IOS-Router für die Weiterleitung eines LAN-zu-LAN-IPSec-Tunnels über PAT-Konfigurationsbeispiel

Inhalt

Einführung

Dieses Dokument enthält eine Beispielkonfiguration für die Port Address Translation (PAT), um die Einrichtung eines LAN-zu-LAN IPSec-Tunnels zu ermöglichen. Sie gilt für Szenarien, bei denen nur eine öffentliche IP-Adresse vorhanden ist (die in einem Cisco IOS®-Router verwendet wird, um PAT für den gesamten Datenverkehr auszuführen) und ein IPSec-Tunnel durchlaufen werden muss.

Für VPN-Gateways, die Cisco IOS-Softwareversionen vor 12.2(13)T ausführen, wird die IPSec-Passthrough-Funktion auf dem Router benötigt, der PAT ausführt, um die Encapsulating Security Payload (ESP) bis zu ermöglichen.

Hinweis: Diese Funktion wird als IPSec durch Network Address Translation (NAT)-Unterstützung in der Software Advisory bezeichnet (nur registrierte Kunden).

Um den Tunnel vom lokalen (PATed) Peer aus zu initiieren, ist keine Konfiguration erforderlich. Um den Tunnel vom Remote-Peer aus zu initiieren, werden folgende Befehle benötigt:

- **ip nat inside source static** ***esp inside_ip*** **interface** ***interface***

- **ip nat inside static udp** *inside_ip* **500 interface** *interface* **500**

Für VPN-Gateways, die eine Cisco IOS Software-Version nach 12.2(13)T ausführen, wird IPSec-Datenverkehr in UDP-Port 4500-Pakete gekapselt. Diese Funktion wird als IPSec NAT Transparency bezeichnet. Um den Tunnel vom lokalen (PATed) Peer aus zu initiieren, ist keine Konfiguration erforderlich.

Um den Tunnel vom Remote-Peer aus zu initiieren, werden folgende Befehle benötigt:

- **ip nat inside static source** *udp inside_ip* **4500 interface** *interface* **4500**
- **ip nat inside static source** *udp inside_ip* **500 interface** *interface* **500**

Geben Sie den Befehl **no crypto ipsec nat-Transparent udp-encaps** ein, um die IPSec NAT-Transparenz zu deaktivieren.

Voraussetzungen

Anforderungen

Für dieses Dokument bestehen keine speziellen Anforderungen.

Verwendete Komponenten

Die Informationen in diesem Dokument basieren auf der Cisco IOS Software-Version 12.3(7)T1.

Die Informationen in diesem Dokument wurden von den Geräten in einer bestimmten Laborumgebung erstellt. Alle in diesem Dokument verwendeten Geräte haben mit einer leeren (Standard-)Konfiguration begonnen. Wenn Ihr Netzwerk in Betrieb ist, stellen Sie sicher, dass Sie die potenziellen Auswirkungen eines Befehls verstehen.

Konventionen

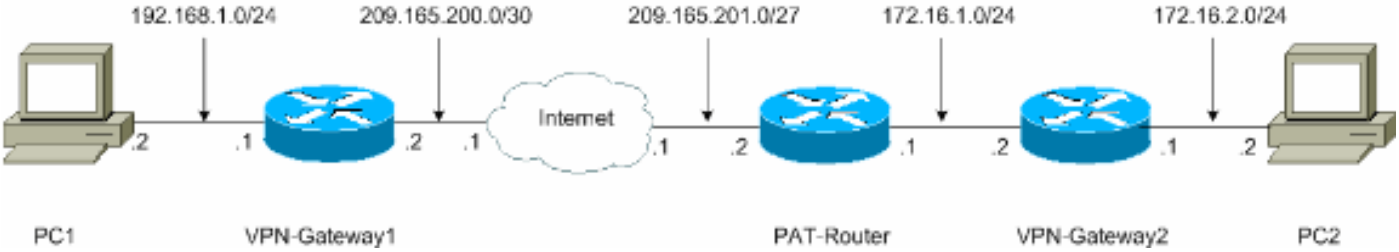
Weitere Informationen zu Dokumentkonventionen finden Sie unter Cisco Technical Tips Conventions.

Konfigurieren

In diesem Abschnitt erhalten Sie Informationen zum Konfigurieren der in diesem Dokument beschriebenen Funktionen.

Netzwerkdiagramm

In diesem Dokument wird die folgende Netzwerkeinrichtung verwendet:



Konfigurationen mit IPSec NAT Transparancy

In diesem Dokument werden folgende Konfigurationen verwendet:

- VPN-Gateway1
- PAT-Router
- VPN-Gateway2

Fehlerbehebung

Dieser Abschnitt enthält Informationen zur Fehlerbehebung in Ihrer Konfiguration.

Wenn Sie einen LAN-to-LAN IPSec-Tunnel mit PAT eingerichtet haben (wie in diesem Dokument beschrieben) und weiterhin Probleme auftreten, sammeln Sie die **Debug-**Ausgabe jedes Geräts und die Ausgabe der Befehle **show** zur Analyse durch den technischen Support von Cisco.

Dies sind Informationen zur Fehlerbehebung, die für diese Konfiguration relevant sind. Weitere Informationen zur Fehlerbehebung finden Sie unter IP Security Troubleshooting - Understanding and Using debug befehls and Verifying NAT Operation and Basic NAT Troubleshooting.

In diesen Abschnitten werden **Debug-**Befehle und Beispielausgaben angezeigt.

- Fehlerbehebung mit IPSec NAT Transparency
- Fehlerbehebung ohne IPSec NAT Transparency

Hinweis: Bevor Sie **Debugbefehle** ausgeben, lesen Sie Wichtige Informationen über Debug-Befehle.

Fehlerbehebung mit IPSec NAT Transparency

- **debug crypto ipsec**: Zeigt die IPSec-Verhandlungen von Phase 2 an.
- **debug crypto isakmp**: Zeigt die ISAKMP-Verhandlungen von Phase 1 an.
- **debug ip nat detail** - Überprüft, ob NAT vom Router ausgeführt wird.

Dies ist die Beispielbefehlsausgabe.

```
VPN-Gateway1#debug crypto ipsec
Crypto IPSEC debugging is on
VPN-Gateway1#debug crypto isakmp
Crypto ISAKMP debugging is on
VPN-Gateway1#show debug
Cryptographic Subsystem:
  Crypto ISAKMP debugging is on
```

```
Crypto IPSEC debugging is on

```

Fehlerbehebung ohne IPSec NAT-Transparenz

- **debug crypto ipsec**: Zeigt die IPSec-Verhandlungen von Phase 2 an.
- **debug crypto isakmp**: Zeigt die ISAKMP-Verhandlungen von Phase 1 an.
- **debug ip nat detail** - Überprüft, ob NAT vom Router ausgeführt wird.

Dies ist die Beispielbefehlsausgabe.

```
VPN-Gateway1#debug crypto ipsec
Crypto IPSEC debugging is on
VPN-Gateway1#debug crypto isakmp
Crypto ISAKMP debugging is on
VPN-Gateway1#show debug
Cryptographic Subsystem:
  Crypto ISAKMP debugging is on
  Crypto IPSEC debugging is on
