

# MACsec Encryption Commands

This module describes the commands used to configure MACsec encryption.

For detailed information about MACsec concepts, configuration tasks, and examples, see the *Configuring MACsec* chapter in the *System Security Configuration Guide for Cisco ASR 9000 Series Routers* and *System Security Configuration Guide for Cisco 8000 Series Routers*.

# allow (macsec)

To specify MACsec policy exception to allow packets in clear text, use **allow** command under MACsec policy configuration mode. To remove this configuration, use the **no** form of this command.

**allow** { **lACP-in-clear** | **pause-frames-in-clear** | **lldp-in-clear** }

Syntax Description	Command	Description
	<b>lACP-in-clear</b>	Allows Link Aggregation Control Plane protocol (LACP) packets in clear text.
	<b>pause-frames-in-clear</b>	Allows Ethernet PAUSE frame packets in clear text.
	<b>lldp-in-clear</b>	Allows Link Layer Discovery Protocol (LLDP) packets in clear text.

**Command Default** None

**Command Modes** MACsec policy configuration mode

Command History	Release	Modification
	Release 7.11.1	This command was modified to include the <b>lldp-in-clear</b> option.
	Release 7.3.15	This command was modified to include the <b>pause-frames-in-clear</b> option.
	Release 7.3.1	This command was introduced.

**Usage Guidelines** The **policy-exception lACP-in-clear** command under MACsec policy configuration mode is deprecated. Hence, it is recommended to use the **allow lACP-in-clear** command instead, to allow LACP packets in clear-text format.

Task ID	Task ID	Operations
	system	read, write

## Examples

This example shows how to create a MACsec policy exception to allow LACP, LLDP, and Ethernet PAUSE frame packets in clear text:

```
Router#configure
Router(config)#macsec-policy test-macsec-policy
Router(config-macsec-policy)#allow lACP-in-clear
Router(config-macsec-policy)#allow pause-frames-in-clear
Router(config-macsec-policy)#allow lldp-in-clear
Router(config-macsec-policy)#commit
```

# cipher-suite

Configures the cipher suite for encrypting traffic with MACsec in the MACsec policy configuration mode.

The first portion of the cipher name indicates the encryption method, the second portion indicates the hash or integrity algorithm, and the third portion indicates the length of the cipher (128/256).

To remove this configuration, use the **no** form of this command.

**cipher-suite** *encryption\_suite*

## Syntax Description

*encryption\_suite* The GCM encryption method that uses the AES encryption algorithm. The available encryption suites are:

- GCM-AES-128
- GCM-AES-256
- GCM-AES-XPB-128
- GCM-AES-XPB-256

## Command Default

The default cipher suite chosen for encryption is GCM-AES-XPB-256.

## Command Modes

MACsec policy configuration.

## Command History

Release	Modification
Release 7.0.12	This command was introduced.

## Task ID

Task ID	Operations
system	read, write

## Examples

The following example shows how to use the **cipher-suite** command:

```
RP/0/RP0RSP0/CPU0:router# configure t
RP/0/RP0RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# cipher-suite GCM-AES-XPB-256
RP/0/RP0RSP0/CPU0:router(config-mac_policy)#commit
```

# conf-offset

Configures the confidentiality offset for MACsec encryption in the MACsec policy configuration mode.

To remove this configuration, use the **no** form of this command.

**conf-offset** *offset\_value*

<b>Syntax Description</b>	<p><i>offset_value</i> Configures the offset value. The options are:</p> <ul style="list-style-type: none"> <li>• CONF-OFFSET-0 : Does not offset the encryption.</li> <li>• CONF-OFFSET-30: Offsets the encryption by 30 bytes.</li> <li>• CONF-OFFSET-50: Offsets the encryption by 50 bytes.</li> </ul>
---------------------------	--

<b>Command Default</b>	Default value is 0.
------------------------	---------------------

<b>Command Modes</b>	MACsec policy configuration.
----------------------	------------------------------

<b>Command History</b>	<table border="1"> <thead> <tr> <th style="text-align: left;">Release</th> <th style="text-align: left;">Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				

<b>Task ID</b>	<table border="1"> <thead> <tr> <th style="text-align: left;">Task ID</th> <th style="text-align: left;">Operations</th> </tr> </thead> <tbody> <tr> <td>system</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	system	read, write
Task ID	Operations				
system	read, write				

**Examples** The following example shows how to use the **conf-offset** command:

```
RP/0/RP0RSP0/CPU0:router# configure t
RP/0/RP0RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# conf-offset CONF-OFFSET-30
RP/0/RP0RSP0/CPU0:router(config-mac_policy)#
```

# enable-legacy-fallback

To enable interoperability with peer devices that do not support MACsec active fallback feature, use the **enable-legacy-fallback** command in MACsec policy configuration mode. To remove the configuration, use the **no** form of this command.

## enable-legacy-fallback

**Syntax Description** This command has no keywords or arguments.

**Command Default** Disabled, by default.

**Command Modes** MACsec policy configuration mode

Command History	Release	Modification
	Release 7.0.14	This command was introduced.

**Usage Guidelines** For more details on MACsec active fallback feature, see the *Fallback PSK* section in the *Configuring MACsec Encryption* chapter in the *System Security Configuration Guide for Cisco ASR 9000 Series Routers* and *System Security Configuration Guide for Cisco 8000 Series Routers*.

Task ID	Task ID	Operation
	system read, write	

This example shows how to enable interoperability with peer devices that do not support MACsec active fallback feature:

```
Router#configure
Router(config)#macsec-policy P1
Router(config-macsec-policy)#enable-legacy-fallback
Router(config-macsec-policy)#commit
```

# hw-module macsec-fips-post

To enable the power-on self-test (POST) known answer test (KAT) for the physical layer transceiver (PHY) of a line card, use the **hw-module macsec-fips-post** command in Global Configuration modeXR Config mode. To remove this configuration, use the no form of this command.

```
hw-module macsec-fips-post location { location | all }
```

## Syntax Description

**location** Enables POST KAT for a specific node location.

*location* Specifies the node location to enable POST KAT.

**all** Enables POST KAT for all nodes.

## Command Default

Disabled by default

## Command Modes

Global Configuration modeXR Config mode

## Command History

Release	Modification
Release 7.0.14	This command was introduced.

## Usage Guidelines

You must reload the line card for this configuration to take effect.

You can use the **show hw-module macsec-fips-post** command to know the current mode of POST KAT configuration, and what action is to be performed.

**Note** If power-on self-test (POST) known answer test (KAT) is already enabled on the PHY, then the system does not allow you to configure the **hw-module macsec-fips-post location all** command again. This restriction is in place to prevent conflicts in configuration, especially in a configuration restore scenario. In such scenarios, you can make use of the **show hw-module macsec-mode fips-post** command to know of the respective running configurations in place.

## Task ID

**Task ID**

system read,  
write

This example shows how to enable power-on self-test KAT for the physical layer transceiver (PHY) of a line card:

```
Router# configure
Router(config)# hw-module macsec-fips-post location 0/4/CPU0
```

```
Router(config)# commit
```

---

**Related Commands**

Command	Description
<a href="#">show hw-module macsec-fips-post, on page 25</a>	Displays the power-on self-test (POST) known answer test (KAT) configurations of nodes in a router.

---

## hw-module macsec-mode

To enable the MACsec mode for the physical layer transceiver (PHY) of a line card, use the **hw-module macsec-mode** command in Global Configuration modeXR Config mode mode. To remove this configuration, use the no form of this command.

**hw-module macsec-mode location** {**all** | *location*}

### Syntax Description

**location** Specifies the node location to enable the MACsec mode.

**all** Enables MACsec mode for all nodes.

*location* Enables MACsec mode for a specific node.

### Command Default

Disabled by default

### Command Modes

Global Configuration modeXR Config mode

### Command History

Release	Modification
Release 7.0.12	This command was introduced.

### Usage Guidelines

This configuration helps to avoid interface flap when MACsec is configured on an interface.

You must reload the line card for this configuration to take effect.

You can use the **show hw-module macsec-mode** command to know the current mode of MACsec, and what action is to be performed.

**Note** If the MACsec mode is already enabled on a node such as a line card, then the system does not allow you to configure the **hw-module macsec-mode location all** command again. This restriction is in place to prevent conflicts in configuration, especially in a configuration restore scenario. In such scenarios, you can make use of the **show hw-module macsec-mode** command to know of the respective running configurations in place.

### Task ID

Task ID	Operation
system read, write	

This example shows how to enable the MACsec mode for the physical layer transceiver (PHY) of a line card:

```
Router# configure
Router(config)# hw-module macsec-mode location 0/1/CPU0
```

```
Router(config)# commit
```

Related Commands	Command	Description
	<a href="#">show hw-module macsec-mode, on page 27</a>	Displays the MACsec mode of a line card and the user action to be performed.

# impose-overhead-on-bundle

To impose the MACsec overhead on the bundle interface, use **impose-overhead-on-bundle** command under MACsec policy configuration mode.

## **impose-overhead-on-bundle**

<b>Syntax Description</b>	<b>impose-overhead-on-bundle</b> Applies macsec overhead on the bundle interface.
---------------------------	---

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	MACsec policy configuration mode
----------------------	----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 24.1.1	This command was introduced.

<b>Usage Guidelines</b>	No specific guidelines impact the use of this command.
-------------------------	--

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	system	read, write

## **Examples**

This example shows how to configure MACsec policy exception to apply macsec overhead on the bundle interface:

```
Router#configure
Router(config)#macsec-policy test-macsec-policy
Router(config-macsec-policy)#impose-overhead-on-bundle
Router(config-macsec-policy)#commit
```

# key

To create or modify a keychain key, use the **key** command in keychain-key configuration mode. To remove this configuration, use the **no key** form of this command.

**key** *key-id*  
**no key** *key-id*

<b>Syntax Description</b>	<i>key-id</i> Hexadecimal string of 2-64 characters.
---------------------------	--

<b>Command Default</b>	No default behavior or values.
------------------------	--------------------------------

<b>Command Modes</b>	Key chain configuration
----------------------	-------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 7.0.12	This command was introduced.

<b>Usage Guidelines</b>	The key must be of even number of hex characters. Entering an odd number of characters will exit the MACsec configuration mode.
-------------------------	---

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	system	read, write

## Examples

The following example shows how to use the **key** command:

```
RP/0/RP0RSP0/CPU0:router# configure
RP/0/RP0RSP0/CPU0:router# key chain mac_chain macsec
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
```

# key-server-priority

Configures the preference for a device to serve as the key server for MACsec encryption in the MACsec policy configuration mode. To remove this configuration, use the **no** form of this command.

**key-server-priority** *value*

<b>Syntax Description</b>	<i>value</i> Indicates the priority for a device to become the key server. Lower the value, higher the preference. The range is 0-255.
---------------------------	--

<b>Command Default</b>	Default value is 16.
------------------------	----------------------

<b>Command Modes</b>	MACsec policy configuration.
----------------------	------------------------------

Command History	Release	Modification
	Release 7.0.12	This command was introduced.

Task ID	Task ID	Operations
	system	read, write

## Examples

The following example shows how to use the **key-server-priority** command:

```
RP/0/RP0RSP0/CPU0:router# configure t
RP/0/RP0RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# key-server-priority 16
RP/0/RP0RSP0/CPU0:router(config-mac_policy)#
```

# key chain

To create or modify a key chain, use the **key chain** command in the key chain configuration mode.

To remove this configuration, use the **no** form of this command.

**key chain** *key-chain-name* **macsec**

<b>Syntax Description</b>	<i>key-chain-name</i> Specifies the name of the keychain. The maximum length is 32 (128-bit encryption)/64 (256-bit encryption) character hexadecimal string.				
	<b>macsec</b> Specifies the key chain for MACsec encryption.				
<b>Command Modes</b>	Key chain configuration				
<b>Command Default</b>	No default behavior or values				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
<b>Task ID</b>	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>system</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	system	read, write
Task ID	Operations				
system	read, write				

## Examples

The following example shows how you can configure a key chain for MACsec encryption:

```
RP/0/RP0RSP0/CPU0:router# configure
RP/0/RP0RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec)#
```

# key-string

To specify the text string for the key, use the **key-string** command in key configuration submode under the macsec key chain mode.

To remove this configuration, use the **no** form of this command.

**key-string** [**clear** | **password** | **password6**] *key-string-text* **cryptographic-algorithm** {**aes-128-cmac** | **aes-256-cmac**}

## Syntax Description

<b>clear</b>	Specifies the key string in clear-text form.
<b>password</b> <i>password</i>	Specifies the key in encrypted form.
<b>password6</b>	Specifies the key in Type 6 encrypted form.
<i>key-string-text</i>	Text string for the key, which is encrypted by the parser process before being saved to the configuration. The text string has the following character limitations: <ul style="list-style-type: none"> <li>• Plain-text key strings—Minimum of 1 character and a maximum of 32 (128-bit encryption)/64 (256-bit encryption) characters (hexadecimal string).</li> <li>• Encrypted key strings—Minimum of 4 characters and no maximum.</li> </ul>

## Command Default

The default value is clear.

## Command Modes

Key configuration submode under the macsec key chain mode

## Command History

Release	Modification
Release 7.0.12	This command was introduced.

## Usage Guidelines

For an encrypted password to be valid, the following statements must be true:

- String must contain an even number of characters, with a minimum of four.
- The first two characters in the password string must be decimal numbers and the rest must be hexadecimals.
- The first two digits must not be a number greater than 53.

Either of the following examples would be valid encrypted passwords:

**1234abcd**

or

**50aefd**

## Task ID

Task ID	Operations
system	read, write

---

**Examples**

The following example shows how to use the **key-string** command:

**! For AES 128-bit encryption**

```
RP/0/RP0RSP0/CPU0:router# configure
RP/0/RP0RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
12345678123456781234567812345678 cryptographic-algorithm AES-128-CMAC
```

**! For AES 256-bit encryption with clear-text CAK:**

```
RP/0/RP0RSP0/CPU0:router# configure
RP/0/RP0RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string clear
1234567812345678123456781234567812345678123456781234567812345678 cryptographic-algorithm
AES-256-CMACRP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)#commit
```

# lifetime

Configures the validity period for the MACsec key or CKN in the Keychain-key configuration mode. To remove this configuration, use the **no** form of this command.

The lifetime period can be configured with a duration in seconds, as a validity period between two dates (for example, Jan 01 2020 to Dec 31 2020), or with an infinite validity.

The key is valid from the time you configure in HH:MM:SS format. Duration is configured in seconds.

When a key has expired, the MACsec session is torn down and running the **show macsec mka session** command does not display any information. If you run the **show macsec mka interface** and **show macsec mka interface detail** commands, you can see that the session is unsecured.

**lifetime** *start\_time start\_date* {*end\_time end\_date* | **duration** *validity* | **infinite**}

Syntax Description	
<i>start-time</i>	Start time in hh:mm:ss from which the key becomes valid. The range is from 0:0:0 to 23:59:59.
<i>end-time</i>	End time in hh:mm:ss at which point the key becomes invalid. The range is from 0:0:0 to 23:59:59.
<i>start_date</i>	The date in DD month YYYY format when the key becomes valid.
<i>end_date</i>	The date in DD month YYYY format when the key becomes invalid.
<b>duration</b> <i>validity</i>	The key chain is valid for the duration you configure. You can configure duration in seconds. The range is from 1 to 2147483646.
<b>infinite</b>	The key chain is valid indefinitely.

**Command Default** No default behavior or values

**Command Modes** Keychain-key configuration

Command History	Release	Modification
	Release 7.0.12	This command was introduced.

Task ID	Task ID	Operations
	system	read, write

## Examples

The following example shows how to use the **lifetime** command:

```
! For AES 128-bit encryption
```

```
RP/0/RP0RSP0/CPU0:router# configure
RP/0/RP0RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
12345678123456781234567812345678 cryptographic-algorithm AES-128-CMAC
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# lifetime 05:00:00 20 february
2020 12:00:00 30 september 2020
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)#commit
```

**! For AES 256-bit encryption, with lifetime specified as duration:**

```
RP/0/RP0RSP0/CPU0:router# configure
RP/0/RP0RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
1234567812345678123456781234567812345678123456781234567812345678 cryptographic-algorithm
AES-256-CMAC
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# lifetime 05:00:00 20 february
2020 duration 2592000
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# commit
```

**! Lifetime specified as infinite:**

```
RP/0/RP0RSP0/CPU0:router# configure
RP/0/RP0RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
1234567812345678123456781234567812345678123456781234567812345678 cryptographic-algorithm
AES-256-CMAC
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# lifetime 05:00:00 20 february
2020 infinite
RP/0/RP0RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# commit
```

## macsec-policy

Creates a MACsec policy for MACsec encryption in the global configuration mode. To remove this configuration, use the **no** form of this command.

```
macsec-policy policy-name [ allow { lACP-in-clear | pause-frames-in-clear } | cipher-suite {
GCM-AES-128 | GCM-AES-256 | GCM-AES-XPB-128 | GCM-AES-XPB-256 } | conf-offset {
CONF-OFFSET-0 | CONF-OFFSET-30 | CONF-OFFSET-50 } | delay-protection |
enable-legacy-fallback | include-icv-indicator | key-server-priority priority-value | policy-exception
lACP-in-clear | sak-rekey-interval { value-in-minutes | seconds value-in-seconds } | security-policy
{ must-secure | should-secure } | use-eapol-pae-in-icv | vlan-tags-in-clear value | window-size
window-size ]
```

### Syntax Description

<b>policy_name</b>	The MACsec policy name with a maximum length of 16.
<b>allow</b>	Specifies MACsec policy exception to allow packets in clear text.
<b>pause-frames-in-clear</b>	Allows Ethernet PAUSE frame packets in clear text.
<b>cipher-suite</b>	Specifies the cipher-suite used for encryption.
<b>conf-offset</b>	Specifies the confidentiality offset value for encryption.
<b>delay-protection</b>	Enables data delay protection.
<b>include-icv-indicator</b>	Includes integrity check value (ICV) indicator parameter set in MACsec Key Agreement PDU (MKPDU).
<b>enable-legacy-fallback</b>	Enables interoperability with peer devices that do not support MACsec active fallback feature.
<b>key-server-priority</b>	Specifies the key-server priority for the node.
<b>policy-exception</b>	Specifies MACsec policy exception to allow packets in clear text.
<b>lACP-in-clear</b>	Allows Link Aggregation Control Plane protocol (LACP) packets in clear text.
<b>sak-rekey-interval</b>	Specifies the interval after which the key-server generates a new Secure Association Key (SAK) for a secured session.
<b>security-policy</b>	Specifies the security policy as must secure or should secure for data encryption.
<b>use-eapol-pae-in-icv</b>	Enables the use of Extensible Authentication Protocol over LAN (EAPoL) port access entity (POE) address in ICV.
<b>vlan-tags-in-clear</b>	Specifies the number of vlan-tags in clear (1 or 2).
<b>window-size</b>	Specifies the window-size used for encryption. The range is from 0 to 1024.

### Command Default

No default behavior or values.

**Command Modes** Global configuration

Command History	Release	Modification
	Release 7.0.12	This command was introduced.
	Release 7.0.14	This command was modified to include the <b>enable-legacy-fallback</b> option.
	Release 7.3.1	This command was modified to include the <b>allow</b> keyword.
	Release 7.3.15	This command was modified to include the <b>pause-frames-in-clear</b> option under the <b>allow</b> keyword.

**Usage Guidelines** The **policy-exception lacp-in-clear** command is deprecated. Hence, it is recommended to use the **allow lacp-in-clear** command instead, to allow LACP packets in clear-text format.

Task ID	Task ID	Operations
	system	read, write

### Examples

This example shows how to configure the **macsec-policy** command:

```
RP/0/RP0RSP0/CPU0:router# configure t
RP/0/RP0RSP0/CPU0:router (config)# macsec-policy mac_policy
RP/0/RP0RSP0/CPU0:router (config-mac_policy)#
```

This example shows how to specify the cipher-suite used for MACsec encryption:

```
RP/0/RP0RSP0/CPU0:router (config-mac_policy)#cipher-suite GCM-AES-128
RP/0/RP0RSP0/CPU0:router (config-mac_policy)#
```

This example shows how to specify the confidentiality offset value used for MACsec encryption:

```
RP/0/RP0RSP0/CPU0:router (config-mac_policy)#conf-offset CONF-OFFSET-30
RP/0/RP0RSP0/CPU0:router (config-mac_policy)#
```

This example shows how to enable data delay protection under the macsec policy:

```
RP/0/RP0RSP0/CPU0:router (config-mac_policy)#delay-protection
RP/0/RP0RSP0/CPU0:router (config-mac_policy)#
```

This example shows how to include ICV indicator under the macsec policy:

```
RP/0/RP0RSP0/CPU0:router (config-mac_policy)# include-icv-indicator
RP/0/RP0RSP0/CPU0:router (config-mac_policy)#
```

This example shows how to specify the key-server priority for the node:

```
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# key-server-priority 10
RP/0/RP0RSP0/CPU0:router(config-mac_policy)#
```

This example shows how to specify the macsec policy exception to allow packets in clear text:

```
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# policy-exception lacp-in-clear
RP/0/RP0RSP0/CPU0:router(config-mac_policy)#
```

This example shows how to specify the SAK rekey interval under the macsec policy:

```
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# sak-rekey-interval seconds 86400
RP/0/RP0RSP0/CPU0:router(config-mac_policy)#
```

This example shows how to specify the security policy as must-secure or should-secure under the macsec policy:

```
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# security-policy must-secure
RP/0/RP0RSP0/CPU0:router(config-mac_policy)#
```

This example shows how to enable the use of EAPoL PAE address in ICV:

```
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# use-eapol-pae-in-icv
RP/0/RP0RSP0/CPU0:router(config-mac_policy)#
```

This example shows how to specify the number of vlan-tags in clear:

```
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# vlan-tags-in-clear 1
RP/0/RP0RSP0/CPU0:router(config-mac_policy)#
```

This example shows how to specify the window-size under the macsec-policy:

```
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# window-size 256
RP/0/RP0RSP0/CPU0:router(config-mac_policy)#
```

This example shows how to create a MACsec policy exception to allow LACP and Ethernet PAUSE frame packets in clear text:

```
Router#configure
Router(config)#macsec-policy test-macsec-policy
Router(config-macsec-policy)#allow lacp-in-clear
Router(config-macsec-policy)#allow pause-frames-in-clear
Router(config-macsec-policy)#commit
```

# macsec shutdown

To enable MACsec shutdown, use the **macsec shutdown** command. To disable MACsec shutdown, use the **no** form of the command.

## macsec shutdown

### Syntax Description

This command has no keywords or arguments.

**Command Default** The **macsec shutdown** command is disabled by default.

**Command Modes** Global configuration

Command History	Release	Modification
	Release 7.0.12	This command was introduced.

**Usage Guidelines** Enabling the **macsec shutdown** command, brings down all macsec sessions on the MACsec-enabled interfaces and resets ports to non-macsec mode. The already existing MACsec configurations remain unaffected by enabling this feature.

Disabling the **macsec shutdown** command, brings up MACsec sessions for the configured interfaces and enforces MACsec policy on the port.

**Warning** Configuring **macsec shutdown** command disables MACsec on all data ports, system wide. Execute **clear** command to erase cached configuration or **commit** command to continue.

Task ID	Task ID	Operation
	system	read, write

### Example

The following example shows how to enable MACsec shutdown:

```
RP/0/RSP0/CPU0:router# configure terminal
RP/0/RSP0/CPU0:router(config)# macsec shutdown
```

# sak-rekey-interval

To set a timer value to rekey the MACsec secure association key (SAK) at a specified interval, use the **sak-rekey-interval** command in the macsec-policy configuration mode. To disable this feature, use the **no** form of this command.

**sak-rekey-interval** *timer-value*

<b>Syntax Description</b>	<i>timer-value</i> Specifies the timer value, in seconds. Range is 60 to 2592000.
---------------------------	--

<b>Command Default</b>	The timer is set to OFF, by default
------------------------	-------------------------------------

<b>Command Modes</b>	MACsec policy configuration mode.
----------------------	-----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 7.0.12	This command was introduced.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	system	read, write

**Examples** This example shows how to set a timer value to rekey the MACsec SAK:

```
Router#configure
Router(config)#macsec-policy test-policy
Router(config-macsec-policy)#sak-rekey-interval 120
Router(config-macsec-policy)#commit
```

# show hw-module macsec-fips-post

To display the power-on self-test (POST) known answer test (KAT) configurations of nodes in a router, use the **show hw-module macsec-mode** command in the EXEC modeXR EXEC mode.

```
show hw-module macsec-fips-post [ location { location | all } ]
```

Syntax Description	
<b>location</b>	Displays the POST KAT configuration for a node location.
<i>location</i>	Specifies the node location for which the POST KAT configuration is to be displayed.
<b>all</b>	Displays the POST KAT configuration for all nodes.

**Command Default** None

**Command Modes** EXEC modeXR EXEC mode

Command History	Release	Modification
	Release 7.0.14	This command was introduced.

**Usage Guidelines** No specific guidelines impact the use of this command.

Task ID	Task	Operation
	system	read

This example shows how to view the POST KAT configuration of all nodes in a router:

Before location reload:

```
Router#show hw-module macsec-fips-post location all
Wed Jun 17 09:36:31.932 UTC

Location          Configured    Applied      Action
-----
0/0/CPU0          NO            NO           NONE
0/11/CPU0         YES           NO           RELOAD
```

After location reload:

```
Router#show hw-module macsec-fips-post location all
Wed Jun 17 10:03:57.263 UTC

Location          Configured    Applied      Action
-----
0/0/CPU0          NO            NO           NONE
```

```
show hw-module macsec-fips-post
```

```
0/11/CPU0      YES      YES      NONE
```

---

**Related Commands**

<b>Command</b>	<b>Description</b>
<a href="#">hw-module macsec-fips-post, on page 8</a>	Enables power-on self-test known answer test (KAT) for the physical layer transceiver (PHY) of a line card

---

# show hw-module macsec-mode

To display the MACsec mode of line cards, and the user action to be performed, use the **show hw-module macsec-mode** command in the EXEC modeXR EXEC mode.

```
show hw-module macsec-mode [ location { location | all } ]
```

<b>Syntax Description</b>	<b>location</b> <i>location</i> Specifies the location of the line card for which the MACsec mode and the user action to be performed are to be displayed.						
	<b>all</b> Displays the MACsec mode information for all the nodes.						
<b>Command Default</b>	None						
<b>Command Modes</b>	EXEC modeXR EXEC mode						
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 7.0.14</td> <td>This command was modified to include the <b>all</b> option.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced. Task ID	Operation						
system	read						

This example shows how to view the MACsec mode of all nodes and the user action to be performed:

```
Router#show hw-module macsec-mode
Sun Feb 16 21:06:07.726 UTC

Location          Configured    Running      Action
-----
0/0/CPU0          NO           NO           NONE
0/7/CPU0          YES          YES          NONE
```

You can also use the **show hw-module macsec-mode location all** command to display the MACsec mode information of all nodes. This **location all** option is available starting Cisco IOS XR Software Release 7.0.14.

This example shows how to view the MACsec mode of a specific node and the user action to be performed:

```
Router#show hw-module macsec-mode location 0/1/CPU0
Sat Dec 7 14:31:52.668 UTC
Location          Configured    Running      Action
```

```
show hw-module macsec-mode
```

```
-----
0/1/CPU0      YES          NO          RELOAD
```

After performing the specified action (reload, in this case):

```
Router#show hw-module macsec-mode location 0/1/CPU0
Sat Dec 7 15:01:00.463 UTC
```

```
Location      Configured  Running     Action
-----
0/1/CPU0      YES         YES         NONE
```

#### Related Commands

# show crypto sks profile

To display the details or statistics of the Session Key Service (SKS) profiles in the router, use the **show crypto sks profile** command in the EXEC mode.

```
show crypto sks profile { profile-name | all } [ stats ]
```

Syntax Description	<i>profile name</i>	Specifies the name of the SKS profile.
	all	Specifies all the SKS profiles in the router.
	stats	Displays the statistics of the SKS profiles.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	Release 7.9.1	This command was introduced.
Usage Guidelines	No specific guidelines impact the use of this command.

# show macsec mka interface detail

To display detailed information on MACsec interfaces, use the **show macsec mka interface detail** command in the EXEC modeXR EXEC mode.

**show macsec mka interface** *interface name* **detail**

<b>Syntax Description</b>	<i>interface name</i>	Specifies the name of the interface for which you want to view the MACsec details.
---------------------------	-----------------------	--

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	EXEC modeXR EXEC mode
----------------------	-----------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 7.11.1	The <b>lldp-in-clear</b> counter was introduced.
	Release 7.0.1	This command was introduced.

**Usage Guidelines**

The **show macsec mka interface detail** command is available only with the installation of the k9sec rpm.

The **show macsec mka interface detail** command displays information about all MACsec-enabled interfaces across all nodes. If you need MACsec information for a specific interface, use the **show macsec mka interface interface name detail** command.

<b>Task ID</b>	<b>Task ID</b>	<b>Operation</b>
	system	read

This example shows how to view the MACsec information for a specific interface:

```
Router# show macsec mka interface HundredGigE 0/0/0/29 detail

```

# show macsec mka standby

To display MACsec MKA information from hot standby node, use the **show macsec mka standby** command in EXEC mode.

**show macsec mka standby** [**interface** | **session** | **statistics**] { *interface name* **detail** } [**summary**]

Syntax Description	Parameter	Description
	<b>interface</b>	Specifies the interface name to view MACsec details.
	<i>interface name</i>	Enables MACsec mode for a specified interface.
	<b>detail</b>	(Optional) detailed information specific to Interface/Session

**Command Default** No default behavior or values.

**Command Modes** EXEC mode

Command History	Release	Modification
	Release 7.0.1	This command was introduced.

**Usage Guidelines** The **show macsec mka standby** command is available only with the installation of the k9sec rpm.

Task ID	Task ID	Operation
	interface	read

This example shows the output for **show macsec mka standby summary**:

```
Router# show macsec mka standby summary
Tue Dec  5 10:38:29.004 UTC

Total MACSec Sessions : 0
  Secured Sessions    : 0
  Pending Sessions    : 0
  Suspended Sessions  : 0
  Active Sessions     : 0
```

# show macsec mka trace

To display MACsec MKA traces, use the **show macsec mka trace** command in EXEC mode.

**show macsec mka trace [all | base | config | errors | events | new-errors | new-events ]**

Syntax Description	
<b>all</b>	(Optional) Show all MACsec MKA traces for the specified node, or the current node if none is specified.
<b>base</b>	(Optional) Show MACsec MKA base traces for the specified node, or the current node if none is specified.
<b>config</b>	(Optional) Show MACsec MKA config traces for the specified node, or the current node if none is specified.
<b>errors</b>	(Optional) Show MACsec MKA error traces for the specified node, or the current node if none is specified.
<b>events</b>	(Optional) Show MACsec MKA event traces for the specified node, or the current node if none is specified.
<b>new-errors</b>	(Optional) Show MACsec MKA new-errors traces for the specified node, or the current node if none is specified.
<b>new-events</b>	(Optional) Show MACsec MKA new-event traces for the specified node, or the current node if none is specified.

**Command Default** No default behavior or values.

**Command Modes** EXEC mode

Command History	Release	Modification
	Release 7.0.1	This command was introduced.

**Usage Guidelines** The **show macsec mka trace** command is available only with the installation of the k9sec rpm.

# show macsec policy detail

To display details on the MACsec policies configured on the router, use the **show macsec policy detail** command in the EXEC modeXR EXEC mode.

**show macsec policy** *policy name* **detail**

<b>Syntax Description</b>	<i>policy name</i> Specifies the name of the MACsec policy that you want to view.						
<b>Command Default</b>	None						
<b>Command Modes</b>	EXEC modeXR EXEC mode						
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.11.1</td> <td>The <b>lldp-in-clear</b> counter was introduced.</td> </tr> <tr> <td>Release 7.0.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.11.1	The <b>lldp-in-clear</b> counter was introduced.	Release 7.0.1	This command was introduced.
Release	Modification						
Release 7.11.1	The <b>lldp-in-clear</b> counter was introduced.						
Release 7.0.1	This command was introduced.						

**Usage Guidelines** The **show macsec policy detail** command is available only with the installation of the k9sec rpm.

The **show macsec policy detail** command displays information about all MACsec policies in the router. If you need details of a specific, use the **show macsec policy *policy name* detail** command.

<b>Task ID</b>	<b>Task Operation ID</b>
	system read

This example shows the output for **show macsec policy *policy name* detail**:

```
Router# show macsec policy mp detail
Policy Name           : mp
Cipher Suite          : GCM-AES-XPN-256

## show macsec secy

To display Interface based MACsec dataplane (SecY) statistics, use the **show macsec secy** command in EXEC mode.

```
show macsec secy [ stats { interface interface name sc } ]
```

Syntax Description	Parameter	Description
	<i>interface name</i>	MACsec enabled Interface to be specified..
	<b>sc</b>	(Optional) Display Secure Channel Statistics for both Rx-SC,SA and Tx-SC,SA specific to the given interface

**Command Default** No default behavior or values.

**Command Modes** EXEC mode

Command History	Release	Modification
	Release 7.0.1	This command was introduced.

**Usage Guidelines** The **show macsec secy** command is available only with the installation of the k9sec rpm.

Task ID	Task ID	Operation
	interface	read

This example shows the output for **show macsec secy**:

```
Router# show macsec mka secy stats interface HundredGigE 0/0/0/29 sc

  OutOctetsProtected  : 0
  OutOctetsEncrypted  : 1827580
```

## show macsec ea

To display MACsec programming details for each interface, use the **show macsec ea** command in EXEC mode.

**show macsec ea** [ **idb** { **interface** *interface name* | | **location** *location name* } | **trace** {**all** | **errors** | **events** | **base**}

Syntax Description	Parameter	Description
	<b>interface</b>	Specifies the interface name to view MACsec details.
	<i>interface name</i>	Enables MACsec mode for a specified interface.
	<b>location</b>	Specifies the node location to enable the MACsec details.
	<i>location name</i>	Enables MACsec mode for a specific node.
	<b>all</b>	(Optional) Show <b>all</b> MACsec EA traces for the specified node, or the current node if none is specified.
	<b>base</b>	(Optional) Show MACsec EA <b>base</b> traces for the specified node, or the current node if none is specified.
	<b>errors</b>	(Optional) Show MACsec EA <b>error</b> traces for the specified node, or the current node if none is specified.
	<b>events</b>	(Optional) Show MACsec EA <b>event</b> traces for the specified node, or the current node if none is specified.

**Command Default** No default behavior or values.

**Command Modes** EXEC mode

Command History	Release	Modification
	Release 7.0.1	This command was introduced.

**Usage Guidelines** The **show macsec ea** command is available only with the installation of the k9sec rpm.

Task ID	Task ID	Operation
	interface	read

This example shows how to view MACsec information for a specific interface located on location 0/RP0/CPU0.

```
Router# show macsec ea idb location 0/RP0/CPU0
Mon Dec 4 03:59:07.481 UTC
```

```

# show macsec platform trace

To display MACsec platform trace logs, use the **show macsec platform trace** command in EXEC mode.

**show macsec platform hardware trace** [**all** | **detail** | **errors** | **events**] { **interface** *interface name* | **location** *location name* }

Syntax Description	Parameter	Description
	<b>interface</b>	Specifies the interface name to view MACsec details.
	<i>interface name</i>	Enables MACsec mode for a specified interface.
	<b>location</b>	Specifies the node location to enable the MACsec details.
	<i>location name</i>	Enables MACsec mode for a specific node.
	<b>all</b>	(Optional) Show <b>all</b> MACsec Platform traces for the specified node, or the current node if none is specified.
	<b>detail</b>	(Optional) Show MACsec Platform <b>detail</b> traces for the specified node, or the current node if none is specified.
	<b>errors</b>	Optional) Show MACsec Platform <b>error</b> traces for the specified node, or the current node if none is specified.
	<b>events</b>	(Optional) Show MACsec Platform <b>event</b> traces for the specified node, or the current node if none is specified.

**Command Default** No default behavior or values.

**Command Modes** EXEC mode

Command History	Release	Modification
	Release 7.0.1	This command was introduced.

**Usage Guidelines** The **show macsec platform trace** command is available only with the installation of the k9sec rpm.

Task ID	Task ID	Operation
	interface	read

This example shows how to view MACsec platform trace information for a specific interface located on location 0/RP0/CPU0.

```
Router# show macsec platform trace detail location 0/RP0/CPU0
Wed Dec 20 08:57:03.178 UTC
2023-12-19:06.28.09.556530212:34390:secdrv_client_camui_ipc_common_fvt_init:COMMJ_IPC_DET_36:secdrv_client_camui_ipc_common_fvt_init
```

# vlan-tags-in-clear

To configure the number of VLAN tags to be unencrypted (in clear) in MACsec, use the **vlan-tags-in-clear** command in the MACsec policy configuration mode.

**vlan-tags-in-clear** *number*

<b>Syntax Description</b>	<p><i>number</i> Specifies the number of VLAN tags in clear.</p> <p>For single VLAN tag with 802.1q encapsulation, the value is 1.</p> <p>For double VLAN tags with 802.1ad outer tag and 802.1q inner tag encapsulation, the value is 2.</p>
---------------------------	---

<b>Command Default</b>	Default value is 1.
------------------------	---------------------

<b>Command Modes</b>	MACsec policy configuration mode
----------------------	----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 7.11.1	This command was introduced.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	system	read, write

## Examples

The following example shows how to use the **vlan-tags-in-clear** command:

```
Router# configure
Router(config)# macsec-policy mac_policy
Router(config-mac_policy)# vlan-tags-in-clear 1
Router(config-mac_policy)# commit
```

# window-size

Configures the replay protection window size in MACsec policy configuration mode. To remove this configuration, use the **no** form of this command.

The replay protection window size indicates the number of out-of-sequence frames that can be accepted at the interface configured with MACsec, without being dropped.

**window-size** *value*

<b>Syntax Description</b>	<i>value</i> Number of out-of-sequence frames that can be accepted at the interface without being dropped. The range is 0-1024.				
<b>Command Default</b>	Default value is 64.				
<b>Command Modes</b>	MACsec policy configuration.				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
<b>Task ID</b>	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>system</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	system	read, write
Task ID	Operations				
system	read, write				

## Examples

The following example shows how to use the **window-size** command:

```
RP/0/RP0RSP0/CPU0:router# configure t
RP/0/RP0RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RP0RSP0/CPU0:router(config-mac_policy)# window-size 64
```
