Identifying Power On Hours for SSD Drives

Contents

Background

"Power on hours" is an important metric for SSD lifespan determination. In order to identify the affected Solid State Drives(SSD), you will need to download 3rdparty utilities that will allow you to see the Power-On Hours(PoH)and in some cases the model#for the affected SSD. Below you will find the instructions on where to get the utilities and how to use them.

Where to get the utilities

There are4different utilities to choose from depending on your OS and needs. Please review the below table.

Tool	Applicable OS's	Tool Source
SmartMon Tools	Linux, Windows, VMware	https://sourceforge.net/projects rtmontools/files/smartmontools
sg3_utils	Linux, Windows	http://sg.danny.cz/sg/sg3_utils
SanDisk Tool	Linux, Windows	https://kb.sandisk.com/app/ans detail/a_id/18565/~/lightning-g ssd-drive-firmware
Storcli Utility	All OS's	https://docs.broadcom.com/do 7.1410.0000.0000_Unified_St zip

Steps on how to use each utility.

Each utility requires some knowledge on installing software in Linux, VMware and Windows. Be sure to read any readme files before installing.

SmartMonTools for Windows - JBOD mode

Note: If you are using a RAID controller, you cannot collect this data through Windows

1. **Installation:** Go the download link posted in the table above and download and install the smartmontools utilityGet the smartctl Windows setup file through above link.Execute the setup file:

   ```
   smartmontools-7.1-1.win32-setup.exe
   ```
   Open the command promptGo to folder:

   ```
   C:\Program Files\smartmontools\bin
   ```

2. **Check Drive Firmware Version:** Run below command to get the device name of target drive.

   ```
   smartctl -scan
   ```

   ```
   C:\Program Files\smartmontools\bin>smartctl --scan
   /dev/sda -d ata # /dev/sda, ATA device
   /dev/sdb -d ata # /dev/sdb, ATA device
   /dev/sdc -d scsi # /dev/sdc, SCSI device
   /dev/sdd -d scsi # /dev/sdd, SCSI device
   ```

   [jbod windows smartmon fw 1]Read drive firmware version as below:

   ```
   smartctl -i /dev/sdc
   ```

   ```
   C:\Program Files\smartmontools\bin>smartctl -i /dev/sdc
   smartctl 7.1 2019-12-30 r5022 [x86_64-w64-mingw32-2016] (sf-7.1-1)
   Copyright (C) 2002-19, Bruce Allen, Christian Franke, www.smartmontools.org

   === START OF INFORMATION SECTION ===
   Vendor:               SanDisk
   Product:              LT1600MO
   Revision:             C405
   Compliance:           SPC-4
   User Capacity:        1,600,321,314,816 bytes [1.60 TB]
   Logical block size:   512 bytes
   LU is resource provisioned, LBPRZ=1
   Rotation Rate:        Solid State Device
   Form Factor:          2.5 inches
   Logical Unit id:      0x5001e82002818248
   Serial number:        42041928
   Device type:          disk

   SMART support is:     Enabled
   Temperature Warning:  Disabled or Not Supported
   ```

   [jbod windows smartmon fw 2]

3. Check Power On Hours: Once installed, you will be using the 'smartctl' utility within the smartmontools package.Open up CMD, go to the smartmontools directory and find the list of SSDs by typing:

   ```
   smartctl.exe --scan
   ```
   Once you identify which SSD you want to check, you can then type the following two commands in order to get the output needed (where X is the drive letter you wish to check

```
smartctl -t short /dev/sdX – Wait 10 seconds before running the second command
smartctl -l selftest /dev/sdX
```

Look for the "Lifetime" hours from the 1st line. That will be the latest record of PoH.

```
C:\Program Files\smartmontools\bin>smartctl --scan
/dev/sda -d ata # /dev/sda, ATA device
/dev/sdb -d scsi # /dev/sdb, SCSI device
/dev/sdc -d scsi # /dev/sdc, SCSI device

C:\Program Files\smartmontools\bin>smartctl -t short /dev/sdb

[jbod windows smartmon]

SmartMonTools for Linux – JBOD Mode

1. Installation: Go the download link posted in the table above and download and install the smartmontools utility.Get the smartctl installation file Linux version through above link.Untar the installation file.

```
tar -zxvf smartmontools-7.1.tar.gz
```
Go to folder:

```
smartmontools-7.1
```
Run below commands in order.

```
./configure
make
make install
```
2. Check Drive Firmware Version: 'sdb' is the device name of target drive.

```
smartctl -i /dev/sdb
```

```
[root@localhost ~]# smartctl -i /dev/sdb
smartctl 6.5 2016-05-07 r4318 [x86_64-linux-3.10.0-957.el7.x86_64] (local build)

SmartMonTools for ESXi – JBOD Mode

1. Installation: Go the download link posted in the table above and download and install

the smartmontools utility Get the smartctl ESXi installation file through above link.Enable shell and SSH on the ESXi host.

[jbod esxi smartmon install]

Upload file 'smartctl-6.6-4321.x86_64.vib' into ESXi host 'tmp' folder through ftp tool.SSH to the ESXi host.Set the ViB acceptance level to CommunitySupported.

```
esxcli software acceptance set --level=CommunitySupported
```

Then install the package.

```
esxcli software vib install -v /tmp/smartctl-6.6-4321.x86_64.vib
```

2. Check the Drive Firmware Version SSH to the ESXi host. Then run below command to get the device name and firmware version of target drive.

```
esxcli storage core device list
```

```
naa.5001e82002818248
    Display Name: Local SanDisk Disk (naa.5001e82002818248)
    Has Settable Display Name: true
    Size: 1526185
    Device Type: Direct-Access
    Multipath Plugin: NMP
    Devfs Path: /vmfs/devices/disks/naa.5001e82002818248

[jbod esxi smartmon]

Sg3_utils for Windows - JBOD mode

1. Installation Go the download link posted in the table above and download and install
   the sg3_utils utilityGet the smartctl Windows setup file through above link.Execute the setup
   file:

   `smartmontools-7.1-1.win32-setup.exe`
   Open the command promptGo to folder:

   `C:\Program Files\smartmontools\bin`

2. Check the Drive Firmware Version: Run below command to get the device name of target
   drive.

   `smartctl –scan`

```
C:\Program Files\smartmontools\bin>smartctl --scan
/dev/sda -d ata # /dev/sda, ATA device
/dev/sdb -d ata # /dev/sdb, ATA device
/dev/sdc -d scsi # /dev/sdc, SCSI device
/dev/sdd -d scsi # /dev/sdd, SCSI device
```

[jbod windows sg3_utils fw 1]Read drive firmware version as below

   `smartctl -i /dev/sdc`

[jbod windows sg3_utils fw 2]

3. Check Power On Hours: Go to the sg3_utils directory and find the list of SSDs by typing:

```
sg_scan
```
Once you identify which SSD you want to check, you can then type the following command(where X is the drive letter you wish to check):

```
sg_logs --page=0x15 pdX
```
Look for the "Accumulated power on minutes".

[jbod windows sg3_utils]

Sg3_utils for Linux - JBOD mode

1. Installation: Go the download link posted in the table above and download and install the sg3_utils utilityGet the sg3_utils installation file Linux version through above link.Untar the installation file.

```
tar -zxvf sg3_utils-1.45.tgz
```
Go to folder 'sg3_utils-1.45'.Run below commands in order.

```
./configure
make
make install
```

2. Check Drive Firmware Version 'sdb' is the device name of target drive.

```
sg_logs --page=0x33 /dev/sdb
```

[jbod linux sg3_utils fw]

3. Check Power On Hours Once you identify which SSD you want to check, you can then type the following command(where X is the drive letter you wish to check):

```
sg_logs --page=0x15 /dev/sdX
```
Look for the "Accumulated power on minutes".

[jbod linux sg3_utils.jpg]

Sandisk Tool for Windows - JBOD mode

1. Installation: Go the download link posted in the table above and download and install the sg3_utils utilityGet the smartctl Windows setup file through above link.Execute the setup file

```
smartmontools-7.1-1.win32-setup.exe
```
Open a command promptGo to folder:

```
C:\Program Files\smartmontools\bin
```

2. Check Drive Firmware Version Run below command to get the device name of target drive.

```
smartctl –scan
```

[jbod windows sandisk fw]

3. Check Power On Hours To identify the drive you want to check, type the command:

```
scli show all
```
Once you identify which SSD you want to check, you can then type the

following command(where X is the drive letter you wish to check):

```
scli show diskX -S
```

Look for "Total Power on Hours".

[jbod windows sandisk]

Sandisk Tool for Linux - JBOD mode

1. Installation Go the download link posted in the table above and download and install the sg3_utils utilityGet the scli installation file Linux version through above link.Unzip the installation file.Go to folder:

```
Linux_1.8.0.12/generic/x86_64
```

Run below command to let 'scli' be executable.

```
chmod +x scli
```

2. Check Drive Firmware Version 'sdb' is the device name of target drive.

```
./scli show /dev/sdb -a
```

```
[root@localhost x86_64]# ./scli show /dev/sdb -a
SanDisk scli version 1.8.0.12
Copyright (C) 2014 SanDisk
07/15/2020  15:41:10

SmartMonTools for Linux - RAID mode

1. Installation You will need to install both smartmontools and storcli utility to collect the data.Go the download link posted in the table above and download and install the smartmontools utility Get the smartctl installation file Linux version through above

link.Untar the installation file.

```
tar -zxvf smartmontools-7.1.tar.gz
```
Go to folder:

```
smartmontools-7.1
```
Run below commands in order.

```
./configure
make
make install
```
Now go to the download link posted in the table above and download and install the storcli utility.To identify the drive you want to check, go to the storcli directory and type the command:

```
storcli /c0/eall/sall show
```
Look for the Device ID(DID). The Device ID will be needed in the future steps.

```
[root@localhost smartctl]# storcli /c0/eall/sall show
CLI Version = 007.0913.0000.0000 Jan 11, 2019
Operating system = Linux 3.10.0-957.el7.x86_64
Controller = 0
Status = Success
Description = Show Drive Information Succeeded.

Drive Information :
==================

----------------------------------------------------------------------------------------
