## Introduction

This document provides a sample configuration for routers with RSA keys. Both routers are configured for RSA keys and IPSec/Generic Routing Encapsulation (GRE) tunnel with Routing Information Protocol (RIP).

## Prerequisites

### Requirements

There are no specific requirements for this document.

### Components Used

The information in this document is based on these software and hardware versions:

- Cisco Router running Cisco IOS® Software Release 12.2

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

### Conventions

For more information on document conventions, refer to Cisco Technical Tips Conventions.

## Configure

In this section, you are presented with the information to configure the features described in this document.

**Note:** To find additional information on the commands used in this document, use the Command Lookup Tool (registered customers only) .

## Network Diagram

This document uses this network setup:

## Configurations

This document uses these configurations:

- Crypto Configuration for Router 101
- Router 101
- Crypto Configuration for Router 102
- Router 102

### Crypto Configuration for Router 101

```
101(config)#crypto isakmp enable
101(config)#crypto isakmp identity hostname
101(config)#crypto isakmp policy 1
101(config-isakmp)#authentication rsa-encr
101(config)#access-list 101 permit gre host 20.1.1.1 host 20.1.1.2
101(config)#crypto ipsec transform-set test esp-des esp-sha-hmac
101(cfg-crypto-trans)#mode transport
101(config)#crypto map test 10 ip
101(config)#crypto map test 10 ipsec-is
% NOTE: This new crypto map will remain disabled until a peer
and a valid access list have been configured.
101(config-crypto-map)#set transform-set test
101(config-crypto-map)#match address 101
101(config-crypto-map)#set peer 20.1.1.2
101(config-crypto-map)#

101(config)#access-list 101 permit gre host 20.1.1.1 host 20.1.1.2

101(config)#interface Tunnel0
101(config-if)#crypto map test

101(config)#interface ethernet 1/0
101(config-if)#crypto map test
```

## Verify

This section provides information you can use to confirm your configuration is working properly.

Certain **show** commands are supported by the Output Interpreter Tool (registered customers only) , which allows you to view an analysis of **show** command output.

- **show crypto isakmp sa detail** Displays all current Internet Key Exchange (IKE) security associations (SAs) at a peer.
- **show crypto ipsec sa** Displays the settings used by current SAs.
- **show crypto engine connections active** Displays a summary of the configuration information for the crypto engines.
- **show ip route** Displays the current state of the routing table.

## Router 101 Command Output

## Troubleshoot

This section provides information you can use to troubleshoot your configuration. For additional information on troubleshooting, please see IP Security Troubleshooting – Understanding and Using debug Commands.

## Troubleshooting Procedure

Follow these instructions to troubleshoot your configuration.

1. Generate the RSA keys on Router 101.

```
101#show crypto key mypubkey rsa
101#
101#
101#conf t
101(config)#ip domain-name cisco.com
101(config)#crypto key generate rsa ?
  general-keys  Generate a general purpose RSA key pair for signing and
                  encryption
  usage-keys    Generate separate RSA key pairs for signing and encryption

101(config)#crypto key generate rsa
The name for the keys will be: 101.cisco.com
Choose the size of the key modulus in the range of 360 to 2048 for your
  General Purpose Keys. Choosing a key modulus greater than 512 may take
  a few minutes.

How many bits in the modulus [512]:
% Generating 512 bit RSA keys ...[OK]
```

```

101#show crypto key mypubkey rsa
% Key pair was generated at: 12:02:08 PST Dec 28 2002
Key name: 101.cisco.com
Usage: General Purpose Key
Key Data:
 305C300D 06092A86 4886F70D 01010105 00034B00 30480241 00A7D24F E6E15787
 5EE1434A A76A3DC1 ADE96A4D C6B4D0F3 A7DDAD10 446EF83A 89D1115F 0C517118
 ECAF418E F4C84823 2A017B97 F85690EF EBCF3414 AB3E81F6 A5020301 0001
% Key pair was generated at: 12:02:12 PST Dec 28 2002
Key name: 101.cisco.com.server
Usage: Encryption Key
Key Data:

101#

```

## 2. Generate the RSA keys on Router 102.

```

102#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
102(config)#ip domain-name cisco.com
102(config)#crypto key gen rsa
The name for the keys will be: 102.cisco.com
Choose the size of the key modulus in the range of 360 to 2048 for your
  General Purpose Keys. Choosing a key modulus greater than 512 may take
  a few minutes.

```

```

How many bits in the modulus [512]:
% Generating 512 bit RSA keys ...[OK]

```

```

102#show crypto key mypubkey rsa
% Key pair was generated at: 12:03:45 PST Dec 28 2002

```

## 3. Resolve the hostname.

```

102(config)#ip host 101.cisco.com 20.1.1.1

```

## 4. Exchange the General purpose keys on Router 101.

```

101(config)#crypto key pubkey-chain rsa
101(config-pubkey-chain)#named-key 102.cisco.com
% Named public key resolved to ip address: 20.1.1.2
101(config-pubkey-key)#key-string ?
Enter a public key as a hexadecimal number ....

```

```

101(config-pubkey)#$6F70D 01010105 00034B00 30480241 00DB4FEB EF0C0D3D
