## Network Convergence System 1000 Series

### What's New in Cisco NCS 1000 Series, IOS XR Release 7.5.1

#### NCS 1004

Feature	Description
<b>Data Models</b>	
<a href="#">Unified YANG Models</a>	CLI-based Yang data models, also known as unified YANG models, are introduced in this release. The unified YANG models provide a complete coverage of the router functionality, and serve as an abstraction for YANG and CLI commands.
<a href="#">OC Support for 400G TXP/MXP</a>	This feature allows you to configure the 400G TXP and 400G MXP using CFP2 DCO. On the OTN-XP card, you can configure OC datapath on a single 400GE or 4x100G payload that is received over the client port as a 400G signal over DWDM on the line side. The card improves efficiency, performance, and flexibility for customer networks allowing 400GE or 4x100G client transport over 400G WDM wavelength.
<b>Configuration</b>	
<b>OTN-XP Card</b>	
<a href="#">2X100GE MXP modes with QDD ZRP for OTN-XP Card</a>	On the OTN-XP card, you can configure two 2x100GE payloads that are received over the client port as a 200GE signal over DWDM on the line side.  The 2x100GE-MXP-DD muxponder mode improves efficiency, performance, and flexibility for customer networks allowing 2x100GE client transport over 200GE WDM wavelength.
<a href="#">3x100GE MXP modes with QDD ZRP for OTN-XP Card</a>	On the OTN-XP card, you can configure two 3x100GE payloads that are received over the client port as a 300GE signal over DWDM on the line side.  The 3x100GE-MXP-DD muxponder mode improves efficiency, performance, and flexibility for customer networks allowing 3x100GE client transport over 300GE WDM wavelength.

Feature	Description
<a href="#">400GE TXP mode with QDD ZRP for OTN-XP Card</a>	On the OTN-XP card, you can configure two 400GE payloads that are received over the client port as a 400GE signal over DWDM on the line side.  The 400GE-TXP-DD muxponder mode improves efficiency, performance, and flexibility for customer networks allowing 400GE client transport over 400GE WDM wavelength.
<a href="#">Support for 10x10G + 2 x 100G, 20x10G + 1 x 100G, and 30x10G + 1 x 100G Hybrid Modes</a>	You can configure different client rates across the ports depending on the bandwidth requirement, using the following hybrid modes: <ul style="list-style-type: none"> <li>• 30x10G + 1 x 100G</li> <li>• 10x10G + 2 x 100G</li> <li>• 20x10G + 1 x 100G</li> </ul>
<b>2-QDD-C Card</b>	
<a href="#">Mixed Client Traffic Mode Configuration</a>	You can now configure the client traffic mode on each trunk port of the 2-QDD-C card independently. This feature provides flexibility to carry both OTN and Ethernet client traffic on the 2-QDD-C card at the same time across two slices.
<a href="#">Support for n x 50G Rate</a>	You can now configure sub 50G muxponder mode in a combination of trunk and client rates for 2-QDD-C cards.
<b>Hardware</b>	
<a href="#">NCS1K4-CNTRLR-B-K9 Controller Card</a>	NCS 1004 supports the NCS1K4-CNTRLR-B-K9 controller card. The card supports a default of 9600 baud rate on the RS232 console port and runs on BIOS version 5.10.

**NCS 1001, NCS 1002, and NCS 1004**

Feature	Description
<b>System Setup</b>	
<a href="#">Supported Software Upgrade or Downgrade IOS XR Versions</a>	You can determine whether a software version can be upgraded or downgraded to another version using this functionality. Before an actual upgrade or downgrade process, you can also view the hardware or software limitations that could cause the upgrade or downgrade to fail. This feature helps you plan successful software upgrades or downgrades.  This feature introduces the <b>show install upgrade-matrix</b> command.
