

## 3-Level User-Defined Queuing Policy Support

3-level user-defined queuing policy support feature allows 3 level policy with topmost layer user defined classes to support and enhance the flexibility of the traffic class in the hierarchy.

### Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <https://cfng.cisco.com/>. An account on Cisco.com is not required.

### Restrictions for 3-Level User-Defined Queuing Policy Support

- User-defined class in top layer of a 3-level hierarchical queuing policy is not supported on port-channel main interface.

User-defined class at the topmost layer is not supported on any logical target. Logical targets include service-group, tunnel, session, dealer interface, etc.

# Information About 3-Level User-Defined Queuing Policy Support

## Three-Parameter Scheduler in Hierarchical QoS

Classic IOS uses max value (shape) and min value (bandwidth) to define each scheduler node behavior when traffic congestion happens, or 2 parameter scheduler.

ASR 1000 utilize a different 3-parameter scheduler: max value (shape), min value (bandwidth) and excess value (bandwidth remaining) which is to adjust sharing of excess bandwidth. In a 2-parameter scheduler, the excess bandwidth are shared by the classes proportionally (same as the bandwidth ratio for each class); But in a 3-parameter scheduler, the excess bandwidth are shared equally by default after satisfying minimum bandwidth requirements, but it can be tuned when using 'bandwidth remaining' command. ISR 4000 platforms share the same design.

In Classic IOS, it is permitted to configure bandwidth at the leaf and intermediate nodes of a hierarchy. In IOS XE, bandwidth (bandwidth rate, or bandwidth percent) is only allowed at the leaf node of a hierarchy. In other words, bandwidth (bandwidth rate, or bandwidth percent) class cannot be attached with a child policy-map containing queuing features. This is a restriction in software and may be lifted in the future.

For current deployments where a Classic IOS QoS policy-map is being moved to a IOS XE platform, the best option is to convert the intermediate node bandwidth commands to bandwidth remaining commands. bandwidth remaining percent or bandwidth remaining ratio commands could be used to achieve very similar behavior.

## Guidelines for Hierarchical Policies

In general, three levels of hierarchy are supported on ASR 1000. Hierarchical policy can be applied on most of the physical and logical targets that supports QoS.

If you mix queuing and non-queuing policies together in a hierarchy, the non-queuing policy-maps must be at the leaf level of the policy-map (for example, child policy beneath grandparent and parent queuing policies).

If the policy-map is applied to a virtual interface (such as a tunnel or session), there may be additional restrictions limiting the hierarchy to two levels of queuing, depending on the configuration.

- Queuing features: shape, bandwidth, bandwidth remaining, random-detect, fair-queue, queue limit, and priority.
- Non-queuing features: police, mark, and account.

Hierarchy Feature Combination	Ingress Policy Support	Egress Policy Support
One-level Non-queuing Policy	Yes	Yes
Two-level Non-queuing Policy (including color-aware police)	Yes	Yes
Three-level Non-queuing Policy (including hierarchical color-aware police)	Yes	Yes
One-level Queuing Policy	-	Yes

Hierarchy Feature Combination	Ingress Policy Support	Egress Policy Support
Two-level Queuing Policy	-	Yes
Three-level Queuing Policy	-	Yes
Two-level Mixed Policy, Queuing feature at parent level	-	Yes
Three-level Mixed Policy, Queuing feature at grandparent level, or at grandparent + parent level	-	Yes

## User-defined Traffic Class in Top-level Policy of HQoS

Any traffic class configured explicitly by 'class-map' is called 'user-defined class'. Class-default classes need not be configured, and can be used in any policy to match all the traffic that does not belong to user-defined classes.

In a three-level queuing policy-map, only class-default class can be configured in the highest level before Release Polaris 16.3. From Polaris 16.3, user-defined class in top layer of a 3-level hierarchical policy is supported.

## How to Configure 3-Level User-Defined Queuing Policy Support

### Configuring 3-level Hierarchical QoS Policy

```
enable
configure terminal
class-map vlan10
  match vlan10
class-map vlan20
  match vlan 20
class-map ef
  match dscp ef
policy-map child
  class ef
    priority
    police 1000000
  class class-default
    police 3000000
policy-map parent
  class vlan10
    shape average 4000000
    service-policy child
  class vlan20
    shape average 8000000
    service-policy child
policy-map grand-parent
  class class-default
    shape average 10000000
  service-policy parent
end
```

## Configuring User-Defined Traffic Class in Top Level Policy

```

ip access-list extended PEER
permit ip host 200.0.0.2 any

class-map match-all ef
match dscp ef
class-map match-all vlan100
match vlan 100
class-map match-all vlan101
match vlan 101
class-map match-all PEER
match access-group name PEER

policy-map child
class ef
bandwidth remaining percent 15
class class-default
fair-queue
queue-limit 512 packets
bandwidth remaining percent 85

policy-map parent
class PEER
shape average 8000000
bandwidth remaining percent 10
service-policy child
class class-default
shape average 8000000

policy-map grandparent
class vlan100
shape average 8000000
bandwidth remaining ratio 1000
service-policy parent
class vlan101
shape average 8000000
bandwidth remaining ratio 1000
service-policy parent
class class-default
bandwidth remaining ratio 1
shape average 10000000
end

```

## Feature Information for 3-Level User-Defined Queuing Policy Support

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.

**Table 1: Feature Information for 3-Level User-Defined Queuing Policy Support**

Feature Name	Releases	Feature Information
3-Level User-Defined Queuing Policy Support	Cisco IOS XE Denali 16.3.1.	This feature is introduced on Cisco ASR 1000, ISR4000, CSR1000v platforms. User-defined class can be configured in top layer of a 3-level hierarchical policy.
