Overlap fragment means offset of one fragment overlaps the offset of another fragment. For example if first fragment's offset is 0 and length is 800 then the second fragments offset must be 800. If second fragment's offset is less than 800 that means the second fragment overlaps the first fragment. | qfp-ipucast | "This could possibly be an attack configure a static ACL to prevent " "further overlap fragments from the sender" |

If the defect is shown on Standby Supervisor try to reset the Standby. If the defect persists there may be damage to the hardware keystore chip please take appropriate action. In the meantime you can configure the switch to use software keystore emulation. After you have enabled software keystore emulation please re-configure CTS credentials to populate the software keystore. | - | - |

| [illegible] | 4-Warning | The LISP database-mapping platform limit of [dec] has been reached. Current count is [dec]. | This message is a warning that the local database size has hit the platform limit. The limit may be reached during normal operation if a xTR discovers a large number of dynamic hosts in the EID-prefix ranges enabled for dynamic learning. If the dynamic local database size limit is reached new hosts will not be discovered. It is worth noting that it is normal for the local database to have a limit for dynamic entries for example to set an upper limit on the amount of memory required. | Facility-Severity-Mnemonic | Severity-Meaning | Message | Message-Explanation | Component | Recommended-Action |
|---|---|---|---|---|---|
| | | | The ACL specified in the message text associates the key chain specified\n\ in the message text with a set of RSVP neighbors. RSVP uses the specified\n\ key chain to authenticate each RSVP message exchanged with that set of\n\ RSVP neighbors after the association is configured. Subsequently the\n\ specified ACL has been reconfigured such that the key chain association\n\ is no longer valid for one or more RSVP neighbors in the set. This causes\n\ RSVP to search the configuration for another suitable key chain to use\n\ with those neighbors. If no such key chain is found RSVP will no longer\n\ be able to provide authentication for messages exchanged with those RSVP\n\ neighbors. This causes RSVP to discard RSVP messages from that set of\n\ neighbors. Because this may ultimately lead to loss of RSVP functionality\n\ with those neighbors RSVP generates this system message. | | |

| Facility-Severity-Mnemonic | Severity-Meaning | Message | Message-Explanation | Component | Recommended-Action |
|---|---|---|---|---|---|
| | | | This system\n\ message may also be generated if the ACL is subsequently changed so that\n\ it re-associates RSVP neighbors with the specified key chain. If RSVP is\n\ not using another key chain for the set of RSVP neighbors specified by\n\ the ACL RSVP will begin using the specified key chain to exchange\n\ authenticated RSVP messages with that set of RSVP neighbors potentially\n\ restoring RSVP functionality with those neighbors. | | |

| SRVGRP-3-SRVGRP_DELETE_ERROR | 3-Error | An error is detected when deleting Service Group %u [chars] | An error was detected when deleting a service group. The failure most likely occurred because of the group is not configured or a software error. | ether-infra | "If the group is configured please copy the error message exactly " "as it appears and report it to your technical support " "representative." |
| SRVGRP-3-SRVGRP_INTERNAL_ERROR | 3-Error | Service Group detected an internal error [chars] %u | An internal error was detected by the service group software. | ether-infra | "Please copy the error message exactly as it appears and report it " "to your technical support representative." |
| SRVGRP-3-SRVGRP_IPC_TRANSMIT_FAILED | 3-Error | Service Group IPC message transmission failure [chars] | An error was detected when transmitting an IPC message between route processor and linecard. The failure most likely occurred because of a software error. The message output identifies the type of error that occurred. | ether-infra | "This could be a transient error. If this error persists " "copy the error message exactly as it appears and report it " "to your technical support representative." |
| SRV_MODULE-0-INIT_FAILURE | 0-Emergency | Unit [chars] - failed to create data structures used for module-access | The CSU/DSU driver failed to allocate memory for its data structures.\n\ This is a catastrophic error. The system has crashed. | low-serial | "Copy the error message exactly as it appears and report it to your\n\ technical support representative." |
| SRV_MODULE-0-INIT_FAILURE | 0-Emergency | Unit [chars] - failed to download properly | The CSU/DSU driver detected a checksum error while downloading WIC firmware. | low-serial | "Copy the error message exactly as it appears and report it to your\n\ technical support representative." |

|---|---|---|---|---|---|
| SERVICE_MODULE-3-LOOPDOWNFAILED | 3-Error | Unit [chars] - WARNING - Loopdown of remote unit failed | A remote CSU is looping pings/test patterns back to the system. This\n\ error could be triggered if the user disabled loopbacks on the remote\n\ CSU after placing the remote CSU into remote loopback. | low-serial | "Execute a clear command on the remote CSU." |
| SERVICE_MODULE-4-ACCESSERROR | 4-Warning | Unit [chars] reports register access error - [chars] | This message indicates that the T1 module supplied a bad register\n\ address. It might be due to having a new version of the module\n\ operating with an old Cisco IOS software image. | low-serial | "Update the Cisco IOS software image on the system. If this does not\n\ solve the problem copy the error message exactly as it appears and\n\ report it to your technical support representative." |
| SERVICE_MODULE-4-ALARMFAILURE | 4-Warning | Unit [chars] - Could not access alarm status - disabling alarm processing | The system issued an alarm interrupt but could not read the alarm\n\ status register from the module. This caused the system to disable\n\ alarm processing. | low-serial | "Copy the error message exactly as it appears and report it to your\n\ technical support representative." |
| SERVICE_MODULE-4-BADTYPE | 4-Warning | Unit [chars] - reports incompatible module type [dec] against router hw detect | A register read request returned an identity for a module which was\n\ not the same as the identity reported by the router hardware pinout. | low-serial | "Copy the error message exactly as it appears and report it to your\n\ technical support representative." |
| SERVICE_MODULE-4-COMMANDFAILED | 4-Warning | Unit [chars] not ready/responding after register [dec] access command issued | The system did not receive a ready signal within the allotted time\n\ after writing to the command register. | low-serial | "Copy the error message exactly as it appears and report it to your\n\ technical support representative." |

|---|---|---|---|---|---|
| SERVICE_MODULE-4-BYTETIMEOUT | 4-Warning | Unit [chars] - timed out while [chars] byte [dec] of [dec] length register [dec] | The module took more than two seconds to respond between bytes. | low-serial | "Copy the error message exactly as it appears and report it to your\n\ technical support representative." |
| SERVICE_MODULE-4-NOTREADY | 4-Warning | Unit [chars] not ready for register access | The module was waiting for a ready status before executing a\n\ read/write request. The system reported a not ready status for 5\n\ seconds. This caused the module to terminate the read/write request. | low-serial | "Copy the error message exactly as it appears and report it to your\n\ technical support representative." |
| SERVICE_MODULE-4-OLDIMAGE | 4-Warning | Unit [chars] - router image older than module version - access errors may be seen | The Cisco IOS software image does not recognize the PROM software\n\ version number on the module. The system displays this message if the\n\ PROM has been upgraded to a new version but the Cisco IOS software\n\ image has not been upgraded. | low-serial | "Upgrade the Cisco IOS software image." |
| SERVICE_MODULE-4-REPEATEDRESET | 4-Warning | Unit [chars] - giving up after [dec] repeated resets couldn't bring module up again | The software issued several clear service-module requests to the\n\ module. The module did not respond to these requests. | low-serial | "Copy the error message exactly as it appears and report it to your\n\ technical support representative." |

| Facility-Severity-Mnemonic | Severity-Meaning | Message | Message-Explanation | Component | Recommended-Action |
|---|---|---|---|---|---|
| SYSMGR_MODULE_REQUEST_OVERLOAD | 4-Warning | Unit [chars] - module request overload - lock access timeout | The system employs a Cisco IOS scheduler semaphore object to ensure\n\ mutually exclusive access across software threads to the CSU/DSU. This\n\ message indicates that a thread had to wait for more than 5 seconds on\n\ this semaphore. | low-serial | "Copy the error message exactly as it appears and report it to your\n\ technical support representative." |
| SYSMGR_MODULE_RESET_FAILURE | 4-Warning | Unit [chars] - failed to create reset process - non-default module configuration may be lost | To execute a reset the Cisco IOS software needs to initiate a\n\ separate process. The Cisco IOS software did not have sufficient memory\n\ to create this separate process. The module came up in an initialized\n\ state with the default configuration. The user defined configuration\n\ may have been lost. | low-serial | "Copy the error message exactly as it appears and report it to your\n\ technical support representative." |
| SYSMGR_MODULE_UNKNOWN_ALARM | 4-Warning | Unit [chars] reports unknown network alarms - alarm status reg = [hec] | A recent version of the module operating with an old Cisco IOS\n\ software image did not recognize an alarm condition. | low-serial | "Update the Cisco IOS software image on the system. If this does not\n\ solve the problem copy the error message exactly as it appears and\n\ report it to your technical support representative." |
