- [ztp clean, on page 131](#)
- [ztp initiate, on page 132](#)
- [ztp terminate, on page 132](#)

apc

To enable or disable APC at the link level, use the **apc** command on an OLT node.

```
apc { disable | enable }
```

Syntax	Description
disable	Disable APC
enable	Enable APC

Command Default	
	(config-olc-ots)

Command Modes**Command History**

Release	Modification
Cisco IOS XR Release 7.7.1	This command was introduced.

Usage Guidelines

Use this command on an OLT node. APC can be disabled and enabled at a link level only from the APC Manager for the link.

Example

The following is a sample configuration that disables APC.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#apc disable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

The following is a sample configuration that enables APC.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#apc enable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

apc-local

Use the **apc-local disable** command to disable APC on an agent node.

apc-local { RX | TX } disable

Syntax Description

RX	Disable APC agent in RX direction
TX	Disable APC agent in TX direction
disable	Disable APC on APC agent.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following is a sample configuration that disables APC locally.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#apc-local RX disable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

apc-pause

Use the **apc-pause** command to pause APC.

apc-pause

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 7.7.1	This command was introduced.

Usage Guidelines

If you run the **apc-pause** command when APC is in idle state, APC remains in the idle state until APC detects changes in the network that requires power correction. APC changes the status to paused after it detects changes, but does not perform power correction.

Running the **apc-pause** command, does not pause channel startup.

Example

The following is a sample configuration that pauses APC.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#apc-pause
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

automatic-link-bringup

To enable automatic link bring up, use the **automatic-link-bringup** command. To disable automatic link bring up, use the no form of the command.

automatic-link-bringup

no automatic-link-bringup

Command Modes

(config-olc)

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following sample configuration enables automatic link bring up.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios (config)#optical-line-control
RP/0/RP0/CPU0:ios (config-olc)#automatic-link-bringup
RP/0/RP0/CPU0:ios (config-olc)#commit
RP/0/RP0/CPU0:ios (config-olc)#end
```

The following sample configuration disables automatic link bring up.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios (config)#optical-line-control
RP/0/RP0/CPU0:ios (config-olc)#no automatic-link-bringup
RP/0/RP0/CPU0:ios (config-olc)#commit
RP/0/RP0/CPU0:ios (config-olc)#end
```

bfr-pause

Use the **bfr-pause** command to pause Band Failure Recovery(BFR). When BFR is paused, the recovery and failure procedures are not initiated in case of band failure. To resume BFR, use the **no** form of this command.

bfr-pause

no bfr-pause

Syntax Description	This command has no keywords or arguments.
--------------------	--

Command Modes	Controller configuration mode
---------------	-------------------------------

Command History	Release	Modification
	Cisco IOS XR Release 7.10.1	This command was introduced.

Example 1

The following is a sample output to pause BFR on the controller 0/0/0/0.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios (config)#optical-line-control
RP/0/RP0/CPU0:ios (config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios (config-olc-ots)#bfr-pause
RP/0/RP0/CPU0:ios (config-olc-ots)#commit
```

Example 2

The following is a sample output to resume BFR on the controller 0/0/0/0.

```
RP/0/RP0/CPU0:#configure
RP/0/RP0/CPU0: (config)#optical-line-control
RP/0/RP0/CPU0: (config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0: (config-olc-ots)#no bfr-pause
RP/0/RP0/CPU0: (config-olc-ots)#commit
```

bridge-port routed-interface

Use the **bridge-port routed-interface** command to bridge traffic between two interfaces. For example, when connecting multiple NCS 1010 device in a Daisy Chain topology, use this command to bridge traffic between a NCS 1010 management interface and a TOR switch interface.

bridge-port routed-interface *type interface-path-id*

Syntax Description	<i>type</i>	Specify the Management Ethernet interface.
	<i>interface-path-id</i>	Specify the physical or virtual interface.
Command Default	None	
Command Modes	Interface Configuration mode	
Command History	Release	Modification
	Release 7.10.1	This command was introduced.
Usage Guidelines	None	
Task ID	Task ID	Operation
	Ethernet-services	read, write

Example

The following example shows how to bridge traffic between a NCS 1010 management port and TOR switch port:

```
RP/0/RP0/CPU0:Box(config)#interface mgmtEth0/RP0/CPU0/1
RP/0/RP0/CPU0:Box(config-if)# no ipv4 address
RP/0/RP0/CPU0:Box(config-if)# no ipv6 address
RP/0/RP0/CPU0:Box(config-if)# bridge-port routed-interface mgmtEth 0/RP0/CPU0/0
```

cdp

To enable Cisco Discovery Protocol (CDP) globally or on an interface, use the **cdp** command in global configuration mode or in interface configuration mode. To disable CDP, use the **no** form of this command.

cdp

no cdp

Syntax Description This command has no arguments or keywords.

Command Default This command is enabled both at the global configuration level and at the interface configuration level.

Command Modes Global configuration (config) and Interface configuration (config-if)

Command History	Release	Modification
	Release 7.10.1	This command was introduced.

Example

The following example enables CDP globally.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios (config)#cdp
RP/0/RP0/CPU0:ios (config)#commit
```

The following example enables CDP on the management interface.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios (config)#interface mgmtEth 0/RP0/CPU0/1
RP/0/RP0/CPU0:ios (config-if)#cdp
RP/0/RP0/CPU0:ios (config-if)#commit
```

cdp advertise

To enable CDP Version 1 advertising functionality on a device, use the **cdp advertise** command in global configuration mode. To disable CDP Version 1 functionality, use the **no** form of this command.

cdp advertise v1

no cdp advertise v1

Syntax Description This command has no arguments or keywords.

Command Default

Enabled

Command Modes

Global configuration (config)

Command History

Release	Modification
Release 7.10.1	This command was introduced.

Usage Guidelines

When CDP is enabled, the device sends CDPv2 packets by default. CDP sends and receives CDPv1 packets if the device with which CDP is interacting does not process CDPv2 packets.

Example

The following example configures CDP to use CDP Version 1 in communicating with neighboring devices.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#cdp advertise v1
RP/0/RP0/CPU0:ios(config)#commit
```

cdp holdtime

To specify the amount of time the receiving device must hold a CDP packet sent from another device before discarding it, use the **cdp holdtime** command in global configuration mode. To revert to the default setting, use the **no** form of this command.

cdp holdtime *seconds*

no cdp holdtime

Syntax Description

seconds Specifies the hold time to be sent in the CDP update packets. The default is 180 seconds. The range is 10 to 255 seconds.

Command Default

180 seconds

Command Modes

Global configuration (config)

Command History

Release	Modification
Release 7.10.1	This command was introduced.

Usage Guidelines

CDP packets are sent with a time to live, or hold time, value. The receiving device will discard the CDP information in the CDP packet after the hold time has elapsed.

You can set the hold time lower than the default setting of 180 seconds if you want the receiving devices to update their CDP information more rapidly.

The CDP hold time must be set to a higher number of seconds than the time between CDP transmissions, which is set using the **cdp timer** command.

Example

The following example configures CDP holdtime to 120 seconds.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#cdp holdtime 120
RP/0/RP0/CPU0:ios(config)#commit
```

cdp timer

To specify the frequency at which CDP update packets are sent., use the **cdp timer** command in global configuration mode. To revert to the default setting, use the **no** form of this command.

cdp timer *seconds*

no cdp timer

Syntax Description	<i>seconds</i> Specifies the frequency at which CDP update packets are sent. The default is 60 seconds. The range is 5 to 254 seconds.
---------------------------	--

Command Default	60 seconds
------------------------	------------

Command Modes	Global configuration (config)
----------------------	-------------------------------

Command History	Release	Modification
	Release 7.10.1	This command was introduced.

Usage Guidelines	A lower timer setting causes CDP update packets to be sent more frequently.
-------------------------	---

Example

The following example configures CDP timer to 65 seconds.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#cdp timer 65
RP/0/RP0/CPU0:ios(config)#commit
```

commit

To commit the target configuration to the active (running) configuration, use the **commit** command in any configuration mode.

commit [**replace**]

Syntax Description **replace** Replaces the entire running configuration with the contents of the target configuration.

Command Default None

Command Modes Cisco IOS XR Configuration

Command History **Release** **Modification**

Release	This command was
7.7.1	introduced.

Usage Guidelines None

Example

To remove the entire running configuration on the NCS 1010 node, use the following command:

```
Fri Apr 29 06:48:46.236 UTC
RP/0/RP0/CPU0:P2B_DT_02(config)#commit replace
Fri Apr 29 06:48:53.199 UTC
This commit will replace or remove the entire running configuration. This
operation can be service affecting.
Do you wish to proceed? [no]: yes
RP/0/RP0/CPU0:ios(config)#
RP/0/RP0/CPU0:ios(config)#end
```

connector-loss

To configure connector loss, use the **connector-loss** command.

connector-loss { **rx** | **tx** } *value*

Syntax Description **rx** Connector loss at receive point

tx Connector loss at transmit point

value Connector loss value ranges from 0 to 20 with a unit value of 1 dB. Although the CLI description indicates the unit value as 1 dB, you can also input values in decimal format, up to five decimal places.

Command Default The default connector loss is:

- 0.25 dB for ports without Raman module
- 0.3 dB for ports with Raman module

Command Modes (config-olc-ots)

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following example is a sample configuration that configures rx and tx connector losses to 0.1 dB.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#connector-loss rx 1
RP/0/RP0/CPU0:ios(config-olc-ots)#connector-loss tx 1
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

controller ots

To configure the OTS controller, use the **controller ots** command in the controller OTS configuration mode.

Use the following parameters to configure different configurations for an OTS controller on an ILA node.

```
controller ots R/S/I/P [ tx-voa-attenuation value ] [ egress-ampli-gain-range {normal | extended} ] [
egress-ampli-gain value ] [ egress-ampli-tilt value ] [ egress-ampli-osri {on | off} ] [
egress-ampli-safety-control-mode {auto | disabled} ] [ egress-ampli-force-apr {on | off} ] [
ingress-ampli-gain-range {normal | extended} ] [ ingress-ampli-gain value ] [ raman-tx-power
Raman-transmit-pump-instance ] [ power power-value ] [ raman-tx-power-disable
Raman-transmit-pump-instance ] [ raman-force-apr {on | off} ] [ raman-osri {on | off} ] [ ] [ otdr
scan-mode expert ] [ otdr rx auto reflectance-threshold value ] [ otdr rx auto splice-loss-threshold
value ] [ otdr rx expert pulse-width value ] [ otdr tx auto reflectance-threshold value ] [ otdr tx
auto splice-loss-threshold value ] [ raman-tx-power <1-N> value value ] [ otdr rx auto raman-setpoint
value ] [ otdr tx auto raman-setpoint value ] [ otdr rx auto excess-reflection-threshold value ] [
otdr tx auto excess-reflection-threshold value ] [ otdr rx back-scattering value ] [ otdr tx
back-scattering value ] [ otdr rx refractive-index value ] [ otdr tx refractive-index value ] [ otdr
rx expert pulse-width value ] [ otdr tx expert pulse-width value ] [ otdr rx expert capture-end value
] [ otdr tx expert capture-end value ] [ otdr rx expert capture-start value ] [ otdr tx expert
capture-start value ] [ otdr rx expert scan duration value ] [ otdr tx expert scan duration value ] [
otdr rx auto excess-orl-threshold value ] [ otdr tx auto excess-orl-threshold value ] [ otdr rx auto
excess-attenuation-threshold value ] [ otdr tx auto excess-attenuation-threshold value ]
```

```
controller ots R/S/I/P [ tone-rate ] [ tone-pattern-expected ] [ tone-frequency ]
```

Syntax Description		
	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OTS controller.
	tx-voa-attenuation <i>value</i>	Configures the TX VoA attenuation set point.
	egress-ampli-gain-range { normal extended }	Configures egress amplification gain range to normal or extended.

egress-ampli-gain <i>value</i>	Configures egress amplification gain.
egress-ampli-tilt <i>value</i>	Configures egress amplifier tilt.
egress-ampli-osri {on off}	Enables or disables egress optical safety remote interlock (OSRI).
egress-ampli-safety-control-mode {auto disabled}	Configure egress amplification safety control mode to auto or disables it.
egress-ampli-force-apr {on off}	Enables or disables egress amplification force automatic power reduction.
raman-tx-power <i>Raman-transmit-pump-instance power power-value</i>	Configures Raman transmit power parameters.
raman-tx-power-disable <i>Raman-transmit-pump-instance</i>	Disables Raman transmit power.
raman-force-apr {on off}	Enables or disables Raman force APR.
raman-osri {on off}	Enables or disables Raman optical safety remote interlock (OSRI).
ingress-ampli-gain-range {normal extended}	Configure ingress amplification safety control mode to auto or disables it.
ingress-ampli-gain <i>value</i>	Configures ingress amplification gain.
otdr rx auto reflectance-threshold <i>value</i>	Configures OTDR reflectance threshold in RX direction in auto mode.
otdr rx auto splice-loss-threshold <i>value</i>	Configures OTDR splice loss threshold in RX direction in auto mode.
otdr rx expert pulse-width <i>value</i>	Configures OTDR pulse width threshold in RX direction in expert mode.
otdr tx auto reflectance-threshold <i>value</i>	Configures OTDR reflectance threshold in TX direction in auto mode.
otdr tx auto splice-loss-threshold <i>value</i>	Configures OTDR splice loss threshold in TX direction in auto mode.
otdr scan-mode expert	Configures OTDR scan in expert.
raman-tx-power <1-N> value <i>value</i>	Configures the target Raman transmit power value for multiple instances.
otdr rx auto raman-setpoint <i>value</i>	Configures OTDR Raman in RX direction in auto mode.
otdr tx auto raman-setpoint <i>value</i>	Configures OTDR Raman in TX direction in auto mode.

otdr rx auto excess-reflection-threshold <i>value</i>	Configures OTDR excess reflection threshold in RX direction in auto mode.
otdr tx auto excess-reflection-threshold <i>value</i>	Configures OTDR excess reflection threshold in TX direction in auto mode.
otdr rx back- scattering <i>value</i>	Configures OTDR back scattering in RX direction in auto mode.
otdr tx back- scattering <i>value</i>	Configures OTDR back scattering in TX direction in auto mode.
otdr rx refractive-index <i>value</i>	Configures OTDR refractive index in RX direction in auto mode.
otdr tx refractive-index <i>value</i>	Configures OTDR refractive index in TX direction in auto mode.
otdr rx expert pulse-width <i>value</i>	Configures OTDR pulse width in RX direction in expert mode.
otdr tx expert pulse-width <i>value</i>	Configures OTDR pulse width in TX direction in expert mode.
otdr rx expert capture-end <i>value</i>	Configures OTDR capture end time in RX direction in expert mode.
otdr tx expert capture-end <i>value</i>	Configures OTDR capture end time in TX direction in expert mode.
otdr rx expert capture-start <i>value</i>	Configures OTDR capture start time in RX direction in expert mode.
otdr tx expert capture-start <i>value</i>	Configures OTDR capture start time in TX direction in expert mode.
otdr rx expert scan duration <i>value</i>	Configures OTDR scan duration in RX direction in expert mode.
otdr tx expert scan duration <i>value</i>	Configures OTDR scan duration in TX direction in expert mode.
otdr rx auto excess-orl-threshold <i>value</i>	Configures OTDR excess Optical Return Loss (ORL) threshold in RX direction in auto mode.
otdr tx auto excess-orl-threshold <i>value</i>	Configures OTDR excess ORL threshold in TX direction in auto mode.
otdr rx auto excess-attenuation-threshold <i>value</i>	Configures OTDR excess attenuation threshold in RX direction in auto mode.
otdr tx auto excess-attenuation-threshold <i>value</i>	Configures OTDR excess attenuation threshold in TX direction in auto mode.
tone-rate <i>value</i>	Configures the tone rate for tone generation.

tone-pattern <i>value</i>	Configures the tone pattern for tone generation.
tone-frequency <i>value</i>	Configures the tone frequency for tone generation.

Command Default

None

Command Modes

controller configuration mode

Command History

Release	Modification
Release 7.7.1	Introduced this command.
Release 7.11.1	The following keywords are added: <ul style="list-style-type: none"> • otdr rx auto excess-orl-threshold • otdr tx auto excess-orl-threshold • otdr rx auto excess-attenuation-threshold • otdr tx auto excess-attenuation-threshold

Example

The following output is a sample of configuring various otdr parameters using the **controller ots 0/0/0/0** command.

```
RP/0/RP0/CPU0:ios#RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-Ots)#otdr scan-mode expert
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx auto reflectance-threshold -50
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx auto splice-loss-threshold 200
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx expert pulse-width 6000
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx auto excess-orl-threshold 600
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx auto excess-reflection-threshold -35
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx auto excess-attenuation-threshold 5
RP/0/RP0/CPU0:ios(config-Ots)#otdr tx auto reflectance-threshold -50
RP/0/RP0/CPU0:ios(config-Ots)#otdr tx auto splice-loss-threshold 200
RP/0/RP0/CPU0:ios(config-Ots)#otdr tx auto excess-orl-threshold 600
RP/0/RP0/CPU0:ios(config-Ots)#otdr tx auto excess-reflection-threshold -50
RP/0/RP0/CPU0:ios(config-Ots)#otdr tx auto excess-attenuation-threshold 5
RP/0/RP0/CPU0:ios(config-Ots)#commit
```

The following output is a sample of configuring various tone generation parameters using the **controller ots 0/0/0/3** command.

```
RP/0/RP0/CPU0:(config)#controller ots 0/0/0/3
RP/0/RP0/CPU0:(config-Ots)#tone-rate 25
RP/0/RP0/CPU0:(config-Ots)#tone-frequency 191.175 ( OOB frequency )
RP/0/RP0/CPU0:(config-Ots)#tone-pattern abcd1234
RP/0/RP0/CPU0:(config-Ots)#commit
```

controller dfb

To configure the DFB controller, use the **controller dfb** command in the controller configuration mode.

```
controller dfb R/S/I/P [ tx-voa-attenuation value | tx-low-threshold value | sec-admin-state
{normal | maintenance} | transmit-shutdown | shutdown ]
```

Syntax Description		
R/S/I/P		Rack/Slot/Instance/Port of the DFB controller.
tx-voa-attenuation <i>value</i>		Configures the DFB TX VoA attenuation set point.
tx-low-threshold <i>value</i>		Configures the low transmit power threshold.
sec-admin-state		Configures the administrative state of the controller. The values are maintenance or normal.
transmit-shutdown		Shuts down the DFB laser.
shutdown		Disables the configuration of the controller.

Command Default None

Command Modes controller configuration mode

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines None

Example

In the following sample, the tx-voa-attenuation is set to 2 dB.

```
RP/0/RP0/CPU0:ios#config
Thu Apr 21 17:00:57.654 UTC
RP/0/RP0/CPU0:ios(config)#
RP/0/RP0/CPU0:ios(config)#controller dfb 0/0/0/0 tx-voa-attenuation 20
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)#end
```

To view the configured value, use the following command:

```
RP/0/RP0/CPU0:ios#sh controller dfb 0/0/0/0
Thu Apr 21 17:02:06.316 UTC
Controller State: Up
Transport Admin State: In Service
Laser State: On
Alarm Status:
-----
Detected Alarms: None
Alarm Statistics:
-----
```

```

RX-LOS-P = 0
TX-POWER-FAIL-LOW = 0
Parameter Statistics:
-----
Total TX Power = 20.00 dBm
Total RX Power = 10.00 dBm
TX Voa Attenuation = 2.0 dB
Configured Parameters:
-----
TX Voa Attenuation = 2.0 dB

```

The DFB laser attenuates based on the updated value and the TX power changes accordingly.

In the following sample, the sec-admin-state is set to maintenance.

```

RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#controller dfb 0/0/0/0 sec-admin-state maintenance
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)#end
RP/0/RP0/CPU0:ios#sh controllers dfb 0/0/0/0
Thu Apr 21 17:05:41.311 UTC
Controller State: Up
Transport Admin State: Maintenance
Laser State: On
Alarm Status:
-----
Detected Alarms: None
Alarm Statistics:
-----
RX-LOS-P = 0
TX-POWER-FAIL-LOW = 0
Parameter Statistics:
-----
Total TX Power = 20.00 dBm
Total RX Power = 10.00 dBm
TX Voa Attenuation = 2.0 dB
Configured Parameters:
-----
TX Voa Attenuation = 2.0 dB

```

In the following sample, the DFB controller is shut down.

```

RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#controller dfb 0/0/0/0 shutdown
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)#end
RP/0/RP0/CPU0:ios#sh controllers dfb 0/0/0/0
Thu Apr 21 17:08:40.211 UTC
Controller State: Administratively Down
Transport Admin State: Out Of Service
Laser State: Off
Alarm Status:
-----
Detected Alarms: None
Alarm Statistics:
-----
RX-LOS-P = 0
TX-POWER-FAIL-LOW = 0
Parameter Statistics:
-----
Total TX Power = -50.00 dBm
Total RX Power = 10.00 dBm
TX Voa Attenuation = 2.0 dB
Configured Parameters:

```

```
-----
TX Voa Attenuation = 2.0 dB
```

controller osc

To configure the OSC controller, use the **controller osc** command in the controller configuration mode.

```
controller osc R/S/I/P [ transmit-power value | sec-admin-state {normal | maintenance} |
tx-low-threshold value | shutdown ]
```

Syntax Description		
R/S/I/P		Rack/Slot/Instance/Port of the OSC controller.
transmit-power <i>value</i>		Configures the transmit power.
sec-admin-state		Configures the administrative state of the controller. The values are maintenance or normal.
tx-low-threshold <i>value</i>		Configures low transmit power threshold
shutdown		Disables the configuration of the controller.

Command Default None

Command Modes Controller configuration mode

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines None

Example

In the following sample, the transmit-power is set to 2 dBm. The transmit power can be changed only after the OSC laser probing loop is closed and the OSC transmit power is stable. The OSC transmit power depends on the span length. If the span loss is high, the OSC Tx power is low and vice versa.

```
RP/0/RP0/CPU0:ios(config)#controller osc 0/0/0/0 transmit-power 20
Fri May 13 11:26:53.445 UTC
WARNING! Changing TX power can impact traffic
RP/0/RP0/CPU0:ios(config)#commit
Fri May 13 11:26:55.127 UTC
RP/0/RP0/CPU0:ios(config)#end
RP/0/RP0/CPU0:ios#sh controllers osc 0/0/0/0
Fri May 13 11:26:59.542 UTC
Controller State: Up
Transport Admin State: In Service
Laser State: On

```

controller ots-och

To configure the OTS-OCH controller on the add-drop port to which the cross-connection is made on the COM side, use the **controller ots-och** command in the controller configuration mode.

controller ots-och *R/S/I/P/channel-id* **add-drop-channel ots-och** *R/S/I/P/channel-id*

Syntax Description	<i>R/S/I/P/channel-id</i> Rack/Slot/Instance/Port/Channel-id of the OTS-OCH controller.
	add-drop-channel Creates the add/drop channel on the COM side.

Command Default None

Command Modes Controller configuration mode

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines None

Example

To configure the optical cross-connect, use the following commands:

```
Mon Apr 4 14:54:32.834 UTC
RP/0/RP0/CPU0:ios(config)#controller ots-och 0/0/0/0/1 add-drop-channel ots-och 0/0/0/33/1
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)
```

To view the OTS-OCH controllers, use the following command:

```
RP/0/RP0/CPU0:ios#sh controller ots-och ?
0/0/0/0/1 Ots-Och Interface Instance
0/0/0/33/1 Ots-Och Interface Instance
R/S/I/P/B or R/S/I/P Forward interface in Rack/Slot/Instance/Port/Breakout format or
R/S/I/P format
```

To view the parameters of the OTS-OCH controller (LINE side), use the following command:

```
RP/0/RP0/CPU0:ios#sh controllers ots-och 0/0/0/0/1
Tue Apr 5 06:32:29.696 UTC
```

```
Controller State: Up
```

```
Transport Admin State: In Service
```

```
Alarm Status:
```

```
-----
```

```
Detected Alarms: None
```

```
Alarm Statistics:
```

```
-----
```

```
RX-LOS-P = 0
```

```

TX-POWER-FAIL-LOW = 0

Parameter Statistics:
-----
Total RX Power = -10.50 dBm
Total TX Power = -10.50 dBm

Cross Connect Info:
-----
Add-Drop Channel = Ots-Och0/0/0/33/1

Configured Parameters:
-----

RP/0/RP0/CPU0:ios#

```

Note The Add/Drop channel that is cross connected to the line port, 0/0/0/1 is displayed in the output.

drop-psd

Use the **drop-psd** command to set the target PSD for drop ports.

drop-psd *value*

Syntax Description	<i>value</i> PSD in range -30.0 dBm per 12.5 GHz to 23.0 dBm per 12.5 GHz in increments of 0.1 dBm per 12.5 GHz.				
Command Default	The default target PSD for drop ports is -9.4 dB.				
Command Modes	(config-olc-ots)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XR Release 7.7.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XR Release 7.7.1	This command was introduced.
Release	Modification				
Cisco IOS XR Release 7.7.1	This command was introduced.				
Usage Guidelines	The NCS 1010 applies drop PSD configuration for channels with cross connect configurations.				

Example

The following is a sample configuration that sets the target PSD at drop ports to -25 dB.

```

RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#drop-psd -250

```

```
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
Tue Apr 26 09:50:12.055 UTC
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

dual-band-psd

Use the **dual-band-psd** command to set the target dual-band PSDs when using C+L band configuration.

dual-band-psd *index value*

Syntax Description

index PSD index 1–33.

value PSD in range -50.0 dBm per 12.5 GHz to -32.0 dBm per 12.5 GHz in increments of 0.1 dBm per 12.5 GHz.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 7.9.1	This command was introduced.

Example

The following example shows how to set the dual band psd values -50 and -49 on setpoints 1 and 2 respectively, on the 0/0/0/0 controller .

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#dual-band-psd 1 -50
RP/0/RP0/CPU0:ios(config-olc-ots)#dual-band-psd 2 -49
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

fiber-type

To configure fiber type, use **fiber-type** command.

fiber-type *type*

Syntax Description	<p><i>type</i> Fiber type. Possible fiber types are:</p> <ul style="list-style-type: none"> • E-LEAF • FREE-LIGHT • METRO-CORE • SMF • SMF-28E • TERA-LIGHT • TW-RS • TW-Reach • TW-minus • TW-plus • ULL-SMF28
---------------------------	--

Command Default	SMF is the default fiber-type.
------------------------	--------------------------------

Command Modes	(config-olc-ots)
----------------------	------------------

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following example is a sample configuration that configures fiber-type to SMF.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#fiber-type SMF
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

fpd auto-upgrade

To enable or disable automatic FPD upgrade, use the **fpd auto-upgrade** command in Cisco IOS XR Configuration mode.

```
fpd auto-upgrade { enable | disable }
```

Syntax Description	<p>enable disable Enables or disables automatic FPD upgrade</p>
---------------------------	---

Command Default Automatic FPD upgrade is enabled.

Command Modes Cisco IOS XR Configuration

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Example

The following example shows how to disable automatic FPD upgrade.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#fpd auto-upgrade disable
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)#end
```

gain-estimator

To enable or disable Gain Estimator, use the **gain-estimator** command.

gain-estimator { **disable** | **enable** }

Syntax Description	disable	Disable Gain Estimator
	enable	Enable Gain Estimator

Command Modes (config-olc-ots)

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following output is a sample configuration that disables Gain Estimator.

```
RP/0/RP0/CPU0:ios#configure terminal
Mon Jun 13 05:35:20.510 UTC
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#gain-estimator disable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
```

The following output is a sample configuration that enables Gain Estimator.

```
RP/0/RP0/CPU0:ios#configure terminal
Mon Jun 13 05:35:27.511 UTC
```

```
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#gain-estimator enable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
```

http client connection

To configure the connection for http client, use the **http client connection** command in XR Config mode. To restore the default value, use the **no** form of this command.

```
http client connection { retry count | timeout seconds }
```

Syntax Description	retry count	Specifies how many times HTTP Client resends a connection request. Range is from 1 to 5. The default value is 0.
	timeout seconds	The time interval (in seconds) that HTTP client waits for a server connection to establish before giving up. Range is from 1 to 60 seconds. The default value is 10 seconds.
Command Default	The connection retry is not configured by default. The default connection timeout is set to 10 seconds.	
Command History	Release	Modification
	Release 7.10.1	This command was introduced.
Command Modes	HTTP configuration	
Usage Guidelines	Use this command to set the connection timeout or connection retry count.	
Task ID	Task ID	Operations
	config-services	read, write

The following example shows how to configure the connection request retry to two times:

```
RP/0/RP0/CPU0:router(config)#http client connection retry 2
```

The following example shows how to configure the connection request timeout to 20 seconds:

```
RP/0/RP0/CPU0:router(config)#http client connection timeout 20
```

http client response

To configure the time interval (in seconds) for HTTP Client to wait for a response from the server before giving up, use the **http client response** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client response { timeout seconds }

Syntax Description	timeout seconds	The time interval (in seconds) that HTTP client waits for a response from the server before giving up. Range is from 1 to 300 seconds. The default value is 30 seconds.
Command Default	The response timeout is 30 seconds by default.	
Command History	Release	Modification
	Release 7.10.1	This command was introduced.
Command Modes	HTTP configuration	
Usage Guidelines	Use this command to configure the response timeout.	
Task ID	Task ID	Operations
	config-services	read, write

The following example shows how to configure the response timeout to 40 seconds:

```
RP/0/RP0/CPU0:router (config) #http client response timeout 40
```

http client ssl

To configure Secure Socket Layer (SSL) version to be used for HTTPS requests, use the **http client ssl** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client ssl version

Syntax Description	ssl version	Specify the SSL version to be used for HTTPS requests. Select one of the following versions: <ul style="list-style-type: none"> • tls1.0 - Forces TLSv1.0 to be used for HTTPS requests. • tls1.1 - Forces TLSv1.1 to be used for HTTPS requests. • tls1.2 - Forces TLSv1.2 to be used for HTTPS requests. <p>By default libcurl does not force the TLS version.</p>
Command History	Release	Modification
	Release 7.10.1	This command was introduced.
Command Default	By default, the SSL version is not configured.	

Command Modes	HTTP configuration
Usage Guidelines	Use this command to configure the ssl version to be used in HTTPS requests.

Task ID	Task ID	Operations
	config-servicess	read, write

The following example shows how to configure the SSL version to tls1.1:

```
RP/0/RP0/CPU0:router(config)#http client ssl tls1.1
```

http client secure-verify-host

To enable verifying host in peer's certificate, use the **http client secure-verify-host** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client secure-verify-host

Syntax Description	secure-verify-host Verifies the host in peer's certificate. This is enabled by default. To disable, use the command http client secure-verify-host disable
---------------------------	--

Command Default	Host verification is enabled by default.
------------------------	--

Command History	Release	Modification
	Release 7.10.1	This command was introduced.

Command Modes	HTTP configuration
----------------------	--------------------

Usage Guidelines	Use the http client secure-verify-host command to disable the host verification.
-------------------------	---

Task ID	Task ID	Operations
	config-services	read, write

The following example shows how to disable host verification :

```
RP/0/RP0/CPU0:router(config)#http client secure-verify-host disable
```

http client secure-verify-peer

To enable verifying authenticity of the peer certificate, use the **http client secure-verify-peer** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client secure-verify-peer

Syntax Description	secure-verify-peer Verifies authenticity of the peer certificate. This is enabled by default. To disable, use the command http client secure-verify-peer disable				
Command Default	Peer verification is enabled by default.				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.10.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.10.1	This command was introduced.
Release	Modification				
Release 7.10.1	This command was introduced.				
Command Modes	HTTP configuration				
Usage Guidelines	Use the http client secure-verify-peer command to disable the peer verification.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>config-services</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	config-services	read, write
Task ID	Operations				
config-services	read, write				

The following example shows how to disable peer verification :

```
RP/0/RP0/CPU0:router (config)#http client secure-verify-peer disable
```

http client source interface

To specify the interface for source address for Hypertext Transfer Protocol (HTTP) connections, use the **http client source-interface** command in XR Config mode. To remove the **http client source-interface** command from the configuration file and restore the system to its default condition, use the **no** form of this command.

http client source-interface { ipv4 | ipv6 }

Syntax Description	ipv4 Enter ipv4 address from interface. <i>ip-address</i>
	ipv6 Enter ipv6 address from interface. <i>ip-address</i>
Command Default	No default behavior or values.

Command History	Release	Modification
	Release 7.10.1	This command was introduced.

Command Modes HTTP configuration

Usage Guidelines Use the **http client source-interface** command to configure ipv4 and ipv6 source interfaces. If both the source interfaces are configured, then the source interface is selected depending on the host DNS resolution.

Task ID	Task ID	Operations
	config-services	read, write

The following example shows how to configure ipv4 source interface for HTTP connection:

```
RP/0/RP0/CPU0:router(config)#http client source-interface ipv4 gigabitEthernet 0/0/0/0
```

The following example shows how to configure ipv6 source interface for HTTP connection:

```
RP/0/RP0/CPU0:router(config)#http client source-interface ipv6 gigabitEthernet 0/0/0/0
```

http client tcp-window-scale

To configure the TCP window scale factor for high latency links, use the **http client tcp-window-scale** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client tcp-window-scale *scale*

Syntax Description *scale* Specify the TCP window scale for HTTP requests. Range is 1 to 14.

Command Default By default, TCP window scale is disabled.

Command History	Release	Modification
	Release 7.10.1	This command was introduced.

Command Modes HTTP configuration

Usage Guidelines Use this command to configure the TCP window scale for HTTP requests.

Note Currently, this is enabled for copying of files using HTTP.

Task ID	Task ID	Operations
	config-services	read, write

The following example shows how to set the TCP window scale to 10:

```
RP/0/RP0/CPU0:router (config) #http client tcp-window-scale 10
```

http client version

To configure the HTTP version to be used for HTTP requests, use the **http client version** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client version *version*

Syntax Description	version <i>version</i>
	Specify the HTTP version to be used for HTTP requests. Select one of the following versions: <ul style="list-style-type: none"> • 1.0 - Forces HTTP1.0 to be used for all HTTP requests. • 1.1 - Forces HTTP1.1 to be used for all HTTP requests. • default - libcurl picks up HTTP version automatically.

Command Default By default, libcurl does not force the HTTP version.

Note HTTP Client uses libcurl version 7.30

Command History	Release	Modification
	Release 7.10.1	This command was introduced.

Command Modes HTTP configuration

Usage Guidelines Use this command to configure the HTTP version to be used in HTTP requests.

Task ID	Task ID	Operations
	config-services	read, write

The following example shows how to configure the HTTP version to 1.1:

```
Router (config) #http client version 1.1
```

http client vrf

To configure a new VRF to be used by the HTTP client, use the **http client vrf** command. To remove the specified vrf, use the **no** form of this command.

http client vrf *vrf-name*

Syntax Description	<i>vrf-name</i> Specifies the name of the VRF to be used by the HTTP client.				
Command Default	If not configured, the default VRF "default-vrf" will be used.				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.10.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.10.1	This command was introduced.
Release	Modification				
Release 7.10.1	This command was introduced.				
Command Modes	HTTP configuration				
Usage Guidelines	A HTTP client can have only one VRF. If a specific VRF is not configured for the HTTP client, the default VRF is assumed.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>config-services</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	config-services	read, write
Task ID	Operations				
config-services	read, write				

The following example shows the HTTP client being configured to start with the specified VRF:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# http client vrf green
```

hw-module

To create the OTS-OCH controller, use the **hw-module location** command in IOS XR configuration mode.

hw-module location *location* **terminal-ampli** | **inline-ampli** **grid-mode** *mode* **channel-id** *channel-id*
centre-freq *frequency* **width** *channel width*

Syntax Description	<i>location</i> Specifies the location of the hardware module. The location is 0/0/NXR0.
terminal-ampli inline-ampli	terminal-ampli is used for OLT nodes and inline-ampli is used for ILA nodes.
grid-mode <i>value</i>	Specifies the optical spectrum on the interfaces.
centre-freq <i>frequency</i>	Defines the central frequency of the channel.

width <i>channel-width</i>	Defines the width of the channel.
-----------------------------------	-----------------------------------

Command Default None

Command Modes Cisco IOS XR Configuration

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines None

Example

To create the OTS-OCH controller on the LINE side of an ILA-C node, use the following commands:

```
RP/0/RP0/CPU0:ios#config
Thu Apr 7 13:14:49.841 UTC
RP/0/RP0/CPU0:ios(config)#
RP/0/RP0/CPU0:ios(config)#hw-module location 0/0/NXR0 inline-ampli grid-mode flex
RP/0/RP0/CPU0:ios(config-hwmod-ila-flexi)#channel-id 1 centre-freq 196.1 width 75
RP/0/RP0/CPU0:ios(config-hwmod-ila-flexi)# commit
```

To create the OTS-OCH controller on the LINE side of an OLT-R-C node, use the following commands:

```
RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#hw-module location 0/0/nxr0 terminal-ampli grid-mode flex
RP/0/RP0/CPU0:ios(config-hwmod-olt-flexi)#channel-id 1 centre-freq 196.1 width 75
RP/0/RP0/CPU0:ios(config-hwmod-olt-flexi)#commit
```

interface

Use the **interface** command in the config mode to enter the configuration mode of a management interface. To delete the configuration, use the **no** form of this command.

```
interface type interface-path-id
no interface type interface-path-id
```

Syntax Description	<i>type</i>	Interface type.
	<i>interface-path-id</i>	Physical interface or virtual interface.

Command Default None

Command Modes Configuration Mode

Command History	Release	Modification
	Release 7.10.1	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task ID's. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	otn	write

Examples

This example shows how to enter the configuration mode of *mgmtEth* interface:

```
RP/0/RP0/CPU0:Box(config)#interface mgmtEth0/RP0/CPU0/1
```

ipv4-access-group

To control access to an interface, use the **ipv4 access-group** command in interface configuration mode. To remove the specified access group, use the **no** form of this command.

```
ipv4 access-group access-list-name { ingress | egress } [ compress level compression-level ]
```

Syntax Description		
<i>access-list-name</i>		Name of an IPv4 access list as specified by an ipv4 access-list command.
ingress		Filters on inbound packets.
egress		Filters on outbound packets.
compress level <i>compression-level</i>		Configures compression level for interface ACLs. Compression level values range from zero and two.

Command Default The interface does not have an IPv4 access list applied to it.

Command Modes Interface configuration

Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Usage Guidelines Use the **ipv4 access-group** command to control access to an interface. To remove the specified access group, use the **no** form of the command. Use the *access-list-name* argument to specify a particular IPv4 access list.

If the access list permits the addresses, the software continues to process the packet. If the access list denies the address, the software discards the packet and returns an Internet Control Message Protocol (ICMP) host unreachable message.

If the specified access list does not exist, all packets are passed.

Task ID	Task ID	Operations
	acl	read, write

Examples

The following example shows how to apply the access list named IPV4-ACL to the management interface:

```
RP/0/RP0/CPU0:ios(config)# interface mgmtEth 0/RP0/CPU0/0
RP/0/RP0/CPU0:ios(config-if)# ipv4 access-group IPV4-ACL ingress
RP/0/RP0/CPU0:ios(config-if)# commit
```

ipv6-access-group

To control access to an interface, use the **ipv6 access-group** command in interface configuration mode. To remove the specified access group, use the **no** form of this command.

ipv6 access-group *access-list-name* { **ingress** | **egress** } [**compress level** *compression-level*]

Syntax Description	
<i>access-list-name</i>	Name of an IPv6 access list as specified by an ipv6 access-list command.
ingress	Filters on inbound packets.
egress	Filters on outbound packets.
compress level <i>compression-level</i>	Configures compression level for interface ACLs. Compression level values range from zero and two.

Command Default The interface does not have an IPv6 access list applied to it.

Command Modes Interface configuration

Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Usage Guidelines Use compression level two to create Hybrid ACLs with an ACE that uses IPv6 extension headers to filter ingress and egress IPv6 packets.

Task ID	Task ID	Operations
	acl	read, write

Examples

The following example shows how to apply the access list named IPV6-ACL to the management interface:

```
RP/0/RP0/CPU0:ios(config)# interface mgmtEth 0/RP0/CPU0/0
RP/0/RP0/CPU0:ios(config-if)# ipv6 access-group IPV6-ACL ingress
RP/0/RP0/CPU0:ios(config-if)# commit
```

ipv4-access-list

To define an IPv4 access list by name, use the **ipv4 access-list** command in IOS XR Config mode. To remove all entries in an IPv4 access list, use the **no** form of this command.

```
ipv4 access-list name
no ipv4 access-list name
```

Syntax Description	<i>name</i> Name of the access list. Names cannot contain a space or quotation marks.				
Command Default	No IPv4 access list is defined.				
Command Modes	IOS XR Config mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XR Release 7.11.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XR Release 7.11.1	This command was introduced.
Release	Modification				
Cisco IOS XR Release 7.11.1	This command was introduced.				

Usage Guidelines Use the **ipv4 access-list** command to configure an IPv4 access list. This command places the system in access list configuration mode, in which the denied or permitted access conditions must be defined with the **deny** or **permit** command.

Use the **ipv4 access-group** command to apply the access list to an interface.

Task ID	Task ID	Operations
	acl	read, write

Examples

This example shows how to define a standard access list named ACL:

```
RP/0/RP0/CPU0:ios(config)# ipv4 access-list ACL
RP/0/RP0/CPU0:ios(config-ipv4-acl)# 10 permit tcp 192.0.2.2 255.255.255.0 any
RP/0/RP0/CPU0:ios(config-ipv4-acl)# 20 deny udp any any
RP/0/RP0/CPU0:ios(config-ipv4-acl)# 30 permit ipv4 192.0.2.64 255.255.255.0 any
RP/0/RP0/CPU0:ios(config-ipv4-acl)# commit
```

ipv6-access-list

To define an IPv6 access list by name, use the **ipv6 access-list** command in IOS XR Config mode. To remove all entries in an IPv6 access list, use the **no** form of this command.

```
ipv6 access-list name
no ipv6 access-list name
```

Syntax Description	<i>name</i> Name of the access list. Names cannot contain a space or quotation mark, or begin with a numeric.
---------------------------	---

Command Default	No IPv6 access list is defined.
------------------------	---------------------------------

Command Modes	IOS XR Config mode
----------------------	--------------------

Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Usage Guidelines	<p>The IPv6 access lists are used for traffic filtering based on source and destination addresses, IPv6 option headers, and optional, upper-layer protocol type information for finer granularity of control. IPv6 access lists are defined by using the ipv6 access-list command in XR Config mode mode and their permit and deny conditions are set by using the deny and permit commands in IPv6 access list configuration mode. From IPv6 access list configuration mode, permit and deny conditions can be set for the defined IPv6 access list.</p>
-------------------------	--

The **ipv6 access-list** command is similar to the **ipv4 access-list** command, except that it is IPv6-specific.

Use the **ipv6 access-group** command to apply the access list to an interface.

Every IPv6 access list has an implicit **deny ipv6 any any** statement as its last match condition. An IPv6 access list must contain at least one entry for the implicit **deny ipv6 any any** statement to take effect.

Task ID	Task ID	Operations
	acl	read, write

Examples	This example shows how to define a standard access list named ACL:
-----------------	--

```
RP/0/RP0/CPU0:ios(config)# ipv6 access-list ACL
RP/0/RP0/CPU0:ios(config-ipv6-acl)# 10 permit ipv6 any any
RP/0/RP0/CPU0:ios(config-ipv6-acl)# 20 deny udp any any
RP/0/RP0/CPU0:ios(config-ipv6-acl)# commit
```

ipv4 address

Use the **ipv4 address** command in the interface configuration mode to configure IPv4 address for an interface. To remove the IPv4 address from an interface, use the **no** form of this command.

ipv4 address *ipv4-address mask*
no ipv4 address *ipv4-address mask*

Syntax Description	<i>ipv4-address</i> IPv4 address.				
	<i>mask</i> Mask for the associated IP subnet. The network mask can be specified in either of two ways: <ul style="list-style-type: none"> • The network mask can be a four-part dotted decimal address. For example, 255.0.0.0 indicates that each bit equal to 1 means the corresponding address bit belongs to the network address. • The network mask can be indicated as a slash (/) and number. For example, /8 indicates that the first 8 bits of the mask are ones, and the corresponding bits of the address are network address. 				
Command Default	None				
Command Modes	Interface Configuration mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.10.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.10.1	This command was introduced.
Release	Modification				
Release 7.10.1	This command was introduced.				
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operation</th> </tr> </thead> <tbody> <tr> <td>otn</td> <td>write</td> </tr> </tbody> </table>	Task ID	Operation	otn	write
Task ID	Operation				
otn	write				

Example

This example shows how to configure IPv4 address on an interface.

```
RP/0/RP0/CPU0:Box(config-if)# ipv4 address 192.0.2.6/24
```

Example

This example shows how to remove IPv4 address from an interface.

```
RP/0/RP0/CPU0:Box(config-if)# no ipv4 address
```

ipv6 address

Use the **ipv6 address** command in the interface configuration mode to configure IPv6 address for an interface. To remove the IPv6 address from an interface, use the **no** form of this command.

ipv6 address *ipv6-prefix/ prefix-length*
no ipv6 address *ipv6-prefix/ prefix-length*

Syntax Description

<i>ipv6-prefix/</i>	The IPv6 network assigned to the interface. This argument must be in the form documented in RFC 2373 where the address is specified in hexadecimal using 16-bit values between colons.
<i>prefix-length</i>	The length of the IPv6 prefix. A decimal value that indicates how many of the high-order contiguous bits of the address compose the prefix (the network portion of the address). A slash (/) must precede the decimal value.

Command Default

None

Command Modes

Interface Configuration mode

Command History

Release	Modification
Release 7.10.1	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operation
otn	write

Example

This example shows how to configure IPv6 address on an interface.

```
RP/0/RP0/CPU0:Box(config-if)# ipv6 address 0:0:0:7272::72/64
```

Example

This example shows how to remove IPv6 address from an interface.

```
RP/0/RP0/CPU0:Box(config-if)# no ipv6 address
```

link-tuner

To enable and disable link tuner and to configure the spectrum density, use the **link-tuner** command.

link-tuner { **enable** | **disable** | **spectrum-density** *value* }

Syntax Description	enable	Enable Link-Tuner
	disable	Disable Link-Tuner
	spectrum-density	Configure spectrum density
	<i>value</i>	Spectrum density in range 1–100 in increments of 1

Command Default The default spectrum density is 81.

Command Modes (config-olc-ots)

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following is a sample configuration that enables link tuner.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#link-tuner enable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

The following is a sample configuration that disables link tuner.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#link-tuner disable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

The following example is a sample configuration that configures the spectrum density to 80%.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#link-tuner spectrum-density 80
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

license smart deregister

To cancel the registration of your device, use the **license smart deregister** command.

license smart deregister

Command Default None

Command Modes None

Command History	Release	Modification
	R7.7.1	This command was introduced.

Usage Guidelines When your device is taken off the inventory, shipped elsewhere for redeployment or returned to Cisco for replacement using the return merchandise authorization (RMA) process, you can use this command to cancel the registration on your device. All smart licensing entitlements and certificates on the platform are removed.

The following example deregisters NCS 1010.

```
RP/0/RP0/CPU0:ios#license smart deregister
```

license smart register

To register the device instance with Cisco licensing cloud, use the **license smart register idtoken *token-id* force** command.

license smart register idtoken *token-id* [force]

Syntax Description *token_id* Specifies the token generated in smart manager.

force If the registration fails due to communication failure between the device and the portal, the system waits for 24 hours before attempting to register the device again. Use this option to force the registration.

Command Default None

Command Modes None

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines Use this command to register the device instance with Cisco licensing cloud.

The following example registers and sets the token ID required for registration of NCS 1004.

```
RP/0/RP0/CPU0:ios#license smart register
YzY2ZjYyNjktY2NlOS00NTc4LWlXNTAtMjZkNmNiNzMxMTY1LlTE2NjAzNjQ3
%0ANzY4Njl8ZVJSckxKN2pFV2tIeHVomUkxbGxTazFDVm9kc1B5MGlHQmlFWUJi%0Ac3VNRT0%3D%0A
```

license smart renew

To manually renew the ID certification or authorization, use the **license smart renew** command.

license smart renew { **ID** | **auth** }

Syntax Description

ID ID certificates are renewed automatically after six months. In case, the renewal fails, the product instance goes into unidentified state. You can manually renew the ID certificate using this option.

auth Authorization periods are renewed by the Smart Licensing system every 30 days. As long as the license is in an 'Authorized' or 'Out-of-compliance' (OOC), the authorization period is renewed. Use this command to make an on-demand manual update of your registration. Thus, instead of waiting 30 days for the next registration renewal cycle, you can use this option to instantly find out the status of your license.

After 90 days, the authorization period expires and the status of the associated licenses display "AUTH EXPIRED". Use this option to retry the authorization period renewal. If the retry is successful, a new authorization period begins.

Command Default

None

Command Modes

None

Command History

Release	Modification
Release 7.7.1	This command was introduced.

Usage Guidelines

None

The following example manually renews the ID certificate for the NCS 1010:

```
RP/0/RP0:ios#license smart renew id
```

The following example manually renews the authorization for the NCS 1010:

```
RP/0/RP0:ios#license smart renew auth
```

license smart reservation install file

To register the device using the authorization code that is copied as a file, and to activate smart licensing reservation for your device, use the **license smart reservation install file** command.

license smart reservation install file *file name*

Syntax Description	file name	Name of the file where the authorization code is saved.
---------------------------	--------------	---

Command Default	None
------------------------	------

Command Modes	None
----------------------	------

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines	None
-------------------------	------

The following example registers and activates the registration and license for NCS 1010:

```
RP/0/RP0/CPU0:ios#license smart reservation install file /disk0:/smart1
Tue Jul 19 13:46:22.877 UTC
RP/0/RP0/CPU0:Jul 19 13:46:22.946 UTC: plat_sl_client[368]:
%LICENSE-PLAT_CLIENT-6-STATE_CHANGE :
Licensing platform state changing from UNREGISTERED to REGISTERED
RP/0/RP0/CPU0:Jul 19 13:46:22.946 UTC: smartlicserver[247]:
%LICENSE-SMART_LIC-6-AGENT_REG_SUCCESS
: Smart Agent for Licensing Registration successful. udi PID:NCS1010-SA,SN:FCB2546B08T
Reservation install file successful
Last Confirmation code 8572aa81
```

license smart transport

To configure the smart transport as an alternative option to Call Home, use the **license smart transport** command.

license smart transport smart

Command Default	None
------------------------	------

Command Modes	None
----------------------	------

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines	None
-------------------------	------

The following example configures the smart transport option to connect to the CSSM.

```
RP/0/RP0/CPU0:ios#license smart transport smart
Thu Jul 19 13:34:47.251 UTC
```

```
RP/0/RP0/CPU0:ios#commit
```

ntp

To enter Network Time Protocol (NTP) configuration mode and run NTP configuration commands, use the **ntp** command in global configuration mode.

ntp

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	No default behavior or values.
------------------------	--------------------------------

Command Modes	Global configuration
----------------------	----------------------

Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Task ID	Task ID	Operations
	ip-services	read, write

The following example shows how to enter NTP configuration mode:

```
RP/0/RP0/CPU0:ios (config) #ntp
RP/0/RP0/CPU0:ios (config-ntp) #
```

olc bfr-initialize

Use the **olc bfr-initialize** command to initialize the Band Failure Recovery(BFR) feature.

```
olc bfr-initialize controller ots R/S/I/P
```

Syntax Description	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OTS controller.
---------------------------	----------------	--

controller Ots	Use this parameter to choose a particular controller.
-----------------------	---

Command Modes	Privileged EXEC mode
----------------------	----------------------

Command History	Release	Modification
	Cisco IOS XR Release 7.9.1	This command was introduced.

Example

The following is a sample output of the **olc bfr-initialize** command that initializes BFR.

```
RP/0/RP0/CPU0:ios#olc bfr-initialize controller ots 0/0/0/0
```

olc bfr-pause

Use the **olc bfr-pause** command to enable or disable Band Failure Recovery(BFR) pause. In case of band failure, when BFR pause is enabled, the recovery procedure is not initiated and the surviving band is not switched to single-band PSD profile.

olc bfr-pause controller ots *Rack/Slot/Instance/Port* { **enable** | **disable** }

Syntax Description	Parameter	Description
	controller Ots	Use this parameter to choose a particular controller.
	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OTS controller.
	enable	Use this keyword to temporarily pause BFR.
	disable	Use this keyword to disable BFR pause.

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XR Release 7.9.1	This command was introduced.

The following is a sample output of the **olc bfr-pause** command that enables the BFR pause feature and temporarily pauses BFR.

```
RP/0/RP0/CPU0:ios#olc bfr-pause controller ots 0/0/0/0 enable
```

The following is a sample output of the **olc bfr-pause** command that disables the BFR pause feature.

```
RP/0/RP0/CPU0:ios#olc bfr-pause controller ots 0/0/0/0 disable
```

olc force-raman-turn-up

Use the **olc force-raman-turn-up** command to turn on the Raman pumps, when the RAMAN-TURNUP-FAIL alarm is raised due to failure of Raman turn-up fiber check.

olc force-raman-turn-up controller ots *R/S/I/P*

Syntax Description	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OSC controller.
	controller Ots	Use this parameter to choose a particular controller.

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Example

The following is a sample configuration to forcefully turn up the Raman pumps:

```
RP/0/RP0/CPU0:IOS#olc force-raman-turn-up controller ots 0/0/0/0
Thu Nov  2 10:12:26.668 UTC
```

olc otdr raman-turn-up

Use the **olc otdr raman-turn-up** command to configure the OTDR for Raman turn-up.

olc otdr raman-turn-up [**enable** | **disable**] [**relaxation factor** *value*]

Syntax Description	enable	Enables OTDR for Raman turn-up.
	disable	Disables OTDR for Raman turn-up.
	relaxation factor <i>value</i>	Configures the percentage of relaxation factor to ignore the reflective events evaluated by Raman turn-up.

Command Modes Controller configuration mode

Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Example

The following are the sample configurations that enable and disable the Raman Turn-up and set up the relaxation factor for Ramam turn-up.

```
RP/0/RP0/CPU0:IOS#configure
Thu Nov  2 10:10:53.812 UTC
RP/0/RP0/CPU0:IOS(config)#optical-line-control controller Ots 0/0/0/0
RP/0/RP0/CPU0:IOS(config-olc-ots)#otdr raman-turn-up enable
RP/0/RP0/CPU0:IOS(config-olc-ots)#commit
Thu Nov  2 10:11:20.514 UTC

RP/0/RP0/CPU0:IOS#configure
Fri Nov  3 11:12:34.631 UTC
RP/0/RP0/CPU0:IOS(config)#optical-line-control controller Ots 0/0/0/0
RP/0/RP0/CPU0:IOS(config-olc-ots)#otdr raman-turn-up disable
RP/0/RP0/CPU0:IOS(config-olc-ots)#commit
Fri Nov  3 11:13:23.514 UTC

RP/0/RP0/CPU0:IOS#configure
Thu Nov  2 10:24:55.778 UTC
RP/0/RP0/CPU0:IOS(config)#optical-line-control controller Ots 0/0/0/0
RP/0/RP0/CPU0:IOS(config-olc-ots)#otdr raman-turn-up relaxation-factor 40
RP/0/RP0/CPU0:IOS(config-olc-ots)#commit
Thu Nov  2 10:25:06.733 UTC
RP/0/RP0/CPU0:IOS(config-olc-ots)#end
RP/0/RP0/CPU0:IOS#olc start-raman-turn-up controller Ots 0/0/0/0
Thu Nov  2 10:25:24.143 UTC
```

olc start-raman-turn-up

Use the **olc start-raman-turn-up** command to trigger Raman turn-up.

olc start-raman-turn-up controller ots *R/S/I/P*

Syntax Description	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OSC controller.
	controller Ots	Use this parameter to choose a particular controller.
Command Modes	Controller configuration mode	
Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Example

The following output is a sample of the **olc start-raman-turn-up controller ots 0/0/0/0** command.

```
RP/0/RP0/CPU0:IOS#olc start-raman-turn-up controller Ots 0/0/0/2
Thu Nov  2 10:28:41.529 UTC
```

olc start-gain-estimation

Use the **olc start-gain-estimation** command to trigger the gain estimation operation.

olc start-gain-estimation controller ots *R/S/I/P*

Syntax Description	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OSC controller.
	controller Ots	Use this parameter to choose a particular controller.

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following output is a sample of the **olc start-gain-estimation controller ots 0/0/0/0** command.

```
RP/0/RP0/CPU0:ios#olc start-gain-estimation controller ots 0/0/0/0
```

olc start-raman-tuning

Use the **olc start-raman-tuning** command to trigger Raman tuning.

olc start-raman-tuning controller ots *R/S/I/P*

Syntax Description	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OSC controller.
	controller Ots	Use this parameter to choose a particular controller.

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

optical-line-control

To use the optical applications configuration mode, use the **optical-line-control** command.

optical-line-control

Command Modes Global configuration mode (config)

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

otdr auto-scan

Use the **otdr auto-scan** command to enable or disable the auto otdr scan

otdr auto-scan [**enable** | **disable**]

Syntax Description	enable	disable
	Enables OTDR auto scan.	Disables OTDR auto scan.

Command Modes Controller configuration mode

Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Example

The following are sample configurations that enable and disable automatic OTDR scan.

```
RP/0/RP0/CPU0:ios#configure
Mon Sep 18 13:11:53.812 UTC
RP/0/RP0/CPU0:IOS(config)#optical-line-control controller Ots 0/0/0/0
RP/0/RP0/CPU0:IOS(config-olc-ots)#otdr auto-scan enable
RP/0/RP0/CPU0:IOS(config-olc-ots)#commit

RP/0/RP0/CPU0:ios#configure
Mon Sep 3 13:28:34.631 UTC
RP/0/RP0/CPU0:IOS(config)#optical-line-control controller Ots 0/0/0/0
RP/0/RP0/CPU0:IOS(config-olc-ots)#otdr auto-scan disable
RP/0/RP0/CPU0:IOS(config-olc-ots)#commit
```

otdr start

Use the **otdr-start controller ots** command to start the otdr operation.

otdr-start controller ots *R/S/I/P direction*

Syntax Description	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OTS controller.
--------------------	----------------	--

otdr-start controller ots	Use this parameter to start the otdr operation in a particular direction.
<i>direction</i>	Scan direction (RX or TX)

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following output is a sample of enabling and disabling automatic OTDR scan.

otdr stop

Use the **otdr-stop controller ots** command to stop the otdr operation.

otdr-stop controller ots *R/S/I/P direction*

Syntax Description	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OTS controller.
	otdr-stop controller ots	Use this parameter to stop the otdr operation in a particular direction.
	<i>direction</i>	Scan direction (RX or TX)

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

```
RP/0/RP0/CPU0:ios#otdr-stop controller ots 0/0/0/0 tx
OTS OTDR Scan Stopped at TX
```

partner-band-port

Use the **partner-band-port** command to establish a connection between C and L-band nodes by configuring the L-band peer IP on C-band node and C-band peer IP on L-band node.

partner-band-port **ipv4** *address controller ots Rack/Slot/Instance/Port*

Syntax Description	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OTS controller.
	ipv4 address	Specify the IP address of the peer node.
	controller Ots	Use this parameter to choose a particular controller.
	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OTS controller.

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XR Release 7.9.1	This command was introduced.

Example 1

The following is a sample output of the **partner-band-port** command that configures the peer node IP address 192.0.2.1 on the C-band node.

```
RP/0/RP0/CPU0:ios# optical-line-control controller Ots0/0/0/0
RP/0/RP0/CPU0:ios# partner-band-port ipv4 address 192.0.2.1 controller Ots0/0/0/0
```

pm

To configure the performance monitoring parameters of the OTS, OTS-OCH, OSC, and DFB controllers, use the **pm** command in the controller configuration mode.

For more information about PM threshold values for the controllers, see the section, Monitor performance.

```
pm [ flex-bin | 15-min | 30-sec | 24-hour ] [ ots | ots-och | osc | dfb ] [ report | threshold ] [ eagn
| eatl | iagn | iatl | slr-cl | slt-cl | opbr | opr | opr-cl | opt | opt-s | raman-1
| raman-2 | raman-3 | raman-4 | raman-5 | raman-tot ] [ max-tca | min-tca ] [
enable | value ]
```

Syntax Description	flex-bin 15-min 30-sec 24-hour	Configures performance monitoring parameters for 10 seconds, 15 minutes, 30 seconds, or 24-hour intervals.
	ots ots-och osc dfb	Specifies whether to configure performance monitoring parameters for the OTS, OTS-OCH, OSC, or DFB controllers.
	history	Displays the historical values of the pm command.
	report	Configures the TCA reporting status for optics (OTS-OCH, OSC, or DFB) or OTS parameters.
	threshold	Configures thresholds on optics (OTS-OCH, OSC, or DFB) or OTS parameters.
	iagn eagn	Configures thresholds for ingress or egress amplifier gain.

iatl eatl	Configures the thresholds for ingress or egress amplifier tilt.
slr-cl slt-cl	Configures the thresholds for span loss in Rx or Tx direction.
opr opr-cl opr-s	Configures thresholds for total Rx power, total Rx power for C and L band, or total C band signal power.
opbr	Configures thresholds for back reflection power.
opt opt-s	Configures thresholds for total Tx power or total C band signal power.
raman-1 raman-2 raman-3 raman-4 raman-5 raman-tot	Configures thresholds for Raman power (1, 2, 3, 4, or 5) or total Raman pump power.
max-tca min-tca enable	Enable the maximum or minimum TCA reporting status.
<i>value</i>	Value of the thresholds.

Last clearing of "show controllers OPTICS" counters never

process restart

To restart the license registration process, use the **license smart reservation** command.

process restart smartlicserver location *location*

Syntax Description	location Specifies the node-id.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	None
----------------------	------

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines	None
-------------------------	------

The following example restarts the smart licensing process:

```
RP/0/RP0/CPU0:ios#RP/0/RP0/CPU0:ios (config)#process restart smartlicserver location
0/RP0/CPU0
```

psd

Use the **psd** command to set the target PSDs.

psd *index value*

Syntax Description	<i>index</i> PSD index 1–33.
	<i>value</i> PSD in range -30.0 dBm per 12.5 GHz to 23.0 dBm per 12.5 GHz in increments of 0.1 dBm per 12.5 GHz.

Command Modes	(config-olc-ots)
----------------------	------------------

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Usage Guidelines	You can configure the target power spectral densities for 33 points across the band. The 33 PSD values divide the entire spectrum into 150-GHz steps. APC uses the corresponding PSD value if the channel frequency corresponds to a configured point. If the central frequency is not on a configured position, APC computes the target PSD for a channel by extrapolating from the two adjacent steps.
-------------------------	--

Example

The following is a sample configuration that sets the psd to 15 dB for the setpoints 1 and 2.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#psd 1 150
RP/0/RP0/CPU0:ios(config-olc-ots)#psd 2 150
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

psd-min

Use the **psd-min** command to set the desired minimum PSD.

psd-min *value*

Syntax Description	<i>value</i> PSD in range -40.0 dBm per 12.5 GHz to 23.0 dBm per 12.5 GHz in increments of 0.1 dBm per 12.5 GHz.				
Command Default	The default minimum PSD is -24 dB.				
Command Modes	(config-olc-ots)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XR Release 7.7.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XR Release 7.7.1	This command was introduced.
Release	Modification				
Cisco IOS XR Release 7.7.1	This command was introduced.				

Example

The following is a sample configuration that sets the minimum PSD to -25 dB.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#psd-min -250
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
Tue Apr 26 09:50:12.055 UTC
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

raman-tuning

Use the **raman-tuning** command to disable and enable Raman tuning and to configure Raman gain target manually.

raman-tuning { **disable** | **enable** | { **raman-gain-target** *value* } }

Syntax Description	disable	Disable Automatic Raman Tuner
	enable	Enable Automatic Raman Tune
	raman-gain-target	Configure Raman Gain Target manually
	<i>value</i>	Target Raman Gain in the range 8.0 to 25.0 dB in increments of 0.1 dB.

Command Modes (config-olc-ots)

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Usage Guidelines You can configure Target Raman Gain of 8.0 to 25.0 dB in multiples of 0.1 dB.

Example

The following is a sample configuration that disables Raman tuning.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#raman-tuning disable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

The following is a sample configuration that enables Raman tuning.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#raman-tuning enable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

The following is a sample configuration that configures the Raman gain target to 18 dB.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#raman-tuning raman-gain-target 180
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

raman-tx-power

Use the **raman-tx-power** command to set the Raman pump powers manually.

raman-tx-power *pump* **value** *value*

Syntax Description	<i>pump</i> RAMAN Transmit Pump Instance
---------------------------	--

value Power level (in units of 0.01mW). Range: 3500-39000

Command Modes (config-Ots)

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following is a sample configuration that sets the pump power of the first Raman pump to 211 mW.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#raman-tx-power 1 value 21100
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

reload

To perform the reload operation on the NCS 1010 unit and its modules, use the **reload** command.

reload location *location*

Syntax Description	location <i>location</i>	(Optional) Enter the location for the unit or module which you want to reload.
--------------------	-----------------------------------	--

Command Default All slots are reloaded.

Command Modes Cisco IOS XR

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines None

Example

To reboot the Cisco NCS 1010 system, use the following command.

```
RP/0/RP0/CPU0:ios#reload
Fri Apr 29 06:50:12.312 UTC
Proceed with reload? [confirm]
RP/0/RP0/CPU0:ios#
Preparing system for backup. This may take a few minutes especially for large configurations.
Status report: node0_RP0_CPU0: BACKUP INPROGRESS
```

```
Status report: node0_RP0_CPU0: BACKUP HAS COMPLETED SUCCESSFULLY
[Done]
```

To reboot the entire Cisco NCS 1010 system along with its modules, use the following command.

```
RP/0/RP0/CPU0:ios#reload location all noprompt
Fri Jul 15 14:53:25.775 UTC

server

To allow the system clock to be synchronized by a NTP time server, use the **server** command in one of the NTP configuration modes. To remove the **server** command from the configuration file and restore the system to its default condition with respect to this command, use the **no** form of this command.

server

[**ipv4** | **ipv6**] *ip-address* [**version** *number*] [**key** *key-id*] [**minpoll** *interval*] [**maxpoll** *interval*] [**source** *type interface-path-id*] [**prefer**] [**burst**] [**iburst**]

no server

[**ipv4** | **ipv6**] *ip-address*

Syntax Description

ipv4	(Optional) Specifies an IPv4 IP address.
ipv6	(Optional) Specifies an IPv6 IP address.
<i>ip-address</i>	IPv4 or IPv6 address of the time server providing the clock synchronization.
version <i>number</i>	(Optional) Defines the Network Time Protocol (NTP) version number, where the <i>number</i> argument is a value from 1 to 4. The default is 4.
key <i>key-id</i>	(Optional) Defines the authentication key, where the <i>key-id</i> argument is the authentication key to use when packets are sent to this peer. By default, no authentication key is used.
minpoll <i>interval</i>	(Optional) Defines the shortest polling interval, where the <i>interval</i> argument is specified in powers of two seconds. Range is from 4 to 17. The default value is 6.
maxpoll <i>interval</i>	(Optional) Defines the longest polling interval, where the <i>interval</i> argument is specified in powers of two seconds. Range is from 4 to 17. The default value is 10.
source	(Optional) Specifies the IP source address. The default is the outgoing interface.
<i>type</i>	(Optional) Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	(Optional) Physical interface or virtual interface.
Note	Use the show interfaces command to see a list of all interfaces currently configured on the device.
prefer	(Optional) Makes this peer the preferred server that provides synchronization.

burst	(Optional) Sends a series of packets instead of a single packet within each synchronization interval to achieve faster synchronization.
iburst	(Optional) Sends a series of packets instead of a single packet within the initial synchronization interval to achieve faster initial synchronization.

Command Default No servers are configured by default.

Command Modes NTP configuration

Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Usage Guidelines The value for the **minpoll** keyword must be less than or equal to the value for the **maxpoll** keyword. If this is not the case, the system issues an error message.

Using the **prefer** keyword reduces switching back and forth among servers.

Task ID	Task ID	Operations
	ip-services	read, write

The following example shows how to configure the device to allow its system clock to be synchronized with the clock of the peer at IP address 203.0.113.51 using NTP.

```
RP/0/RP0/CPU0:ios(config)#ntp
RP/0/RP0/CPU0:ios(config-ntp)#server 203.0.113.51 minpoll 8 maxpoll 12 prefer iburst
```

show access-lists-ipv4

To display the contents of current IPv4 access lists, use the **show access-lists ipv4** command in IOS XR EXEC mode.

```
show access-lists ipv4 [ access-list-name hardware { ingress | egress } [ interface type
interface-path-id ] { sequence number | location node-id } [ usage pfilter { location node-id
} ] ] ]
```

Syntax Description		
access-list-name		(Optional) Name of a particular IPv4 access list. The name cannot contain spaces or quotation marks, but can include numbers.
hardware		(Optional) Identifies the access list as an access list for an interface.

ingress	(Optional) Specifies an inbound interface.
interface	(Optional) Displays interface statistics.
<i>type</i>	(Optional) Interface type.
<i>interface-path-id</i>	Physical interface or virtual interface. Note Use the show interfaces command to see a list of all interfaces currently configured on the router.
sequence <i>number</i>	(Optional) Sequence number of a particular IPv4 access list. Range is 1 to 2147483644.
location <i>node-id</i>	(Optional) Location of a particular IPv4 access list. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
summary	(Optional) Displays a summary of all current IPv4 access lists.
<i>sequence-number</i>	(Optional) Sequence number of a particular IPv4 access list. Range is 1 to 2147483644.
usage	(Optional) Displays the usage of the access list on a given line card.
pfilter	(Optional) Displays the packet filtering usage for the specified line card.

Command Default The default displays all IPv4 access lists.

Command Modes IOS XR EXEC

Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Usage Guidelines Use the **show access-lists ipv4** command to display the contents of all IPv4 access lists. To display the contents of a specific IPv4 access list, use the *name* argument. Use the *sequence-number* argument to specify the sequence number of the access list.

Use the **hardware**, **ingress** and **location** keywords to display the access list hardware contents and counters for all interfaces that use the specified access list in a given direction. To display the contents of a specific access list entry, use the **sequence** *number* keyword and argument. The access group for an interface must be configured using the **ipv4 access-group** command for access list hardware counters to be enabled.

Use the **show access-lists ipv4 summary** command to display a summary of all current IPv4 access lists. To display a summary of a specific IPv4 access list, use the *name* argument.

Use the **show access-list ipv4 usage** command to display a summary of all interfaces and access lists programmed on the specified line card.

Task ID	Task ID	Operations
	acl	read

Examples

In the following example, the contents of all IPv4 access lists are displayed:

```
RP/0/RP0/CPU0:ios# show access-lists ipv4 acl_1
Fri Oct 20 06:22:17.223 UTC
ipv4 access-list acl_1
10 permit ipv4 172.16.0.0 0.0.255.255 any
20 deny ipv4 192.168.34.0 0.0.0.255 any
```

show access-lists ipv6

To display the contents of current IPv6 access lists, use the **show access-lists ipv6** command in IOS XR EXEC mode.

```
show access-lists ipv6 [ access-list-name hardware { ingress | egress } [ interface type
interface-path-id ] { sequence number | location node-id | [ usage filter { location node-id
} ] ] ]
```

Syntax Description	
<i>access-list-name</i>	(Optional) Name of a particular IPv6 access list. The name cannot contain a spaces or quotation marks, but can include numbers.
hardware	(Optional) Identifies the access list as an access list for an interface.
ingress	(Optional) Specifies an inbound interface.
interface	(Optional) Displays interface statistics.
<i>type</i>	(Optional) Interface type.

<i>interface-path-id</i>	(Optional) Either a physical interface instance or a virtual interface instance as follows: <ul style="list-style-type: none"> • Physical interface instance. Naming notation is <i>rack/slot/instance/port</i> and a slash between values is required as part of the notation. <ul style="list-style-type: none"> • <i>rack</i>: Chassis number of the rack. • <i>slot</i>: Physical slot number of the modular services card or line card. • <i>instance</i>: Module number. • <i>port</i>: Physical port number of the interface. • Virtual interface instance. Number range varies depending on interface type.
sequence number	(Optional) Sequence number of a particular IPv6 access list. Range is 1 to 2147483644.
location node-id	(Optional) Location of a particular IPv6 access list. The <i>node-id</i> argument is entered in the <i>rack/slot/instance</i> notation.
summary	(Optional) Displays a summary of all current IPv6 access lists.
<i>sequence-number</i>	(Optional) Sequence number of a particular IPv6 access list. Range is 1 to 2147483644.
usage	(Optional) Displays the usage of the access list on a given line card.
pfilter	(Optional) Displays the packet filtering usage for the specified line card.
all	(Optional) Displays the location of all the line cards.

Command Default Displays all IPv6 access lists.

Command Modes IOS XR EXEC

Command History	Release	Modification
	Cisco IOS XR Release 7.11.1	This command was introduced.

Usage Guidelines The **show access-lists ipv6** command is similar to the **show access-lists ipv4** command, except that it is IPv6 specific.

Use the **show access-lists ipv6** command to display the contents of all IPv6 access lists. To display the contents of a specific IPv6 access list, use the *name* argument. Use the *sequence-number* argument to specify the sequence number of the access list.

Use the **hardware**, **ingress** and **location** keywords to display the access list hardware contents and counters for all interfaces that use the specified access list in a given direction. To display the contents of a specific access list entry, use the **sequence number** keyword and argument. The access group for an interface must be configured using the **ipv6 access-group** command for access list hardware counters to be enabled.

Use the **show access-lists ipv6 summary** command to display a summary of all current IPv6 access lists. To display a summary of a specific IPv6 access list, use the *name* argument.

Use the **show access-list ipv6 usage** command to display a summary of all interfaces and access lists programmed on the specified line card.

Task ID	Task ID	Operations
	acl	read

Examples

In the following example, the contents of all IPv6 access lists are displayed:

```
RP/0/RP0/CPU0:ios# show access-lists ipv6
Fri Oct 20 05:29:01.125 UTC
ipv6 access-list V6-INGRESS-ACL
10 permit ipv6 any any
20 deny udp any any
```

show alarms

To view alarm information, use the **show alarms** command in XR EXEC mode or Administration EXEC mode.

```
show alarms [ brief ] [ system ] [ active ]
```

Syntax Description	brief	Displays alarms in brief.
	system	Displays system scope alarms related data.
	active	Displays active alarms.

Command Default None

Command Modes XR EXEC
Administration EXEC

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Usage Guidelines This command displays the alarm information. The command displays only the administration alarms in admin EXEC mode and all the alarms in XR EXEC mode.

Example

The following example shows the output of the **show alarms brief system active** command.

```
RP/0/RP0/CPU0:P1AL 05#show alarms brief system active
Thu Feb 9 11:33:03.137 UTC
-----
```

```

Active Alarms
-----

```

show cdp

To display global CDP information (including timer and hold-time information, information about neighboring devices, interfaces on which CDP is enabled, traffic between devices), use the **show cdp** command in EXEC mode.

```

show cdp { traffic | neighbors [ type number | detail ] | interface [ type number ] | entry { * |
device-name [ * ] } [ version ] [ protocol ] }

```

Syntax Description	
<i>type</i>	(Optional) Interface type that is connected to the neighbors about which you want information.
<i>number</i>	(Optional) Number of the interface connected to the neighbors about which you want information.
detail	(Optional) Displays detailed information about a neighbor (or neighbors) including network address, enabled protocols, hold time, and software version.
*	Displays all CDP neighbors.
<i>device-name</i> *	Name of the neighbor about which you want information. You can enter an optional asterisk (*) at the end of a <i>device-name</i> as a wildcard. For example, entering show cdp entry dev* will match all device names that begin with dev .
version	(Optional) Limits the display to information about the software version running on the device.
protocol	(Optional) Limits the display to information about the protocols enabled on the device.

Command Default No default behavior or values.

Command Modes EXEC

Command History	Release	Modification
	Release 7.10.1	This command was introduced.

Example

Use the **show cdp** command to display global CDP information.

```
RP/0/RP0/CPU0:ios#show cdp
Tue Feb 14 16:59:38.255 UTC
Global CDP information:
  Sending CDP packets every 60 seconds
  Sending a holdtime value of 180 seconds
  Sending CDPv2 advertisements is enabled
```

Use the **show cdp neighbors** command to display detailed information about neighboring devices discovered using CDP.

```
RP/0/RP0/CPU0:R2#show cdp neighbors mgmtEth 0/RP0/CPU0/1
Mon Apr 10 12:30:30.902 UTC

  CDP version 2 advertisements output: 11, Input: 5
  Unrecognize Hdr version: 0, File open failed: 0

```

show configuration commit changes

To display the changes made to the running configuration by previous configuration commits, a configuration commit, or for a range of configuration commits, use the **show configuration commit changes** command in EXEC, administration EXEC, administration configuration, or global configuration mode.

```
show configuration commit changes { commit-id | since commit-id | last number-of-commits
| original last-modified | all } [diff]
```

Syntax Description		
	since	Displays all changes committed to the running configuration since (and including) a specific configuration commit.
	<i>commit-id</i>	Displays configuration changes for a specific configuration commit.
	last <i>number-of-commits</i>	Displays the changes made to the running configuration during the last number of configuration commits specified for the <i>number-of-commits</i> argument.
	original <i>last-modified</i>	Displays the original content of the actual commit operation before policy modifications by commit scripts.
	all	Displays commit ID and configurations completed for last 100 commits.
	diff	(Optional) Displays added lines, changed lines, and deleted lines.
Command Default	None	
Command Modes	EXEC Administration EXEC Administration configuration Global configuration	
Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines

Each time a configuration is committed with the **commit** command, the configuration commit operation is assigned a commit ID. The **show configuration commit changes** command displays the configuration changes made since the specified commit.

To display a list of the available commit IDs, enter the **show configuration commit list** command. You can also display the commit IDs by entering the **show configuration commit changes** command with the online help function (?).

You cannot view commit IDs from a different release if the syntax or semantics of the configuration changed in the current release.

Note Syntax of a configuration refers to its structure and format, while the semantics of a configuration refers to its backend interpretation.

The following example shows sample output from the **show configuration commit changes** command with the *commit-id* argument. In this example, the output displays the changes made in the configuration commit assigned commit ID 1000000006.

```
RP/0/RP0/CPU0:ios#show configuration commit changes 1000000006
Building configuration...

controller Ots0/0/0/0
  raman-osri off
  raman-force-apr off
  raman-tx-power 1 value 22300
  raman-tx-power 2 value 26800
  raman-tx-power 3 value 6400
  raman-tx-power 4 value 12900
  raman-tx-power 5 value 19000
  raman-safety-control-mode auto
!
end
```

The following example shows sample output from the **show configuration commit changes** command with the **since** *commit-id* keyword and argument. In this example, the output displays the configuration changes made since the configuration commit assigned commit ID 1000000006 was committed.

```
RP/0/RP0/CPU0:ios#show configuration commit changes since 1000000006
Tue Feb 28 11:41:04.643 UTC

show controllers

To display status and configuration information about the interfaces on a specific node, use the **show controllers** command in XR EXEC mode.

Show controllers [**description**] [*Controller-type R/S/I/P*] [**spectrum-info**] [**otdr-info** *direction*] [**tone-info**]

Syntax Description	description	Displays the controller status.
	<i>Controller-type R/S/I/P</i>	Rack/Slot/Instance/Port of the controller.
	spectrum-info	Displays the Optical Channel Monitoring (OCM) raw data at slice level, such as Tx-power and Rx-power.
	otdr-info	Displays the OTDR scan status and location of the SOR file, and the OTDR events.
	direction	Scan direction (RX or TX)
	tone-info	Displays the Tone Generation parameters that are set for connection verification and the status of the connection verification operation.

Command Default None

Command Modes XR EXEC mode

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines None

Example

To view the OTS controller status on the ILA cards, use the sh controller description command.

```
RP/0/RP0/CPU0:ios#sh controller description
Fri Mar 25 09:24:53.386 UTC
Interface Status Description
-----
Osc0/0/0/0 up
Osc0/0/0/2 up
Ots0/0/0/0 up
Ots0/0/0/1 up
```

```
Ots0/0/0/2 up
Ots0/0/0/3 up
RP/0/RP0/CPU0:ios#
```

To view the parameters of the LINE 0 OTS controller, use the following command:

```
RP/0/RP0/CPU0:ios#sh controllers ots 0/0/0/0
Wed Mar 23 06:00:37.097 UTC

To view the parameter values set for Tone Generation and the status of connection verification on port 4 OTS controller, use the following command:

```
RP/0/RP0/CPU0:ios#show controllers ots 0/0/0/4 tone-info
Fri Sep 15 14:53:22.579 UTC
Tone Info:
Tone Frequency : 191.3750000 THz
Tone Rate : 2 bits/second
Tone Pattern(Hex value) : abcd1234
Tone Pattern Expected(Hex value) : abcd1234
Tone Pattern Received(Hex value) : 00000000
Tone Detected OOB : Enabled
  Detection State: Inprogress
```

To view the parameter values set for Tone Generation and the status of connection verification on port 4 OMS controller, use the following command:

```
RP/0/RP0/CPU0:#show controllers oms 0/0/0/4 tone-info
Tue May 10 11:41:18.847 UTC
Tone Info:
Tone Rate : 25 bits/second
Tone Pattern Expected(Hex value) : abcd1234
Tone Pattern Received(Hex value) : abcd1234
Tone Detected OOB : Enabled
Detection State: Success
```

To view the parameter values set for Tone Generation and the status of connection verification on port 4 OCH controller, use the following command:

```
RP/0/RP0/CPU0:#show controllers och 0/0/0/4 tone-info
Tue May 10 11:41:18.847 UTC
Tone Info:
Tone Rate : 25 bits/second
Tone Pattern Expected(Hex value) : abcd1234
Tone Pattern Received(Hex value) : abcd1234
Tone Detected OOB : Enabled
Detection State: Success
```

show controllers raman-info

To view the individual Raman pump information and other parameters, use the **show controllers ots r/s/i/p raman-info** command.

show controllers ots *R/S/I/P* raman-info

Syntax Description	<i>R/S/I/P</i> Rack/Slot/Instance/Port of the OSC controller.				
Command Modes	User EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XR Release 7.7.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XR Release 7.7.1	This command was introduced.
Release	Modification				
Cisco IOS XR Release 7.7.1	This command was introduced.				

Example

The following sample shows the output of the **show controllers ots r/s/i/p raman-info** command.

```
RP/0/RP0/CPU0:ios#show controllers ots 0/0/0/0 raman-info
Fri Apr 1 06:40:33.849 UTC

show environment

To display environmental monitor parameters for the system, use the **show environment** command.

```

show environment [ alarm-contact | all | altitude | current | fan | humidity | power
| voltages [ location | location ] | temperature [ location | location ] ]

```

Syntax Description

alarm-contact	(Optional) Displays information about the alarm ports.
all	(Optional) Displays information for all the environmental monitor parameters.
altitude	(Optional) Displays information about the altitude.
current	(Optional) Displays current sensor information.
fan	(Optional) Displays information about the fans.

humidity	(Optional) Displays information about the humidity.
power	(Optional) Displays power supply voltage and current information.
temperature	(Optional) Displays system temperature information.
voltages	(Optional) Displays system voltage information.
location <i>location</i>	(Optional) Enter the location for which the environmental information needs to be displayed.

Command Default

All environmental monitor parameters are displayed.

Command Modes

Cisco IOS XR

Command History

Release	Modification
Release 7.7.1	This command was introduced.

Usage Guidelines

The **show environment** command displays information about the hardware that is installed in the system, including fans, power supply voltage, current information, and temperatures.

Example

The following example shows sample output from the **show environment** command with the **fan** keyword.

```
sysadmin-vm:0_RP0# show environment fan
```

```
Thu May 26 04:15:37.765 UTC
```

```
=====
Location          FRU Type          Fan speed (rpm)

show fpd package

To determine the FPDs that are supported with the current software release and the minimum hardware requirements for each FPD, use the **show fpd package** command in Cisco IOS XR mode.

show fpd package [**detail**]

Syntax Description

detail (Optional) Displays detailed information about FPD upgrade.

Command Default

Firmware information of all the hardware components is displayed.

Command Modes

Cisco IOS XR EXEC

Command History

Release	Modification
Release 7.7.1	This command was introduced.

Example

The following example shows sample output from the **show fpd package** command.

```

RP/0/RP0/CPU0:ios#show fpd package

show hw-module fpd

To display the firmware information of various hardware components of NCS 1010, use the **show hw-module fpd** command in Cisco IOS XR mode.

```
show hw-module fpd [ fpd-name ]
```

Syntax Description	<i>fpd-name</i> (Optional) Name of the FPD.				
Command Default	Firmware information of all the hardware components is displayed.				
Command Modes	Cisco IOS XR EXEC				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.7.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.7.1	This command was introduced.
Release	Modification				
Release 7.7.1	This command was introduced.				

Example

The following example shows sample output from the **show hw-module fpd** command.

```
RP/0/RP0/CPU0:ios# show hw-module fpd
```

```
Wed Jun 29 08:50:21.057 UTC
```

```
Auto-upgrade:Disabled
```

show inventory

To retrieve and display the physical inventory information of the system, use the **show inventory** command in Cisco IOS XR mode.

show environment [**WORD** | **all** | **chassis** | **details** | **fan** | **location** | **power**]
[**raw** | **vendor-type**]

Syntax Description	WORD	(Optional) Displays partially qualified location specification.
	all	(Optional) Displays inventory information for all the physical entities.
	chassis	(Optional) Displays inventory information for the entire chassis.
	details	(Optional) Displays detailed entity information.
	fan	(Optional) Displays inventory information for the fans.
	location <i>location</i>	(Optional) Displays inventory information for a specific node, or for all nodes in the chassis.
	power	(Optional) Displays inventory information for the power supply.
	raw	(Optional) Displays raw information about the chassis for diagnostic purposes.
	vendor-type	(Optional) Displays vendor-type information.

Command Default All hardware inventory information is displayed.

Command Modes Cisco IOS XR EXEC

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines Enter the **show inventory** command with the **raw** keyword to display every RFC 2737 entity installed in NCS 1004, including those without a PID, unique device identifier (UDI), or other physical identification. The **raw** keyword is primarily intended for troubleshooting problems with the **show inventory** command itself.

Example

The following example shows a sample output from the **show inventory** command with the **chassis** keyword.

```
RP/0/RP0/CPU0:P2B_DT_02#show inventory chassis
```

Thu May 26 04:24:52.892 UTC

NAME: "Rack 0", DESCR: "NCS 1010 Shelf Assembly"
 PID: NCS1010-SA , VID: V00, SN: FCB2544B0KC

The following example shows a sample output from the **show inventory** command with the **fan** keyword.

RP/0/RP0/CPU0:P2B_DT_02#show inventory fan

Thu May 26 04:25:23.655 UTC

NAME: "0/FT0", DESCR: "NCS1010 - Shelf Fan"

show ntp associations

To display the status of Network Time Protocol (NTP) associations, use the **show ntp associations** command in privileged EXEC mode.

```
show ntp associations [detail] [location node-id]
```

Syntax Description	detail (Optional) Displays detailed information about each NTP association.				
	location node-id (Optional) Displays the status of NTP associations from the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot</i> notation.				
Command Default	None				
Command Modes	EXEC				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XR Release 7.11.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XR Release 7.11.1	This command was introduced.
Release	Modification				
Cisco IOS XR Release 7.11.1	This command was introduced.				
Usage Guidelines	Output for the show ntp associations command is displayed only if NTP is configured.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>ip-services</td> <td>read</td> </tr> </tbody> </table>	Task ID	Operations	ip-services	read
Task ID	Operations				
ip-services	read				

This example shows sample output from the **show ntp associations** command:

```
RP/0/RP0/CPU0:ios#show ntp associations
Sun Nov 5 15:14:44.128 UTC

address ref clock st when poll reach delay offset disp
*~203.0.113.51 10.64.58.50 2 81 128 377 1.84 7.802 2.129
* sys_peer, # selected, + candidate, - outlayer, x falseticker, ~ configured
```

Table 1: show ntp associations Field Descriptions

Field	Description
*	Peer has been declared the system peer and lends its variables to the system variables.
#	<p>A pound sign (#) displayed next to a configured peer indicates that the router does not synchronize with the peer even though NTP request and response packets are exchanged.</p> <p>In this case, check the output of the show ntp associations detail command or the NTP debugs to see why the clocks are not synchronized.</p> <p>Use the show ntp associations detail and show ntp status commands to obtain additional information about the state of NTP.</p> <p>One possible reason for the # sign is that the NTP client clock differs by more than 4000 seconds from the NTP server clock. On Cisco routers, a time difference of greater than 4000 seconds is considered out of range and prevents the router from synchronization to the server. This does not apply when you first configure an NTP peer on a Cisco router or on reload. In this case, the NTP client clock is changed to match the NTP server clock. Verify the time zone of the client clock; local time is displayed, but time values in NTP messages are in UTC (GMT) time zone. You can manually change the client clock to within a few minutes of the NTP server clock.</p>
+	Peer is a survivor and a candidate for the combining algorithm.
-	Peer is discarded by the clustering algorithm as an outlier.
x	Peer is discarded by the intersection algorithm as a falseticker.
~	Indicates peer is statically configured.
address	IPv4 or IPv6 address of the peer. If a nondefault VRF is configured for the peer, the VRF follows the address.
ref clock	Reference clock type or address for the peer.
st	Stratum setting for the peer.
when	Time since last NTP packet was received from peer, in milliseconds.
poll	Polling interval between NTP poll packets, in seconds. As the NTP server and client are better synced (and there are no dropped packets), this number increases to a maximum of 1024.

Field	Description
reach	Peer reachability (bit string, in octal). The reach field is a circular bit buffer. It gives you the status of the last eight NTP messages (eight bits in octal is 377, so you want to see a reach field value of 377). If an NTP response packet is lost, the lost packet is tracked over the next eight NTP update intervals in the reach field.
delay	Round-trip delay to peer, in milliseconds.
offset	Relative time difference between the client time and server time, in milliseconds. The client slows down or speeds up its clock to match the server time value. The offset decreases toward zero over time. It likely never reaches zero since the packet delay between the client and server is never exactly the same. Therefore, the client NTP cannot ever exactly match its clock with the server. If there is an asterisk (*) next to a configured peer, then you are synchronized to this peer and use them as the primary clock.
disp	Dispersion.

This example shows sample output from the **show ntp associations** command with the **detail** keyword:

```
RP/0/RP0/CPU0:ios#show ntp associations detail
Sun Nov 5 15:14:48.763 UTC

```

Table 2: show ntp associations detail Field Descriptions

Field	Descriptions
vrf	Nondefault VRF, if specified for this peer.
configured	Statically configured peer.
dynamic	Dynamically discovered peer.
our_master	Synchronization of the local machine to this peer.
sane	Passing of basic sanity checks by this peer.
ref ID	Address of machine to which the peer is synchronized.

Field	Descriptions
time	Last time stamp that the peer received from its master.
our mode	Mode relative to peer (active/passive/client/server/bdcast/bdcast client).
peer mode	Mode of peer relative.
our poll intvl	Poll interval to peer.
peer poll intvl	Poll interval of interval.
root delay	Delay along path to root (ultimate stratum 1 time source).
root disp	Dispersion of path to root.
reach	Peer reachability (bit string in octal).
sync dist	Peer synchronization distance.
delay	Round-trip delay to peer.
offset	Offset of peer clock relative to this clock.
dispersion	Dispersion of peer clock.
precision	Precision of peer clock in (Hertz) Hz.
version	NTP version number that peer is using.
org time	Originate time stamp.
rcv time	Receive time stamp.
xmt time	Transmit time stamp.
filtdelay	Round-trip delay of each sample, in milliseconds.
filtoffset	Clock offset of each sample, in milliseconds.
filterror	Approximate error of each sample.

show ntp status

To display the status of Network Time Protocol (NTP), use the **show ntp status** command in XR EXEC mode.

```
show ntp status [ location node-id ]
```

Syntax Description	location <i>node-id</i> (Optional) Displays the status of NTP from the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot</i> notation.				
Command Default	None				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XR Release 7.11.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XR Release 7.11.1	This command was introduced.
Release	Modification				
Cisco IOS XR Release 7.11.1	This command was introduced.				
Usage Guidelines	None				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>ip-services</td> <td>read</td> </tr> </tbody> </table>	Task ID	Operations	ip-services	read
Task ID	Operations				
ip-services	read				

This example shows sample output from the **show ntp status** command:

```
RP/0/RP0/CPU0:ios#show ntp status
Sun Nov 5 15:14:36.949 UTC
```

```
Clock is synchronized, stratum 3, reference is 203.0.113..51
nominal freq is 1000000000.0000 Hz, actual freq is 44881851.3383 Hz, precision is 2**24
reference time is E8F22D7A.AB020D97 (15:04:26.668 UTC Sun Nov 5 2023)
clock offset is 9.690 msec, root delay is 2.553 msec
root dispersion is 24.15 msec, peer dispersion is 2.13 msec
loopfilter state is 'CTRL' (Normal Controlled Loop), drift is 0.0000212807 s/s
system poll interval is 128, last update was 610 sec ago
authenticate is disabled, panic handling is disabled,
hostname resolution retry interval is 1440 minutes.
```

Table 3: show ntp status Field Descriptions

Field	Description
synchronized	Synchronized system to an NTP peer.
stratum	NTP stratum of this system.
reference	IPv4 address or first 32 bits of the MD5 hash of the IPv6 address of the peer to which clock is synchronized.
nominal freq	Nominal frequency in Hertz (Hz) of the system hardware clock.
actual freq	Measured frequency in Hz of the system hardware clock.
precision	Precision of the clock of this system in Hz.
reference time	Reference time stamp.
clock offset	Offset of clock to synchronized peer, in milliseconds.

Field	Description
root delay	Total delay along path to root clock, in milliseconds.
root dispersion	Dispersion of root path.
peer dispersion	Dispersion of synchronized peer.
loopfilter state	The state of the clock state machine transition function.
drift	Drift of the hardware clock.
system poll interval	Poll interval of the peer.
last update	Time the router last updated its NTP information.

show olc apc

Use the **show olc apc** command to view APC status.

```
show olc apc { controller Ots R/S/I/P }
```

Syntax Description

R/S/I/P Rack/Slot/Instance/Port of the OSC controller.

controller Ots Use this parameter to view the information for a particular controller.

Command Modes

User EXEC mode

```

```

Internal State : IDLE

Node RID      : 10.1.1.5
Internal State : DISCREPANCY

```

show olc apc-local

To view the local status of APC on each node, use the **show olc apc-local** command.

```

show olc apc-local { regulation-info { controller Ots R/S/I/P | { tx | rx } } | target-psd-profile } {
controller Ots R/S/I/P }

```

Syntax Description		
regulation-info	Displays APC regulation information.	
target-psd-profile	Displays target PSD profile information	
<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OSC controller.	
controller Ots	Use this parameter to view the information for a particular controller.	

Command Modes User EXEC mode

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following sample is an output of **show olc apc-local** command.

```

RP/0/RP0/CPU0:ios#show olc apc-local
Mon Apr 11 06:59:14.679 UTC

Controller : Ots0/0/0/0

TX Status : ENABLED
RX Status : ENABLED

```

The following sample is an output of **show olc apc-local target-psd-profile** command.

```

RP/0/RP0/CPU0:ios#show olc apc-local target-psd-profile
Tue Apr 26 10:19:24.910 UTC
Controller      : Ots0/0/0/0
Target PSD source : Configuration

```

Setpoint	Frequency (THz)	Target PSD (dBm/12.5 GHz)

```

The following table describes the different fields that are displayed in the output of the *show olc band-status* command.

Status	Description
Controller	Name of the controller.
Self-Band	Name of the band. Values: <ul style="list-style-type: none"> • C-Band • L-Band • None
BFR status	Status of BFR. Values: <ul style="list-style-type: none"> • Running • Paused • NA
Node RID	Node router ID.
Self IP Address	IP address of the current node on which the command is running. Note This field displays <i>NA</i> if BFR is paused.

Status	Description
Self Controller	<p>Controller details of the current node on which the command is running.</p> <p>Note This field displays <i>NA</i> if BFR is paused.</p>
Partner IP address	<p>IP address of the partner node that is connected to the self node in the <i>Node RID</i>. This IP address is used to communicate between the L-band and C-band device.</p> <p>Note This field displays <i>NA</i> if BFR is paused.</p>
Partner Controller	<p>Controller details of the partner node.</p> <p>Note This field displays <i>NA</i> if BFR is paused.</p>
Partner link status	<p>Connection status of the C and L band nodes.</p> <p>Values:</p> <ul style="list-style-type: none"> • UP • DOWN <p>Note This field displays <i>NA</i> if BFR is paused.</p>
C-Band status	<p>C band node status.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • ACTIVE • FAILED • RECOVERING • NA <p>Note This field displays <i>NA</i> if BFR is paused.</p>
C-Band PSD	<p>The active PSD profile on the C-Band node.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • Dual Band • Single Band <p>Note This field displays <i>NA</i> if BFR is paused.</p>

Status	Description
L-Band status	<p>L band node status.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • ACTIVE • FAILED • RECOVERING • NA <p>Note This field displays <i>NA</i> if BFR is paused.</p>
L-Band PSD	<p>The active PSD profile on the L-Band node.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • Dual Band • Single Band <p>Note This field displays <i>NA</i> if BFR is paused.</p>

show olc gain-estimator

Use the **show olc gain-estimator** command to view the gain estimation details.

show olc gain-estimator { **controller Ots** *R/S/I/P* }

Syntax Description

R/S/I/P Rack/Slot/Instance/Port of the OSC controller.

controller Ots Use this parameter to view the information for a particular controller.

Command Modes

User EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following output is a sample of the **show olc gain-estimator** command.

```
RP/0/RP0/CPU0:ios#show olc gain-estimator
Thu May 12 09:30:39.987 UTC
Controller                               : Ots0/0/0/0
Egress Gain Estimator Status             : IDLE
Egress Estimated Gain                     : 25.9 dB
```

```

Egress Estimated Gain Mode      : Extended
Egress Gain Estimation Timestamp : 2022-05-07 09:16:53

Controller                       : Ots0/0/0/2
Egress Gain Estimator Status     : IDLE
Egress Estimated Gain           : 11.7 dB
Egress Estimated Gain Mode      : Normal
Egress Gain Estimation Timestamp : 2022-05-07 10:13:53

```

The following output is a sample of the **show olc gain-estimator controller ots R/S/I/P** command.

```

RP/0/RP0/CPU0:ios#show olc gain-estimator controller Ots 0/0/0/0
Fri Jun 10 05:47:21.119 UTC
Controller                       : Ots0/0/0/0
Ingress Gain Estimator Status    : IDLE
Ingress Estimated Gain           : 21.7 dB
Ingress Estimated Gain Mode      : Normal
Ingress Gain Estimation Timestamp : 2022-06-10 05:46:48

```

show olc link-tuner

To view link tuner status and PSD computation information, use **show olc link-tuner** command.

```
show olc link-tuner { detail } { { controller Ots R/S/I/P } }
```

Syntax Description	detail	Displays link tuner status, PSD computation information, and computed total noise.
	<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OSC controller.
	controller Ots	Use this parameter to view the information for a particular controller.

Command Modes User EXEC mode

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following sample is an output of **show olc link-tuner** command.

```

RP/0/RP0/CPU0:ios#show olc link-tuner

Last Trigger Event                       : Span Fault
```

show olc raman-tuning

To view the Raman tuning status using **show olc raman-tuning** command.

```
show olc raman-tuning { controller Ots R/S/I/P }
```

Syntax Description

R/S/I/P Rack/Slot/Instance/Port of the OSC controller.

controller Ots Use this parameter to view the information for a particular controller.

Command Modes

User EXEC mode

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following sample is an output of the **show olc raman-tuning** command.

```
RP/0/RP0/CPU0:ios#sh olc raman-tuning
Fri Apr 1 06:38:34.330 UTC

Controller                : Ots0/0/0/0
Raman-Tuning Status      : TUNED
Tuning Complete Timestamp : 2022-04-01 05:49:30.407029
Estimated Max Possible Gain : 21.7 dB
Raman Gain Target        : 14.7 dB
Gain Achieved on Tuning Complete : 14.6 dB
```

The following sample is an output of the **show olc raman-tuning controller ots r/s/i/p** command.

```
RP/0/RP0/CPU0:ios#sh olc raman-tuning controller ots 0/0/0/0
Fri Apr 1 06:42:49.538 UTC

Controller                : Ots0/0/0/0
Raman-Tuning Status      : TUNED
Tuning Complete Timestamp : 2022-04-01 05:50:19.934044
Estimated Max Possible Gain : 21.1 dB
Raman Gain Target        : 18.0 dB
Gain Achieved on Tuning Complete : 18.1 dB
```

show olc span-loss

Use the **show olc span-loss** command to view the Tx span loss and Rx span loss.

```
show olc span-loss { controller Ots R/S/I/P }
```

Syntax Description	
<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OSC controller.
controller Ots	Use this parameter to view the span loss for a particular controller.

Command Modes	User EXEC mode
---------------	----------------

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example 1

This example shows the span loss values on a Raman span.

```
RP/0/RP0/CPU0:ios#show olc span-loss

Controller name                : Ots0/0/0/0
Neighbour RID                  : 10.1.1.2
Apparent Rx Span Loss         : 21.1 dB

Rx Span Loss (with pumps off) : NA
Rx Span Loss (with pumps off) measured at : 2024-09-02 07:42:56
Estimated Rx Span Loss        : NA
Apparent Tx Span Loss         : 20.8 dB

Tx Span Loss (with pumps off) : NA
Tx Span Loss (with pumps off) measured at : 2024-09-02 07:42:56
Estimated Tx Span Loss        : NA
```

Example 2

This example shows the span loss values on a non-Raman span.

```
RP/0/RP0/CPU0:ios#show olc span-loss

Controller name                : Ots0/0/0/0
Neighbour RID                  : 10.1.1.2
Rx Span Loss                   : 21.1 dB

Rx Span Loss (with pumps off) : NA
Estimated Rx Span Loss        : NA
Tx Span Loss                   : 20.8 dB
Tx Span Loss (with pumps off) : NA
Estimated Tx Span Loss        : NA
```

show platform

To display information and status for each node in the network, use the **show platform** command in the XR EXEC mode.

Show platform

Syntax Description	show platform Displays the status of the node				
Command Default	None				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.7.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.7.1	This command was introduced.
Release	Modification				
Release 7.7.1	This command was introduced.				
Usage Guidelines	None				

Example

To view the information of the node, use the following command:

```
RP/0/RP0/CPU0:R3#sh platform
Wed May 11 15:58:41.627 UTC
Node                               Type                               State                               Config state
-----
0/RP0/CPU0                         NCS1010-CNTRLR-K9(Active)        IOS XR RUN                         NSHUT,NMON
0/PM0                               NCS1010-AC-PSU                  OPERATIONAL                        NSHUT,NMON
0/PM1                               NCS1010-AC-PSU                  OPERATIONAL                        NSHUT,NMON
0/FT0                               NCS1010-FAN                     OPERATIONAL                        NSHUT,NMON
0/FT1                               NCS1010-FAN                     OPERATIONAL                        NSHUT,NMON
0/0/NXR0                           NCS1K-OLT-R-C                   OPERATIONAL                        NSHUT,NMON
0/2                                  NCS1K-BRK-SA                    OPERATIONAL                        NSHUT,NMON
0/2/0                              NCS1K-BRK-8                    OPERATIONAL                        NSHUT,NMON
0/2/1                              NCS1K-BRK-16                   OPERATIONAL                        NSHUT,NMON
0/2/2                              NCS1K-BRK-24                   OPERATIONAL                        NSHUT,NMON
0/2/3                              NCS1K-BRK-24-SIM               OPERATIONAL                        NSHUT,NMON
```

show tcp dump-file

To display the details of the PCB state from a dump file, use the **show tcp dump-file** command in EXEC mode.

```
show tcp dump-file { dump-file-name | | all | | list | { ipv4-address-of-dumpfiles | ipv6-address-of-dumpfiles | | all } } { location node-id }
```

Syntax Description	all Displays all connections information.				
	location <i>node-id</i> Displays RAW statistics for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.				
Command Default	No default behavior or values				
Command Modes	EXEC				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release R24.2.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release R24.2.1	This command was introduced.
Release	Modification				
Release R24.2.1	This command was introduced.				
Usage Guidelines	The basic use of this command is to provide information about the list of all TCP dump files, details of any specific or all TCP dumpfile file. You can also use this command for debugging purpose or to monitor the flow of TCP packets for a TCP connection.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>transport</td> <td>read</td> </tr> </tbody> </table>	Task ID	Operations	transport	read
Task ID	Operations				
transport	read				

Examples

The following is sample output from the **show tcp dumpfile all location 0/RP0/CPU0** command:

```
RP/0/RP0/CPU0:ios# show tcp dumpfile list all location 0/RP0/CPU0

total 4
-rw-r--r-- 1 rpathark eng 3884 May 11 20:16 80_80_80_80.26355.179.cl.15892
```

show version

To display the software version and details such as system uptime, use the **show version** command.

show version]

Syntax Description

This command has no keywords or arguments.

Command Default

The software version and details such as system uptime are displayed for all the nodes in the system.

Command Modes

Cisco IOS XR

Command History

Release	Modification
Release 7.7.1	This command was introduced.

Usage Guidelines

Enter the **show version** command to display the software version, build information and system uptime.

Example

The following example shows a sample output from the **show version** command.

```
sysadmin-vm:0_RP0# show version

Thu Apr 28 05:47:48.980 UTC
Cisco IOS XR Software, Version 7.7.1.19I LNT
Copyright (c) 2013-2022 by Cisco Systems, Inc.

Build Information:
Built By      : ingunawa
Built On     : Tue Apr 12 18:27:51 UTC 2022
Build Host   : iox-lnx-109
Workspace    : /auto/iox-lnx-109-san1/prod/7.7.1.19I.SIT_IMAGE/ncs1010/ws
Version      : 7.7.1.19I
Label        : 7.7.1.19I-PROD_BUILD_7_7_1_19I_SIT_IMAGE

cisco NCS1010 (C3758 @ 2.20GHz)
cisco NCS1010-SA (C3758 @ 2.20GHz) processor with 32GB of memory
ios uptime is 2 minutes
NCS 1010 - Chassis
```

span-length

To configure span length, use the **span-length** command.

span-length *length*

Syntax Description	<i>length</i> Span length in 0.1 km. Range: 1-2000
---------------------------	--

Command Modes	(config-olc-ots)
----------------------	------------------

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example

The following example is a sample configuration that configures span-length to 10 km.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#span-length 100
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

span-loss

To configure the span loss thresholds, use the **span-loss** command.

span-loss **min** | **max** *threshold*

Syntax Description	max Sets the maximum span loss threshold.
---------------------------	--

	min Sets the minimum span loss threshold.
--	--

	<i>threshold</i> The threshold is set within the range of 0.0 to 42.0 dB, in increments of 0.1 dB. If the threshold value is configured to 42 dB, the actual span loss value is 4.2 dB.
--	---

Command Modes	(config-olc-ots)
----------------------	------------------

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Example 1

This example sets the span loss minimum threshold to 14 dB and the maximum threshold to 35 dB.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#span-loss max 350
RP/0/RP0/CPU0:ios(config-olc-ots)#span-loss min 140
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

tcp dump-file convert

Use the **tcp dump-file convert** command in EXEC mode to convert the TCP dump packet traces files to other readable formats such as pcap, text, or both.

```
tcp dump-file convert { pcap | text | all-formats } { all | binary_file_name | ipaddress } location
{ node-id } file { absolute file path }
```

Syntax Description	
pcap	Converts TCP dump packet files to packet capture (pcap) format.
text	Converts TCP dump packet traces files to text format.
all-format	Converts TCP dump packet traces files to both pcap and text format.
all	Collects TCP dump file data from all peers and nodes.
binary_file_name	Specifies the name of the dump file to be converted.
ipaddress	Specifies the IP address of the peer node.
location { <i>node-id</i> }	(Optional) Specifies the node to store the converted TCP dump file. The <i>node-id</i> is entered in the <i>rack/slot/module</i> notation, for example location <i>0/RP0/CPU0</i> . By default, the files are stored in the current node where the CLI command is executed.
file { <i>absolute file path</i> }	(Optional) Specifies the absolute file path where you want to store the converted TCP dump files. The file path is entered in the <i>node/filename</i> notation, for example <i>/harddisk:/demo1</i> . By default, the converted files are stored inside the file "decoded_dumpfiles" in the current node where the CLI command is executed or if you have provided the location the files are stored in that location.

Command Default By default, the converted files are stored inside the *decoded_dumpfiles* file.

Command Modes EXEC

Command History	Release	Modification
	Release R24.2.1	This command was introduced.

Usage Guidelines

Use this command to convert TCP dump packet traces files into text, pcap, or both readable formats.

Task ID**Task ID Operations**

transport read,
write

Examples

The following example shows how to convert TCP packet traces files into text and pcap readable formats:

```
RP/0/RP0/CPU0:ios# tcp dump-file convert all-formats all
ascii file is saved at :
/harddisk:/decoded_dumpfiles/text_tcpdump_peer_all_node0_RP0_CPU0_2024_3_19_10_8_53.462070.txt
pcap file is saved at :
/harddisk:/decoded_dumpfiles/pcap_tcpdump_peer_all_node0_RP0_CPU0_2024_3_19_10_8_40.154838.pcap
[OK]
```

The following example shows how to filter TCP dump packet traces by IP address and convert them into text and pcap readable format:

```
RP/0/RP0/CPU0:ios# tcp dump-file convert all-formats ipaddress 192.0.2.121
ascii file is saved at :
/harddisk:/decoded_dumpfiles/text_tcpdump_peer_1_1_1_2_node0_RSP0_CPU0_2024_3_19_10_9_20.539021.txt
pcap file is saved at :
/harddisk:/decoded_dumpfiles/pcap_tcpdump_peer_1_1_1_2_node0_RSP0_CPU0_2024_3_19_10_9_20.539021.pcap
[OK]
```

The following example specifies a location where you want to store the converted TCP dump file:

```
RP/0/RP0/CPU0:ios# tcp dump-file convert all-formats all location 0/RP0/CPU0
ascii file is saved at :
/harddisk:/decoded_dumpfiles/text_tcpdump_peer_all_node0_RP0_CPU0_2024_3_19_12_53_35.12323.txt
pcap file is saved at :
/harddisk:/decoded_dumpfiles/pcap_tcpdump_peer_all_node0_RP0_CPU0_2024_3_19_12_53_35.12323.pcap
[OK]
```

The following example specifies the absolute file path where you want to store the converted TCP dump files:

```
RP/0/RP0/CPU0:ios# tcp dump-file convert text all file /harddisk:/demo2
ascii file is saved at : /harddisk:/demo2.txt
[OK]
```

tone-pattern controller

Use the **tone-pattern controller** command to start or stop initiating the tone pattern from the OTS controller.

tone-pattern controller ots *R/S/I/P* [**start** | **stop**]

Syntax Description

tone-pattern controller ots	Use this parameter to stop or start the tone pattern operation in the OTS controller.
<i>R/S/I/P</i>	Rack/Slot/Instance/Port of the OTS controller.
start	Use this parameter to start the tone-pattern operation in the OTS controller.

stop Use this parameter to stop the tone-pattern operation in the OTS controller.

Command Default None

Command Modes controller configuration mode

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Usage Guidelines None

Example

The following is a sample configuration of the **tone-pattern controller ots** command that starts the tone pattern on port 2 OTS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern controller ots 0/0/0/2 start
Wed May 25 12:00:03.271 UTC
Tone pattern started
```

The following is a sample configuration of the **tone-pattern controller ots** command that stops the tone pattern on port 2 OTS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern controller ots 0/0/0/2 stop
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

tone-pattern-detect controller

Use the **tone-pattern-detect controller** command to start or stop detecting the tone pattern that is initiated from the OTS controller.

tone-pattern-detect controller *controllertype R/S/I/P* [**start** | **stop**]

Syntax Description	Parameter	Description
	tone-pattern-detect controller	Use this parameter to stop or start the tone-pattern detect operation in a particular controller.
	<i>controllertype R/S/I/P</i>	Rack/Slot/Instance/Port of the controller.
	start	Use this parameter to start the tone-pattern detect operation in a particular controller.
	stop	Use this parameter to stop the tone-pattern detect operation in a particular controller.

Command Default None

Command Modes controller configuration mode

Command History	Release	Modification
	Cisco IOS XR Release 7.7.1	This command was introduced.

Usage Guidelines None

Example

The following is a sample configuration of the **tone-pattern-detect controller** command that starts the tone pattern detection on port 2 OTS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern-detect controller ots 0/0/0/2 start
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

The following is a sample configuration of the **tone-pattern-detect controller** command that starts the tone pattern detection on port 2 OMS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern-detect controller oms 0/0/0/2 start
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

The following is a sample configuration of the **tone-pattern-detect controller** command that starts the tone pattern detection on port 2 OCH controller.

```
RP/0/RP0/CPU0:ios#tone-pattern-detect controller och 0/0/0/2 start
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

The following is a sample configuration of the **tone-pattern-detect controller** command that stops the tone pattern detection on port 2 OTS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern-detect controller ots 0/0/0/2 stop
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

The following is a sample configuration of the **tone-pattern-detect controller** command that stops the tone pattern detection on port 2 OMS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern-detect controller oms 0/0/0/2 stop
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

The following is a sample configuration of the **tone-pattern-detect controller** command that stops the tone pattern detection on port 2 OCH controller.

```
RP/0/RP0/CPU0:ios#tone-pattern-detect controller och 0/0/0/2 stop
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

upgrade hw-module

To upgrade a specific FPD, all the FPDs, or the FPDs belonging to a specific location, use the **upgrade-hw-module** command in Cisco IOS XR mode.

upgrade hw-module [**location** [*location-id* | **all**]] [**fpd** [*fpd-name*] | **all**]

Syntax Description	location [<i>location-id</i> all]	Upgrades the FPDs belonging to a specific location.
	fpd [<i>fpd-name</i> all]	Upgrades a specific FPD or all the FPDs.

Command Default None

Command Modes Cisco IOS XR

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Example

The following example shows how to upgrade IoFpga FPD.

```
RP/0/RP0/CPU0:ios# upgrade hw-module location 0/Rack fpd IoFpga
```

ztp clean

To remove all Zero Touch Provisioning (ZTP) logs and settings that are saved on the node, use the ztp clean command in EXEC mode.

ztp clean

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Cisco IOS XR Configuration
----------------------	----------------------------

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines	None
-------------------------	------

To remove all the ZTP logs and saved settings use the following command.

```
RP/0/RP0/CPU0:ios#ztp clean
Fri Apr 29 06:49:29.760 UTC
This would remove all ZTP temporary files.
Would you like to proceed? [no]: yes
All ZTP operation files have been removed.
ZTP logs are present in /var/log/ztp*.log for logrotate.
```

Please remove manually if needed.
If you now wish ZTP to run again from boot, do 'conf t/commit replace' followed by reload.

ztp initiate

To remove all Zero Touch Provisioning (ZTP) logs and settings that are saved on the node, use the `ztp clean` command in EXEC mode.

ztp clean

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes Cisco IOS XR Configuration

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines None

Example

To initiate the ZTP use the following command.

```
RP/0/RP0/CPU0:ios#ztp initiate
Fri Jun 17 11:44:08.791 UTC
Initiating ZTP may change your configuration.
Interfaces might be brought up if they are in shutdown state
Would you like to proceed? [no]: yes
ZTP will now run in the background.
Please use "show logging" or look at /var/log/ztp.log to check progress.
RP/0/RP0/CPU0:ios#
```

ztp terminate

To terminate all existing Zero Touch Provisioning (ZTP) processes, use the `ztp terminate` command in EXEC mode.

ztp terminate

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes Cisco IOS XR Configuration

Command History	Release	Modification
	Release 7.7.1	This command was introduced.

Usage Guidelines None

Example

To terminate the ZTP process use the following command.

```
RP/0/RP0/CPU0:ios#ztp terminate
Fri Apr 29 06:38:59.238 UTC
This would terminate active ZTP session if any (this may leave your system in a partially
configured
state)
Would you like to proceed? [no]: yes
Terminating ZTP
No ZTP process running
```

■ ztp terminate
