

# **Recursive Static Route**

The Recursive Static Route feature enables you to install a recursive static route into the Routing Information Base (RIB) even if the next-hop address of the static route or the destination network itself is already available in the RIB as part of a previously learned route. This module explains recursive static routes and how to configure the Recursive Static Route feature.

## Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see **Bug Search** Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to https://cfnng.cisco.com/. An account on Cisco.com is not required.

# **Restrictions for Recursive Static Route**

When recursive static routes are enabled using route maps, only one route map can be entered per virtual routing and forwarding (VRF) instance or topology. If a second route map is entered, the new map will overwrite the previous one.

## **Information About Recursive Static Route**

# **How to Install Recursive Static Route**

### **Installing Recursive Static Routes in a VRF**

Perform these steps to install recursive static routes in a specific virtual routing and forwarding (VRF) instance. You can configure the recursive-static-route functionality on any number of VRFs. Installing recursive static routes in specific VRFs allows you to retain the default RIB behavior (of removing recursive static routes) for the rest of the network.

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- **3.** vrf definition vrf-name
- **4. rd** *route-distinguisher*
- 5. address-family {ipv4 | ipv6}
- 6. exit
- 7. exit
- 8. ip route [vrf vrf-name] prefix mask ip-address
- 9. ip route static install-routes-recurse-via-nexthop [vrf vrf-name]
- 10. end
- **11**. show running-config | include install
- **12.** show ip route vrf vrf-name

#### **DETAILED STEPS**

	Command or Action	Purpose	
Step 1	enable	Enables privileged EXEC mode.	
	Example:	• Enter your password if prompted.	
	Device> enable		
Step 2	configure terminal	Enters global configuration mode.	
	Example:		
	Device# configure terminal		
Step 3	vrf definition vrf-name	Creates a virtual routing and forwarding (VRF) routing	
	Example:	table instance and enters VRF configuration mode.	
	Device(config)# vrf definition vrf1		
Step 4	rd route-distinguisher	Specifies a route distinguisher for a VRF instance.	
	Example:		

	Command or Action	Purpose
	Device(config-vrf)# rd 100:1	
Step 5	<pre>address-family {ipv4   ipv6} Example: Device(config-vrf)# address-family ipv4</pre>	Enters VRF address family configuration mode to specify an IPv4 or IPv6 address family for a VRF.
Step 6	exit Example: Device(config-vrf-af)# exit	Exits VRF address family configuration mode.
Step 7	<pre>exit Example: Device(config-vrf)# exit</pre>	Exits VRF configuration mode.
Step 8	<pre>ip route [vrf vrf-name] prefix mask ip-address Example: Device(config)# ip route vrf vrf1 10.0.2.0 255.255.255.0 10.0.1.1</pre>	Configures a static route for a specific VRF instance.
Step 9	<pre>ip route static install-routes-recurse-via-nexthop [vrf vrf-name] Example: Device(config)# ip route static install-routes-recurse-via-nexthop vrf vrf1</pre>	Enables recursive static routes to be installed in the RIB of a specific VRF instance.
Step 10	end Example: Device(config)# end	Exits global configuration mode and returns to privileged EXEC mode.
Step 11	<pre>show running-config   include install Example: Device# show running-config   inc install</pre>	Displays all recursive static route configurations.
Step 12	<pre>show ip route vrf vrf-name Example: Device# show ip route vrf vrf1</pre>	Displays the IP routing table associated with a specific VRF.

### **Installing Recursive Static Routes Using a Route Map**

Perform this task to install recursive static routes in a virtual routing and forwarding (VRF) instance defined by a route map. You can perform this task if you want to install recursive static routes for only a certain range of networks. If the **route-map** keyword is used without the **vrf** keyword, recursive static routes defined by the route map will be applicable for the global VRF or topology.

#### **SUMMARY STEPS**

- 1. enable
- **2**. configure terminal
- **3.** vrf definition vrf-name
- 4. rd route-distinguisher
- 5. address-family {ipv4 | ipv6}
- 6. exit
- 7. exit
- 8. ip route [vrf vrf-name] prefix mask ip-address
- 9. access-list access-list-number permit source [source-wildcard]
- **10.** route-map *map-tag*
- **11.** match ip address access-list-number
- **12.** exit
- **13**. **ip route static install-routes-recurse-via-nexthop** [**vrf** *vrf-name*] [**route-map** *map-name*]
- 14. end
- 15. show running-config | include install
- **16.** show ip route vrf *vrf-name*

#### **DETAILED STEPS**

Command or Action	Purpose	
enable	Enables privileged EXEC mode.	
Example:	• Enter your password if prompted.	
Device> enable		
configure terminal	Enters global configuration mode.	
Example:		
Device# configure terminal		
vrf definition vrf-name	Creates a virtual routing and forwarding (VRF) routing	
Example:	table instance and enters VRF configuration mode.	
<pre>Device(config)# vrf definition vrf1</pre>		
rd route-distinguisher	Specifies a route distinguisher for a VRF instance.	
Example:		
Device(config-vrf)# rd 100:1		
address-family {ipv4   ipv6}	Enters VRF address family configuration mode to specify an IPv4 or an IPv6 address-family type for a VRF.	
Example:		
<pre>Device(config-vrf)# address-family ipv4</pre>		
exit	Exits VRF address family configuration mode.	
Example:		
<pre>Device(config-vrf-af)# exit</pre>		
	enable         Example:         Device> enable         configure terminal         Example:         Device# configure terminal         vrf definition vrf-name         Example:         Device (config) # vrf definition vrf1         rd route-distinguisher         Example:         Device (config-vrf) # rd 100:1         address-family {ipv4   ipv6}         Example:         Device (config-vrf) # address-family ipv4         exit         Example:	

	Command or Action	Purpose
Step 7	exit	Exits VRF configuration mode.
	Example:	
	<pre>Device(config-vrf)# exit</pre>	
Step 8	<b>ip route</b> [ <b>vrf</b> vrf-name] prefix mask ip-address	Configures a static route for a specific VRF instance.
	Example:	
	Device(config)# ip route vrf vrf1 10.0.2.0 255.255.255.0 10.0.1.1	
Step 9	access-list access-list-number permit source [source-wildcard]	Defines a standard access list permitting addresses that need to be translated.
	Example:	
	Device(config)# access-list 10 permit 10.0.2.0 255.255.255.0	
Step 10	route-map map-tag	Defines a route map to control route redistribution and
	Example:	enters route-map configuration mode.
	<pre>Device(config)# route-map map1</pre>	
Step 11	match ip address access-list-number	Matches routes that have a destination network address
	Example:	that is permitted by a standard or extended access list.
	<pre>Device(config-route-map)# match ip address 10</pre>	
Step 12	exit	Exits route-map configuration mode.
	Example:	
	<pre>Device(config-route-map)# exit</pre>	
Step 13	<b>ip route static install-routes-recurse-via-nexthop</b> [vrf vrf-name] [route-map map-name]	Enables installation of recursive static routes defined by a route map into the RIB of a specific VRF.
	Example:	
	Device(config)# ip route static install-routes-recurse-via-nexthop vrf vrf1 route-map map1	
Step 14	end	Exits global configuration mode and returns to privileged
	Example:	EXEC mode.
	Device(config)# end	
Step 15	show running-config   include install	Displays all recursive static route configurations.
	Example:	
	Device# show running-config   inc install	
Step 16	show ip route vrf vrf-name	Displays the IP routing table associated with a specific
	Example:	VRF.
	Device# show ip route vrf vrf1	

## **Configuration Examples for Recursive Static Route**

### Example: Installing Recursive Static Routes in a VRF

The following example shows how to install recursive static routes into a specific virtual routing and forwarding instance. By using the **vrf** keyword, you can ensure that recursive static routes are installed in the Routing Information Base (RIB) of only the specified VRF. The rest of the network retains the default behavior of not installing recursive static routes in the RIB. This example is based on the assumption that a 10.0.0.0/8 route is already installed dynamically or statically in the RIB of vrf1.

```
Device> enable
Device# configure terminal
Device(config)# vrf definition vrf1
Device(config-vrf)# rd 1:100
Device(config-vrf)# address-family ipv4
Device(config-vrf-af)# exit
Device(config-vrf)# exit
Device(config)# ip route vrf vrf1 10.0.2.0 255.255.255.0 10.0.1.1
Device(config)# ip route static install-routes-recurse-via-nexthop vrf vrf1
Device(config)# end
```

### Example: Installing Recursive Static Routes using a Route Map

You can use the **route-map** keyword to install recursive static routes defined by the route map into the Routing Information Base (RIB). You can also specify a route map for a specific virtual routing and forwarding (VRF) instance to ensure that the route map is applied to only the specified VRF. In the example given below, a route map is specified for a specific VRF. This example is based on the assumption that a 10.0.0.0/8 route is already installed statically or dynamically in the RIB of vrf1.

```
Device> enable
Device# configure terminal
Device(config)# vrf definition vrf1
Device(config-vrf)# rd 100:2
Device(config-vrf)# address-family ipv4
Device(config-vrf-af)# exit
Device(config-vrf)# exit
Device(config)# access-list 10 permit 10.0.2.0 255.255.255.0
Device(config)# route-map map1
Device(config-route-map)# match ip address 10
Device(config)# ip route static install-routes-recurse-via-nexthop vrf vrf1 route-map map1
Device(config)# ip route vrf vrf1 10.0.2.0 255.255.255.0 10.0.1.1
Device(config)# ip route vrf vrf1 10.0.3.0 255.255.255.0 10.0.1.1
```

In the example above, route 10.0.2.0 255.255.0 10.0.1.1 will be installed in the RIB, but the route 10.0.3.0 255. 255.255.0 10.0.1.1 will not be installed in the RIB because this route does not match the network defined in the route map.

# **Feature Information for Recursive Static Routes**

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Feature Name	Releases	Feature Information
Recursive Static Routes	Cisco IOS XE Release 3.9S	<ul> <li>The Recursive Static Route feature enables you to install a recursive static route into the Routing Information Base (RIB) even if the next-hop address of the static route or the destination network itself is already available in the RIB as part of a previously learned route.</li> <li>The following command was introduced: ip route static install-recurse-via-nexthop.</li> </ul>
