

DFS Channel Identification in CBW

Objective

The objective of this article is to show you how to identify channels that support Dynamic Frequency Selection (DFS) in Cisco Business Wireless (CBW) access points.

Applicable Devices | Software Version

CBW140AC | 10.8.1.0 ([Download latest](#))

CBW141ACM | 10.8.1.0 ([Download latest](#))

CBW142ACM | 10.8.1.0 ([Download latest](#))

CBW143ACM | 10.8.1.0 ([Download latest](#))

CBW145AC | 10.8.1.0 ([Download latest](#))

CBW240AC | 10.8.1.0 ([Download latest](#))

Introduction

Cisco Business Wireless devices support Dynamic Frequency Selection (DFS). In the US and in some other countries, some channels in the 5GHz band are used by other systems, such as radar. DFS can prevent this interference by removing the channels dynamically.

In CBW firmware version 10.8.1.0, a label has been added to 5GHz channels which support DFS. This makes it easy for you to identify such channels and configure the settings. In the US, the DFS channels are 52-144. As a best practice, you can avoid using DFS channels if possible.

DFS Channel Identification

Step 1

Login to your Primary CBW AP.

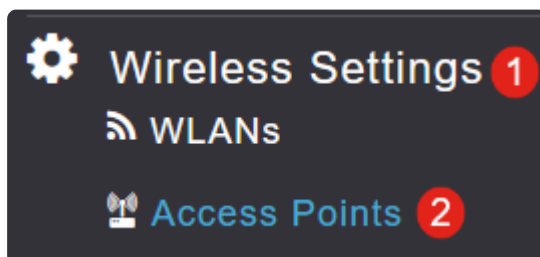

Cisco Business Wireless Access Point

Welcome! Please click the login button to enter your user name and password

Step 2

Navigate to **Wireless Settings > Access Points**.

Step 3

Click on the **pencil icon** next to the access point you want to edit.

Access Points

Access Points

4

Search

Refresh

Action	Manage	Type	AP Role	Location
		Primary Capable	Root	default location
		Primary Capable	Root	default location
		Primary Capable	Root	default location
		Mesh Extender	Mesh	default location

Step 4

Click **Yes** in the pop-up window to continue.

Step 5

Navigate to **Radio 2 (5GHz)** tab.

CBW140-1(Active Primary AP)

General Primary AP Radio 1 (2.4 GHz) **Radio 2 (5GHz)** Mesh

Step 6

Click the **Channel** drop-down menu to view the channels that support DFS.

CBW140-1(Active Primary AP)

General Primary AP Radio 1 (2.4 GHz) **Radio 2 (5GHz)** Mesh

Status Enabled

Disabling radio may strand Mesh APs connectivity

5GHz
802.11a/n/ac

Channel	Automatic
Channel Width	44
Transmit Power (%)	48
Interferer Detection	52 (DFS)
	56 (DFS)
	60 (DFS)
	64 (DFS)
	100 (DFS)
	104 (DFS)

Apply

Cancel

Note:

In the US, channels 52 – 144 support DFS as indicated by the label **DFS** within parenthesis next to the channel number.

Conclusion

Thatâ€™s all there is to it. Now you know how to identify the channels that support DFS in your CBW AP.
