New and Changed Feature Information

This section lists all the new and changed features for the *Telemetry Configuration Guide for Cisco NCS 6000 Series Routers*.

New and Changed Telemetry Features

Feature	Description	Changed in Release
gNMI Dial-Out via Tunnel Service	Release 7.6.1	This feature uses the tunnel service to allow the router (tunnel client) to dial out to a collector (tunnel server). After the session is established, the server-client switch directions where a server can act as a client to request gNMI services without altering the gNMI semantics. With this feature, the management software automatically learns when a new device is introduced in the network, thus saving you the manual, offline effort required to ensure the device connects to the management software. This feature introduces the keyword **tunnel** to the **grpc** command.
