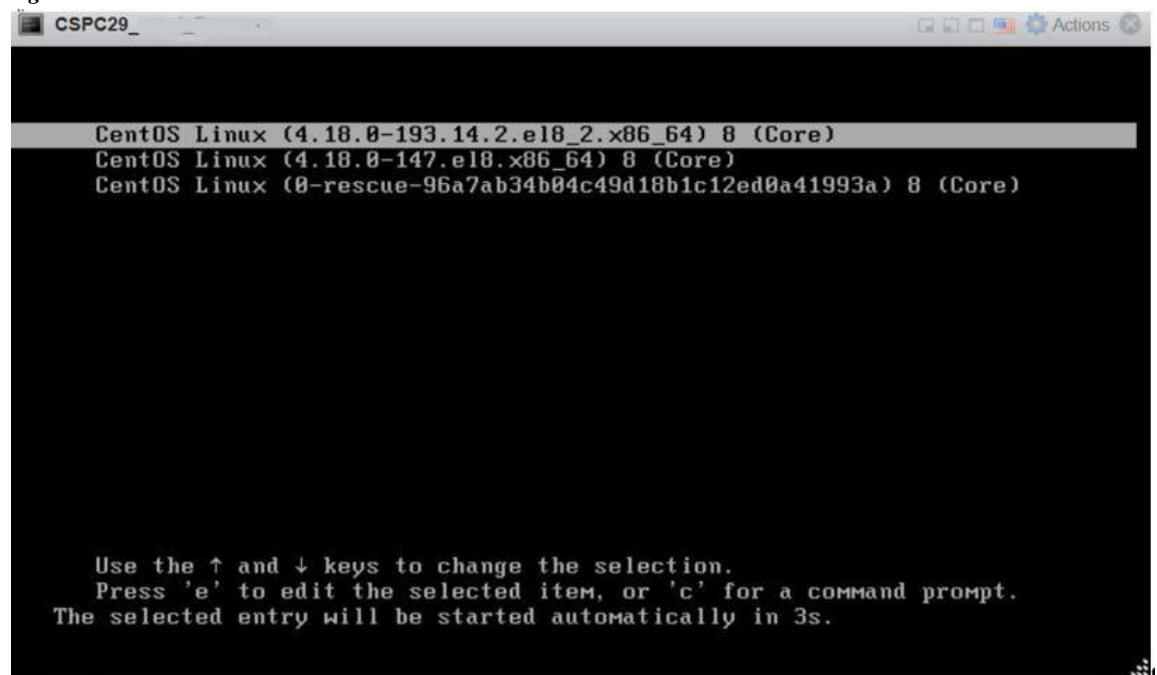

# Reset Root Password and Deployment of ESXi 7.0

## Recovering Root Password

To recover the root password, perform the following:

- Step 1** Reboot the server from console and as the boot process starts, press `e` to edit the first boot option.

*Figure I-1 Console*

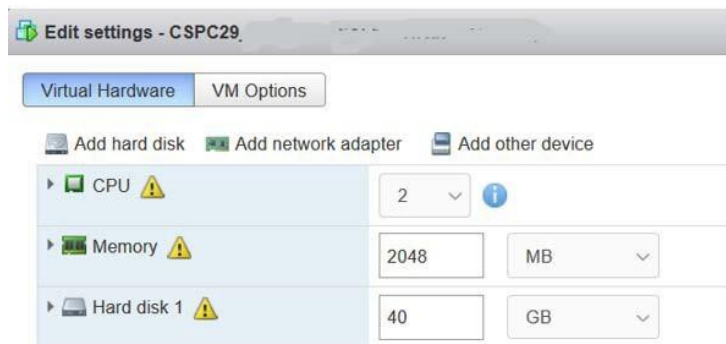

- Step 2** Enter grub **Username** (`root`) and **Password**.
- Step 3** Search the kernel for the line that starts with `linux`, change `ro` to `rw` `init=/sysroot/bin/sh`
- Step 4** Press `CTRL+x` or `F10` to boot single user mode
- Step 5** Access the system using command `chroot /sysroot`
- Step 6** Execute command `passwd` to change the root password
- Step 7** Execute the following commands to force the system file to relabel and reboot.

```
touch /.autorelabel
exit
logout
reboot
```

## Deploying CSPC 2.11 OVA on ESXi 7.0

To deploy CSPC 2.11 OVA on ESXi 7.0 and modify the configurations post deployment

- Step 1** Log in to the VMware vSphere Web Client and navigate to the VMs tab.
- Step 2** Add the **Deploy OVF Template** action button via the **Actions** drop-down list.
- Step 3** Click the newly added **Deploy OVF Template** button.
- Step 4** Click on **Browse** to upload CSPC ova from local path.
- Step 5** Accept end user license and select Deployment Type as **Ultrasmall**.
- Step 6** Click **Finish**, once CSPC OVA is deployed.
- Step 7** **Power off** VM to change ultrasmall to small, medium, or large deployment types.
- Step 8** Right click and then click **Edit settings**.

You can reconfigure Vcpus, Memory, and Storage for small, medium, and large as below:

| Deployment Type | Vcpus    | Memory | Storage |
|-----------------|----------|--------|---------|
| Small           | 4 Vcpus  | 4GB    | 250GB   |
| Medium          | 8 Vcpus  | 8GB    | 500GB   |
| Large           | 12 Vcpus | 16GB   | 1TB     |

- Step 9** Click **Save** and **Power on** the VM.

## Setting hostname as PrimaryDeviceName

---

- Step 1 Login into CSPC VM as **collectorlogin** then switch to **root** user
- Step 2 Change directory to **/opt/cisco/ss/adminshell/applications/CSPC/resources/server/mainserver**
- Step 3 Update **hostNameInPrimaryDevice=true** in **mainserver.properties** file (by default  
hostNameInPrimaryDevice=false)
- Step 4 Restart the CSPC service

**Note:** If the device is already in managed state in this case if you set the `hostNameInPrimaryDevice` to true in `mainserver.properties` file it will not set the `PrimaryDeviceName` as the host name. We have to unmanaged the existing managed device first to reflect `PrimaryDeviceName` as the host name.

## Frequently Asked Questions

---

**Q.** Does adding credentials manage a device?

**A.** No.

**Q.** Can credentials be added by DNS Name?

**A.** No.

**Q.** Can CNC seed files be imported?

**A.** Yes.

**Q.** Can Ciscoworks DCR files be imported?

**A.** Yes, but only the XML Version and only if the IP Addresses were exported from Ciscoworks, not the DNS Names.

**Q.** Does importing a credentials file ever manage a device?

**A.** No.

**Q.** Can credentials be exported?

**A.** Yes, in Pari credentials and CNC CSV formats.

**Q.** Is it better to enumerate IP address or to use wild cards?

**A.** It is better to use wild cards.

**Q.** Is the order of credentials important?

**A.** Yes, the order of credentials is used to choose the preferred protocol for a dataset type and also to choose between multiple matching wildcards.

**Q.** Does Discovery of Known Devices discover anything?

A. No, but it will filter out any devices it cannot collect device properties from using the SNMP credentials.

Q. How come all my devices weren't added?

A. Because Discovery of Known Devices filters out any devices it cannot collect device properties from using the SNMP credentials.

Q. Are SNMP credentials necessary to manage a device?

A. Yes.

Q. Can I select Cisco or third party vendor products where the data is collected?

A. Yes, by default CSPC discovery engine collects all devices that are SNMP/CLI enabled, If you want a set of devices not to be collected, then add those to ignore list. Refer to [Exclude Platform](#)

Q. Can I disable remote access for SW uploads to CSPC?

A. Yes, you can uncheck the uploads to remote server. Refer to Export Options in [Profile Details](#)

Q. I have legacy products that may be LDoS or past SW Maintenance and are sweating assets. Will CSPC still collect the data from these legacy products?

A. Yes

Q. I have procured third part products, will CSPC collect data from those?

A. Yes, CSPC collects the data and those will be considered as Cisco products.

Q. Will data be collected and processed for analytics from third party products that now are Cisco?

A. Yes, below is list of PID supported for collection by CSPC. You can see the supported third party PIDs.

Figure J-1 Third Party PIDs

| Physical Type | Product Family     | PID               | OS Type | Name                     |
|---------------|--------------------|-------------------|---------|--------------------------|
| Chassis       | Cisco SD-WAN       | vBond             | Viptela | vBond Orchestrator       |
| Chassis       | Cisco SD-WAN       | vManage           | Viptela | vManage NMS              |
