

July 2, 2015

To Whom It May Concern,

Acumen Security verified that the following software faithfully embeds a FIPS 140 validated cryptographic module,

- TelePresence Management Suite, version 15.0

TelePresence Management Suite is known to operate on the following Operation Systems:

- Microsoft Windows 8,
- Microsoft Windows Server 2012,
- Microsoft Windows RT,
- Microsoft Surface Windows RT,
- Microsoft Surface Windows 8 Pro

As part of this review, the software was tested on the following platforms:

- Windows 8

During the course of the review, Acumen Security confirmed that the following cryptographic module is incorporated into the product,

- Microsoft Windows 8, Microsoft Windows Server 2012, Microsoft Windows RT, Microsoft Surface Windows RT, Microsoft Surface Windows 8 Pro, and Microsoft Windows Phone 8 Enhanced Cryptographic Provider (RSAENH.DLL), version 6.2.9200, FIPS 140-2 certificate # 1894

Acumen Security confirmed that the following features leverage the embedded module to provide cryptographic services, **Web GUI**, **Managed Device Control**, **LDAP over TLS**, and **SOAP API**.

- Session establishment supporting each service,
- Hashing for each service,
- Symmetric encryption for each service,
- Asymmetric cryptography.

Acumen Security also confirmed that the embedded module provides the following cryptographic services for **Web GUI**, **Managed Device Control**, and **LDAP over TLS** connections,

- All packet authentication.

Additionally, Acumen Security confirmed that the above referenced embedded cryptographic module is initialized in a manner consistent with the instructions provided in the non-proprietary Security Policy.

Details of the verification may be obtained from Cisco Systems, Inc. at the request of interested parties.

This letter represents the independent opinions of Acumen Security and does not imply endorsement of the product by the CMVP or any other parties.

Sincerely,

Ashit Vora  
Laboratory Director
