- [Verify Negotiation of an Audio Codec from a List of Codecs, on page 6](#)

Overview

This chapter describes how to negotiate an audio codec from a list of codec associated with a preference. This chapter also describes how to disable codec filtering by configuring Cisco Unified Border Element (CUBE) to send an outgoing offer with all configured audio codecs in the list assuming that the dspfarm supports all these codecs.

Note H.323 protocol is no longer supported from Cisco IOS XE Bengaluru 17.6.1a onwards. Consider using SIP for multimedia applications.

Feature Information

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Table 1: Feature Information for Negotiation of an Audio Codec from a List of Codecs on Each Leg of a SIP-to-SIP Call on the Cisco Unified Border Element

Feature Name	Releases	Feature Information
Negotiation of an Audio Codec from a List of Codecs on Each Leg of a SIP-to-SIP Call on the CUBE	Baseline Functionality	The following command was introduced or modified: voice-class codec (dial-peer)

Codecs Configured Using Preference Lists

The list of codecs supported in a SIP-to-SIP call can be configured with a Codec Preference List on each SIP call leg with following properties:

- Incoming and outgoing dial-peers can be configured with different preference lists.
- Midcall codec changes for supplementary services are supported with preference lists. Transcoder resources are dynamically inserted or deleted when there is a codec or RTP-NTE to in-band DTMF interworking required.
- Reinvite-based supplementary services that are invoked from the Cisco Unified Communications Manager (CUCM), like call hold, call resume, Music On Hold (MOH), call transfer, and call forward are supported with preference lists.
- T.38 fax and fax passthrough switchover with preference lists are supported.
- Reinvite-based call hold and call resume for the Secure Real-Time Transfer protocol (SRTP) and Real-Time Transport Protocol (RTP) interworking on CUBE is supported with preference lists.
- High availability is supported for calls that use codecs with preference lists. But calls requiring the transcoder to be invoked are not checkpointed. During midcall renegotiation, if the call releases the transcoder, then the call is checkpointed.

Restrictions

For All Calls (SIP-to-SIP calls)

- Video codecs are not supported with preference lists.
- Multiple audio streams are not supported.
- Codec re-packetization feature is not supported when preference lists are configured.

Note

Codec preference in the voice class codec on the outgoing call leg is not followed when the same codecs are available in the respective incoming invite with SDP with different codec preference. Cube prioritizes and follows the incoming invite with SDP codec preference when compared to the voice class codec preference on the outgoing dial-peer leg.

Configure Audio Codecs Using a Codec Voice Class and Preference Lists

Preferences can be used to determine which codecs will be selected over others.

A codec voice class is a construct within which a codec preference order can be defined. A codec voice class can then be applied to a dial peer, which then follows the preference order defined in the codec voice class.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **voice class codec tag**
4. Do the following for each audio codec you want to configure in the voice class:
 - **codec preference value codec-type[profile profile-tag]**
 - **codec preference value codec-type[bytes payload-size fixed-bytes]**
 - **codec preference value isac [mode {adaptive | independent} [bit-rate value framesize { 30 | 60 } [fixed]]**
 - **codec preference value ilbc [mode frame-size [bytes payload-size]]**
 - **codec preference value mp4-latm [profile tag]**
5. **exit**
6. **dial-peer voice number voip**
7. **voice-class codec tag**
8. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Device> enable	Enables privileged EXEC mode. • Enter your password if prompted.
Step 2	configure terminal Example: Device> configure terminal	Enters global configuration mode.
Step 3	voice class codec tag Example: Device(config)# voice class codec 10	Enters voice-class configuration mode for the specified codec voice class.
Step 4	Do the following for each audio codec you want to configure in the voice class: <ul style="list-style-type: none"> • codec preference value codec-type[profile profile-tag] 	Configure a codec within the voice class and specifies a preference for the codec. This becomes part of a preference list

Disable Codec Filtering

	Command or Action	Purpose
	<ul style="list-style-type: none"> • codec preference value codec-type[bytes payload-size fixed-bytes] • codec preference value isac [mode {adaptive independent} [bit-rate value framesize { 30 60 } [fixed]] • codec preference value ilbc [mode frame-size [bytes payload-size]] • codec preference value mp4-latm [profile tag] 	
Step 5	exit Example: Device(config-class)# exit	Exits the current mode. • Enter your password if prompted.
Step 6	dial-peer voice number voip Example: Device(config)# dial-peer voice 1 voip	Enters dial peer configuration mode for the specified VoIP dial peer.
Step 7	voice-class codec tag Example: Device(config-dial-peer)# voice-class codec 10	Applies the previously configured voice class and associated codecs to a dial peer.
Step 8	end Example: Device(config-dial-peer)# end	Returns to privileged EXEC mode.

Disable Codec Filtering

CUBE is configured to filter common codecs for the subsets, by default. The filtered codecs are sent in the outgoing offer. You can configure the CUBE to offer all the codecs configured on an outbound leg instead of offering only the filtered codecs.

Note This configuration is applicable only for early offer calls from the CUBE. For delayed offer calls, by default all codecs are offered irrespective of this configuration.

Perform this task to disable codec filtering and allow all the codecs configured on an outbound leg.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **dial-peer voice tag voip**
4. **voice-class codec tag offer-all**
5. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Device> enable	Enables privileged EXEC mode. • Enter your password if prompted.
Step 2	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 3	dial-peer voice tag voip Example: Device(config)# dial-peer voice 10 voip	Enters dial peer voice configuration mode.
Step 4	voice-class codec tag offer-all Example: Device(config-dial-peer)# voice-class codec 10 offer-all	Adds all the configured voice class codec to the outgoing offer from the CUBE.
Step 5	end Example: Device(config-dial-peer)# end	Exits the dial peer voice configuration mode.

Troubleshoot Negotiation of an Audio Codec from a List of Codecs

Use the following commands to debug any errors that you may encounter when you configure the Negotiation of an Audio Codec from a List of Codecs on Each Leg of a SIP-to-SIP Call on the CUBE feature:

- **debug ccsip all**
- **debug voip ccapi input**
- **debug voip rtp session**

For DSP-related debugs, use the following commands:

- **debug voip dsmp all**
- **debug voip dsmp rtp both payload all**
- **debug voip ipipgw**

Verify Negotiation of an Audio Codec from a List of Codecs

Perform this task to display information to verify Negotiation of an Audio Codec from a List of Codecs on Each Leg of a SIP-to-SIP Call on the Cisco Unified Border Element configuration. These **show** commands need not be entered in any specific order.

SUMMARY STEPS

1. **enable**
2. **show call active voice brief**
3. **show voip rtp connections**
4. **show dspfarm dsp active**

DETAILED STEPS

Step 1 **enable**

Enables privileged EXEC mode.

Step 2 **show call active voice brief**

Displays a truncated version of call information for voice calls in progress.

Example:

```
Device# show call active voice brief
<ID>: <CallID> <start>ms.<index> +<connect> pid:<peer_id> <dir> <addr> <state>
    dur hh:mm:ss tx:<packets>/<bytes> rx:<packets>/<bytes>

Total call-legs: 4

```

Step 3 show voip rtp connections

Displays Real-Time Transport Protocol (RTP) connections.

Example:

```

Device# show voip rtp connections
VoIP RTP active connections :
No. CallId      dstCallId    LocalRTP   RmtRTP      LocalIP           RemoteIP
1     11          12          16662      19304      192.0.2.1

192.0.2.3
3     13          14          18422      2000       192.0.2.4
9.44.26.3
4     15          14          16576      2000       192.0.2.6
192.0.2.5
Found 4 active RTP connections

```

Step 4 show dspfarm dsp active

Displays active DSP information about the DSP farm service.

Example:

```

Device# show dspfarm dsp active
SLOT DSP VERSION STATUS CHNL USE TYPE      RSC_ID BRIDGE_ID PKTS_TXED PKTS_RXED
0    1  27.0.201 UP     1  USED  xcode    1      0x9        5        8
0    1  27.0.201 UP     1  USED  xcode    1      0x8      2558      17
Total number of DSPFARM DSP channel(s) 1

```

Verify Negotiation of an Audio Codec from a List of Codecs
