- [show epm trace boot](#), on page 4
- [show reboot](#), on page 6

reload

To reloads the route processor (RP), use the **reload** command in XR EXEC mode.

reload

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes XR EXEC mode

Command History	Releases	Modifications
	Release 7.0.12	This command was introduced.

Usage Guidelines Use the **reload** command to cause the RP to reload the Cisco IOS XR software according to the configuration register setting (for example, 0x0 to enter ROMMON mode and 0x2 to reload the RP to EXEC mode). If a standby RP is in the ready redundancy state, the **reload** command also causes the router to fail over to the standby RP. Use the **show redundancy** command in EXEC mode to display the status of the standby RP.

When the **reload** command is used and a switchover occurs, the running (active) software configuration is automatically maintained during switchover.

Caution If a standby RP is not installed or is not in the ready state, then the router experiences a loss of service while the active RP is reloading Cisco IOS XR software. To view the status of the standby RP, issue the **show redundancy** command in EXEC mode.

If you use the **reload** command and there is no available standby node, you are prompted to continue with the reload:

```
Router# reload
Standby card not present or not Ready for failover. Proceed?[confirm]y
```

Task ID	Task ID	Operations
	root-lr	execute

The following example shows how to reload the active RP. If a standby RP is in the ready state, then the router fails over to the standby RP. If the standby RP is not installed or is not in the ready state, then the router enters ROMMON mode and routing operations stop.

```
Router# reload
Updating Commit Database. Please wait...[OK]
```

```
Proceed with reload? [confirm] y

show epm trace boot

To display execution path monitoring traces, use the **show epm trace boot** command in administration EXEC mode.

show epm trace boot [**hexdump**] [**last** *n*] [**reverse**] [**stats**] [**tailf**] [**unique**][**verbose**] [**wrapping**][**file** *filename original*] [**location** {*node-id* | **all**}]

Syntax Description		
hexdump	(Optional)	Displays traces in hexadecimal format.
last <i>n</i>	(Optional)	Displays the last <i>n</i> number of traces only.
reverse	(Optional)	Displays the most recent traces first.
stats	(Optional)	Displays execution path statistics.
tailf	(Optional)	Displays new traces as they are added.
unique	(Optional)	Displays unique entries only, along with the count of the number of times this entry appears.
verbose	(Optional)	Displays additional internal debugging information.
wrapping	(Optional)	Displays wrapping entries.
file <i>filename original</i>	(Optional)	Specifies the filename of the file to display. You can specify up to four trace files.
location { <i>node-id</i> all }	(Optional)	Specifies the node of the . The <i>node-id</i> argument is entered in the <i>rack/slot</i> notation. You can specify up to four nodes. The all keyword specifies all nodes.

Command Default None

Command Modes Administration EXEC

Command History	Release	Modification
	Release 7.0.12	This command was introduced.

Usage Guidelines The **show epm trace boot** command provides a simple way of tracking and time-stamping critical events to clearly understand their temporal relationship to one another and the amount of time spent performing critical operations.

Task ID	Task ID	Operations
	basic	read
	services	

The following example shows sample output from the **show epm trace boot** command:

```
RP/0/RP0/CPU0:router(admin)# show epm trace boot

Mon Jun 1 03:16:36.946 PST
22 wrapping entries (1024 possible, 0 filtered, 22 total)

Oct 8 07:59:38.189 epm/boot 0/RP0/CPU0 t4 @ 00:04:54 - [cfgmgr-rp] lr-config-start
Oct 8 07:59:49.898 epm/boot 0/RP0/CPU0 t4 @ 00:05:06 - [cfgmgr-rp] lr-config-done
Oct 8 07:59:50.259 epm/boot 0/RP0/CPU0 t4 @ 00:05:06 - [cfgmgr-rp]
bulk-interface-config-start
Oct 8 07:59:50.351 epm/boot 0/RP0/CPU0 t7 @ 00:05:06 - [cfgmgr-rp] node-config-done
```

In this sample output, the time stamp following the @ sign is the elapsed time in the format hh:mm:ss since the execution phase started (for example, since node start, in the case of a boot).

show reboot

To display reboot information for a node, use the **show reboot** command in EXEC or administration EXEC System Admin EXEC mode.

show reboot {**history** | [**reverse**] | {**first** | **last**} {**crashinfo** | **syslog** | **trace**} | **graceful**} **location** *node-id*

Syntax Description	
first	(Optional) Displays information about the first ungraceful reboot.
last	(Optional) Displays information about the last ungraceful reboot.
crashinfo	Displays crash information for an ungraceful reboot.
syslog	Displays the syslogs related to an ungraceful reboot.
trace	Displays trace information for an ungraceful reboot.
graceful	Displays information about the last graceful reboot.
history	Displays the reboot history of a specific node.
reverse	(Optional) Displays the reboot history information in reverse chronological order. Note Starting from Cisco IOS XR Release 24.3.1, the reverse keyword is deprecated and will not be supported in future releases.
location <i>node-id</i>	Specifies which node to reload. The <i>node-id</i> argument is expressed in the <i>rack/slot</i> notation.

Command Default None

Command Modes EXEC
Administration EXEC
System Admin EXEC

Command History	Release	Modification
	Release 24.3.1	The reverse keyword is deprecated and will not be supported in future releases. Hence the show reboot history reverse location command is also not supported.
	Release 7.0.12	This command was introduced.

Usage Guidelines

- The **show reboot history** command displays all reboot causes stored for previous node resets.
- The **show reboot history** command output does not include information about the system reload event triggered by power cycle.
- Crash information (**crashinfo**), syslog, and kernel dumper ltrace (**trace**) is displayed for the first or last reboot if it is an ungraceful reboot.

Task ID

Task Operations ID

system read

This example shows the history of reloaded nodes.

```
RP/0/RP0/CPU0:ios#show reboot history location 0/RP0/CPU0
Wed Apr 17 16:55:20.748 PDT
```

```
