

## Need A New Office? Get Connected In Minutes.

Set up your business to succeed now and in the future

### Your business depends on a secure network

more than ever before. The one you will need to stay connected to your suppliers, your employees, and of course, your customers. As your business goes digital, the needs from your network are only going to increase. You will need to think about consistently high performance as video becomes a primary communication method. You need to provide your customers and guests a great Wi-Fi experience on any device they choose. And at the same time, you need to protect your employees and guests' confidential data from attackers.

### Businesses have dynamic 24x7 requirements

as employees are constantly moving on and off the network from different locations, switching between devices and applications. All the technology needs to work to keep the business running. Rapid and unpredictable growth drives changes and the new connections must be as secure and simple as the original network setup. Any time lost to redesign, integration, or rewiring and cabling is a loss of productive time for employees and revenue for the business. As small businesses grow and add office locations, travel between those locations can

become expensive. The same is true for when offices are consolidated or when you move to a more cost-appropriate location—the setup needs to be simple and fast to set up and operate, whether you do it yourself or rely on a trusted partner.

**Reliable connections** between your networks and to the Internet keep your employees, and your customers, happy. And, isn't that one of the keys to success? Connect your business to the Internet and the world. With Cisco® partners, you can keep your business running smoothly during challenging times. You can trust your Cisco partner's expertise to guide you and support you along the way.

**Switches are the basic building blocks of every network.**

Start with these small devices to allow for the simple addition of new voice, wireless, data, video products, and more. Power over Ethernet (PoE) offers flexible deployments for continued business growth. Then, choose the ideal router for your business, with comprehensive security and easy installation.

**Deploy your small business network solutions in minutes** with simple web or mobile applications. From guest logins to remote access, all of your devices are united—and easily managed—in one place.

If you're not sure where to start or which options are best for your business, talk to your Cisco partner. It will be one less thing for you to worry about.

**You don't have to be an expert at everything.** Our Cisco partners are here to be your IT expert. Focus on what's most important to your business—connecting customers and creating a great business. Our partners will be right there with you. It's what they do every day. Cisco partners can help you quickly get the answers you need—on your speed dial, fix issues remotely, or send someone over. Get high-touch service when you need it most.

**We offer two options:** on-premises, with a one-time cost, or in the cloud by subscription via Cisco Meraki® solutions. There are benefits to both. It just depends on your comfort level with having equipment in your office versus services delivered through a secure Internet connection, and how you want to manage your operations. Either way, our pricing and licensing structure are straightforward, with no hidden costs. Talk to your partner to assess which solution would work best for you based on your business goals.

## Office-in-a-box solutions

-  Creates a reliable, small business local area network (LAN)
-  Easily integrates with data, voice, video, and wireless products
