

# Virtual Private LAN Services Commands

---

This module describes the commands used to configure, monitor, and troubleshoot Virtual Private LAN Services (VPLS).

For detailed information about virtual private network concepts, configuration tasks, and examples, refer to the *Virtual Private Configuration Guide*.

- [action \(VPLS\)](#), on page 2
- [aging \(VPLS\)](#), on page 4
- [bridge-domain \(VPLS\)](#), on page 6
- [bridge group \(VPLS\)](#), on page 7
- [clear l2vpn bridge-domain \(VPLS\)](#), on page 8

- [type \(VPLS\)](#), on page 79
- [vfi \(VPLS\)](#), on page 81
- [withdraw \(VPLS\)](#), on page 83

## action (VPLS)

To configure the bridge behavior when the number of learned MAC addresses reaches the MAC limit configured, use the **action** command in L2VPN bridge group bridge domain MAC limit configuration mode. To disable this feature, use the **no** form of this command.

**action** {**flood** | **no-flood** | **shutdown**}

**no action** {**flood** | **no-flood** | **shutdown**}

Syntax Description	
<b>flood</b>	Configures the action to flood all unknown unicast packets when the MAC limit is reached. If the action is set to flood, all unknown unicast packets, with unknown destinations addresses, are flooded over the bridge.
<b>no-flood</b>	Configures the action to no-flood so all unknown unicast packets are dropped when the MAC limit is reached. If the action is set to no-flood, all unknown unicast packets, with unknown destination addresses, are dropped.
<b>shutdown</b>	Stops forwarding when the MAC limit is reached. If the action is set to shutdown, all packets are dropped.

**Command Default** No action is taken when the MAC address limit is reached.

**Command Modes** L2VPN bridge group bridge domain MAC limit configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **action** command to specify the type of action to be taken when the action is violated.

The configured action has no impact if the MAC limit has not been reached.

Task ID	Task ID	Operations
	l2vpn	read, write

### Examples

The following example shows how to configure the bridge bar to flood all unknown unicast packets when the number of MAC addresses learned by the bridge reaches 10:

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router (config)#l2vpn
RP/0/RP0/CPU0:router (config-l2vpn)#bridge group 1
```

```

RP/0/RP0/CPU0:router(config-l2vpn-bg) #bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd) #mac
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac) #limit
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac-limit) #action flood
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac-limit) #maximum 10

```

Related Commands	Command	Description
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
	<a href="#">limit (VPLS), on page 16</a>	Sets the MAC address limit for action, maximum, and notification and enters L2VPN bridge group bridge domain MAC limit configuration mode.
	l2vpn	Enters L2VPN configuration mode.
	<a href="#">mac (VPLS), on page 18</a>	Enters L2VPN bridge group bridge domain MAC configuration mode.
	<a href="#">maximum (VPLS), on page 20</a>	Configures the specified action when the number of MAC addresses learned on a bridge is reached.
	<a href="#">notification (VPLS), on page 28</a>	Specifies the type of notification that is sent when the number of learned MAC addresses exceeds the configured limit.

## aging (VPLS)

To enter the MAC aging configuration submode to set the aging parameters such as time and type, use the **aging** command in L2VPN bridge group bridge domain configuration mode. To return to the default value for all parameters that are attached to this configuration submode, use the **no** form of this command.

**aging**  
**no aging**

**Syntax Description** This command has no keywords or arguments.

**Command Default** No defaults are attached to this parameter since it is used as a configuration submode. See defaults that are assigned to the [time \(VPLS\), on page 77](#) and the [type \(VPLS\), on page 79](#) parameters.

**Command Modes** L2VPN bridge group bridge domain MAC configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **aging** command to enter L2VPN bridge group bridge domain MAC aging configuration mode.

Task ID	Task ID	Operations
	l2vpn	read, write

### Examples

The following example shows how to enter MAC aging configuration submode and to set the MAC aging time to 120 seconds:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# l2vpn
RP/0/RP0/CPU0:router (config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router (config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd)# mac
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd-mac)# aging
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd-mac-aging)# time 120
```

### Related Commands

Commands	Description
<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain and enters L2VPN bridge group bridge domain configuration mode.

Commands	Description

<a href="#">type (VPLS), on page 79</a>	Configures the type for MAC address aging.

## bridge-domain (VPLS)

To establish a bridge domain and to enter L2VPN bridge group bridge domain configuration mode, use the **bridge-domain** command in L2VPN bridge group configuration mode. To return to a single bridge domain, use the **no** form of this command.

**bridge-domain** *bridge-domain-name*  
**no bridge-domain** *bridge-domain-name*

<b>Syntax Description</b>	<p><i>bridge-domain-name</i> Name of the bridge domain.</p> <p><b>Note</b> The maximum number of characters that can be specified in the bridge domain name is 27.</p>						
<b>Command Default</b>	The default value is a single bridge domain.						
<b>Command Modes</b>	L2VPN bridge group configuration						
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.8.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.8.0	This command was introduced.		
Release	Modification						
Release 3.8.0	This command was introduced.						
<b>Usage Guidelines</b>	Use the <b>bridge-domain</b> command to enter L2VPN bridge group bridge domain configuration mode.						
<b>Task ID</b>	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>l2vpn</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	l2vpn	read, write

l2vpn	read, write						
<b>Examples</b>	<p>The following example shows how to configure a bridge domain:</p> <pre>RP/0/RP0/CPU0:router# configure RP/0/RP0/CPU0:router(config)# l2vpn RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1 RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)#</pre>						
<b>Related Commands</b>	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><a href="#">bridge group (VPLS), on page 7</a></td> <td>Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.</td> </tr> <tr> <td><a href="#">l2vpn</a></td> <td>Enters L2VPN configuration mode.</td> </tr> </tbody> </table>	Command	Description	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.	<a href="#">l2vpn</a>	Enters L2VPN configuration mode.
Command	Description						
<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.						
<a href="#">l2vpn</a>	Enters L2VPN configuration mode.						

## bridge group (VPLS)

To create a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain, use the **bridge group** command in L2VPN configuration mode. To remove all the bridge domains that are created under this bridge group and to remove all network interfaces that are assigned under this bridge group, use the **no** form of this command.

**bridge group** *bridge-group-name*  
**no bridge-group** *bridge-group-name*

<b>Syntax Description</b>	<i>bridge-group-name</i> Number of the bridge group to which the interface belongs.
---------------------------	---

<b>Command Default</b>	No bridge group is created.
------------------------	-----------------------------

<b>Command Modes</b>	L2VPN configuration
----------------------	---------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 3.8.0	This command was introduced.

<b>Usage Guidelines</b>	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Use the **bridge group** command to enter L2VPN bridge group configuration mode.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	l2vpn	read, write

### Examples

The following example shows that bridge group 1 is assigned:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)#
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">l2vpn</a>	Enters L2VPN configuration mode.

## clear l2vpn bridge-domain (VPLS)

To clear the MAC addresses and to restart the bridge domains on the router, use the **clear l2vpn bridge-domain** command in EXEC mode.

```
clear l2vpn bridge-domain {all | bd-name name | group group}
```

Syntax Description	all	Clears and restarts all the bridge domains on the router.
	<b>bd-name</b> <i>name</i>	Clears and restarts the specified bridge domain. The <i>name</i> argument specifies the name of the bridge-domain.
	<b>group</b> <i>group</i>	Clears and restarts all the bridge domains that are part of the bridge group.

**Command Default** None

**Command Modes** EXEC

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This is the method that allows a bridge to forward again after it was put in Shutdown state as a result of exceeding the configured MAC limit.

Task ID	Task ID	Operations
	l2vpn	read, write

### Examples

The following example shows how to clear all the MAC addresses and to restart all the bridge domains on the router:

```
RP/0/RP0/CPU0:router# clear l2vpn bridge-domain all
```

Related Commands	Command	Description
	<a href="#">show l2vpn bridge-domain (VPLS), on page 34</a>	Display information for the bridge ports such as attachment circuits and pseudowires for the specific bridge domains.

## debug l2vpn forwarding platform vpls all location

To display debugging information about L2VPN forwarding Virtual Private LAN Service (VPLS) platform of a specified location, use the **debug l2vpn forwarding platform vpls all location** command in EXEC mode. To disable debugging, use the **no** form of this command.

**debug l2vpn forwarding platform vpls all location** *location*  
**no debug l2vpn forwarding platform vpls all location** *location*

<b>Syntax Description</b>	<i>location</i> Location to display debugging information.
---------------------------	--

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	EXEC
----------------------	------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 5.1	This command was introduced.

<b>Usage Guidelines</b>	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

<b>Task ID</b>	<b>Task ID</b>	<b>Operation</b>
	root-system	read, write

# flooding disable

To configure flooding for traffic at the bridge domain level or at the bridge port level, use the **flooding disable** command in L2VPN bridge group bridge domain configuration mode. To return the bridge to normal flooding behavior when all unknown unicast packets, all broadcast packets, and all multicast packets are flooded over all other bridge domain network interfaces, use the **no** form of this command.

**flooding disable**  
**no flooding disable**

This command has no keywords or arguments.

**Command Default** The default behavior is that packets are flooded when their destination MAC address is not found.

**Command Modes** L2VPN bridge group bridge domain configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **flooding disable** command to override the parent bridge configuration.

By default, bridge ports inherit the flooding behavior of the bridge domain.

When flooding is disabled, all unknown unicast packets, all broadcast packets, and all multicast packets are discarded.

Task ID	Task ID	Operations
	l2vpn	read, write

**Examples** The following example shows how to disable flooding on the bridge domain called bar:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# flooding disable
```

Related Commands	Command	Description
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.

Command	Description
<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
<a href="#">l2vpn</a>	Enters L2VPN configuration mode.
<a href="#">mtu (VPLS), on page 24</a>	Adjusts the maximum packet size or maximum transmission unit (MTU) size for the bridge domain.

## interface (VPLS)

To add an interface to a bridge domain that allows packets to be forwarded and received from other interfaces that are part of the same bridge domain, use the **interface** command in L2VPN bridge group bridge domain configuration mode. To remove an interface from a bridge domain, use the **no** form of this command.

```
interface type interface-path-id
no interface type interface-path-id
```

<b>Syntax Description</b>	<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
	<i>interface-path-id</i>	Physical interface or virtual interface.
	<b>Note</b>	Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router.
		For more information about the syntax for the router, use the question mark (?) online help function.

**Command Default** None

**Command Modes** L2VPN bridge group bridge domain configuration

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **interface** command to enter L2VPN bridge group bridge domain attachment circuit configuration mode. In addition, the **interface** command enters the interface configuration submode to configure parameters specific to the interface.

By default, an interface is not part of a bridge.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	l2vpn	read, write

### Examples

The following example shows how to configure the bundle Ethernet interface as an attachment circuit:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# l2vpn
RP/0/RP0/CPU0:router (config-l2vpn)# bridge group 1
```

```
RP/0/RP0/CPU0:router(config-l2vpn-bg) # bridge-domain bar  
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd) # interface gigabitethernet 0/1/0/9  
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-ac) #
```

Related Commands	Command	Description
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
	<a href="#">l2vpn</a>	Enters L2VPN configuration mode.

## learning disable (VPLS)

To override the MAC learning configuration of a parent bridge or to set the MAC learning configuration of a bridge, use the **learning disable** command in L2VPN bridge group bridge domain MAC configuration mode. To disable this feature, use the **no** form of this command.

**learning disable**  
**no learning disable**

<b>Syntax Description</b>	This command has no keywords or arguments.	
<b>Command Default</b>	By default, learning is enabled on all bridge domains and all interfaces on that bridge inherits this behavior.	
<b>Command Modes</b>	L2VPN bridge group bridge domain MAC configuration	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 3.8.0	This command was introduced.
<b>Usage Guidelines</b>	<p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>When set, the <b>learning disable</b> command stops all MAC learning either on the specified interface or the bridge domain.</p>	
<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	l2vpn	read, write
<b>Examples</b>	<p>In the following example, MAC learning is disabled on all ports in the bridge domain called bar, which is applied to all interfaces in the bridge unless the interface has its own MAC learning enable command.</p> <pre>RP/0/RP0/CPU0:router# configure RP/0/RP0/CPU0:router (config)# l2vpn RP/0/RP0/CPU0:router (config-l2vpn)# bridge group 1 RP/0/RP0/CPU0:router (config-l2vpn-bg)# bridge-domain bar RP/0/RP0/CPU0:router (config-l2vpn-bg-bd)# mac RP/0/RP0/CPU0:router (config-l2vpn-bg-bd-mac)# learning disable</pre>	
<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.

Command	Description
<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
<a href="#">l2vpn</a>	Enters L2VPN configuration mode.
<a href="#">mac (VPLS), on page 18</a>	Enters L2VPN bridge group bridge domain MAC configuration mode.

## limit (VPLS)

To set the MAC address limit for action, maximum, and notification and to enter L2VPN bridge group bridge domain MAC limit configuration mode, use the **limit** command in L2VPN bridge group bridge domain MAC configuration mode. To remove all limits that were previously configured under the MAC configuration submodes, use the **no** form of this command.

**limit**  
**no limit**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** L2VPN bridge group bridge domain MAC configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **limit** command to enter L2VPN bridge group bridge domain MAC limit configuration mode. The **limit** command specifies that one syslog message is sent or a corresponding trap is generated with the MAC limit when the action is violated.

Task ID	Task ID	Operations
	l2vpn	read, write

### Examples

The following example shows how the MAC limit for the bridge bar is set to 100 with an action of shutdown. After the configuration, the bridge stops all forwarding after 100 MAC addresses are learned. When this happens, a syslog message and an SNMP trap are created.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# l2vpn
RP/0/RP0/CPU0:router (config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router (config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd)# mac
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd-mac)# limit
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd-mac-limit)# maximum 100
```

```
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# action shutdown
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# notification both
```

Related Commands	Command	Description
	<a href="#">action (VPLS), on page 2</a>	Configures bridge behavior when the number of learned MAC addresses reaches the MAC limit configured.
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
	l2vpn	Enters L2VPN configuration mode.
	<a href="#">mac (VPLS), on page 18</a>	Enters L2VPN bridge group bridge domain MAC configuration mode.
	<a href="#">maximum (VPLS), on page 20</a>	Configures the specified action when the number of MAC addresses learned on a bridge is reached.
	<a href="#">notification (VPLS), on page 28</a>	Specifies the type of notification that is sent when the number of learned MAC addresses exceeds the configured limit.

## mac (VPLS)

To enter L2VPN bridge group bridge domain MAC configuration mode, use the **mac** command in L2VPN bridge group bridge domain configuration mode. To disable all configurations added under the MAC configuration submodes, use the **no** form of this command.

**mac**  
**no mac**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** L2VPN bridge group bridge domain configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **mac** command to enter L2VPN bridge group bridge domain MAC configuration mode.

Task ID	Task ID	Operations
	l2vpn	read, write

### Examples

The following example shows how to enter L2VPN bridge group bridge domain MAC configuration mode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# l2vpn
RP/0/RP0/CPU0:router (config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router (config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd)# mac
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd-mac)#
```

Related Commands	Command	Description
	<a href="#">aging (VPLS), on page 4</a>	Enters the MAC aging configuration submode to set the aging parameters such as time and type.
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.

Command	Description
<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
<a href="#">l2vpn</a>	Enters L2VPN configuration mode.
<a href="#">learning disable (VPLS), on page 14</a>	Overrides the MAC learning configuration of a parent bridge or sets the MAC learning configuration of a bridge.
<a href="#">limit (VPLS), on page 16</a>	Sets the MAC address limit for action, maximum, and notification and enters L2VPN bridge group bridge domain MAC limit configuration mode.
<a href="#">static-address (VPLS), on page 73</a>	Adds static entries to the MAC address for filtering.
<a href="#">withdraw (VPLS), on page 83</a>	Disables MAC address withdrawal for a specified bridge domain

## maximum (VPLS)

To configure the specified action when the number of MAC addresses learned on a bridge is reached, use the **maximum** command in L2VPN bridge group bridge domain MAC limit configuration mode. To disable this feature, use the **no** form of this command.

**maximum** *value*  
**no maximum** *value*

<b>Syntax Description</b>	<i>value</i> Maximum number of learned MAC addresses. The range is from 5 to 512000.
---------------------------	---

<b>Command Default</b>	The default maximum value is 4000.
------------------------	------------------------------------

<b>Command Modes</b>	L2VPN bridge group bridge domain MAC limit configuration
----------------------	--

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 3.8.0	This command was introduced.

<b>Usage Guidelines</b>	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

The action can either be flood, no flood, or shutdown. Depending on the configuration, a syslog, an SNMP trap notification, or both are issued.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	l2vpn	read, write

<b>Examples</b>	The following example shows when the number of MAC address learned on the bridge reaches 5000 and the bridge stops learning but continues flooding:
-----------------	---

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# l2vpn
RP/0/RP0/CPU0:router (config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router (config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd)# mac
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd-mac)# limit
```

```
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# maximum 5000
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# action no-flood
```

## mpls static label (VPLS)

To configure the MPLS static labels and the static labels for the access pseudowire configuration, use the **mpls static label** command in L2VPN bridge group bridge domain VFI pseudowire configuration mode. To assign the dynamic MPLS labels to either the virtual forwarding interface (VFI) pseudowire or the access pseudowire, use the **no** form of this command.

**mpls static label local** *value value* **remote** *value*  
**no mpls static label local** *value value* **remote** *value*

### Syntax Description

**local** *value* Configures the local pseudowire label.

**Note** Use the **show mpls label range** command to obtain the range for the local labels.

**remote** *value* Configures the remote pseudowire label.

**Note** The range of values for the remote labels depends on the label allocator of the remote router.

### Command Default

By default, the router attempts to assign dynamic labels to the pseudowire.

### Command Modes

L2VPN bridge group bridge domain Access/VFI pseudowire configuration

### Command History

Release	Modification
Release 3.8.0	This command was introduced.

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Ensure that both ends of the pseudowire have matching static labels.

### Task ID

Task ID	Operations
l2vpn	read, write

### Examples

The following example shows how to configure the VFI pseudowire 10.1.1.2 with pseudowire ID of 1000 to use MPLS label 800 and remote MPLS label 500:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# vfi model
```

```
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-vfi)# neighbor 10.1.1.2 pw-id 1000
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-vfi-pw)# mpls static label local 800 remote 500
```

Related Commands	Command	Description
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
	<a href="#">l2vpn</a>	Enters L2VPN configuration mode.
	<a href="#">neighbor (VPLS), on page 26</a>	Adds an access pseudowire port to a bridge domain or a pseudowire to a bridge virtual forwarding interface (VFI).
	<a href="#">pw-class (VFI), on page 32</a>	Configures the pseudowire class template name to use for the pseudowire.
	<a href="#">vfi (VPLS), on page 81</a>	Configures virtual forwarding interface (VFI) parameters.

## mtu (VPLS)

To adjust the maximum packet size or maximum transmission unit (MTU) size for the bridge domain, use the **mtu** command in L2VPN bridge group bridge domain configuration mode. To disable this feature, use the **no** form of this command.

**mtu** *bytes*  
**no mtu**

<b>Syntax Description</b>	<i>bytes</i> MTU size, in bytes. The range is from 46 to 65535.
---------------------------	---

<b>Command Default</b>	The default MTU value is 1500.
------------------------	--------------------------------

<b>Command Modes</b>	L2VPN bridge group bridge domain configuration
----------------------	--

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 3.8.0	This command was introduced.

<b>Usage Guidelines</b>	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Each interface has a default maximum packet size or MTU size. This number generally defaults to the largest size possible for that interface type. On serial interfaces, the MTU size varies, but cannot be set smaller than 64 bytes.

The MTU for the bridge domain includes only the payload of the packet. For example, a configured bridge MTU of 1500 allows tagged packets of 1518 bytes (6 bytes DA, 6 bytes SA, 2 bytes ethertype, or 4 bytes qtag).

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	l2vpn	read, write

### Examples

The following example specifies an MTU of 1000 bytes:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
```

```
RP/0/RP0/CPU0:router(config-l2vpn-bg) # bridge-domain bar  
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd) # mtu 1000
```

Related Commands	Command	Description
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
	<a href="#">flooding disable, on page 10</a>	Configures flooding for traffic at the bridge domain level or at the bridge port level.
	<a href="#">l2vpn</a>	Enters L2VPN configuration mode.

## neighbor (VPLS)

To add an access pseudowire port to a bridge domain or a pseudowire to a bridge virtual forwarding interface (VFI), use the **neighbor** command in the appropriate L2VPN bridge group bridge domain configuration submode. To remove the pseudowire either from the bridge or from the VFI, use the **no** form of this command.

**neighbor** *A.B.C.D* **pw-id** *value*  
**no neighbor** *A.B.C.D* **pw-id** *value*

Syntax Description	
<i>A.B.C.D</i>	IP address of the cross-connect peer.
<b>pw-id</b> <i>value</i>	Configures the pseudowire ID and ID value. Range is 1 to 4294967295.

**Command Default** None

**Command Modes** L2VPN bridge group bridge domain configuration  
 L2VPN bridge group bridge domain VFI configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **neighbor** command to enter L2VPN bridge group bridge domain VFI pseudowire configuration mode. Alternatively, use the **neighbor** command to enter L2VPN bridge group bridge domain access pseudowire configuration mode.

Task ID	Task ID	Operations
	l2vpn	read, write

### Examples

The following example shows how to configure an access pseudowire directly under a bridge domain in L2VPN bridge group bridge domain configuration mode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config) # l2vpn
RP/0/RP0/CPU0:router (config-l2vpn) # bridge group 1
RP/0/RP0/CPU0:router (config-l2vpn-bg) # bridge-domain bar
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd) # neighbor 10.1.1.2 pw-id 1000
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd-pw) #
```

The following example shows how to configure the parameters for any pseudowire in L2VPN bridge group bridge domain VFI configuration mode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# vfi v1
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-vfi)# neighbor 10.1.1.2 pw-id 1000
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-vfi-pw)#
```

Related Commands	Command	Description
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.

	<a href="#">pw-class (VFI), on page 32</a>	Configures the pseudowire class template name to use for the pseudowire.
	<a href="#">static-mac-address (VPLS), on page 75</a>	Configures the static MAC address to associate a remote MAC address with a pseudowire or any other bridge interface.
	<a href="#">vfi (VPLS), on page 81</a>	Configures virtual forwarding interface (VFI) parameters.

## notification (VPLS)

To specify the type of notification that is sent when the number of learned MAC addresses exceeds the configured limit, use the **notification** command in L2VPN bridge group bridge domain MAC limit configuration mode. To use the notification as only a syslog entry, use the **no** form of this command.

```
notification {both | none | trap}
no notification {both | none | trap}
```

<b>Syntax Description</b>	<p><b>both</b> Sends syslog and trap notifications when the action is violated.</p> <p><b>none</b> Specifies no notification.</p> <p><b>trap</b> Sends trap notifications when the action is violated.</p>				
<b>Command Default</b>	By default, only a syslog message is sent when the number of learned MAC addresses reaches the maximum configured.				
<b>Command Modes</b>	L2VPN bridge group bridge domain MAC limit configuration				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.8.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.8.0	This command was introduced.
Release	Modification				
Release 3.8.0	This command was introduced.				
<b>Usage Guidelines</b>	<p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>A syslog message and an SNMP trap is generated. Alternatively, an SNMP trap is generated. Finally, no notification is generated.</p>				
<b>Task ID</b>	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>l2vpn</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	l2vpn	read, write
Task ID	Operations				
l2vpn	read, write				

### Examples

The following example shows how both a syslog message and an SNMP trap are generated with the bridge bar and learns more MAC addresses than the configured limit:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# mac
```

```
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac)# limit
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# notification both
```

Related Commands	Command	Description
	<a href="#">action (VPLS), on page 2</a>	Configures bridge behavior when the number of learned MAC addresses reaches the MAC limit configured.
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
	l2vpn	Enters L2VPN configuration mode.
	<a href="#">mac (VPLS), on page 18</a>	Enters L2VPN bridge group bridge domain MAC configuration mode.
	<a href="#">maximum (VPLS), on page 20</a>	Configures the specified action when the number of MAC addresses learned on a bridge is reached.

## port-down flush disable (VPLS)

To disable MAC flush when the bridge port is nonfunctional, use the **port-down flush disable** command in the L2VPN bridge group bridge domain MAC configuration mode. Use the **no** form of this command to enable the MAC flush when the bridge port is nonfunctional.

**port-down flush disable**  
**no port-down flush disable**

<b>Syntax Description</b>	This command has no keywords or arguments.
---------------------------	--

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	L2VPN bridge group bridge domain MAC configuration
----------------------	--

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 3.9.0	This command was introduced.

<b>Usage Guidelines</b>	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

The **port-down flush disable** command disables the MAC flush when the bridge port is nonfunctional.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
		l2vpn

### Examples

The following example shows how to disable MAC flush when the bridge port is nonfunctional:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# l2vpn
RP/0/RP0/CPU0:router (config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router (config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd)# mac
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd-mac)# port-down flush disable
```

<a href="#">notification (VPLS), on page 28</a>	Specifies the type of notification that is sent when the number of learned MAC addresses exceeds the configured limit.

## pw-class (VFI)

To configure the pseudowire class template name to use for the pseudowire, use the **pw-class** command in L2VPN bridge group bridge domain VFI pseudowire configuration mode. To delete the pseudowire class, use the **no** form of this command.

```
pw-class class-name
no pw-class class-name
```

<b>Syntax Description</b>	<i>class-name</i> Pseudowire class name.						
<b>Command Default</b>	None						
<b>Command Modes</b>	L2VPN bridge group bridge domain VFI pseudowire configuration

<a href="#">vfi (VPLS), on page 81</a>	Configures virtual forwarding interface (VFI) parameters.

## show l2vpn bridge-domain (VPLS)

To display information for the bridge ports such as attachment circuits and pseudowires for the specific bridge domains, use the **show l2vpn bridge-domain** command in EXEC mode.

```
show l2vpn bridge-domain [{bd-name bridge-domain-name | brief | detail | group
bridge-domain-group-name | interface type interface-path-id | pw-id value }] neighbor IP-address
[ {pw-id value | summary} ]
```

Syntax Description					
<b>bd-name</b> <i>bridge-domain-name</i>	(Optional) Displays the bridges by the bridge ID. The <i>bridge-domain-name</i> argument is used to name a bridge domain.				
<b>brief</b>	(Optional) Displays brief information about the bridges.				
<b>detail</b>	(Optional) Displays the output for the Layer 2 VPN (L2VPN) to indicate whether or not the MAC withdrawal feature is enabled and the number of MAC withdrawal messages that are sent or received from the pseudowire.				
<b>group</b> <i>bridge-domain-group-name</i>	(Optional) Displays filter information on the bridge-domain group name. The <i>bridge-domain-group-name</i> argument is used to name the bridge domain group.				
<b>interface</b>	(Optional) Displays the filter information for the interface on the bridge domain.				
<i>type</i>	Interface type. For more information, use the question mark (?) online help function.				
<i>interface-path-id</i>	Physical interface or virtual interface.  <b>Note</b> Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router.  For more information about the syntax for the router, use the question mark (?) online help function.				
<b>neighbor</b> <i>IP-address</i>	(Optional) Displays only the bridge domain that contains the pseudowires to match the filter for the neighbor. The <i>IP-address</i> argument is used to configure IP address of the neighbor.				
<b>pw-id</b> <i>value</i>	(Optional) Displays the filter for the pseudowire ID. The range is from 1 to 4294967295.				
<b>summary</b>	(Optional) Displays the summary information for the bridge domain.				
<b>Command Default</b>	None				
<b>Command Modes</b>	EXEC mode				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.8.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.8.0	This command was introduced.
Release	Modification				
Release 3.8.0	This command was introduced.				

Release	Modification
Release 5.1.2	This command was modified to enable filtering the command output for specific pseudowire with just the pseudowire ID.

### Usage Guidelines

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

Use the **interface** keyword to display only the bridge domain that contains the specified interface as an attachment circuit. In the sample output, only the attachment circuit matches the filter that is displayed. No pseudowires are displayed.

**Note** For Cisco IOS XR software Release 5.1.2 and above, you can filter the command output for a specific pseudowire with just the pseudowire ID. However, in case of configurations with BGP Auto-discovery with BGP or LDP signaling (in VPLS), you can specify the pseudowire only with the combination of the neighbor filter and the pseudowire ID.

### Task ID

Task ID	Operations
l2vpn	read

This table describes the significant fields shown in the display.

**Table 1: show l2vpn bridge-domain Command Field Descriptions**

Field	Description
Bridge group	Name of bridge domain group is displayed.
bridge-domain	Name of bridge domain is displayed.
id	ID assigned to this bridge domain is displayed.
state	Current state of the bridge domain is displayed.

The following example shows sample output for a bridge named bd1:

```

RP/0/RP0/CPU0:router# show l2vpn bridge-domain bd-name bd1

Bridge group: g1, bridge-domain: bd1, id: 0, state: up, ShgId: 0, MSTi: 0
Aging: 300 s, MAC limit: 4000, Action: none, Notification: syslog
Filter MAC addresses: 0
ACs: 1 (1 up), VFIs: 1, PWs: 1 (1 up)
List of ACs:
  Gi0/1/0/0, state: up, Static MAC addresses: 2, MSTi: 0 (unprotected)
List of Access PWs:
List of VFIs:
  VFI 1
    Neighbor 10.1.1.1 pw-id 1, state: up, Static MAC addresses: 0

```

The following sample output shows brief information about the bridges:

## show l2vpn bridge-domain (VPLS)

```
RP/0/RP0/CPU0:router# show l2vpn bridge-domain brief
```

```
Bridge Group/Bridge-Domain Name  ID      State      Num ACs/up  Num PWS/up
-----
g1/bd1                            0       up         1/1         1/1
```

This table describes the significant fields shown in the display.

**Table 2: show l2vpn bridge-domain brief Command Field Descriptions**

Field	Description
Bridge Group/Bridge-Domain Name	Bridge domain group name followed by the bridge domain name are displayed.
ID	ID assigned to this bridge domain is displayed.
State	Current state of the bridge domain is displayed.
Num ACs/up	Total number of attachment circuits that are up in this bridge domain is displayed.
Num PWS/up	Total number of pseudowires that are up in this bridge domain is displayed. The count includes both VFI pseudowires and access pseudowires.

The following sample output shows detailed information:

```
RP/0/RP0/CPU0:router# show l2vpn bridge-domain detail
```

```

This table describes the significant fields shown in the display.

**Table 3: show l2vpn bridge-domain detail Command Field Descriptions**

Field	Description
Bridge group	Name of bridge domain group is displayed.
bridge-domain	Name of bridge domain is displayed.
ID	ID assigned to this bridge domain is displayed.
state	Current state of the bridge domain is displayed.
MSTi	ID for the Multiple Spanning Tree.

The following sample output shows filter information about the bridge-domain group named g1:

```

RP/0/RP0/CPU0:router# show l2vpn bridge-domain group g1

Bridge group: g1, bridge-domain: bd1, id: 0, state: up, ShgId: 0, MSTi: 0
Aging: 300 s, MAC limit: 4000, Action: none, Notification: syslog
Filter MAC addresses: 0
ACs: 1 (1 up), VFIs: 1, PWs: 1 (1 up)

```

```

List of ACs:
  Gi0/1/0/0, state: up, Static MAC addresses: 2, MSTi: 0 (unprotected)
List of Access PWs:
List of VFIs:
  VFI 1
    Neighbor 10.0.0.1 pw-id 1, state: up, Static MAC addresses: 0

```

The following sample output shows display the filter information for the interface on the bridge domain:

```

RP/0/RP0/CPU0:router# show l2vpn bridge-domain interface gigabitEthernet 0/1/0/0

Bridge group: g1, bridge-domain: bd1, id: 0, state: up, ShgId: 0, MSTi: 0
  Aging: 300 s, MAC limit: 4000, Action: none, Notification: syslog
  Filter MAC addresses: 0
  ACs: 1 (1 up), VFIs: 1, PWs: 1 (1 up)
  List of ACs:
    Gi0/1/0/0, state: up, Static MAC addresses: 2, MSTi: 0 (unprotected)

```

The following sample output shows that the bridge domain contains the pseudowires to match the filter for the neighbor:

```

RP/0/RP0/CPU0:router# show l2vpn bridge-domain neighbor 10.0.0.1

Bridge group: g1, bridge-domain: bd1, id: 0, state: up, ShgId: 0, MSTi: 0
  Aging: 300 s, MAC limit: 4000, Action: none, Notification: syslog
  Filter MAC addresses: 0
  ACs: 1 (1 up), VFIs: 1, PWs: 1 (1 up)
  List of Access PWs:
  List of VFIs:
    VFI 1
      Neighbor 10.0.0.1 pw-id 1, state: up, Static MAC addresses: 0

```

The following sample output shows the summary information for the bridge domain:

```

RP/0/RP0/CPU0:router# show l2vpn bridge-domain summary

Number of groups: 1, bridge-domains: 1, Up: 1, Shutdown: 0
Number of ACs: 1 Up: 1, Down: 0
Number of PWs: 1 Up: 1, Down: 0

```

This example shows the sample output of a configured flow label:

```

RP/0/RP0/CPU0:router# show l2vpn bridge-domain detail
Bridge group: g1, bridge-domain: d1, id: 0, state: up, ShgId: 0, MSTi: 0
.....
  PW: neighbor 192.168.0.1, PW ID 2, state is up ( established )
  PW class class1, XC ID 0x1000002
  Encapsulation MPLS, protocol LDP
  PW type Ethernet, control word disabled, interworking none
  PW backup disable delay 0 sec
  Sequencing not set
  Flow label flags configured (Rx=1,Tx=1), negotiated (Rx=0,Tx=1)

```

This table describes the significant fields shown in the display.

Table 4: show l2vpn bridge-domain summary Command Field Descriptions

Field	Description
Number of groups	Number of configured bridge domain groups is displayed.
bridge-domains	Number of configured bridge domains is displayed.
Shutdown	Number of bridge domains that are in Shutdown state is displayed.
Number of ACs	Number of attachment circuits that are in Up state and Down state are displayed.
Number of PWs	Number of pseudowires that are in Up state and Down state are displayed. This includes the VFI pseudowire and the access pseudowire.

**Related Commands**

Command	Description
<a href="#">clear l2vpn bridge-domain (VPLS), on page 8</a>	Clears the MAC addresses and restarts the bridge domains on the router.

## show l2vpn forwarding bridge-domain (VPLS)

To display information on the bridge that is used by the forwarding layer, use the **show l2vpn forwarding bridge-domain** command in EXEC mode.

```
show l2vpn forwarding bridge-domain [bridge-domain-name] {detail | hardware {egress | ingress}}
location node-id
```

Syntax Description	
<i>bridge-domain-name</i>	(Optional) Name of a bridge domain.
<b>detail</b>	Displays all the detailed information on the attachment circuits and pseudowires.
<b>hardware</b>	Displays the hardware location entry.
<b>egress</b>	Reads information from the egress PSE.
<b>ingress</b>	Reads information from the ingress PSE.
<b>location</b> <i>node-id</i>	Displays the bridge-domain information for the specified location. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.

**Command Default** None

**Command Modes** EXEC

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

For each bridge, you can display summary information about the number of bridge ports, number of MAC addresses, configured VXLANs and so forth.

The **detail** keyword displays detailed information on the attachment circuits and pseudowires, and is meant for field investigation by a specialized Cisco engineer.

**Note** All bridge ports in the bridge domain on that line card are displayed. Therefore, if the bridge domain contains non-local bridge ports, those are displayed as well.

Task ID	Task ID	Operations
	l2vpn	read

**Examples**

The following sample output shows bridge-domain information for location 0/1/CPU0:

```
RP/0/RP0/CPU0:router# show l2vpn forwarding bridge-domain location 0/1/CPU0

This table describes the significant fields shown in the display.

**Table 5: show l2vpn forwarding bridge-domain Command Field Descriptions**

Field	Description
Bridge-Domain Name	Name of bridge domain is displayed.
Bridge ID	ID assigned to this bridge domain is displayed.
Ports	Number of ports that are part of this bridge domain is displayed.
MAC Addr	Number of MAC addresses that are learned on this bridge domain is displayed.
Flooding	Flooding of packets are displayed if they are enabled on this bridge domain.
Learning	Learning of MAC addresses are displayed if they are enabled on this bridge domain.
State	Current state of the bridge domain is displayed.

 show l2vpn forwarding bridge-domain (VPLS)

---

**Related Commands**

Command	Description
<a href="#">clear l2vpn bridge-domain (VPLS), on page 8</a>	Clears the MAC addresses and restarts the bridge domains on the router.

## show l2vpn forwarding bridge-domain mac-address (VPLS)

To display the summary information for the MAC address, use the **show l2vpn forwarding bridge-domain mac-address** command in EXEC mode.

```
show l2vpn forwarding bridge-domain [bridge-domain-name] mac-address {MAC-address | detail
| hardware {egress | ingress} | interface type interface-path-id | neighbor address pw-id pw-id}
location node-id
```

Syntax Description									
<i>bridge-domain-name</i>	(Optional) Name of a bridge domain.								
<i>MAC-address</i>	MAC address.								
<b>detail</b>	Displays detailed information for the MAC address.								
<b>hardware</b>	Reads information from the hardware.								
<b>egress</b>	Reads information from the egress PSE.								
<b>ingress</b>	Reads information from the ingress PSE.								
<b>interface</b>	Displays the match for the attachment circuit subinterface.								
<i>type</i>	Interface type. For more information, use the question mark (?) online help function.								
<i>interface-path-id</i>	Physical interface or virtual interface.								
	<p><b>Note</b> Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router.</p> <p>For more information about the syntax for the router, use the question mark (?) online help function.</p>								
<b>neighbor</b> <i>address</i>	Displays the match for the neighbor IP address.								
<b>pw-id</b> <i>pw-id</i>	Displays the match for the pseudowire ID.								
<b>location</b> <i>node-id</i>	Displays the bridge-domain information for the MAC address of the specified location. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.								
<b>Command Default</b>	None								
<b>Command Modes</b>	EXEC								
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.7.0</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 3.7.2</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 3.8.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.7.0	This command was introduced.	Release 3.7.2	This command was introduced.	Release 3.8.0	This command was introduced.
Release	Modification								
Release 3.7.0	This command was introduced.								
Release 3.7.2	This command was introduced.								
Release 3.8.0	This command was introduced.								

## show l2vpn forwarding bridge-domain mac-address (VPLS)

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

### Task ID

Task ID	Task ID	Operations
	l2vpn	read

### Examples

The following sample output shows the specified location of the bridge-domain name g1:bd1 for the MAC address:

```
RP/0/RP0/CPU0:router# show l2vpn forwarding bridge-domain g1:bd1 location 0/1/CPU0
Bridge-ID      Ports  addr  Flooding Learning State
-----
g1:bd1        0      2     65536 Enabled  Enabled  UP
```

The following sample output shows the list of MAC addresses that are learned on a specified bridge and summary information for the addresses:

```
RP/0/RP0/CPU0:router# show l2vpn forwarding bridge-domain mac-address location 0/1/CPU0
Mac Address    Type      Learned from/Filtered on  LC learned Age
-----

**Related Commands**

Command	Description
<a href="#">show l2vpn forwarding bridge-domain (VPLS), on page 43</a>	Displays information on the bridge that is used by the forwarding layer.

# shutdown (Bridge Domain)

To shut down a bridge domain to bring the bridge and all attachment circuits and pseudowires under it to admin down state, use the **shutdown** command in L2VPN bridge group bridge domain configuration mode. To re-enable the bridge domain, use the **no** form of this command.

**shutdown**  
**no shutdown**

**Syntax Description** This command has no keywords or arguments.

**Command Default** By default, the bridge is not shutdown.

**Command Modes** L2VPN bridge group bridge domain configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When a bridge domain is disabled, all VFIs associated with the bridge domain are disabled. You can still attach or detach members to or from the bridge domain as well as the VFIs associated with the bridge domain.

Task ID	Task ID	Operations
	l2vpn	read, write

## Examples

The following example shows how to disable the bridge domain named bar:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# l2vpn
RP/0/RP0/CPU0:router (config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router (config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router (config-l2vpn-bg-bd)# shutdown
```

Related Commands	Command	Description
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
	<a href="#">l2vpn</a>	Enters L2VPN configuration mode.

## shutdown (VFI)

To disable virtual forwarding interface (VFI), use the **shutdown** command in L2VPN bridge group bridge domain VFI configuration mode. To re-enable VFI, use the **no** form of this command.

**shutdown**  
**no shutdown**

<b>Syntax Description</b>	This command has no keywords or arguments.
<b>Command Default</b>	By default, the VFI is not shutdown.
<b>Command Modes</b>	L2VPN bridge group bridge domain VFI configuration

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 3.8.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	l2vpn	read, write

### Examples

The following example shows how to disable VFI:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# vfi v1
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-vfi)# shutdown
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
	<a href="#">l2vpn</a>	Enters L2VPN configuration mode.
	<a href="#">mpls static label (VPLS), on page 22</a>	Configures the MPLS static labels and the static labels for the access pseudowire configuration.

Command	Description
<a href="#">neighbor (VPLS), on page 26</a>	Adds an access pseudowire port to a bridge domain or a pseudowire to a bridge virtual forwarding interface (VFI).

## static-address (VPLS)

To add static entries to the MAC address for filtering, use the **static-address** command in L2VPN bridge group bridge domain MAC configuration mode. To remove entries profiled by the combination of a specified entry information, use the **no** form of this command.

**static-address** *MAC-address* **drop**  
**no static-address** *MAC-address* **drop**

<b>Syntax Description</b>	<p><i>MAC-address</i> Static MAC address that is used to filter on the bridge domain.</p> <p><b>drop</b> Drops all traffic that is going to the configured MAC address.</p>				
<b>Command Default</b>	No static MAC address is configured.				
<b>Command Modes</b>	L2VPN bridge group bridge domain MAC configuration

## static-mac-address (VPLS)

To configure the static MAC address to associate a remote MAC address with a pseudowire or any other bridge interface, use the **static-mac-address** command in the appropriate L2VPN bridge group bridge domain configuration submenu. To disable this feature, use the **no** form of this command.

**static-mac-address** *MAC-address*  
**no static-mac-address** *MAC-address*

<b>Syntax Description</b>	<i>MAC-address</i> Static address to add to the MAC address.				
<b>Command Default</b>	None				
<b>Command Modes</b>	L2VPN bridge group bridge domain VFI pseudowire configuration L2VPN bridge group bridge domain attachment circuit configuration				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.8.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.8.0	This command was introduced.

Release 3.8.0	This command was introduced.				
<b>Usage Guidelines</b>	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.				
<b>Task ID</b>	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>l2vpn</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	l2vpn	read, write
Task ID	Operations				
l2vpn	read, write				

### Examples

The following example shows how to associate a remote MAC address with a pseudowire:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# vfi model
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-vfi)# neighbor 10.1.1.2 pw-id 1000
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-vfi-pw)# static-mac-address 1.1.1
```

The following example shows how to associate a GigabitEthernet interface from a bridge domain to static MAC address 1.1.1:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
```

```
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# interface GigabitEthernet 0/1/0/0
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-ac)# static-mac-address 1.1.1
```

The following example shows how to associate an access pseudowire to static MAC address 2.2.2:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# neighbor 10.1.1.2 pw-id 2000
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-pw)# static-mac-address 2.2.2
```

Related Commands	Command	Description
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
	<a href="#">l2vpn</a>	Enters L2VPN configuration mode.
	<a href="#">mpls static label (VPLS), on page 22</a>	Configures the MPLS static labels and the static labels for the access pseudowire configuration.

	<a href="#">vfi (VPLS), on page 81</a>	Configures virtual forwarding interface (VFI) parameters.

## time (VPLS)

To configure the maximum aging time, use the **time** command in L2VPN bridge group bridge domain MAC aging configuration mode. To disable this feature, use the **no** form of this command.

**time** *seconds*  
**no time** *seconds*

### Syntax Description

*seconds* MAC address table entry maximum age. The range is from 300 to 30000 seconds. Aging time is counted from the last time that the switch saw the MAC address. The default value is 300 seconds.

### Command Default

*seconds*: 300

### Command Modes

L2VPN bridge group bridge domain MAC aging configuration

### Command History

Release	Modification
Release 3.8.0	This command was introduced.

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If no packets are received from the MAC address for the duration of the maximum aging time, the dynamic MAC entry previously learned is removed from the forwarding table.

### Task ID

Task ID	Operations
l2vpn	read, write

### Examples

The following example shows how to increase the maximum aging time to 600 seconds. After 600 seconds of inactivity from a MAC address, the MAC address is removed from the forwarding table.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# mac
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac)# aging
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac-aging)# time 600
```

### Related Commands

Command	Description
<a href="#">aging (VPLS), on page 4</a>	Enters the MAC aging configuration submode to set the aging parameters such as time and type.

<b>Command</b>	<b>Description</b>
<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
<a href="#">l2vpn</a>	Enters L2VPN configuration mode.
<a href="#">mac (VPLS), on page 18</a>	Enters L2VPN bridge group bridge domain MAC configuration mode.
<a href="#">type (VPLS), on page 79</a>	Configures the type for MAC address aging.

## type (VPLS)

To configure the type for MAC address aging, use the **type** command in L2VPN bridge group bridge domain MAC aging configuration mode. To disable this feature, use the **no** form of this command.

```
type {absolute | inactivity}
no type {absolute | inactivity}
```

### Syntax Description

**absolute** Configures the absolute aging type.

**inactivity** Configures the inactivity aging type.

### Command Default

By default, the inactivity type is configured.

### Command Modes

L2VPN bridge group bridge domain MAC aging configuration

### Command History

Release	Modification
Release 3.8.0	This command was introduced.

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

In general, the type is set to inactivity. With an inactivity type configuration, a MAC address is removed from the forwarding table after the MAC address is inactive for the configured aging time.

With an absolute type configuration, a MAC address is always removed from the forwarding table after the aging time has elapsed once it is initially learned.

### Task ID

Task ID	Operations
l2vpn	read, write

### Examples

The following example shows how to configure the MAC address aging type to absolute for every member of the bridge domain named bar:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# mac
```

```
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac) # aging
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac-aging) # type absolute
```

Related Commands	Command	Description
	<a href="#">aging (VPLS), on page 4</a>	Enters the MAC aging configuration submode to set the aging parameters such as time and type.
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
	<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
	l2vpn	Enters L2VPN configuration mode.
	<a href="#">mac (VPLS), on page 18</a>	Enters L2VPN bridge group bridge domain MAC configuration mode.
	<a href="#">time (VPLS), on page 77</a>	Configures the maximum aging time.

## vfi (VPLS)

To configure virtual forwarding interface (VFI) parameters and to enter L2VPN bridge group bridge domain VFI configuration mode, use the **vfi** command in L2VPN bridge group bridge domain configuration mode. To remove all configurations that are made under the specified VFI, use the **no** form of this command.

**vfi** *vfi-name*  
**no vfi** *vfi-name*

<b>Syntax Description</b>	<i>vfi-name</i> Name of the specified virtual forwarding interface.
---------------------------	---

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	L2VPN bridge group bridge domain configuration
----------------------	--

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 3.8.0	This command was introduced.

<b>Usage Guidelines</b>	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Use the **vfi** command to enter L2VPN bridge group bridge domain VFI configuration mode.

You cannot configure a pseudowire directly under a bridge domain. Therefore, a pseudowire must be configured under a VFI, which is configured under a bridge domain.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	l2vpn	read, write

<b>Examples</b>	The following example shows how to create a VFI:
-----------------	--

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# vfi vl
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-vfi)#
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<a href="#">bridge-domain (VPLS), on page 6</a>	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.

Command	Description
<a href="#">bridge group (VPLS), on page 7</a>	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
<a href="#">l2vpn</a>	Enters L2VPN configuration mode.
<a href="#">mpls static label (VPLS), on page 22</a>	Configures the MPLS static labels and the static labels for the access pseudowire configuration.
<a href="#">neighbor (VPLS), on page 26</a>	Adds an access pseudowire port to a bridge domain or a pseudowire to a bridge virtual forwarding interface (VFI).

## withdraw (VPLS)

To enable MAC address withdrawal for a specified bridge domain, use the **withdraw** command in L2VPN bridge group bridge domain MAC configuration mode. To disable this feature, use the **no** form of this command

```
withdraw { disable }
no withdraw { disable }
```

### Syntax Description

**disable** Disables MAC address withdrawal.

### Command Default

By default, MAC address withdrawal is enabled.

### Command Modes

L2VPN bridge group bridge domain MAC configuration

### Command History

Release	Modification
Release 3.8.0	This command was introduced.

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

### Task ID

Task ID	Operations
l2vpn	read, write

### Examples

The following example shows how to enable disable MAC withdrawal:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# mac
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac)# withdraw disable
```

The following example shows how to disable sending MAC withdrawal messages to access pseudowires:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# l2vpn
RP/0/RP0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/RP0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
```

```
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd)# mac
RP/0/RP0/CPU0:router(config-l2vpn-bg-bd-mac)# withdraw access-pw disable
```
