## Introduction

This document describes the procedure to integrate Advanced Malware Protection (AMP) for Endpoints with Firepower Management Center (FMC) for event data feed.

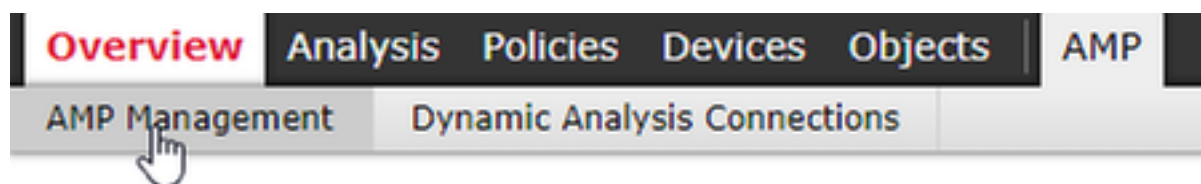

## Procedure to Integrate AMP for Endpoints with FMC

**Note:** This is a one-way data feed (AMP for Endpoints feeds the FMC with the events that it encounters). Configuration will not be integrated.

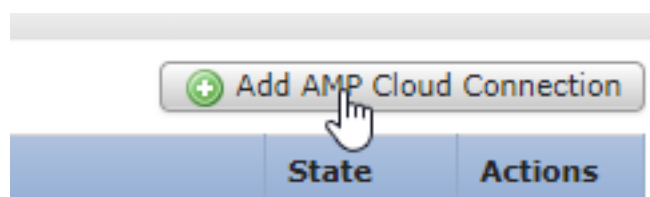

1. From the FMC, Click "AMP":

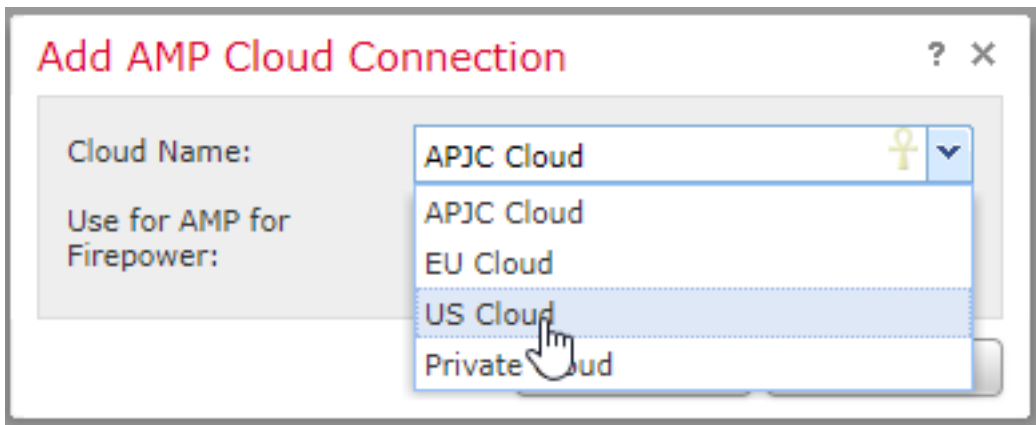

2. Click on "AMP Management"

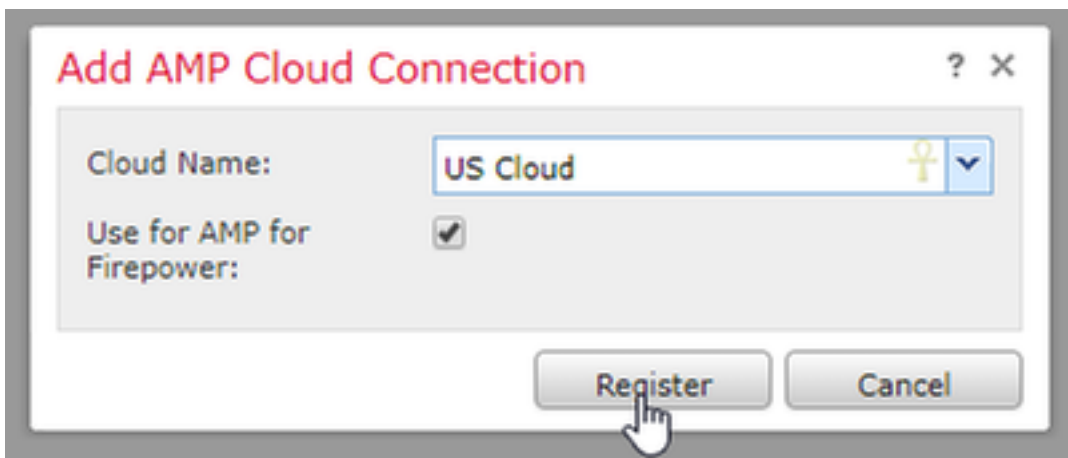

3. "Add AMP Cloud Connection"

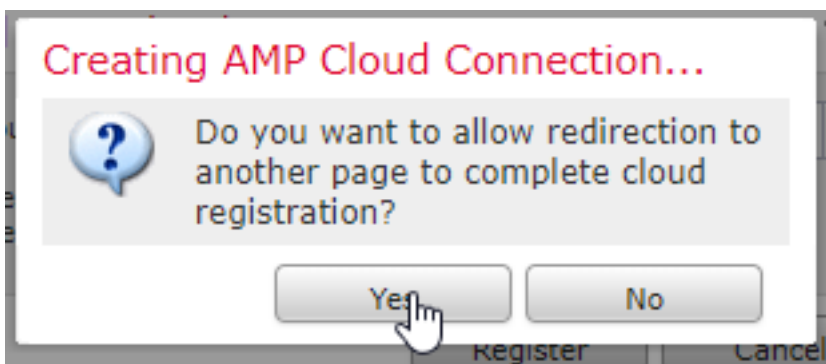

4. Select the AMP Cloud that you use for AMP for Endpoints:

5. Click "Register":

6. Click "Yes" to allow redirection to the AMP for Endpoint console:

7. Log in to AMP for Endpoints:

# AMP for Endpoints

you@yourdomain.com

.....

Log In

[Use Single Sign-On](#)

[Can't access your account?](#)

8. Click "Allow" to authorize the AMP to FMC Connection:

## < Authorize [REDACTED]

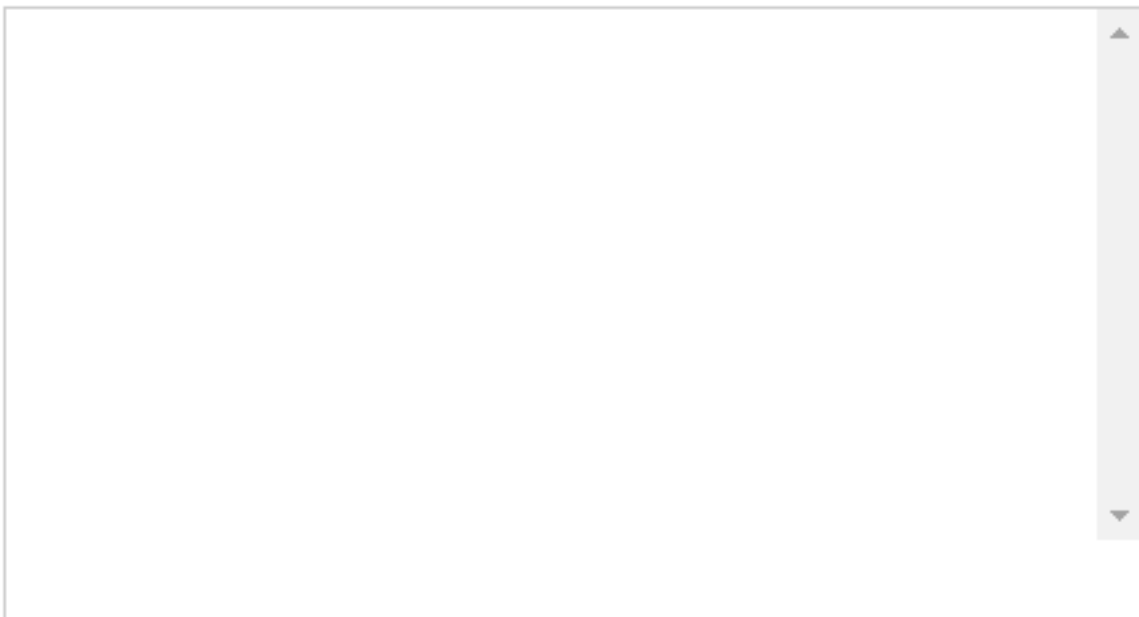

The [REDACTED] with URL of https://[REDACTED] is requesting the following authorizations:

- Streaming event export

If you are going to authorize the request, please select which groups will have their events exported to this application:

### Event Export Groups

All groups selected

A large, empty rectangular box with a vertical scrollbar on the right side, intended for selecting event export groups. The box is currently empty.

Deny

Allow

9. The page is redirected back to the FMC. Verify the Cisco AMP Solution Type, it will display "AMP for Endpoints and AMP for Networks" and the "State" should be a blue checkmark:
