// This function traverses the sourceAST and returns a mapping
// that maps locations in the source code to their corresponding
// Hook name, if there is a relevant Hook name for that
// location.
// A location in the source code is represented by line and column
// numbers as a Position object: {
//   line, column
// }
// - line is 1-indexed.
// - column is 0-indexed.
// A Hook name will be assigned to a
// Hook CallExpression if the CallExpression is for a variable declaration
// (i.e. it returns a value that is assigned to a variable),
// and if we can reliably infer the correct name to use
// (see comments in the function body for more details).
// The returned mapping is an array of locations and their assigned
// names, sorted by location.
// Specifically, each entry in the array contains a `name` and a `start`
// Position. The `name` of a given entry is the "assigned" name in the
// source code until the `start` of the next entry. This means that
// given the mapping, in order to determine the Hook name assigned for
// a given source location, we need to find the adjacent entries that
// most closely contain the given location.
// E.g. for the following code:
//
// |
// | function Component() {
// |   const [state, setState] = useState();
// |   // ^-----^ -> Col 28
// |   useEffect(() => { ... });
// |   // -> call ignored since not declaring a variable
// |   return (...);
// | }
//
// The returned "mapping" would be something like:
// [
//   { name: '<no-hook>', start: { line: 1, column: 0 } },
//   { name: 'state', start: { line: 2, column: 28 } },
//   { name: '<no-hook>', start: { line: 2, column: 38 } },
// ]
//
// Where the Hook name `state` (corresponding to the `state` variable)
// is assigned to the location in the code for the CallExpression
// representing the call to `useState(0)` (line 2, col 28-38).

constructor of a subclass. Maybe a typo in the method name ('constructor') or not extending another class?

SuperPrivateField: Private fields can't be accessed on super.

TrailingDecorator: Decorators must be attached to a class element.

TupleExpressionBarIncorrectEndSyntaxType: Tuple expressions ending with ']' are only allowed when the 'syntaxType' option of the 'recordAndTuple' plugin is set to 'bar'.

TupleExpressionBarIncorrectStartSyntaxType: Tuple expressions starting with '[' are only allowed when the 'syntaxType' option of the 'recordAndTuple' plugin is set to 'bar'.

TupleExpressionHashIncorrectStartSyntaxType: Tuple expressions starting with '#' are only allowed when the 'syntaxType' option of the 'recordAndTuple' plugin is set to 'hash'.

UnexpectedArgumentPlaceholder: Unexpected argument placeholder.

UnexpectedAwaitAfterPipelineBody: Unexpected 'await' after pipeline body; await must have parentheses in minimal proposal.

UnexpectedDigitAfterHash: Unexpected digit after hash token.

UnexpectedImportExport: 'import' and 'export' may only appear at the top level.

UnexpectedKeyword: Unexpected keyword '%0'.

UnexpectedLeadingDecorator: Leading decorators must be attached to a class declaration.

UnexpectedLexicalDeclaration: Lexical declaration cannot appear in a single-statement context.

UnexpectedNewTarget: 'new.target' can only be used in functions or class properties.

UnexpectedNumericSeparator: A numeric separator is only allowed between two digits.

UnexpectedPrivateField: Private names can only be used as the name of a class element (i.e. class C { #p = 42; #m() { } }) or a property of member expression (i.e. this.#p).

UnexpectedReservedWord: Unexpected reserved word '%0'.

UnexpectedSuper: 'super' is only allowed in object methods and classes.

UnexpectedToken: Unexpected token '%0'.

UnexpectedTokenUnaryExponentiation: Illegal expression. Wrap left hand side or entire exponentiation in parentheses.

UnsupportedBind: Binding should be performed on object property.

UnsupportedDecoratorExport: A decorated export must export a class declaration.

UnsupportedDefaultExport: Only expressions, functions or classes are allowed as the 'default' export.

UnsupportedImport: 'import' can only be used in 'import()' or 'import.meta'.

UnsupportedMetaProperty: The only valid meta property for %0 is %0.%1.

UnsupportedParameterDecorator: Decorators cannot be used to decorate parameters.

UnsupportedPropertyDecorator: Decorators cannot be used to decorate object literal properties.

UnsupportedSuper: 'super' can only be used with function calls (i.e. super()) or in property accesses (i.e. super.prop or super[prop]).

UnterminatedComment: Unterminated comment.

UnterminatedRegExp: Unterminated regular expression.

UnterminatedString: Unterminated string constant.

UnterminatedTemplate: Unterminated template.

VarRedeclaration: Identifier '%0' has already been declared.

YieldBindingIdentifier: Can not use 'yield' as identifier inside a generator.

YieldInParameter: Yield expression is not allowed in formal parameters.

ZeroDigitNumericSeparator: Numeric separator can not be used after leading 0.

```
