table/blob/main/src/vendor_upstream/dom/normalizeWheel.js\n\nexport type NormalizedWheelDelta = {\n  deltaX:
number,\n  deltaY: number,\n};\n\n// Reasonable defaults\nconst LINE_HEIGHT = 40;\nconst PAGE_HEIGHT =
800;\n\n/**\n * Mouse wheel (and 2-finger trackpad) support on the web sucks. It is\n * complicated, thus this doc
is long and (hopefully) detailed enough to answer\n * your questions.\n *\n * If you need to react to the mouse
wheel in a predictable way, this code is\n * like your bestest friend. * hugs *\n *\n * In your event callback, use this
code to get sane interpretation of the\n * deltas. This code will return an object with properties:\n *\n * - deltaX --
normalized distance (to pixels) - x plane\n * - deltaY -- " - y plane\n *\n * Wheel values are provided by the
browser assuming you are using the wheel to\n * scroll a web page by a number of lines or pixels (or pages). Values
can vary\n * significantly on different platforms and browsers, forgetting that you can\n * scroll at different speeds.
Some devices (like trackpads) emit more events\n * at smaller increments with fine granularity, and some emit
massive jumps with\n * linear speed or acceleration.\n *\n * This code does its best to normalize the deltas for
you:\n *\n * - delta* is normalizing the desired scroll delta in pixel units.\n *\n * - positive value indicates
scrolling DOWN/RIGHT, negative UP/LEFT. This\n * should translate to positive value zooming IN, negative
zooming OUT.\n *\n * This matches the 'wheel' event.\n *\n * Implementation info:\n *\n * The basics of the
standard 'wheel' event is that it includes a unit,\n * deltaMode (pixels, lines, pages), and deltaX, deltaY and deltaZ.\n
* See: http://www.w3.org/TR/DOM-Level-3-Events/#events-wheelevents\n *\n * Examples of 'wheel' event if you
scroll slowly (down) by one step with an\n * average mouse:\n *\n * OS X + Chrome (mouse) - 4 pixel delta
(wheelDelta -120)\n * OS X + Safari (mouse) - N/A pixel delta (wheelDelta -12)\n * OS X + Firefox
(mouse) - 0.1 line delta (wheelDelta N/A)\n * Win8 + Chrome (mouse) - 100 pixel delta (wheelDelta -
120)\n * Win8 + Firefox (mouse) - 3 line delta (wheelDelta -120)\n *\n * On the trackpad:\n *\n * OS X +
Chrome (trackpad) - 2 pixel delta (wheelDelta -6)\n * OS X + Firefox (trackpad) - 1 pixel delta
(wheelDelta N/A)\n */\n\nexport function normalizeWheel(event: WheelEvent): NormalizedWheelDelta {\n  let
