"" Easy DNS (including DNSSEC) via ldns.

ldns is a great library. It is a powerful tool for working with DNS. python-ldns is a straight up clone of the C interface, however that is not a very good interface for python. Its documentation is incomplete and some functions don't work as described. And some objects don't have a full python API.

ldnsx aims to fix this. It wraps around the ldns python bindings, working around its limitations and providing a well-documented, more pythonistic interface.
