Return Material Authorization (RMA)

Note Before powering down the CSP device, ensure to remove the vMedia configuration used for NFVIS installation.

Table 1:

Original Card Mode	New Card Mode	Process
2x40	2x40	• Shut down the CSP. • Insert the new 2x40 card in the same slot as the old RMAed card. • Turn on the CSP. • Confirm that the PNICs are in ok state by checking **show system status**. • Interfaces come up as ethx-1 and ethx-2 where x is the slot. Run the **show running-config pnic** and **show pnic** commands to check PNIC information.

Original Card Mode	New Card Mode	Process
4x10	4x10	• Shut down the CSP. • Insert the new 4x10 card in the same slot as the old RMAed card. • Turn on the CSP. • Confirm that the PNICs are in ok state by checking **show system status**. • Interfaces come up as ethx-1-1, ethx-1-2, ethx-1-3, and ethx-1-4, where x is the slot. Run the **show running-config pnic** and **show pnic** commands to check PNIC information.
2x40: ethx-1 ethx-2	4x10	• Shut down the CSP. • Insert the new 4x10 card in the same slot as the old RMAed card. • Turn on the CSP. • NFVIS reboots again since the PNIC status is not ok. You see the interfaces ethx-1, ethx-2, ethx-1-1, ethx-1-2, ethx-1-3, and ethx-1-4 in the running configuration. Running the **show system status** command shows that the PNIC status is not ok.c • Run the **show pnic-breakout** or **show nic** commands to get the device ID of the 40G NIC card whose PNIC mode needs to be changed. • Use the device ID got from the previous step to run the un-breakout command: **hostaction pnic-breakout force device x mode 2x40** (where x is device ID). • System reboots after the command is executed. • Confirm that PNICs are in ok state by running the **show system status** command. • Interfaces come up as ethx-1, ethx-2 where x is the slot. Run the **show running-config pnic** and **show pnic** commands to check PNIC information.
