

## Configure VDSL and G.SHDSL

This chapter provides usage information and guidelines for configuring very-high-data-rate DSL (VDSL) and G.symmetric high bit rate DSL (G.SHDSL) in SD-WAN mode.

- [Configure VDSL, on page 1](#)
- [Configure G.SHDSL, on page 5](#)

### Configure VDSL

The following table provides usage information and guidelines for configuring asymmetric DSL (ADSL2/2+) and VDSL for supported Integrated Services Router Network Interface Modules (ISR NIMs) in SD-WAN mode. VDSL2 and ADSL2/2+ provide highly reliable WAN connections for remote sites.

For related information, see [VDSL Commands](#).

Function	Command	Guidelines
Configure operating mode	Device# <b>configure terminal</b> Device(config)# <b>controller</b> <b>VDSL slot/subslot/port</b> Device(config)# <b>operating</b> <b>mode auto</b>	To switch from operating mode auto adsl1 (adsl2+/ or vdsl2) to operating mode auto ads2+ (adsl1 or vdsl2), switch to operating mode auto first.  Before you change the operating mode, ensure that line-mode is changed to line-mode single-wire line 0.
Enable DSL on a line	Device(config)# <b>line-mode</b> <b>single-wire</b> <b>line line-number</b>	This command is supported only on DSL NIM-VAB-A.
Enable bonding	Device(config)# <b>line-mode</b> <b>bonding</b>	This command is supported only on DSL NIM-VAB-A.

Function	Command	Guidelines
Load firmware on a device	Device# <b>configure terminal</b> Device(config)# <b>controller VDSL slot/subslot/port</b> Device(config-controller)# <b>firmware phy filename filename</b>	The Cisco Catalyst SD-WAN CLI template does not support specifying the file location. Prepend the file name with <code>flash:</code> or with <code>bootflash:</code> , depending on its location.
Enable or disable SRA	Device(config-controller)# <b>sra</b>	The Cisco Catalyst SD-WAN CLI template does not support the <code>sra line number</code> command. In line-mode bonding, <code>sra</code> enables sra on both lines and <code>no sra</code> disables sra on both lines.
Enable or disable bitswap	Device(config-controller)# <b>bitswap</b>	The Cisco Catalyst SD-WAN CLI template does not support the <code>bitswap line number</code> command. In line-mode bonding, <code>bitswap</code> enables bitswap on both lines and <code>no bitswap</code> disables bitswap on both lines.
Enable modem features	Device(config-controller)# <b>modemkeyword</b>	—
Display a description of a controller	Device(config-controller)# <b>description string</b>	—
Enable dual ended line testing	Device(config-controller)# <b>diagnostics DELT</b>	—
Modify the file in which the training log is stored	Device(config-controller)# <b>training log filename flash: filename</b>	The Cisco Catalyst SD-WAN CLI template does not support specifying the file location. Prepend the file name with <code>flash:</code> or with <code>bootflash:</code> , depending where the file should be stored.
Enable sync mode	Device(config-controller)# <b>sync mode mode</b>	To switch from one sync mode to another, delete the existing sync mode, then configure the new one.
Enable sync interval	Device(config-controller)# <b>sync interval seconds</b>	—

### Command Examples

```
Device# config-transaction
Device(config)# controller VDSL 0/0/0
Device(config)# operating mode auto
```

```

Device# config-transaction
Device(config)# line-mode single-wire line 1

Device# config-transaction
Device(config)# line-mode bonding

Device# config-transaction
Device(config)# controller VDSL 0/0/0
Device(config-controller)# firmware phy filename flash:IDC_1.7.2.6_DFE_FW_BETA_120111A.pkg

Device# config-transaction
Device(config-controller)# sra

Device# config-transaction
Device(config-controller)# bitswap

Device# config-transaction
Device(config)# controller VDSL 0/0/0
Device(config-controller)# modem customUKAnnexM

Device# config-transaction
Device(config)# controller VDSL 0/0/0
Device(config-controller)# description to ISP 1

Device# config-transaction
Device(config)# controller VDSL 0/0/0
Device(config-controller)# diagnostics DELT

Device# config-transaction
Device(config)# controller VDSL 0/0/0
Device(config-controller)# training log filename bootflash:VDSLLOG.log

Device# config-transaction
Device(config)# controller VDSL 0/0/0
Device(config-controller)# sync mode ansi previous

Device# configure terminal
Device(config)# ptp clock ordinary domain 0
Device(config-ptp-clk)# clock-port slave slaveport
Device(config-ptp-port)# sync interval -4
Device(config-ptp-port)# end

```

### Configuration Example

```

Device(config)# show controllers vdsL 0/2/0
Controller VDSL 0/2/0 is UP

Daemon Status:          UP

# Configure G.SHDSL

## Overview

G.SHDSL is an international standard that allows devices to send and receive high-speed symmetrical data streams over a single pair of copper wires. This section provides information about the Cisco G.SHDSL EFM/ATM NIM and provides guidelines for configuring G.SHDSL in SD-WAN mode.

For related information, see [Configuring Cisco G.SHDSL HWICs in Cisco Access Routers](#) and [VDSL Commands](#).

## Cisco G.SHDSL EFM/ATM NIM

The Cisco G.SHDSL EFM/ATM NIM connects Cisco 4000 Series Integrated Services Routers with central office Digital Subscriber Line Access Multiplexers (DSLAMs) and supports up to four DSL pairs. The DSL pairs are bundled in groups and configured in the Cisco IOS CLI by using the `dsl-group` command. Use the mode command to choose the mode (ATM or EFM).

The NIM supports the following configuration:

- You can configure up to four DSL groups.
- You can configure auto mode on only one DSL group. For example, DSL group 0.
- In ATM Mode, you can configure the lines to use 2-wire, 4-wire (standard or enhanced), or m-pair.
- In EFM mode, you can configure a DSL group with any one of the lines in 2-wire non-bonding mode or with multiple lines in bonding mode.
- Depending on the mode (ATM or EFM), the corresponding interface (ATM or EFM) is automatically created.

## Cisco G.SHDSL Configuration Guidelines

The following table provides usage information and guidelines that apply when you configure the Cisco G.SHDSL EFM/ATM in CPE or CO mode.

Function	Command	Guidelines
Configure a device with the <code>dsl-group auto</code> command	Device(config-controller)# <b>dsl-group auto</b>	Use customer premises equipment (CPE) mode when configuring a device with the <code>dsl-group auto</code> command. If you use this command in Central Office (CO) mode, the configuration does not take effect.
Add or delete a link	—	The <code>efm-grp</code> command is not supported. To add or delete a link to a <code>dsl-group</code> , delete the <code>dsl-group</code> , then create a new <code>dsl-group</code> .

Function	Command	Guidelines
Load firmware on a device	Device(config-controller)# <b>firmware phy filename</b> <i>location</i>	File name location options are not supported when using the firmware phy command. Prepend the file name with flash: or with bootflash:, depending on the location.
Create or delete an annex	Device(config-controller-dsl-group)# <b>no shdsl annex</b>  Device(config-controller-dsl-group)# <b>no shdsl rate rate</b>	To avoid Cisco IOS and Cisco Catalyst SD-WAN configuration from going out of sync when you create or delete an annex, create or delete the rate in the same transaction.
Enable SHDSL to use enhanced mode	(config-controller-dsl-group)# <b>shdsl 4-wire mode</b> <b>enhanced</b>	To enable SHDSL to use the enhanced mode in a 2-pair digital subscriber line (DSL) group, use the shdsl 4-wire mode enhanced command in configuration controller DSL group mode.
Ignore CRC errors	(config-controller-dsl-group)# <b>ignoreseconds</b>	To configure a device to ignore CRC errors, use the ignore command. Replace <i>timeout</i> with a value from 0 through 60, which indicates the number of seconds that the device ignores CRC errors that do not resolve before the device terminates an action.
Shutdown a DSL group	(config-controller-dsl-group)# <b>shutdown</b>	To shut down a DSL group, use the shutdown command.

### Examples

```
Device# config-transaction
Device(config)# controller SHDSL 0/0/0
Device(config-controller)# dsl-group auto
```

```
Device# config-transaction
Device(config)# controller VDSL 0/0/0
Device(config-controller)# firmware phy filename bootflash:IDC_1.1.1.0_DFE_1.1-1.8.1__001.pkg
```

```
Device# config-transaction
Device(config)# controller SHDSL 0/0/0
Device(config-controller)# dsl-group 0 pairs 0
Device(config-controller-dsl-group)# no shdsl annex
Device(config-controller-dsl-group)# no shdsl rate 5696
```

```
Device# config-transaction
Device(config)# controller SHDSL 0/0/0
Device(config-controller)# termination cpe
```

```
Device(config-controller)# dsl-group 0 pairs 0
(config-controller-dsl-group)# shdsl 4-wire mode enhanced
```

```
Device# config-transaction
Device(config)# controller SHDSL 0/0/0
Device(config-controller)# termination cpe
Device(config-controller)# dsl-group 0 pairs 0
config-controller-dsl-group)# ignore 30
```

```
Device# config-transaction
Device(config)# controller SHDSL 0/0/0
Device(config-controller)# termination cpe
Device(config-controller)# dsl-group 0 pairs 0
config-controller-dsl-group)# shutdown
```

### Configuration Example

```
Device# sh controllers shDSL 0/1/0
Controller SHDSL 0/1/0 is UP
  Hardware is NIM-SHDSL-EA, on slot 0,bay 0
