## Einführung

In diesem Dokument wird beschrieben, wie eine IPsec-Verbindung zwischen einem Router und dem Cisco Virtual Private Network (VPN) Client 4.x mit Terminal Access Controller Access Control System Plus (TACACS+) für die Benutzerauthentifizierung konfiguriert wird. Cisco IOS<sup>®</sup> Softwareversion 12.2(8)T und höher unterstützt Verbindungen vom Cisco VPN Client 4.x. Der VPN-Client 4.x verwendet die Richtlinien der Diffie-Hellman (D-H)-Gruppe 2. Der Befehl **isakmp policy # group 2** ermöglicht es den 4.x-Clients, eine Verbindung herzustellen.

Dieses Dokument zeigt die Authentifizierung auf dem TACACS+-Server mit Autorisierung, z. B. Windows Internet Naming Service (WINS)- und Domain Naming Service (DNS)-Zuweisungen, die lokal vom Router durchgeführt werden.

Unter [Konfigurieren von Cisco VPN Client 3.x für Windows zu IOS mithilfe der lokalen erweiterten Authentifizierung](#) erfahren Sie mehr über das Szenario, in dem die Benutzerauthentifizierung lokal im Cisco IOS-Router erfolgt.

Unter [Konfigurieren von IPSec zwischen einem Cisco IOS-Router und einem Cisco VPN-Client 4.x für Windows mit RADIUS für die Benutzerauthentifizierung](#) finden Sie weitere Informationen zu dem Szenario, in dem die Benutzerauthentifizierung extern mit dem RADIUS-Protokoll erfolgt.

# Voraussetzungen

## Anforderungen

Bevor Sie diese Konfiguration versuchen, stellen Sie sicher, dass Sie die folgenden Anforderungen erfüllen:

- Ein Pool von Adressen, die für IPsec zugewiesen werden sollen
- Eine Gruppe mit dem Namen "vpngroup" und dem Kennwort "cisco123"
- Benutzerauthentifizierung auf einem TACACS+-Server

## Verwendete Komponenten

Die Informationen in diesem Dokument basieren auf den folgenden Software- und Hardwareversionen:

- Cisco VPN Client für Windows Version 4.0.2D (alle VPN Client 3.x oder höher sollten funktionieren.)
- Cisco Secure für Windows 3.0 (alle TACACS+-Server sollten funktionieren)
- Cisco IOS 1710 Router Version 12.2(8)T1 mit IPsec-Feature-SetHier wird die Ausgabe des Befehls **show version** auf dem Router angezeigt.

```

Die Informationen in diesem Dokument wurden von den Geräten in einer bestimmten Laborumgebung erstellt. Alle in diesem Dokument verwendeten Geräte haben mit einer leeren (Standard-)Konfiguration begonnen. Wenn Ihr Netzwerk in Betrieb ist, stellen Sie sicher, dass Sie die potenziellen Auswirkungen eines Befehls verstehen.

## Konventionen

Informationen zu Dokumentkonventionen finden Sie unter [Cisco Technical Tips Conventions](#) (Technische Tipps von Cisco zu Konventionen).

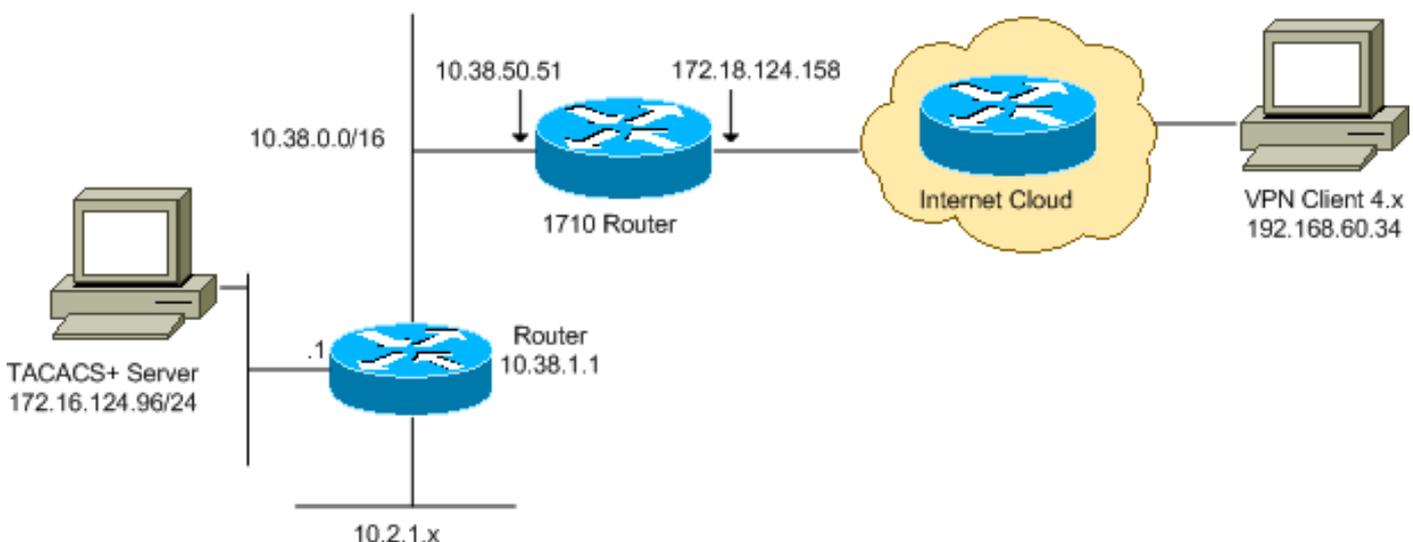

## [Konfigurieren](#)

In diesem Abschnitt erhalten Sie Informationen zum Konfigurieren der in diesem Dokument beschriebenen Funktionen.

**Hinweis:** Verwenden Sie das [Command Lookup Tool](#) (nur [registrierte](#) Kunden), um weitere Informationen zu den in diesem Dokument verwendeten Befehlen zu erhalten.

## [Netzwerkdiagramm](#)

In diesem Dokument wird die folgende Netzwerkeinrichtung verwendet:

**Hinweis:** Die in dieser Konfiguration verwendeten IP-Adressierungsschemata sind im Internet nicht rechtlich routbar. Sie sind [RFC 1918](#) -Adressen, die in einer Laborumgebung verwendet wurden.

## [Konfigurationen](#)

In diesem Dokument werden folgende Konfigurationen verwendet:

- [Cisco Router 1710](#)
- [TACACS+-Server](#)
- [VPN-Client 4.x](#)
- [Split Tunneling](#)

## [TACACS+-Server](#)

Gehen Sie wie folgt vor, um den TACACS+-Server zu konfigurieren:

1. Klicken Sie auf **Add Entry (Eintrag hinzufügen)**, um einen Eintrag für den Router in der TACACS+-Serverdatenbank hinzuzufügen.

AAA Client Hostname	AAA Client IP Address	Authenticate Using
<a href="#">340</a>	172.18.124.151	RADIUS (Cisco Aironet)
<a href="#">Aironet-340-Lab</a>	10.36.1.99	RADIUS (Cisco Aironet)
<a href="#">others</a>	<Default>	TACACS+ (Cisco IOS)

[Add Entry](#)

2. Geben Sie auf der Seite "Add AAA Client" (AAA-Client hinzufügen) die Routerinformationen ein, wie in diesem Bild gezeigt:

Geben Sie im Feld AAA-Client-Hostname einen Namen für den Router ein. Geben Sie im Feld AAA Client IP Address (AAA-Client-IP-Adresse) **10.38.50.51** ein. Geben Sie im Feld Key (Schlüssel) **cisco123** als gemeinsamen geheimen Schlüssel ein. Wählen Sie in der Dropdown-Liste Authenticate Using (Authentifizierung über Verwendung) die Option **TACACS+ (Cisco IOS)** aus, und klicken Sie auf **Submit (Senden)**.

3. Geben Sie im Feld User (Benutzer) den Benutzernamen für den VPN-Benutzer in der Cisco Secure-Datenbank ein, und klicken Sie auf **Add/Edit**. In diesem Beispiel lautet der Benutzername *cisco*.

- [User Setup and External User Databases](#)
- [Finding a Specific User in the CiscoSecure User Database](#)
- [Adding a User to the CiscoSecure User Database](#)
- [Listing Usernames that Begin with a Particular Character](#)
- [Listing All Usernames in the CiscoSecure User Database](#)
- [Changing a Username in the CiscoSecure User Database](#)

User Setup enables you to configure individual user information, add users, and delete users in the database.

4. Geben Sie auf der nächsten Seite das Kennwort für den Benutzer *cisco* ein, und bestätigen Sie es. In diesem Beispiel ist das Kennwort auch *cisco*.

**Supplementary User Info**

Real Name   
 Description

---

**User Setup**

Password Authentication:  
 CiscoSecure Database

CiscoSecure PAP (Also used for CHAP/MS-CHAP/ARAP, if the Separate field is not checked.)

Password   
 Confirm Password

Separate (CHAP/MS-CHAP/ARAP)  
 Password   
 Confirm Password

When using a Token Card server for authentication, supplying a separate CHAP password for a token card user allows CHAP authentication. This is especially useful when token caching is enabled.

Group to which the user is assigned:  
 Group 19

Submit Cancel

5. Wenn Sie das Benutzerkonto einer Gruppe zuordnen möchten, schließen Sie diesen Schritt jetzt ab. Wenn Sie fertig sind, klicken Sie auf **Senden**.

## [VPN-Client 4.x](#)

Gehen Sie wie folgt vor, um VPN Client 4.x zu konfigurieren:

1. Starten Sie den VPN-Client, und klicken Sie auf **Neu**, um eine neue Verbindung herzustellen.

Das Dialogfeld "VPN Client Create New VPN Connection Entry" (Neuen VPN-Verbindungseintrag erstellen) wird

**VPN Client | Create New VPN Connection Entry**

Connection Entry:

Description:

Host:

Authentication | Transport | Backup Servers | Dial-Up

Group Authentication  Mutual Group Authentication

Name:

Password:

Confirm Password:

Certificate Authentication

Name:

Send CA Certificate Chain

Erase User Password | Save | Cancel

angezeigt.

2. Geben Sie im Dialogfeld Create New VPN Connection Entry (Neuen VPN-Verbindungseintrag erstellen) die Verbindungsinformationen ein, wie in diesem Bild

**VPN Client | Create New VPN Connection Entry**

Connection Entry:

Description:

Host:

Authentication | Transport | Backup Servers | Dial-Up

Group Authentication  Mutual Group Authentication

Name:

Password:

Confirm Password:

Certificate Authentication

Name:

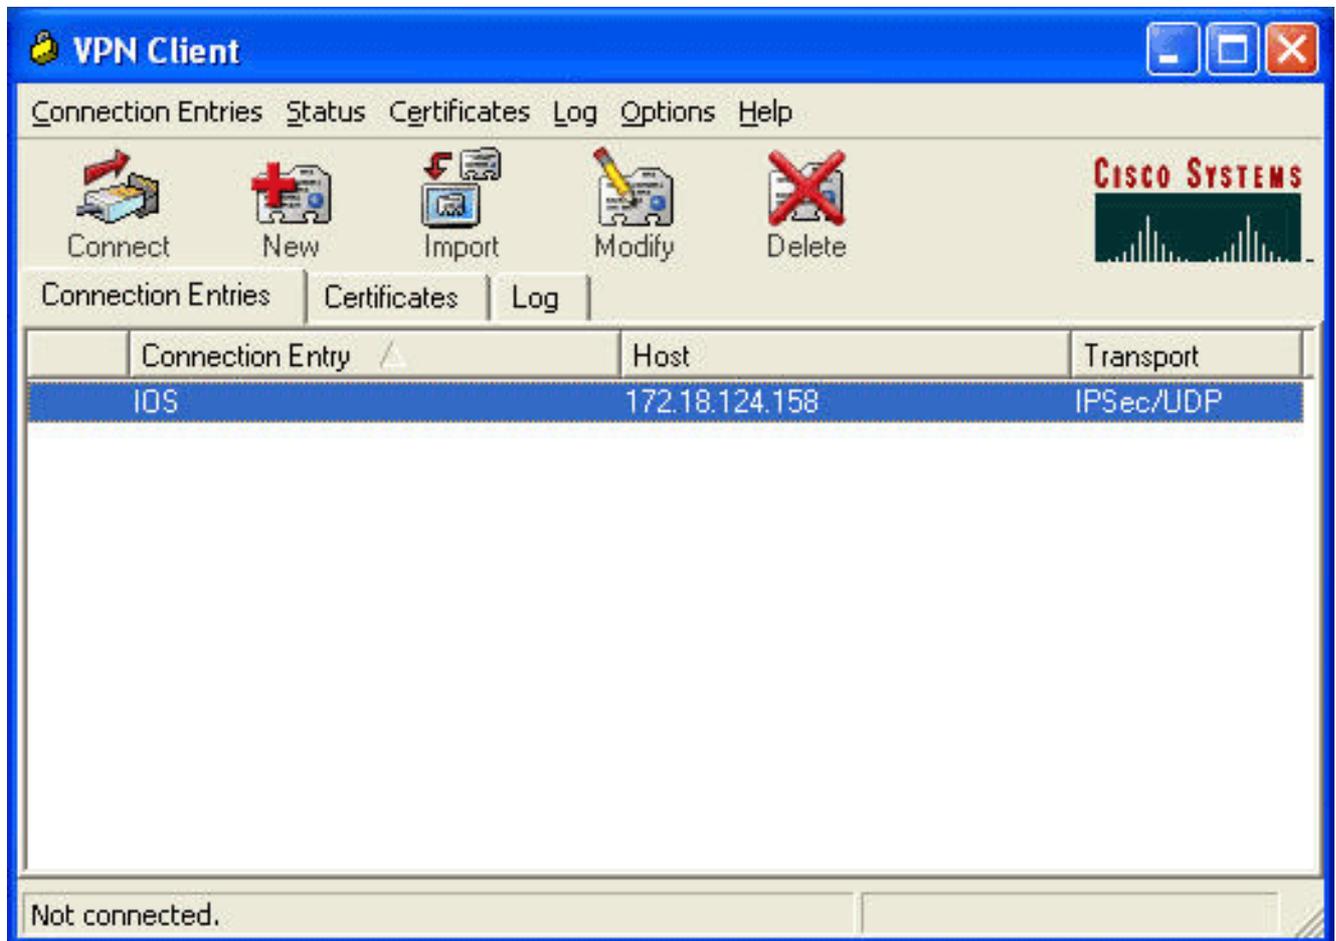

Send CA Certificate Chain

Erase User Password | Save | Cancel

gezeigt:

eben Sie im Feld Verbindungseintrag einen Namen für die Verbindung ein. Geben Sie in die Felder Description (Beschreibung) und Host (Host) eine Beschreibung und die Host-IP-Adresse für den Verbindungseintrag ein. Klicken Sie auf der Registerkarte Authentifizierung auf das Optionsfeld **Gruppenauthentifizierung**, und geben Sie den Namen und das Kennwort des Benutzers ein. Klicken Sie auf **Speichern**, um die Verbindung zu speichern.

3. Wählen Sie im Fenster VPN Client (VPN-Client) den Verbindungseintrag aus, den Sie erstellt haben, und klicken Sie auf **Connect (Verbinden)**, um eine Verbindung zum Router herzustellen.

4. Bei der Aushandlung von IPsec werden Sie aufgefordert, einen Benutzernamen und ein Kennwort einzugeben. Geben Sie einen Benutzernamen und ein Kennwort ein. Im Fenster werden folgende Meldungen angezeigt: "Verhandeln von Sicherheitsprofilen." "Ihr Link ist jetzt sicher."

### Split Tunneling

Um Split-Tunneling für die VPN-Verbindungen zu aktivieren, müssen Sie auf dem Router eine Zugriffskontrollliste (ACL) konfigurieren. In diesem Beispiel ist der Befehl **access-list 102** für Split-Tunneling der Gruppe zugeordnet, und der Tunnel wird zu den Netzwerken 10.38.X.X /16 und 10.2.x.x gebildet. Der Datenverkehr fließt unverschlüsselt zu Geräten, die sich nicht in der ACL 102 befinden (z. B. das Internet).

```
access-list 102 permit ip 10.38.0.0 0.0.255.255 10.1.1.0 0.0.0.255
access-list 102 permit ip 10.2.0.0 0.0.255.255 10.1.1.0 0.0.0.255
```

Wenden Sie die ACL auf die Gruppeneigenschaften an.

```
crypto isakmp client configuration group vpngroup
key cisco123
dns 10.2.1.10
wins 10.2.1.20
domain cisco.com
pool ippool
acl 102
```

## Überprüfen

Dieser Abschnitt enthält Informationen, mit denen Sie bestätigen können, dass Ihre Konfiguration ordnungsgemäß funktioniert.

Bestimmte **show**-Befehle werden vom [Output Interpreter Tool](#) unterstützt (nur [registrierte](#) Kunden). Mit diesem Tool können Sie eine Analyse der **Ausgabe** des **Befehls show** anzeigen.
