1.16 @ampproject/remapping 2.2.1

1.16.1 Available under license :

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity

on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
 - (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
 - (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
 - (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
 - (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one

of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a

result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications

represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without

modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. **Submission of Contributions.** Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. **Trademarks.** This License does not grant permission to use the trade

names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier

identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a

copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct

or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of

this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following

boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Licensed under the Apache License, Version 2.0 (the "License");
you may not use this file except in compliance with the License.
You may obtain a copy of the License at

<http://www.apache.org/licenses/LICENSE-2.0>

Unless required by applicable law or agreed to in writing, software
distributed under the License is distributed on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.
See the License for the specific language governing permissions and
limitations under the License.

given its low and high 32-bit\n * values as *signed* integers. See the from* functions below for more\n *
convenient ways of constructing Longs.\n * \n * The internal representation of a long is the two given signed, 32-bit
values.\n * \n * We use 32-bit pieces because these are the size of integers on which\n * Javascript performs bit-
operations. For operations like addition and\n * multiplication, we split each number into 16-bit pieces, which can
easily be\n * multiplied within Javascript's floating-point representation without overflow\n * or change in sign.\n
*\n * \n * In the algorithms below, we frequently reduce the negative case to the\n * positive case by negating the
input(s) and then post-processing the result.\n * \n * Note that we must ALWAYS check specially whether those values
are MIN_VALUE\n * (-2^63) because -MIN_VALUE == MIN_VALUE (since 2^63 cannot be represented as\n * a
positive number, it overflows back into a negative). Not handling this\n * case would often result in infinite
recursion.\n * \n * @param {number} low The low (signed) 32 bits of the long.\n * @param {number} high The
high (signed) 32 bits of the long.\n * @constructor\n * @final\n */\n\nKotlin.Long = function(low, high) {\n  /**\n

public fun LongArray.sortedWith(comparator: Comparator<in Long>): List<Long> {
    return toTypedArray().apply { sortWith(comparator) }.asList()
}

```

* Returns a list of all elements sorted according to the specified [comparator].

```

public fun FloatArray.sortedWith(comparator: Comparator<in Float>): List<Float> {
    return toTypedArray().apply { sortWith(comparator) }.asList()
}

```

* Returns a list of all elements sorted according to the specified [comparator].

```

public fun DoubleArray.sortedWith(comparator: Comparator<in Double>): List<Double> {
    return toTypedArray().apply { sortWith(comparator) }.asList()
}

```

* Returns a list of all elements sorted according to the specified [comparator].

```

public fun BooleanArray.sortedWith(comparator: Comparator<in Boolean>): List<Boolean> {
    return toTypedArray().apply { sortWith(comparator) }.asList()
}

```

* Returns a list of all elements sorted according to the specified [comparator].

```

public fun CharArray.sortedWith(comparator: Comparator<in Char>): List<Char> {
    return toTypedArray().apply { sortWith(comparator) }.asList()
}

```

* Returns a [List] that wraps the original array.

```

public expect fun <T> Array<out T>.asList(): List<T>

```

* Returns a [List] that wraps the original array.

```

public expect fun ByteArray.asList(): List<Byte>

```

* Returns a [List] that wraps the original array.

```

public expect fun ShortArray.asList(): List<Short>

```

* Returns a [List] that wraps the original array.

```

public expect fun IntArray.asList(): List<Int>

```

* Returns a [List] that wraps the original array.

```

public expect fun LongArray.asList(): List<Long>

```

```

public expect fun FloatArray.asList(): List<Float>

```

* Returns a [List] that wraps the original array.

```

public expect fun DoubleArray.asList(): List<Double>

```

* Returns a [List] that wraps the original array.

```

public expect fun BooleanArray.asList(): List<Boolean>

```

* Returns a [List] that wraps the original array.

```

public expect fun CharArray.asList(): List<Char>

```

* Returns `true` if the two specified arrays are *deeply* equal to one another, i.e. contain the same number of the same elements in the same order.

* If two corresponding elements are nested arrays, they are also compared deeply.

* If any of arrays contains itself on any

nesting level the behavior is undefined.

`<T> Array<out T>.contentDeepEquals(other: Array<out T>): Boolean`

Returns a hash code based on the contents of this array as if it is [List]. Nested arrays are treated as lists too. If any of arrays contains itself on any nesting level the behavior is undefined.

`<T> Array<out T>.contentDeepHashCode(): Int`

Returns a string representation of the contents of this array as if it is a [List]. Nested arrays are treated as lists too. If any of arrays contains itself on any nesting level that reference is rendered as "[...]" to prevent recursion.

`@sample samples.collections.Arrays.ContentOperations.contentDeepToString()`

`<T> Array<out T>.contentDeepToString(): String`

Returns true if the two specified arrays are structurally equal to one another, i.e. contain the same number of the same elements in the same order. The elements are compared for equality with the [equals][Any.equals] function. For floating point numbers it means that NaN is equal to itself and -0.0 is not equal to 0.0.

`<T> Array<out T>.contentEquals(other: Array<out T>): Boolean`

Returns true if the two specified arrays are structurally equal to one another, i.e. contain the same number of the same elements in the same order. The elements are compared for equality with the [equals][Any.equals] function. For floating point numbers it means that NaN is equal to itself and -0.0 is not equal to 0.0.

`ByteArray.contentEquals(other: ByteArray): Boolean`

Returns true if the two specified arrays are structurally equal to one another, i.e. contain the same number of the same elements in the same order. The elements are compared for equality with the [equals][Any.equals] function. For floating point numbers it means that NaN is equal to itself and -0.0 is not equal to 0.0.

`ShortArray.contentEquals(other: ShortArray): Boolean`

Returns true if the two specified arrays are structurally equal to one another, i.e. contain the same number of the same elements in the same order. The elements are compared for equality with the [equals][Any.equals] function. For floating point numbers it means that NaN is equal to itself and -0.0 is not equal to 0.0.

`IntArray.contentEquals(other: IntArray): Boolean`

Returns true if the two specified arrays are structurally equal to one another, i.e. contain the same number of the same elements in the same order. The elements are compared for equality with the [equals][Any.equals] function. For floating point numbers it means that NaN is equal to itself and -0.0 is not equal to 0.0.

`LongArray.contentEquals(other: LongArray): Boolean`

Returns true if the two specified arrays are structurally equal to one another, i.e. contain the same number of the same elements in the same order. The elements are compared for equality with the [equals][Any.equals] function. For floating point numbers it means that NaN is equal to itself and -0.0 is not equal to 0.0.

`FloatArray.contentEquals(other: FloatArray): Boolean`

Returns true if the two specified arrays are structurally equal to one another, i.e. contain the same number of the same elements in the same order. The elements are compared for equality with the [equals][Any.equals] function. For floating point numbers it means that NaN is equal to itself and -0.0 is not equal to 0.0.

`DoubleArray.contentEquals(other: DoubleArray): Boolean`

Returns true if the two specified arrays are structurally equal to one another, i.e. contain the same number of the same elements in the same order. The elements are compared for equality with the [equals][Any.equals] function. For floating point numbers it means that NaN is equal to itself and -0.0 is not equal to 0.0.

`BooleanArray.contentEquals(other: BooleanArray): Boolean`

Returns true if the two specified arrays are structurally equal to one another, i.e. contain the same number of the same elements in the same order. The elements are compared for equality with the [equals][Any.equals] function. For floating point numbers it means that NaN is equal to itself and -0.0 is not equal to 0.0.

`CharArray.contentEquals(other: CharArray): Boolean`

Returns a hash code based on the contents of this array as if it is [List].

`<T> Array<out T>.contentHashCode():`

```

public inline fun <R> BooleanArray.mapIndexed(transform:
(index: Int, Boolean) -> R): List<R> {
    return mapIndexedTo(ArrayList<R>(size), transform)
}

```

Returns a list containing the results of applying the given [transform] function to each element and its index in the original array.

@param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element.

```

public inline fun <R>
CharArray.mapIndexed(transform: (index: Int, Char) -> R): List<R> {
    return
mapIndexedTo(ArrayList<R>(size), transform)
}

```

Returns a list containing only the non-null results of applying the given [transform] function to each element and its index in the original array.

@param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element.

```

public inline fun <T, R : Any> Array<out
T>.mapIndexedNotNull(transform: (index: Int, T) -> R?): List<R> {
    return
mapIndexedNotNullTo(ArrayList<R>(), transform)
}

```

Applies the given [transform] function to each element and its index in the original array and appends only the non-null results to the given [destination].

@param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element.

```

public inline fun <T, R : Any, C : MutableCollection<in R>> Array<out
T>.mapIndexedNotNullTo(destination: C, transform: (index: Int, T) -> R?): C {
    for<Indexed> { index,
element -> transform(index, element)?.let { destination.add(it) } }
    return destination
}

```

Applies the given [transform] function to each element and its index in the original array and appends the results to the given [destination].

@param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element.

```

public inline fun <T, R, C : MutableCollection<in
R>> Array<out T>.mapIndexedTo(destination: C, transform: (index: Int, T) -> R): C {
    var index = 0
    for (item in this)
        destination.add(transform(index++, item))
    return destination
}

```

Applies the given [transform] function to each element and its index in the original array and appends the results to the given [destination].

@param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element.

```

public inline fun <R, C : MutableCollection<in R>>
ByteArray.mapIndexedTo(destination: C, transform: (index: Int, Byte) -> R): C {
    var index = 0
    for (item in this)
        destination.add(transform(index++, item))
    return destination
}

```

Applies the given [transform] function to each element and its index in the original array and appends the results to the given [destination].

@param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element.

```

public inline fun <R, C : MutableCollection<in R>>
ShortArray.mapIndexedTo(destination: C, transform: (index: Int, Short) -> R): C {
    var index = 0
    for (item in this)
        destination.add(transform(index++, item))
    return destination
}

```

Applies the given [transform] function to each element and its index in the original array and appends the results to the given [destination].

@param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element.

```

public inline fun <R, C : MutableCollection<in R>>
IntArray.mapIndexedTo(destination: C, transform: (index: Int, Int) -> R): C {
    var index = 0
    for (item in this)
        destination.add(transform(index++, item))
    return destination
}

```

Applies the given [transform] function to each element and its index in the original array and appends the results to the given [destination].

@param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element.

```

`LongProgression.fromClosedRange(this.toLong(), to, -1L)` Returns a progression from this value down to the specified [to] value with the step -1. The [to] value should be less than or equal to `this` value. If the [to] value is greater than `this` value the returned progression is empty.

`Short.downTo(to: Long): LongProgression` Returns a progression from this value down to the specified [to] value with the step -1. The [to] value should be less than or equal to `this` value. If the [to] value is greater than `this` value the returned progression is empty.

`Int.downTo(to: Short): IntProgression` Returns a progression from this value down to the specified [to] value with the step -1. The [to] value should be less than or equal to `this` value. If the [to] value is greater than `this` value the returned progression is empty.

`Long.downTo(to: Short): LongProgression` Returns a progression from this value down to the specified [to] value with the step -1. The [to] value should be less than or equal to `this` value. If the [to] value is greater than `this` value the returned progression is empty.

`Byte.downTo(to: Short): IntProgression` Returns a progression from this value down to the specified [to] value with the step -1. The [to] value should be less than or equal to `this` value. If the [to] value is greater than `this` value the returned progression is empty.

`IntProgression.fromClosedRange(this.toInt(), to.toInt(), -1)` Returns a progression from this value down to the specified [to] value with the step -1. The [to] value should be less than or equal to `this` value. If the [to] value is greater than `this` value the returned progression is empty.

`Short.downTo(to: Short): IntProgression` Returns a progression that goes over the same range in the opposite direction with the same step.

`IntProgression.reversed(): IntProgression` Returns a progression that goes over the same range in the opposite direction with the same step.

`LongProgression.reversed(): LongProgression` Returns a progression that goes over the same range in the opposite direction with the same step.

`CharProgression.reversed(): CharProgression` Returns a progression that goes over the same range with the given step.

`IntProgression.step(step: Int): IntProgression` Returns a progression that goes over the same range with the given step.

`LongProgression.step(step: Long): LongProgression` Returns a progression that goes over the same range with the given step.

`CharProgression.step(step: Int): CharProgression` Returns a progression that goes over the same range with the given step.

`Int.toByteExactOrNull(): Byte?` Returns if (this in `Byte.MIN_VALUE.toInt()..Byte.MAX_VALUE.toInt()`) `this.toByte()` else null.

`Long.toByteExactOrNull(): Byte?` Returns if (this in `Byte.MIN_VALUE.toLong()..Byte.MAX_VALUE.toLong()`) `this.toByte()` else null.

`Short.toByteExactOrNull(): Byte?` Returns if (this in `Byte.MIN_VALUE.toShort()..Byte.MAX_VALUE.toShort()`) `this.toByte()` else null.

`Double.toByteExactOrNull(): Byte?` Returns if (this in `Byte.MIN_VALUE.toDouble()..Byte.MAX_VALUE.toDouble()`) `this.toByte()` else null.

`Float.toByteExactOrNull(): Byte?` Returns if (this in `Byte.MIN_VALUE.toFloat()..Byte.MAX_VALUE.toFloat()`) `this.toByte()` else null.

`Long.toIntExactOrNull(): Int?` Returns if (this in `Int.MIN_VALUE.toLong()..Int.MAX_VALUE.toLong()`) `this.toInt()` else null.

`Double.toIntExactOrNull(): Int?` Returns if (this in `Int.MIN_VALUE.toDouble()..Int.MAX_VALUE.toDouble()`) `this.toInt()` else null.

`Float.toIntExactOrNull(): Int?` Returns if (this in `Int.MIN_VALUE.toFloat()..Int.MAX_VALUE.toFloat()`) `this.toInt()` else null.

`Double.toLongExactOrNull(): Long?` Returns if (this in `Long.MIN_VALUE.toDouble()..Long.MAX_VALUE.toDouble()`) `this.toLong()` else null.

the non-null results of applying the given [transform] function to each element and its index in the original collection.

`Iterable<T>.mapIndexedNotNull(transform: (index: Int, T) -> R?): List<R>` {
 return
 mapIndexedNotNullTo(ArrayList<R>(), transform)
 }
 Applies the given [transform] function to each element and its index in the original collection and appends only the non-null results to the given [destination].

`Iterable<T>.mapIndexedNotNullTo(destination: C, transform: (index: Int, T) -> R?): C` {
 forEachIndexed {
 index, element -> transform(index, element)?.let { destination.add(it) }
 }
 return destination
 }
 Applies the given [transform] function to each element and its index in the original collection and appends the results to the given [destination].

`Iterable<T>.mapIndexedTo(destination: C, transform: (index: Int, T) -> R): C` {
 var
 index = 0
 for (item in this)
 destination.add(transform(checkIndexOverflow(index++), item))
 return
 destination
 }
 Returns a list containing only the non-null results of applying the given [transform] function to each element in the original collection.

`Iterable<T>.mapNotNull(transform: (T) -> R?): List<R>` {
 return mapNotNullTo(ArrayList<R>(),
 transform)
 }
 Applies the given [transform] function to each element in the original collection and appends only the non-null results to the given [destination].

`Iterable<T>.mapNotNullTo(destination: C, transform: (T) -> R?): C` {
 forEach {
 element -> transform(element)?.let { destination.add(it) }
 }
 return destination
 }
 Applies the given [transform] function to each element of the original collection and appends the results to the given [destination].

`Iterable<T>.mapTo(destination: C, transform: (T) -> R): C` {
 for (item in this)
 destination.add(transform(item))
 return
 destination
 }
 Returns a lazy [Iterable] that wraps each element of the original collection into an [IndexedValue] containing the index of that element and the element itself.

`Iterable<T>.withIndex(): Iterable<IndexedValue<T>>` {
 return IndexingIterable { iterator() }
 }
 Returns a list containing only distinct elements from the given collection. The elements in the resulting list are in the same order as they were in the source collection.

`Iterable<T>.distinct(): List<T>` {
 return this.toMutableSet().toList()
 }
 Returns a list containing only elements from the given collection having distinct keys returned by the given [selector] function.

`Iterable<T>.distinctBy(selector: (T) -> K): List<T>` {
 val set = HashSet<K>()
 val list = ArrayList<T>()
 for (e in this) {
 val key = selector(e)
 if (set.add(key))
 list.add(e)
 }
 return list
 }
 Returns a set containing all elements that are contained by both this collection and the specified collection. The returned set preserves the element iteration order of the original collection.

`Iterable<T>.intersect(other: Iterable<T>): Set<T>` {
 val set = this.toMutableSet()
 set.retainAll(other)
 return set
 }
 Returns a set containing all elements that are contained by this collection and not contained by the specified collection. The returned set preserves the element iteration order of the original collection.

`Iterable<T>.subtract(other: Iterable<T>): Set<T>` {
 val set = this.toMutableSet()
 set.removeAll(other)
 return set
 }
 Returns a mutable set containing all distinct elements from the given collection. The returned set preserves the element iteration order of the original collection.

`Iterable<T>.toMutableSet(): MutableSet<T>` {
 return when (this) {
 is Collection<T> ->
 LinkedHashSet(this)
 else -> toCollection(LinkedHashSet<T>())
 }
 }
 Returns a set containing all distinct elements from both collections. The returned set preserves the element iteration order of the original collection. Those elements of the [other] collection that are unique are iterated in the end in the order

of the [other] collection.

        n == 0 -> this
        this is DropTakeSequence -> this.drop(n)
        else -> DropSequence(this, n)
    }
}

Returns a sequence containing all elements except first elements that satisfy the given [predicate].
The operation is _intermediate_ and _stateless_.

@sample
samples.collections.Collections.Transformations.dropWhile(predicate: (T) -> Boolean): Sequence<T> {
    return DropWhileSequence(this, predicate)
}

Returns a sequence containing only elements matching the given [predicate].
The operation is _intermediate_ and _stateless_.

@sample
samples.collections.Collections.Transformations.filter(predicate: (T) -> Boolean): Sequence<T> {
    return FilteringSequence(this, true, predicate)
}

Returns a sequence containing only elements matching the given [predicate].
@param [predicate] function that takes the index of an element and the element itself
and returns the result of predicate evaluation on the element.
The operation is _intermediate_ and _stateless_.

@sample
samples.collections.Collections.Transformations.filterIndexed(predicate: (index: Int, T) -> Boolean): Sequence<T> {
    // TODO: Rewrite with generalized MapFilterIndexingSequence
    return TransformingSequence(FilteringSequence(IndexingSequence(this), true, { predicate(it.index, it.value) } ), { it.value })
}

Appends all elements matching the given [predicate] to the given [destination].
@param [predicate] function that takes the index of an element and the element itself
and returns the result of predicate evaluation on the element.
The operation is _terminal_.

@sample
samples.collections.Collections.Transformations.filterIndexedTo(destination: C, predicate: (index: Int, T) -> Boolean): C {
    forEachIndexed { index, element ->
        if (predicate(index, element)) destination.add(element)
    }
    return destination
}

Returns a sequence containing all elements that are instances of specified type parameter R.
The operation is _intermediate_ and _stateless_.

@sample
samples.collections.Collections.Transformations.filterIsInstance(): Sequence<@kotlin.internal.NoInfer R> {
    @Suppress("UNCHECKED_CAST")
    return filter { it is R } as Sequence<R>
}

Appends all elements that are instances of specified type parameter R to the given [destination].
The operation is _terminal_.

@sample
samples.collections.Collections.Transformations.filterIsInstanceTo(destination: C): C {
    for (element in this) if (element is R) destination.add(element)
    return destination
}

Returns a sequence containing all elements not matching the given [predicate].
The operation is _intermediate_ and _stateless_.

@sample
samples.collections.Collections.Transformations.filterNot(predicate: (T) -> Boolean): Sequence<T> {
    return FilteringSequence(this, false, predicate)
}

Returns a sequence containing all elements that are not `null`.
The operation is _intermediate_ and _stateless_.

@sample
samples.collections.Collections.Transformations.filterNotNull(): Sequence<T> {
    @Suppress("UNCHECKED_CAST")
    return filterNot { it == null } as Sequence<T>
}

Appends all elements that are not `null` to the given [destination].
The operation is _terminal_.

@sample
samples.collections.Collections.Transformations.filterNotNullTo(destination: C): C {
    for (element in this) if (element != null) destination.add(element)
    return destination
}

Appends all elements not matching the given [predicate] to the given [destination].
The operation is _terminal_.

@sample
samples.collections.Collections.Transformations.filterNotTo(destination: C, predicate: (T) -> Boolean): C {
    for (element in this) if (!predicate(element)) destination.add(element)
    return destination
}

Appends all elements matching the given [predicate] to the given [destination].
The operation is _terminal_.

@sample
samples.collections.Collections.Transformations.filterTo(destination: C, predicate: (T) -> Boolean): C {
    for (element in this) if (predicate(element)) destination.add(element)
    return destination
}

Returns a sequence containing first [n] elements.
The operation is _intermediate_ and _stateless_.
@throws IllegalArgumentException if [n] is negative.

@sample
samples.collections.Collections.Transformations.take(n: Int): Sequence<T> {
    require(n >= 0) { "Requested element count $n is less than zero." }
    return when {
        n == 0 -> emptySequence()
        this is DropTakeSequence -> this.take(n)
        else -> TakeSequence(this, n)
    }
}

Returns a sequence containing first elements satisfying the given [predicate].
The operation is _intermediate_ and _stateless_.

@sample
samples.collections.Collections.Transformations.takeWhile(predicate: (T) -> Boolean): Sequence<T> {
    return TakeWhileSequence(this, predicate)
}

```

```

*public fun <T> Sequence<T>.takeWhile(predicate: (T) -> Boolean): Sequence<T> {
    return TakeWhileSequence(this, predicate)
}

* Returns a sequence that yields elements of this sequence sorted according to their natural sort order.
* The sort is _stable_. It means that equal elements preserve their order relative to each other after sorting.
* The operation is _intermediate_ and _stateful_.

*public fun <T : Comparable<T>> Sequence<T>.sorted(): Sequence<T> {
    return object : Sequence<T> {
        override fun iterator(): Iterator<T> {
            val sortedList = this@sorted.toMutableList()
            sortedList.sort()
            return sortedList.iterator()
        }
    }
}

* Returns a sequence that yields elements of this sequence sorted according to natural sort order of the value returned by specified [selector] function.
* The sort is _stable_. It means that equal elements preserve their order relative to each other after sorting.
* The operation is _intermediate_ and _stateful_.

*public inline fun <T, R : Comparable<R>> Sequence<T>.sortedBy(crossinline selector: (T) -> R?): Sequence<T> {
    return sortedWith(compareBy(selector))
}

* Returns a sequence that yields elements of this sequence sorted descending according to natural sort order of the value returned by specified [selector] function.
* The sort is _stable_. It means that equal elements preserve their order relative to each other after sorting.
* The operation is _intermediate_ and _stateful_.

*public inline fun <T, R : Comparable<R>> Sequence<T>.sortedByDescending(crossinline selector: (T) -> R?): Sequence<T> {
    return sortedWith(compareByDescending(selector))
}

* Returns a sequence that yields elements of this sequence sorted descending according to their natural sort order.
* The sort is _stable_. It means that equal elements preserve their order relative to each other after sorting.
* The operation is _intermediate_ and _stateful_.

*public fun <T : Comparable<T>> Sequence<T>.sortedDescending(): Sequence<T> {
    return sortedWith(reverseOrder())
}

* Returns a sequence that yields elements of this sequence sorted according to the specified [comparator].
* The sort is _stable_. It means that equal elements preserve their order relative to each other after sorting.
* The operation is _intermediate_ and _stateful_.

*public fun <T> Sequence<T>.sortedWith(comparator: Comparator<in T>): Sequence<T> {
    return object : Sequence<T> {
        override fun iterator(): Iterator<T> {
            val sortedList = this@sortedWith.toMutableList()
            sortedList.sortWith(comparator)
            return sortedList.iterator()
        }
    }
}

* Returns a [Map] containing key-value pairs provided by [transform] function applied to elements of the given sequence.
* If any of two pairs would have the same key the last one gets added to the map.
* The returned map preserves the entry iteration order of the original sequence.
* The operation is _terminal_.

*public inline fun <T, K, V> Sequence<T>.associate(transform: (T) -> Pair<K, V>): Map<K, V> {
    return associateTo(LinkedHashMap<K, V>(), transform)
}

* Returns a [Map] containing the elements from the given sequence indexed by the key returned from [keySelector] function applied to each element.
* If any two elements would have the same key returned by [keySelector] the last one gets added to the map.
* The returned map preserves the entry iteration order of the original sequence.
* The operation is _terminal_.

*public inline fun <T, K> Sequence<T>.associateBy(keySelector: (T) -> K): Map<K, T> {
    return associateByTo(LinkedHashMap<K, T>(), keySelector)
}

* Returns a [Map] containing the values provided by [valueTransform] and indexed by [keySelector] functions applied to elements of the given sequence.
* If any two elements would have the same key returned by [keySelector] the last one gets added to the map.
* The returned map preserves the entry iteration order of the original sequence.
* The operation is _terminal_.

*public inline fun <T, K, V> Sequence<T>.associateBy(keySelector: (T) -> K, valueTransform: (T) -> V): Map<K, V> {
    return associateByTo(LinkedHashMap<K, V>(), keySelector, valueTransform)
}

* Populates and returns the [destination] mutable map with key-value pairs, where key is provided by the [keySelector] function applied to each element of the given sequence and value is the element itself.
* If any two elements would have the same key returned by [keySelector] the last one gets added to the map.
* The operation is _terminal_.

*public inline fun <T, K, M : MutableMap<in K, in T>> Sequence<T>.associateByTo(destination: M, keySelector: (T) -> K): M {
    for (element in this) {
        destination.put(keySelector(element), element)
    }
    return destination
}

* Populates and returns the [destination] mutable map with key-value pairs, where key is provided by the [keySelector] function and

```

value is provided by the [valueTransform] function applied to elements of the given sequence.

If any two elements would have the same key returned by [keySelector] the last one gets added to the map.

The operation is `_terminal_`.

```
public inline fun <T, K, V, M : MutableMap<in K, in V>>
Sequence<T>.associateByTo(destination: M, keySelector: (T) -> K, valueTransform: (T) -> V): M {
    for (element in this) {
        destination.put(keySelector(element), valueTransform(element))
    }
    return destination
}
```

Populates and returns the [destination] mutable map with key-value pairs provided by [transform] function applied to each element of the given sequence.

If any of two pairs would have the same key the last one gets added to the map.

The operation is `_terminal_`.

```
public inline fun <T, K, V, M : MutableMap<in K, in V>>
Sequence<T>.associateTo(destination: M, transform: (T) -> Pair<K, V>): M {
    for (element in this) {
        destination += transform(element)
    }
    return destination
}
```

Returns a [Map] where keys are elements from the given sequence and values are produced by the [valueSelector] function applied to each element.

If any two elements are equal, the last one gets added to the map.

The returned map preserves the entry iteration order of the original sequence.

The operation is `_terminal_`.

@sample samples.collections.Collections.Transformations.associateWith

```
@SinceKotlin("1.3")
public inline fun <K, V>
Sequence<K>.associateWith(valueSelector: (K) -> V): Map<K, V> {
    val result =
        LinkedHashMap<K, V>()
    return associateWithTo(result, valueSelector)
}
```

Populates and returns the [destination] mutable map with key-value pairs for each element of the given sequence, where key is the element itself and value is provided by the [valueSelector] function applied to that key.

If any two elements are equal, the last one overwrites the former value in the map.

The operation is `_terminal_`.

```
@SinceKotlin("1.3")
public inline fun <K, V, M : MutableMap<in K, in V>>
Sequence<K>.associateWithTo(destination: M, valueSelector: (K) -> V): M {
    for (element in this) {
        destination.put(element, valueSelector(element))
    }
    return destination
}
```

Appends all elements to the given [destination] collection.

The operation is `_terminal_`.

```
public fun <T, C : MutableCollection<in T>>
Sequence<T>.toCollection(destination: C): C {
    for (item in this) {
        destination.add(item)
    }
    return destination
}
```

Returns a [HashSet] of all elements.

The operation is `_terminal_`.

```
public fun <T>
Sequence<T>.toHashSet(): HashSet<T> {
    return toCollection(HashSet<T>())
}
```

Returns a [List] containing all elements.

The operation is `_terminal_`.

```
public fun <T>
Sequence<T>.toList(): List<T> {
    return this.toMutableList().optimizeReadOnlyList()
}
```

Returns a [MutableList] filled with all elements of this sequence.

The operation is `_terminal_`.

```
public fun <T>
Sequence<T>.toMutableList(): MutableList<T> {
    return toCollection(ArrayList<T>())
}
```

Returns a [Set] of all elements.

The returned set preserves the element iteration order of the original sequence.

The operation is `_terminal_`.

```
public fun <T>
Sequence<T>.toSet(): Set<T> {
    return toCollection(LinkedHashSet<T>()).optimizeReadOnlySet()
}
```

Returns a single sequence of all elements from results of [transform] function being invoked on each element of original sequence.

The operation is `_intermediate_` and `_stateless_`.

```
public fun <T, R>
Sequence<T>.flatMap(transform: (T) -> Sequence<R>):
Sequence<R> {
    return FlatteningSequence(this, transform, { it.iterator() })
}
```

Appends all elements yielded from results of [transform] function being invoked on each element of original sequence, to the given [destination].

The operation is `_terminal_`.

```
public inline fun <T, R, C : MutableCollection<in R>>
Sequence<T>.flatMapTo(destination: C, transform: (T) -> Sequence<R>): C {
    for (element in this) {
        val list = transform(element)
        destination.addAll(list)
    }
    return destination
}
```

Groups elements of the original sequence by the key returned by the given [keySelector] function applied to each element and returns a map where each group key is associated with a list of corresponding elements.

The returned map preserves the entry iteration order of the keys produced from the original sequence.

The operation is `_terminal_`.

@sample samples.collections.Collections.Transformations.groupBy

```
public inline fun <T, K>
Sequence<T>.groupBy(keySelector: (T) -> K): Map<K, List<T>> {
    return groupByTo(LinkedHashMap<K, MutableList<T>>(), keySelector)
}
```

Groups values returned by the [valueTransform] function applied to each element of the original sequence by the key returned by the given [keySelector] function applied to the

element and returns a map where each group key is associated with a list of corresponding values. The returned map preserves the entry iteration order of the keys produced from the original sequence. The operation is `_terminal_`. @sample

```

samples.collections.Collections.Transformations.groupByKeyAndValues
public inline fun <T, K, V>
Sequence<T>.groupBy(keySelector: (T) -> K, valueTransform: (T) -> V): Map<K, List<V>> {
    return groupByTo(LinkedHashMap<K, MutableList<V>>(), keySelector, valueTransform)
}

```

Groups elements of the original sequence by the key returned by the given [keySelector] function applied to each element and puts to the [destination] map each group key associated with a list of corresponding elements. The operation is `_terminal_`. @sample

```

samples.collections.Collections.Transformations.groupBy
public inline fun <T, K, M : MutableMap<in K, MutableList<T>>> Sequence<T>.groupByTo(destination: M, keySelector: (T) -> K): M {
    for (element in this) {
        val key = keySelector(element)
        val list = destination.getOrPut(key) { ArrayList<T>() }
        list.add(element)
    }
    return destination
}

```

Groups values returned by the [valueTransform] function applied to each element of the original sequence by the key returned by the given [keySelector] function applied to the element and puts to the [destination] map each group key associated with a list of corresponding values. The operation is `_terminal_`. @sample

```

samples.collections.Collections.Transformations.groupByKeyAndValues
public inline fun <T, K, V, M : MutableMap<in K, MutableList<V>>> Sequence<T>.groupByTo(destination: M, keySelector: (T) -> K, valueTransform: (T) -> V): M {
    for (element in this) {
        val key = keySelector(element)
        val list = destination.getOrPut(key) { ArrayList<V>() }
        list.add(valueTransform(element))
    }
    return destination
}

```

Creates a [Grouping] source from a sequence to be used later with one of group-and-fold operations using the specified [keySelector] function to extract a key from each element. The operation is `_intermediate_` and `_stateless_`. @sample

```

samples.collections.Grouping.groupingByEachCount
@SinceKotlin("1.1")
public inline fun <T, K> Sequence<T>.groupingBy(crossinline keySelector: (T) -> K): Grouping<T, K> {
    return object : Grouping<T, K> {
        override fun sourceIterator(): Iterator<T> = this@groupingBy.iterator()
        override fun keyOf(element: T): K = keySelector(element)
    }
}

```

Returns a sequence containing the results of applying the given [transform] function to each element in the original sequence. The operation is `_intermediate_` and `_stateless_`. @sample

```

samples.collections.Collections.Transformations.map
public fun <T, R> Sequence<T>.map(transform: (T) -> R): Sequence<R> {
    return TransformingSequence(this, transform)
}

```

Returns a sequence containing the results of applying the given [transform] function to each element and its index in the original sequence. @param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element. The operation is `_intermediate_` and `_stateless_`. @sample

```

public fun <T, R> Sequence<T>.mapIndexed(transform: (index: Int, T) -> R): Sequence<R> {
    return TransformingIndexedSequence(this, transform)
}

```

Returns a sequence containing only the non-null results of applying the given [transform] function to each element and its index in the original sequence. @param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element. The operation is `_intermediate_` and `_stateless_`. @sample

```

public fun <T, R : Any> Sequence<T>.mapIndexedNotNull(transform: (index: Int, T) -> R?): Sequence<R> {
    return TransformingIndexedSequence(this, transform).filterNotNull()
}

```

Applies the given [transform] function to each element and its index in the original sequence and appends only the non-null results to the given [destination]. @param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element. The operation is `_terminal_`. @sample

```

public inline fun <T, R : Any, C : MutableCollection<in R>> Sequence<T>.mapIndexedNotNullTo(destination: C, transform: (index: Int, T) -> R?): C {
    forEachIndexed { index, element -> transform(index, element)?.let { destination.add(it) } }
    return destination
}

```

Applies the given [transform] function to each element and its index in the original sequence and appends the results to the given [destination]. @param [transform] function that takes the index of an element and the element itself and returns the result of the transform applied to the element.

The operation is `_terminal_`.

```

elements to take in each list, must be positive and can be greater than the number of elements in this sequence.

```

    * The operation is _intermediate_ and _stateful_.
    * @sample samples.text.Strings.chunkedTransform
    * Since Kotlin("1.2")
    public fun <T, R> Sequence<T>.chunked(size: Int, transform: (List<T>) -> R):
    Sequence<R> {
        return windowed(size, size, partialWindows = true, transform = transform)
    }

```

Returns a sequence containing all elements of the original sequence without the first occurrence of the given [element].

```

    * The operation is _intermediate_ and _stateless_.
    * public operator fun <T>
    Sequence<T>.minus(element: T): Sequence<T> {
        return object: Sequence<T> {
            override fun iterator():
            Iterator<T> {
                var removed = false
                return this@minus.filter { if (!removed && it == element) {
                    removed = true; false } else true }.iterator()
            }
        }
    }

```

Returns a sequence containing all elements of original sequence except the elements contained in the given [elements] array.

Note that the source sequence and the array being subtracted are iterated only when an `iterator` is requested from the resulting sequence. Changing any of them between successive calls to `iterator` may affect the result.

The [elements] array may be converted to a [HashSet] to speed up the operation, thus the elements are required to have a correct and stable implementation of `hashCode()` that doesn't change between successive invocations.

```

    * The operation is _intermediate_ and _stateful_.
    * public operator fun <T> Sequence<T>.minus(elements: Array<out
    T>): Sequence<T> {
        if (elements.isEmpty()) return this
        return object: Sequence<T> {
            override fun
            iterator(): Iterator<T> {
                val other = elements.toHashSet()
                return this@minus.filterNot { it in other
                }.iterator()
            }
        }
    }

```

Returns a sequence containing all elements of original sequence except the elements contained in the given [elements] collection.

Note that the source sequence and the collection being subtracted are iterated only when an `iterator` is requested from the resulting sequence. Changing any of them between successive calls to `iterator` may affect the result.

The [elements] collection may be converted to a [HashSet] to speed up the operation, thus the elements are required to have a correct and stable implementation of `hashCode()` that doesn't change between successive invocations.

```

    * The operation is _intermediate_ and _stateful_.
    * public operator fun <T> Sequence<T>.minus(elements: Iterable<T>):
    Sequence<T> {
        return object: Sequence<T> {
            override fun iterator(): Iterator<T> {
                val other =
                elements.convertToSetForSetOperation()
                if (other.isEmpty()) return this@minus.iterator()
                else
                return this@minus.filterNot { it in other }.iterator()
            }
        }
    }

```

Returns a sequence containing all elements of original sequence except the elements contained in the given [elements] sequence.

Note that the source sequence and the sequence being subtracted are iterated only when an `iterator` is requested from the resulting sequence. Changing any of them between successive calls to `iterator` may affect the result.

The operation is `_intermediate_` for this sequence and `_terminal_` and `_stateful_` for the [elements] sequence.

The [elements] sequence may be converted to a [HashSet] to speed up the operation, thus the elements are required to have a correct and stable implementation of `hashCode()` that doesn't change between successive invocations.

```

    * public operator fun <T> Sequence<T>.minus(elements: Sequence<T>): Sequence<T> {

<https://github.com/JetBrains/kotlin/tree/master/libraries/stdlib>

`CharSequence.elementAt(index: Int): Char`

Returns a character at the given [index] or throws an [IndexOutOfBoundsException] if the [index] is out of bounds of this char sequence.

`CharSequence.elementAtOrElse(index: Int, defaultValue: (Int) -> Char): Char`

Returns a character at the given [index] or the result of calling the [defaultValue] function if the [index] is out of bounds of this char sequence.

`CharSequence.elementAtOrNull(index: Int): Char?`

Returns the first character matching the given [predicate], or null if no such character was found.

`CharSequence.find(predicate: (Char) -> Boolean): Char?`

Returns the last character matching the given [predicate], or null if no such character was found.

`CharSequence.findLast(predicate: (Char) -> Boolean): Char?`

Returns first character.

`CharSequence.first(): Char`

```

the given [size] and applies the given [transform] function to an each. Note that the char sequence passed to the [transform] function is ephemeral and is valid only inside that function. You should not store it or allow it to escape in some way, unless you made a snapshot of it. The last char sequence may have less characters than the given [size].

`@param size` the number of elements to take in each char sequence, must be positive and can be greater than the number of elements in this char sequence.

`@sample` samples.text.Strings.chunkedTransform

```

*Since Kotlin("1.2")
public fun <R> CharSequence.chunked(size: Int, transform: (CharSequence) -> R):
List<R> {
    return windowed(size, size, partialWindows = true, transform = transform)
}

```

Splits this char sequence into a sequence of strings each not exceeding the given [size]. The last string in the resulting sequence may have less characters than the given [size].

`@param size` the number of elements to take in each string, must be positive and can be greater than the number of elements in this char sequence.

`@sample` samples.collections.Collections.Transformations.chunked

```

*Since Kotlin("1.2")
public fun
CharSequence.chunkedSequence(size: Int): Sequence<String> {
    return chunkedSequence(size) { it.toString() }
}

```

Splits this char sequence into several char sequences each not exceeding the given [size] and applies the given [transform] function to an each. Note that the char sequence passed to the [transform] function is ephemeral and is valid only inside that function. You should not store it or allow it to escape in some way, unless you made a snapshot of it. The last char sequence may have less characters than the given [size].

`@param size` the number of elements to take in each char sequence, must be positive and can be greater than the number of elements in this char sequence.

`@sample` samples.text.Strings.chunkedTransformToSequence

```

*Since Kotlin("1.2")
public fun <R> CharSequence.chunkedSequence(size: Int, transform: (CharSequence) -
> R): Sequence<R> {
    return windowedSequence(size, size, partialWindows = true, transform =
transform)
}

```

Splits the original char sequence into pair of char sequences, where `*first*` char sequence contains characters for which [predicate] yielded `true`, while `*second*` char sequence contains characters for which [predicate] yielded `false`.

```

public inline fun CharSequence.partition(predicate: (Char) ->
Boolean): Pair<CharSequence, CharSequence> {
    val first = StringBuilder()
    val second = StringBuilder()
    for (element in this) {
        if (predicate(element)) {
            first.append(element)
        } else {
            second.append(element)
        }
    }
    return Pair(first, second)
}

```

Splits the original string into pair of strings, where `*first*` string contains characters for which [predicate] yielded `true`, while `*second*` string contains characters for which [predicate] yielded `false`.

```

public inline fun String.partition(predicate: (Char) ->
Boolean): Pair<String, String> {
    val first = StringBuilder()
    val second = StringBuilder()
    for (element in this) {
        if (predicate(element)) {
            first.append(element)
        } else {
            second.append(element)
        }
    }
    return Pair(first.toString(), second.toString())
}

```

Returns a list of snapshots of the window of the given [size] sliding along this char sequence with the given [step], where each snapshot is a string. Several last strings may have less characters than the given [size]. Both [size] and [step] must be positive and can be greater than the number of elements in this char sequence.

`@param size` the number of elements to take in each window

`@param step` the number of elements to move the window forward by on an each step, by default 1

`@param partialWindows` controls whether or not to keep partial windows in the end if any, by default `false` which means partial windows won't be preserved

`@sample` samples.collections.Sequences.Transformations.takeWindows

```

*Since Kotlin("1.2")
public fun
CharSequence.windowed(size: Int, step: Int = 1, partialWindows: Boolean = false): List<String> {
    return windowed(size, step, partialWindows) { it.toString() }
}

```

Returns a list of results of applying the given [transform] function to an each char sequence representing a view over the window of the given [size] sliding along this char sequence with the given [step]. Note that the char sequence passed to the [transform] function is ephemeral and is valid only inside that function. You should not store it or allow it to escape in some way, unless you made a snapshot of it. Several last char sequences may have less characters than the given [size]. Both [size] and [step] must be positive and can be greater than the number of elements in this char sequence.

`@param size` the number of elements to take in each window

`@param step` the number of

elements to move the window forward by on an each step, by default 1

- `@param partialWindows` controls whether or not to keep partial windows in the end if any.
- by default `false` which means partial windows won't be preserved
- `@sample samples.collections.Sequences.Transformations.averageWindows`

```

*\n@SinceKotlin("1.2")\npublic fun <R> CharSequence.windowed(size: Int, step: Int = 1, partialWindows: Boolean = false, transform: (CharSequence) -> R): List<R> {
    checkWindowSizeStep(size, step)
    val thisSize = this.length
    val resultCapacity = thisSize / step + if (thisSize % step == 0) 0 else 1
    val result = ArrayList<R>(resultCapacity)
    var index = 0
    while (index in 0 until thisSize) {
        val end = index + size
        val coercedEnd = if (end < 0 || end > thisSize) { if (partialWindows) thisSize else break } else end
        result.add(transform(subSequence(index, coercedEnd)))
        index += step
    }
    return result
}

```

Returns a sequence of snapshots of the window of the given [size] sliding along this char sequence with the given [step], where each snapshot is a string.

- Several last strings may have less characters than the given [size].
- Both [size] and [step] must be positive and can be greater than the number of elements in this char sequence.
- `@param size` the number of elements to take in each window
- `@param step` the number of elements to move the window forward by on an each step, by default 1
- `@param partialWindows` controls whether or not to keep partial windows in the end if any.
- by default `false` which means partial windows won't be preserved
- `@sample samples.collections.Sequences.Transformations.takeWindows`

```

*\n@SinceKotlin("1.2")\npublic fun CharSequence.windowedSequence(size: Int, step: Int = 1, partialWindows: Boolean = false): Sequence<String> {
    return windowedSequence(size, step, partialWindows) { it.toString() }
}

```

Returns a sequence of results of applying the given [transform] function to an each char sequence representing a view over the window of the given [size] sliding along this char sequence with the given [step].

- Note that the char sequence passed to the [transform] function is ephemeral and is valid only inside that function.
- You should not store it or allow it to escape in some way, unless you made a snapshot of it.
- Several last char sequences may have less characters than the given [size].
- Both [size] and [step] must be positive and can be greater than the number of elements in this char sequence.
- `@param size` the number of elements to take in each window
- `@param step` the number of elements to move the window forward by on an each step, by default 1
- `@param partialWindows` controls whether or not to keep partial windows in the end if any.
- by default `false` which means partial windows won't be preserved
- `@sample samples.collections.Sequences.Transformations.averageWindows`

```

*\n@SinceKotlin("1.2")\npublic fun <R> CharSequence.windowedSequence(size: Int, step: Int = 1, partialWindows: Boolean = false, transform: (CharSequence) -> R): Sequence<R> {
    checkWindowSizeStep(size, step)
    val windows = (if (partialWindows) indices else 0 until length - size + 1) step step
    return windows.asSequence().map { index ->
        val end = index + size
        val coercedEnd = if (end < 0 || end > length) length else end
        transform(subSequence(index, coercedEnd))
    }
}

```

Returns a list of pairs built from the characters of `this` and the [other] char sequences with the same index

- The returned list has length of the shortest char sequence.
- `@sample samples.text.Strings.zip`

```

*\npublic infix fun CharSequence.zip(other: CharSequence): List<Pair<Char, Char>> {
    return zip(other) { c1, c2 -> c1 to c2 }
}

```

Returns a list of values built from the characters of `this` and the [other] char sequences with the same index using the provided [transform] function applied to each pair of characters.

- The returned list has length of the shortest char sequence.
- `@sample samples.text.Strings.zipWithTransform`

```

*\npublic inline fun <V> CharSequence.zip(other: CharSequence, transform: (a: Char, b: Char) -> V): List<V> {
    val length = minOf(this.length, other.length)
    val list = ArrayList<V>(length)
    for (i in 0 until length) {
        list.add(transform(this[i], other[i]))
    }
    return list
}

```

Returns a list of pairs of each two adjacent characters in this char sequence.

- The returned list is empty if this char sequence contains less than two characters.
- `@sample samples.collections.Collections.Transformations.zipWithNext`

```

*\n@SinceKotlin("1.2")\npublic fun CharSequence.zipWithNext(): List<Pair<Char, Char>> {
    return zipWithNext { a, b -> a to b }
}

```

Returns a list containing the results of applying the given [transform] function to an each pair of two adjacent characters in this char sequence.

- The returned list is empty if this char sequence contains less than two characters.
- `@sample samples.collections.Collections.Transformations.zipWithNextToFindDeltas`

```

parameter list of its containing callable.\n     *\n     * public val index: Int\n     *\n     * Name of this parameter as it\n
was declared in the source code,\n     * or `null` if the parameter has no name or its name is not available at\n
runtime.\n     * Examples of nameless parameters include `this` instance for member functions,\n     * extension  

receiver for extension functions or properties, parameters of Java methods\n     * compiled without the debug  

information, and others.\n     *\n     * public val name: String?\n     *\n     * Type of this parameter. For a `vararg`\n
parameter, this is the type of the corresponding array,\n     * not the individual element.\n     *\n     * public val type:\n
KType\n     *\n     * Kind of this parameter.\n     *\n     * public val kind: Kind\n     *\n     * Kind represents a  

particular position of the parameter declaration in the source code,\n     * such as an instance, an extension receiver  

parameter or a value parameter.\n     *\n     * public enum class Kind {\n     *\n     * Instance required to make a call to  

the member, or an outer class instance for an inner class constructor. *\n     INSTANCE,\n     *\n     * Extension  

receiver of an extension function or property. *\n     EXTENSION_RECEIVER,\n     *\n     * Ordinary named  

value parameter. *\n     VALUE,\n     *\n     * `true` if this parameter is optional and can be omitted when
```

making a call via [KCallable.callBy], or `false` otherwise.

* A parameter is optional in any of the two cases:

1. The default value is provided at the declaration of this parameter.
2. The parameter is declared in a member function and one of the corresponding parameters in the super functions is optional.

`public val isOptional: Boolean`

***`true` if this parameter is `vararg`.

* See the [Kotlin language documentation](https://kotlinlang.org/docs/reference/functions.html#variable-number-of-arguments) for more information.

`@SinceKotlin("1.1") public val isVararg: Boolean`

* Copyright 2010-2019 JetBrains s.r.o. and Kotlin Programming Language contributors.

* Use of this source code is governed by the Apache 2.0 license that can be found in the license/LICENSE.txt file.

`package kotlin.reflect`

* Represents a type. Type is usually either a class with optional type arguments, or a type parameter of some declaration, plus nullability.

`public interface KType : KAnnotatedElement`

***The declaration of the classifier used in this type.

* For example, in the type `List<String>` the classifier would be the [KClass] instance for [List].

* Returns `null` if this type is not denotable in Kotlin, for example if it is an intersection type.

`@SinceKotlin("1.1") public val classifier: KClassifier?`

***Type arguments passed for the parameters of the classifier in this type.

* For example, in the type `Array<out Number>` the only type argument is `out Number`.

* In case this type is based on an inner class, the returned list contains the type arguments provided for the innermost class first, then its outer class, and so on.

* For example, in the type `Outer<A, B>.Inner<C, D>` the returned list is `[C, D, A, B]`.

`@SinceKotlin("1.1") public val arguments: List<KTypeProjection>`

***`true` if this type was marked nullable in the source code.

* For Kotlin types, it means that `null` value is allowed to be represented by this type.

* In practice it means that the type was declared with a question mark at the end.

* For non-Kotlin types, it means the type or the symbol which was declared with this type is annotated with a runtime-retained nullability annotation such as [javax.annotation.Nullable].

* Note that even if [isMarkedNullable] is false, values of the type can still be `null`.

* This may happen if it is a type of the type parameter with a nullable upper bound:

```
fun <T> foo(t: T) {
    // isMarkedNullable == false for t's type, but t can be null here when T = "Any?"
}
```

`public val isMarkedNullable: Boolean`

***Represents a type projection. Type projection is usually the argument to another type in a type usage.

* For example, in the type `Array<out Number>`, `out Number` is the covariant projection of the type represented by the class `Number`.

* Type projection is either the star projection, or an entity consisting of a specific type plus optional variance.

* See the [Kotlin language documentation](https://kotlinlang.org/docs/reference/generics.html#type-projections) for more information.

`@SinceKotlin("1.1") public data class KTypeProjection constructor(
 * The use-site variance specified in the projection, or `null` if this is a star projection.
 public val variance: KVariance?,
 * The type specified in the projection, or `null` if this is a star projection.
 public val type: KType?) {
 public companion object {
 * Star projection, denoted by the `*` character.
 For example, in the type `KClass<*>`, `*` is the star projection.
 * See the [Kotlin language documentation](https://kotlinlang.org/docs/reference/generics.html#star-projections) for more information.
 public val STAR: KTypeProjection = KTypeProjection(null, null)
 * Creates an invariant projection of a given type. Invariant projection is just the type itself, without any use-site variance modifiers applied to it.
 For example, in the type `Set<String>`, `String` is an invariant projection of the type represented by the class `String`.
 public fun invariant(type: KType): KTypeProjection =
 KTypeProjection(KVariance.INVARIANT, type)
 * Creates a contravariant projection of a given type, denoted by the `in` modifier applied to a type.
 For example, in the type `MutableList<in Number>`, `in Number` is a contravariant projection of the type of class `Number`.
 public fun contravariant(type: KType): KTypeProjection =
 KTypeProjection(KVariance.IN, type)
 * Creates a covariant projection of a given type, denoted by the `out` modifier applied to a type.
 For example, in the type `Array<out Number>`, `out Number` is a covariant projection of the type of class `Number`.
 public fun covariant(type: KType): KTypeProjection =
 KTypeProjection(KVariance.OUT, type)
 }
}`

Visibility is an aspect of a Kotlin declaration regulating where that declaration is accessible in the source code. Visibility can be changed with one of the following modifiers: `public`, `protected`, `internal`, `private`. Note that some Java visibilities such as package-private and protected (which also gives access to items from the same package) cannot be represented in Kotlin, so there's no [KVisibility] value corresponding to them. See the [Kotlin language documentation](<https://kotlinlang.org/docs/reference/visibility-modifiers.html>) for more information.

/**
* Gives a declaration (a function, a property or
a class) specific name in JavaScript.
* This may be useful in the following cases:
* * There are two
functions for which the compiler gives same name in JavaScript, you can
* mark one with `@JsName(...)` to
prevent the compiler from reporting error.
* * You are writing a JavaScript library in Kotlin. The compiler
produces mangled names
* for functions with parameters, which is unnatural for usual JavaScript developer.
* You can put `@JsName(...)` on functions you want to be available from JavaScript.
* * For some reason you
want to rename declaration, e.g. there's common term in JavaScript
* for a concept provided by the declaration,
which is uncommon in Kotlin.
* Example:
* ``` kotlin
* class Person(val name: String) {
* fun
hello() {
* println("Hello $name!")
* }
* @JsName("helloWithGreeting")
* fun
hello(greeting: String) {
* println("$greeting $name!")
* }
* }
* ```
* @property name the
name which compiler uses both for declaration itself and for all references to the declaration.
* It's required
to denote a valid JavaScript identifier.
*/
@Retention(AnnotationRetention.BINARY)
@Target(CLASS,
FUNCTION, PROPERTY, CONSTRUCTOR, PROPERTY_GETTER, PROPERTY_SETTER)
public actual
annotation class JsName(actual val name: String)
/**
* Denotes an `external` declaration that must be imported
from native JavaScript library.
* The compiler produces the code relevant for the target module system, for
example, in case of CommonJS,
* it will import the declaration via the `require(...)` function.
* The
annotation can be used on top-level external declarations (classes, properties, functions) and files.
* In case of file
(which can't be `external`) the following rule applies: all the declarations in
* the file must be `external`.
By
applying `@JsModule(...)` on a file you tell the compiler to import a JavaScript object
* that contain all the
declarations from the file.
* Example:
* ``` kotlin
* @JsModule("jquery")
* external abstract class
JQuery() {
* // some declarations here
* }
* @JsModule("jquery")
* external fun JQuery(element:
Element): JQuery
* ```
* @property import name of a module to import declaration from.
* It is not
interpreted by the Kotlin compiler, it's passed as is directly to the target module system.
* @see
JsNonModule
*/
@Retention(AnnotationRetention.BINARY)
@Target(CLASS, PROPERTY, FUNCTION,
FILE)
public annotation class JsModule(val import: String)
/**
* Denotes an `external` declaration that can be
used without module system.
* By default, an `external` declaration is available regardless your target module
system.
* However, by applying [JsModule] annotation you can make a declaration unavailable to *plain* module
system.
* Some JavaScript libraries are distributed both as a standalone downloadable piece of JavaScript and as a
module available
* as an npm package.
* To tell the Kotlin compiler to accept both cases, you can augment
[JsModule] with the `@JsNonModule` annotation.
* For example:
* ``` kotlin
*
* @JsModule("jquery")
* @JsNonModule
* @JsName("$")
* external abstract class JQuery() {
* //
some declarations here
* }
* @JsModule("jquery")
* @JsNonModule
* @JsName("$")
* external

```

```

fun JQuery(element: Element): JQuery {
    * @see JsModule
    * @Retention(AnnotationRetention.BINARY) @Target(CLASS, PROPERTY, FUNCTION, FILE)
    public annotation class JsNonModule {
        * Adds prefix to `external` declarations in a source file.
        * JavaScript does not have concept of packages (namespaces). They are usually emulated by nested objects.
        * The compiler turns references to `external` declarations either to plain unprefixed names (in case of *plain* modules)
        * or to plain imports.
        * However, if a JavaScript library provides its declarations in packages, you won't be satisfied with this.
        * You can tell the compiler to generate additional prefix before references to `external` declarations using the
        * `@JsQualifier(...)` annotation.
        * Note that a file marked with the `@JsQualifier(...)` annotation can't contain non-`external` declarations.
        * Example:
        * @file:JsQualifier("my.jsPackageName")
        * package some.kotlinPackage
        * external fun foo(x: Int)
        * external fun bar(): String
        * @property value the qualifier to add to the declarations in the generated code.
        * It must be a sequence of valid JavaScript identifiers separated by the `.` character.
        * Examples of valid qualifiers are: `foo`, `bar.Baz`, `_.$.f`.
        * @see JsModule
    }
}

* @Retention(AnnotationRetention.BINARY) @Target(AnnotationTarget.FILE)
public annotation class JsQualifier(val value: String) {
    * Marks experimental JS export annotations.
    * Note that behaviour of these annotations will likely be changed in the future.
    * Usages of such annotations will be reported as warnings unless an explicit opt-in with
    * the [UseExperimental] annotation, e.g.
    * @UseExperimental(ExperimentalJsExport::class)
    * or with the `Xuse-experimental=kotlin.js.ExperimentalJsExport` compiler option is given.

```

given value [x].
Special cases: `abs(NaN)` is `NaN`
@see `absoluteValue` extension property for `[Double]`
@SinceKotlin("1.2")
@InlineOnly
@public actual inline fun `abs(x: Double): Double` = `nativeMath.abs(x)`
Returns the sign of the given value [x]: `-1.0` if the value is negative, `0.0` if the value is zero, `1.0` if the value is positive
Special case: `sign(NaN)` is `NaN`
@SinceKotlin("1.2")
@InlineOnly
@public actual inline fun `sign(x: Double): Double` = `nativeMath.sign(x)`
Returns the smaller of two values.
If either value is `NaN`, then the result is `NaN`.
@SinceKotlin("1.2")
@InlineOnly
@public actual inline fun `min(a: Double, b: Double): Double` = `nativeMath.min(a, b)`
Returns the greater of two values.
If either value is `NaN`, then the result is `NaN`.
@SinceKotlin("1.2")
@InlineOnly
@public actual inline fun `max(a: Double, b: Double): Double` = `nativeMath.max(a, b)`
// extensions
Raises this value to the power [x].
Special cases: `b.pow(0.0)` is `1.0`, `b.pow(1.0)` == `b`, `b.pow(NaN)` is `NaN`, `NaN.pow(x)` is `NaN` for `x != 0.0`, `b.pow(Inf)` is `NaN` for `abs(b) == 1.0`, `b.pow(x)` is `NaN` for `b < 0` and `x` is finite and not an integer.
@SinceKotlin("1.2")
@InlineOnly
@public actual inline fun `Double.pow(x: Double): Double` = `nativeMath.pow(this, x)`
Raises this value to the integer power [n].
See the other overload of [pow] for details.
@SinceKotlin("1.2")
@InlineOnly
@public actual inline fun `Double.pow(n: Int): Double` = `nativeMath.pow(this, n.toDouble())`
Returns the absolute value of this value.
Special cases: `NaN.absoluteValue` is `NaN`
@see `abs` function
@SinceKotlin("1.2")
@InlineOnly
@public actual inline val `Double.absoluteValue: Double` get() = `nativeMath.abs(this)`
Returns the sign of this value: `-1.0` if the value is negative, `0.0` if the value is zero, `1.0` if the value is positive
Special case: `NaN.sign` is `NaN`
@SinceKotlin("1.2")
@InlineOnly
@public actual inline val `Double.sign: Double` get() = `nativeMath.sign(this)`
Returns this value with the sign bit same as of the [sign] value.
@SinceKotlin("1.2")
@InlineOnly
@public actual inline fun `Double.withSign(sign: Int): Double` = `this.withSign(sign.toDouble())`
Returns the ulp (unit in the last place) of this value.
An ulp is a positive distance between this value and the next nearest [Double] value larger in magnitude.
Special Cases: `NaN.ulp` is `NaN`, `x.ulp` is `+Inf` when `x` is `+Inf` or `-Inf`, `0.0.ulp` is `Double.MIN_VALUE`
@SinceKotlin("1.2")
@public actual val `Double.ulp: Double` get() = when {
this < 0 -> (-this).ulp
this.isNaN() || this == Double.POSITIVE_INFINITY -> this
this == Double.MAX_VALUE -> this - this.nextDown()
else -> this.nextUp() - this
}
Returns the [Double] value nearest to this value in direction of positive infinity.
@SinceKotlin("1.2")
@public actual fun `Double.nextUp(): Double` = when {
this.isNaN() || this == Double.POSITIVE_INFINITY -> this
this == 0.0 -> Double.MIN_VALUE
else -> Double.fromBits(this.toRawBits() + if (this > 0) 1 else -1)
}
Returns the [Double] value nearest to this value in direction of negative infinity.
@SinceKotlin("1.2")
@public actual fun `Double.nextDown(): Double` = when {
this.isNaN() || this == Double.NEGATIVE_INFINITY -> this
this == 0.0 -> -Double.MIN_VALUE
else -> Double.fromBits(this.toRawBits() + if (this > 0) -1 else 1)
}
Returns the [Double] value nearest to this value in direction from this value towards the value [to].
Special cases: `x.nextTowards(y)` is `NaN` if either `x` or `y` are `NaN`, `x.nextTowards(x)` == `x`
@SinceKotlin("1.2")
@public actual fun `Double.nextTowards(to: Double): Double` = when {
this.isNaN() || to.isNaN() -> Double.NaN
to == this -> to
to > this -> this.nextUp()
else /* to < this */ -> this.nextDown()
}
Returns this [Double] value to the nearest integer and converts the result to [Int].
Ties are rounded towards positive infinity.
Special cases: `x.roundToInt()` == `Int.MAX_VALUE` when `x > Int.MAX_VALUE`, `x.roundToInt()` == `Int.MIN_VALUE` when `x < Int.MIN_VALUE`
@throws `IllegalArgumentException` when this value is `NaN`
@SinceKotlin("1.2")
@public actual fun `Double.roundToInt(): Int` = when {
this.isNaN() -> throw `IllegalArgumentException("Cannot round NaN value.")`
this > Int.MAX_VALUE -> Int.MAX_VALUE
this < Int.MIN_VALUE -> Int.MIN_VALUE
else -> `nativeMath.round(this).unsafeCast<Double>().toInt()`
Returns this [Double] value to the nearest integer and converts the result to [Long].
Ties are rounded towards positive infinity.
Special cases: `x.roundToLong()` == `Long.MAX_VALUE` when `x > Long.MAX_VALUE`, `x.roundToLong()` ==

`Long.MIN_VALUE` when `x < Long.MIN_VALUE`
 is `NaN` * `@throws IllegalArgumentException` when this value is `NaN`

Computes the logarithm of the value `[x]` to the given `[base]`.
 Special cases:

- `log(x, b)` is `NaN` if either `x` or `b` are `NaN`
- `log(x, b)` is `NaN` when `x < 0` or `b <= 0` or `b == 1.0`
- `log(+Inf, +Inf)` is `NaN`
- `log(+Inf, b)` is `+Inf` for `b > 1` and `-Inf` for `b < 1`
- `log(0.0, b)` is `-Inf` for `b > 1` and `+Inf` for `b > 1`

 See also logarithm functions for common fixed bases: [ln], [log10] and [log2].

```

@SinceKotlin("1.2")@InlineOnly@public actual inline fun log(x: Float, base: Float): Float =
    log(x.toDouble(), base.toDouble()).toFloat()
    
```

Computes the natural logarithm (base `E`) of the value `[x]`.
 Special cases:

- `ln(NaN)` is `NaN`
- `ln(x)` is `NaN` when `x < 0.0`
- `ln(+Inf)` is `+Inf`
- `ln(0.0)` is `-Inf`

```

@SinceKotlin("1.2")@InlineOnly@public actual inline fun ln(x: Float): Float =
    nativeMath.log(x.toDouble()).toFloat()
    
```

Computes the common logarithm (base 10) of the value `[x]`.
 @see [ln] function for special cases.

```

@SinceKotlin("1.2")@InlineOnly@public actual inline fun log10(x: Float): Float =
    nativeMath.log10(x.toDouble()).toFloat()
    
```

Computes the binary logarithm (base 2) of the value `[x]`.
 @see [ln] function for special cases.

```

@SinceKotlin("1.2")@InlineOnly@public actual inline fun log2(x: Float): Float =
    nativeMath.log2(x.toDouble()).toFloat()
    
```

Computes `ln(a + 1)`.
 This function can be implemented to produce more precise result for `[x]` near zero.
 Special cases:

- `ln1p(NaN)` is `NaN`
- `ln1p(x)` is `NaN` where `x < -1.0`
- `ln1p(-1.0)` is `-Inf`
- `ln1p(+Inf)` is `+Inf`

 @see [ln] function
 @see [expm1] function

```

@SinceKotlin("1.2")@InlineOnly@public actual inline fun ln1p(x: Float): Float =
    nativeMath.log1p(x.toDouble()).toFloat()
    
```

Rounds the given value `[x]` to an integer towards positive infinity.
 @return the smallest Float value that is greater than or equal to the given value `[x]` and is a mathematical integer.
 Special cases:

- `ceil(x)` is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.

```

@SinceKotlin("1.2")@InlineOnly@public actual inline fun ceil(x: Float): Float =
    nativeMath.ceil(x.toDouble()).toFloat()
    
```

Rounds the given value `[x]` to an integer towards negative infinity.
 @return the largest Float value that is smaller than or equal to the given value `[x]` and is a mathematical integer.
 Special cases:

- `floor(x)` is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.

```

@SinceKotlin("1.2")@InlineOnly@public actual inline fun floor(x: Float): Float =
    nativeMath.floor(x.toDouble()).toFloat()
    
```

Rounds the given value `[x]` to an integer towards zero.
 @return the value `[x]` having its fractional part truncated.
 Special cases:

- `truncate(x)` is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.

```

@SinceKotlin("1.2")@InlineOnly@public actual inline fun truncate(x: Float): Float =
    truncate(x.toDouble()).toFloat()
    
```

Rounds the given value `[x]` towards the closest integer with ties rounded towards even integer.
 Special cases:

- `round(x)` is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.

```

@SinceKotlin("1.2")@InlineOnly@public actual inline fun round(x: Float): Float =
    round(x.toDouble()).toFloat()
    
```

Returns the absolute value of the given value `[x]`.
 Special cases:

* - `abs(NaN)` is `NaN`
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun abs(x: Float): Float = nativeMath.abs(x.toDouble()).toFloat()`
 * Returns the sign of the given value [x]:
 * - -1.0 if the value is negative,
 * - zero if the value is zero,
 * - 1.0 if the value is positive
 * Special case:
 * - `sign(NaN)` is `NaN`
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun sign(x: Float): Float = nativeMath.sign(x.toDouble()).toFloat()`
 * Returns the smaller of two values.
 * If either value is `NaN`, then the result is `NaN`.
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun min(a: Float, b: Float): Float = nativeMath.min(a, b).toFloat()`
 * Returns the greater of two values.
 * If either value is `NaN`, then the result is `NaN`.
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun max(a: Float, b: Float): Float = nativeMath.max(a, b).toFloat()`
 * // extensions
 * Raises this value to the power [x].
 * Special cases:
 * - `b.pow(0.0)` is `1.0`
 * - `b.pow(1.0) == b`
 * - `b.pow(NaN)` is `NaN`
 * - `NaN.pow(x)` is `NaN` for `x != 0.0`
 * - `b.pow(Inf)` is `NaN` for `abs(b) == 1.0`
 * - `b.pow(x)` is `NaN` for `b < 0` and `x` is finite and not an integer
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun Float.pow(x: Float): Float = nativeMath.pow(this.toDouble(), x.toDouble()).toFloat()`
 * Raises this value to the integer power [n].
 * See the other overload of [pow] for details.
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun Float.pow(n: Int): Float = nativeMath.pow(this.toDouble(), n.toDouble()).toFloat()`
 * Returns the absolute value of this value.
 * Special cases:
 * - `NaN.absoluteValue` is `NaN`
 * @see abs function
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline val Float.absoluteValue: Float get() = nativeMath.abs(this.toDouble()).toFloat()`
 * Returns the sign of this value:
 * - -1.0 if the value is negative,
 * - zero if the value is zero,
 * - 1.0 if the value is positive
 * Special case:
 * - `NaN.sign` is `NaN`
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline val Float.sign: Float get() = nativeMath.sign(this.toDouble()).toFloat()`
 * Returns this value with the sign bit same as of the [sign] value.
 * If [sign] is `NaN` the sign of the result is undefined.
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun Float.withSign(sign: Float): Float = this.toDouble().withSign(sign.toDouble()).toFloat()`
 * Returns this value with the sign bit same as of the [sign] value.
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun Float.withSign(sign: Int): Float = this.toDouble().withSign(sign.toDouble()).toFloat()`
 * Rounds this [Float] value to the nearest integer and converts the result to [Int].
 * Ties are rounded towards positive infinity.
 * Special cases:
 * - `x.roundToInt() == Int.MAX_VALUE` when `x > Int.MAX_VALUE`
 * - `x.roundToInt() == Int.MIN_VALUE` when `x < Int.MIN_VALUE`
 * @throws IllegalArgumentException when this value is `NaN`
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun Float.roundToInt(): Int = toDouble().roundToInt()`
 * Rounds this [Float] value to the nearest integer and converts the result to [Long].
 * Ties are rounded towards positive infinity.
 * Special cases:
 * - `x.roundToLong() == Long.MAX_VALUE` when `x > Long.MAX_VALUE`
 * - `x.roundToLong() == Long.MIN_VALUE` when `x < Long.MIN_VALUE`
 * @throws IllegalArgumentException when this value is `NaN`
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun Float.roundToLong(): Long = toDouble().roundToLong()`
 * // endregion
 * // region
 * ===== Integer Math
 * =====
 * Returns the absolute value of the given value [n].
 * Special cases:
 * - `abs(Int.MIN_VALUE)` is `Int.MIN_VALUE` due to an overflow
 * @see absoluteValue extension property for [Int]
 * // TODO: remove manual 'or' when KT-19290 is fixed
 * `@SinceKotlin("1.2")`
 * `public actual fun abs(n: Int): Int = if (n < 0) (-n or 0) else n`
 * Returns the smaller of two values.
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun min(a: Int, b: Int): Int = nativeMath.min(a, b)`
 * Returns the greater of two values.
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline fun max(a: Int, b: Int): Int = nativeMath.max(a, b)`
 * Returns the absolute value of this value.
 * Special cases:
 * - `Int.MIN_VALUE.absoluteValue` is `Int.MIN_VALUE` due to an overflow
 * @see abs function
 * `@SinceKotlin("1.2")`
 * `@InlineOnly`
 * `public actual inline val Int.absoluteValue: Int get() = abs(this)`
 * Returns the sign of this value:
 * - -1 if the value is negative,
 * - 0 if the value is zero,
 * - 1 if the value

```
