

URPF Commands

This module describes the commands used in enabling the Unicast Reverse Path Forwarding (uRPF).

For detailed information about FIPS configuration tasks, and examples, see the *Configuring FIPS Mode* chapter in the *System Security Configuration Guide for Cisco ASR 9000 Series Routers* and *System Security Configuration Guide for Cisco 8000 Series Routers*.

- [hw-module profile cef unipath-surpf, on page 2](#)
- [ipv4/ipv6 verify unicast source reachable-via, on page 3](#)

hw-module profile cef unipath-surpf

hw-module profile cef unipath-surpf

To configure uRPF on strict mode, use the **hw-module profile cef unipath-surpf** command in the Global configuration mode.

hw-module profile cef unipath-surpf enable

Syntax Description	enable		Enables uRPF in strict mode.
Command Default	Strict mode in uRPF is disabled.		
Command Modes	Global configuration		
Command History	Release	Modification	
	Release 7.9.1	This command was introduced.	
Usage Guidelines	<p>You must configure both IPv4 and IPv6 commands to enable uRPF in strict mode.</p> <p>You must reload the router after using the hw-module profile cef unipath-surpf command.</p> <p>To disable the strict mode in uRPF use the no form of the hw-module profile cef unipath-surpf command.</p>		
Task ID	Task ID	Operation	
	acl	read, write	
	network	read, write	
	ipv4	read, write	
	ipv6	read, write	

Example

This example shows how to configure uRPF in strict mode on the router:

```
Router# configure
Router(config)# hw-module profile cef unipath-surpf enable
Router(config-if)# commit
```

ipv4/ipv6 verify unicast source reachable-via

To configure uRPF, use the **ipv4 verify unicast source reachable-via** command in the Interface configuration mode.

```
{ ipv4 | ipv6 } verify unicast source reachable-via { any | rx } [allow-default]
```

Syntax Description	any (uRPF Loose Mode) Configures a source that is reachable any interface. rx (uRPF Strict Mode) Configures a source that is reachable only on the interface that is same the interface used to transmit the back to source. allow-default Enables the matching of default routes.										
Command Default	None										
Command Modes	Interface configuration										
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Release 7.9.1</td><td>The rx keyword was introduced.</td></tr> <tr> <td>Release 7.3.15</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Release 7.9.1	The rx keyword was introduced.	Release 7.3.15	This command was introduced.				
Release	Modification										
Release 7.9.1	The rx keyword was introduced.										
Release 7.3.15	This command was introduced.										
Usage Guidelines	You must configure both IPv4 and IPv6 commands to enable uRPF.										
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th><th>Operation</th></tr> </thead> <tbody> <tr> <td>acl</td><td>read, write</td></tr> <tr> <td>network</td><td>read, write</td></tr> <tr> <td>ipv4</td><td>read, write</td></tr> <tr> <td>ipv6</td><td>read, write</td></tr> </tbody> </table>	Task ID	Operation	acl	read, write	network	read, write	ipv4	read, write	ipv6	read, write
Task ID	Operation										
acl	read, write										
network	read, write										
ipv4	read, write										
ipv6	read, write										

Example

This example shows how to configure uRPF in loose mode on the router along with the default address.:.

ipv4/ipv6 verify unicast source reachable-via

```
Router# configure
Router(config)# interface hundredGigE 0/0/0/0
Router(config-if)# ipv4 verify unicast source reachable-via any allow-default
Router(config-if)# ipv6 verify unicast source reachable-via any allow-default
Router(config-if)# commit
```

This example shows how to configure uRPF in strict mode on the router along with the default address.:

```
Router# configure
Router(config)# hw-module profile cef unipath-surpf enable
Router(config)# interface hundredGigE 0/0/0/0
Router(config-if)# ipv4 verify unicast source reachable-via rx allow-default
Router(config-if)# ipv6 verify unicast source reachable-via rx allow-default
Router(config-if)# commit
```
