CONTENTS

CHAPTER 1

| | |
|---|----------|
| AAA through COMPILED_ACL | 1 |
| AAA through ADJ | 1 |
| AGGMGR through APM | 43 |
| APPFW through ATA | 66 |
| ATMSIG through BCRDU | 99 |
| BFD_HA through BRI | 122 |
| BSC through CALL_CONTROL | 136 |
| CAPWAP_REASS_PROXY through CD_SW_SSL_SHIM | 162 |
| CEF_PROXY through CHAT | 195 |
| CISCO_STUN through CMCC | 234 |
| CMEM through COMPILED_ACL | 262 |

CHAPTER 2

| | |
|---------------------------------------|------------|
| COMP_MATRIX through ENT_API | 357 |
| COMP_MATRIX through CPPTCAMRM | 357 |
| CPPUI through CSVERIFY | 383 |
| CTLPROVIDERSERV through CWAN_CHOC_DS0 | 399 |
| CWAN_CHOC_DSX through CWPAATOM | 417 |
| CWRPSPA through DFP | 447 |
| DHCP through DLC | 470 |
| DLINK through DPSS | 486 |
| DRIP through DSPRM | 517 |
| DSPU through EAP | 533 |
| EC through ENT_API | 566 |

CHAPTER 3

| | |
|--|------------|
| ENVIRONMENTAL through GBIC_SECURITY | 581 |
| ENVIRONMENTAL through ESS_FEATURE | 581 |

| | |
|---------------------------------------|-----|
| ESS_IPSUB through ETHERNET_PROXY | 589 |
| ETHER_LMI through EVENT | 612 |
| EVENTLIB through FEC_ISSU | 628 |
| FED through FED_QOS_ERRMSG | 640 |
| FED_SRVO_ERRMSG through FLEXDSPRM | 650 |
| FLEX_DNLD through FMANRP_MPLS | 661 |
| FMANRP_NAT through FME_DP | 678 |
| FMFP through FRAG | 709 |
| FRAG_DESC_PROXY through GBIC_SECURITY | 744 |

CHAPTER 4**GBIC_SECURITY_CRYPT through IPA 765**

| | |
|---|------|
| GBIC_SECURITY_CRYPT through HAL_GENMEM | 765 |
| HAL_PACKET through HTSP | 802 |
| HTTP through IDB_IDENTITY | 859 |
| IDB_SGI through ILPOWER | 873 |
| IM through IOSD_INFRA | 892 |
| IOSXE_APS through IOSXE_FMANRP_CCE | 917 |
| IOSXE_FMANRP_CEF through IOSXE_MEMPOOL_MIB | 931 |
| IOSXE_MGMTVRF through IOSXE_RP_IF_FLOW_IDS | 960 |
| IOSXE_RP_MGMTE through IOSXE_TIMESTAMP_ENGINE | 993 |
| IOSXE_UPGRADE_ROMMON through IPA | 1038 |

CHAPTER 5**IPACCESS through MPLS_TP_LINK 1057**

| | |
|--------------------------------------|------|
| IPACCESS through IPSEC | 1057 |
| IPV4_FORWARDING through IP_SNMP | 1083 |
| IP_TUNNEL through IVR_NOSIGNALING | 1094 |
| KERBEROS through LANMGR | 1119 |
| LAPB through LINEPROTO | 1128 |
| LINK through LSD | 1152 |
| LSD_CLIENT through MCPRP_DAI | 1184 |
| MCP_SYS through MFIB | 1193 |
| MFIB_PLTF through MPLSMFISTATIC | 1217 |
| MPLS_FORWARDING through MPLS_TP_LINK | 1241 |

CHAPTER 6

| | |
|--------------------------------|-------------|
| MPLS_TP_LSP through RPL | 1253 |
| MPLS_TP_LSP through NAT | 1253 |
| NAT64 through NETWORK_RF_API | 1268 |
| NIF_MGR through ONEP_LISP | 1284 |
| OOM through PBUF | 1303 |
| PCE through PKTLOG | 1311 |
| PLATFORM through PLATFORM_TAM | 1356 |
| PLIM_QOS through POS_SPA_SPI4 | 1367 |
| PRELIB_DL through QOS | 1388 |
| RAC through RFS | 1425 |
| RG_AR through RPL | 1449 |

CHAPTER 7

| | |
|------------------------------------|-------------|
| RSCMSM through SWPORT_PROXY | 1459 |
| RSCMSM through SBC_HA | 1459 |
| SBC_MPS through SDWAN_PROXY | 1503 |
| SEC through SFP | 1516 |
| SGBP through SIP_SUPPSERV | 1528 |

- ACCESS_SESSION
- ACCESS_SESSION_TRACE
- ACE
- ACL
- ACL_ERRMSG
- ADJ

AAA**%AAA-3-BADMETHOD : Cannot process [chars] method [int]**

| | |
|---------------------------|---|
| Explanation | A method list function encountered a method list that was unknown, or could not be handled. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-BADMETHODERROR : Cannot process [chars] method [chars]

| | |
|---------------------------|---|
| Explanation | A method list function encountered a method type that was unknown, or could not be handled. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-BADSERVERTYPEERROR : Cannot process [chars] server type [chars]

| | |
|---------------------------|---|
| Explanation | A method list function encountered a server type that was unknown, or could not be handled. This may be due to a server misconfiguration. |
| Recommended Action | Research the cause of the misconfiguration and attempt to correct it, otherwise take the following action. LOG_STD_ACTION |

%AAA-2-FORKFAIL : Cannot fork process [chars]

| | |
|---------------------------|---|
| Explanation | Attempted to fork a process and failed. The reason could be either hardware or software. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-2-AAAMULTILINKERROR : [chars]([hex]): Acct db for Id [hex] absent

| | |
|--------------------|--------------------|
| Explanation | AAA internal error |
|--------------------|--------------------|

%AAA-2-AAAMULTILINKERROR : [chars]([hex]): Acct db for Id [hex] absent

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%AAA-3-SORTFAIL : [chars] :Peruser Could not sort the [chars] attributes

| | |
|---------------------------|---|
| Explanation | Sorting of the attributes received from AAA server failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-INVALIDATTRLIST : aaa attribute list CLI is not valid when configuring in sub-mode.

| | |
|---------------------------|---|
| Explanation | An internal error has occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-ISDNINTF : [chars] [chars]: Can not apply configuration to ISDN channel: [chars]

| | |
|---------------------------|--|
| Explanation | Configuration can not be applied to individual ISDN channels. |
| Recommended Action | You need virtual-profiles and virtual-access interfaces to apply configuration to ISDN. Refer to the section on Configuring virtual profile by AAA Configuration in the Cisco IOS Dial Technologies Configuration Guide. |

%AAA-3-AUTHORMLISTUNDEF : Authorization method list '[chars]' is not defined. Please define it.

| | |
|---------------------------|--|
| Explanation | A given method list was listed in a command without defining it first. The method list should be defined before use. |
| Recommended Action | Define the method list before using it. |

%AAA-3-PARSEERR : Error([dec]) parser is unable to parse [chars] per-user command

| | |
|---------------------------|--|
| Explanation | All attempts to parse this per_user unconfigure command failed. The unconfigure command is called when an error occurs while configuring per-user commands, to revert back. The unconfiguration may fail due to parser or AAA error. |
| Recommended Action | The given unconfigure command was not executed. Switch on the debug peruser command and repeat the steps that caused the error. If you get the error, Report it to your technical support representative. |

%AAA-6-ACCTSESSIDWRAP : Accounting-Session-ID [dec] exceeded max value allowed

| | |
|---------------------------|---|
| Explanation | Accounting-Session-ID value exceeded max value allowed. Now it is wrapping. |
| Recommended Action | This is informational only, not an error. |

%AAA-3-PASSWDRESTRICTERR : AAA password restriction failed.- [chars]

| | |
|---------------------------|---|
| Explanation | The password/secret/key entered is not meeting the password restrictions configured |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-BADCURS0R : invalid cursor index [dec] max [dec] service [chars] protocol [chars]

| | |
|---------------------------|---|
| Explanation | A AAA client has provided an invalid attribute cursor to AAA. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-MLIST_TOO_MANY_METHODS : method list '[chars]'

| | |
|---------------------------|---|
| Explanation | This is an internal software error. An AAA client attempted to add too many methods to a method list. |
| Recommended Action | This is an internal software error. Check bug tool-kit on Cisco web-site for the issue. If you didn't find one, Collect the error message and report it to your technical support representative. |

%AAA-3-SG_INTERNAL_ERROR : server group '[chars]': [chars]

| | |
|---------------------------|--|
| Explanation | This is an internal software error in the AAA server group subsystem. |
| Recommended Action | This is an internal software error. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message, report it to your technical support representative. |

%AAA-3-SG_DEADTIME_FORKFAIL : Failed to fork process for [chars].

| | |
|---------------------------|---|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible. |
| Recommended Action | If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |

%AAA-3-SG_TESTPROC_FORKFAIL : Failed to fork process for [chars].

| | |
|---------------------------|---|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible. |
| Recommended Action | If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, Collect all the information and error message and report it to your technical support representative. |

%AAA-3-MLIST_INTERNAL_ERROR : method list '[chars]': [chars]

| | |
|---------------------------|---|
| Explanation | This is an internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-SERVER_INTERNAL_ERROR : Server '[chars]': [chars]

| | |
|---------------------------|---|
| Explanation | This is an internal software error in the AAA server group subsystem. |
| Recommended Action | This is an internal software error. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, Collect all the information and error message and report it to your technical support representative. |

%AAA-3-ATTRFORMATERR : Attribute with unknown format [dec]

| | |
|--------------------|--|
| Explanation | An attribute was found with an invalid format. |
|--------------------|--|

%AAA-3-ATTRFORMATERR : Attribute with unknown format [dec]

Recommended Action Attribute with unknown format in definition. Enable AAA debug and try to replicate the steps to get the message. If the message appears again, Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter **Show tech-support** command, Collect all the information and error message and report it to your technical support representative.

%AAA-3-NULLCURSOR : Null cursor

Explanation A AAA client has provided a nonexistent attribute cursor to AAA.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAA-3-NOTABLE : AAA ID [int]

Explanation Resource failure.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAA-3-BADLIST : invalid list AAA ID [int]

Explanation A AAA client has provided an invalid attribute list to AAA.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAA-6-BADHDL : invalid hdl AAA ID [int], hdl [hex], [chars]

Explanation A AAA client has provided an invalid attribute list handle to AAA.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAA-3-IPILLEGALMSG : Invalid use of ip_pid([int])

| | |
|---------------------------|---|
| Explanation | This error means a process sent an illegal message. |
| Recommended Action | If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, Collect all the information and error message and report it to your technical support representative. |

%AAA-3-INVALIDPARM : invalid parameter was used when accessing AAA function

| | |
|---------------------------|---|
| Explanation | A AAA client tried to use a AAA function with an invalid parameter. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-BADMAGIC : Data structure failed magic number sanity check

| | |
|---------------------------|---|
| Explanation | A corrupted data structure has been found which was stored internally. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-BUFFER_OVERFLOW : Radius I/O buffer has overflowed

| | |
|---------------------------|---|
| Explanation | An unusually large number of RADIUS attributes has caused AAA to overflow its RADIUS I/O buffer. |
| Recommended Action | This is an internal software error. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, Collect all the information and error message and report it to your technical support representative. |

%AAA-3-DROPACCTFAIL : Accounting record dropped, send to server failed: [chars]

| | |
|--------------------|--|
| Explanation | An attempt to send an accounting record to a server failed. This happens when device exhaust all its retries and retransmission. The cause for this be the servers may not be operational or the NAS is not configured properly. |
|--------------------|--|

%AAA-3-DROPACCTFAIL : Accounting record dropped, send to server failed: [chars]

Recommended Action Check the server , whether they are operational or not. Next check whether the device is configured properly. Refer to the server configuration section of the cisco IOS documentation. Finally, check that the NAS can communicate with the server. If the problem persist, Enter **show running- config** command, contact your cisco technical support representative and provide all the information gathered to the representative.

%AAA-3-AUTH_LOW_IOMEM : RADIUS process is unable to handle the requests due to insufficient I/O memory

Explanation RADIUS process unable to handle request due to insufficient IO memory. Hence returning failure.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAA-3-ACCT_LOW_PROC_MEM_TRASH : AAA unable to handle accounting requests due to insufficient processor memory and could be trashing the queued accounting records

Explanation Dropping the accounting request as there is no enough processor memory. Hence all queued accounting requests shall be trashed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAA-3-ACCT_LOW_IO_MEM_TRASH : AAA unable to handle accounting requests due to insufficient I/O memory and could be trashing the queued accounting records

Explanation Dropping the accounting request as there is no enough I/O memory. Hence all queued accounting requests shall be trashed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAA-3-ACCT_UNKNOWN_REASON_TRASH : AAA unable to handle accounting requests, reason unknown and could be trashing the queued accounting records

| | |
|---------------------------|---|
| Explanation | Dropping the accounting request, reason unknown. Hence all queued accounting requests shall be trashed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-ACCT_LOW_MEM_UID_FAIL : AAA unable to create UID for incoming calls due to insufficient processor memory

| | |
|---------------------------|---|
| Explanation | Stop creating the AAA UID, due to LOW processor memory |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-LOW_MEM : [chars] process is unable to handle the incoming packet due to low memory

| | |
|---------------------------|---|
| Explanation | Please check the processor memory or IO memory. Most likely one is them has less available memory or worst case, both may have insufficient memory. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-ACCT_IOMEM_LOW : AAA ACCT process suspended : low I/O memory

| | |
|---------------------------|---|
| Explanation | AAA ACCT process has been suspended due to insufficient IO memory. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-5-USER_LOCKED : User [chars] locked out on authentication failure

| | |
|--------------------|--|
| Explanation | User locked out since the number of authentication failures exceeded the configured threshold. |
|--------------------|--|

%AAA-5-USER_LOCKED : User [chars] locked out on authentication failure

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%AAA-5-LOCAL_USER_BLOCKED : User [chars] blocked for login till [chars]

| | |
|---------------------------|---|
| Explanation | User blocked since the number of authentication failures in the watch time exceeded the configured threshold. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-5-USER_UNLOCKED : User [chars] unlocked by [chars]

| | |
|---------------------------|---|
| Explanation | User unlocked by the system administrator. User is enabled to login to the system. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-5-USER_RESET : User [chars] failed attempts reset by [chars]

| | |
|---------------------------|---|
| Explanation | User's number of failed authentication attempts so far has been reset to zero |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-NULLVRF : Null vrf entry

| | |
|---------------------------|---|
| Explanation | A NULL VRF entry found while comparing the AAA VRF attributes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-6-INVALIDROUTE : Syntax error in route statement: [chars]

| | |
|---------------------------|---|
| Explanation | Currently downloading route contains syntax error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-HA_INIT_FAILURE : High availability initialization failure: [chars]

| | |
|---------------------------|---|
| Explanation | The AAA subsystem was unable to perform necessary high-availability related initialization. In the event of switchover to a standby device, sessions depending on high availability capabilities in the AAA subsystem will be forced to renegotiate. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-3-HA_INTERNAL_ERROR : High availability internal error for unique id [hex]: [chars]

| | |
|---------------------------|---|
| Explanation | The AAA subsystem was suffered an internal error. In the event of switchover to a standby device, sessions depending on high availability capabilities in the AAA subsystem may be forced to renegotiate. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-6-USER_BLOCKED : Enable view requires to be authenticated by non-none methods, Please use the appropriate method with the login authentication

| | |
|---------------------------|---|
| Explanation | None method authentication is not allowed in CLI |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAA-6-USER_FAIL_VIEW_AAA : User [chars] failed to enter view '[chars]'.

| | |
|---------------------------|--|
| Explanation | You have provided wrong User ID or Password for the requested view |
| Recommended Action | This message is for information only. No action is required. |

%AAA-6-SKIP_MOH_ATTRIBUTE : Warning: Hardware idb is NULL. No Modem. MoH attribute can not be applied and it is Skipped for authorization.

| | |
|---------------------------|---|
| Explanation | To handle Modem-on-Hold attribute, we need connectivity with modems supporting V.92 modem standards. If there is no modem, there wouldn't be any tty, without which we cannot use MOH attributes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

AAAA

%AAAA-3-BADSTR : Bad accounting data: [chars]

| | |
|---------------------------|---|
| Explanation | During AAA accounting operations, the internal database of accounting information for a user was found to be corrupt. In all cases, this indicates an internal software error, and that accounting information for a particular user session has been lost. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%AAAA-3-ACCTDUMP : dump of accounting data:

| | |
|---------------------------|--|
| Explanation | The data buffer overflowed while building the accounting packet as the total length of the attributes exceed the buffer size. Last 128 bytes of buffer data is dumped. |
| Recommended Action | LOG_STD_ACTIONCollect the logs with these debugs by using commands #debug aaa api,#debug aaa attr,#debug aaa accounting |

%AAAA-3-ACCTATTR : last accounting attribute:

| | |
|---------------------------|---|
| Explanation | The data buffer overflowed while building the accounting packet. The accounting attribute that was being written to the buffer while the buffer overflow occurred was logged. |
| Recommended Action | LOG_STD_ACTIONCollect the logs with these debugs by using commands #debug aaa api,#debug aaa attr,#debug aaa accounting |

%AAAA-3-BADAUTHENSTR : Bad authentication data: [chars]

| | |
|---------------------------|---|
| Explanation | The data buffer overflowed while building the authentication packet as the total length of the attributes exceeded the buffer size. |
| Recommended Action | LOG_STD_ACTIONCollect the logs with these debugs by using the commands #debug aaa api,#debug aaa attr,#debug aaa authentication |

%AAAA-3-NULUSR : accounting for null user

| | |
|---------------------------|---|
| Explanation | This message indicates an internal software error. During shutdown of a line or interface, the system tried to send accounting information via AAA, but could not find the user to which the accounting information belonged. The most likely reason for this error is trying to do accounting twice for the same event. This error message can occur without any loss of accounting information. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%AAAA-3-NULPORT : Could not establish port information

| | |
|---------------------------|--|
| Explanation | This message indicates an internal software error. AAA could not determine a valid port string based on the information provided to it via a client. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%AAAA-3-RELOGIN : sanity check in re-login [chars] to [chars]

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%AAAA-3-DROPACCTSNDFAIL : Accounting record dropped, send to server failed: [chars]-[chars] [chars] [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to send an accounting record to a server failed. |
| Recommended Action | Check that the server (TACACS+ or RADIUS) is operational. Next, check the NAS is configured properly. Finally, check that the NAS can communicate with the server |

%AAAA-3-DROPACCTLOWMEM : Accounting record dropped due to low memory: [chars]-[chars] [chars] [chars]

Explanation An accounting record dropped due to low memory.

Recommended Action Disable periodic accounting if it is on. Try to reduce the load on the router.

%AAAA-3-DROPACCTFULLQ : Accounting record dropped due to a full aaa accounting queue: [chars]-[chars] [chars] [chars]

Explanation An accounting record was dropped because there are too many accounting packets enqueued.

Recommended Action Disable periodic accounting if it is on. The accounting queue may have grown to be large, which is usually due to a non-responsive AAA server. Use 'show radius statistics' or 'show tacacs' to see if the number of timeouts is increasing or if the response delay is unusually high.

%AAAA-3-DROPACCTQUEUEEXCEEDED : accounting record dropped, output record queue full: [chars]-[chars] [chars] [chars]

Explanation An accounting record was dropped. The record could not be enqueued because the number of records in the output queue has exceeded the system limit.

Recommended Action Disable periodic accounting if it is on. `[no] aaa accounting update newinfo periodic <interval>`

%AAAA-3-MKTIMERFAIL : Failed to create periodic accounting timer for user [chars]. This user may not generate periodic accounting records.

Explanation Failed to malloc a timer struct for periodic accounting.

Recommended Action Free up some memory and have user re-authenticate.

%AAAA-3-MKTIMERINVALID : Invalid request to create periodic accounting timer for user [chars]. Timer already exists.

Explanation Invalid client usage of timer struct for periodic accounting.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%AAAA-3-PERIODICFORKFAIL : Failed to start periodic accounting process. Periodic accounting records may not be sent.

Explanation Failed to create the periodic accounting process.

Recommended Action Free up some memory.

%AAAA-3-ACCTFORKFAIL : Failed to start accounting process. Accounting records may not be sent.

Explanation Failed to create the accounting process.

Recommended Action Free up some memory.

%AAAA-3-AAAFORKFAIL : Failed to start AAA process. AAA requests may not be processed.

Explanation Failed to create the AAA process.

Recommended Action Free up some memory.

%AAAA-4-BADMETHNAME : Bad [chars] method-list name [chars] (this is only a warning)

Explanation A method-list name should not be the same as a method name. Please choose a different name for the method list.

Recommended Action Pick a different method-list name, that is not also a method-name.

%AAAA-3-ILLEGALNAME : Illegal [chars] [chars] name [chars] rejected

Explanation A method-list name should not be the same as a method name. Please choose a different name for the method list.

Recommended Action Pick a different method-list name, that is not also a method-name.

%AAAA-3-BADLIST : %% AAA: bad [chars] list [chars]

Explanation One of the AAA methods does not seem to have a list associated with it.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-4-UNSUPWAITSTART : %% AAA: Unsupported option wait-start mapped to start-stop.

Explanation wait-start accounting is not supported. It is being mapped to start-stop

Recommended Action wait-start accounting is not supported. It is being mapped to start-stop

%AAAA-3-INVALIDLIST : %% AAA: invalid [chars] list [dec].

Explanation One of the AAA methods lists has inconsistent settings

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-3-BADARG : %% AAA: bad argument (%0#4x)

Explanation We tried to NVGEN a non-existent AAA command.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-3-BADSTATE : %% AAA: Bad state for [chars] list name ([dec])

Explanation A AAA method list is neither default nor named. This is bad.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-3-NOFREELISTS : %% AAA: No free [chars] lists for [chars]

Explanation You have reached the maximum number of possible authentication lists for this method.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-3-TIMERNOPER : AAA/ACCT/TIMER: No periodic update but timer set.

Explanation We are trying to free a timer, but the update method is not PERIODIC, and so no timer should exist.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-3-PERNOTIMER : AAA/ACCT/TIMER: Periodic update but no timer.

Explanation We are trying to free a timer, and the method is PERIODIC, but no timer seems to exist.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-3-OVERWRITE : Overwrote internal buffer space [chars]

Explanation An internal software error.

Recommended Action Report to tac@cisco.com.

%AAAA-3-DLRFORKFAIL : Failed to fork process for [chars].

Explanation Quite likely, we ran out of memory. Other explanations are possible.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-3-STRCREATE : str_create overwrote its internal buffer.

Explanation An internal buffer, used to assemble a string, was exceeded, thus possibly corrupting other memory.

%AAAA-3-STRCREATE : str_create overwrote its internal buffer.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%AAAA-6-ACCTSTART : [chars]

| | |
|---------------------------|---|
| Explanation | A AAA accounting start message. |
| Recommended Action | This information is for information only. |

%AAAA-6-ACCTSTOP : [chars]

| | |
|---------------------------|---|
| Explanation | A AAA accounting stop message. |
| Recommended Action | This information is for information only. |

%AAAA-6-ACCTWATCH : [chars]

| | |
|---------------------------|---|
| Explanation | A AAA accounting watchdog/update message. |
| Recommended Action | This information is for information only. |

%AAAA-6-ACCTLOCAL : Username: [chars] Privilege level: [dec] Command: [chars]

| | |
|---------------------------|--|
| Explanation | AAA local accounting log message |
| Recommended Action | This information is to store buffered logs locally and send to SYSLOG server |

%AAAA-3-SUBTYPE : Bad Subtype [dec] for [chars] ([dec])

| | |
|---------------------------|--|
| Explanation | An internal software error. |
| Recommended Action | Report to tac@cisco.com . |

%AAAA-3-NOLIST : [chars]: no method list-name.

| | |
|---------------------------|---|
| Explanation | An internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAAA-3-INVSTATE : [chars] AUTHOR[chars]: Internal state is invalid: astruct 0x[int]struct [hex]

| | |
|---------------------------|---|
| Explanation | One of the two mentioned data-structures is not set, but is needed here. This is an internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAAA-3-LISTCREATE : The list [dec] for [chars] is NULL. This should never be.

| | |
|---------------------------|---|
| Explanation | One of the method-lists, created at startup, wasn't created. This may cause a reload |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAAA-3-NOSERV : No name for servergroup in method [chars]

| | |
|---------------------------|---|
| Explanation | An internal error has occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAAA-4-SERVUNDEF : The server-group [chars] is not defined. Please define it.

| | |
|---------------------------|---|
| Explanation | A given server-group was listed in a method-list without defining it first. Server-groups should be defined before use. |
| Recommended Action | Define the server-group before using it. |

%AAAA-4-SERVNOTACPLUS : The server-group [chars] is not a tacacs+ server group. Please define [chars] as a tacacs+ server group.

Explanation The protocol used by the server-group doesn't support the configured aaa action.

Recommended Action Use a tacacs+ server-group.

%AAAA-4-SERVNORADIUS : The server-group [chars] is not a radius server group. Please define [chars] as a radius server group.

Explanation The protocol used by the server-group doesn't support the configured aaa action.

Recommended Action Use a radius server-group.

%AAAA-4-DNISGPUNDEF : Warning: DNIS group [chars] is not defined.

Explanation The DNIS group was used without defining it first. It should be defined before use.

Recommended Action Define the DNIS group before using it.

%AAAA-3-NOREG : [chars] method [dec] has no registry!

Explanation An internal error has occurred

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-3-BADREG : Illegal registry call.

Explanation An internal software error has occurred

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-3-BADCOMM : Trying config command but should not be.

| | |
|---------------------------|---|
| Explanation | An internal error has occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAAA-3-NOSG : No server-group passed through parser.

| | |
|---------------------------|---|
| Explanation | An internal error has occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAAA-6-SERVERMSG : [chars] [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | This message was passed to the NAS from the AAA server |
| Recommended Action | No action need be taken, but the message may contain usefull information regarding some event on the server |

%AAAA-6-ADMINMSG : [chars] [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | This administrative message was passed to the NAS from the AAA server |
| Recommended Action | No action need be taken, but the message may contain usefull information regarding some event on the server |

%AAAA-3-ILLSGNAME : Illegal server-group name [chars] (type [chars]).

| | |
|---------------------------|---|
| Explanation | The given server-group name is a name that could conflict with internally chosen lists. |
| Recommended Action | Please pick a different server-group name. |

%AAAA-4-NOSERVER : Warning: Server [chars] is not defined.

| | |
|--------------------|---|
| Explanation | The given server is not on the master-list, and should be defined, or unexpected things might happen. |
|--------------------|---|

%AAAA-4-NOSERVER : Warning: Server [chars] is not defined.

Recommended Action Please define the server on the appropriate master-list as soon as possible.

%AAAA-4-BADSGNAME : Bad server-group name [chars] (type [chars]).

Explanation The given server-group name either doesn't exist or the given type does not match the defined server-group.

Recommended Action Verify that the group exists and has the same type.

%AAAA-4-BADSGTYPE : Server-group [chars] is not of type [chars].

Explanation The given server-group name does not match the specified type

Recommended Action Verify that the group exists and has the same type.

%AAAA-4-SERVNOGRP : Warning: Server [IP_address]:[dec],[dec] is not part of server group [chars].

Explanation The server does not belong to the specified server group

Recommended Action Please check that the specified server belongs to the server group

%AAAA-3-NOADMINPROC : [chars]

Explanation Administrative process has been enabled but somehow could not run

Recommended Action

%AAAA-3-INTERNAL_ERROR : [chars]

Explanation This is an internal software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AAAA-3-SGDUPFREE : Duplicate free of server group [hex]

| | |
|---------------------------|---|
| Explanation | This is an internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAAA-4-NOCACHEPROC : The aaa cache process is not created. Please configure aaa cache profile first

| | |
|---------------------------|--|
| Explanation | Cache was listed in a method-list without defining it first. Cache profile should be defined before use. |
| Recommended Action | Define the cache profile before using it. |

%AAAA-3-INVALIDATTRLIST : aaa attribute list CLI is not valid when configuring in sub-mode.

| | |
|---------------------------|---|
| Explanation | An internal error has occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AAAA-4-CLI_DEPRECATED : [chars]

| | |
|---------------------------|---|
| Explanation | CLI deprecated. New CLI to be used |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

AC**%AC-3-AC_WS_REGISTER : L2VPN WS registration failed for [chars]**

| | |
|--------------------|--|
| Explanation | An error was encountered when attempting to register the specified Attachment Circuit type with the Layer 2 Virtual Private Network Wire Service facility. |
|--------------------|--|

%AC-3-AC_WS_REGISTER : L2VPN WS registration failed for [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%AC-3-AC_SANITY : [chars]

| | |
|---------------------------|---|
| Explanation | A unexpected sanity check failed during Attachment Circuit processing. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AC-3-L2SS_NULL_CONTEXT : Encountered a NULL context in [chars]

| | |
|---------------------------|---|
| Explanation | Encountered a NULL context in L2SS Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AC-3-L2SS_WRONG_KEYS : Wrong set of keys in [chars] message

| | |
|---------------------------|---|
| Explanation | SIP sends a wrong set of keys to L2SS Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AC-3-L2SS_UNEXPECTED : Received unexpected [chars] message

| | |
|---------------------------|---|
| Explanation | L2SS received unexpected message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AC-3-L2SS_BAD_HANDLE : Corrupted L2SS handle [[hex]].

| | |
|---------------------------|---|
| Explanation | An internal L2SS Manager occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AC-3-ACMGR_XDM_CREATE : Failed to create XDM - rc [int]

| | |
|---------------------------|---|
| Explanation | Attachment Circuit Manager was unable to create a Dispatch Manager instance for event handling. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AC-3-ACMGR_INVALID_MSG : Received [chars]

| | |
|---------------------------|---|
| Explanation | Attachment Circuit Manager receives invalid message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AC-3-ACMGR_MISSED_CIRCUIT : Circuit info missing in [chars] message.

| | |
|---------------------------|---|
| Explanation | AC Manager received message with missing circuit info |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AC-3-ACMGR_INVALID_HDL : Received invalid [chars] handle

| | |
|--------------------|---|
| Explanation | Attachment Circuit Manager receives invalid handle. |
|--------------------|---|

%AC-3-ACMGR_INVALID_HDL : Received invalid [chars] handle

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

ACCESS_IE

%ACCESS_IE-3-INVALID_HANDLE : Caller passed in invalid handle - traceback to follow.

| | |
|---------------------------|---|
| Explanation | An invalid handle was encountered in the Access IE library. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

ACCESS_SESSION

%ACCESS_SESSION-3-TRACE_INIT_FAIL : Initialization failed with code: [dec]

| | |
|---------------------------|--|
| Explanation | Failed to initialize access-session trace. |
| Recommended Action | No action is required. |

%ACCESS_SESSION-3-TRACE_REG_FAIL : Component [chars] registration failed. Error code: [dec]

| | |
|---------------------------|--|
| Explanation | Component failed to register with access-session trace |
| Recommended Action | No action is required. |

ACCESS_SESSION_TRACE

%ACCESS_SESSION_TRACE-3-TRACE_INIT_FAIL :

| | |
|---------------------------|--|
| Explanation | Failed to initialize access-session trace. |
| Recommended Action | Review smd logs taking note of the timestamp information to select specific information to review. Copy the message and other related information exactly as it appears on the console or in the system log. |

%ACCESS_SESSION_TRACE-3-TRACE_REG_FAIL :

| | |
|---------------------------|--|
| Explanation | Component failed to register with access-session trace |
| Recommended Action | Review smd logs taking note of the timestamp information to select specific information to review. Copy the message and other related information exactly as it appears on the console or in the system log. |

ACE**%ACE-3-INITFAIL : [chars]: initialization failed ([chars])**

| | |
|---------------------------|---|
| Explanation | ACE initialization sequence failed. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%ACE-3-TRANSERR : [chars]: [chars] trans [hex]; opcode [hex]; param [hex]; error [hex]; retry cnt [dec]

| | |
|---------------------------|---|
| Explanation | An error occurred in the indicated control transaction. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%ACE-6-SWITCHOVER : VPN-SM switchover: [dec]/[dec] has been [chars] [dec]/[dec]

| | |
|---------------------------|---|
| Explanation | A blade to blade switchover has occurred. System performance is not affected. |
| Recommended Action | System performance is not affected. No customer action is necessary. |

%ACE-3-TRANSERR_RL : [chars]: [chars] trans [hex]; opcode [hex]; param [hex]; error [hex]; retry cnt [dec]

| | |
|---------------------------|---|
| Explanation | An error occurred in the indicated control transaction. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%ACE-3-TRANSTO : [chars]: [chars] trans [hex]; opcode [hex]; param [hex]; too many retries

| | |
|---------------------------|---|
| Explanation | An error occurred in the indicated control transaction. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%ACE-3-TRANSNAK : [chars]: [chars] NAK trans [hex]; opcode [hex]; param [hex]

| | |
|---------------------------|---|
| Explanation | An negative acknowledge occured in the indicated control transaction. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%ACE-3-NOMORETID : [chars]: out of [chars] transactions

| | |
|---------------------------|---|
| Explanation | Transaction pool for the indicated transaction type was exhausted. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%ACE-3-INTVID : [chars]: [chars] of invalid [chars] trans id [dec]

| | |
|---------------------------|---|
| Explanation | An invalid transaction ID of for the indicated transaction type was encountered |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%ACE-3-HAPITRUNC : [chars]: Received truncated HAPI message (tlen=[dec], actual=[dec])

| | |
|---------------------------|---|
| Explanation | The received ACE control packet was smaller than the size field indicated |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%ACE-6-UNEXP_OUTBOUND_IPSEC : [chars]: received unexpected IPsec packet: src IP: [IP_address]; dst IP: [IP_address]; firsthop/lasthop = [chars]/[chars] (count=[dec])

| | |
|---------------------------|--|
| Explanation | An IPsec packet was unexpectedly forwarded to the RP |
| Recommended Action | If this message was seen in the context of the router booting, enabling the hardware crypto accelerator, or with an invalid peer IP address then this message is normal and can be safely ignored. Otherwise, please copy the error message exactly as it appears, and report it to your technical support representative. |

%ACE-6-UNEXP_INBOUND_IPSEC : [chars]: received unexpected IPsec packet: src IP: [IP_address]; dst IP: [IP_address]; (count=[dec])

| | |
|---------------------------|---|
| Explanation | An IPsec packet was unexpectedly forwarded to the RP |
| Recommended Action | If this message was seen in the context of the router booting, enabling the hardware crypto accelerator, then this message is normal and can be safely ignored. Otherwise, please copy the error message exactly as it appears, and report it to your technical support representative. |

%ACE-3-CRASHDUMPSTART : [chars]: crashdump retrieval initiated to file [chars]

Explanation The ACE crashed and was rebooted. Upon reboot, a crashdump file was detected and uploaded to the sup-bootflash filesystem.

Recommended Action Report the crash and transfer the crashdump file to your technical support representative.

%ACE-6-CRASHDUMPEND : [chars]: crashdump retrieval complete

Explanation The ACE crashed and was rebooted. Upon reboot, a crashdump file was detected and uploaded to the sup-bootflash filesystem.

Recommended Action Report the crash and transfer the crashdump file to your technical support representative.

%ACE-3-CRASHDUMPERR : [chars]: crashdump retrieval error: [chars] [chars]

Explanation An error occurred during crashdump file retrieval from ACE.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ACE-6-BOOTMSGINFO : [chars]: boot info: [chars]

Explanation The ACE completed booting, but with a non-zero informational status code. This does not indicate an error and ACE will run normally.

Recommended Action No action is necessary.

%ACE-3-BOOTMSGERR : [chars]: boot error: [chars]

Explanation The ACE completed booting, but with an error status code. ACE will not operate and it will not register with the crypto subsystem.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ACE-3-OUTOFRES : Too many [chars] in the system. Cannot allocate a new one

Explanation All VPN-accelerator resources of a particular are in used and thus this allocation request fails.

%ACE-3-OUTOFRES : Too many [chars] in the system. Cannot allocate a new one

Recommended Action Remove the cryptomap set from the interface. Reduce the number of that resource in the system. For ACL, reduce the number of ACL permit ACE in the system. For cryptomap, reduce the number of cryptomaps in the system. For SPD and SPD map, reduce the number of interface with cryptomap set attached.

%ACE-2-INTTABOPERR : Internal [chars] table error: [chars]

Explanation Internal table operation fails. This means the state of the module is mostly like inconsistent.

Recommended Action Contact your technical support representative

%ACE-2-CRYPTOENGERR : Crypto engine error: [chars] ([dec])

Explanation A crypto engine operation did not complete. This error condition can indicate that the crypto engine cannot bind or unbind an interface to a crypto engine. It can also indicate that the crypto engine cannot query an interface ID.

Recommended Action Remove the cryptomap set from the interface by issuing **no crypto map** command. Then reattach the cryptomap set to the interface using **crypto map** command. Although removing and reattaching the crypto map might fix the cryptographic engine operation failure, report the failure to your technical support representative along with the sequence of commands that lead to the failure.

%ACE-6-INFO : [chars]: [chars]

Explanation This is informational message from ACE

Recommended Action This is informational message from ACE. This occurs in normal operation.

%ACE-3-OUTOFID_RL : Too many [chars] IDs in the system. Cannot allocate a new one

Explanation All the IDs of the specified type are in use

Recommended Action Reduce the traffic load, number of IPSec tunnels and/or frequency of re-key. If this message was seen under light loading conditions, then copy the error message exactly as it appears, and report it to your technical support representative.

%ACE-3-NOENGINESLOT : Interface [chars] has no crypto engine slot

Explanation An IKE SA was requested for a given interface, but no crypto engine slot was assigned to that interface

%ACE-3-NOENGINESLOT : Interface [chars] has no crypto engine slot

Recommended Action Configure the interface in question with the `crypto engine [sub]slot` command

%ACE-3-CEAL_REGISTRATION : ACE [chars] failed to register.

Explanation The ACE failed to register with CEAL

Recommended Action Reset the hw module

%ACE-4-BV_IDMGR_DESTROY : ACE failed to destroy [chars] ID manager. Leaking memory.

Explanation The ACE failed to destroy memory space for ID management.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ACE-6-SWITCHOVER : VPN-SPA switchover: [dec]/[dec] has been [chars] [dec]/[dec]

Explanation A blade to blade switchover has occurred. System performance is not affected.

Recommended Action System performance is not affected. No customer action is necessary.

%ACE-6-UNEXP_INBOUND_IPSEC : [chars]: received unexpected IPsec packet: src IP: [chars]; dst IP: [chars]; (count=[dec])

Explanation An IPsec packet was unexpectedly forwarded to the RP

Recommended Action If this message was seen in the context of the router booting, enabling the hardware crypto accelerator, then this message is normal and can be safely ignored. Otherwise, please copy the error message exactly as it appears, and report it to your technical support representative.

%ACE-3-OUTOFID_RL : Too may [chars] IDs in the system. Cannot allocate a new one

Explanation All the IDs of the specified type are in use

Recommended Action Reduce the traffic load, number of IPSec tunnels and/or frequency of re-key. If this message was seen under light loading conditions, then copy the error message exactly as it appears, and report it to your technical support representative.

ACL

%ACL-3-UNEXPECTED_STATE : type [dec], int [chars] [chars]put, w0: [hex], w1: [hex]

Explanation An error has occurred in the setup of ACL hardware.

Recommended Action LOG_STD_ACTION

%ACL-3-UNEXPECTED_PKT_TYPE : type [dec], int [dec] [chars]put

Explanation ACL logging has encountered unexpected pkt type.

Recommended Action LOG_STD_ACTION

ACL_ERRMSG

%ACL_ERRMSG-4-UNLOADED : [chars] [chars] [chars] ACL on interface [chars] could not be programmed in hardware and traffic will be dropped.

Explanation The configuration is too large dropped will be dropped on this interface.

Recommended Action Allocate more space to the relevant section of the TCAM and reboot, or else use a simpler configuration. If possible, use the same ACLs on multiple interfaces.

%ACL_ERRMSG-4-HASH_FULL : [chars] [chars] [chars] ACL on cell [chars] could not be programmed in hardware, SGACL table is full.

Explanation The configuration is too large.

Recommended Action You have exceeded the system limit of SGACL cells, use a simpler configuration which uses less SGACL cells.

%ACL_ERRMSG-4-HASH_ERROR : [chars] [chars] [chars] ACL on cell [chars] could not be found.

Explanation The configuration is unknown.

Recommended Action There is no SGACL Cell with this configuration found.

%ACL_ERRMSG-4-PROGRAM_FAILED : [chars] [chars] [chars] ACL on [chars] programming failed in hardware.

Explanation The configuration is too large.

Recommended Action You have exceeded the system limit of entries, use a simpler configuration which uses less entries.

%ACL_ERRMSG-6-RELOADED : [chars] [chars] [chars] ACL on interface [chars] has now been loaded into the hardware.

Explanation The configuration that previously was unable to fit into the hardware will now fit and has been programmed for this interface.

Recommended Action No action required, informational only.

%ACL_ERRMSG-6-REMOVED : The [chars] [chars] [chars] ACL configuration that was previously unloaded has been removed from interface [chars].

Explanation The configuration that was previously unloaded, because of lack of space, has been removed.

Recommended Action No action required, informational only.

%ACL_ERRMSG-3-ERROR : [chars] [chars] [chars] ACL [chars] configuration could not be applied on [chars].

Explanation The given ACL configuration could not be applied to hardware.

Recommended Action Find out more about the error by using the show platform software trace messages fed command.

%ACL_ERRMSG-6-PACL_INFO : Logging is not supported for PAACL.

Explanation The ACL logging is not supported on port interface.

Recommended Action No action is needed.

%ACL_ERRMSG-6-GACL_INFO : Logging is not supported for GACL.

Explanation The ACL logging is not supported for client/group ACL.

Recommended Action No action is needed.

ADJ

%ADJ-3-BADMACALIGN : adjacency mac string end [hex] not [chars] aligned

Explanation An internal software error occurred.

%ADJ-3-BADMACALIGN : adjacency mac string end [hex] not [chars] aligned

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%ADJ-3-BADMAGIC : adjacency [chars] is followed by bad magic

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-ALLOCATEONDOWN : Allocating adj when adj subsystem down

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-ALLOCATEFAIL : Failed to allocate an adjacency

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. This is probably because not enough memory was available. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-BOARDENCAP : Generation of encapsulation string for [chars] failed

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-ILLEGALARGS : Illegal arguments - [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-STATETRANSITION : Unexpected state transition from [chars] to [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-NOFIBIDB : CEF Interface not found - [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-LCXDRCLIENT : Adjacency distribution client: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-RPXDRCLIENT : Adjacency distribution client: [chars]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%ADJ-3-RPXDRCLIENT : Adjacency distribution client: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%ADJ-3-BROKERINITFAIL : Failed to initialise adjacency RP broker facility

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-SBINITFAIL : Failed to initialise adjacency subblock facility

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-ILINITFAIL : Failed to initialise adjacency interest list facility

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-BUNDLES : Adj bundles: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-ILALLOCATEFAIL : Failed to allocate an adjacency interest list subblock

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. This is probably because not enough memory was available. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-ILDEALLOCATEFAIL : Failed to deallocate an adjacency interest list subblock

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. This is probably because not enough memory was available. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-DBGFILTERALLOCATEFAIL : Failed to allocate an adjacency debug filter block

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. This is probably because not enough memory was available. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-ADJMGRALLOCATEFAIL : Failed to allocate an adjacency summary event block

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. This is probably because not enough memory was available. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-ADJGENALLOCATEFAIL : Failed to allocate memory [chars]

Explanation An internal software error occurred. This is probably because not enough memory was available.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ADJ-3-ADJGENDEALLOCATEFAIL : Failed to deallocate memory [chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ADJ-3-ADJMGRREFRESHFAIL : Failed to dispatch a refresh adjacency summary event

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ADJ-3-ADJMGRDISPATCHFAIL : Failed to enqueue an adjacency summary event block

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ADJ-5-PARENT : Midchain parent maintenance for [chars] - [chars]

| | |
|---------------------------|---|
| Explanation | A midchain adjacency failed to stack onto output chain because a loop was detected. Traffic through the adjacency will be dropped until the adj is restacked. This condition is typically transient and is rectified by the control plane driving stacking. E.g. if an ip tunnel destination resolves through the tunnel transiently this message would appear. The situation would be rectified either by learning the tunnel destination through an interface other than the tunnel itself or by bringing the tunnel down. Monitor 'show adjacency internal' to determine if the problem has been resolved. |
| Recommended Action | No action is required. |

%ADJ-3-ADJSTACK2 : Adj stack2 error [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-5-ADJISSUINCOMPATIBLE : All or part of adjacency message for [chars] not sent to incompatible CEF instance for [chars]

| | |
|---------------------------|---|
| Explanation | The adjacency is not distributed in whole to the remote CEF instance. This may impact traffic forwarding on remote CEF instance |
| Recommended Action | No action is required. |

%ADJ-3-BADADDRTYPE : Using an unsupported address type [dec] when trying to add/delete/modify/find an adjacency

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. An attempt to reference an adjacency with an unsupported address type has been made. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-BADADDRLLEN : Zero address length detected distributing adj [chars]

| | |
|--------------------|---|
| Explanation | An internal software error occurred. An attempt to reference an adjacency with an unsupported address type has been made. |
|--------------------|---|

%ADJ-3-BADADDRLEN : Zero address length detected distributing adj [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%ADJ-3-BADLINKTYPE : Using an unsupported linktype [chars] when trying to add/delete/modify/find an adjacency

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. An attempt to reference an adjacency with an unsupported address type has been made. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-BADMACALIGN2 : Adjacency mac string for [chars] not byte aligned, offset [hex], length [hex]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-MACOVERFLOW : Adjacency mac address for [chars] overflowed by [dec] bytes

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-5-RESOLVE_REQ_FAIL : Adj resolve request failed for [chars] on [chars]

| | |
|--------------------|--|
| Explanation | The source (e.g. ARP or ND) could not resolve the address. |
|--------------------|--|

%ADJ-5-RESOLVE_REQ_FAIL : Adj resolve request failed for [chars] on [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%ADJ-3-MACSTRING_PD_ERROR : Platform request for header type [chars] from adjacency [chars] [chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-ISSU_REG : ISSU client [chars] ([dec]), entity [dec], failed ISSU registration: [chars]

| | |
|---------------------------|---|
| Explanation | ISSU negotiation failed for this XDR client. |
| Recommended Action | This error indicates a coding problem. It is an error that will occur every time this image is run, and requires a code change to fix it. |

%ADJ-3-CONNID_POOL_EXHAUSTED : Pool of connection ids is fully utilized. It may not be possible to encode new sets of extended keys.

| | |
|---------------------------|---|
| Explanation | Either there are too many unique sets of extended keys in the system, or ids have been leaking. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-CONNID_INVALID_KEY : Unexpected connection-id parameter: Expecting [chars] when encoding [chars]

| | |
|---------------------------|---|
| Explanation | An application has provided an invalid key for computing a connection-id. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-CONNID_TREE_OP_FAIL : Tree [chars] failed for [chars] for id [int] (connid [int])

Explanation A tree operation failed for the connection-id manager. An inability to correctly construct a tree will have negative consequences for the system.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ADJ-3-CONNID_INVALID : Connection id [int] not recognized ([chars])

Explanation A supplied connection id did not exist in the managed id database.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ADJ-3-CONNID_INCOMPATIBLE_ID : Connection id [int] could not be transformed: [chars]

Explanation A connection id could not be transformed from a lower revision.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ADJ-3-CONNID_TREE_MISMATCH : Supplied connid [int] and extended keys ([chars]) do not match database: [int] ([chars])

Explanation An adjacency has a connection id and extended keys mapping that doesn't match what's in the managed connection id database. This will likely result in a rejected adjacency update or sync.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ADJ-3-ADJ_XKEYS : Adj extended keys error [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | An initialization error occurred for extended keys. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ADJ-3-XKEYS_XDR_LEN : Expected [int] bytes of extended adjacency keys: decoded [int] bytes

| | |
|---------------------------|---|
| Explanation | The XDR message was incorrectly formatted and may contain bad xkey data. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

AGGMGR through APM

- [AGGMGR](#)
- [ALARM](#)
- [ALG_COM](#)
- [ALG_PROXY](#)
- [ALIGN](#)
- [ALPS](#)
- [AMT](#)
- [AN](#)
- [ANALOG_SM](#)
- [APM](#)

AGGMGR

%AGGMGR-0-NO_SPACE : No space left for creator [chars] to add data item to agg list (items [dec] max [dec] remaining [dec])

| | |
|--------------------|--|
| Explanation | An attempt was made to add an item to an aggregation list that had just been successfully created but for some reason the add failed. This situation should never occur. If it does occur, then it is the result of a program error which would be found during development and considered an internal error. There is no work around. |
|--------------------|--|

%AGGMGR-0-NO_SPACE : No space left for creator [chars] to add data item to agg list (items [dec] max [dec] remaining [dec])

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

ALARM

%ALARM-3-NOMEM : OUT of Memory: [chars]

Explanation

Recommended Action

%ALARM-3-CLEAR : [chars] [chars] [chars] [chars] [chars]

Explanation

Recommended Action

%ALARM-6-ENTITY_INFO : [chars] [chars] [chars] [chars] [chars]

Explanation Entity alarm assertion or deassertion information.

Recommended Action No action is required.

ALG_COM

%ALG_COM-3-ALG_COND_DEBUG_REG_FAILED : [chars]

Explanation

Recommended Action

%ALG_COM-3-CHUNK_CREATE_FAIL : [chars]

Explanation A request to create a chunk failed

Recommended Action LOG_STD_ACTION

%ALG_COM-3-CHUNK_EXTEND_FAIL : [chars]

Explanation A request to create a chunk failed**Recommended Action** LOG_STD_ACTION

%ALG_COM-3-IPC_INIT_FAILED : [dec]

Explanation IPC handler initialization failed.**Recommended Action** LOG_STD_ACTION

%ALG_COM-3-ALG_REGISTER_FAILED : [dec]

Explanation ALG registration failed.**Recommended Action** LOG_STD_ACTION

ALG_PROXY

%ALG_PROXY-3-PROXY_MEM_REQ_FAILED : ALG IPC subtype: [dec]

Explanation Requesting more memory failed.**Recommended Action** LOG_STD_ACTION

%ALG_PROXY-3-PROXY_MEM_EXTEND_FAILED : ALG IPC subtype: [dec]

Explanation Extending memory failed.**Recommended Action** LOG_STD_ACTION

%ALG_PROXY-4-PROXY_IPC_INVALID_MSG_LEN : [dec]:[dec] len [dec] flags [hex] source [dec]

Explanation Invalid IPC message length.**Recommended Action** LOG_STD_ACTION

%ALG_PROXY-4-PROXY_IPC_INVALID_MSG : [dec]

Explanation Invalid IPC message subtype.**Recommended Action** LOG_STD_ACTION

%ALG_PROXY-3-PROXY_IPC_FAIL : rc= [dec], MSGDEF_LIMIT_MEDIUM

Explanation The ALG proxy has experienced a failure when trying to send an IPC**Recommended Action** LOG_STD_ACTION

ALIGN

%ALIGN-3-CORRECT : Alignment correction made at [hex] [chars]ing [hex]

Explanation A software component within the router needs memory optimization.**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

%ALIGN-3-FULL : Alignment log is full - no new entries will be recorded

Explanation The router identified more software components in need of memory optimization than it can record.**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

%ALIGN-3-SPURIOUS : Spurious memory access made at [hex] reading [hex]

Explanation An attempted but illegal access to a low memory address within a software component in the router has been temporarily blocked.**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Issue the **show alignment** command to gather data that may help identify the nature of the error. If you cannot determine the nature of the error from the error message text or from the **show alignment** output, call your Cisco technical support representative and provide the representative with the gathered information.

%ALIGN-3-TRACE : -Traceback= [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

Explanation A trace that shows where the previous ALIGN error occurred.

%ALIGN-3-TRACE : -Traceback= [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%ALIGN-3-TRACEX : [chars]

| | |
|--------------------|---|
| Explanation | A trace that shows where the previous ALIGN error occurred. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%ALIGN-3-READEXCEPTION : Warning : read access failed at [chars], still continuing

| | |
|--------------------|--|
| Explanation | In ls1010 read access failures do not make the box reload. They can be caused by either a bad register value in the asp ver 3.3 or earlier or a real problem in the hardware |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | If the ASP version is 3.3 or more, report it to your technical support representative. |
|---------------------------|--|

%ALIGN-3-CORRECT : Alignment correction made at [chars] [chars]ing [hex]

| | |
|--------------------|---|
| Explanation | A software component within the router needs memory optimization. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%ALIGN-3-CORRECT_SO : Alignment correction made at [chars] [chars]ing [chars]

| | |
|--------------------|---|
| Explanation | A software component within the router needs memory optimization. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%ALIGN-3-SPURIOUS : Spurious memory access made at [chars] reading [hex]

| | |
|--------------------|---|
| Explanation | An attempted but illegal access to a low memory address within a software component in the router has been temporarily blocked. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show alignment command to gather data that may help identify the nature of the error. If you cannot determine the nature of the error from the error message text or from the show alignment output, call your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%ALIGN-3-SPURIOUS_SO : Spurious memory access made at [chars] reading [chars]

Explanation An attempted but illegal access to a low memory address within a software component in the router has been temporarily blocked.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show alignment** command to gather data that may help identify the nature of the error. If you cannot determine the nature of the error from the error message text or from the **show alignment** output, call your Cisco technical support representative and provide the representative with the gathered information.

%ALIGN-3-TRACE : -Traceback= [chars]

Explanation A trace that shows where the previous ALIGN error occurred.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ALIGN-3-TRACE_SO : -Traceback= [chars]

Explanation A trace that shows where the previous ALIGN error occurred.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

ALPS

%ALPS-3-ALPSFAIL : ALPS: Assertion failed: [chars]

Explanation An internal software error has occurred.

Recommended Action LOG_STD_ACTION

%ALPS-5-PEER_CONN_ID_CHANGE : Peer ([IP_address], [chars]) ID modified to ([IP_address], [chars]).

Explanation An ALPS peer connection identifier has changed.

Recommended Action LOG_STD_NO_ACTION

%ALPS-5-PEER_OPEN : Peer ([IP_address], [chars]) changed state to open.

Explanation An ALPS peer connection is now open.

Recommended Action LOG_STD_NO_ACTION

%ALPS-5-PEER_CLOSED : Peer ([IP_address], [chars]) changed state to closed.

Explanation An ALPS peer connection is now closed.**Recommended Action** LOG_STD_NO_ACTION

%ALPS-5-PEER_CLOSED_DYNAMIC_INACTIVITY : Peer ([IP_address], [chars]) closed due to inactivity.

Explanation An ALPS peer connection is now closed due to inactivity.**Recommended Action** LOG_STD_NO_ACTION

%ALPS-6-PEER_OPEN_FAIL : Peer ([IP_address], [chars]) open failed, rsn = [chars]

Explanation An ALPS peer connection attempted to open, but failed to open.**Recommended Action** LOG_STD_NO_ACTION

%ALPS-6-PEER_BUSY_START : Peer ([IP_address], [chars]) has entered a congested state.

Explanation An ALPS peer connection is experiencing congestion.**Recommended Action** LOG_STD_NO_ACTION

%ALPS-6-PEER_BUSY_END : Peer ([IP_address], [chars]) has exited a congested state.

Explanation An ALPS peer connection is no longer experiencing congestion.**Recommended Action** LOG_STD_NO_ACTION

%ALPS-7-PEER_DROPS_MAX_SIZE_EXCEEDED : Threshold exceeded for maximum size exceeded drops for peer ([IP_address], [chars]).

Explanation The number of ALPS peer drops due to maximum size exceeded exceeds the ALPS peer threshold value.**Recommended Action** LOG_STD_NO_ACTION

%ALPS-7-PEER_DROPS_VERSION_MISMATCH : Threshold exceeded for version mismatch peer drops for peer ([IP_address], [chars]).

Explanation The number of ALPS peer drops due to version mismatch exceeds the ALPS peer threshold value.

Recommended Action LOG_STD_NO_ACTION

%ALPS-7-PEER_DROPS_QUEUE_OVERFLOW : Threshold exceeded for TCP Queue overflow peer drops for peer ([IP_address], [chars]).

Explanation The number of ALPS peer drops due to queue overflow exceeds the ALPS peer threshold value.

Recommended Action LOG_STD_NO_ACTION

%ALPS-7-PEER_DROPS_PEER_UNREACHABLE : Threshold exceeded for peer unreachable peer drops for peer ([IP_address], [chars]).

Explanation The number of ALPS peer drops due to a peer unreachable condition exceeds the ALPS peer threshold value.

Recommended Action LOG_STD_NO_ACTION

%ALPS-5-CIRCUIT_OPEN : Circuit [chars] changed state to open.

Explanation An ALPS circuit has transitioned from closed to open.

Recommended Action LOG_STD_NO_ACTION

%ALPS-5-CIRCUIT_CLOSED : Circuit [chars] changed state to closed, rsn = [chars].

Explanation An ALPS circuit has transitioned from open to closed

Recommended Action LOG_STD_NO_ACTION

%ALPS-6-CIRCUIT_OPEN_FAILED : Circuit [chars] received a Circuit Open Failed message, rsn = [chars].

Explanation An ALPS circuit sent a Circuit Open Request message and received a Circuit Open Failed message as a reply.

%ALPS-6-CIRCUIT_OPEN_FAILED : Circuit [chars] received a Circuit Open Failed message, rsn = [chars].

Recommended Action LOG_STD_NO_ACTION

%ALPS-6-CIRCUIT_ASCU_REJECT : Circuit [chars] received a Circuit Open Confirm with a list of rejected ascus

Explanation An ALPS circuit sent a Circuit Open Request message and received a Circuit Open Confirm with a list of rejected ascus.

Recommended Action LOG_STD_NO_ACTION

%ALPS-6-CIRCUIT_UPDATE_FAILED : Circuit [chars] received a Circuit Open Failed message, rsn = [chars].

Explanation An ALPS circuit sent a Circuit Update message and received a Circuit Open Failed message as a reply.

Recommended Action LOG_STD_NO_ACTION

%ALPS-6-CIRCUIT_BUSY_START : Circuit [chars] has entered a congested state.

Explanation An ALPS circuit is experiencing congestion.

Recommended Action LOG_STD_NO_ACTION

%ALPS-7-CIRCUIT_BUSY_END : Circuit [chars] has exited a congested state.

Explanation An ALPS circuit is no longer experiencing congestion.

Recommended Action LOG_STD_NO_ACTION

%ALPS-7-CIRCUIT_DROPS_QUEUE_OVERFLOW : Threshold exceeded for queue overflow drops for circuit [chars]

Explanation The number of ALPS circuit drops due to queue overflow exceeds the ALPS circuit threshold value.

Recommended Action LOG_STD_NO_ACTION

%ALPS-7-CIRCUIT_DROPS_CKT_DISABLED : Threshold exceeded for circuit disabled drops for circuit [chars]

Explanation The number of ALPS circuit drops due to circuit disabled exceeds the ALPS circuit threshold value.

Recommended Action LOG_STD_NO_ACTION

%ALPS-7-CIRCUIT_DROPS_LIFETIME_EXPIRED : Threshold exceeded for lifetime timer expiration drops for circuit [chars]

Explanation The number of ALPS circuit drops due to lifetime timer expiration exceeds the ALPS circuit threshold value.

Recommended Action LOG_STD_NO_ACTION

%ALPS-7-CIRCUIT_DROPS_INVALID_ASCU : Threshold exceeded for invalid ASCU drops for circuit [chars]

Explanation The number of ALPS circuit drops due to invalid ASCU identifier exceeds the ALPS circuit threshold value.

Recommended Action LOG_STD_NO_ACTION

%ALPS-7-CIRCUIT_DROPS_VC_RESET : Threshold exceeded for X.25 VC Reset drops for circuit [chars]

Explanation The number of ALPS circuit drops due to X.25 VC Reset exceeds the ALPS circuit threshold value.

Recommended Action LOG_STD_NO_ACTION

%ALPS-6-CIRCUIT_X25_VC_STUCK : Host unresponsive on X.25 VC for circuit [chars]

Explanation The X.25 or EMTX host is not advancing the transmit window for extended periods of time. This may be indicative of a temporary problem with the host application. An X.25 Reset is sent to reset the transmit and receive windows to allow communication to proceed.

Recommended Action None

%ALPS-5-ASCU_UP : ASCU [hex] on interface [chars] is up.

Explanation An ALPS ASCU has transitioned from down to up.

%ALPS-5-ASCU_UP : ASCU [hex] on interface [chars] is up.

Recommended Action LOG_STD_NO_ACTION

%ALPS-5-ASCU_DOWN : ASCU [hex] on interface [chars] is down.

Explanation An ALPS ASCU has transitioned from up to down.
Recommended Action LOG_STD_NO_ACTION

%ALPS-3-ASCU_FSM_ERR : ASCU [hex] on interface [chars] has an internal FSM error.

Explanation Internal error.
Recommended Action Turn debug flags on, capture traces & contact Cisco technical support

%ALPS-3-ASCU_IF_STUCK : Polling for ASCU [hex] on interface [chars] is stalled.

Explanation The polling mechanism for an ALPS interface has become stuck.
Recommended Action LOG_STD_NO_ACTION

%ALPS-5-ASCU_DISABLED_ASCU_STUCK : ASCU [hex] on interface [chars] has been disabled since 4 consecutive messages were received from same SID.

Explanation An ALPS ASCU has been automatically disabled.
Recommended Action LOG_STD_NO_ACTION

AMT

%AMT-2-GATEWAY_INIT : Error initializing AMT Gateway

Explanation Insufficient memory is available to initialize Gateway
Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AMT-2-RELAY_INIT : Error initializing AMT Relay

| | |
|---------------------------|---|
| Explanation | Insufficient memory is available to initialize Relay |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AMT-2-MSGTYPE_ERR : [chars] AMT message with invalid type [dec]

| | |
|---------------------------|------------------------|
| Explanation | AMT type is not 1-7 |
| Recommended Action | No action is required. |

%AMT-2-PROCESS_ERR : Error initializing AMT process

| | |
|---------------------------|-----------------------------|
| Explanation | Can't start the AMT process |
| Recommended Action | No action is required. |

%AMT-2-ADD_GATEWAY : Error adding new Gateway

| | |
|---------------------------|--|
| Explanation | Can't get memory for a new Gateway %s, port %d |
| Recommended Action | No action is required. |

%AMT-2-RPT_WAVLINIT : Error initializing IGMP Unsolicited Report handler

| | |
|---------------------------|---|
| Explanation | Insufficient memory is available to initialize the IGMP Unsolicited Report handler. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

AN

%AN-4-DEVICE_NOT_IN_WHITELIST : Device with UDI ([chars]) connected to Proxy (Addr [chars]) on interface [chars] is not in whitelist and will not be allowed by autonomic registrar in its domain [chars]

Explanation The autonomic network registration authority will not allow this device to join as it is not in whitelist

Recommended Action No action is required.

%AN-4-DEVICE_ALREADY_REGISTERED_BY_ANR : Device with UDI ([chars]) connected to Proxy (Addr [chars]) on interface [chars] is already registered by autonomic registrar in its domain [chars] with a different public key

Explanation The autonomic network registration authority will not allow this device to join as it already registered with a different public key

Recommended Action No action is required.

%AN-6-DEVICE_ALLOWED_BY_ANR : Device with udi [chars] is allowed by autonomic registrar in its Domain ID [chars] with addr [chars] and Device ID [chars]

Explanation The autonomic network registration authority has authorised this device to enter its network

Recommended Action No action is required.

%AN-6-DEVICE_ENROLLED : Device with UDI ([chars]) connected to Proxy (Addr [chars]) on the interface [chars] is allowed by Autonomic registrar (Addr [chars]) in its domain [chars] and has been assigned IP Addr ([chars]) and Device ID ([chars])

Explanation The autonomic network registration authority has enrolled this device

Recommended Action No action is required.

%AN-5-DEVICE_BOOTSTRAPPED_BY_ANR : Device with UDI ([chars]) and (Addr [chars]) has been bootstrapped by autonomic registrar, in autonomic domain [chars]

Explanation The autonomic network registration authority has bootstrapped this device

Recommended Action No action is required.

%AN-5-ANR_UP : A New Autonomic Registrar has been configured in domain ([chars]) and it has been assigned IP Addr ([chars]) and Device ID as ([chars])

| | |
|---------------------------|--|
| Explanation | The autonomic network registration authority has been configured and is locally up |
| Recommended Action | No action is required. |

%AN-5-ANR_DOWN : Disabled autonomic registrar with Addr ([chars])

| | |
|---------------------------|--|
| Explanation | The autonomic network registration authority functionality is disabled |
| Recommended Action | No action is required. |

%AN-4-MASA_AUTH_FAIL : Device with udi [chars] is not authorized by MASA

| | |
|---------------------------|--|
| Explanation | The MASA - manufacturer authorised signing authority has not authorised this device in its network |
| Recommended Action | No action is required. |

%AN-4-MASA_AUDIT_LOG_FAIL : Device with udi [chars] is not in the audit log of MASA

| | |
|---------------------------|---|
| Explanation | The manufacturer authorised signing authority audit log doesn't contain this device in its database |
| Recommended Action | No action is required. |

%AN-6-MASA_NOT_CONFIG : Autonomic registrar with udi [chars] has no reachability to MASA -not configured, Cant verify device udi [chars]

| | |
|---------------------------|---|
| Explanation | The manufacturer authorised signing authority has not been configured, cannot do the verification of device |
| Recommended Action | No action is required. |

%AN-6-ANR_WHITELIST_CONFIG : Autonomic registrar with (Addr [chars]) Domain id [chars] has whitelist-will allow only these devices in autonomic network

| | |
|--------------------|---|
| Explanation | The autonomic registration authority has been configured with white list and will allow only these devices to enter its network |
|--------------------|---|

%AN-6-ANR_WHITELIST_CONFIG : Autonomic registrar with (Addr [chars]) Domain id [chars] has whitelist- will allow only these devices in autonomic network

Recommended Action No action is required.

%AN-6-ANR_WHITELIST_NOT_CONFIG : Autonomic registrar with (Addr [chars]) has no whitelist- will allow all devices

Explanation The autonomic registration authority has not been configured with white list and will allow all devices to enter its network

Recommended Action No action is required.

%AN-3-ANR_WHITELIST_FILE_ERROR : Autonomic Registrar with (Addr [chars]) encountered error in reading from whitelist file [chars]

Explanation The autonomic registration authority encountered file error when reading from whitelist file, check the file name and its contents

Recommended Action No action is required.

%AN-3-IDP_INTENT_FILE_ERROR : Device (Addr [chars]) encountered error ([chars]) when reading from intent file

Explanation The Intent Distribution Protocol Module, encountered file error when reading from intent file, check the file name and its contents

Recommended Action No action is required.

%AN-5-IDP_INTENT_VER_UPDATED : Device (Addr [chars]) updated to a new Intent version [dec]

Explanation The device received a new intent file by Intent Distribution Protocol

Recommended Action No action is required.

%AN-5-IDP_INTENT_VER_OLD_DISCARD : Device (Addr [chars]) discarded the older intent version [dec]

Explanation The device received an old intent file by Intent Distribution Protocol and is discarding it

Recommended Action No action is required.

%AN-5-SERVICE_LEARNT : Device with (Addr [chars]) learnt Autonomic service with Service Type ([dec]) Service IP Addr ([chars])

Explanation The device received a new autonomic service by Service Discovery Protocol

Recommended Action No action is required.

%AN-6-UDI_AVAILABLE : UDI - [chars]

Explanation Unique device identification number is available on the device

Recommended Action No action is required.

%AN-6-AN_ABORTED_BY_CONSOLE_INPUT : Autonomic disabled due to User intervention on console. configure 'autonomic' to enable it.

Explanation User entered into configuration mode So AN is disabled, An process is stopped

Recommended Action No action is required.

%AN-6-AN_ABORTED_BY_NO_AUTONOMIC : Autonomic disabled due to 'no autonomic' command.

Explanation 'No autonomic' command is entered So AN is disabled, An process is stopped

Recommended Action No action is required.

%AN-6-AN_ABORTED_BY_MANUAL_CONFIG_DETECTED : Autonomic disabled due to detection of new configuration.

Explanation Some other process configures something. So AN is disabled, An process is stopped

Recommended Action No action is required.

%AN-6-CONFIG_SAVE : Issuing 'write memory' to save config

Explanation Saving configurations to startup-config by AN process

Recommended Action No action is required.

%AN-6-SUDI_AVAILABLE : secure UDI - [chars]

| | |
|---------------------------|---|
| Explanation | Secure unique device identification number is available on the device |
| Recommended Action | No action is required. |

%AN-5-NBR_IN_DOMAIN : Neighbor with (Addr [chars]) connected via interface [chars] to device (Addr [chars]) is brought inside my domain [chars]

| | |
|---------------------------|--|
| Explanation | The device has been admitted into the autonomic domain |
| Recommended Action | No action is required. |

%AN-5-NBR_OUT_DOMAIN : Neighbor with (Addr [chars]) connected via interface [chars] to device (Addr [chars]) is now outside the autonomic domain

| | |
|---------------------------|--|
| Explanation | The device is removed from the autonomic domain ,it can happen if the domain certificate is NULL or if the domain certificate is invalid |
| Recommended Action | No action is required. |

%AN-5-NBR_ADDED : Device with UDI ([chars]) is added as a Neighbor to Device with (Addr [chars]) on the interface [chars]

| | |
|---------------------------|---|
| Explanation | A hello message is received and the device is added in the neighbor table |
| Recommended Action | No action is required. |

%AN-5-NBR_LOST : Device with ACP (Addr [chars]) lost connectivity to its Neighbor (Addr [chars]) on interface [chars]

| | |
|---------------------------|--|
| Explanation | Lost connectivity to the neighboring device & it is no longer part of autonomic domain |
| Recommended Action | No action is required. |

%AN-6-NBR_DOMAIN_CERT_VALID : Domain certificate of Neighbor with (Addr [chars]) connected on interface [chars] is valid

| | |
|---------------------------|---|
| Explanation | The domain certificate of the neighbor device is validated successfully |
| Recommended Action | No action is required. |

%AN-3-NBR_DOMAIN_CERT_INVALID : Domain certificate of Neighbor with (Addr [chars]) connected on interface [chars] is invalid

Explanation The domain certificate of the neighbor device is invalid

Recommended Action No action is required.

%AN-3-NBR_DOMAIN_CERT_REVOKED : Domain certificate of Neighbor with (Addr [chars]) connected on interface [chars] is revoked

Explanation The domain certificate of the neighbor device has been revoked

Recommended Action No action is required.

%AN-3-NBR_DOMAIN_CERT_EXPIRED : Domain certificate of Neighbor with (Addr [chars]) connected on interface [chars] has expired

Explanation The domain certificate of the neighbor device has expired

Recommended Action No action is required.

%AN-6-MY_DOMAIN_CERT_RENEWED : Domain certificate of device (Addr [chars]) has been renewed

Explanation The domain certificate of this device is renewed

Recommended Action No action is required.

%AN-6-MY_DOMAIN_CERT_EXPIRED : Domain certificate of this device (Addr [chars]) has expired

Explanation The domain certificate of this device has expired

Recommended Action No action is required.

%AN-3-DOMAIN_KEY_GEN_FAIL : The bootstrapping device with key label ([chars]) failed to generate key pair for enrollment at Autonomic registrar

Explanation The key pair generation failed at the device for triggering BS request message to Autonomic registrar. Can be due to failure in RSA key pair generation in the crypto library

%AN-3-DOMAIN_KEY_GEN_FAIL : The bootstrapping device with key label ([chars]) failed to generate key pair for enrollment at Autonomic registrar

Recommended Action No action is required.

%AN-4-ANR_SIGN_VERIFY_FAIL : Device UDI ([chars]) signature verification of Autonomic registrar by new device has failed due to error ([chars])

Explanation The new device joining the network verified the signature of autonomic registrar as a part of mutual authentication and the verification failed

Recommended Action No action is required.

%AN-4-MASA_AUTH_TOKEN_PARSE_ERROR : Error while parsing authentication token from MASA server for device udi-[chars]

Explanation Encountered error while parsing the authentication token response string from MASA server

Recommended Action No action is required.

%AN-3-TLV_PARSE_ALIGN_ERROR : TLV parsed Len [dec], Next TLV could be misaligned

Explanation Parsed TLV message is not a multiple of 4 and the next TLV message can be misaligned

Recommended Action No action is required.

%AN-3-TLV_PARSE_LEN_INCORRECT : TLV parsed len [dec] > original message length [dec]

Explanation Parsed TLV message length is greater than original message length

Recommended Action No action is required.

%AN-3-MSG_INVALID_HEADER : Invalid message header type [dec] received

Explanation The message packet header got corrupted and invalid header received

Recommended Action No action is required.

%AN-6-ACP_ROUTING_GLOBAL_ENABLED : Enabled global OSPFv3 pid [dec],rid [IP_address],area [dec]

Explanation OSPF routing has been enabled globally

Recommended Action No action is required.

%AN-6-ACP_ROUTING_INTERFACE_ENABLED : OSPF routing enabled on interface: [chars], (pid [dec],rid [IP_address], area [dec])

Explanation OSPF routing has been enabled on all physical interface

Recommended Action No action is required.

%AN-6-ACP_ROUTING_GLOBAL_DISABLE : Removed OSPFv3 routing globally, pid [dec]

Explanation OSPF routing has been disabled globally

Recommended Action No action is required.

%AN-6-ACP_VRF_GLOBAL_CREATE_SUCCESS : Device UDI ([chars]) Autonomic VRF created globally vrf name [chars], vrf id [dec]

Explanation Autonomic network VRF has been created globally

Recommended Action No action is required.

%AN-3-ACP_VRF_GLOBAL_CREATE_FAIL : Device UDI ([chars]) failed to create Autonomic VRF globally, vrf name [chars], vrf id [dec]

Explanation Autonomic network VRF has not been created globally

Recommended Action No action is required.

%AN-6-ACP_VRF_GLOBAL_REMOVE : Device UDI ([chars]) Autonomic VRF removed globally vrf name [chars], vrf id [dec]

Explanation Autonomic network VRF has been removed globally

Recommended Action No action is required.

%AN-6-ACP_VRF_INTERFACE_CREATE_SUCCESS : Device UDI ([chars]) Autonomic VRF created successfully on interface [chars], vrf name [chars], vrf id [dec]

Explanation Autonomic network VRF has been created on the interface

Recommended No action is required.

Action

%AN-3-ACP_VRF_INTERFACE_CREATE_FAIL : Device UDI ([chars]) failed to create Autonomic VRF on interface [chars], vrf name [chars], vrf id [dec]

Explanation Autonomic network VRF has not been created on the interface

Recommended No action is required.

Action

%AN-6-ACP_CHANNEL_TO_NBR_CREATED : Established ACP [chars] from Device (Addr [chars]) to Neighbor (Addr [chars]) connected on interface [chars]

Explanation Autonomic Network Control plane Channel has been created to the neighbor

Recommended No action is required.

Action

%AN-3-ACP_CHANNEL_TO_NBR_FAILED : Failed to create ACP [chars] from Device (Addr [chars]) to Neighbor (Addr [chars]) connected on interface [chars]

Explanation Autonomic Network Control Plane Channel has not been created to the neighbor

Recommended No action is required.

Action

%AN-6-ACP_CHANNEL_TO_NBR_REMOVED : Removed ACP [chars] from Device (Addr [chars]) to Neighbor (Addr [chars]) connected on interface [chars]

Explanation Autonomic Network Control Plane Channel to neighbor is removed

Recommended No action is required.

Action

%AN-6-ACP_IPSEC_TO_NBR_CREATED : Established IPSEC on ACP from Device (Addr [chars]) to Neighbor (Addr [chars]) connected on interface [chars]

Explanation Autonomic Network Control plane - IPSEC tunnel established to neighbor

Recommended No action is required.

Action

%AN-3-ACP_IPSEC_TO_NBR_FAILED : Failed to create IPSEC on ACP from device (Addr [chars]) to Neighbor (Addr [chars]) on interface [chars]

Explanation Autonomic Network Control plane - Failed to create IPSEC tunnel to neighbor

Recommended Action No action is required.

%AN-6-ACP_IPSEC_TO_NBR_REMOVED : Removed IPSEC on ACP from Device (Addr [chars]) to Neighbor (Addr [chars]) connected on interface [chars]

Explanation Autonomic Network Control plane - IPSEC tunnel to neighbor is removed

Recommended Action No action is required.

%AN-6-ACP_DIKE_TO_NBR_CREATED : Established DIKE on ACP [chars] from Device (Addr [chars]) to Neighbor (Addr [chars]) connected on interface [chars]

Explanation Autonomic Network Control plane - DIKE tunnel established to neighbor

Recommended Action No action is required.

%AN-3-ACP_DIKE_TO_NBR_FAILED : Failed to create DIKE on ACP [chars] from Device (Addr [chars]) to Neighbor (Addr [chars]) connected on interface [chars]

Explanation Autonomic Network Control plane - Failed to create DIKE tunnel to neighbor

Recommended Action No action is required.

%AN-6-ACP_DIKE_TO_NBR_REMOVED : Removed DIKE on ACP [chars] from Device (Addr [chars]) to Neighbor (Addr [chars]) connected on interface [chars]

Explanation Autonomic Network Control plane - DIKE tunnel to neighbor is removed

Recommended Action No action is required.

%AN-6-CONFIG_DOWNLOAD_SUCCESS : Config download at the Device (Addr [chars]) is Successful

Explanation Download of the config file to the Running config is Successful

Recommended Action No action is required.

%AN-6-CONFIG_DOWNLOAD_FAILED : Config download on the Device (Addr [chars]) has FAILED

Explanation Failed to download the config file to the Running config

Recommended Action No action is required.

%AN-6-CONFIG_DOWNLOAD_STARTED : Config download started on the Device (Addr [chars])

Explanation Config download is triggered

Recommended Action No action is required.

%AN-5-CD_STATE_CHANGED : [chars] Channel ([dec]) [chars] - Our Intf ([chars]), Nbr UDI ([chars]), Nbr Intf ([chars])

Explanation CD L2 or Reuse Channel Created/Removed/Expired

Recommended Action No action is required.

ANALOG_SM**%ANALOG_SM-6-STAGGER_RINGING : INFO only: REN resources have been exhausted. Unable to ring FXS voice port on slot [dec]. Stagger ringing algorithm has been triggered to compensate.**

Explanation Too many FXS voice ports are being rung at the same time on this module. Stagger ringing is triggered to prevent overload the HW module

Recommended Action Make sure ren configuration of all analog FXS voice ports on this module is correctly configured and matching up the actually required REN LOG_STD_RECUR_ACTION

APM**%APM-3-INIT : [chars]**

Explanation Easy Perf Mon Initialization failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%APM-3-LIST : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | List operation error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%APM-3-MEM : Memory [chars] failed - [chars]

| | |
|---------------------------|---|
| Explanation | Memory operation failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

APPFW

%APPFW-4-HTTP_STRICT_PROTOCOL : Sig:[dec] HTTP protocol violation detected - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

| | |
|--------------------|---|
| Explanation | The HTTP message has been detected to violate the strict-http application firewall inspection rule. |
|--------------------|---|

%APPFW-4-HTTP_STRICT_PROTOCOL : Sig:[dec] HTTP protocol violation detected - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_CONT_LENGTH : content-length

Explanation The HTTP message has been detected to violate the content-length application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_CONT_TYPE_VERIFY : Sig:[dec] Content type does not match the specified type - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the content-type-verification application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_MATCH_REQ_RESP : Sig:[dec] Content type: [chars] does not match the Accept-Type from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the content-type-verification application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_CONT_TYPE_MATCH : Sig:[dec] Content type not found - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the content-type-verification application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_CONT_TYPE_SIZE : Sig:[dec] Content size [int] out of range - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the content-type-verification application firewall inspection rule.

%APPFW-4-HTTP_CONT_TYPE_SIZE : Sig:[dec] Content size [int] out of range - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_MAX_HDR_LEN : Sig:[dec] HTTP Header length exceeded. Received [int] byte of header - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the max-hdr-len application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_MAX_URI_LEN : Sig:[dec] HTTP URI length exceeded. Received [int] byte of URL - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the max-uri-len application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_REQ_METHOD_RFC : Sig:[dec] HTTP RFC method illegal - [chars] '[chars]' from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the request-method application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_REQ_METHOD_EXT : Sig:[dec] HTTP Extension method illegal - [chars] '[chars]' from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the request-method application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_PORT_MISUSE_IM : Sig:[dec] HTTP Instant Messenger detected - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the port misuse application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_PORT_MISUSE_P2P : Sig:[dec] HTTP Peer-to-Peer detected - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the port misuse application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_PORT_MISUSE_TUNNEL : Sig:[dec] HTTP Tunnel detected - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the port misuse application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_TRANSFER_ENCODE : Sig:[dec] HTTP Transfer encoding violation detected - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the transfer encoding application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-4-HTTP_DEOBFUSCATE : Sig:[dec] Deobfuscation signature detected - [chars] [chars] from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the deobfuscate application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-3-HTTP_MAX_REQ_EXCEED : Maximum of [dec] unanswered HTTP requests exceeded from [IP_address]:[dec] to [IP_address]:[dec]

Explanation The HTTP message has been detected to violate the transfer encoding application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-6-HTTP_SESSION_AUDIT_TRAIL : HTTP session initiator [IP_address]:[dec] sends [dec] bytes - responder [IP_address]:[dec] sends [dec] bytes

Explanation The HTTP message has been detected to violate the transfer encoding application firewall inspection rule.

Recommended Action This message is for informational purposed only, but may indicate a security problem.

%APPFW-3-HTTP_APPFW_CONF_ERROR : Application Firewall configuration error -- [chars]

Explanation An error has occurred during Application Firewall configuration.

Recommended Action This message indicates an error during firewall configuration and may be a potential security problem.

%APPFW-6-IM_YAHOO_SESSION : im-yahoo [chars] service session initiator [IP_address]:[dec] [chars] [dec] bytes [chars] responder [IP_address]:[dec]

Explanation The YMSGGR well known service message has been detected.

Recommended Action This message is for informational purposed only.

%APPFW-6-IM_YAHOO_P2P_CHAT : im-yahoo text-chat service session: [IP_address]:[dec] establishing a direct chat with [dec].[dec].[dec].[dec]

Explanation A specific service yyyy has been detected to establish a direct connection with another peer in a Yahoo! Instant Messenger application and the application firewall inspection policy has been configured to send an alarm for this event. Typical services are ñ text-chat, voice-chat, file-transfer etc.

Recommended Action This message is for informational purposed only.

%APPFW-6-IM_AOL_SESSION : im-aol [chars] service session initiator [IP_address]:[dec] [chars] [dec] bytes [chars] responder [IP_address]:[dec]

Explanation The AIM well known service message has been detected.

Recommended Action This message is for informational purposed only.

%APPFW-6-IM_MSN_SESSION : im-msn [chars] service session initiator [IP_address]:[dec] [chars] [dec] bytes [chars] responder [IP_address]:[dec]

Explanation The MSNMSGGR well known service message has been detected.

Recommended Action This message is for informational purposed only.

%APPFW-6-IM_YAHOO_CLIENT_VERSION : im-yahoo [IP_address]:[dec] attempting to establish connection with yahoo server [IP_address]:[dec] using an unsupported version of the client

Explanation The YAHOO client version is not supported

Recommended Action This message is for informational purposed only.

%APPFW-6-IM_MSN_CLIENT_VERSION : im-msn [IP_address]:[dec] attempting to establish connection with msn server [IP_address]:[dec] using an unsupported version of the client

Explanation The MSN client version is not supported

Recommended Action This message is for informational purposed only.

%APPFW-6-IM_AOL_CLIENT_VERSION : im-aol [IP_address]:[dec] attempting to establish connection with aol server [IP_address]:[dec] using an unsupported version of the client

Explanation The AOL client version is not supported

Recommended Action This message is for informational purposed only.

APPNAV_CLIENT

%APPNAV_CLIENT-3-CFT_INIT_FAILED : AppNav failed initialize flow table - [int].

Explanation Flow table is a critical component of AppNav. The failure is likely due to lack of memory (DRAM) on the ESP. The previous configuration needs to be removed and re-applied.

%APPNAV_CLIENT-3-CFT_INIT_FAILED : AppNav failed initialize flow table - [int].

| | |
|---------------------------|---|
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |
|---------------------------|---|

APPNAV_CONTROLLER

%APPNAV_CONTROLLER-4-SC_SN_UNREACHABLE : APPNAV-CONTROLLER: Alarm #29007, Severity: Major

| | |
|--------------------|--|
| Explanation | Service context has entered Operational state and there is at least one configured node that is not part of the SN view. |
|--------------------|--|

| | |
|---------------------------|---------------------------------|
| Recommended Action | Check status of configured SNs. |
|---------------------------|---------------------------------|

%APPNAV_CONTROLLER-5-SC_MIXED_FARM : APPNAV-CONTROLLER: Alarm #29003, Severity: Minor

| | |
|--------------------|--|
| Explanation | When an appnav controller detects upon that there are other appnav-controllers/SNs in the cluster with different ICIMP/DMP minor version number. |
|--------------------|--|

| | |
|---------------------------|-----------------------------------|
| Recommended Action | Check versions of SNs in network. |
|---------------------------|-----------------------------------|

%APPNAV_CONTROLLER-4-SNG_UNAVAILABLE : APPNAV-CONTROLLER: Alarm #30001, Severity: Major

| | |
|--------------------|---|
| Explanation | No SN in appnav node group is available for optimization. |
|--------------------|---|

| | |
|---------------------------|-----------------------------------|
| Recommended Action | Check status of configured nodes. |
|---------------------------|-----------------------------------|

%APPNAV_CONTROLLER-4-SNG_AO_UNAVAILABLE : APPNAV-CONTROLLER: Alarm #30000, Severity: Major

| | |
|--------------------|--|
| Explanation | No node in service node group is available for optimization and traffic is getting optimized by a secondary SNG. |
|--------------------|--|

| | |
|---------------------------|---------------------------------|
| Recommended Action | Check status of configured SNs. |
|---------------------------|---------------------------------|

%APPNAV_CONTROLLER-5-SC_CONVERGENCE_FAILED : APPNAV-CONTROLLER: Alarm #29001, Severity: Critical

| | |
|--------------------|--|
| Explanation | CMM is not coming out of convergence state |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Check connectivity between SN's and AC's |
|---------------------------|--|

%APPNAV_CONTROLLER-5-SC_DEGRADED_CLUSTER : APPNAV-CONTROLLER: Alarm #29002, Severity: Critical

Explanation Mismatch of stable AC views between AC's

Recommended Action Check connectivity between AC's

%APPNAV_CONTROLLER-4-SC_SC_UNREACHABLE : APPNAV-CONTROLLER: Alarm #29006, Severity: Major

Explanation Connectivity with AC's under ACG is lost

Recommended Action Make sure AC's configured under ACG are up and reachable

%APPNAV_CONTROLLER-4-SC_SN_EXCLUDED : APPNAV-CONTROLLER: Alarm #29008, Severity: Major

Explanation Stable SN views across AC's are different. Those SN's that are not reachable by other AC's are excluded

Recommended Action Make sure excluded SN's are reachable from all AC's

**%APPNAV_CONTROLLER-4-ACG_IP_CHANGED : APPNAV-CONTROLLER: Alarm #10000, Severity: Major
Appnav controller group IP address changed! All relevant service contexts will be disabled**

Explanation Appnav controller group IP address changed! All relevant service contexts will be disabled

Recommended Action Change AppNav Controller's IP

%APPNAV_CONTROLLER-6-CM_REGISTER_SUCCESS : AppNav registered with Central Manager successfully

Explanation Received a registration success message from the Central Manager

Recommended Action None. All is well

%APPNAV_CONTROLLER-3-CM_REGISTER_FAILED : AppNav registration with Central Manager failed for the following reason: [chars]

Explanation Received a registration failure message from the AppNav Central Manager. AppNav has not registered with the Central Manager

%APPNAV_CONTROLLER-3-CM_REGISTER_FAILED : AppNav registration with Central Manager failed for the following reason: [chars]

Recommended Action Issue the `debug waas management errors` command, and the `debug waas management events`, Contact your Cisco technical support representative, and provide the representative with the gathered information.

%APPNAV_CONTROLLER-4-SERVICE_CTX_DISABLE : SERVICE-CONTROLLER: Alarm 10001, Severity: Major Disabling service context [chars]

Explanation Disabling service context

Recommended Action

ARAP

%ARAP-5-PAKINVALID : TTY [dec]: ARAP invalid packet received

Explanation A corrupted packet reached the ARA protocol code.

Recommended Action Check for excessive CPU usage or excessive line noise.

%ARAP-6-ADDRUSED : TTY [dec]: ARAP started for user [chars]; address [dec].[dec]

Explanation This message appears only when ARA protocol logging is configured. The message notes that an ARA protocol user has logged in.

Recommended Action No action is required.

%ARAP-6-ADDRFREE : TTY [dec]: ARAP ended for user [chars]; address %A; [dec] seconds connected

Explanation This message appears only when ARA protocol logging is configured. The message notes that an ARA protocol user has logged out.

Recommended Action No action is required.

%ARAP-5-INITCONFUSED : TTY [dec]: ARAP unexpected initialization packet [chars]

Explanation The startup negotiation between a client and the ARA protocol server fell out of order. If this message is received sporadically, it indicates line noise.

Recommended Action If this message recurs, reinstall the ARA client software.

%ARAP-4-CONFAILED : TTY [dec]: ARAP connection failed: [chars]

Explanation The ARA protocol client was denied access, probably due to a configuration problem on the server. The error message should indicate the problem. This message does not indicate access denials due to bad passwords.

Recommended Action Investigate the problem reported in the error message.

%ARAP-3-BADCONFIG : TTY [dec]: unhandled configuration command

Explanation A configuration command was not recognized.

Recommended Action Check the configuration file on the server for any invalid configuration commands.

%ARAP-3-BADPAK : TTY [dec]: Bad packet type in arap_send_msg

Explanation Internal data structures are corrupted.

Recommended Action Check for abnormally high CPU usage.

%ARAP-6-BADEXIT : TTY [dec]: exited user [chars]: [chars]

Explanation A user was disconnected from ARA protocol at an unexpected time. The disconnection may be due to modems dropping, server error, client problems, or any number of other difficulties.

Recommended Action To determine the cause of the disconnection, correlate the receipt of this message with the user problem reports.

%ARAP-6-XTICKLE : TTY [dec]: exited user [chars]: Other side stopped answering ARAP tickles (mnp4 pak resent [dec] mnp4 pak sent [dec] last [dec] now [dec])

Explanation The router disconnected as the remote Macintosh client stopped sending ARAP tickle or data packets.

Recommended Action To determine the cause of the disconnection, correlate the receipt of this message with the user problem reports.

%ARAP-6-MAXRESENDS : TTY [dec]

Explanation The router resent MNP4 packets maximum number of times without receiving an acknowledgement.

%ARAP-6-MAXRESENDS : TTY [dec]

| | |
|---------------------------|---|
| Recommended Action | To determine the cause of the disconnection, correlate the receipt of this message with the user problem reports. |
|---------------------------|---|

%ARAP-0-NULLRESEND : TTY [dec]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

| | |
|---------------------------|--|
| Recommended Action | Report this error to you technical support representative. |
|---------------------------|--|

%ARAP-0-NOTNULLRESEND : TTY [dec]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%ARAP-6-LRPHASERROR : TTY [dec]: Received LT in CONNECTION PHASE

| | |
|--------------------|--|
| Explanation | The router received an invalid packet during ARA connection setup phase. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Check for excessive line noise. Check the ARAP client software configuration for possible problems. |
|---------------------------|---|

%ARAP-6-RCVNOPAK : TTY [dec]: Receive getbuffer failure. dropping frame

| | |
|--------------------|--|
| Explanation | No buffer exists for an incoming packet. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Examine buffer usage statistics. Possibly more memory is required. |
|---------------------------|--|

%ARAP-6-RCVGIANT : TTY [dec]: Rcv giant. dropping frame

| | |
|--------------------|--|
| Explanation | The router received an oversized MNP4 frame. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Check for excessive line noise. Check the ARAP client software configuration for possible problems. |
|---------------------------|---|

%ARAP-0-DEFAULT : TTY [dec]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ARAP-0-WAITBADMSG : TTY [dec]: arg msg bad [hex]

| | |
|---------------------------|---|
| Explanation | The router received an invalid packet during ARAP MNP4 connection setup phase. |
| Recommended Action | Check for excessive line noise. Check the ARAP client software configuration for possible problems. |

%ARAP-0-VSERROR : TTY [dec]: VS queued error

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ARAP-6-MNP4T401 : TTY [dec]: T401 [dec] baud rate [dec]

| | |
|---------------------------|--|
| Explanation | This message indicates that the router received MNP4 connection request. MNP4 acknowledgement timer value is also indicated. |
| Recommended Action | No action is required. |

%ARAP-6-RESENDSLOW : TTY [dec]

| | |
|---------------------------|--|
| Explanation | The router repeated resending of MNP4 packets as the Macintosh client failed to acknowledge previously resent packets. |
| Recommended Action | If this error message persists for several ARAP connections report it to your technical support representative. |

%ARAP-2-NOLOG : TTY [dec]: Could not malloc log

| | |
|---------------------------|---|
| Explanation | Memory not available for internal MNP4 logging. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ARAP-6-MNP4RCVDISC : TTY [dec]: MNP4 input disconnect

| | |
|---------------------------|--|
| Explanation | This indicates that the router received disconnect request from the remote Macintosh client. |
| Recommended Action | No action is required. |

%ARAP-3-REMOTEERROR : TTY [dec]: arap input error

| | |
|---------------------------|---|
| Explanation | ARAP connection was terminated without a known cause. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ARAP-6-TIMERERROR : TTY [dec]: MNP4 timeout error

| | |
|---------------------------|---|
| Explanation | The router is dropping the connection after doing maximum resends. |
| Recommended Action | To determine the cause of the disconnection, correlate the receipt of this message with the user problem reports. |

%ARAP-4-NOEXTTACACS : TTY [dec]: arap TACACS is configured but extended TACACS is not.

| | |
|---------------------------|--|
| Explanation | Terminal Access Controller Access Control System (TACACS) authentication failed because extended TACACS is not configured. |
| Recommended Action | Configure extended TACACS. |

%ARAP-3-ABORTED : TTY [dec]: arap callback aborted

| | |
|---------------------------|---|
| Explanation | An unexpected message was received during the Microcom Networking Protocol version 4 (MNP4) link setup. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ARAP-3-TIMEOUT : TTY [dec]: arap expected message timeout

| | |
|---------------------------|---|
| Explanation | The software timed out during the MNP4 link setup. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

ARCHIVE_CONFIG

%ARCHIVE_CONFIG-4-ARCHIVE_SKIPPED : Archive of router configuration was skipped due to a previous initiation.

| | |
|---------------------------|---|
| Explanation | Only one archive can be created at a time. Two or more simultaneous archives in progress is not allowed. This could occur for example if two users attempt to create an archive simultaneously. |
| Recommended Action | Retry the archive creation later, when the previous archive has finished being written. |

%ARCHIVE_CONFIG-4-ARCHIVE_DELETE_FAILED : Delete of a previously saved archive of the router configuration could not be completed.

| | |
|---------------------------|--|
| Explanation | The router could not delete a file that was previously written. The file that was being deleted file contains an archive of the router configuration. This could occur for example if the file was manually deleted. |
| Recommended Action | None |

%ARCHIVE_CONFIG-6-ARCHIVE_CREATE_FAILED_STANDBY : Could not create an archive of the router configuration on the standby RP.

Explanation The router could not create an archive file on the standby RP. The file that was being created contains an archive of the router configuration. This could occur for example if the active RP cannot communicate with the standby RP.

Recommended Action None

%ARCHIVE_CONFIG-6-ARCHIVE_DELETE_FAILED_STANDBY : Delete of a previously saved archive of the router configuration could not be completed on the standby RP.

Explanation The router could not delete a file that was previously written on the standby RP. The file that was being deleted file contains an archive of the router configuration. This could occur for example if the file was manually deleted. Alternatively, the file could not be deleted when the active RP cannot communicate with the standby RP.

Recommended Action None

ARCHIVE_ISSU

%ARCHIVE_ISSU-2-INIT : Archive ISSU client initialization failed to [chars]. Error: [dec] ([chars])

Explanation The Archive ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ARCHIVE_ISSU-3-TRANSFORM_FAIL : Archive ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

Explanation The Archive ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the Archive state between the active device and the standby device is not identical.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>)

%ARCHIVE_ISSU-3-MSG_NOT_OK : Archive ISSU client 'Message Type [dec]' is not compatible

| | |
|---------------------------|---|
| Explanation | The Archive ISSU client received an incompatible message from the peer device. The message cannot be processed. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%ARCHIVE_ISSU-3-MSG_SIZE : Archive ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Archive ISSU client failed to calculate the MTU for the specified message. The Archive ISSU client is not able to send the message to the standby device. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%ARCHIVE_ISSU-3-INVALID_SESSION : Archive ISSU client does not have a valid registered session.

| | |
|---------------------------|---|
| Explanation | The Archive ISSU client does not have a valid registered session. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%ARCHIVE_ISSU-2-SESSION_REGISTRY : Archive ISSU client failed to register session information. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Archive ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%ARCHIVE_ISSU-3-SESSION_UNREGISTRY : Archive ISSU client failed to unregister session information. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The Archive ISSU client failed to unregister session information. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%ARCHIVE_ISSU-2-SESSION_NEGO_FAIL_START : Failed to start Archive ISSU session negotiation. Error: [dec] ([chars])

| | |
|--------------------|---|
| Explanation | The Archive ISSU client failed to start session negotiation. If a problem occurs with the ISSU session start, the standby device cannot be brought up properly. |
|--------------------|---|

%ARCHIVE_ISSU-2-SESSION_NEGO_FAIL_START : Failed to start Archive ISSU session negotiation. Error: [dec] ([chars])

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id>)

%ARCHIVE_ISSU-2-SEND_NEGO_FAILED : Archive ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The Archive ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%ARCHIVE_ISSU-2-GET_BUFFER : Archive ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The Archive ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

ARP

%ARP-4-ENTRYTHRESHOLD : Cannot insert more than [int] dynamic ARP entries on [chars]

Explanation This message indicates that the number of dynamically learned ARP entries, complete or incomplete, has exceeded a preconfigured limit, indicating a possible misconfiguration or DOS attack.

Recommended Action First, inspect the ARP entries on the affected interface. If they are valid entries, either increase the configured ARP entry limit or reconfigure the network to reduce ARP peers. If they are invalid entries, there is a possible DOS attack on the system.

%ARP-4-TRAPENTRY : [int] dynamic ARP entries on [chars] installed in the ARP table

Explanation This message indicates that the number of dynamically learned ARP entries, complete or incomplete, has exceeded a preconfigured threshold, indicating a possible misconfiguration or DOS attack.

Recommended Action First, inspect the ARP entries on the affected interface. If they are valid entries, either increase the configured log threshold or reconfigure the network to reduce ARP peers. If they are invalid entries, there is a possible DOS attack on the system.

%ARP-4-ARPLEARNTHRES : Learned ARP entries have reached to threshold level [int]

| | |
|---------------------------|---|
| Explanation | This message indicates that the number of learned ARP entries, which are not configured, has reached a preconfigured threshold, indicating a possible misconfiguration or DOS attack. |
| Recommended Action | First, inspect the ARP entries on the interface. reconfigure the network to reduce ARP peers. |

%ARP-4-ARPLEARNCROSS : [int] Learned ARP entries are installed in the ARP table and reached the max limit

| | |
|---------------------------|--|
| Explanation | This message indicates that the number of dynamically learned ARP entries has reached a preconfigured max. limit in ARP Table. |
| Recommended Action | First, inspect the ARP entries on the interface. If they are valid entries, either increase the configured max limit or reconfigure the network to reduce ARP peers. |

%ARP-6-ARPLEARNRESUME : Resuming Learn ARP entries to install in ARP table.

| | |
|---------------------------|--|
| Explanation | This message indicates that the number of dynamically learned ARP entries is in range of permit threshold value. System is allowing new Learned ARP entries to install in ARP table. |
| Recommended Action | No action is required. |

%ARP-3-STCKYARPOVR : Attempt to overwrite Sticky ARP entry: [IP_address], hw: [enet] by hw: [enet]

| | |
|---------------------------|--|
| Explanation | Multiple stations configured with same IP in Private VLAN. Possible case of IP address stealing. |
| Recommended Action | Change the IP address of one of the two systems. |

%ARP-3-TABLEERR : Internal software error during ARP table operation for ARP entry

| | |
|---------------------------|---|
| Explanation | An internal software error has occurred during an ARP table operation. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ARP-4-ARPADJ : Received CEF Adjacency updation request on different interfaces: [IP_address] on [chars]

Explanation A request to update CEF adjacency came on two different interfaces.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ARP-3-ARPINIT : Internal software error during ARP subsystem initialization

Explanation An internal software error has occurred during ARP subsystem initialization.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ARP-3-ARPHAMSGFMT : Malformed ARP HA checkpointing message (size = [int], entry count = [int])

Explanation A malformed ARP HA checkpointing message has been received.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ARP-4-NULL_SRC_MAC : NULL MAC address from [IP_address] on [chars]

Explanation Application or peer tried to insert entry with NULL SRC MAC

Recommended Action If this message recurs, call your technical support representative for assistance.

%ARP-3-ARPINT : ARP table accessed at interrupt level [dec]

Explanation ARP table is accessed at interrupt level which is forbidden.

%ARP-3-ARPINT : ARP table accessed at interrupt level [dec]

| | |
|---------------------------|--|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%ARP-3-ARPINVALIDEENTRY : ARP system internal error. Returns NULL arp entry on node [IPv6 address]

| | |
|---------------------------|--|
| Explanation | An internal software error has occurred in ARP subsystem, an NULL arp entry is got. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

ASPP**%ASPP-3-NOTTY : [chars]: Unable to set Rx/Tx tty async service hooks.**

| | |
|---------------------------|---|
| Explanation | This message occurs only when ASP is configured. It indicates the serial interface using ASP is configured incorrectly or does not support asynchronous mode. |
| Recommended Action | Verify the correct hardware interface type is being used. |

AT**%AT-3-NOTRUNNING : AppleTalk not running**

| | |
|---------------------------|--|
| Explanation | You tried to show or change the AppleTalk configuration when AppleTalk routing was not turned on. |
| Recommended Action | Issue the appletalk routing command before issuing any other AppleTalk configuration or display command. |

%AT-5-ADDRINUSE : [chars]: AppleTalk node warning; address %A already in use

| | |
|---------------------------|---|
| Explanation | The initial hint address was in use. A search will be made for a valid address. |
| Recommended Action | No action is required. |

%AT-5-ADDRINVALID : [chars]: AppleTalk node warning; address %A is invalid

| | |
|---------------------------|---|
| Explanation | The hint address specified for the interface was not valid for the current configuration. |
| Recommended Action | The hint address is ignored and a random valid hint address is automatically computed. LOG_STD_NO_ACTION |

%AT-3-DISCOFF : [chars]: AppleTalk node warning; discovery mode disabled

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AT-3-NOADDRSAVAIL : [chars]: AppleTalk node down; no addresses available

| | |
|---------------------------|--|
| Explanation | No free node could be found on the interface. |
| Recommended Action | If your AppleTalk network has less than 250 nodes, issue the debug appletalk errors command and then call your technical support representative. If your AppleTalk network has more than 250 nodes, split it into smaller networks by creating new segments and moving some nodes into the new segments. |

%AT-3-NOSRCADDR : [chars]: AppleTalk packet error; no source address available

| | |
|---------------------------|--|
| Explanation | The router could not generate an AppleTalk packet because no valid AppleTalk source address was available to identify this router in the packet. |
| Recommended Action | Configure an interface to have an address or cable range. Use the show appletalk command to verify that the interface is operational. |

%AT-6-ADDRUSED : [chars]: AppleTalk node up; using address %A

| | |
|---------------------------|---|
| Explanation | No hint address or a bad hint address was specified. This message indicates which AppleTalk address will be used for the interface. |
| Recommended Action | No action is required. |

%AT-4-NETINVALID : [chars]: AppleTalk node down; conflicts with active internet

| | |
|--------------------|--|
| Explanation | The configuration specified for the interface conflicts with the active AppleTalk internetwork. For example, a cable range might be configured that overlaps an existing route but does not match the entry exactly. |
|--------------------|--|

%AT-4-NETINVALID : [chars]: AppleTalk node down; conflicts with active internet

Recommended Action Use the appletalk cable-range command to reconfigure the interface so that there are no conflicts with the existing AppleTalk network, or take any other actions necessary to resolve the conflict. AppleTalk will periodically attempt to restart the interface.

%AT-3-NETDISAGREES : [chars]: AppleTalk interface disabled; network incompatible with %a

Explanation The interface was disabled because the configured AppleTalk address or cable range for the interface conflicts with that of another router on the attached network.

Recommended Action Reconfigure the affected routers so that there are no conflicting addresses or cable ranges on the attached network.

%AT-3-DEFZONEERR : [chars]: AppleTalk interface warning; default zone differs from %a

Explanation During the verification startup process, there was a disagreement between the default zone (the first zone defined after the appletalk cable-range command) and the router that confirmed the configuration. When an AppleTalk end node is first connected to a network, it joins the default zone until it is overridden.

Recommended Action Use the appletalk zone command to correct the configuration so that all routers are advertising the same default zone. Note that several router implementations are known to mismanage the default zone.

%AT-3-ZONEDISAGREES : [chars]: AppleTalk interface disabled; zone list incompatible with %a

Explanation The zone list of the configured interface is inconsistent with the zone list of other routers.

Recommended Action Reconfigure the zone list on the router so that it does not conflict with that the zone lists on other routers.

%AT-6-CONFIGOK : [chars]: AppleTalk interface enabled; verified by %a

Explanation The AppleTalk configuration was verified by consulting the indicated router.

Recommended Action No action is required.

%AT-6-ONLYROUTER : [chars]: AppleTalk interface enabled; no neighbors found

Explanation No other AppleTalk routers were found on the network attached to the interface.

Recommended Action No action is required.

%AT-3-MCMISMATCH : [chars]: AppleTalk interface warning; zone multicast [enet] differs from our multicast [enet]

Explanation A computed multicast address disagrees with that provided by another AppleTalk router. The other AppleTalk router might be misconfigured or faulty.

Recommended Action Correct the problem at the other router.

%AT-5-INTDOWN : [chars]: AppleTalk node down; line protocol down

Explanation An AppleTalk hardware interface was disabled because of a bad serial line, a configuration command, or a bad interface.

Recommended Action If the interface was not intentionally disabled, this message indicates a hardware problem. In this case, repair or replace the applicable hardware.

%AT-5-INTRESTART : [chars]: AppleTalk interface restarting; protocol restarted

Explanation The hardware interface was reset because of a configuration change. After the reset, AppleTalk automatically reinitialized the interface.

Recommended Action No action is required.

%AT-6-INTUP : [chars]: AppleTalk interface restarting; line protocol came up

Explanation An AppleTalk interface that was previously shut down was restarted.

Recommended Action No action is required.

%AT-6-BADROUTE : Route to %#A has gone bad

Explanation The system did not detect a route within the required timeout period. Therefore, the route is marked as bad. A network might have become unreachable for some reason, perhaps because of a broken connection. This message does not necessarily indicate an error condition.

Recommended Action No action is required.

%AT-5-PATHCHANGE : Route to %A is now using path of type [chars] on [chars] via %a

Explanation The path to a network changed because either the old path went down or the new path was better.

Recommended Action No action is required.

%AT-5-RTMPSTATE : [chars]: RTMP path to %A via %a now in [chars] state (metric [dec], [dec] hops)

Explanation The state of a path changed.

Recommended Action No action is required.

%AT-6-PATHNOTIFY : [chars]: AppleTalk [chars] path to %A down; reported bad by %a

Explanation A router went down somewhere on the AppleTalk network. The indicated peer notified this router of the change.

Recommended Action No action is required.

%AT-6-PATHADD : [chars]: AppleTalk [chars] path to network %A added; via %a (metric [dec])

Explanation A new AppleTalk path has been learned. The message indicates the source of the path, its distance in hops, its metric, and the type of path.

Recommended Action No action is required.

%AT-6-PATHDEL : [chars]: AppleTalk [chars] path to %A via %a has been deleted

Explanation A path on the AppleTalk network aged out.

Recommended Action No action is required.

%AT-6-ROUTEOK : [chars]: AppleTalk network up; %A via %a ([dec] hop [chars])

Explanation A routing update was received for a previously suspect route.

Recommended Action No action is required.

%AT-6-ROUTENOTIFY : [chars]: AppleTalk network down; %#A reported bad by %#a

Explanation A router went down somewhere on the AppleTalk network. The indicated peer notified this router of the change.

Recommended Action No action is required.

%AT-6-ROUTEDOWN : [chars]: AppleTalk network down; interface to %#A disabled

Explanation A connected route is being advertised as down (also known as notify neighbor) because the configured interface is no longer operational.

Recommended Action No action is required.

%AT-6-NEWROUTE : [chars]: AppleTalk network added; %#A via %#a [[dec] hop [chars]]

Explanation A new AppleTalk route was learned. The message indicates the source of the route and its distance in hops.

Recommended Action No action is required.

%AT-6-DELROUTE : AppleTalk network deleted; %#A removed from routing table

Explanation A route on the AppleTalk network aged out.

Recommended Action No action is required.

%AT-6-NEWZONE : AppleTalk zone added; zone %*s defined

Explanation A new AppleTalk zone was created.

Recommended Action No action is required.

%AT-6-ZONEGC : AppleTalk zone deleted; zone [chars] released

Explanation The router removed an unused zone from the zone table.

Recommended Action No action is required.

%AT-6-NODEWRONG : [chars]: AppleTalk node %a misconfigured; reply has been broadcast

| | |
|---------------------------|--|
| Explanation | An AppleTalk node sent a GetNet Info request to this router specifying an invalid network number for the source of the GetNet Info request. This situation occurs when an AppleTalk end node is moved to another network and is therefore misconfigured for the current network. |
| Recommended Action | No action is required. |

%AT-7-BUGREPORT : AppleTalk bug: [chars]

| | |
|---------------------------|---|
| Explanation | The software detected an unexpected condition. The router takes corrective action and continues. |
| Recommended Action | Copy the message exactly as it appears, note any AppleTalk problems you experience, and call your technical support representative. |

%AT-2-ASSERTFAILED : AppleTalk assertion failed: [chars]

| | |
|---------------------------|--|
| Explanation | The software detected an inconsistency. Although this error is serious, the router attempts to continue. AppleTalk processing might be impaired. |
| Recommended Action | Copy the message exactly as it appears, note any AppleTalk problems you experience, and call your technical support representative. |

%AT-7-DEBUGMSG : AppleTalk debug: [chars]

| | |
|---------------------------|---|
| Explanation | This message is generated by a debug command and provides additional information about an AppleTalk condition. |
| Recommended Action | Copy the message exactly as it appears, note any AppleTalk problems you experience, and call your technical support representative. |

%AT-5-COMPATERR1 : [chars]: AppleTalk internet compatibility mode required by %a

| | |
|---------------------------|---|
| Explanation | A neighboring router supports only extended AppleTalk networks with a cable range of 1 and with one assigned zone, for example, 25-25. |
| Recommended Action | Upgrade the routers that support only the original AppleTalk specification. In the meantime, observe the compatibility rules for AppleTalk Phase 1 and Phase 2 routers. |

%AT-5-COMPATERR2 : AppleTalk neighbor incompatibility; %A has multiple zones

| | |
|--------------------|---|
| Explanation | Although this router has neighbors that require your internetwork to observe compatibility rules, AppleTalk has learned of a route with multiple zone names defined. This condition can cause node inconsistencies on your AppleTalk network. |
|--------------------|---|

%AT-5-COMPATERR2 : AppleTalk neighbor incompatibility; %#A has multiple zones

Recommended Action Upgrade the routers that support only the original AppleTalk specification. In the meantime, observe the compatibility rules for AppleTalk Phase 1 and Phase 2 routers.

%AT-5-COMPATERR3 : AppleTalk neighbor incompatibility; %#A has wide cable range

Explanation Although this router has neighbors that require your internetwork to observe compatibility rules, AppleTalk has learned of a route that has a cable range greater than 1. This condition can cause node inconsistencies on your AppleTalk network.

Recommended Action Upgrade the routers that support only the original AppleTalk specification. In the meantime, observe the compatibility rules for AppleTalk Phase 1 and Phase 2 routers.

%AT-5-FDDICOMPAT : AppleTalk FDDI neighbor %#a using obsolete FDDI addressing

Explanation Another AppleTalk router on the FDDI ring is running a release of the router software earlier than 9.0(2). Routers running these early software releases use an encapsulation for AppleTalk on FDDI rings that is not compatible with the Apple FDDITalk implementation.

Recommended Action Upgrade the routers running the software releases that use the pre-FDDITalk encapsulation for AppleTalk on FDDI rings.

%AT-5-LOSTNEIGHBOR : [chars]: AppleTalk neighbor down; lost contact with %#a

Explanation A peer router is unreachable.

Recommended Action No action is required.

%AT-6-NEWNEIGHBOR : [chars]: AppleTalk neighbor added; %#a is operational

Explanation The router discovered a new AppleTalk router on the network.

Recommended Action No action is required.

%AT-6-NEIGHBORUP : [chars]: AppleTalk neighbor up; %#a has restarted

Explanation A neighboring router to which this router previously lost connectivity reappeared on the network.

Recommended Action No action is required.

%AT-5-BADNEIGHBOR : [chars]: AppleTalk neighbor ignored; %a is misconfigured

| | |
|---------------------------|---|
| Explanation | A neighboring router's AppleTalk configuration does not agree with this router's AppleTalk configuration. This condition can result from a mismatch between the neighbor's network range and this router's network range. |
| Recommended Action | Modify either this router's or the neighboring router's configuration so that the network ranges agree. |

%AT-6-ACQUIREMODE : [chars]: AppleTalk interface initializing; acquiring [chars]

| | |
|---------------------------|---|
| Explanation | The interface is determining the correct configuration. This message is displayed when discovery mode is enabled and no other router is detected. |
| Recommended Action | No action is required. |

%AT-6-ZONEPROXY : AppleTalk proxy defined; zone [chars] using network %A

| | |
|---------------------------|---|
| Explanation | This message reports the zone name and network number that are being advertised to support the appletalk nbp-proxy command. |
| Recommended Action | When proxy service is initiated, this message is generated each time the appletalk nbp-proxy command is issued. LOG_STD_NO_ACTION |

%AT-6-NOPROXY : AppleTalk proxy deleted; zone [chars] freed network %A

| | |
|---------------------------|--|
| Explanation | A previously configured Name Binding Protocol (NBP) proxy was deleted. The router can no longer convert NBP requests to a format understood by routers that support only the original AppleTalk specification. |
| Recommended Action | No action is required. |

%AT-5-NOTSUPPORTED : [chars]: AppleTalk node down; line protocol not supported

| | |
|---------------------------|--|
| Explanation | An encapsulation method on the specified interface does not support AppleTalk. |
| Recommended Action | No action is required. |

%AT-5-DUPADDR : [chars]: AppleTalk interface restarting; node address taken by [enet]

| | |
|--------------------|---|
| Explanation | Another AppleTalk node on a common network interface claimed the same AppleTalk address that this router was using. This error indicates a serious, unexpected problem. If it recurs, a physical network problem in which the nodes cannot communicate with each other might exist. |
|--------------------|---|

%AT-5-DUPADDR : [chars]: AppleTalk interface restarting; node address taken by [enet]

Recommended Action The interface on this router restarts AppleTalk processing on the common network interface to resolve the address conflict. LOG_STD_NO_ACTION

%AT-5-INTCLEARED : [chars]: AppleTalk interface restarting; interface cleared

Explanation A clear interface command was issued on an interface that is currently routing AppleTalk.

Recommended Action No action is required.

%AT-5-OLDMCI : [chars]: AppleTalk route cache disabled; firmware is obsolete

Explanation The firmware on the MCI controller card does not support AppleTalk fast switching.

Recommended Action No corrective action is required. Normal AppleTalk operation continues, but the fast switching cache is disabled for the interface associated with the MCI card. If this message is unexpected, verify that the MCI firmware for the interface specified in the error message is at level 1.7 or higher.

%AT-3-IFCONFLICT : [chars]: AppleTalk interface disabled; conflicts with interface [chars]

Explanation An attempt was made to configure an interface to have the same or a conflicting AppleTalk address or cable range as another interface on the same router.

Recommended Action Verify that you are not specifying an AppleTalk address or cable range used previously on this router, and reconfigure the interface.

%AT-3-SUBROUTINE_ERROR : AppleTalk error: [chars]

Explanation An internal error occurred. Specifically, a programming assertion in the AppleTalk networking code was violated.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AT-6-MACIPUP : [chars]: MacIP server operational, [IP_address]

| | |
|---------------------------|---|
| Explanation | If the appletalk event-logging command is configured, this message appears on the console when a MacIP server is fully initialized and is ready to accept client requests. The AppleTalk zone served by the MacIP server replaces the zone specified in the appletalk zone command. The IP address configured on the MacIP server replaces the IP address configured by the ip address command. |
| Recommended Action | No action is required. |

%AT-6-MACIPDOWN : [chars]: MacIP server shutting down, [IP_address]

| | |
|---------------------------|--|
| Explanation | If the appletalk event-logging command is configured, this message appears on the console when a MacIP server is no longer operational for any reason. MacIP servers shut down in response to MacIP configuration changes or errors, or a change in the condition or configuration of an AppleTalk or IP interface for which the MacIP server is providing service. The AppleTalk zone served by the MacIP server replaces the zone specified in the appletalk zone command. The IP address configured on the MacIP server replaces the IP address configured by the ip address command. |
| Recommended Action | No action is required. |

%AT-4-MACIPBADCONF : [chars]: MacIP inoperable configuration, [IP_address]

| | |
|---------------------------|---|
| Explanation | If the appletalk event-logging command is configured, this message appears on the console when a MacIP server cannot begin or recover operations because of an invalid IP address configuration. This condition only occurs when the configured MacIP server's IP address is not valid on the same cable of any operable IP interface. The AppleTalk zone served by the MacIP server replaces the zone specified in the appletalk zone command. The IP address configured on the MacIP server replaces the IP address configured by the ip address command. When this error occurs, the MacIP configuration is considered invalid and is deleted. |
| Recommended Action | No action is required. |

%AT-4-MACIPNOCABLE : [chars]: MacIP inoperable IP interface, [IP_address]

| | |
|--------------------|--|
| Explanation | If the appletalk event-logging command is configured, this message appears on the console when a MacIP server can no longer operate due to a change in the condition of the IP interface it serves. This condition can occur if IP routing is shut down on the interface, or the IP address of the interface is changed so that the MacIP server's IP address is no longer valid on the same cable. The AppleTalk zone served by the MacIP server replaces the zone specified in the appletalk zone command. The IP address configured on the MacIP server replaces the IP address configured by the ip address command. |
|--------------------|--|

%AT-4-MACIPNOCABLE : [chars]: MacIP inoperable IP interface, [IP_address]

Recommended Action No action is required.

%AT-5-NOSUCHROUTE : No such route [dec]

Explanation You specified a nonexistent route in a show appletalk route or clear appletalk route command.

Recommended Action Specify a valid route, that is, one that appears in the output of the show appletalk route command.

%AT-3-NOSUCHNBR : No such neighbor, %#a

Explanation You specified a nonexistent neighbor address in a show appletalk neighbor or clear appletalk neighbor.

Recommended Action Specify a valid neighbor address, that is, one that appears in the output of the show appletalk neighbor command.

%AT-6-NBRDELETED : Neighbor entry for %#a deleted

Explanation The clear appletalk neighbor command displays this command when it completes successfully.

Recommended Action No action is required.

%AT-6-REGPENDING : NBP registration of [chars] at [[chars]] pending

Explanation A name registration call is being performed.

Recommended Action No action is required.

%AT-1-NOMEM : Could not allocate memory for [chars] at line [dec] in [chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%AT-3-NOBESTPATH : Could not compute best path for network %A

| | |
|---------------------------|---|
| Explanation | A path to the specified network could not be found. |
| Recommended Action | Use the show appletalk route command to verify that a path to the specified network exists. If it does, copy the error message exactly as it appears, and report it along with the output of the show appletalk route command to your technical support representative. |

%AT-3-NOROUTE : No route to destination %a

| | |
|---------------------------|---|
| Explanation | The router could not deliver a packet to a destination because it did not know where to send it. |
| Recommended Action | Use the show appletalk route command to verify that a path to the destination exists. If it does, copy the error message exactly as it appears, and report it with the output of the show appletalk route command to your technical support representative. |

%AT-3-CANTDEL : Cannot delete [chars] route [dec] by clearing; remove it by reconfiguring

| | |
|---------------------------|--|
| Explanation | You attempted to remove a route from the routing table by issuing the clear appletalk route command. The command failed because the route was on a directly connected interface, that is, it was created when you configured the router. |
| Recommended Action | Remove the route by reconfiguring the directly connected interface with which it is associated. |

%AT-3-INVNBPCMD : Invalid NBPtest command [chars]

| | |
|---------------------------|---|
| Explanation | An unrecognized command was specified in the Name Binding Protocol (NBP) test facility. |
| Recommended Action | Enter a valid command. |

%AT-3-OUTOFSYNC : [chars]: AURP connection out of sync...terminating

| | |
|---------------------------|---|
| Explanation | AURP detected packets that were out of sequence. This might be caused by a lost connection. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%AT-4-PATHREJECTED : AURP path %#A rejected; conflict detected

| | |
|---------------------------|---|
| Explanation | The router detected a conflicting cable range. A router is configured with a cable range that overlaps with an existing range but does not match the entry exactly. |
| Recommended Action | Use the show appletalk command to identify the overlapped cable range, and then reconfigure the misconfigured router. |

%AT-3-DOMOVERFLOW : Remap range overflow for [chars] domain [dec]

| | |
|---------------------------|--|
| Explanation | The remap range overflowed. If a network (range) cannot fit inside the remapping range, the network or cable range being advertised by a neighboring router is not accepted. When an overflow occurs, all interfaces in the domain are disabled. |
| Recommended Action | Use the appletalk domain remap-range command to increase the remapping range. Then restart the interfaces. |

%AT-3-DOMLOOP : Loop detected on domain [dec] [[chars]]

| | |
|---------------------------|--|
| Explanation | The domain router detected a routing loop. Routing loops are not allowed. The domain router runs a background loop detection process. The domain router starts this process when it receives a new zone list from a domain that is identical to the list in the main routing table and whose network range length matches that in this list. The loop detection process sends several AppleTalk NBP loopback packets. When one of these packets is received on an interface that does not belong to the original domain, the domain router first shuts off all the domains involved in the loop, and then shuts off all the interfaces in these domains. The loop detection does not catch all types of loops. It is your responsibility to make sure that no loop exists. |
| Recommended Action | Disable the cause of the routing loop. Then use the clear appletalk command to restart the interfaces involved. |

%AT-3-NOVIRTUAL : [chars]: client tried to connect, but no virtual network is declared

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%AT-3-NOSOCKET : [chars]: client tried to open socket, but failed

| | |
|---------------------------|---|
| Explanation | open socket failed;Possible out of memory situation |
| Recommended Action | |

ATA

%ATA-6-ATA_STATUS_TIMEOUT : Timeout occurred while querying the status of ATA device. Status returned :[hex], event: [dec]

| | |
|---------------------------|--|
| Explanation | A timeout occurred while querying the status of ATA device. |
| Recommended Action | Replace the new ATA device and retry the operation. If the problem persists, (1) Run 'show tech' command. (2) Enable file system operation logs using the following commands: (a) 'debug ifs file' (b) 'debug ifs fs' (c) 'debug ifs verbose' (3) Contact the TAC or engineering team with the output of the commands. |

%ATA-3-ATA_STATUS_ERROR : Error occurred while querying the status of ATA device. Return: [dec], stat_reg: [hex]

| | |
|---------------------------|--|
| Explanation | An error occurred while querying the status of ATA device. Device not responding |
| Recommended Action | Replace the new ATA device and retry the operation. If the problem persists, (1) Run 'show tech' command. (2) Enable file system operation logs using the following commands: (a) 'debug ifs file' (b) 'debug ifs fs' (c) 'debug ifs verbose' (3) Contact the TAC or engineering team with the output of the commands. |

ATMSIG

%ATMSIG-3-FAILASSERT : Assertion failed: [chars]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%ATMSIG-3-FAILASSERT : Assertion failed: [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-NOSVC : no SVC, [chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-NOCALLREF : Cannot find a Callref value to allocate: [chars]

Explanation This indicates an internal software error, probably including memory exhaustion.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-ATMSIG_SVC_INSERT_FAILED : ATMSIG([chars] [dec],[dec] - %04d/%02d) SVC wavl ins failed:svc [hex]

Explanation A software error occurred during creation of an SVC. Other error messages appearing immediately prior to this one may be related.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-ATMSIG_SVC_DELETE_FAILED : ATMSIG([chars] [dec],[dec] - %04d/%02d) SVC wavl del failed:svc [hex]

Explanation A software error occurred during closure of an SVC. Other error messages appearing immediately prior to this one may be related.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-ATMSIG_PRTY_INSERT_FAILED : ATMSIG([chars] [dec],[dec] - %04d/%02d) avl prty ins failed:svc [hex] party [hex]

Explanation A software error occurred during addition of a party to a point-to-multipoint call. Other error messages appearing immediately prior to this one may be related.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-ATMSIG_PRTY_DELETE_FAILED : ATMSIG([chars] [dec],[dec] - %04d/%02d) avl prty del failed:svc [hex] party [hex]

Explanation A software error occurred during removal of a party from a point-to-multipoint call. Other error messages appearing immediately prior to this one may be related.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-ATMSIG_CUG_INSERT_FAILED : ATMSIG([chars])

Explanation A software error occurred during addition of a member to a closed user group. Other error messages appearing immediately prior to this one may be related.

%ATMSIG-3-ATMSIG_CUG_INSERT_FAILED : ATMSIG([chars])

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-ATMSIG_CUG_DELETE_FAILED : ATMSIG([chars])

Explanation A software error occurred during removal of a member from a closed user group. Other error messages appearing immediately prior to this one may be related.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-FAILHALFLEGREM : halfLeg removal failed, [chars]

Explanation An internal software error occurred. This message should only be displayed when verbose debugging is enabled for an SVC.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-FAILXCONN : Xconnect failed, [chars]

Explanation An internal software error occurred during installation of an SVC cross-connect.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-INVPNNIMSG : Invalid msg from routing/pnni : [chars]

| | |
|---------------------------|---|
| Explanation | This message indicates an error in the PNNI routing subsystem. It could be caused by an internal software error or by bad control information received from peer equipment. The message will contain additional information that can help locate the cause. Any message with 'NULL' probably indicates a problem with this system, others probably point at the peer equipment. |
| Recommended Action | Check this system and the peer equipment for any obvious errors. LOG_STD_RECUR_ACTION |

%ATMSIG-4-CONFIG_ERROR : Configuration Error: [chars] [chars]

| | |
|---------------------------|---|
| Explanation | This message indicates a configuration error in the ATM Signaling subsystem. The message will display more specific information about the problem location. |
| Recommended Action | Change the configuration to correct the error. |

%ATMSIG-3-FAIL1STHALFLEG : 1st halfLeg failed, [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ATMSIG-3-FAIL2NDHALFLEG : 2nd halfLeg failed, [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ATMSIG-3-ENQFAIL : process_enqueue failed, [chars]

| | |
|--------------------|--|
| Explanation | An internal software error occurred while handling a user request. |
|--------------------|--|

%ATMSIG-3-ENQFAIL : process_enqueue failed, [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-DBINITFAIL : Signalling control block initialization failure, [chars]

Explanation An internal software or resource error occurred

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-ATMSIG_LISTEN_FAILED_DUP : Duplicate LISTEN by [chars] for existing NSAP [chars] owned by [chars]

Explanation An application attempted to either LISTEN on an NSAP owned by another application or to LISTEN for the same NSAP twice

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSIG-3-PNNI_TRACE_INTERNAL : [chars]

Explanation An internal software error or unexpected condition occurred during PNNI (Connection/Path) Trace related processing

Recommended Action LOG_STD_SH_CMD_ACTION(show atm pnni trace information) Also gather information about where/how trace was initiated, and for what type of VC.

ATMSPA**%ATMSPA-3-FATAL_ERROR : occurred on [chars]. Resetting SPA**

| | |
|---------------------------|--|
| Explanation | The SPA has been reset due to a critical error in one of its devices. The error could either be a single occurrence of an event or multiple occurrences within a period of time. The message text on the console or in the system log provides more information on the specific nature of the error. |
| Recommended Action | If the SPA is reset more than once, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at http://www.cisco.com/public/support/tac/tools.shtml . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%ATMSPA-4-SETUPVC : Interface [chars], VC ([dec]) setup failed, reason = [dec]

| | |
|---------------------------|--|
| Explanation | A command to setup a VC has failed on RP. |
| Recommended Action | The SPA ATM driver has detected a problem creating the internal OAM VC. Reload the indicated SPA card to reconfigure the internal OAM VC. If the error messages persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at http://www.cisco.com/public/support/tac/tools.shtml . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%ATMSPA-4-TEARDOWNVC : Interface [chars], VC ([dec]) teardown failed, reason = [dec]

| | |
|---------------------------|--|
| Explanation | A command to remove a VC config has failed on RP. |
| Recommended Action | The SPA ATM driver has detected a problem tearing down the internal OAM VC. Reload the indicated SPA card to do a clean tear down of the internal OAM VC. If the error messages persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at http://www.cisco.com/public/support/tac/tools.shtml . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%ATMSPA-3-SW_ERROR : [chars] Error [hex] [chars]

| | |
|---------------------------|---|
| Explanation | The specified software error has been detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ATMSPA-3-HW_ERROR : [chars] Error [hex] [chars]

| | |
|---------------------------|--|
| Explanation | The specified hardware error has been detected. |
| Recommended Action | The message text on the console or in the system log provides more information on the specific nature of the error. LOG_STD_SH_TECH_ACTION |

%ATMSPA-3-KEEPALIVE_FAILURE : occurred on [chars]. Resetting SPA

| | |
|---------------------------|--|
| Explanation | One of the devices of the SPA failed to respond to keepalives due to which SPA has been reset. The message text on the console or in the system log provides more information on which device failed to respond. |
| Recommended Action | If the SPA is reset more than once, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at BUG_TOOLKIT. If you still require assistance, open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN or contact your Cisco technical support representative. Be sure to provide the information you have gathered and <code><cmdBold>show tech-support</cmdBold></code> to your support representative, or attach it to your case |

%ATMSPA-3-DATA_ERROR : [chars] Error [hex] [chars]

| | |
|---------------------------|--|
| Explanation | A datapath protocol violation or sequence error has been detected. |
| Recommended Action | The message text on the console or in the system log provides more information on the specific nature of the error. LOG_STD_SH_TECH_ACTION |

%ATMSPA-3-GEN_ERROR : [chars] Error [hex] [chars]

| | |
|--------------------|--|
| Explanation | The specified error has been detected. |
|--------------------|--|

%ATMSPA-3-GEN_ERROR : [chars] Error [hex] [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSPA-2-INITFAIL : [chars] - Init Failed return code: [int]

Explanation The SPA failed to complete hardware initialization. One of the devices in the SPA failed to initialize successfully. Information about the failed device is specified in the message text on the console or in the system log.

Recommended Action Please power down and reseal the indicated SPA card. If the condition persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at <http://www.cisco.com/public/support/tac/tools.shtml>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case> or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt).

%ATMSPA-4-VCSETUP : [chars]: VC setup command received on the LC for an existing VC (VCD [dec])

Explanation A command to set up a VC has been received for a VC that has already been set up. The VC has already been configured by a previous setup VC command from the RP. A duplicate setup command may indicate that the RP did not receive a response from the LC for the previous setup command.

Recommended Action No action is required.

%ATMSPA-4-VCTEARDOWN : [chars]: VC tear down command received on the LC for a non-existing VC (VCD [dec])

Explanation The VC does not exist on the LC. Most likely, it has been torn down by a previous teardown command from RP. A duplicate teardown command may indicate that the RP did not receive a response from the LC for the previous teardown command.

Recommended Action No action is required.

%ATMSPA-4-VPSETUP : [chars]: VP setup command received on the LC for an existing VP (VPI [dec])

Explanation A command to set up a VP has been received for a VP that has already been set up. The VP has already been configured by a previous setup VP command from the RP. A duplicate setup command may indicate that the RP did not receive a response from the LC for the previous setup command.

Recommended Action No action is required.

%ATMSPA-4-VPTEARDOWN : [chars]: VP tear down command received on the LC for a non-existing VP (VPI [dec])

Explanation The VP does not exist on the LC. Most likely, it has been torn down by a previous teardown command from RP. A duplicate teardown command may indicate that the RP did not receive a response from the LC for the previous teardown command.

Recommended Action No action is required.

%ATMSPA-3-VCQ_ERROR : [chars]: VC queue configuration failed due to un-initialized queue table (global identifier [dec])

Explanation Software configuration of a VC queue failed due to un-initialized queue table.

Recommended Action Attempt to perform a soft OIR operation by entering the command that is described in the shared port adapter software configuration guide. If the condition persists, copy the error message exactly as it appears, and report it to your technical support representative. Also supply a 'show tech-support' at that time.

%ATMSPA-3-QOS_ALLOC_FAILED : [chars] [chars] [chars]: [dec]

Explanation Traffic shaping parameters could not be configured because the number of unique shaping parameters that are configured on the PVCs or PVPs in this specified ATM SPA is over the maximum limit. The maximum number of unique shaping parameters that can be configured on the PVCs or PVPs is 4096.

Recommended Action Ensure that the total number of unique shaping parameters that are configured on both PVCs and PVPs does not exceed the maximum limit of 4096.

%ATMSPA-3-FPD_VER_DEPENDENCY_NOTE : Cannot perform the requested FPD update operation because [chars] in subslot [int]/[int] has incompatible HW version [int].[int] with FPD image version [dec].[dec] for FPD ID [dec]. Only image version greater than [int].[int] can be used in the update operation of [chars] with HW version greater than [int].[int].

Explanation The version of the FPD image from the FPD image bundle or package is not compatible with the HW version of the target card

%ATMSPA-3-FPD_VER_DEPENDENCY_NOTE : Cannot perform the requested FPD update operation because [chars] in subslot [int]/[int] has incompatible HW version [int].[int] with FPD image version [dec].[dec] for FPD ID [dec]. Only image version greater than [int].[int] can be used in the update operation of [chars] with HW version greater than [int].[int].

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ATMSPA-3-ATM_SPA_AUTOVC_FAIL : [chars]: atm autovc discovery configuration failed, reason: [chars]

Explanation A command to configure the atm autovc discovery on an atm interface has failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

ATMSSCOP

%ATMSSCOP-4-UNMATCHUNIVERSION : ([chars]): [chars]. Please verify peer UNI version

Explanation The ATM peer equipment appears to be running an old version of ATM UNI. Communication with it is not possible.

Recommended Action The ATM peer equipment may need attention. Please verify its UNI version is at least 3.1, and upgrade if necessary.

%ATMSSCOP-3-SSCOPERR : INIT SSCOP -Intf : [chars], Event : [chars], State : [chars].

Explanation A software error occurred in the ATM SSCOP subsystem.

Recommended Action LOG_STD_SH_CMD_ACTION

%ATMSSCOP-5-SSCOPINIT : - Intf : [chars], Event : [chars], State : [chars].

Explanation This message indicates a routine step of the ATM SSCOP initialization sequence.

Recommended Action LOG_STD_NO_ACTION

ATTN**%ATTN-2-MBOX_REG_FAIL : return code [dec]**

| | |
|---------------------------|---|
| Explanation | Registration of handler function for mailbox event failed mailbox event failed. |
| Recommended Action | LOG_STD_ACTION |

%ATTN-2-PROXY_INIT_FAIL_IPC_REG : return code [dec]

| | |
|---------------------------|---|
| Explanation | Initialization of attention proxy failed due to error registering IPC handler function. |
| Recommended Action | LOG_STD_ACTION |

%ATTN-3-PROXY_UNHANDLED_MSG : subtype [dec]

| | |
|---------------------------|---|
| Explanation | Attention proxy received a message with an unknown subtype. |
| Recommended Action | LOG_STD_ACTION |

%ATTN-3-PROXY_IPC_ALLOC_FAILED : [chars]

| | |
|---------------------------|---|
| Explanation | Allocation of an IPC packet buffer by the attention proxy failed. |
| Recommended Action | LOG_STD_ACTION |

%ATTN-3-PROXY_IPC_SEND_FAILED : [chars]

| | |
|---------------------------|---|
| Explanation | Transmission of an IPC message by the attention proxy failed. |
| Recommended Action | LOG_STD_ACTION |

%ATTN-3-SYNC_TIMEOUT : msec since last timeout [int], missing packets [dec]

| | |
|---------------------------|-----------------------------------|
| Explanation | Attention sync command timed out. |
| Recommended Action | LOG_STD_ACTION |

AUTHMGR

%AUTHMGR-5-START : Starting '[chars]' for client ([enet]) on Interface [chars] AuditSessionID [chars]

Explanation Starting an authentication method

Recommended Action No action is required.

%AUTHMGR-5-SUCCESS : Authorization succeeded for client ([enet]) on Interface [chars] AuditSessionID [chars]

Explanation Authorization was successful.

Recommended Action No action is required.

%AUTHMGR-5-FAIL : Authorization failed or unapplied for client ([enet]) on Interface [chars] AuditSessionID [chars]

Explanation Authorization was unsuccessful.

Recommended Action No action is required.

%AUTHMGR-5-VLANASSIGN : VLAN [dec] assigned to Interface [chars] AuditSessionID [chars]

Explanation VLAN assignment

Recommended Action No action is required.

%AUTHMGR-5-SECURITY_VIOLATION : Security violation on the interface [chars], new MAC address ([enet]) is seen. AuditSessionID [chars]

Explanation A host on the specified interface is attempting to gain access into the network or is trying to authenticate in a host mode that does not support the number of hosts attached. This is treated as a security violation and the port has been error-disabled.

Recommended Action Ensure that the port is configured to support the number of hosts attached. Enter the **shutdown** command followed by **no shutdown** command to restart the port.

%AUTHMGR-7-FAILOVER : Failing over from '[chars]' for client ([chars]) on Interface [chars] AuditSessionID [chars]

Explanation Failing over from the current authentication method

%AUTHMGR-7-FAILOVER : Failing over from '[chars]' for client ([chars]) on Interface [chars] AuditSessionID [chars]

Recommended Action No action is required.

%AUTHMGR-7-STOPPING : Stopping '[chars]' for client [enet] on Interface [chars] AuditSessionID [chars]

Explanation Stopping the current authentication method

Recommended Action No action is required.

%AUTHMGR-7-NOMOREMETHODS : Exhausted all authentication methods for client ([chars]) on Interface [chars] AuditSessionID [chars]

Explanation All available authentication methods have been tried

Recommended Action No action is required.

%AUTHMGR-5-MACMOVE : MAC address ([enet]) moved from Interface [chars] to Interface [chars] AuditSessionID [chars]

Explanation Client has moved to a new interface without logging off on the previous one.

Recommended Action No action is required.

%AUTHMGR-5-MACREPLACE : MAC address ([enet]) on Interface [chars] is replaced by MAC ([enet]) AuditSessionID [chars]

Explanation A new client has triggered a violation causing an existing client to be replaced

Recommended Action No action is required.

%AUTHMGR-4-UNAUTH_MOVE : [chars] MAC address ([enet]) from [chars] to [chars]

Explanation Move while not authenticated on old IDB

Recommended Action No action is required.

%AUTHMGR-4-ILLEGAL_TRACE_REQ : Component ID [dec] not registered.

| | |
|---------------------------|--|
| Explanation | Attempt to log a message with unregistered ID. |
| Recommended Action | No action is required. |

%AUTHMGR-0-CONFIG_CORRUPT : Checksummed interface configuration corruption detected.

| | |
|---------------------------|--|
| Explanation | Interface configuration field was modified unexpectedly. |
| Recommended Action | No action is required. |

AUTOSEC

%AUTOSEC-3-CONFSAVE_FAIL : Applying AutoSecure config to running-conf failed with error [dec]

| | |
|---------------------------|---|
| Explanation | Configuration of the AutoSecure session could not be applied to the running configuration |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%AUTOSEC-5-ENABLED : AutoSecure is configured on the device

| | |
|---------------------------|--|
| Explanation | Security configuration of the device is done using AutoSecure. |
| Recommended Action | Notification message only. No action required. |

AUTO_FPD

%AUTO_FPD-5-FRU_HWPRG_UPG_START : [chars] in slot [chars] are upgrading, \please don't reload or power-cycle this card.

| | |
|---------------------------|--|
| Explanation | The hw-programmable firmware is upgrading |
| Recommended Action | No action is required. This is informational message |

%AUTO_FPD-5-FRU_HWPRG_UPG_SUCCESS : [chars] in slot [chars] are successfully programmed.

| | |
|--------------------|---|
| Explanation | The hw-programmable was upgraded successfully |
|--------------------|---|

%AUTO_FPD-5-FRU_HWPRG_UPG_SUCCESS : [chars] in slot [chars] are successfully programmed.

Recommended Action No action is required. This is informational message

%AUTO_FPD-3-FRU_HWPRG_UPG_FAILED : [chars] in slot [chars] failed to program. error: [chars]

Explanation The hw-programmable was upgraded failed

Recommended Action Retry upgrade

%AUTO_FPD-3-FRU_HWPRG_UPG_ERR : Error reason:[chars]

Explanation Some error occurred during auto upgrade

Recommended Action Retry upgrade

AUTO_UPGRADE

%AUTO_UPGRADE-5-AUTO_ADVISE_SW_CONV : [chars] [dec] running bundled software has been added to the stack that is running installed software.\The 'install autoupgrade' command can be used to convert [chars] [dec] to the installed running mode by \installing its running software.

Explanation No explanation required.

Recommended Action No specific action required.

%AUTO_UPGRADE-5-AUTO_ADVISE_SW_BUNDLED : switch [dec] running installed software has been added to the stack.\Switch [dec] must be running bundled software in order to join the stack.

Explanation No explanation required.

Recommended Action Boot the member with compatible software.

%AUTO_UPGRADE-3-AUTO_ADVISE_SW_COM_BUNDLED : Switch [dec] running incompatible bundled software has been added to the stack.\Switch [dec] must be running compatible bundled software in order to join the stack.

Explanation No explanation required.

Recommended Action Boot the member with compatible software.

%AUTO_UPGRADE-3-AUTO_UPGRADE_MODE_UNKNOWN : Switch [dec] has been added to the stack. Failed to initiate auto upgrade for switch [dec] because switch [dec] is not running installed or bundled software

Explanation No explanation required.

Recommended Action Boot the member with compatible software.

%AUTO_UPGRADE-3-AUTO_ADVISE_SW_MODE_UNKNOWN : Switch [dec] has been added to the stack. Failed to initiate auto advise for switch [dec] because switch [dec] is not running installed or bundled software

Explanation No explanation required.

Recommended Action Boot the member with compatible software.

%AUTO_UPGRADE-3-AUTO_UPGRADE_INTERNAL_ERROR : Local chassis/RP number did not publish yet

Explanation Somehow the chassis/FRU number is missing.

Recommended Action Try to do it again.

%AUTO_UPGRADE-3-AUTO_UPGRADE_NOT_SUPPORTED : The system is not running installed software. Auto upgrade for [chars] [dec] cannot be initiated

Explanation A system with incompatible software has been detected in the stack. The auto upgrade functionality cannot be initiated because the stack/HA system is not running installed software. The user must manually upgrade the incompatible switch/FRU.

Recommended Action Perform the one shot cli to convert system is install mode. Boot the system from the boot directory (bootflash/harddisk) using 'boot bootflash:packages.conf'

%AUTO_UPGRADE-5-AUTO_UPGRADE_CONV : Converting [chars] [dec] to installed mode by installing its running software.

Explanation This needs to be converted as part of the auto upgrade.

Recommended Action No action is required.

%AUTO_UPGRADE-3-AUTO_UPGRADE_FAILED_DISK : [chars] [dec] doesn't have enough free disk space to perform auto upgrade. A minimum of [dec] KB of free disk space is required \Initiating the auto-delete of the old images on joining member/FRU. (Default is oldest image in configuration mode)

Explanation There might be older files because of which there is not enough memory.

Recommended Action Clean up disk space in the remote switch.

%AUTO_UPGRADE-3-SMU_UPGRADE_FAILED_DISK : Switch [dec] doesn't have enough free disk space to sync SMU. A minimum of [dec] KB of free disk space is required. Auto upgrade will pass with out syncing SMUs on this switch

Explanation There might be older files because of which there is not enough memory.

Recommended Action Clean up disk space in the remote switch.

%AUTO_UPGRADE-3-AUTO_UPGRADE_FAILED_MEM : [chars] [dec] doesn't have enough free memory to perform auto upgrade. A minimum of [dec] KB of free memory is required

Explanation There might be older files because of which there is not enough memory.

Recommended Action Clean up disk space in the remote switch.

%AUTO_UPGRADE-3-AUTO_UPGRADE_FAILED_EXPAND : Failed to install the running software on switch [dec]

Explanation TODO: add an explanation.

Recommended Action No action required.

%AUTO_UPGRADE-3-SMU_SYNC_FAILED : SMU upgrade failed on switch [dec]. Auto upgrade of image will pass with out syncing SMUs on this switch. SMUs will be synced at boot time of the switch [dec]

Explanation SMU sync failed because of some reason.

Recommended Action No action required, SMU sync will be tried in next reload.

%AUTO_UPGRADE-5-SMU_RB_SYNC_FAILED : SMU rollback sync failed on [chars]. Rollback operations may be affected

Explanation SMU rollback sync failed on some reason. Most probable causes are SMUs are not present on the media or the media is full.

%AUTO_UPGRADE-5-SMU_RB_SYNC_FAILED : SMU rollback sync failed on [chars]. Rollback operations may be affected

Recommended Action Bring back the SMUs deleted and check whether there is enough space in remote member/SMUs

%AUTO_UPGRADE-3-AUTO_UPGRADE_ROMMON_NOT_UPDATED : Unable to confirm boot config on [chars] [dec], assuming it is set as [chars].

Explanation TODO: add an explanation.

Recommended Action NO action is required.

%AUTO_UPGRADE-5-AUTO_UPGRADE_RELOAD : Reloading [chars] [dec] to complete the auto upgrade.

Explanation Part of autoupgrade

Recommended Action Just wait until the reload completes.

%AUTO_UPGRADE-5-AUTO_UPGRADE_START_CHECK : Auto upgrade start checking for incompatible switches.

Explanation Part of autoupgrade

Recommended Action NO action is required.

%AUTO_UPGRADE-5-AUTO_ADVISE_SW_SEARCH : Searching stack for software to upgrade [chars] [dec].

Explanation Just an init message.

Recommended Action No action is required.

%AUTO_UPGRADE-5-AUTO_UPGRADE_SEARCH : Searching stack for software to upgrade [chars] [dec].

Explanation Just an init message.

Recommended Action No action is required.

%AUTO_UPGRADE-5-AUTO_ADVISE_SW_FOUND : Found donor switch [dec] to auto upgrade switch [dec].

Explanation Just an init message.

Recommended Action No action is required.

%AUTO_UPGRADE-5-AUTO_UPGRADE_FOUND : Found donor [chars] [dec] to auto upgrade [chars] [dec].

Explanation Just an init message.

Recommended Action No action is required.

%AUTO_UPGRADE-5-AUTO_ADVISE_SW_START : Upgrading [chars] [dec] with software from [chars] [dec].

Explanation Just an init message.

Recommended Action No action is required.

%AUTO_UPGRADE-5-AUTO_UPGRADE_START : Upgrading [chars] [dec] with software from [chars] [dec].

Explanation Just an init message.

Recommended Action No action is required.

%AUTO_UPGRADE-5-AUTO_ADVISE_SW_INITIATED : Auto advise initiated for [chars] [dec].

Explanation A system with incompatible software has been detected in the stack. The stack will now determine whether or not \software is available to be copied to the incompatible system, and if so, advise the user how to copy it. \Otherwise, the system will merely let the user know that the software on the stack needs to be updated.

Recommended Action No action is required.

%AUTO_UPGRADE-5-AUTO_UPGRADE_INITIATED : Auto upgrade initiated for [chars] [dec].

Explanation A system with incompatible software has been detected in the stack. The stack will first attempt to download \software from a previously-configured location, and install it to make the system compatible. If this is not successful, the stack will then determine whether \running software on another stack member is available to be copied to the incompatible system, and \whether or not it is appropriate to copy the software automatically

%AUTO_UPGRADE-5-AUTO_UPGRADE_INITIATED : Auto upgrade initiated for [chars] [dec].

Recommended Action No action is required.

%AUTO_UPGRADE-3-AUTO_UPGRADE_PLATMISMATCH : No software was found to upgrade [chars] [dec]

Explanation Happens because of incompatible switches. For example, ngwc and non-ngwc ones are incompatible

Recommended Action Plugin compatible switches for autoupgrade to run.

%AUTO_UPGRADE-3-AUTO_CONF_EXEC : Auto upgrade is enabled by config. Please disable auto upgrade configuration to execute auto upgrade manually using exec CLI.

Explanation TODO: add an explanation.

Recommended Action TODO: add an action

%AUTO_UPGRADE-5-AUTO_ADVISE_SW_MSG : [chars] [dec] with incompatible software has been added to the system/stack. \all system/stack members were scanned and it has been determined that the 'install autoupgrade' command can be used to install compatible software on [chars] [dec].

Explanation TODO: add an explanation.

Recommended Action TODO: add an action

%AUTO_UPGRADE-3-AUTO_UPGRADE_FAILED_COPY : Failed to copy upgrade packages from [chars] [dec] to [chars] [dec].

Explanation TODO: add an explanation.

Recommended Action TODO: add an action

%AUTO_UPGRADE-5-AUTO_UPGRADE_RELOAD_INSTALLED : Reloading [chars] [dec] to boot in installed mode.

Explanation TODO: add an explanation.

Recommended Action TODO: add an action

%AUTO_UPGRADE-5-AUTO_UPGRADE_INSTALLED : Finished installing the running software on [chars] [dec].

Explanation TODO: add an explanation.

Recommended Action TODO: add an action

%AUTO_UPGRADE-5-AUTO_UPGRADE_FINISH : Finished installing software on [chars] [dec].

Explanation TODO: add an explanation.

Recommended Action TODO: add an action

%AUTO_UPGRADE-3-AUTO_UPGRADE_FAILED_PLATFORM : Failed to determine platform hardware type of [chars] [dec]

Explanation Somehow the platform type could not determined.

Recommended Action Add an action

%AUTO_UPGRADE-3-AUTO_UPGRADE_FAILED_STATE : A previous provisioning action is pending reboot. Please reboot the [chars] [dec].

Explanation The user has run an operation that requires a reboot to take action.

Recommended Action Reload the switch

%AUTO_UPGRADE-3-AUTO_ADVISE_SW_FAILED_PLATFORM : Failed to determine platform hardware type of switch [dec]

Explanation Somehow the platform type could not determined.

Recommended Action Add an action

%AUTO_UPGRADE-3-AUTO_UPGRADE_NOTHING_TO_UPGRADE : No incompatible standby/member is found, nothing to auto-upgrade.

Explanation Exec autoupgrade scenario when there is no incompatible member in stack.

Recommended Action No action is required from the user

%AUTO_UPGRADE-3-AUTO_UPGRADE_NOTHING_TO_CLEAN : Couldn't find enough old install images on incompatible standby/member for deletion.\ Please manually free up [dec] MB space on incompatible standby/member and try again using 'install autoupgrade'.

Explanation If there is no old images are found on joining standby/member's boot directory

Recommended Action User will have to manually delete old files using IOS delete command

AUTO_UPGRADE_MODULAR

%AUTO_UPGRADE_MODULAR-5-SMU_AUTO_UPGRADE_INITIATING : Initiating SMU autoupgrade for [chars] [dec]

Explanation No explanation required.

Recommended Action Boot the member with same software.

%AUTO_UPGRADE_MODULAR-5-AUTO_ADVISE_SW_MISMATCH : Active and standby are running different versions, SMUs will not be synced.

Explanation No explanation required.

Recommended Action Boot the member with same software.

%AUTO_UPGRADE_MODULAR-5-AUTO_NOTICE_STBY_RELOAD : Installing SMUs on standby. Standby will reload

Explanation No explanation required.

Recommended Action No action required.

%AUTO_UPGRADE_MODULAR-5-AUTO_NOTICE_RUN_MISMATCH_STBY_RELOAD : Mismatch between running version of SMUs. Trying to recover. Standby will reload

Explanation There is a mismatch on the running version. This will happen when the standby reloads after activate/deactivate and before commit. The machine will try to correct it. One reload is required for correcting the changes.

Recommended Action No action required.

%AUTO_UPGRADE_MODULAR-3-AUTO_NOTICE_RUN_CORRECTION_FAILED : Failed to correct the SMU mismatch between the running version on active and standby. Pls abort the smu installation using 'install abort'

Explanation The system tried to recover from the mismatch, but failed. Engineer intervention is required

Recommended Action Get the 'show install log' and the btrace logs from active and standby

%AUTO_UPGRADE_MODULAR-3-AUTO_ERR_SMU_SYNC_FAILED : Failed to sync SMUs to standby. Make sure that SMU files are present on active and there is space enough to copy SMUs on standby.

Explanation SMU sync failed. Most probable cause are the smu files may have been removed from the active switch using IOS/linux commands. Another reason is there is no space enough to copy the files to the standby

Recommended Action If the files are removed from the active bring it back to same location. Make sure there is enough space to copy the files on the standby

BCRDU

%BCRDU-3-PATCH_ACTIVATE_FAIL_MESSAGE : Failed to activate patch. The patch name is [chars] and the reason is: [chars]

Explanation During system reload, all committed patches will be automatically activated. For some reason, a patch activation fails.

Recommended Action Check [bcrdu] ERR entries in the log files for message reporting problems.

BFD_HA

%BFD_HA-2-RESOURCE : [chars]

| | |
|---------------------------|---|
| Explanation | System resource error occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BFD_HA-2-CF : [chars][dec]

| | |
|---------------------------|---|
| Explanation | CF related error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BFD_HA-2-ET : [chars][dec]

| | |
|---------------------------|---|
| Explanation | Enhanced-timer error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

BFD_ISSU

%BFD_ISSU-2-INIT : BFD ISSU client initialization failed to [chars]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The BFD ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BFD_ISSU-3-TRANSFORM_FAIL : bfd ISSU client [chars] transform failed for message [dec]. Error: [dec] ([chars])

Explanation The BFD ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the BFD state between the active device and the standby device is not identical.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>)

%BFD_ISSU-2-GET_BUFFER : BFD ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The BFD ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%BFD_ISSU-2-SEND_NEGO_FAILED : BFD ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The BFD ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%BFD_ISSU-2-SESSION_NEGO : BFD ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

Explanation An ISSU-compliant client transitions through a series of internal states. The BFD ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%BFD_ISSU-2-SESSION_REGISTRY : BFD ISSU client failed to register session information. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The BFD ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%BFD_ISSU-3-SESSION_UNREGISTRY : BFD ISSU client failed to unregister session information. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The BFD ISSU client failed to unregister session information. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%BFD_ISSU-3-MSG_SIZE : BFD ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The BFD ISSU client failed to calculate the MTU for the specified message. The BFD ISSU client is not able to send the message to the standby device. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%BFD_ISSU-3-INVALID_SESSION : BFD ISSU client does not have a valid registered session.

| | |
|---------------------------|---|
| Explanation | The BFD ISSU client does not have a valid registered session. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

BFD_OFFLOAD

%BFD_OFFLOAD-3-INIT_FAILED : Initialization of the BFD Offload feature in QFP failed

| | |
|---------------------------|---|
| Explanation | Initialization of the BFD Offload feature in the QFP failed. This indicates a software failure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BFD_OFFLOAD-3-ALLOC_FAILED : Allocation of [chars] memory failed for BFD Offload feature in QFP

| | |
|---------------------------|---|
| Explanation | Allocation of memory by the QFP BFD Offload feature microcode failed. The name of the memory chunk is specified in the message. This indicates a software failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BFD_OFFLOAD-3-PKT_REPLICA_INIT_FAILED : Failed to register with generic packet replication for BFD Offload feature in QFP

| | |
|---------------------------|---|
| Explanation | BFD Offload initialization of packet replication registration failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BFD_OFFLOAD-3-HA_INVALID_STATE : state [dec], MSGDEF_LIMIT_MEDIUM

| | |
|---------------------------|---|
| Explanation | An invalid HA state was received from the HA infrastructure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BFD_OFFLOAD-3-HA_BULK_SYNC_FAIL : rg [dec], MSGDEF_LIMIT_MEDIUM

| | |
|---------------------------|---|
| Explanation | There was a failure such that BFD Offload domain bulk sync did not occur |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

BFD_PROXY**%BFD_PROXY-3-BFD_MEM_REQ_FAILED : BFD IPC subtype: [dec]**

| | |
|--------------------|--------------------------------|
| Explanation | Requesting more memory failed. |
|--------------------|--------------------------------|

%BFD_PROXY-3-BFD_MEM_REQ_FAILED : BFD IPC subtype: [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%BFD_PROXY-3-BFD_MEM_EXTEND_FAILED : BFD IPC subtype: [dec]

Explanation Extending memory failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%BFD_PROXY-4-PROXY_INVALID_MSG_LEN : QFP BFD Proxy IPC invalid length, [dec]:[dec] len [dec] flags [hex] source [dec]

Explanation Cisco internal software error. QFP BFD Proxy received invalid IPC message length from control plane. This message will be ignored.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%BFD_PROXY-4-PROXY_INVALID_MSG : QFP BFD Proxy received invalid message type [dec]

Explanation Cisco internal software error. QFP BFD Proxy received an invalid message from control plane. This message will be ignored.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%BFD_PROXY-2-PROXY_IPC_INIT_FAILED : QFP BFD Proxy IPC interface initialization failure (result: [dec]).

Explanation Cisco internal software error. QFP BFD Proxy initialization detected that the IPC interface initialization failed. QFP BFD proxy will not be functional while this condition exists.

%BFD_PROXY-2-PROXY_IPC_INIT_FAILED : QFP BFD Proxy IPC interface initialization failure (result: [dec]).

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%BFD_PROXY-3-PROXY_BAD_MSG : QFP BFD Proxy received bad length message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP BFD Proxy received a corrupted message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BFD_PROXY-3-PROXY_IPC_ALLOC_FAILED : QFP BFD Proxy [chars] message lost due to message buffer allocation failure.

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP BFD Proxy message processing detected a message buffer allocation failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BFD_PROXY-3-PROXY_IPC_SEND_FAILED : QFP BFD Proxy [chars] message lost due to message sent failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP BFD Proxy message processing detected a message sent failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

BINOS_LOGIN**%BINOS_LOGIN-3-AUTHERR : The authentication process failed, [chars]**

Explanation This error occurs when there is an error in the system that prevents the user from being successfully authenticated

Recommended Action No action is required.

%BINOS_LOGIN-3-PWNOENT : No entry for user [chars] in passwd file

Explanation The username/password authenticated correctly, but the user's environment could not be established because the user's environment data is missing.

Recommended Action No action is required.

%BINOS_LOGIN-3-PAMERR : PAM error [chars] encountered.

Explanation The system encountered a PAM error.

Recommended Action No action is required.

%BINOS_LOGIN-6-PAMAUTHDENY : User was not authenticated

Explanation User was not authenticated

Recommended Action No action is required.

%BINOS_LOGIN-6-PAMMAXTRIES : Maximum number of retries exceeded.

Explanation The user tried and failed too many times to login.

Recommended Action No action is required.

%BINOS_LOGIN-3-NOTROOT : login attempted to run without proper credentials.

Explanation login can not be run without proper credentials.

Recommended Action No action is required.

%BINOS_LOGIN-3-NOTTY : login attempted but stdin is not a tty

| | |
|---------------------------|---|
| Explanation | login can not be run without stdin set to tty |
| Recommended Action | No action is required. |

BIPC

%BIPC-3-BIPC_PERFORMANCE : buffer size request [int] failed

| | |
|---------------------------|--|
| Explanation | An internal buffer allocation has failed. |
| Recommended Action | No action is required. If the problem persists, or router performance is noticeably degraded, contact Cisco technical support. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

BIPCMGR

%BIPCMGR-3-INVALID_TDL_ERROR_ON_MARSHAL : TDL epoch error on marshal [dec] unexpected: [chars]

| | |
|---------------------------|---|
| Explanation | The bipc manager has attempt to marshal a message to be sent. The tdl library has generated an error on marshal that is unexpected. The message was not sent. |
| Recommended Action | This is unexpected. Report this to Cisco TAC |

BOOST_PERFORMANCE

%BOOST_PERFORMANCE-2-CONFIG_REMOVED : Boost capability removed. Throughput will be defaulted on next reload. Reason: [chars]

| | |
|---------------------------|---|
| Explanation | Device no longer support boost throughput level |
| Recommended Action | |

BOOT**%BOOT-0-DRV_INITFAIL : [chars] driver failed to initialize properly**

| | |
|---------------------------|--|
| Explanation | A kernel driver that is critical to the functioning of the system failed to initialize properly. |
| Recommended Action | Note the time of the error message and check the kernel error logs for additional information on the problem. If you are unable to resolve this problem, copy the error message and the output of show platform software tech-support into a plaintext file and contact Cisco technical support. |

%BOOT-0-DRV_LOADFAIL : Failed to load driver [chars] ([chars])

| | |
|---------------------------|--|
| Explanation | A kernel driver that was critical to the functioning of the system failed to load. |
| Recommended Action | Note the time of the error message and check the kernel error logs for additional information on the problem. If you are unable to resolve this problem, copy the error message and the output of show platform software tech-support into a plaintext file and contact Cisco technical support. |

%BOOT-6-DRV_LOAD : Loaded driver [chars]

| | |
|---------------------------|---|
| Explanation | A kernel driver that was critical to the functioning of the system was successfully loaded. |
| Recommended Action | No user action is necessary. This message indicates the system is functioning normally and is provided for informational purposes only. |

%BOOT-3-APP_STARTFAIL : Failed to launch process [chars]

| | |
|---------------------------|--|
| Explanation | A process that does not affect the forwarding of network traffic failed to start. |
| Recommended Action | If the failed process is not something that needs to be corrected, do not address this message. If the failed process needs to be addressed, install new software and reload the router. |

%BOOT-0-APP_STARTFAILCRIT : Failed to launch a critical process [chars]

| | |
|---------------------------|---|
| Explanation | A process important to the chassis has failed. |
| Recommended Action | Note the time of the message and investigate the error message logs to learn more about the problem. If the problem persists or cannot be resolved, copy the error message and the output of show platform software tech-support into a plaintext file and contact Cisco technical support. |

%BOOT-6-APP_START : The process [chars] has started

| | |
|---------------------------|---|
| Explanation | The process has successful launched and begun executing. |
| Recommended Action | No user action is necessary. This message indicates the system is functioning normally and is provided for informational purposes only. |

%BOOT-3-DUAL_BOOT_MEMORY : Dual IOS boot indicated in ROMMON ([chars]), unavailable on [chars] RP

| | |
|---------------------------|--|
| Explanation | Running two IOS instances on the same RP is unavailable on route-processors with insufficient memory |
| Recommended Action | Unset the specified ROMMON variable or increase the memory on the route-processor. |

%BOOT-3-PARTIAL_CORE_CLEANUP_FAILURE : Partial core clean up failed for [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | During RP boot, a failure occurred cleaning up incomplete core files. |
| Recommended Action | Please check the router file systems. |

%BOOT-6-PARTIAL_CORE_REMOVED : Removed incomplete core file: [chars]

| | |
|---------------------------|--|
| Explanation | On boot of the RP, an incomplete core file was found and removed. Incomplete core files can happen for a variety of reasons, including the coincident failure of the active RP while a core file is being generated. |
| Recommended Action | No action required. This is not an error, it is an indication that the system is cleaning up a previous error. |

%BOOT-3-EXT_ISSU_CHK_FAILED : Detected booting up of standby RP with image beyond the ISSU domain of active RP by the [chars] process. The standby RP is forced to reset.

| | |
|---------------------------|--|
| Explanation | If standby RP is booted up with an image which is beyond the ISSU software domain of the active RP's image, the functionality of active RP may be unpredictable. Hence the standby is being reset. |
| Recommended Action | Remove the standby RP FRU from the chassis or boot it up with an image whose version is compatible with current running active RP. |

%BOOT-3-FLASH_READ_FAIL : failed to get [chars] from flash

| | |
|--------------------|-------------------------|
| Explanation | Property not populated. |
|--------------------|-------------------------|

%BOOT-3-FLASH_READ_FAIL : failed to get [chars] from flash

Recommended Action No user action is necessary. This is informative message.

%BOOT-3-BOOTTIME_INCOMPATIBLE_SW_DETECTED : Incompatible software detected. Details: [chars]

Explanation Incompatible software is detected on target fru/chassis.

Recommended Action Upgrade manually or check auto-upgrade configuration.

%BOOT-3-BOOTTIME_MISMATCH_RESTRICTED_STACK_SETUP_DETECTED : Mismatch detected. Details: [chars]

Explanation Incompatible stacked setup detected on target fru/chassis.

Recommended Action Switch with mismatch require to be reloaded

%BOOT-5-BOOTTIME_SMU_MISMATCH_DETECTED : SMU mismatch from active detected. SMUs will be copied and switch [chars] will be reloaded

Explanation SMU mismatch found on newly joined switch.

Recommended Action Switch with mismatch will be reloaded

%BOOT-5-BOOTTIME_SMU_RUN_MISMATCH_DETECTED : Running SMU mismatch from active detected. System will try to correct it, switch [chars] will be reloaded

Explanation Running version of SMU mismatch found on newly joined switch.

Recommended Action Stack will try to correct itself.

%BOOT-3-BOOTTIME_SMU_SYNC_FAILED : Failed to copy the SMUs to switch [chars]. Reload cancelled and switch will be declared incompatible

Explanation SMU sync failed on newly joined switch.

Recommended Action Switch with mismatch will be declared incompatible. Check the space on the remote switch. Check whether the file is present on active.

%BOOT-5-BOOTTIME_RB_SYNC_FAILED : Failed to sync the SMUs to switch [chars]. Install rollback operation may get affected.

Explanation Rollback point sync failed on newly joined switch.

Recommended Action Switch will not have the rollback points. Check the space on the remote switch.

%BOOT-3-BOOTTIME_SMU_RUN_CORRECTION_FAILED : Failed to correct the SMU mismatch between the running version on active and [chars]. Pls abort the smu installation using 'install abort'

Explanation The system tried to recover from the mismatch, but failed. Engineer intervention is required

Recommended Action Get the 'show install log' and the btrace logs from active and standby

%BOOT-3-BOOTTIME_SMU_MISSING_DETECTED : SMU file [chars] missing and system impact will be unknown

Explanation SMU file not found during bootup.

Recommended Action System will be running without the fix from the SMU

%BOOT-5-BOOTTIME_SMU_TEMP_ACTIVE_DETECTED : SMU file [chars] active temporary... SMU commit is pending

Explanation SMU file is active temporary and 'install commit' needs to be run to make it permanent. Else reload without commit will deactivate this SMU.

Recommended Action Execute 'install commit' before reload to make activate permanent.

%BOOT-5-BOOTTIME_SMU_TEMP_DEACTIVE_DETECTED : SMU file [chars] deactivate temporary... SMU commit is pending

Explanation SMU file is deactivate temporary and 'install commit' needs to be run to make it permanent. Else reload without commit will activate this SMU again.

Recommended Action Execute 'install commit' before reload to make deactivate permanent.

%BOOT-0-BOOT_COMPLETE_FAIL : Critical boot tasks failed: [chars]

Explanation The system has encountered a critical failure preventing successful boot.

%BOOT-0-BOOT_COMPLETE_FAIL : Critical boot tasks failed: [chars]

| | |
|---------------------------|--|
| Recommended Action | Note the time of the error message and system logs for additional information on the problem. If you are unable to resolve this problem, copy the error message and the output of show platform software tech-support into a plaintext file and contact Cisco technical support. |
|---------------------------|--|

%BOOT-3-SYSD_STARTFAIL : Failed to launch boot task [chars] ([chars])

| | |
|---------------------------|--|
| Explanation | A boot task failed to start. |
| Recommended Action | If the failed boot task is not something that needs to be corrected, do not address this message. If the failed boot task needs to be addressed, install new software and reload the router. |

BRI

%BRI-1-NOMEMORY : msgtxt_nomemory

| | |
|---------------------------|---|
| Explanation | The requested operation could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%BRI-1-INITFAIL : msgtxt_initfail

| | |
|---------------------------|--|
| Explanation | The hardware failed to initialize correctly. |
| Recommended Action | Repair or replace the controller. |

%BRI-4-NOSWITCH : msgtxt_initfail

| | |
|---------------------------|---|
| Explanation | ISDN leased line requires an ISDN switch type configure. |
| Recommended Action | Choose and configure a BRI switch type; if unsure, choose any switch. |

%BRI-4-OVERSIZE_D_MTU : Failed to set MTU of [dec] on [chars]. Can't support MTU over [dec].

| | |
|---------------------------|--|
| Explanation | User config IP MTU size not supported by BRI hardware. |
| Recommended Action | Reconfigure IP MTU base on the suggested range. |

%BRI-4-OVERSIZE_B1_MTU : Failed to set MTU of [dec] on [chars]. Can't support MTU over [dec].

Explanation User config IP MTU size not supported by BRI hardware.

Recommended Action Reconfigure IP MTU base on the suggested range.

%BRI-4-OVERSIZE_B2_MTU : Failed to set MTU of [dec] on [chars]. Can't support MTU over [dec].

Explanation User config IP MTU size not supported by BRI hardware.

Recommended Action Reconfigure IP MTU base on the suggested range.

BSC through CALL_CONTROL

- [BSC](#)
- [BSHELL](#)
- [BSMRP](#)
- [BSO_SAR_VRF](#)
- [BSTUN](#)
- [BUFCAP](#)
- [CALLPROG](#)
- [CALLTREAT](#)
- [CALLTREAT_NOSIGNAL](#)
- [CALL_CONTROL](#)

BSC

%BSC-3-BADPEERTYPE : Peer [chars] is incorrect type

Explanation This message occurs only when BSC local-ack is configured. It indicates the serial interfaces that are using the BSTUN tunnel are configured incorrectly, that is, both have been configured as a secondary.

Recommended Action Reconfigure the serial interfaces correctly to be a primary and secondary pair.

%BSC-2-NOMEM : No buffers available on interface [chars].

Explanation This message indicates that memory in the router was exhausted.

%BSC-2-NOMEM : No buffers available on interface [chars].

| | |
|---------------------------|--|
| Recommended Action | Perform diagnostics on the router to locate the subsystem or interface responsible for consuming memory. The only method that will clear this situation is to reload the router. |
|---------------------------|--|

%BSC-3-BADLINESTATE : Line state Tx when receiving [chars] on line [chars]

| | |
|--------------------|---|
| Explanation | An unexpected receive occurred during a transmission. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Verify that the line has been consistently defined in regards to the carrier. If a message report was sent, hard-on stop and start the bisynchronous interface in question. |
|---------------------------|---|

BSHELL

%BSHELL-6-BSHELL_UPGRADE_DETECTED : [[chars]] New software detected. Bshell instance restarting.

| | |
|--------------------|--|
| Explanation | The diagnostic shell detected a new installation of diagnostic shell software. The diagnostic shell instance exits and restarts with the new software version. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | This is an informational message only. No action is required. |
|---------------------------|---|

%BSHELL-6-SMAN_CONNECTION_LOST : [[chars]] Shell Manager connection lost

| | |
|--------------------|--|
| Explanation | The diagnostic shell was disconnected from the Shell Manager and the Shell Manager process is no longer available. This type of error is experienced if a software upgrade is in progress. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | This is an informational message only. No action is required. Once the Shell Manager process has restarted, the diagnostic shell will reconnect. |
|---------------------------|--|

%BSHELL-6-SMAN_CONNECTION_FAILED : [[chars]] Shell Manager connect failed: [chars]

| | |
|--------------------|--|
| Explanation | The diagnostic shell is unable to connect to the Shell Manager, possibly because the Shell Manager process is no longer available. This type of error is experienced if a software upgrade is in progress. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | No action is required. Once the Shell Manager process has restarted, the diagnostic shell will reconnect. |
|---------------------------|---|

%BSHELL-6-SESSION_STARTED : [[chars]] bshell session started for user '[chars]'

| | |
|--------------------|--|
| Explanation | A user has started a diagnostic shell session. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | This is an informational message only. No action is required. |
|---------------------------|---|

%BSHELL-6-SESSION_ENDED : [[chars]] bshell session ended for user '[chars]'

Explanation A user has exited a diagnostic shell session.

Recommended Action This is an informational message only. No action is required.

%BSHELL-3-EXEC_PREPARE_FAIL : [[chars]] Command execution prepare failed

Explanation The diagnostic shell was unable to prepare the requested interactive command for execution. The command failed.

Recommended Action Check the diagnostic shell trace file for more information on the underlying failure.

%BSHELL-3-EXEC_FAIL : [[chars]] Command execution failed

Explanation The diagnostic shell was unable to execute the requested interactive command.

Recommended Action Check the diagnostic shell trace file for more information on the underlying failure.

%BSHELL-3-EXEC_DIRECTIVE_FAIL : [[chars]] Command directive execution failed: [chars]

Explanation The diagnostic shell was unable to execute the requested directive.

Recommended Action Check the diagnostic shell trace file for more information on the underlying failure.

%BSHELL-3-TERMINAL_OPERATION_FAIL : [[chars]] Terminal [chars] [chars] failed: [chars]

Explanation The diagnostic shell was unable to get or set terminal properties. An attempt to change or act on terminal properties failed.

Recommended Action Restart the diagnostic shell and reattempt the failed operation

%BSHELL-3-GET_HOSTNAME_FAIL : [[chars]] Get hostname failed: [chars]

Explanation The diagnostic shell was unable to read the hostname from the kernel.

Recommended Action No action is required. The diagnostic shell periodically checks for hostname changes to set the user prompt.

%BSHELL-3-SEND_MESSAGE_FAILED : [[chars]] Send message [chars] failed: [chars]

| | |
|---------------------------|---|
| Explanation | The diagnostic shell was unable to send a message to the Shell Manager. |
| Recommended Action | Retry the operation or start a new diagnostic shell session. |

%BSHELL-3-RECEIVE_MESSAGE_FAILED : [[chars]] Receive message [chars] failed: [chars]

| | |
|---------------------------|---|
| Explanation | The diagnostic shell was unable to receive a message from the Shell Manager |
| Recommended Action | Retry the operation or start a new diagnostic shell session. |

BSMRP

%BSMRP-0-CHASFS_LOCATION_TRANSLATE : Failed to translate a location to a chasfs object name because [chars]

| | |
|---------------------------|--|
| Explanation | The backplane switch manager failed to translate a location to a chasfs object name. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-CHASFS_OBJECT_CREATE : Failed to create chassis filesystem object [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | The hardware failed to create a chassis filesystem object. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-CHASFS_PROPERTY_CREATE : Failed to create chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem property was not properly created. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-CHASFS_PROPERTY_GET : Failed to read chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem property was not properly read by the system. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-CHASFS_PROPERTY_SET : Failed to write chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem property failed to write. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-RESOLVE_FRU : Failed to determine [chars] card because [chars]

| | |
|---------------------------|--|
| Explanation | The router failed to determine a FRU state. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-EVENT_LIBRARY : An event facility initialization or maintenance function failed because [chars]

| | |
|---------------------------|--|
| Explanation | An event facility initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-PEER_TABLE : A peer table initialization or maintenance function failed because [chars]

| | |
|---------------------------|--|
| Explanation | A peer table initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-3-PEER_INVALID : A peer table entry has invalid state.

| | |
|---------------------------|--|
| Explanation | A peer table entry has an invalid state. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-UIPEER_CREATE : Failed to create user interface peer.

| | |
|---------------------------|--|
| Explanation | The system failed to create a user interface peer. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-SLOTS_INITIALIZATION : Failed to initialize chassis slot information because [chars]

| | |
|---------------------------|--|
| Explanation | The system failed to initialize the chassis slot information. |
| Recommended Action | Note the time of the error message and examine the logs for IDPROM or software errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-SIGNAL_INITIALIZATION : Failed to initialize signals because [chars]

| | |
|--------------------|--|
| Explanation | The system failed to initialize signals. |
|--------------------|--|

%BSMRP-0-SIGNAL_INITIALIZATION : Failed to initialize signals because [chars]

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-SERVICES_INITIALIZATION : Failed to initialize general application services because [chars]

Explanation The system failed to initialize application services.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-MESSAGE_REGISTER : Failed to register with active RP because [chars]

Explanation The active RP failed to register.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-MESSAGE_RESPONSE : An invalid message response was received because [chars]

Explanation An invalid message response was received. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-CHASSIS_TYPE : The chassis type [chars] is invalid.

Explanation The chassis type is invalid. This could be due to a hardware defect, software defect or incorrect IDPROM content.

%BSMRP-0-CHASSIS_TYPE : The chassis type [chars] is invalid.

| | |
|---------------------------|---|
| Recommended Action | Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|---|

%BSMRP-0-PLATFORM_FAMILY_TYPE : The platform family type [chars] is invalid.

| | |
|---------------------------|---|
| Explanation | The platform family type is invalid. This could be due to a hardware defect, software defect or incorrect IDPROM content. |
| Recommended Action | Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-CHASSIS_STATUS : Failed to get chassis hardware status because [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to get the chassis hardware status. |
| Recommended Action | Note the time of the error message and examine the logs for CPLD driver or hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-3-CHASFS_OBJECT_DESTROY : Failed to destroy chassis filesystem object [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem object that should have been destroyed was not destroyed. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-3-CHASFS_PROPERTY_DESTROY : Failed to destroy chassis filesystem property [chars]/[chars] because [chars]

| | |
|--------------------|--|
| Explanation | A chassis filesystem property that should have been destroyed was not destroyed. |
|--------------------|--|

%BSMRP-3-CHASFS_PROPERTY_DESTROY : Failed to destroy chassis filesystem property [chars]/[chars] because [chars]

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-CHASFS_OBJECT_WATCH : Failed to watch chassis filesystem object [chars] because [chars]

Explanation A chassis filesystem object was not watched because of the reason stated in the error message.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-CHASFS_OBJECT_NOT_PRESENT : Expected chassis filesystem object [chars] not present.

Explanation A chassis filesystem object expected to be present is not. This could be due to a software defect or filesystem failure.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-CHASFS_PROPERTY_NOT_PRESENT : Expected chassis filesystem object [chars] property [chars] not present.

Explanation A chassis filesystem object property expected to be present is not. This could be due to a software defect or filesystem failure.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-INVALID_ARGUMENT : A system function was given an invalid argument.

Explanation A system function was given an invalid argument. This is due to a software defect.

%BSMRP-0-INVALID_ARGUMENT : A system function was given an invalid argument.

| | |
|---------------------------|--|
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%BSMRP-0-SLOT_INVALID : A card absolute slot number cannot be determined for this chassis type

| | |
|---------------------------|--|
| Explanation | An absolute slot number is invalid. This could be due to a software defect or incorrect IDPROM content. |
| Recommended Action | Note the time of the error message and examine the logs for IDPROM or software errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-IPC_INITIALIZATION : IPC initialization failed because [chars]

| | |
|---------------------------|--|
| Explanation | IPC initialization failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-IPC_CONNECT_MASTER : IPC connection to the active RP failed because [chars]

| | |
|---------------------------|--|
| Explanation | IPC connection to the active RP failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%BSMRP-0-IPC_CONNECTION_INVALID : An IPC connection has invalid state.

| | |
|--------------------|---|
| Explanation | An IPC connection has an invalid state. This could be due to a software defect or system resource exhaustion. |
|--------------------|---|

%BSMRP-0-IPC_CONNECTION_INVALID : An IPC connection has invalid state.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-MQIPC_INITIALIZATION : MQIPC initialization failed because [chars]

Explanation MQIPC initialization failed. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-MQIPC_ADVANCE : Failed to advance MQIPC queue because [chars]

Explanation The MQIPC initialization failed.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-0-MESSAGE_RELAY : Failed to relay a message because [chars]

Explanation Failed to relay a message. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%BSMRP-3-BSM_SERVICE_SETUP : Failed to setup the backplane switch manager (bsm) service

Explanation Backplane Switch Manager failed to set itself up as a proxy to the backplane switch.

Recommended Action Collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

BSO_SAR_VRF**%BSO_SAR_VRF-3-API_FAILED : NULL**

| | |
|---------------------------|---|
| Explanation | A call to the API of another component has indicated an error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

BSTUN**%BSTUN-4-DUPROUTE : Cannot define duplicate route on thesame group**

| | |
|---------------------------|---|
| Explanation | This route command is defined on another interface belonging to thesame group. Cannot define duplicate route on the same group |
| Recommended Action | Consider defining a new group and moving this interface onto thatgroup |

%BSTUN-4-PEERSTATE : Peer [chars], wrong state [dec] ([dec])

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BSTUN-3-BADMAGIC : [chars]: wrong magic, mine [hex], theirs [hex] ([dec])

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BSTUN-3-BADMAGICTCP : [chars]: peer [chars], wrong magic, mine [hex], theirs [hex]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%BSTUN-3-BADMAGICTCP : [chars]: peer [chars], wrong magic, mine [hex], theirs [hex]

| | |
|---------------------------|---|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%BSTUN-3-BADLENOP : [chars]: bad len or unknown op, op [dec], len [dec]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BSTUN-6-TCPPEERSHUT : [chars] [chars], [IP_address]([dec])

| | |
|---------------------------|--|
| Explanation | This route closed a BSTUN connection with a remote peer. |
| Recommended Action | Examine this router to see why it closed this connection with this peer. This can be caused by normal events, such as reconfiguration. |

%BSTUN-3-CONNILLSTATE : CONN: Peer [chars], illegal state [dec]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BSTUN-3-BADCONN : CONN: bad connection ([dec]), peer: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BSTUN-6-ERR : [chars]: [chars]: [chars], op [hex], len [dec]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%BSTUN-3-SENDPUNT : [chars]: sent [chars] to [chars]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%BSTUN-4-SENDPUNTTCP : [chars]: sent [chars] to ([[int]])[IP_address]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%BSTUN-6-OPENING : CONN: opening peer [chars], [dec]

Explanation A connection attempt to a remote peer completed successfully (OPENED, PASSIVE-OPEN) or is in the process of being opened (OPENING). This is good, expected behavior.

Recommended Action No action is required.

%BSTUN-6-CONNOPENFAIL : CONN: peer [chars] open failed, [chars] [[int]]

Explanation An attempt to connect to a remote TCP BSTUN peer failed.

%BSTUN-6-CONNOPENFAIL : CONN: peer [chars] open failed, [chars] [[int]]

| | |
|---------------------------|---|
| Recommended Action | Verify that the remote peer is accessible from this router, that it is running software capable of supporting BSTUN, and that it is configured correctly. |
|---------------------------|---|

%BSTUN-3-BADPASSIVEOPEN : passive open from [IP_address]([dec]) -> [dec] failed

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%BSTUN-6-PASSIVEOPEN : passive open [IP_address]([dec]) -> [dec]

| | |
|---------------------------|--|
| Explanation | A connection attempt to a remote peer completed successfully (OPENED, PASSIVE-OPEN) or is in the process of being opened (OPENING). This is good, expected behavior. |
| Recommended Action | No action is required. |

%BSTUN-6-TCPFINI : peer [chars] closed [previous state [chars]]

| | |
|---------------------------|---|
| Explanation | A remote peer closed a BSTUN connection with this router. |
| Recommended Action | Examine the other router to see why it closed this connection with this peer. This can be caused by normal events, such as reconfiguration. |

%BSTUN-6-PEERSHUTDOWN : shutting down peer [chars] on [chars]

| | |
|---------------------------|---|
| Explanation | A connection to a remote peer is being shut down. This is typically the result of user intervention in BSTUN reconfiguration or disabling. This is good, expected behavior. |
| Recommended Action | No action is required. |

%BSTUN-6-OPENED : [chars]: peer [chars] opened, [previous state [chars]]

| | |
|--------------------|--|
| Explanation | A connection attempt to a remote peer completed successfully (OPENED, PASSIVE-OPEN) or is in the process of being opened (OPENING). This is good, expected behavior. |
|--------------------|--|

%BSTUN-6-OPENED : [chars]: peer [chars] opened, [previous state [chars]]

Recommended Action No action is required.

%BSTUN-6-RECONNECT : PHDR: reconnect from peer [chars]

Explanation A remote peer reestablished a connection to this router.
Recommended Action No action is required.

%BSTUN-2-NOBUF : Interface [chars], no buffer available to [chars]

Explanation A memory shortage existed at the time that the configuration command was issued. This condition is rare and, under normal conditions, temporary.
Recommended Action Reconfigure the BSTUN group. If memory shortages persist, call your technical support representative for assistance.

%BSTUN-3-NOGRPDEF : No bstun group defined on interface [chars]

Explanation An action was taken that requires the previous definition of a BSTUN group number.
Recommended Action Make sure encapsulation bstun and the bstun group have been defined for the interface.

%BSTUN-3-UNKPROTOEV : Unknown protocol event [dec] on interface [chars]

Explanation An event passed to the BSTUN layer for processing could not be decoded.
Recommended Action Perform a hard restart on the indicated interface.

%BSTUN-6-PROCEXIT : Process terminating. Due to signal [dec]. Subcode [dec]. Address [hex].

Explanation The BSTUN background process is terminating.
Recommended Action If this message appears while you are unconfiguring BSTUN, no action is required. Otherwise, record all the displayed values and any other BSTUN error messages, and contact your technical support representative.

%BSTUN-3-NOPEER : No peer configured to route frame with destination address [chars] (bstun group [dec])

| | |
|---------------------------|---|
| Explanation | A BSTUN route has not been configured for the frame with a destination address. |
| Recommended Action | If this message appears while you are debugging bstun, it indicates that no specific bstun route has been configured for the frames being received with the device address listed in the packet debug trace. You may choose to configure a bstun route, or ignore this message. |

%BSTUN-3-IFNOTSETUP : Could not setup interface for protocol [chars]

| | |
|---------------------------|--|
| Explanation | BSTUN was unable to start the interface for handling the specified protocol traffic. |
| Recommended Action | If this message appears while you are configuring BSTUN, check for other system errors, such as no available memory in the router, or the interface shutting down. If no obvious problem can be detected, record all the displayed values and any other BSTUN error messages, and contact your technical support representative. |

BUFCAP

%BUFCAP-6-CAPPOINT_EXISTS : [chars]

| | |
|---------------------------|---|
| Explanation | EEM Policy provisioning by Auto-deploy is successful. |
| Recommended Action | No action is required. |

%BUFCAP-6-ENABLE : Capture Point [chars] enabled.

| | |
|---------------------------|---|
| Explanation | Specified capture point has been enabled. |
| Recommended Action | No action is required. |

%BUFCAP-6-DISABLE : Capture Point [chars] disabled.

| | |
|---------------------------|--|
| Explanation | Specified capture point has been disabled. |
| Recommended Action | No action is required. |

%BUFCAP-6-DISABLE_ASYNC : Capture Point [chars] disabled. Reason : [chars]

| | |
|--------------------|--|
| Explanation | Specified capture point has been disabled due to asynchronous event. |
|--------------------|--|

%BUFCAP-6-DISABLE_ASYNC : Capture Point [chars] disabled. Reason : [chars]

Recommended Action No action is required.

%BUFCAP-6-CREATE : Capture Point [chars] created.

Explanation Specified capture point has been created.
Recommended Action No action is required.

%BUFCAP-6-DELETE : Capture Point [chars] deleted.

Explanation Specified capture point has been deleted.
Recommended Action No action is required.

%BUFCAP-6-CAPPOINT_EXISTS : Capture Point [chars] already exists.

Explanation A Capture point by the specified name already exists.
Recommended Action No action is required.

%BUFCAP-5-TIME_EXCEEDED : Capture Point [chars] disabled. The associated capture buffer's ([chars]) configured duration ([dec] sec(s)) exceeded.

Explanation The duration of the capture exceeds the maximum configured duration associated with the capture buffer. The associated capture point will be disabled.
Recommended Action No action is required.

%BUFCAP-5-ELEM_TRIMMED : Element trimmed as there was not enough space in capture buffer [chars]. Original Size: [dec]; Copied Size: [dec].

Explanation The linear buffer does not have enough space left. Hence the packet was trimmed. This is the final element in the buffer.
Recommended Action No action is required.

%BUFCAP-5-BUFFER_FULL : Linear Buffer associated with capture buffer [chars] is full.

Explanation The linear buffer is full. Further capture would be halted.

Recommended Action No action is required.

%BUFCAP-5-MAX_ELEMS : Capture point [chars] disabled. The number of elements in associated capture buffer's ([chars]) has reached the maximum configured value ([dec] elements).

Explanation The buffer contains the maximum configured number of packets. The associated capture point will be disabled.

Recommended Action No action is required.

%BUFCAP-3-NO_MEM : Not enough memory available for Buffer Capture Infrastructure

Explanation The buffer capture infrastructure could not get the memory it requested.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%BUFCAP-3-INVALID_CAPPOINT : Invalid capture point.

Explanation Some operation was attempted on a invalid capture point.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%BUFCAP-3-ACTIVE_CAPPOINT : Invalid operation was attempted on an active capture point [chars].

Explanation Invalid operation was attempted on an active capture point.

Recommended Action Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, copy the error message exactly as it appears on the console or in the system log, enter the **show monitor capture point all** and **show tech** commands and contact your Cisco technical support representative, providing the representative with the gathered information.

%BUFCAP-3-INVALID_PARAM : Invalid parameters

Explanation Invalid parameters were passed in to a buffer capture infrastructure function.

%BUFCAP-3-INVALID_PARAM : Invalid parameters

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%BUFCAP-3-EXPORT_BUFFER : Error exporting buffer [chars] to location [chars]

| | |
|---------------------------|--|
| Explanation | The Buffer Capture Infrastructure is not able to export the buffer to the specified location |
| Recommended Action | Please check if a valid destination was specified. Or if a file by the same name already exists, rename the dump file or remove the existing file from the destination location. If those actions do not resolve the problem, LOG_STD_ACTION |

%BUFCAP-6-RATE_LIMIT : [dec] packets from capture point [chars] dropped due to rate limiting.

| | |
|---------------------------|---|
| Explanation | Rate limiting has been enabled and the number of packets exceed the allowed configured value. |
| Recommended Action | |

%BUFCAP-6-TOO_BIG : The packet to be dumped is bigger than the buffer size of capture buffer [chars]. Packet of size [dec] dropped.

| | |
|---------------------------|--|
| Explanation | The packet is bigger than the configured/default buffer size. |
| Recommended Action | Change the parameters of the capture buffer. You can try to increase the size of the buffer or limit the number of bytes copied. |

%BUFCAP-3-NOSUCHCAPTURE : Error finding capture point.

| | |
|---------------------------|---|
| Explanation | No such capture point exists |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CALLPROG**%CALLPROG-3-API_INIT : api front init failed for [chars]**

| | |
|---------------------------|--|
| Explanation | Failed to init Call Progress Notification support structures for APIs. |
| Recommended Action | System running low on available memory. |

%CALLPROG-3-API_USE : no free front-end q elt's; dropping api call info (func=[dec])

| | |
|---------------------------|---|
| Explanation | Failed to get free element from front end queue. |
| Recommended Action | Platform requires additional free elements to properly function. Stop using Call Progress Notification applications. Call TAC to report the problem |

CALLTREAT**%CALLTREAT-3-HIGH_CPU_ONE_MIN_LOAD : System experiencing high cpu utilization over one minute interval. Processing for callID([dec]) is rejected.**

| | |
|---------------------------|--|
| Explanation | Based on the average CPU utilization over a 60 second interval, the system does not have enough CPU resources available to accept a new call. The specified call was rejected. |
| Recommended Action | Ensure that the call setup rate is within the supported capacity of this gateway. Enter the show proc cpu command to see which processes are consuming the most CPU capacity and, if appropriate, reduce other system activity to ease CPU demands. By default, the system will reject calls if the five-second CPU utilization on the gateway exceeds 98%. |

%CALLTREAT-3-HIGH_CPU_5SEC_LOAD : System experiencing high cpu utilization. Processing for callID([dec]) is rejected.

| | |
|---------------------------|---|
| Explanation | System does not have enough CPU resources available to accept a new call. The specified call was rejected. |
| Recommended Action | Ensure that the call setup rate is within the supported capacity of this gateway. Enter the show proc cpu command to see which processes are consuming the most CPU capacity and, if appropriate, reduce other system activity to ease CPU demands. By default, the system will reject calls if the five-second CPU utilization on the gateway exceeds 89%. The default value can be overridden by enabling call treatment and entering the call threshold global cpu-5sec command. |

%CALLTREAT-3-HIGH_CPU_AVERAGE_LOAD : System experiencing high average cpu utilization. Processing for callID([dec]) is rejected.

| | |
|---------------------------|--|
| Explanation | Based on the average CPU utilization over a 60-second interval or an interval configured through the <code>call threshold poll-interval</code> command, the system does not have enough CPU resources available to accept a new call. The specified call was rejected. |
| Recommended Action | Ensure that the call setup rate is within the supported capacity of this gateway. Check to see if the current call setup rate is supported on this gateway. Enter the <code>show proc cpu</code> command to see which processes are consuming the most CPU capacity and, if appropriate, reduce other system activity to ease CPU demands. By default, the system will reject calls if the five-second CPU utilization on the gateway exceeds 98%. The default value can be overridden by enabling call treatment and entering the <code>call threshold global cpu-avg</code> command. |

%CALLTREAT-3-HIGH_IOMEM_USAGE : System running low on I/O memory. Processing for callID([dec]) is rejected.

| | |
|---------------------------|--|
| Explanation | The system does not have enough free I/O memory to accept a new call. The specified call was rejected. |
| Recommended Action | Ensure that the gateway has the recommended amount of I/O memory for this Cisco IOS feature set and version. Enter the <code>show mem</code> and <code>show proc mem</code> commands to see which processes are consuming the most memory. Check to see if the memory usage is appropriate for these processes and, if so, reduce other system activity to ease CPU demands. The high and low thresholds for I/O memory utilization can be configured by enabling call treatment and entering the <code>call threshold global io-mem</code> command. |

%CALLTREAT-3-HIGH_PROCMEM_USAGE : System running low on processor memory. Processing for callID([dec]) is rejected.

| | |
|---------------------------|--|
| Explanation | The system does not have enough free processor memory to accept a new call. The specified call was rejected. |
| Recommended Action | Ensure that the gateway has the recommended amount of processor memory for this Cisco IOS feature set and version. Enter the <code>show mem</code> and <code>show proc mem</code> commands to see which processes are consuming the most memory. Check to see if the memory usage is appropriate for these processes and, if so, reduce other system activity to ease CPU demands. The high and low thresholds for processor memory utilization can be configured by enabling call treatment and entering the <code>call threshold global proc-mem</code> command. |

%CALLTREAT-3-HIGH_TOTAL_CALLS : High call volume. Processing for callID([dec]) is rejected.

| | |
|--------------------|--|
| Explanation | The system is experiencing a high call volume. There are not enough resources to accept a new call. The specified call was rejected. |
|--------------------|--|

%CALLTREAT-3-HIGH_TOTAL_CALLS : High call volume. Processing for callID([dec]) is rejected.

| | |
|---------------------------|---|
| Recommended Action | Disable call threshold, modify the call threshold global high and low values, or investigate the cause of the high resource utilization. The high and low thresholds for total number of calls can be configured by enabling call treatment and entering the <code>call threshold global proc-mem</code> command. |
|---------------------------|---|

%CALLTREAT-3-HIGH_MEMORY_USAGE : System running low on memory. Processing for callID([dec]) is rejected.

| | |
|---------------------------|---|
| Explanation | The system does not have enough free memory to accept a new call. The specified call was rejected. |
| Recommended Action | Ensure that the gateway has the recommended amount of memory for this Cisco IOS feature set and version. Enter the <code>show mem</code> and <code>show proc mem</code> commands to see which processes are consuming the most memory. Check to see if the memory usage is appropriate for these processes and, if so, reduce other system activity to ease CPU demands. By default, the system will reject calls if there is less than 2% free processor memory on the gateway. This value can be overridden by enabling call treatment and entering the <code>call threshold global total-mem</code> command. |

CALLTREAT_NOSIGNAL

%CALLTREAT_NOSIGNAL-3-HIGH_CPU_ONE_MIN_LOAD : System experiencing high cpu utilization over one minute interval.

| | |
|---------------------------|--|
| Explanation | Based on the average CPU utilization over a 60 second interval, the system does not have enough CPU resources available. |
| Recommended Action | Ensure that the call setup rate is within the supported capacity of this gateway. Enter the <code>show proc cpu</code> command to see which processes are consuming the most CPU capacity and, if appropriate, reduce other system activity to ease CPU demands. By default, the system will reject resource allocation if the five-second CPU utilization on the gateway exceeds 98%. |

%CALLTREAT_NOSIGNAL-3-HIGH_CPU_5SEC_LOAD : System experiencing high cpu utilization.

| | |
|---------------------------|---|
| Explanation | System does not have enough CPU resources available to allocate a new resource. |
| Recommended Action | Ensure that the call setup rate is within the supported capacity of this gateway. Enter the <code>show proc cpu</code> command to see which processes are consuming the most CPU capacity and, if appropriate, reduce other system activity to ease CPU demands. By default, the system will reject calls if the five-second CPU utilization on the gateway exceeds 89%. The default value can be overridden by enabling call treatment and entering the <code>call threshold global cpu-5sec</code> command. |

%CALLTREAT_NOSIGNAL-3-HIGH_CPU_AVERAGE_LOAD : System experiencing high average cpu utilization.

Explanation Based on the average CPU utilization over a 60-second interval or an interval configured through the `call threshold poll-interval` command, the system does not have enough CPU resources available to accept a new call.

Recommended Action Ensure that the call setup rate is within the supported capacity of this gateway. Check to see if the current call setup rate is supported on this gateway. Enter the `show proc cpu` command to see which processes are consuming the most CPU capacity and, if appropriate, reduce other system activity to ease CPU demands. By default, the system will reject calls if the five-second CPU utilization on the gateway exceeds 98%. The default value can be overridden by enabling call treatment and entering the `call threshold global cpu-avg` command.

%CALLTREAT_NOSIGNAL-3-HIGH_IOMEM_USAGE : System running low on I/O memory.

Explanation The system does not have enough free I/O memory.

Recommended Action Ensure that the gateway has the recommended amount of I/O memory for this Cisco IOS feature set and version. Enter the `show mem` and `show proc mem` commands to see which processes are consuming the most memory. Check to see if the memory usage is appropriate for these processes and, if so, reduce other system activity to ease CPU demands. The high and low thresholds for I/O memory utilization can be configured by enabling call treatment and entering the `call threshold global io-mem` command.

%CALLTREAT_NOSIGNAL-3-HIGH_PROCMEM_USAGE : System running low on processor memory.

Explanation The system does not have enough free processor memory.

Recommended Action Ensure that the gateway has the recommended amount of processor memory for this Cisco IOS feature set and version. Enter the `show mem` and `show proc mem` commands to see which processes are consuming the most memory. Check to see if the memory usage is appropriate for these processes and, if so, reduce other system activity to ease CPU demands. The high and low thresholds for processor memory utilization can be configured by enabling call treatment and entering the `call threshold global proc-mem` command.

%CALLTREAT_NOSIGNAL-3-HIGH_TOTAL_CALLS : High call volume.

Explanation The system is experiencing a high call volume.

Recommended Action Disable call threshold, modify the call threshold global high and low values, or investigate the cause of the high resource utilization. The high and low thresholds for total number of calls can be configured by enabling call treatment and entering the `call threshold global proc-mem` command.

%CALLTREAT_NOSIGNAL-3-HIGH_MEMORY_USAGE : System running low on memory.

| | |
|---------------------------|---|
| Explanation | The system does not have enough free memory to allocated new resource. |
| Recommended Action | Ensure that the gateway has the recommended amount of memory for this Cisco IOS feature set and version. Enter the show mem and show proc mem commands to see which processes are consuming the most memory. Check to see if the memory usage is appropriate for these processes and, if so, reduce other system activity to ease CPU demands. By default, the system will reject calls if there is less than 2% free processor memory on the gateway. This value can be overridden by enabling call treatment and entering the call threshold global total-mem command. |

CALL_CONTROL

%CALL_CONTROL-6-MAX_CONNECTIONS : Maximum number of connections reached for dial-peer [dec]

| | |
|---------------------------|---|
| Explanation | The dial-peer in question has reached its maximum connections configurations. No more calls will be taken on this dial-peer. |
| Recommended Action | No action is required, however, to increase the number of connections allowed to this dial peer see 'maximum connections' configuration under the dial-peer configuration mode. |

%CALL_CONTROL-6-APP_NOT_FOUND : Application [chars] in dial-peer [dec] not found. Handing callid [dec] to the alternate app [chars].

| | |
|---------------------------|---|
| Explanation | The inbound dial-peer points to an unavailable application. The call is being handed to the alternate application or is rejected. |
| Recommended Action | Reconfigure the dial-peer to have a valid application name or verify the application is accesible at its location. |

%CALL_CONTROL-6-APP_NOT_EXIST : The requested application does not exist any more. The event for the callid [dec] is being discarded.

| | |
|---------------------------|--|
| Explanation | The event points to a session application which does not exist any more. The event is being discarded. |
| Recommended Action | No action is required for the users |

%CALL_CONTROL-6-NUMBERING_TYPE_NO_MATCH : The called number numbering type did not match The event for the callid [dec] is being discarded.

| | |
|--------------------|--|
| Explanation | The event points to a session application which does not exist any more. The event is being discarded. |
|--------------------|--|

**%CALL_CONTROL-6-NUMBERING_TYPE_NO_MATCH : The called number numbering type did not match
The event for the callid [dec] is being discarded.**

Recommended Action No action is required for the users

%CALL_CONTROL-3-NORAWMSG : no free raw msg structure available from [chars] for signaling message

Explanation There were no rawmsg structures remaining in the system pools to alert the router of a voice or signaling event.

Recommended Action Check that the voice port for which the event was reported is still operational. If not, clear the voice port.

%CALL_CONTROL-3-CCAPI_DB_ERR : ccapi database error

Explanation Internal CCAPI conference or call record database error. This message represents an internal software fault and may manifest itself as dropped or hung calls.

Recommended Action Contact your technical support representative, include the full text of the error message.

%CALL_CONTROL-6-CALL_LOOP : The incoming call has a global identifier already present in the list of currently handled calls. It is being refused.

Explanation The incoming call has a global identifier already present in the list of currently handled calls. It means that the voice gateway has detected a loop in the call route.

Recommended Action Please check your configuration.

%CALL_CONTROL-6-UNKNOWN_EXT_AGENT_RESET_ATTEMPT : Request to reset an unknown external agent (ID [dec]) attempted. Attempt ignored.

Explanation A request to reset an external agent (eg H323 Gatekeeper or MGCP CA etc) was attempted but IOS doesn't know how to process the request. This is not usually a problem for the router. It does however mean that the external agent for whom the reset was intended never got it.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CALL_CONTROL-3-INVALID_PARAMETER : An invalid parameter is passed to the function

| | |
|---------------------------|-------------------------------------|
| Explanation | This is due to coding error. |
| Recommended Action | No action is required for the users |

%CALL_CONTROL-3-STAT_MEMORY_CORRUPTED : Memory corruption detected in memory=[hex] allocated for RTPC statistic

| | |
|---------------------------|-------------------------------------|
| Explanation | This is due to coding error |
| Recommended Action | No action is required for the users |

CAPWAP_REASS_PROXY through CD_SW_SSL_SHIM

- [CAPWAP_REASS_PROXY](#)
- [CASA](#)
- [CBAC_C3PL](#)
- [CBUS](#)
- [CCE_PI_PD](#)
- [CCH323](#)
- [CCK_QAT](#)
- [CD_FFP_IPSEC_PROXY](#)

- [CD_SW_SSL_SHIM](#)

CAPWAP_REASS_PROXY

%CAPWAP_REASS_PROXY-3-PROXY_IPC_MEM_INIT_FAILED :

| | |
|---------------------------|---|
| Explanation | Initialization of Capwap Reassembly memory pool failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CAPWAP_REASS_PROXY-3-PROXY_IPC_MEM_EXTEND_FAILED :

| | |
|---------------------------|---|
| Explanation | Increasing of Capwap Reassembly memory pool failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CAPWAP_REASS_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]

| | |
|---------------------------|---|
| Explanation | IPC handler initialization failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CAPWAP_REASS_PROXY-4-PROXY_IPC_INVALID_MSG : [hex]

| | |
|---------------------------|---|
| Explanation | Received an invalid IPC messages subtype. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CASA**%CASA-3-BADVER : Incoming packet is CASA v[dec], this router is v[dec]**

| | |
|---------------------------|---|
| Explanation | A packet was received for the wrong version of CASA |
| Recommended Action | Verify that all CASA devices are running the same version of the protocol |

%CASA-2-NOMEM : Out of memory: [chars]

| | |
|---------------------------|---|
| Explanation | CASA failed to allocate memory. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%CASA-4-BADMSG : Message parsing error: [chars]

| | |
|---------------------------|--|
| Explanation | Failed to parse an incoming packet |
| Recommended Action | If this message is occurring repeatedly, enable 'debug ip casa error' and record the output, call your Cisco technical support representative, and provide the gathered information. |

%CASA-4-SECURITY_FAIL : [chars] security information in CASA packet.

| | |
|---------------------------|---|
| Explanation | Security check failed. |
| Recommended Action | Make sure all CASA systems are configured with the same password. |

%CASA-4-UNEXPECTED : Unexpected error: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected error occurred while performing CASA operation |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CASA-4-WARNING : Unexpected condition: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition was detected while performing CASA operation |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CASA-4-PORTCHANGE : Wildcard overlap: [chars]

| | |
|--------------------|---|
| Explanation | A CASA wildcard, received on one port, has been overwritten by a service manager sending to another port. This message may appear once if you are migrating your service to a new forwarding-agent port, if it recurs, it could indicate a configuration problem. |
|--------------------|---|

%CASA-4-PORTCHANGE : Wildcard overlap: [chars]

| | |
|---------------------------|---|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

CBAC_C3PL

%CBAC_C3PL-4-OBJ_CREATE : Firewall [chars] object [chars] creation failed in the data plane, error [dec]

| | |
|---------------------------|--|
| Explanation | The notification of the creation of a firewall object e.g. a parameter map, has failed to update the data plane and as such the application of the parameters contained within the object will not be applied to the data plane. It is also possible that the common classification may fail to locate and bind to the object rendering the configuration incomplete in terms of application. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show memory command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBAC_C3PL-4-OBJ_DELETE : Firewall [chars] object [chars] deletion failed in the data plane, error [dec]

| | |
|---------------------------|--|
| Explanation | The notification of the deletion of a firewall object e.g. a parameter map, has failed to update the data plane and as such the application of the parameters contained within the object may continue to be applied to the data plane. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show memory command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBAC_C3PL-4-OBJ_MODIFY : Firewall [chars] object [chars] modification failed in the data plane, error [dec]

| | |
|--------------------|--|
| Explanation | The notification of the modification of a firewall object e.g. a parameter map, has failed to update the data plane and as such the application of the parameters contained within the object will not be applied to the data plane. |
|--------------------|--|

%CBAC_C3PL-4-OBJ_MODIFY : Firewall [chars] object [chars] modification failed in the data plane, error [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show memory** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBAC_C3PL-3-INIT : Firewall data plane updates are disabled

Explanation The firewall notification of objects to the data plane has failed to startup and as such data plane updates are disabled.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show registry brief** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

CBUS

%CBUS-4-RSETFAIL : Interface [chars] failed to reset properly in [chars], code [hex]

Explanation An interface reset command failed. This may be a software or hardware problem.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-OUTHUNG : [chars]: tx%c output hung (%-04x - [chars]), [chars]

Explanation A transmission attempt on an interface failed. The interface might not be attached to a cable or there might be a software problem.

Recommended Action Check that the interfaces are all connected to the proper cables. If that is not the problem, call your technical support representative.

%CBUS-4-NOCOKIE : [chars]-[dec] controller missing configuration data - disabled

| | |
|---------------------------|---|
| Explanation | The controller type was derived from a hardware probe. The controller number indicates the ciscoBus relative slot number. This is a hardware error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBUS-3-TESTFAIL : Unit [dec], failed [chars] test - interface disabled

| | |
|---------------------------|--|
| Explanation | A hardware component failed an internal diagnostic test. |
| Recommended Action | Check switch settings on the interface cards. Check for proper unit numbers. Reset the cards. Replace the malfunctioning device. |

%CBUS-3-DAUGHTER : Unit [dec], daughter controller [dec] failed [chars] test - interface disabled

| | |
|---------------------------|--|
| Explanation | A hardware component failed an internal diagnostic test. Test output and descriptions of ranges follow: Unit [dec] (ranges 0-14): Indicates the Multibus jumper setting for the ciscoBus controller, or in the Cisco 7000, a slot number. daughter controller [dec] (ranges 0-3): Indicates the ciscoBus relative slot number (0 to 3, or in the Cisco 7000, 0 to 4) of the daughter card that failed the test. failed [chars] test ([chars]= memd read, memd write):If the failed test was memd read, the processor was able to write to shared ciscoBus buffer memory from the ciscoBus registers, but was unable to read back that memory through special commands to the daughter card. If the failed test was memd write, writes to the memory device through the daughter card were not verified successfully with reads through the ciscoBus controller. The daughter card under test responds successfully to some commands (otherwise the software would have received a DAUGHTER_NO_RSP message), but its memory device tests failed. The daughter card must be able to write to some memory device addresses; otherwise, it cannot respond to any commands. |
| Recommended Action | First check that the daughter controller card is properly seated in its Multibus and ciscoBus connectors. Next, swap daughter cards and check whether the error follows the daughter card or the slot. If the message recurs, call your technical support representative for assistance. |

%CBUS-3-DAUGHTER_NO_RSP : Unit [dec], daughter [dec], not responding ([hex]) - disabled

Explanation A hardware component failed an internal diagnostic test. Test output and descriptions of ranges are as follows: Unit [dec] (ranges 0-14): Indicates the Multibus jumper setting for the ciscoBus controller. daughter controller [dec] (ranges 0-3): Indicates the ciscoBus relative slot number (0 to 3, or in the Cisco 7000, 0 to 4) of the daughter card that failed the test. The daughter card hardware was recognized across the cBus backplane, but the daughter card did not respond to the first command issued to it. This condition is a result of one of the following: the daughter card did not reset, or the microcode on the card is in a hung state, or the card cannot fully communicate across the ciscoBus backplane (cannot read or write shared MEMD or does not get the MALU_ATTENTION signal across the ciscoBus).

Recommended Action First, make sure that the daughter card is properly seated in its Multibus and ciscoBus connectors. If this message recurs, copy the error message exactly as it appears on the console or in the system log, contact your Cisco technical support representative, and provide the representative with the gathered information

%CBUS-3-CORRUPT : Controller [dec], wrote 0x%-04x, read 0x%-04x, loc 0x%-04x - dci_memtest()

Explanation A hardware component failed an internal diagnostic test.

Recommended Action Replace the malfunctioning device.

%CBUS-3-TXALLOC : Error (%-04x) tx_allocate - cbus_init()

Explanation A hardware device did not respond appropriately to a request.

Recommended Action Make sure the device is functioning and is configured correctly.

%CBUS-3-BUFFER : Controller [dec], Error (%-04x), Buffersize = [dec], Bufferpool = [dec], number [dec]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-INITERR : Interface [dec], Error (%-04x), idb [hex] [dec] [chars] - cbus_init()

Explanation The switch processor or ciscoBus controller signaled an error while processing a packet or selecting an interface. This indicates a software problem.

%CBUS-3-INITERR : Interface [dec], Error (%-04x), idb [hex] [dec] [chars] - cbus_init()

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-INTR : Interface [dec], idb [hex] [dec] [chars] - cbus_interrupt()

Explanation The switch processor or ciscoBus controller returned a nonsensical value.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CBUSBCE : Failed to select a BCE, response [hex] - cbus_bce_update_ifa()

Explanation A hardware or software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CBUSBCEPERM : Failed to select a BCE, response [hex] - cbus_bce_permissions_update()

Explanation A hardware or software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-FDDIRSET : Interface [chars], Error (%-04x) [chars] - fddi_reset()

Explanation A hardware device did not respond appropriately to a request.

Recommended Action Make sure the device is functioning and is configured correctly.

%CBUS-3-FDDIRSETU : Unit [dec], Error (%-04x) [chars] - fddi_reset()

Explanation A hardware device did not respond appropriately to a request.

Recommended Action Make sure the device is functioning and is configured correctly.

%CBUS-5-FDDICMD : '[chars]' is not supported on [chars]

Explanation This command is not supported on this FDDI interface.

Recommended Action No action is required.

%CBUS-3-HSSIRSET : Interface [chars], Error (%-04x) [chars] - hssi_reset()

Explanation A command to reset an HSSI interface was issued by the RSP, but the interface did not respond to the command within the expected time delay. The delay is given for the processor to return the buffers that it has allocated and to perform any necessary cleanup. This condition may be caused by a large number of buffers that have been allocated by the interface due to either heavy traffic or a hardware problem with the interface.

Recommended Action Verify that the card is properly seated. If this error recurs, then issue the **show tech-support** and **show logging** commands, contact your Cisco technical support representative, and provide the representative with the gathered information.

%CBUS-3-SRPRSET : Interface [chars], Error (%-04x) [chars] - srp_reset()

Explanation A command to reset an SRP interface was issued by the RSP, but the interface did not respond to the command within the expected time delay. The delay is given for the processor to return the buffers that it has allocated and to perform any necessary cleanup. This condition may be caused by a large number of buffers that have been allocated by the interface due to either heavy traffic or a hardware problem with the interface.

Recommended Action Verify that the card is properly seated. If this error recurs, then issue the **show tech-support** and **show logging** commands, contact your Cisco technical support representative, and provide the representative with the gathered information.

%CBUS-3-CTRRAMTEST : Interface [chars], RAM Addressing Test Failed - [chars]

| | |
|---------------------------|--|
| Explanation | The Token Ring interface failed its memory diagnostic tests. |
| Recommended Action | Issue a clear interface command. LOG_STD_RECUR_ACTION |

%CBUS-3-CTRINIT : Interface [chars], CTR Initialization Failed - [chars]

| | |
|---------------------------|---|
| Explanation | The Token Ring interface failed one of its internal self-tests. |
| Recommended Action | Issue a clear interface command. LOG_STD_RECUR_ACTION |

%CBUS-3-CTRCMDFAILED : Interface [chars], CTR Command [chars] Failed, [chars] (%#04x)

| | |
|---------------------------|---|
| Explanation | A command sent from the system to the Token Ring interface failed to complete successfully. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBUS-3-CTRCMDFAILED2 : Interface [chars], CTR Command [chars] Failed, Code %#04x

| | |
|---------------------------|---|
| Explanation | A command sent from the system to the Token Ring interface failed to complete successfully. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBUS-3-CTRRSET : Interface [chars] failed to initialize

| | |
|---------------------------|---|
| Explanation | The Token Ring interface failed to insert into the Token Ring. The interface is placed into reset state and will not automatically try to re-insert itself. |
| Recommended Action | Issue a clear interface command. LOG_STD_RECUR_ACTION |

%CBUS-3-CTRACHECK : Interface [chars], Adapter Check Error ([hex] [hex] [hex] [hex])

Explanation The Token Ring monitor firmware detected a fatal error on the interface card.

Recommended Action Issue a `clear interface` command. LOG_STD_RECUR_ACTION

%CBUS-3-CTRUCHECK : Interface [chars], Microcode Check Error

Explanation The Token Ring interface microcode detected an unrecoverable error.

Recommended Action Issue a `clear interface` command. LOG_STD_RECUR_ACTION

%CBUS-3-CTRBADLOVE1 : Interface [chars], SRB_COMPLETE lovenote received with unknown command ([hex])

Explanation The system received a message from the Token Ring interface but does not recognize the message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CTRBADLOVE1_DUMP : Dump of MEMB follows-SRB_ADDR: [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

Explanation The system is printing codes related to a previous lovenote error message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-4-CTRBADLOVE2 : Interface [chars], Unexpected SRB_COMPLETE lovenote, command=[hex], result=[hex]

Explanation The system received an unsolicited message from the Token Ring interface. The system ignored the message and continued normal processing.

%CBUS-4-CTRBADLOVE2 : Interface [chars], Unexpected SRB_COMPLETE lovenote, command=[hex], result=[hex]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-RESETNXI : Reset of removed interface [hex] ([chars])

Explanation An interface reset was attempted on an interface that was removed from the router. This message appears if you use the shutdown command to bring down a removed interface.

Recommended Action No action is required.

%CBUS-3-FSIPRSET : Interface [chars], Error (%-04x) [chars] - fsip_reset()

Explanation A Fast Serial Interface Processor (FSIP) did not respond to a reset request from the Route Processor.

Recommended Action Check FSIP electrical connections, cable, and ciscoBus connections. An FSIP microcode reload will be required. If the check of electrical connections reveals no problems and the message recurs, call your technical support representative for assistance.

%CBUS-3-SERRSET : Interface [chars], Error (%-04x) [chars] - serial_reset()

Explanation A software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CATMRSET : Interface [chars], Error (%-04x) [chars] - aip_reset()

Explanation A software error occurred.

%CBUS-3-CATMRSET : Interface [chars], Error (%-04x) [chars] - aip_reset()

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CATMRSETU : Unit [dec], Error (%-04x) [chars] - cbus_atm_reset()

Explanation A software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CATMCFG : Interface [chars], Cannot config interface, CBus ATM MEM [hex], status [dec]

Explanation A software error occurred.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CBUS-3-AIPINVPLIM : Interface [chars], Invalid PLIM detected. Interface downed

Explanation A software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CATMREJCMD : [chars] [chars] command failed (error code [hex])

Explanation The cBus ATM microcode rejected a command sent by the Route Processor (RP). The error code is the status value returned by the command.

%CBUS-3-CATMREJCMD : [chars] [chars] command failed (error code [hex])

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-BADVC : [chars] [dec]/[dec] got bad VC packet [hex] [hex] [hex] [hex] [hex] [hex] [hex]

Explanation An interface received a packet with bad VC encapsulation. This indicates either a software or hardware problem.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-POLLFAIL : Interface [chars] failed to respond, debug info follows

Explanation A Token Ring interface card failed to respond to periodic polling. This can indicate a software or hardware problem. See CBUS-3-POLLFAILDAT for the syntax of this message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-POLLFAILDAT : Int [dec]: [hex] [hex] [hex] [hex] [hex] [hex]

Explanation This is the debugging information for the CBUS-3-POLLFAIL error.

Recommended Action This is a debug message only. No action is required.

%CBUS-3-FCICMDFAIL0 : Controller [dec], cmd ([dec]) failed (0x%-04x) count ([dec])

Explanation A command sent from the system to an interface processor failed to complete successfully.

Recommended Action The system recovered by generating an error code to the requester.

%CBUS-3-FCICMDFAIL1 : Controller [dec], cmd ([dec] 0x%-08x) failed (0x%-04x) count ([dec])

Explanation A command sent from the system to an interface processor failed to complete successfully.

Recommended Action The system recovered by generating an error code to the requester.

%CBUS-3-CTRLRCMDFAIL0 : Controller [dec], cmd ([dec]) failed (0x%-04x) count ([dec])

Explanation A command sent from the system to an interface processor failed to complete successfully.

Recommended Action The system recovered by generating an error code to the requester.

%CBUS-3-CTRLRCMDFAIL1 : Controller [dec], cmd ([dec] 0x%-08x) failed (0x%-04x) count ([dec])

Explanation A command sent from the system to an interface processor failed to complete successfully.

Recommended Action The system recovered by generating an error code to the requester.

%CBUS-3-CCBCMDFAIL0 : Controller [dec], cmd ([dec]) failed (0x%-04x)

Explanation A command sent from the system to an interface processor failed to complete successfully.

Recommended Action The system recovered by generating an error code to the requester.

%CBUS-3-CCBCMDFAIL1 : Controller [dec], cmd ([dec] 0x%-08x) failed (0x%-04x)

Explanation A command sent from the system to an interface processor failed to complete successfully.

Recommended Action The system recovered by generating an error code to the requester.

%CBUS-3-CCBCMDFAIL3 : Controller [dec], cmd ([dec] 0x%-04x, 0x%-04x, 0x%-04x) failed (0x%-04x)

Explanation A command sent from the system to an interface processor failed to complete successfully.

Recommended Action The system recovered by generating an error code to the requester.

%CBUS-3-UNKENC : Interface [chars], unknown encaps type [hex]

Explanation A packet was received from the CIP with an unknown encapsulation type. The packet will be dropped.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CT3STAT : Out of buffers--losing status information for CT3 on VIP card

Explanation A status information message from the VIP was received. A memory buffer is required to process the status information message, but the memory allocation routine due to insufficient system buffer memory. Therefore, the status information message was not processed. This condition may be caused either by a heavy memory utilization at the time of the memory buffer request or by insufficient memory in the system.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. If this message recurs or appears regularly, contact your Cisco technical representative to upgrade the memory of the system.

%CBUS-3-HALSTAT : Out of buffers--losing status information for ChSTM-1 on VIP card

Explanation An internal software resource has been exhausted.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-POTSTAT : Out of buffers--losing status information for POTENT on VIP card

| | |
|---------------------------|---|
| Explanation | An internal software resource has been exhausted. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBUS-3-CT3DSX3ERR : ([chars])Illegal dsx3 value - unit is [dec]**Explanation****Recommended Action****%CBUS-3-CE3DSX3ERR : ([chars])Illegal E3 value - unit is [dec]**

| | |
|---------------------------|--|
| Explanation | A status information message was received from the CT3 VIP, but during message processing it was detected that an element in the data structure corresponding to the status information message has not been set. This condition may be caused by either an element that has not been passed by the VIP or a corruption in the status message. |
| Recommended Action | If this error recurs, enter the show tech-support and show logging commands, contact your Cisco technical support representative, and provide the representative with the gathered information. |

%CBUS-3-HALSDHERR : ([chars])Illegal sdh value - unit is [dec]

| | |
|---------------------------|---|
| Explanation | Internal data structure is corrupted, which causes the love letter to drop. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBUS-5-CBADVCSETUP : Interface [chars], setup vc failed with vci exceeding (vc-per-vp - 3) on the last vpi.

| | |
|--------------------|--|
| Explanation | The TI1570 chip reserves 3 RX DMA channels for OAM cells. As a result, the last 3 VCIs of the last VPI block cannot be used for regular traffic. |
|--------------------|--|

%CBUS-5-CBADVCSETUP : Interface [chars], setup vc failed with vci exceeding (vc-per-vp - 3) on the last vpi.

Recommended Action Avoid try different vci/vpi combinations.

%CBUS-3-CFGCMDDROPPED : Config queue is full, command was dropped, slot [dec]

Explanation Sending a config command was retried. The receiving queues were still full after retries therefore the command was dropped.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CBUS-3-ADDRFILTR : Interface [chars], address filter [chars] command failed, code %#04x

Explanation The specified address filter command sent to the specified interface failed with the displayed error code.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CBUS-3-BADRXEOFVEC : [chars] ustatus: [chars] ([hex]), [hex] [hex] [hex] [hex]

Explanation Debugging information when an IP panics.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CBUS-3-BADTXSTATE : [chars] ustatus: [chars] ([hex]), [hex] [hex] [hex] [hex]

Explanation Debugging information when an IP panics.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CBUS-3-BADTXEOFVEC : [chars] ustatus: [chars] ([hex]), [hex] [hex] [hex] [hex]

Explanation Debugging information when an IP panics.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CBUS-3-TXSTARTPENDACTIVE : [chars] ustatus: [chars] ([hex]), [hex] [hex] [hex] [hex]

Explanation Debugging information when an IP panics.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CBUS-3-UNKNOWN : [chars] ustatus: [chars] ([hex]), [hex] [hex] [hex] [hex]

Explanation Debugging information when an IP panics.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CBUS-3-CMDTIMEOUT : Cmd timed out, CCB [hex], slot [dec], cmd code [dec]

Explanation A software or hardware error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CMDDROPPED : Cmd dropped, CCB [hex], slot [dec], cmd code [dec]

Explanation A software or hardware error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CCBSEMINFO : CCB semaphore acquired traceback:[chars] CCB semaphore released traceback:[chars]

Explanation More information on the CCB semaphore. The tracebacks indicate the program counters and stack that point to the code that was the last to acquire this semaphore and the last to release this semaphore respectively

%CBUS-3-CCBSEMINFO : CCB semaphore acquired traceback:[chars] CCB semaphore released traceback:[chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CCBPTIMEOUT : CCB handover timed out, CCB [hex], slot [dec]

Explanation A hardware or software error occurred.

Recommended Action Please gather the logs and tracebacks and contact the TAC

%CBUS-3-PORTTYPE : Unexpected interface type for [chars][int], port [int], type [int]

Explanation A hardware or software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-CMD : Cmd failed: [chars], response %#04x, [chars]

Explanation A software or hardware error occurred.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CBUS-3-MODULE : Missing [chars] for [chars]

Explanation A hardware or software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CBUS-3-NOBUF : Buffer allocation failure: [chars]

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBUS-5-INPUTERR : Interface [chars] excessive input error rate

| | |
|---------------------------|--|
| Explanation | Interface disabled because too many input errors occurred. |
| Recommended Action | Inspect condition of attached network hardware |

%CBUS-4-FIXBADTXVC : Detected and fixed bad tx vc encaps on [chars], bad vc [dec], fixed vc [dec]

| | |
|---------------------------|---|
| Explanation | A transmit packet on a channelized serial interface does not have the vc number encapsulation |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBUS-3-TXVCENCAPFAIL : Detected bad tx vc encaps on [chars], vc [dec]. Board encaps failed [hex], [hex], [hex]

| | |
|---------------------------|---|
| Explanation | Board encaps failed on a transmit packet on a channelized serial interface which does not have the vc number encapsulation |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBUS-3-SELECTBADVC : Select invalid vc number [dec].

| | |
|---------------------------|---|
| Explanation | An invalid channel number is selected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CBUS-3-SENDIPCMDFAIL : Send Ip Cmd Failed. Command dropped after [dec] retries, CCB [hex], slot [dec], cmd code [dec]

| | |
|---------------------------|--|
| Explanation | Sending an ip command was retried. The receiving queues were still full after retries therefore the command was dropped. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%CBUS-5-SENDIPCMDRECOV : Send Ip Cmd Succeeded after [dec] retries, CCB [hex], slot [dec], cmd code [dec]

| | |
|---------------------------|--|
| Explanation | Sending an ip command was retried due to receiving queues being full. But after some retries, command was send successfully. |
| Recommended Action | No action is required. |

CCE_PI_PD

%CCE_PI_PD-4-TARGET_CLASS_GROUP_DB : Failed to [chars] id [hex] [chars] database

| | |
|---------------------------|---|
| Explanation | An operation to manipulate the record of the target class groups supplied via the PI/PD API has failed to perform the required action on a target class group successfully. This may imply that the resultant notification via the API was deferred or dropped. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show cce cpdp bindings target <id>) |

%CCE_PI_PD-6-TARGET_BINDINGS_DB : [chars] [chars] [chars] target class group [hex] contains feature bindings

| | |
|--------------------|---|
| Explanation | The target class group is reporting the presence of feature bindings upon its removal. This is informational. |
|--------------------|---|

%CCE_PI_PD-6-TARGET_BINDINGS_DB : [chars] [chars] [chars] target class group [hex] contains feature bindings

Recommended Action LOG_STD_SH_CMD_ACTION(show cce cpdp bindings target <id>)

%CCE_PI_PD-4-CLASS_GROUP_DB : Failed to [chars] id [hex] [chars] database

Explanation An operation to manipulate the record of the class groups and classes supplied via the PI/PD API has failed to perform the required action on a class group successfully. This may imply that the resultant notification via the API was deferred or dropped.

Recommended Action LOG_STD_SH_CMD_ACTION(show cce cpdp associations class-group <id>)

%CCE_PI_PD-4-CLASS_DB : Failed to [chars] class group id [hex] class id [hex] [chars] database

Explanation An operation to manipulate the record of the class groups and classes supplied via the PI/PD API has failed to perform the required action on a class successfully. This may imply that the resultant notification via the API was deferred or dropped.

Recommended Action LOG_STD_SH_CMD_ACTION(show cce cpdp associations class group <id>)

%CCE_PI_PD-4-CLASS_CLASS_GROUP_DB : Failed to [chars] class group id [hex] class id [hex] class group [hex] [chars] database

Explanation An operation to manipulate the record of the class groups and classes supplied via the PI/PD API has failed to perform the required action on a class group attached to a class successfully. This may imply that the resultant notification via the API was deferred or dropped.

Recommended Action LOG_STD_SH_CMD_ACTION(show cce cpdp associations class-group <id>)

%CCE_PI_PD-4-FEATURE_BIND_DB : Failed to [chars] target id [hex] class group [hex] class id [hex] feature [chars] binding [chars] database

Explanation An operation to manipulate the record of the binding of a action within a policy map class to a particular target supplied via the PI/PD API has failed to perform the required action successfully. This may imply that the resultant notification via the API was deferred or dropped.

Recommended Action LOG_STD_SH_CMD_ACTION(show cce cpdp bindings target <id>)

%CCE_PI_PD-3-FILTER_LIST : Failed to create class [chars] id [hex] filter list

| | |
|---------------------------|---|
| Explanation | An operation to create the filter list for a particular class has failed due to a resource issue. This may imply that the resultant notification via the API was deferred or dropped. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show class-map [type <class type>] <name>) |

%CCE_PI_PD-6-CLASS_GROUP_CLASSES_DB : Class group [hex] contains classes

| | |
|---------------------------|---|
| Explanation | The class group is reporting the presence of classes upon its removal. This is informational. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show cce cpdp associations class-group <id>) |

%CCE_PI_PD-6-CLASS_CLASSES_DB : Class group [hex] class [hex] ([chars]) contains a class group

| | |
|---------------------------|---|
| Explanation | The class is reporting the presence of a class group upon its removal. This is informational. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show cce cpdp associations class-group <id>) |

%CCE_PI_PD-3-CLASS_NAME : Map name [chars] id [hex] unable to [chars] string ([hex])

| | |
|---------------------------|---|
| Explanation | During the addition or removal of a class or a class group its name which corresponds to a class or policy map was either not found within the database of strings or it was unable to add the name to the database. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show cce cpdp associations command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CCE_PI_PD-6-CLASS_FILTER : Class [chars], id [hex], type [chars], filter list is unbalanced

| | |
|---------------------------|---|
| Explanation | During the addition of a class, an internal error was encountered during the construction of the match terms comprising that class. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show class-map [type <type>] <name>) |

CCH323**%CCH323-3-CANNOT_ALLOCATE_GW : [chars]: cannot allocate gateway structure**

Explanation Allocation of the CCH323 gateway instance failed. This is possibly due to the fact that system memory pool is exhausted.

Recommended Action This can be a catastrophic error

%CCH323-3-CANNOT_CREATE_CCB : [chars]: cannot create the H.323 ccb Tree

Explanation Creation of the H.323 CCB Tree failed. This is possibly due to the fact that system memory pool is exhausted.

Recommended Action This can be a catastrophic error

%CCH323-3-CANNOT_ALLOCATE_CCB : [chars]: cannot allocate call control block

Explanation Allocation of the CCH323 call control block failed. This is possibly due to the fact that system memory pool is exhausted.

Recommended Action This can be a catastrophic error

%CCH323-3-CANNOT_ALLOCATE_CALL_INFO : [chars]: cannot allocate call info data structure

Explanation Allocation of the CCH323 call info structure failed. This is possibly due to the fact that system memory pool is exhausted.

Recommended Action This call will be terminated due to lack of resource

%CCH323-3-CANNOT_INSERT_CCB : [chars]: cannot insert control block [hex] to tree

Explanation Insertion of this CCH323 call control block to the RBTree failed. This can be related to a corrupted RBTree

Recommended Action This can be a catastrophic error

%CCH323-3-CANNOT_FIND_CCB : [chars]: cannot find CCH323 call control block based on callID [dec]

Explanation Cannot find a CCH323 call control block based on the specified callID

Recommended Action No action is required. This is an indication that some events happen out of sequence

%CCH323-3-CCAPI_DISCONNECT_ERROR : [chars]: cc_api_call_disconnected returns [dec]

Explanation An error is returned when CCH323 attempts to call cc_api_call_disconnected**Recommended Action** None

%CCH323-3-CCAPI_CONNECT_ERROR : [chars]: cc_api_call_disconnected returns [dec]

Explanation An error is returned when CCH323 attempts to call cc_api_call_connected**Recommended Action** None

%CCH323-3-CANNOT_CREATE_CRVHASH_TBL : [chars]: cannot create the H.323 crv hash table

Explanation Creation of the H.323 CRV Hash Table failed. This is possibly due to the fact that system memory pool is exhausted.**Recommended Action** This can be a catastrophic error

%CCH323-3-BAD_IP_ADDRESS : [chars]: illegal destination [chars]

Explanation The IP address passed from CCAPI in the call setup request is invalid**Recommended Action** Check the dial-peer configuration for the dial-peer that matches the called party number. Make sure that the session target field contains valid IP address. or DNS name

%CCH323-3-CALL_SETUP_FAILED : [chars]: call setup failed

Explanation The call setup request failed**Recommended Action** Verify that the remote destination identified by the IP address is reachable

%CCH323-3-OSS_INIT_FAILED : [chars]: OSS init failure: errno = [dec]

Explanation OSS ASN1 initialization failed**Recommended Action** This can be catastrophic

%CCH323-3-H225_SM_INIT_FAILED : [chars]: H.225.0 State Machine integrity check failed for state [chars]

Explanation H.225 State Machine integrity check failed**Recommended Action** This can be catastrophic

%CCH323-3-H225_LIBRARY_INIT_FAILED : [chars]: H.225.0 library initialization failed

Explanation H.225.0 library initialization failed**Recommended Action** This can be catastrophic

%CCH323-3-CCH323_UNKNOWN_EVENT : unknown event [hex]

Explanation Unknown CCH323 Event**Recommended Action** No action is required

%CCH323-3-CCH323_RSCMON_SETUP_FAILURE : [chars][dec]

Explanation A failure was encountered in setting up the monitoring of H323 resources.**Recommended Action** Try power cycling the system. LOG_STD_RECUR_ACTION

%CCH323-3-STRCALLHISFAIL : cch323_store_call_history: [chars]

Explanation Insert an active H323 call record into call history list failed**Recommended Action** No action is required

%CCH323-2-GTWY_UNREGSTR : Gateway [chars] unregistered from Gatekeeper [chars]

Explanation Gateway unregistered from the Gatekeeper**Recommended Action** Verify whether this is user intended or otherwise report this to the technical support representative.

%CCH323-2-GTKP_UNREGSTR : Gatekeeper [chars] requested unregister from Gateway [chars]

Explanation Gatekeeper requested unregister from Gateway

%CCH323-2-GTKP_UNREGSTR : Gatekeeper [chars] requested unregister from Gateway [chars]

| | |
|---------------------------|--|
| Recommended Action | Verify whether this is user intended or otherwise report this to the technical support representative. |
|---------------------------|--|

%CCH323-6-REGSTR : Gateway [chars] registered with Gatekeeper [chars]

| | |
|--------------------|--|
| Explanation | Gateway registered with the Gatekeeper |
|--------------------|--|

| | |
|---------------------------|-----------------------|
| Recommended Action | no action is required |
|---------------------------|-----------------------|

%CCH323-2-GTWY_REGSTR_FAILED : Gateway [chars] failed to register with Gatekeeper [chars] even after [dec] retries

| | |
|--------------------|--|
| Explanation | Gateway failed to register with Gatekeeper |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Report this immediately to the technical support representative. |
|---------------------------|--|

%CCH323-2-GTWY_REGSTR_FAILED_ALT_GK : Gateway [chars] failed attempt to register with Alternate Gatekeeper [chars]

| | |
|--------------------|--|
| Explanation | Gateway failed attempt to register with Alternate Gatekeeper |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Report this immediately to the technical support representative. |
|---------------------------|--|

%CCH323-2-E164_LENGTH_IS_NOT_SUPPORTED : [chars]: E164 address length [dec] is not supported

| | |
|--------------------|--|
| Explanation | Received E164 address with the length that is not supported. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Report this immediately to the technical support representative. |
|---------------------------|--|

%CCH323-3-CCH323_MALLOC_FAILED : [chars]: cannot allocate message buffer

| | |
|--------------------|--|
| Explanation | Allocation of the CCH323 message buffer failed. This is possibly due to the fact that system memory pool is exhausted. |
|--------------------|--|

| | |
|---------------------------|----------------------------------|
| Recommended Action | This can be a catastrophic error |
|---------------------------|----------------------------------|

%CCH323-3-INTERNAL_EVENT_QUEUE_INIT_FAILED : [chars]: Internal event queue initialization failed

Explanation Errors are found during initialization of internal event queue mechanism

Recommended Action This can be a catastrophic error

%CCH323-3-POSSIBLE_INTERNAL_EVENT_LOOP : [chars]: Exceeding limit on servicing internal event for the same call

Explanation The maximum limit on servicing internal event queue has exceeded the limit. The condition may be caused by internal loops on sending events between state machines.

Recommended Action This can be a severe error

%CCH323-3-MAXIMUM_INTERNAL_EVENT_BUFFERS_EXCEED : [chars]: Exceeding limit on allocating internal event buffers

Explanation The limit for allocating internal event buffers has been exceeded. The condition may be caused by internal loops on sending events between state machines.

Recommended Action This can be a severe error

%CCH323-3-CCH323_H225_SEND_EVENT_FAILED : [chars]: create send internal event [chars] to H.225 state machine failed

Explanation create and send event to H.225 state machine failed. This is possibly due to the missing call control block or not enough memory for event buffers

Recommended Action This can be a catastrophic error

%CCH323-3-CCH323_H245_SEND_EVENT_FAILED : [chars]: create and send event [chars] to H.245 state machine failed

Explanation create and send event to H.245 state machine failed. This is possibly due to the missing call control block or not enough memory for event buffers

Recommended Action This can be a catastrophic error

%CCH323-3-CCH323_RAS_SEND_EVENT_FAILED : [chars]: create and send event [chars] to RAS state machine failed

Explanation create and send event to RAS state machine failed. This is possibly due to the missing call control block or not enough memory for event buffers

Recommended Action This can be a catastrophic error

%CCH323-6-LONG_DUR_CALL_DETECTED : Long Duration Call is detected [chars]

Explanation The call is active for configured duration of long call

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CCH323-6-CALL_PRESERVED : [chars]: H.323 call preserved due to socket closure or error, Call Id = [int], fd = [dec]

Explanation An H.225.0 or H.245 socket was closed due to a TCP FIN received from the remote endpoint or a socket error. Calls using these sockets for which call preservation was configured will be preserved. This is not an error, but call preservation can occasionally cause hung calls.

Recommended Action Use show h323 calls preserved command to get a list of all active preserved calls. Long duration preserved calls can then be cleared using clear call voice command.

CCK_QAT

%CCK_QAT-3-INIT_FAIL : [chars]: initialization failed ([chars])

Explanation CCK QAT initialization sequence failed.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

CD_FFP_IPSEC_PROXY

%CD_FFP_IPSEC_PROXY-2-FFP_INIT_FAILED : FFP Crypto device Proxy Agent initialization failure (result: [dec]).

Explanation Cisco internal software error. FFP Crypto device Procy Agent initialization detected critical failure. FFP Crypto device software library will not be functional while this condition exists.

%CD_FFP_IPSEC_PROXY-2-FFP_INIT_FAILED : FFP Crypto device Proxy Agent initialization failure (result: [dec]).

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CD_FFP_IPSEC_PROXY-2-FFP_PROXY_INIT_FAILED : FFP Crypto device Procy Agent Proxy IPC interface initialization failure (result: [dec]).

Explanation Cisco internal software error. FFP Crypto device Procy Agent Proxy initialization detected that the IPC interface initialization failed. FFP Crypto device Procy Agent proxy will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CD_FFP_IPSEC_PROXY-3-FFP_PROXY_IPSEC_SA_CRT_FAILED : FFP Crypto device Procy Agent Proxy IPsec SA create failure (result: [dec]).

Explanation Cisco internal software error. FFP Crypto device Procy Agent Proxy message processing detected IPsec SA create failure. The request is rejected as the result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CD_FFP_IPSEC_PROXY-3-ESG_IPSEC_KAT_TEST_FAILED : Cryptographic Known-Answer Test failure (result: [chars])

Explanation Cisco internal software error. Cryptographic Known-Answer Tests. Error due to one of the Cryptographic Power-on Self-tests (Known-Answer Tests) not returning the expected value.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

CD_SW_IPSEC_SHIM**%CD_SW_IPSEC_SHIM-2-SHIM_INIT_FAILED : QFP Crypto device software library initialization failure (result: [dec]).**

Explanation Cisco internal software error. QFP Crypto device software library initialization detected critical failure. QFP Crypto device software library will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CD_SW_IPSEC_SHIM-2-SHIM_PROXY_INIT_FAILED : QFP Crypto device software library Proxy IPC interface initialization failure (result: [dec]).

Explanation Cisco internal software error. QFP Crypto device software library Proxy initialization detected that the IPC interface initialization failed. QFP Crypto device software library proxy will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CD_SW_IPSEC_SHIM-3-SHIM_PROXY_IPSEC_SA_CRT_FAILED : QFP Crypto device software library Proxy IPsec SA create failure (result: [dec]).

Explanation Cisco internal software error. QFP Crypto device software library Proxy message processing detected IPsec SA create failure. The request is rejected as the result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CD_SW_IPSEC_SHIM-2-KAT_TEST_FAILED : QFP Crypto device software library kat test failure (result: [dec]).

Explanation Cisco internal software error. QFP Crypto device software library detected critical failure. QFP Crypto device software library will not be functional while this condition exists.

%CD_SW_IPSEC_SHIM-2-KAT_TEST_FAILED : QFP Crypto device software library kat test failure (result: [dec]).

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

CD_SW_SSL_SHIM

%CD_SW_SSL_SHIM-2-SHIM_INIT_FAILED : QFP Crypto device software library initialization failure (result: [dec]).

Explanation Cisco internal software error. QFP Crypto device software library initialization detected critical failure. QFP Crypto device software library will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CD_SW_SSL_SHIM-2-SHIM_PROXY_INIT_FAILED : QFP Crypto device software library Proxy IPC interface initialization failure (result: [dec]).

Explanation Cisco internal software error. QFP Crypto device software library Proxy initialization detected that the IPC interface initialization failed. QFP Crypto device software library proxy will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CD_SW_SSL_SHIM-3-SHIM_PROXY_SSL_CTX_ALLOC_FAILED : QFP Crypto device software library Proxy IPsec CTX create failure (result: [dec]).

Explanation Cisco internal software error. QFP Crypto device software library Proxy message processing detected IPsec CTX create failure. The request is rejected as the result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

CEF_PROXY

%CEF_PROXY-3-PROXY_IPC_ADJ_ID_HASH_FAILED :

| | |
|---------------------------|------------------------------|
| Explanation | Getting Hash Address failed. |
| Recommended Action | LOG_STD_ACTION |

%CEF_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]

| | |
|---------------------------|------------------------------------|
| Explanation | IPC handler initialization failed. |
| Recommended Action | LOG_STD_ACTION |

%CEF_PROXY-4-PROXY_IPC_INVALID_MSG : [hex]

| | |
|---------------------------|---|
| Explanation | Received an invalid IPC messages subtype. |
| Recommended Action | LOG_STD_ACTION |

%CEF_PROXY-3-PROXY_IPC_OCE_CHAIN_PTR_FAILED : [hex]

| | |
|--------------------|-------------------------|
| Explanation | Null OCE Chain pointer. |
|--------------------|-------------------------|

%CEF_PROXY-3-PROXY_IPC_OCE_CHAIN_PTR_FAILED : [hex]

Recommended Action LOG_STD_ACTION

%CEF_PROXY-3-PROXY_IPC_PACKET_ALLOCATION_FAILED : [hex]

Explanation Failed to allocate packet buffer for IPC
Recommended Action LOG_STD_ACTION

%CEF_PROXY-3-PROXY_IPC_PACKET_SEND_FAILED : [hex]

Explanation Failed to send IPC packet.
Recommended Action LOG_STD_ACTION

%CEF_PROXY-3-PROXY_IPC_ADJ_IDX_FAILED : [hex]

Explanation Failed to get adjacency index from IPC packet.
Recommended Action LOG_STD_ACTION

CELLWAN

%CELLWAN-2-NO_PROCESS : Could not start process [chars]

Explanation Could not start one of the processes.
Recommended Action Add more memory.

%CELLWAN-2-SEND_TIMEOUT : [chars] not responding

Explanation The cellular modem is not responding.
Recommended Action If the problem persists, please provide the following:
LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-2-HEART_BEAT_TIMEOUT : No heart beat signal from [chars]

| | |
|---------------------------|--|
| Explanation | The cellular modem is not responding. |
| Recommended Action | If the problem persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |

%CELLWAN-2-MODEM_TOO_HOT : [chars] modem will be [chars]

| | |
|---------------------------|--|
| Explanation | Modem radio temperature has reached critical point. The call will be disconnected and the modem could be shutdown. |
| Recommended Action | Check if the router fans are working properly. |

%CELLWAN-2-MODEM_NOT_ACTIVATED : [chars] modem has not been activated

| | |
|---------------------------|---|
| Explanation | The cellular modem has not been activated by the cellular provider. |
| Recommended Action | Please check the user documentation on how to activate the modem. The cellular modem needs to be activated before it can be used on a cellular network. |

%CELLWAN-2-MODEM_RADIO : [chars] Modem radio has been turned [chars]

| | |
|---------------------------|--|
| Explanation | Modem radio has been turned on/off. |
| Recommended Action | No action if the message appears during bootup. Otherwise please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x radio command and <CmdBold>show tech-support) |

%CELLWAN-2-MODEM_UP : Modem in slot [dec]/[dec] is now UP

| | |
|---------------------------|---|
| Explanation | The cellular modem is now UP. |
| Recommended Action | No action if the message appears during bootup. Otherwise please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |

%CELLWAN-2-MODEM_DOWN : Modem in slot [dec]/[dec] is DOWN

| | |
|---------------------------|---|
| Explanation | The cellular modem is not operational. |
| Recommended Action | This is expected during modem firmware upgrade and modem activation. If the problem happens during other times, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |

%CELLWAN-5-FIRMWARE_SWITCH : Firmware switchover initiated for modem in slot [dec]/[dec]

Explanation Firmware switchover caused by user request.**Recommended Action** No action is required.

%CELLWAN-5-MODEM_BOOT_READY : Modem in slot [dec]/[dec] is in Boot Ready Mode.. Please perform FW upgrade

Explanation The cellular modem is not operational.**Recommended Action** This is expected during modem firmware upgrade and modem activation. If the problem happens during other times, please provide the following:
LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-2-UNSUPPORTED_CELLULAR_NIM : Unsupported Cellular NIM inserted in slot [int]/[int]

Explanation This NIM is not supported for the current software release**Recommended Action** Please contact TAC for supported software release for this NIM

%CELLWAN-2-DYING_GASP_NOT_SUPPORTED : Dying Gasp Feature is not supported in Cellular slot [int]/[int]

Explanation This NIM is not supporting Dying Gasp Feature.**Recommended Action** Please contact TAC for Dying Gasp Feature Supported NIM

%CELLWAN-2-MODEM_INIT_TIMEOUT : Cellular modem initialization timeout for [chars]

Explanation Modem failed to initialize.**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CELLWAN-2-MICRO_DNLD_START_FAIL : Modem returned following error to Download Start Request:[chars]

| | |
|---------------------------|--|
| Explanation | Modem Firmware Download Start Request Failed. It generally means that firmware binary file is wrong. |
| Recommended Action | Please make sure that the firmware binary file is correct. If unsure about validity of the file, please provide the following: LOG_STD_SH_CMD_ACTION(show flash:<noCmdBold> command and <CmdBold>show controller cellular x/x/x all) |

%CELLWAN-2-MICRO_FW_DNLD_FAIL : Modem returned following error to Download Request:[chars]

| | |
|---------------------------|--|
| Explanation | Modem Firmware Download Continue Request Failed. It generally means that firmware binary file is corrupt. |
| Recommended Action | Please make sure that the firmware binary file is correct. If unsure about validity of the file, please provide the following: LOG_STD_SH_CMD_ACTION(show flash:<noCmdBold> command and <CmdBold>show controller cellular x/x/x all) |

%CELLWAN-2-MICRO_DNLD_END_FAIL : Modem returned following error to Download End Request:[chars]

| | |
|---------------------------|--|
| Explanation | Modem Firmware Download End Request Failed |
| Recommended Action | Please make sure that the firmware binary file is correct. If unsure about validity of the file, please provide the following: LOG_STD_SH_CMD_ACTION(show flash:<noCmdBold> command and <CmdBold>show controller cellular x/x/x all) |

%CELLWAN-2-MICRO_FLASH_PRGM_FAIL : Modem returned following error to Flash Program Request:[chars]

| | |
|---------------------------|--|
| Explanation | Modem failed to launch the new firmware. |
| Recommended Action | Please make sure that the firmware binary file is correct. If unsure about validity of the file, please provide the following: LOG_STD_SH_CMD_ACTION(show flash:<noCmdBold> command and <CmdBold>show controller cellular x/x/x all) |

%CELLWAN-2-SIM_FAILURE : [[chars]]: SIM read failed [chars]

| | |
|---------------------------|---|
| Explanation | If the SIM is not present, insert SIM in the SIM socket. If error still persists, SIM needs to be replaced. |
| Recommended Action | Insert SIM if SIM is absent in the NIM. If error still persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |

%CELLWAN-2-SIM_LOCKED : [[chars]]: SIM is locked [chars]

| | |
|--------------------|---|
| Explanation | SIM is locked and no data call can be made till it is unlocked. |
|--------------------|---|

%CELLWAN-2-SIM_LOCKED : [[chars]]: SIM is locked [chars]

| | |
|---------------------------|--|
| Recommended Action | Contact service provider on how to unlock the SIM. If error still persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |
|---------------------------|--|

%CELLWAN-2-SIM_REJECTED : [[chars]]: SIM rejected by the network [chars]

| | |
|--------------------|---|
| Explanation | The SIM is not valid to be used in the network. A new valid SIM needs to be inserted in the SIM socket. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Insert valid SIM in the NIM SIM socket. If error still persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |
|---------------------------|---|

%CELLWAN-2-SIM_CHV1_BLOCKED : [[chars]]: SIM is blocked. PUK is required to unblock the SIM [chars]

| | |
|--------------------|--|
| Explanation | SIM is blocked and no data call can be made until it is unblocked using PUK. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Contact service provider to get PUK to unblock the SIM. Please execute 'cellular <unit> gsm sim unblock <puk> <new-pin>' for unblocking SIM and to set new PIN. If error still persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |
|---------------------------|---|

%CELLWAN-2-SIM_MEP_LOCKED : [[chars]]: Invalid SIM or device locked to carrier [chars]

| | |
|--------------------|---|
| Explanation | Invalid SIM or device locked to carrier |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Insert valid SIM or contact service provider. If error still persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |
|---------------------------|---|

%CELLWAN-2-SIM_CHV1_CONFIG_REMOVED : [[chars]]: CHV1 verification failed [chars] : Incorrect PIN configured. Erased the CHV1 code from router running configuration to avoid SIM blocking during modem reset/powercycle. !!!WARNING: If the incorrect PIN is saved in router start-up configuration, please remove it manually to avoid SIM blocking during router reload

| | |
|--------------------|---|
| Explanation | SIM CHV1 verification failed. Incorrect PIN configured. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Please remove incorrect PIN if saved in startup configuration or configure correct PIN. If error still persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |
|---------------------------|--|

%CELLWAN-2-SIM_SECURITY_SHUTDOWN : [[chars]]: CHV1 PIN is configured while SIM is unlocked [chars]. Shutting down all PDP interfaces

| | |
|---------------------------|--|
| Explanation | CHV1 is configured while SIM is unlocked The SIM is not valid to be used in the network. A new valid locked SIM needs to be inserted in the SIM socket. |
| Recommended Action | Insert valid SIM in the NIM SIM socket or remove CHV1 configuration. If error still persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |

%CELLWAN-2-SIM_NOT_READY : [chars] Modem is not ready. SIM status may be not current.

| | |
|---------------------------|---|
| Explanation | SIM access cannot be granted or may return an error when : (1) The modem is not up or during a reset. (2) The SIM has gone bad. |
| Recommended Action | (1) Wait till MODEM UP message is seen from the console before accessing SIM. (2) Replacing with a working SIM. LOG_STD_SH_CMD_ACTION(show cellular x/x/x security<noCmdBold> command and <CmdBold>show tech-support) |

%CELLWAN-2-SIM_NOT_PRESENT : [[chars]]: SIM is not present in Slot [dec]

| | |
|---------------------------|---|
| Explanation | SIM has not been detected in the NIM SIM socket |
| Recommended Action | Insert a valid sim in the NIM SIM socket. |

%CELLWAN-6-SIM_PRESENT : [[chars]]: SIM is present in Slot [dec]

| | |
|---------------------------|---|
| Explanation | SIM has been detected in the SIM socket |
| Recommended Action | No action |

%CELLWAN-6-SIM_INSERTED : [[chars]]: SIM in slot [dec] has been inserted

| | |
|---------------------------|------------------------------|
| Explanation | SIM is inserted to the slot. |
| Recommended Action | No action |

%CELLWAN-6-SIM_REMOVED : [[chars]]: WARNING: SIM in slot [dec] has been removed

| | |
|---------------------------|-------------------------------|
| Explanation | SIM is removed from the slot. |
| Recommended Action | No action |

%CELLWAN-2-SIM_SWITCH_FAILURE : [[chars]]: Failed to switch to SIM slot [dec] !!

Explanation Failed to switch to the requested NIM SIM slot**Recommended Action** Examine SIM in the indicated slot

%CELLWAN-5-SIM_DETECT_START : [[chars]]: SIM presence detection starts !!

Explanation SIM presence detection has started**Recommended Action** No action is required.

%CELLWAN-5-SIM_DETECT_COMPLETE : [[chars]]: SIM presence detection has completed !!

Explanation SIM presence detection has completed**Recommended Action** No action is required.

%CELLWAN-5-SIM_ACTIVATION : [[chars]]: SIM slot [dec] is being activated !!

Explanation The request to activate the indicated SIM slot has been sent to the modem**Recommended Action** No action is required.

%CELLWAN-5-SIM_ACTIVE : [[chars]]: SIM slot [dec] is Active !!

Explanation The indicated SIM slot is active.**Recommended Action** No action is required.

%CELLWAN-5-SIM_ACTIVATION_TIMEOUT : [[chars]]: SIM slot [dec] activation request timeout !!

Explanation Timeout on the request sent to the modem to activate the indicated SIM slot**Recommended Action** No action is required.

%CELLWAN-5-SIM_ACQUISITION_TIMEOUT : [[chars]]: SIM slot [dec] Acquisition Timer timeout !!

Explanation Timeout on the SIM slot acquisition timer, initiate sim switching request to the alter SIM slot

Recommended Action No action is required.

%CELLWAN-5-SIM_FAILOVER_TIMEOUT : [[chars]]: SIM slot [dec] Failover Timer timeout !!

Explanation Timeout on the SIM slot failover timer, initiate sim switching request to the alter SIM slot

Recommended Action No action is required.

%CELLWAN-2-INTERFACE_GOING_DOWN : [chars] is being shutdown temporarily due to authentication failure for [dec] secs.

Explanation The interface is being shutdown because the call could not be connected due to PPP authentication failures. The interface will be brought up after the specified time. This is to prevent frequent calls being attempted if authentication problems are not fixed.

Recommended Action Activate the modem again by following the steps in the user docs. If the problem persists contact the wireless service provider. LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-2-OMA_DM_NI_ALERT : [[chars]]: OMA DM NI Alert is received for [chars] Please execute 'cellular <unit> cdma activate oma-dm ni-alert [allow | deny]'

Explanation OMA DM Network-Initiated alert is received by modem

Recommended Action Please execute 'cellular <unit> cdma activate oma-dm ni-alert [allow | deny]'. It is recommended to allow the session so as to update device configuration or PRL that is being pushed by carrier. The session can be allowed when data call is disconnected. NI session will disconnect active call and service will be interrupted until the session is completed. Please use 'show cellular <unit> oma-dm ni-alert' to view the pending NI alert. Otherwise, deny the session if update is not required. For any support, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-2-OMA_DM_NO_OP : [[chars]]: OMA DM [chars] could not be completed. Please try again later. If the problem persists, you may need to contact Customer Service.

Explanation OMA DM session state is received by modem

%CELLWAN-2-OMA_DM_NO_OP : [[chars]]: OMA DM [chars] could not be completed. Please try again later. If the problem persists, you may need to contact Customer Service.

Recommended Action Activate the modem again by following the steps in the user docs. If the problem persists contact the wireless service provider. LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-2-OMA_DM_ERROR : [[chars]]: OMA DM [chars] Failed - Error:[hex]([chars])

Explanation OMA DM session state is received by modem

Recommended Action Activate the modem again by following the steps in the user docs. If the problem persists contact the wireless service provider. LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-2-OMA_DM_HFA_PENDING : [[chars]]: OMA DM [chars], waiting for retry in [int] seconds

Explanation OMA DM session state is received by modem

Recommended Action Activate the modem again by following the steps in the user docs. If the problem persists contact the wireless service provider. LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-2-OMA_DM_ACTIVE : [[chars]]: OMA DM [chars] session is active

Explanation OMA DM session state is received by modem

Recommended Action Activate the modem again by following the steps in the user docs. If the problem persists contact the wireless service provider. LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-2-OMA_DM_SUCCESS : [[chars]]: OMA DM [chars] completed successfully

Explanation OMA DM session state is received by modem

Recommended Action Activate the modem again by following the steps in the user docs. If the problem persists contact the wireless service provider. LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-2-OMA_DM_NO_PRL : [[chars]]: OMA DM - No PRL update available

Explanation OMA DM session state is received by modem

Recommended Action Activate the modem again by following the steps in the user docs. If the problem persists contact the wireless service provider. LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-2-POWER_SAVE_MODE : [[chars]]: is in Power save mode. Command ignored.

| | |
|---------------------------|---|
| Explanation | radio is currently OFF on this NIM |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CELLWAN-5-SMS_SERVICE_AVAILABLE : [chars] SMS service is now available.

| | |
|---------------------------|---|
| Explanation | You can send and receive text messages on this cellular interface |
| Recommended Action | No action is required. |

%CELLWAN-5-SMS_SERVICE_UNAVAILABLE : [chars] SMS service is now unavailable.

| | |
|---------------------------|---|
| Explanation | You can not send and receive text messages on this cellular interface |
| Recommended Action | No action is required. |

%CELLWAN-5-INCOMING_SMS : [chars] has just received new incoming SMS.

| | |
|---------------------------|---|
| Explanation | New incoming text messages arrived at cellular interface |
| Recommended Action | Please do 'cellular <unit> gsm cdma sms view' to read SMS |

%CELLWAN-5-OUTGOING_SMS_SENT : [chars] has just sent an outgoing SMS successfully.

| | |
|---------------------------|---|
| Explanation | Outgoing text message was sent successfully from cellular interface |
| Recommended Action | No action is required. |

%CELLWAN-4-OUTGOING_SMS_ERROR : [chars] failed to send an outgoing SMS.

| | |
|---------------------------|--|
| Explanation | Outgoing text message failed to send from cellular interface |
| Recommended Action | Please do 'show cellular <unit> sms' to see error code |

%CELLWAN-4-OUTGOING_SMS_SERV_UNAVAIL : [chars] can't send an SMS because SMS service is not available.

Explanation Text message service is not available on specified cellular interface

Recommended Action Check modem is powered up, radio is not in power saving mode, and SIM is inserted

%CELLWAN-2-SMS_ARCH_PATH_UNCONFIGURED : [chars] failed to archive SMS because 'gsm|cdma|lte sms archive path' under cellular controller is not configured.

Explanation 'gsm|cdma|lte sms archive path' under cellular controller must be configured first before background incoming text message archive can function properly

Recommended Action Configure 'gsm|cdma|lte sms archive path' under cellular controller

%CELLWAN-5-SMS_INBOX_ARCH_DONE : [chars] has just archived all incoming SMS to FTP server successfully.

Explanation Incoming text messages were archived to FTP server successfully from cellular interface

Recommended Action No action is required.

%CELLWAN-2-SMS_INBOX_ARCH_OPEN_ERROR : [chars] failed to open [chars] to archive incoming SMS.

Explanation Incoming text messages archive to FTP server failed because the FTP URL configured with 'gsm|cdma|lte sms archive path' under cellular controller can not be opened

Recommended Action Please check that the FTP server configured under cellular controller is reachable, and that the directory exists

%CELLWAN-2-SMS_INBOX_ARCH_WRITE_ERROR : [chars] failed to write [chars] to archive incoming SMS.

Explanation Incoming text messages archive to FTP server failed because of write error to the FTP URL configured with 'gsm|cdma|lte sms archive path' under cellular controller

Recommended Action Please check that the FTP server configured under cellular controller with 'gsm|cdma|lte sms archive path' is reachable, and has enough storage space

%CELLWAN-5-SMS_INBOX_MSG_ARCH_DONE : [chars] has just archived an incoming SMS to FTP server successfully.

Explanation An incoming text message was archived to FTP server successfully from cellular interface

%CELLWAN-5-SMS_INBOX_MSG_ARCH_DONE : [chars] has just archived an incoming SMS to FTP server successfully.

Recommended Action No action is required.

%CELLWAN-5-SMS_OUTBOX_ARCH_DONE : [chars] has just archived an outgoing SMS to FTP server successfully.

Explanation An outgoing text message was archived to FTP server successfully from cellular interface

Recommended Action No action is required.

%CELLWAN-2-SMS_OUTBOX_ARCH_OPEN_ERROR : [chars] failed to open [chars] to archive an outgoing SMS.

Explanation Outgoing text message archive to FTP server failed because the FTP URL configured with 'gsm|cdma|lte sms archive path' under cellular controller can not be opened

Recommended Action Please check that the FTP server configured under cellular controller is reachable, and that the directory exists

%CELLWAN-2-SMS_OUTBOX_ARCH_WRITE_ERROR : [chars] failed to write [chars] to archive an outgoing SMS.

Explanation Outgoing text message archive to FTP server failed because of write error to the FTP URL configured with 'gsm|cdma|lte sms archive path' under cellular controller

Recommended Action Please check that the FTP server configured under cellular controller with 'gsm|cdma|lte sms archive path' is reachable, and has enough storage space

%CELLWAN-4-CELLULAR_FW_UNSUPPORTED : [chars]: Unsupported or older modem firmware [chars] detected, please upgrade modem to supported firmware of at least [chars]

Explanation The current firmware on specified cellular interface is not supported. Any actions and errors that occur will not be supported until the fw is upgraded to at least the version requested

Recommended Action Please upgrade to the latest FW from online using 'microcode reload'

%CELLWAN-2-DMLOG_FILTER_FILE_OPEN_ERROR : [chars] failed to open [chars] to read DM log filter.

Explanation Failed to open filter file from the location configured with 'gsm|cdma|lte modem dm-log filter' under cellular controller

Recommended Action Please check that the path configured under cellular controller is reachable

%CELLWAN-2-DMLOG_OUTPUT_FILE_OPEN_ERROR : [chars] failed to open [chars] to archive DM log files.

Explanation Saving DM packets to file system failed. Output file URL configured with 'gsm|cdma|lte modem dm-log output path' under cellular controller can not be opened

Recommended Action Please check that the path configured under cellular controller is reachable

%CELLWAN-2-DMLOG_OUTPUT_WRITE_ERROR : [chars] failed to write [chars] DM packets to configured file system

Explanation Saving DM packets to file system failed because of write error to the URL configured with 'gsm|cdma|lte modem dm-log output path' under cellular controller

Recommended Action Please check that the URL configured under cellular controller with 'gsm|cdma|lte modem dm-log output path' is reachable, and has enough storage space

%CELLWAN-2-DMLOG_OUTPUT_SPACE_FULL : [chars] DM log file storage is full!

Explanation Saving DM packets to file system failed because there is no more space left on the URL configured with 'gsm|cdma|lte modem dm-log output path' under cellular controller

Recommended Action Please delete existing log files from the specified URL 'gsm|cdma|lte modem dm-log output path' or upload them to the server then re-enable logging.

%CELLWAN-5-DMLOG_AUTOSTOP_TRIGGER : [chars]: DM logging will be stopped in [dec] [chars], autostop trigger event [chars] set

Explanation DM log autostop trigger event configured, DM logging will be stopped after the timer expiry

Recommended Action No action is required.

%CELLWAN-5-DMLOG_AUTOSTOP_TIMER_EXPIRY : [chars]: DM logging stopped

Explanation DM logging is stopped due to autostop trigger timer expiry

%CELLWAN-5-DMLOG_AUTOSTOP_TIMER_EXPIRY : [chars]: DM logging stopped

Recommended Action No action is required.

%CELLWAN-5-DMLOG_AUTOSTOP_TIMER_CANCEL : [chars]: DM logging autostop timer canceled

Explanation DM logging autostop timer is canceled
Recommended Action No action is required.

%CELLWAN-5-DMLOG_DISABLE_OIR : [chars]: OIR Detected. DM logging stopped

Explanation DM logging is stopped due to OIR
Recommended Action No action is required.

%CELLWAN-5-DMLOG_DISPLAY_OUTPUT_PATH_EXTERN : DM log output path = bootflash:/core/modules

Explanation DM log output path set to bootflash:/core/modules
Recommended Action

%CELLWAN-5-DMLOG_DISPLAY_OUTPUT_PATH_INTEGRATED : DM log output path = bootflash:

Explanation DM log output path set to bootflash:/
Recommended Action

%CELLWAN-2-SVBLOG_OUTPUT_FILE_OPEN_ERROR : [chars] failed to open [chars] to archive SVB log files.

Explanation Saving SVB packets to file system failed. Output file URL configured with 'gsm|cdma|lte modem dm-log output path' under cellular controller can not be opened
Recommended Action Please check that the path configured under cellular controller is reachable

%CELLWAN-2-SVBLOG_OUTPUT_WRITE_ERROR : [chars] failed to write [chars] SVB packets to configured file system

| | |
|---------------------------|--|
| Explanation | Saving SVB packets to file system failed because of write error to the URL configured with 'gsm cdma lte modem dm-log output path' under cellular controller |
| Recommended Action | Please check that the URL configured under cellular controller with 'gsm cdma lte modem dm-log output path' is reachable, and has enough storage space |

%CELLWAN-2-SVBLOG_OUTPUT_SPACE_FULL : [chars] SVB log file storage is full!

| | |
|---------------------------|---|
| Explanation | Saving SVB packets to file system failed because there is no more space left on the URL configured with 'gsm cdma lte modem dm-log output path' under cellular controller |
| Recommended Action | Please delete existing log files from the specified URL 'gsm cdma lte modem dm-log output path' or upload them to the server then re-enable logging. |

%CELLWAN-5-SVBLOG_AUTOSTOP_TRIGGER : [chars]: SVB logging will be stopped in [dec] minutes, autostop trigger event [chars] set

| | |
|---------------------------|---|
| Explanation | SVB log autostop trigger event configured, SVB logging will be stopped after the timer expiry |
| Recommended Action | No action is required. |

%CELLWAN-5-SVBLOG_AUTOSTOP_TIMER_EXPIRY : [chars]: SVB logging stopped

| | |
|---------------------------|---|
| Explanation | SVB logging is stopped due to autostop trigger timer expiry |
| Recommended Action | No action is required. |

%CELLWAN-5-SVBLOG_AUTOSTOP_TIMER_CANCEL : [chars]: SVB logging autostop timer canceled

| | |
|---------------------------|--|
| Explanation | SVB logging autostop timer is canceled |
| Recommended Action | No action is required. |

%CELLWAN-2-WCDMA_ALL_BAND_UNDEFINED : [[chars]]: wcdma-all band not supported

| | |
|---------------------------|---|
| Explanation | wcdma-all band is not supported by modem or not defined |
| Recommended Action | Please contact TAC support LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |

%CELLWAN-2-CALL_SETUP_FAIL : [chars] data call setup failed due to [chars].

Explanation Data call setup failed because the IP address configured under cellular interface does not match the IP address assigned by the network

Recommended Action Please check the IP address configuration under cellular interface

%CELLWAN-2-MDM_LINK_FAILURE : [chars] direct IP synchronization process fails after [dec] attempts

Explanation Direct IP synchronization fails to come up after maximum number of attempts.

Recommended Action Contact customer service if the problem persists.

%CELLWAN-3-GPS_FAIL_START_TRACK : [[chars]] GPS failed to start tracking - [chars] [[hex]], please try again

Explanation Modem failed to enable GPS mode due to error indicated. Fix that error and try again.

Recommended Action Fix error indicated and try enabling GPS again.

%CELLWAN-3-GPS_FAIL_END_SESSION : [[chars]] GPS failed to end location fix session - [chars] [[hex]], please try again

Explanation Modem failed to disable GPS mode due to error indicated. Fix that error and try again.

Recommended Action Fix error indicated and try disabling GPS again.

%CELLWAN-2-GSM_PROFILE_UNDEFINED : [[chars]]: Default profile [dec][chars] does not exist. Please execute 'cellular <unit> gsm profile create <profile #>' to create the profile.

Explanation Default profile is undefined. the profile does not exist because it is not defined or is deleted.

Recommended Action Create the profile by cellular exec cli. If error still persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support)

%CELLWAN-3-GSM_PROFILE_CREATION_FAILURE : [[chars]] GSM profile creation fails - [chars] [[hex]], please try again

| | |
|---------------------------|--|
| Explanation | Modem failed to create the GSM profile due to error indicated. Fix that error and try again. |
| Recommended Action | Fix error indicated and try creating GSM profile again. |

%CELLWAN-2-MODEM_TIMEOUT : Modem in [chars] not responding

| | |
|---------------------------|--|
| Explanation | The cellular modem is not responding. |
| Recommended Action | If the problem persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |

%CELLWAN-4-CELLULAR_MODEM_SKU_MISMATCH : [chars]: Mismatch detected between installed modem [chars][SKU ID [chars]] on SKU type [chars]. Expected modem for this SKU is [chars][SKU ID [chars]]

| | |
|---------------------------|--|
| Explanation | Incorrect modem type has been installed on this SKU. Any actions and issues caused by it will not be supported |
| Recommended Action | Please contact the cisco customer service to replace the card |

%CELLWAN-1-POOL_INIT_FAIL : cellular pool init failed for subslot [dec]/[dec] pool name [chars]

| | |
|---------------------------|--|
| Explanation | The NIM cellular pool init failed for this module. |
| Recommended Action | If the problem persists, please provide the following: LOG_STD_SH_CMD_ACTION(show cellular x/x/x all<noCmdBold> command and <CmdBold>show tech-support) |

%CELLWAN-2-QOS_ENABLED : QoS Feature in [chars] is now activated

| | |
|---------------------------|--|
| Explanation | QoS Feature is now enabled and activated in the modem. |
| Recommended Action | QoS Feature is now enabled and activated in the modem. |

%CELLWAN-2-QOS_NW_STATUS : Network status for QoS feature is [chars] in [chars].

| | |
|---------------------------|--|
| Explanation | Network status for QoS feature is either enabled or disabled by the carrier. |
| Recommended Action | check with carrier if you expect QoS feature but it is disabled |

%CELLWAN-2-QOS_PRI_EVENT_STATUS : QoS Event Status = [dec] for default bearer in [chars] in [chars].

| | |
|---------------------------|---|
| Explanation | QoS Event Status for default bearer for the cellular interface. |
| Recommended Action | check with carrier to see if the default bearer config is changed |

%CELLWAN-2-BEARER_UP : Instance id=[dec], [chars] bearer (bearer_id=[int]) QCI=[dec] in [chars] is now UP

| | |
|---------------------------|--|
| Explanation | default/dedicated bearer has been added. |
| Recommended Action | Check the TFT rules of the dedicated bearer by doing show cellular and configure the host QOS configuration to match the TFT rules |

%CELLWAN-2-BEARER_DOWN : Instance id=[dec], [chars] bearer (bearer_id=[int]) QCI=[int] in [chars] is now down.

| | |
|---------------------------|---|
| Explanation | default/dedicated bearer has been deleted. |
| Recommended Action | Host QOS configuration may need to be modified to match the modem configuration |

%CELLWAN-2-BEARER_DELETED : [chars] bearer (bearer_id=[int]) in [chars] is now deleted.

| | |
|---------------------------|--|
| Explanation | default/dedicated bearer has been deleted. |
| Recommended Action | Host QOS configuration may need to be deleted to match the modem configuration |

%CELLWAN-2-BEARER_SUSPENDED : Instance id=[dec], [chars] bearer (bearer_id=[int]) QCI=[dec] in [chars] is now suspended.

| | |
|---------------------------|--|
| Explanation | default/dedicated bearer has been suspended. |
| Recommended Action | Host QOS configuration may need to be suspended to match the modem configuration |

%CELLWAN-2-BEARER_MODIFIED : Instance id=[dec], [chars] bearer (bearer_id=[int]) QCI=[dec] configuration in [chars] is modified

| | |
|---------------------------|--|
| Explanation | default/dedicated bearer configuration has been modified. |
| Recommended Action | Check the TFT rules of the dedicated bearer by doing show cellular and configure the host QOS configuration to match the TFT rules |

%CELLWAN-2-BEARER_CONGESTION_ON : Instance id=[dec], [chars] bearer (bearer_id=[int]) QCI=[int] in [chars] is congested

| | |
|---------------------------|---|
| Explanation | Traffic congestion present in the dedicated bearer. If it does not clear, make sure the host QOS configuration matches the dedicated bearer configuration |
| Recommended Action | Check the MBR of the dedicated bearer by doing show cellular and configure the host QOS configuration to match MBR of the dedicated bearer. |

%CELLWAN-2-BEARER_CONGESTION_OFF : Instance id=[dec], [chars] bearer (bearer_id=[int]) QCI=[int] in [chars] is NOT congested now

| | |
|---------------------------|--|
| Explanation | Traffic congestion has cleared in the dedicated bearer |
| Recommended Action | No action is needed |

%CELLWAN-2-DEDICATED_BEARER_STATUS_UNKNOWN : Instance id=[dec], [chars] bearer (bearer_id=[int]) QCI=[int] configuration in [chars] is unknown=[dec]

| | |
|---------------------------|---|
| Explanation | Dedicated bearer configuration status is unknown. |
| Recommended Action | Check the TFT rules of the dedicated bearer by doing show cellular and report the TFT rules to the carrier. |

%CELLWAN-4-MANUAL_PLMN_SELECTION_FAILED : Manual/Force PLMN Selection Failed. [chars]

| | |
|---------------------------|---|
| Explanation | Manual/Force PLMN Selection Failed |
| Recommended Action | Please use Different PLMN or check number of MNC Bits in PLMN Selection |

%CELLWAN-4-DG_SMS_CONFIG_FAILED : Dying Gasp SMS Configuration Failed. [chars]

| | |
|---------------------------|---|
| Explanation | Dying Gasp SMS Configuration Failed. |
| Recommended Action | Please try Dying Gasp SMS Configuration later |

%CELLWAN-4-DG_DETACH_CONFIG_FAILED : Dying Gasp Detach Configuration Failed. [chars]

| | |
|---------------------------|--|
| Explanation | Dying Gasp Detach Configuration Failed. |
| Recommended Action | Please try Dying Gasp Detach Configuration later |

%CELLWAN-4-MODEM_RESTART_IND : [chars] Modem restart [chars]

Explanation Modem Restart Indication**Recommended Action** No action is needed

%CELLWAN-4-MODEM_COMM_FAIL : Communication between Modem and IOS failed: [chars]

Explanation Communication between Modem and IOS Failed**Recommended Action** Modem Reset will recover

%CELLWAN-6-CELLULAR_BACKOFF_START : [chars]: Cellular back-off has started on PDN [dec]

Explanation Back off has started because of certain error codes from network side**Recommended Action**

%CELLWAN-6-CELLULAR_BACKOFF_STOP : [chars]: Cellular back-off has stopped on PDN [dec]

Explanation Back off has stopped**Recommended Action**

%CELLWAN-6-CELLULAR_NETWORK_ATTACH_FAILURE : [chars]: Cellular network attachment failure. Reject Cause [dec], [chars].

Explanation Network attachment failure**Recommended Action** Check 3GPP Table 10.5.95/3GPP TS 24.008 for information

%CELLWAN-2-LINK_RECOVERY : [chars]: Cellular Modem has been power cycled : [chars]

Explanation Link Recovery Process has detected an inconsistent state of the modem**Recommended Action**

%CELLWAN-2-DYING_GASP_POWER_FAILURE : Dying Gasp SMS will not be sent out by Modem in slot [dec]/[dec] due to standby power failure. Please contact TAC.

Explanation Modem doesn't have enough power to send Dying Gasp SMS

Recommended Action Please contact TAC

%CELLWAN-2-DYING_GASP_POWER_SUCCESS : Modem in slot [dec]/[dec] has sufficient power to send Dying Gasp SMS

Explanation Modem has sufficient power to send Dying Gasp SMS

Recommended Action No action is needed

%CELLWAN-2-CRASHDUMP_SUCCESS : [chars]:Crashdump successfully logged in /bootflash/

Explanation Cellular Modem Crashdump files successfully logged to local flash.

Recommended Action

%CELLWAN-6-FOTA_DNLD_STARTED : [[chars]]: Firmware download started in cellular slot [dec]/[dec]

Explanation FOTA Cellular modem firmware download started.

Recommended Action

%CELLWAN-6-FOTA_DNLD_COMPLETE : [[chars]]: Firmware has been downloaded for modem in cellular slot [dec]/[dec]

Explanation FOTA Cellular modem firmware download started.

Recommended Action

%CELLWAN-6-FOTA_UPGRADE_STARTED : [[chars]]: Firmware upgrade started in cellular slot [dec]/[dec]. Modem will reset and come up with new firmware.

Explanation FOTA Cellular modem firmware upgraded started.

Recommended Action

%CELLWAN-6-FOTA_UPGRADE_SUCESS : [[chars]]: Firmware upgrade successful in cellular slot [dec]/[dec]

Explanation FOTA Cellular modem firmware upgraded successfully.

**Recommended
Action**

%CELLWAN-6-FOTA_UPGRADE_TIMEOUT : [[chars]]: Firmware upgrade timed out in cellular slot [dec]/[dec]

Explanation FOTA Cellular modem firmware upgrade timed out.

**Recommended
Action**

CEM

%CEM-1-ISSU_NOMEMORY : msgtxt_nomemory

Explanation The requested operation could not be accomplished because of a low memory condition.

**Recommended
Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%CEM-3-ISSU_SENDFAILED : CEM ISSU: send message failed, rc = [dec]

Explanation The sending of a message has failed.

**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CEM-4-ISSU_INCOMPATIBLE : cem-issu-compat: returned FALSE

Explanation The compatibility checking has failed

**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CEM-4-ISSU_XFORM : [chars]: failed, rc=[chars]

| | |
|---------------------------|---|
| Explanation | The transform has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CEMA

%CEMA-3-SPA_CMD_FAIL : [chars]: Command [chars]([dec]) failed ([chars] partial command dump [hex] [hex] [hex])

| | |
|---------------------------|--|
| Explanation | A failure occurred when sending a command to the SPA indicated in the error message. |
| Recommended Action | SPA_CEMA_FAIL_ACTION |

%CEMA-3-CEMA_ADD_FAIL : [chars]: CEMA SB addition failed for interface [chars]

| | |
|---------------------------|---|
| Explanation | A failure occurred when adding cema_sb to the interface shown in the error message. |
| Recommended Action | SPA_CEMA_FAIL_ACTION |

%CEMA-3-CLEAR_CONNECTION_STATS_FAIL : [chars]: clear connection stats failed ([chars])

| | |
|---------------------------|---|
| Explanation | A failure occurred when sending a clear connection stats command. |
| Recommended Action | CEMA_CMD_FAIL_ACTION |

%CEMA-3-CONNECTION_DELETE_FAIL : [chars]: connection delete failed ([chars])

| | |
|---------------------------|--|
| Explanation | A failure occurred when sending a connection delete command. |
| Recommended Action | CEMA_CMD_FAIL_ACTION |

%CEMA-3-ATM_VP_CONFIG_FAIL : [chars]: connection configuration failed for VP [int] ([chars])

| | |
|--------------------|---|
| Explanation | A failure occurred when sending a VP configuration command. |
|--------------------|---|

%CEMA-3-ATM_VP_CONFIG_FAIL : [chars]: connection configuration failed for VP [int] ([chars])

Recommended Action CEMA_CMD_FAIL_ACTION

%CEMA-3-ATM_VC_CONFIG_FAIL : [chars]: connection configuration failed for VC [int]/[int] ([chars])

Explanation A failure occurred when sending a VC configuration command.

Recommended Action CEMA_CMD_FAIL_ACTION

%CEMA-3-CLEAR_INTERFACE_STATS_FAIL : [chars]: clear interface stats failed ([chars])

Explanation A failure occurred when sending a clear interface stats command.

Recommended Action CEMA_CMD_FAIL_ACTION

%CEMA-3-INTERFACE_DELETE_FAIL : [chars]: interface delete failed ([chars])

Explanation A failure occurred when sending an interface delete command.

Recommended Action CEMA_CMD_FAIL_ACTION

%CEMA-3-INTERFACE_CONFIG_FAIL : [chars]: interface configuration failed ([chars])

Explanation A failure occurred when sending an interface delete command.

Recommended Action CEMA_CMD_FAIL_ACTION

%CEMA-3-CARD_TYPE_CONFIG_FAIL : [chars]: card type configuration failed ([chars])

Explanation A failure occurred when sending a card type configuration command.

Recommended Action CEMA_CMD_FAIL_ACTION

CENT**%CENT-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]**

Explanation For a request from upper CENT software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%CENT-3-IPC_NORES : No space for the IPC reply, size [int]

Explanation For a request from upper CENT software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%CENT-2-IPC_INIT : IPC message handler registration failure, rc [int]

Explanation Registering an IPC message handler for the CENT feature failed. This will cause the feature to not function.

Recommended Action This is normally a software issue. The consequences are that the CENT feature will not function. LOG_STD_ACTION

CFC_LISP**%CFC_LISP-3-ALLOCATEFAIL : Failed to allocate memory for [chars]**

Explanation An internal software error occurred. This is probably because not enough memory was available.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CFC_LISP-3-SB_OPERATION_FAILED : Failed to [chars] subblock on [chars]

Explanation An internal software error occurred.

%CFC_LISP-3-SB_OPERATION_FAILED : Failed to [chars] subblock on [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CFC_LISP-3-LOCAL_EID : Failed to [chars] local EID prefix [chars]/[int]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-REMOTE_EID : Failed to [chars] remote EID prefix [chars]/[int][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-REMOTE_EID_PREFIX : Failed to [chars] remote EID prefix [chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-NO_ADJ : Failed to find adjacency for [chars] [chars] [chars] [int]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-NO_FIBIDB : Failed to find fibidb for [chars] [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-NO_SB : Failed to find subblock for [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-NO_TABLE : Failed to find table for [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-BG_PROCESS : Background process failed to [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

| | |
|--------------------|--|
| Explanation | Initialization of the specified subblock data structure could not be accomplished. |
|--------------------|--|

%CFC_LISP-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CFC_LISP-3-TABLE_STATE : Error setting state for table [chars] to top-id [int], iid [int], role [chars], [chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-TABLE_BIND : Error setting [chars] table [chars] for top-id [int], iid [int], [chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-TREE_OP_FAIL : Tree [chars] failed for [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-VIF : Unable to [chars] virtual interface [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-ADJ_SEQ : Adjacency [chars] is still complete after interface shutdown

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-NO_VIF : Unable to find [chars]virtual interface [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-UNABLE_TO_IDENTIFY_TABLE : Unable to identify table for packet from [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-INVALID_INPUT : Invalid input [chars] to [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-RLOC_VRF_IN_USE : RLOC vrfid [int] already in use by user [chars] top-id [int], cannot assign to top-id [int]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%CFC_LISP-3-RLOC_VRF_IN_USE : RLOC vrfid [int] already in use by user [chars] top-id [int], cannot assign to top-id [int]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CFC_LISP-3-UNEXPECTED_PKT : [chars]: [hex]

| | |
|---------------------------|---|
| Explanation | A packet with an unexpected protocol was given to the LISP datapath. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-UNKNOWN_PAYLOAD : Dropping LISP encapsulated packet, unknown payload [hex]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-5-IGNOREICMPMTU : Ignoring received ICMP Type 3 Code 4, [chars]->[chars] next hop mtu [int], due to pmtu min or max setting

| | |
|---------------------------|--|
| Explanation | An ICMP Type 3 Code 4 (fragmentation needed and DF set) packet has been received. This packet has specified a Next-Hop MTU that is smaller or greater than the current minimum or maximum path MTU discovery mtu value. The ICMP packet has been ignored and the MTU has not been changed. |
| Recommended Action | If you want the ICMP packet to be accepted and used, use the <code>ip lisp pmtu min NUMBER max NUMBER</code> command to decrease the minimum MTU allowed and/or increase the maximum MTU that is allowed. |

%CFC_LISP-5-IGNOREICMPV6MTU : Ignoring received ICMPv6 Type 2, [chars]->[chars] next hop mtu [int], due to pmtu min or max setting

| | |
|---------------------------|--|
| Explanation | An ICMPv6 Type 2 (Packet Too Big) packet has been received. This packet has specified a Next-Hop MTU that is smaller or greater than the current minimum or maximum path MTU discovery mtu value. The ICMP packet has been ignored and the MTU has not been changed. |
| Recommended Action | If you want the ICMP packet to be accepted and used, use the <code>ipv6 lisp pmtu min NUMBER max NUMBER</code> command to decrease the minimum MTU allowed and/or increase the maximum MTU that is allowed. |

%CFC_LISP-3-IPL_SRC : Failed to [chars] IPL source [chars] [chars]/[int][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-PUSH_CNTR : Failed to [chars] push counter for [chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-ELIG_OCE : Failed to [chars] LISP eligibility oce [chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-DECAP_OCE : Failed to [chars] LISP decapsulation OCE: [chars][chars]

| | |
|--------------------|--|
| Explanation | An operation dealing with a LISP decapsulation OCE encountered an error. The error message will indicate which operation failed, and the address-family context. |
|--------------------|--|

%CFC_LISP-3-DECAP_OCE : Failed to [chars] LISP decapsulation OCE: [chars][chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CFC_LISP-3-SIGNAL_OCE : Failed to [chars] LISP signal OCE [chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-TIMESTAMP_CTRL_PKT : Failed to timestamp LISP control packet

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-FREE_WITH_DEPS : Request to remove dependency sb on [chars] with dependents

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-DEP_ELEM : Request to [chars] dependency [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-ADJ : Request to [chars] adjacency [chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-5-ADJ_STACK : Stacking adjacency [chars] [chars][chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-XDR_REG_ERR : Failed to register XDR client [chars] ([int]), error [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-XDR_LEN_ERR : Failed to [chars] XDR message [chars] len [int] > max [int]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-ISSU_REG_ERR : Failed to register [chars] for ISSU client [chars] ([int]) entity [int], error [chars]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%CFC_LISP-3-ISSU_REG_ERR : Failed to register [chars] for ISSU client [chars] ([int]) entity [int], error [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CFC_LISP-3-ISSU_NEGO_ERR : Failed to negotiate [chars] for XDR client [chars], error [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-ISSU_XFORM_ERR : Failed to ISSU transform XDR message [chars], error [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-UNKN_INSTANCE : Unknown instance, unable to find/create virtual interface

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-WALK_DEP : Walking dependents [chars][chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-TERM_ADJ : Terminal adjacency [chars][chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-5-BELOW_MIN_MTU : Cannot set [chars] MTU for RLOC [chars] to [int], [chars] MTU for [chars] [chars] is [int], below minimum MTU [int]+[int] required for LISP encap

| | |
|---------------------------|---|
| Explanation | Unable to set the EID payload MTU for a remote RLOC below the minimal MTU, this will cause the encapsulated packet to be bigger than the MTU of the path to the remote RLOC, and may cause packet loss. |
| Recommended Action | Increase the MTU of the path to the remote RLOC |

%CFC_LISP-3-DEPRECATED_API : Use of a deprecated API [chars][chars]

| | |
|---------------------------|---|
| Explanation | |
| Recommended Action | Increase the MTU of the path to the remote RLOC |

%CFC_LISP-3-UNEXPECTED_PATH : Unexpected path type [chars]/[int]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-NO_PATH : Failed to resolve path type for [chars]:[chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-SRC_RLOC_IDX : [chars] source RLOC index database[chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-GSMR : Failed to [chars] generalised SMR attribute for [chars]/[int]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CFC_LISP-3-DYN_EID_IP_ADDR_CONFLICT : Ignore dynamic EID detection due to IP Address conflict [chars]:[chars] on [chars]

| | |
|---------------------------|---|
| Explanation | A dynamic EID Host attempted to register with an IP address conflicting with the XTR gateway. Refer to error message log for more details. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CFT

%CFT-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]

| | |
|---------------------------|---|
| Explanation | For a request from upper CFT software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%CFT-3-IPC_NORES : No space for the IPC reply, size [int]

Explanation For a request from upper CFT software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%CFT-2-IPC_INIT : IPC message handler registration failure, rc [int]

Explanation Registering an IPC message handler for the CFT feature failed. This will cause the feature to not function.

Recommended Action This is normally a software issue. The consequences are that the CFT feature will not function. LOG_STD_ACTION

CFT_API

%CFT_API-3-CFT_ERRMSG_NO_MEMORY : [chars] [chars] [dec]

Explanation The system was unable to supply the requested memory for flow processing to continue.

Recommended Action Check the available memory on your system. Possible solutions include: disable some features; reduce other system activities to ease memory demands; upgrade to a larger memory configuration. LOG_STD_SH_TECH_ACTION

%CFT_API-3-CFT_ERRMSG_MAX_MEMORY : [chars] [chars] [dec]

Explanation The maximum number of concurrent flows allowed has been exceeded. Some flows might not received the provisioned level of service.

Recommended Action This is the platform limit. Either lower the network load on this device or upgrade to a higher capacity platform. LOG_STD_SH_TECH_ACTION

%CFT_API-4-CFT_ERRMSG_CLIENT_PRE_CREATE_PREVENTED : [chars] [chars] [dec]

Explanation Flow creation was prevented by a flow table client. This may be due to an explicit policy that is enabled.

Recommended Action Check your policies to ensure this what you intend. LOG_STD_SH_TECH_ACTION

%CFT_API-4-CFT_ERRMSG_FLOW_CREATION_PREVENTED : [chars] [chars] [dec]

| | |
|---------------------------|---|
| Explanation | Flow creation was denied by a the system. A possible denial of service attack may have been detected. |
| Recommended Action | Modify your denial of service policy if this is in error. LOG_STD_SH_TECH_ACTION |

%CFT_API-5-CFT_ERRMSG_UNSUPPORTED_L3_PROTOCOL : [chars] [chars] [dec]

| | |
|---------------------------|---|
| Explanation | An unsupported layer 3 protocol was identified. |
| Recommended Action | Flow based inspection does not support this protocol at this time. LOG_STD_SH_TECH_ACTION |

%CFT_API-5-CFT_ERRMSG_NON_FIRST_IP_FRAGMENT : [chars] [chars] [dec]

| | |
|---------------------------|---|
| Explanation | The flow table was unable to process a TCP fragmented packet. Service for these packets may be unavailable. |
| Recommended Action | Enable the virtual fragment reassembly (VFR) functionality. If fragmentation is excessive, try to identify the source in your network topology that is causing packet fragmentation. LOG_STD_SH_TECH_ACTION |

%CFT_API-7-CFT_ERRMSG_CLIENT_API : [chars] [chars] [dec]

| | |
|---------------------------|---|
| Explanation | A CFT client may have a incorrectly accessed an API. |
| Recommended Action | This is an internal software error. Please report it to your technical support representative. LOG_STD_SH_TECH_ACTION |

%CFT_API-3-CFT_ERRMSG_UNKNOWN : [chars] [chars] [dec]

| | |
|---------------------------|---|
| Explanation | The error message type does not match the possible enumerated definitions. |
| Recommended Action | This is an internal software error. Please report it to your technical support representative. LOG_STD_SH_TECH_ACTION |

CHASFS

%CHASFS-3-NOCHASFS DIR : The directory [chars] does not exist.

| | |
|---------------------------|------------------------|
| Explanation | No explanation. |
| Recommended Action | No action is required. |

%CHASFS-3-NOINOTIFY : The inotify device could not be opened. Error [dec].

Explanation This error occurs when there is an error in the system that prevents the notification facility from being accessed.

Recommended Action No action is required.

%CHASFS-3-NORESOLVE_LOCAL_OBJECT : Error resolving local FRU object: [chars]

Explanation An application was not able to create a reference to an object in its local chassis file system.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CHASFS-3-NOOPEN_PROPERTY : Error opening chassis file system object [chars]: [chars]

Explanation An application was not able to open a an object in its local chassis file system.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

CHAT

%CHAT-3-CANTRUN : %t in use, can't run startup script

Explanation When the startup script attempted to run, it found another process had Already been started on the line

Recommended Action Remove startup script from line configuration if it's inappropriate. Report to cisco.

CISCO_STUN through CMCC

- CMAN_IDPROM_ENVMON
- CMAN_LED
- CMAPP
- CMCC

CISCO_STUN

**%CISCO_STUN-3-QUEUE_ERROR : Unable to enqueue event [chars] ([dec]) to a process watched queue.
Current size: [dec], max size: [dec]**

Explanation An internal or external event was dropped because it could not be added to the queue, probably because the queue is full. The result may be minor (retransmission of a STUN message) or major (dropped call), depending on the event which was lost. This error may indicate that the call rate is exceeding the capacity of the gateway. If this is the case, the CPU utilization will be excessively high (above 75%).

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show process cpu** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

CLEAR

%CLEAR-5-COUNTERS : Clear counter on [chars] [chars] by [chars]

Explanation The counters have been cleared on the interface(s)

Recommended Action No action is required.

%CLEAR-5-EXT_COUNT : Clear extended [chars] counters on [chars] by [chars]

Explanation The extended counters have been cleared on the interface(s)

Recommended Action No action is required.

CLOCK_RECOVERY**%CLOCK_RECOVERY-4-CLOCK_FAILED : [chars] on module [dec]/[dec] failed**

| | |
|---------------------------|--|
| Explanation | This message indicates that an active recovered or enhanced clock has failed |
| Recommended Action | No action is required. |

%CLOCK_RECOVERY-6-CLOCK_ACTIVE : [chars] on module [dec]/[dec] is now active

| | |
|---------------------------|---|
| Explanation | This message indicates that a recovered or enhanced clock has become active |
| Recommended Action | No action is required. |

CLS**%CLS-3-CLSFAIL : CLS: Assertion failed: [chars]**

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CLS-3-CLSMSG : [chars]

| | |
|---------------------------|---|
| Explanation | A software error detected while manipulating CLSIMsg objects. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CLS-3-BOGUSOP : Unknown CLS verb for [chars] context, DlcOpcodeT=[hex]

| | |
|--------------------|---|
| Explanation | A bad opcode was generated by the DLC for the STN or CEP. |
|--------------------|---|

%CLS-3-BOGUSOP : Unknown CLS verb for [chars] context, DlcOpcodeT=[hex]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

CLSDR**%CLSDR-3-NOINIT : CLSDRIVER not initialized**

| | |
|---------------------------|--|
| Explanation | A CLSDRIVER initialization failed earlier. Trying to use the driver now results in an error condition. |
| Recommended Action | Remove and then restore the destination logical unit (DLU) in the configuration file and try and reboot the system. LOG_STD_ACTION |

%CLSDR-3-NOREMOVEPORT : RemovePort: port [hex] not on list

| | |
|---------------------------|---|
| Explanation | The destination logical unit (DLU) is trying to remove a nonexistent port from the list of active ports because it does not have the correct list of active ports. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CLSDR-3-NOREMOVECEP : RemoveCep : Cep [hex] not on list

| | |
|---------------------------|---|
| Explanation | The destination logical unit (DLU) is trying to remove a nonexistent connection end point from the internal data structure. This creates a problem in the connection end point (CEP) maintenance logic. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CLSDR-3-NODLUCREATE : Cannot create DLU for this type [dec]

| | |
|--------------------|--|
| Explanation | The CLSDRIVER does not understand the destination logical unit (DLU) type. Currently, only STUN uses the CLSDRIVER. Any other value results in an error. |
|--------------------|--|

%CLSDR-3-NODLUCREATE : Cannot create DLU for this type [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CLSDR-3-NOPORTCREATE : Cannot create PORT structure

| | |
|---------------------------|---|
| Explanation | The CLSDRIVER cannot enable this port for processing. |
| Recommended Action | Try rebooting the router. LOG_STD_ACTION |

%CLSDR-3-NOCLSSERVER : unable to start the Server process

| | |
|---------------------------|--|
| Explanation | Could not start the CLSDRIVER process, possibly due to a resource problem. The subsystem using CLSDRIVER does not work. |
| Recommended Action | Remove and then restore the destination logical unit (DLU) in the configuration file and try and reboot the system. LOG_STD_ACTION |

%CLSDR-3-INCORRECTPORT : Incorrect port pointer in USapId

| | |
|---------------------------|---|
| Explanation | Cisco Link Services I (CLSI) returned an incorrect port pointer in the USapID. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CLSDR-3-NOCEP : Cannot found cep in free pool

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CLSDR-3-WRONGMSG : Should never be here, cls message type unknown [hex]

| | |
|--------------------|--|
| Explanation | The CLS message type is unknown to the destination logical unit (DLU). |
|--------------------|--|

%CLSDR-3-WRONGMSG : Should never be here, cls message type unknown [hex]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CLSDR-3-MSGERR : [chars] couldn't get a message

| | |
|---------------------------|---|
| Explanation | The destination logical unit (DLU) could not send a correct message to Cisco Link Services I (CLSI) because the message was formed incorrectly. CLSI will not perform the desired action. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CLSDR-3-ERRRTN : [chars] failed error [hex]

| | |
|---------------------------|---|
| Explanation | An error was returned from Cisco Link Services I (CLSI) to the destination logical unit (DLU) because CLSI did not perform the action desired by the DLU. |
| Recommended Action | Refer to CLSI software documentation for more information about this error. Report this error to your technical support representative. |

CMANRP**%CMANRP-3-MSGDISPATCHNULL : Received NULL TDL message from IOS**

| | |
|---------------------------|---|
| Explanation | An unexpected condition in which IOS has received a NULL TDL message from Chassis Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMANRP-3-MSGDISPATCH : Unable to dispatch received TDL message '[chars]' from Chassis Manager. LUID: [chars]

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred while IOS is trying to dispatch to the TDL message handler functions for received TDL messages from Chassis Manager. |
|--------------------|---|

%CMANRP-3-MSGDISPATCH : Unable to dispatch received TDL message '[chars]' from Chassis Manager. LUID: [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMANRP-3-MSGIPCERR : Unable to process received IPC messages from Chassis Manager, error: [chars]

Explanation An unexpected condition has occurred while IOS is trying to process a received IPC message from Chassis Manager.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMANRP-3-INVERR : Unable to process chassis inventory for file [chars], slot [dec], [chars], error [dec]. Some SPA's may not be fully configured

Explanation An unexpected condition has occurred while IOS is trying to process the chassis inventory on startup. IOS can not determine the type and number of all Carrier Cards and SPA's present in the system. Some configuration relating to these SPA's may not be applied and leave the system in an inconsistent state.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMANRP-3-INVERRSPA : Unable to process chassis inventory for file [chars], SPA subslot [dec]/[dec], [chars], error [dec]. Some SPA's may not be fully configured

Explanation An unexpected condition has occurred while IOS is trying to process the chassis inventory on startup. IOS can not determine the type and number of all Carrier Cards and SPA's present in the system. Some configuration relating to these SPA's may not be applied and leave the system in an inconsistent state.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMANRP-2-CRASHDUMP : Fatal error, calling crashdump, error: [dec] [chars]

| | |
|---------------------------|---|
| Explanation | A fatal condition has occurred causing IOS to crashdump. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMANRP-6-CMSTATUS : Chassis Manager Process is [chars]

| | |
|---------------------------|--|
| Explanation | The current status of Chassis Manager Process. |
| Recommended Action | No action is required. |

%CMANRP-6-CMHASTATUS : RP switchover, [chars]

| | |
|---------------------------|---|
| Explanation | RP switchover events received by chassis manager. |
| Recommended Action | No action is required. |

%CMANRP-6-CMSWREAD : RP switchover event triggered

| | |
|---------------------------|--|
| Explanation | RP switchover event triggered by IOS fastpath. |
| Recommended Action | No action is required. |

%CMANRP-3-CMREADFAIL : Read from cpld_ha fd [dec] failed, errno [dec], event cnt [dec]

| | |
|---------------------------|--|
| Explanation | Read from cpld_ha device returned 0 bytes. |
| Recommended Action | No action is required. |

%CMANRP-6-CMNOTSWITCH : RP is not doing switchover

| | |
|---------------------------|--|
| Explanation | Read from cpld_ha device indicate no switchover event. |
| Recommended Action | No action is required. |

%CMANRP-3-CMSWVERINFO : Unable to process software version information using file [chars]. Reason: [chars]. Error: [dec]

Explanation An unexpected condition has occurred while IOS was trying to process the software version information file. As a result, version information may not be available to an SNMP Manager

Recommended Action No action is required.

%CMANRP-3-UDEVPERMS : An invalid permissions value, [chars], was found in a udev file

Explanation The udev files for a particular filesystem contain a description the file system. If the permissions attribute is not recognized then this file system may run with incorrect permissions.

Recommended Action No action is required.

%CMANRP-4-SMU_UNCOMMITTED : There are uncommitted SMU, abort reload and 'install commit' if required

Explanation There are uncommitted SMU activity in the system, reload will remove this SMU activity, use 'install commit' to make it persistent.

Recommended Action No action is required.

%CMANRP-6-SMU_COMMITTED : 'install commit' is success.

Explanation There were uncommitted SMU activity in the system, reload will remove this SMU activity, with user input install commit is done.

Recommended Action No action is required.

%CMANRP-3-SMU_COMMITTED_FAILED : 'install commit' failed [dec] during reload.

Explanation There are uncommitted SMU activity in the system, reload will remove this SMU activity, with user input install commit is tried but failed with the error code mentioned in message.

Recommended Action No action is required.

CMAN_IDPROM_ENVMON

%CMAN_IDPROM_ENVMON-3-CMAN_IDPROM_FIELD_INVALID : The idprom contains an invalid environmental monitoring field.

| | |
|---------------------------|--|
| Explanation | If this error occurs then parsing of the environmental monitoring data is aborted. Environmental monitoring will be either incomplete or absent entirely. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

CMAN_LED

%CMAN_LED-6-BEACON_LED_TURNED : Slot [dec] Beacon LED turned [chars]

| | |
|---------------------------|--|
| Explanation | Beacon LED turned ON/OFF. This is a notification message only.No action is required. |
| Recommended Action | This is a notification message only. No action is required. |

CMAPP

%CMAPP-6-INTERNAL_ERROR : MGCP fallback is in process, retry later

Explanation

Recommended Action

%CMAPP-6-PROCESS_CREATION_FAILED : Cannot create Call Manager Application process

| | |
|---------------------------|--|
| Explanation | Failed to create the Call Manager Application process. |
| Recommended Action | Check the size of free memory to make sure there is enough memory. |

%CMAPP-6-CONFIG_DONE : Configuration by CCM is done

| | |
|---------------------------|---|
| Explanation | The gateway's configuration has been changed by CCM |
| Recommended Action | This is an informational message only. No action is required. |

CMCC

%CMCC-3-DDR_SINGLE_BIT_ERROR : Single-bit DRAM ECC error: mme: [int], sbe: [int], address: [hex], pid: [int], name: [chars]

Explanation The SIP DRAM experienced a single-bit error checking code (ECC) error.

Recommended Action No action is required. This error is usually self-correcting. If the problem persists, you may need to replace the SIP.

%CMCC-0-CPLD_INITIALIZATION : The SIP CPLD has failed initialization :[chars]

Explanation A SIP complex programmable logic device (CPLD) failed to initialize. This error could be caused by a hardware or software driver defect.

Recommended Action Examine the logs for CPLD driver or hardware errors. Verify that the software and CPLD versions are compatible.

%CMCC-0-FPGA_INITIALIZATION : The CC has failed initialization because [chars]. Reloading the card

Explanation The FPGA on the carrier card has failed to initialize. This error could be caused by a hardware

Recommended Action Examine the driver logs or hardware errors. Decode the core accompanied with this error.

%CMCC-0-CPLD_IOCTL : A CPLD driver I/O control has failed because [chars]

Explanation A complex programmable logic device (CPLD) I/O driver control has failed. This error could be caused by a hardware or software driver defect.

Recommended Action Examine the logs for CPLD driver and hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information

%CMCC-0-C2W_INITIALIZATION : The SIP C2W has failed initialization because [chars]

Explanation The C2W bus on the SIP is used to read the shared port adapter (SPA) IDPROM. This error indicates that the SIP C2W bus failed to initialize.

%CMCC-0-C2W_INITIALIZATION : The SIP C2W has failed initialization because [chars]

| | |
|---------------------------|--|
| Recommended Action | Examine the logs for C2W driver errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%CMCC-3-C2W_READ : An C2W read has failed because [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to read the C2W bus has failed. This error could be caused by a hardware or software defect. |
| Recommended Action | Examine the logs for C2W driver errors. |

%CMCC-3-C2W_WRITE : An I2C write has failed because [chars]

| | |
|---------------------------|--|
| Explanation | An attempt to write to the inter-integrated circuit (I2C) has failed. This error could be caused by a hardware or software defect. |
| Recommended Action | Examine the logs for I2C driver errors. |

%CMCC-0-SERDES_INITIALIZATION : The SIP Serial Bridge ASIC has failed initialization because [chars]

| | |
|---------------------------|--|
| Explanation | The SIP serial bridge ASIC failed to initialize. This error could be caused by a hardware defect, software driver defect, or improper internal configuration. |
| Recommended Action | Examine the logs for serial bridge ASIC driver and hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-5-SERDES_BLOCK_EVENT : A SerDes link informational error [chars], block [hex] count [hex]

| | |
|--------------------|--|
| Explanation | A serial bridge I/O event has occurred. This event is not serious but is logged for diagnostic purposes. |
|--------------------|--|

%CMCC-5-SERDES_BLOCK_EVENT : A SerDes link informational error [chars], block [hex] count [hex]

Recommended Action No user action is required.

%CMCC-0-HT_INITIALIZATION : The SIP HyperTransport has failed initialization because [chars]

Explanation A SIP HyperTransport (HT) CPU bus failed to initialize. This error could be caused by a hardware defect or HT driver defect.

Recommended Action Examine the logs for HT driver or hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMCC-0-HT_IOCTL : A SIP HyperTransport driver I/O control has failed because [chars]

Explanation A physical layer interface module (PLIM) HyperTransport (HT) driver I/O has failed. This error could be caused by a hardware defect or HT driver defect.

Recommended Action Examine the logs for HT driver or hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMCC-0-PLIM_INITIALIZATION : The PLIM has failed initialization because [chars]

Explanation The physical layer interface module (PLIM) failed to initialize. This error could be caused by a hardware defect or a PLIM driver defect.

Recommended Action Examine the logs for PLIM driver or hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMCC-0-HTDP_ENABLE : The HTDP initialization has failed because [chars]

| | |
|---------------------------|---|
| Explanation | The Hypertransort datapath failed to initialize. This error could be caused by a hardware defect or HTDP driver defect. |
| Recommended Action | Examine the logs for HTDP driver or hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-CPLD_INTR_ENABLE : The CPLD initialization has failed because [chars]

| | |
|---------------------------|---|
| Explanation | The CPLD interrupt enable failed to initialize. This error could be caused by a hardware defect or CPLD driver defect. |
| Recommended Action | Examine the logs for CPLD driver or hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-PLIM_IOCTL : A PLIM driver I/O control has failed because [chars]

| | |
|---------------------------|---|
| Explanation | A physical layer interface module (PLIM) driver I/O has failed. This error could be caused by a hardware defect or a PLIM driver defect. |
| Recommended Action | Examine the logs for PLIM driver or hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-PLIM_HALT : A PLIM driver has critical error [chars], [dec], param [hex] param [hex]

Explanation A physical layer interface module (PLIM) HyperTransport (HT) driver I/O has failed. This error could be caused by a hardware defect or an HT driver defect.

Recommended Action Restart the SIP. If the problem persists, you may need to replace the PLIM.

%CMCC-3-PLIM_STATUS : A PLIM driver informational error [chars], block [hex] count [hex]

Explanation A physical layer interface module (PLIM) HyperTransport (HT) driver I/O has failed. This error could be caused by a hardware defect or an HT driver defect.

Recommended Action Examine the logs for PLIM or hardware errors.

%CMCC-3-IDPROM_ACCESS : Failed access or process an IDPROM because [chars]

Explanation The system failed to access an IDPROM or an IDPROM process failed. This error could be caused by a hardware defect, software defect, or incorrect IDPROM content.

Recommended Action Examine the logs for IDPROM or hardware errors.

%CMCC-3-IDPROM_SENSOR : One or more sensor fields from the idprom failed to parse properly because [chars].

Explanation One or more IDPROM sensors failed to parse. This error most likely occurred because of a checksum failure in the IDPROM.

Recommended Action Examine the logs for IDPROM or hardware errors.

%CMCC-0-CHASSIS_TYPE : The chassis type [chars] is invalid.

Explanation The system has detected an invalid chassis type. This error could be caused by a hardware defect, software defect, or incorrect IDPROM content.

Recommended Action Examine the logs for IDPROM or hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMCC-0-CHASFS_OBJECT_CREATE : Failed to create chassis filesystem object [chars] because [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to create a chassis filesystem object. This error could be caused by a software defect or a filesystem failure. |
| Recommended Action | Restart the SIP. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-CHASFS_PROPERTY_CREATE : Failed to create chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to create a chassis filesystem object property. This error could be caused by a software defect or a filesystem failure. |
| Recommended Action | Restart the SIP. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-CHASFS_PROPERTY_GET : Failed to read chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to read a chassis filesystem object property. This error could be caused by a software defect or a filesystem failure. |
| Recommended Action | Restart the SIP. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-CHASFS_PROPERTY_SET : Failed to write chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to write a chassis filesystem object property. This error could be caused by a software defect or a filesystem failure. |
| Recommended Action | Restart the SIP. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-CHASFS_OBJECT_WATCH : Failed to watch chassis filesystem object [chars] because [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to watch a chassis filesystem object. This error could be caused by a software defect or a filesystem failure. |
| Recommended Action | Restart the SIP. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-CHASFS_OBJECT_NOT_PRESENT : Expected chassis filesystem object [chars] not present.

| | |
|---------------------------|---|
| Explanation | The system was unable to find an expected chassis filesystem object. This error could be caused by a software defect or a filesystem failure. |
| Recommended Action | Restart the SIP. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-CHASFS_PROPERTY_NOT_PRESENT : Expected chassis filesystem object [chars] property [chars] not present.

| | |
|---------------------------|---|
| Explanation | The system cannot locate a chassis filesystem object property. This error could be caused by a software defect or a filesystem failure. |
| Recommended Action | Restart the SIP. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-CHASFS_LOCATION_TRANSLATE : Failed to translate a location to a chasfs object name because [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to translate a data sensor location to the chassis filesystem (CHASFS) module. This error could be caused by a software defect. |
| Recommended Action | Restart the SIP. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMCC-0-PEER_INVALID : A peer table entry has invalid state.

| | |
|---------------------------|---|
| Explanation | An invalid state occurred in a peer table entry. This error could be caused by a software defect or system resource limitation. |
| Recommended Action | Restart the SIP. |

%CMCC-0-UIPEER_CREATE : Failed to create user interface peer.

| | |
|---------------------------|---|
| Explanation | The system failed to create a user interface peer. This error could be caused by a software defect or system resource limitation. |
| Recommended Action | Restart the SIP. |

%CMCC-0-SERVICES_INITIALIZATION : Failed to initialize general application services because [chars]

Explanation The system failed to initialize certain application services. This error could be caused by a software defect or system resource limitation.

Recommended Action Restart the SIP.

%CMCC-0-IPC_INITIALIZATION : IPC initialization failed because [chars]

Explanation An inter-process communication (IPC) initialization failed. This error could be caused by a software defect or system resource limitation.

Recommended Action Restart the SIP.

%CMCC-0-IPC_CONNECT_MASTER : IPC connection to the active RP failed because [chars]

Explanation The inter-process communication (IPC) connection to the active route processor (RP) failed. This error could be caused by a software defect or system resources limitation.

Recommended Action Restart the SIP.

%CMCC-0-IPC_CONNECTION_INVALID : An IPC connection has invalid state.

Explanation An inter-process communication (IPC) connection has an invalid state. This error could be caused by a software defect or system resource limitation.

Recommended Action Restart the SIP.

%CMCC-3-NETWORK_CLOCK_LOS : The SIP network clock jitter attenuator has lost signal

Explanation A SIP network clock jitter attenuator has lost signal from the WAN PLL and certain SPAs may report LOS alarms.

Recommended Action Restart the SIP.

%CMCC-3-NETWORK_CLOCK_DH : The SIP network clock jitter attenuator has entered digital holdover

Explanation A SIP network clock jitter attenuator has entered digital holdover mode and certain SPAs may report LOS alarms.

Recommended Action Restart the SIP.

%CMCC-3-NETWORK_CLOCK_CAL_START : The SIP network clock jitter attenuator is calibrating

| | |
|---------------------------|---|
| Explanation | The SIP network clock jitter attenuator is calibrating after device initialization stage. |
| Recommended Action | Restart the SIP if SPA LOS alarms are seen after this. |

%CMCC-3-NETWORK_CLOCK_CAL_FAIL : The SIP network clock jitter attenuator calibration fails

| | |
|---------------------------|---|
| Explanation | The SIP network clock jitter attenuator calibration can not complete within certain time. This would incur some SPA LOS alarms or other error events for some SPA port types. |
| Recommended Action | Restart the SIP |

%CMCC-3-CC_HOTSWAP_CKT_FAIL : Hot Swap Circuit has failed for bay [int]

| | |
|---------------------------|--|
| Explanation | The Hot Swap Circuit for the SPA bay has been tripped. This error could be caused by bad SPA or CC hardware. |
| Recommended Action | Examine the CMCC and PSM OIR logs. Verify whether the recovery reload could bring up the SPA |

%CMCC-3-SPA_HOTSWAP_CKT_FAIL : SPA on bay [int] has tripped the Hot Swap Circuit during power-up.

| | |
|---------------------------|--|
| Explanation | The Hot Swap Circuit for the SPA bay has been tripped. This error could be caused by bad SPA hardware. |
| Recommended Action | Examine the CMCC and PSM OIR logs. Verify whether the recovery reload could bring up the SPA |

%CMCC-3-HB_TIMEOUT : Periodic Heartbeat message from RP timed out.

| | |
|---------------------------|---|
| Explanation | RP sends periodic heartbeat message to the SIP. The SIP did not receive this heartbeat message for last timeout period. |
| Recommended Action | Examine the system logs for errors. |

%CMCC-3-STANDBY_EOBC_LINK_ERROR : Standby EOBC link error detected.

| | |
|--------------------|--|
| Explanation | Standby EOBC link error: either link state is down, or duplexity is not full, or speed is not 1Gbps. |
|--------------------|--|

%CMCC-3-STANDBY_EOBC_LINK_ERROR : Standby EOBC link error detected.

| | |
|---------------------------|---|
| Recommended Action | Examine the system hardware. Re-seat and securely screw in all FRUs. If the problem persists, please contact TAC support. |
|---------------------------|---|

%CMCC-5-SPA_MDR_INIT : SPA[int] initiated Minimal Disruptive Restart

| | |
|--------------------|--|
| Explanation | Informational message that the Minimal Disruptive Restart of a particular SPA has begun. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Informational notification. No action is required. |
|---------------------------|--|

%CMCC-5-SPA_MDR_DONE : SPA[int] completed Minimal Disruptive Restart

| | |
|--------------------|--|
| Explanation | Informational message that the Minimal Disruptive Restart of a particular SPA has completed. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Informational notification. No action is required. |
|---------------------------|--|

%CMCC-3-SPA_MDR_FAIL : The SPA in bay [int] failed Minimal Disruptive Restart because [chars]

| | |
|--------------------|--|
| Explanation | The SPA in bay %u failed Minimal Disruptive Restart. Minimal Disruptive Restart process is aborted and an attempt will be made to recover the SPA by resetting the SPA hardware. |
|--------------------|--|

| | |
|---------------------------|-------------------------------------|
| Recommended Action | Examine the system logs for errors. |
|---------------------------|-------------------------------------|

%CMCC-3-SPA_SOFT_STOP_FAIL : The SPA in bay [int] could not be soft stopped because [chars]

| | |
|--------------------|--|
| Explanation | The SPA in bay %u could not be soft stopped. An attempt will be made to recover the SPA by resetting the SPA hardware. |
|--------------------|--|

| | |
|---------------------------|-------------------------------------|
| Recommended Action | Examine the system logs for errors. |
|---------------------------|-------------------------------------|

%CMCC-3-SIP_MDR_FAIL : The SIP failed Minimal Disruptive Restart because [chars]

| | |
|--------------------|--|
| Explanation | The SIP failed Minimal Disruptive Restart. Minimal Disruptive Restart process is aborted and an attempt will be made to recover the SIP by resetting the SIP hardware. |
|--------------------|--|

| | |
|---------------------------|-------------------------------------|
| Recommended Action | Examine the system logs for errors. |
|---------------------------|-------------------------------------|

%CMCC-3-HT_DETACH : The SIP HyperTransport has failed detachment because [chars]

Explanation A SIP HyperTransport (HT) CPU bus failed to detach from software during SIP MDR. This error could be caused by a hardware defect or HT driver defect.

Recommended Action Examine the system logs for errors.

%CMCC-3-PLIM_DETACH : The PLIM has failed detachment from software because [chars]

Explanation The physical layer interface module (PLIM) failed to detach from software. This error could be caused by a hardware defect or a PLIM driver defect.

Recommended Action Examine the system logs for errors.

%CMCC-3-PLIM_RESTART : The PLIM has failed to restart because [chars]

Explanation The physical layer interface module (PLIM) failed to restart during SIP MDR. This error could be caused by a hardware defect or a PLIM driver defect.

Recommended Action Examine the system logs for errors.

%CMCC-0-EVENT_LIBRARY : An event facility initialization or maintenance function failed because [chars]

Explanation An event facility initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMCC-3-SSD_PIDA_OIR : Hot insertion/removal of SSD module in [dec]/[dec] not supported. Please reload the router with SSD module installed in bay 3

Explanation Hot swapping of SSD is not supported

Recommended Action Reload the router with SSD module installed in bay 3.

%CMCC-5-SERDES_RX_RESET_EVENT : Interlaken Rx Alignment Status [chars], Retry Count [dec]

Explanation Rx Sync Failed for Interlaken, Status Timer Expired. So, Resetting the Rx Interlaken Core

%CMCC-5-SERDES_RX_RESET_EVENT : Interlaken Rx Alignment Status [chars], Retry Count [dec]

Recommended Action No user action is required.

%CMCC-0-PCI_RESCAN : The PCIE bus could not be rescanned because [chars]

Explanation The PCIE bus failed to rescan. This error could be caused by a hardware defect, software driver defect, or improper internal configuration.

Recommended Action Examine the logs for PCIE bus driver and hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information

%CMCC-3-FPGA_FAIL : [chars] FPGA error detected: [chars]

Explanation A SIP field programmable logic device failure detected. This error could be caused by a hardware or software driver defect.

Recommended Action Examine the logs for FPGA driver or hardware errors. Verify that the software and firmware versions are compatible.

%CMCC-3-SCOOBY_ILAK_FAIL : Failed to bringup the Interlaken interface. Cause: [chars]

Explanation Interlaken Rx or Tx failed for this card. This error could be caused by a hardware or software driver defect.

Recommended Action Reload the Linecard. If the problem still persists, replace the Linecard.

%CMCC-2-BAD_ID_HW_SLOT_STR : Failed Identification Test in [chars]. The module [chars] on the [chars] may not be a genuine Cisco product. Cisco warranties and support programs only apply to genuine Cisco products. If Cisco determines that your insertion of non-Cisco memory, WIC cards, AIM cards, Network Modules, SPA cards, GBICs or other modules into a Cisco product is the cause of a support issue, Cisco may deny support under your warranty or under a Cisco support program.

Explanation Hardware in the specified location could not be identified as a genuine Cisco product

Recommended Action Replace the hardware with a genuine Cisco product. If this message recurs, contact your Cisco technical support representative and provide the representative with the gathered information

%CMCC-2-BAD_ID_HW : Failed Identification Test in [chars]. The module [chars] on the slot [dec] may not be a genuine Cisco product. Cisco warranties and support programs only apply to genuine Cisco products. If Cisco determines that your insertion of non-Cisco memory, WIC cards, AIM cards, Network Modules, SPA cards, GBICs or other modules into a Cisco product is the cause of a support issue, Cisco may deny support under your warranty or under a Cisco support program.

| | |
|---------------------------|---|
| Explanation | Hardware in the specified location could not be identified as a genuine Cisco product |
| Recommended Action | Replace the hardware with a genuine Cisco product. If this message recurs, contact your Cisco technical support representative and provide the representative with the gathered information |

%CMCC-6-FRU_HWPRG_UPG_PSOC_START : Hardware programmable PSOCs on [chars] in slot [chars] are upgrading, \ please don't reload or power-cycle this card. \ It will take about 2 mins to finish.

| | |
|---------------------------|--|
| Explanation | The hw-programmable PSOC is upgrading |
| Recommended Action | No action is required. This is informational message |

%CMCC-6-FRU_HWPRG_UPG_PSOC_SUCCESS : Hardware programmable PSOCs on [chars] in slot [chars] were successfully programmed. The card will reload to make new firmware work.

| | |
|---------------------------|--|
| Explanation | The hw-programmable PSOC was upgraded successfully |
| Recommended Action | No action is required. This is informational message |

%CMCC-6-FRU_HWPRG_UPG_PSOC_PREPARE : Hardware programmable PSOCs on [chars] in slot [chars] were set in the golden mode. The card will reload to finish the upgrading

| | |
|---------------------------|---|
| Explanation | The hw-programmable PSOCs were set in the golden mode for FPD |
| Recommended Action | No action is required. This is informational message |

%CMCC-6-FRU_HWPRG_UPG_ADM1266_CFG_SUCCESS : Hardware programmable ADM1266 Configurations on [chars] in slot [chars] were successfully programmed.

| | |
|---------------------------|---|
| Explanation | The hw-programmable ADM1266 configuration was upgraded successfully |
| Recommended Action | No action is required. This is informational message |

%CMCC-6-FRU_HWPRG_UPG_LMK03328_CFG_RESET : Hardware programmable LMK03328 Configurations on [chars] in slot [chars] were successfully partially programmed, please reload it to continue programming.

| | |
|---------------------------|--|
| Explanation | The hw-programmable LMK03328 configuration was partially upgraded successfully |
| Recommended Action | No action is required. This is informational message |

%CMCC-6-FRU_HWPRG_UPG_LMK03328_CFG_SUCCESS : Hardware programmable LMK03328 Configurations on [chars] in slot [chars] were successfully programmed.

| | |
|---------------------------|--|
| Explanation | The hw-programmable LMK03328 configuration was upgraded successfully |
| Recommended Action | No action is required. This is informational message |

%CMCC-6-FRU_HWPRG_UPG_TPS40422_CFG_RESET : Hardware programmable TPS40422 Configurations on [chars] in slot [chars] were successfully partially programmed, please reload it to continue programming.

| | |
|---------------------------|--|
| Explanation | The hw-programmable TPS40422 configuration was partially upgraded successfully |
| Recommended Action | No action is required. This is informational message |

%CMCC-6-FRU_HWPRG_UPG_TPS40422_CFG_SUCCESS : Hardware programmable TPS40422 Configurations on [chars] in slot [chars] were successfully programmed.

| | |
|---------------------------|--|
| Explanation | The hw-programmable TPS40422 configuration was upgraded successfully |
| Recommended Action | No action is required. This is informational message |

%CMCC-2-FRU_HWPRG_UPG_FAILED : Failed to [chars] [chars] hardware programmable on [chars] in [chars].

| | |
|---------------------------|---|
| Explanation | Upgrade hw-programmable failed to upgrade the CPLD/FPGA firmware on the given FRU |
| Recommended Action | Reload the card and retry to program the hw-programmable. If the card fails to come up please contact TAC |

%CMCC-2-FRU_HWPRG_UPG_SUCCESS : Success to [chars] [chars] hardware programmable on [chars]. Please execute the POST Upgrade CLI: upgrade hw-programmable cable <r0/r1> daybreak post-upgrade slot <slot> to finish the upgrade process

| | |
|--------------------|--|
| Explanation | Upgrade hw-programmable success to upgrade the CPLD/FPGA firmware on the given FRU |
|--------------------|--|

%CMCC-2-FRU_HWPRG_UPG_SUCCESS : Success to [chars] [chars] hardware programmable on [chars]. Please execute the POST Upgrade CLI: upgrade hw-programmable cable <r0/r1> daybreak post-upgrade slot <slot> to finish the upgrade process

Recommended Action No action is required. This is informational message

%CMCC-5-CMCC_EZMAN_HB_MISS_EXCEED : CMCC Missed [int] Heartbeats from EZMAN, Reloading the Line Card

Explanation CMCC Monitors the Health of the EZMAN by keeping a track of the Heartbeat messages. In case the EZMAN gets stuck in a event under watchdog disable context (sw_wdog_disbale), then the CMCC will stop getting these updates. The CMCC after a certain period of time would reset the card, since EZMAN is unresponsive

Recommended Action Reload the card, a software initiated to restart the EZMAN

%CMCC-3-CARD_MISMATCH : The CONFIG&PICTYPE in slot [dec] mismatch : CONFIG : [chars], PIC : [chars]

Explanation The CMD and PIC in the slot mismatch.

Recommended Action Shut down the LC and change the card mode or remove the pic card.

%CMCC-3-SPA_PSEUDO_HARD_OIR_VFT_NOT_IMPLEMENTED : The PSEUDO OIR VFT is not implemented for bay [dec]

Explanation The pseudo OIR vft not implemented for this platform

Recommended Action Do nothing

%CMCC-6-FLOW_CONTROL_OTHER : Flow control error seen, Cause [chars]

Explanation Flow control error is detected in the FPGA

Recommended Action Appropriate action is taken in software to correct this error. If the problem persists, the MIP100 hardware may need to be replaced.

%CMCC-3-FLOW_CONTROL_SBE : Single-bit ECC error seen, Cause [chars]

Explanation Self correctable single bit errors were detected in the FPGA

Recommended Action This error is usually self-correcting. If the problem persists, the MIP100 hardware may need to be replaced.

%CMCC-0-FLOW_CONTROL_MBE : Multi-bit ECC error seen, Cause [chars], MIP100 is going to be reloaded to recover

| | |
|---------------------------|--|
| Explanation | Non correctable multi bit errors were detected in the FPGA. |
| Recommended Action | MIP100 is reloaded to correct the error. If the problem persists, the MIP100 hardware may need to be replaced. |

%CMCC-6-MGMT_SFP_INSERT : transceiver module inserted in [chars]

| | |
|---------------------------|--|
| Explanation | The online insertion and removal (OIR) facility detected a newly inserted transceiver module for the interface specified in the error message. |
| Recommended Action | No action required. |

%CMCC-6-MGMT_SFP_REMOVED : Transceiver module removed from [chars]

| | |
|---------------------------|---|
| Explanation | The online insertion and removal (OIR) facility detected the removal of a transceiver module from the interface specified in the error message. |
| Recommended Action | No action required. |

%CMCC-3-UNKNOWN_SPA_LC : Unknown SPA was inserted in slot [dec]

| | |
|---------------------------|--|
| Explanation | Unknown SPA was inserted in the given slot. |
| Recommended Action | Remove the unsupported SPA line card and upgrade the software as needed. |

%CMCC-6-FRU_IOFGA_UPG_START : Field programmable device on [chars] in slot [dec] is being upgraded. \ It will take about 2 mins to finish the upgrade. Please do \not reload or power-cycle this card while upgrade is in \ progress.

| | |
|---------------------------|---|
| Explanation | The field programmable device on the FRU is upgrading |
| Recommended Action | No action is required. This is informational message |

%CMCC-2-FRU_IOFGA_UPG_FAILED : Failed to upgrade field programmable device on [chars] in slot [dec].

| | |
|---------------------------|---|
| Explanation | Upgrade of field programmable device failed |
| Recommended Action | Reload the card and retry to program the field programmable \ device. If the card fails to come up please contact TAC |

%CMCC-2-FRU_IOFPGA_UPG_SUCCESS : Successfully upgraded the field programmable device on [chars] in \slot [dec]. Power-cycling the line card.

| | |
|---------------------------|--|
| Explanation | Upgrade field programmable device was successful on the \ given FRU. Line card needs to be power-cycled or removed \ and re-inserted for upgrade to take effect. |
| Recommended Action | Line card needs to be power cycled or removed and re-inserted \ for the upgrade to take effect. |

%CMCC-2-FRU_IOFPGA_UPG_LC_PWR_CYCLE_DONE : Power cycled the [chars] in slot [dec], after FPGA upgrade.

| | |
|---------------------------|---|
| Explanation | Power cycled the card after FPGA upgrade. |
| Recommended Action | Line card has been power cycled after FPGA upgrade. |

%CMCC-3-MESSAGE_RESPONSE : An invalid message response was received because [chars]

| | |
|---------------------------|--|
| Explanation | An invalid message response was received. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMCC-2-FRU_LC_PWR_RESET : *** Detected power reset for the Line card in slot [dec]\To recover from the error, Line card will brought up shortly**

| | |
|---------------------------|--|
| Explanation | Detected Auto power reset(may be HW issue) for the Linecard. |
| Recommended Action | Pseudo OIR of the Line card has been to recover/bring up the card. |

%CMCC-6-FRU_LC_UPGRADE_REQD : Found mismatch between the Line card FPGA versions \bundled in Software and programmed in Hardware in slot [dec]. \FPGA version bundled in SW: [hex], present in HW: [hex]. To upgrade \the FPGA to version bundled in SW, perform physical OIR of the \line card or run the CLI: \hw-module subslot <slot>/<SPA no.> oir power-cycle

| | |
|---------------------------|--|
| Explanation | New FPGA is bundled in SW. FPGA upgrade is needed. |
| Recommended Action | To upgrade to latest FPGA, do physical OIR Line card or do Pseudo \ OIR of the line card using CLI: hw-module subslot <slot>/<SPA no.> \ oir power-cycle To view the present FPGA versions in chassis, use \ |

CMEM

%CMEM-3-SENSOR_INIT_FAILED : Sensor ([chars]) initialization failed due to [chars].

| | |
|---------------------------|---|
| Explanation | This error indicates that environmental monitor software cannot initialize the sensor. The software will not register and monitor this sensor. This could occur when the IDPROM has a bad I2C address for this sensor. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMEM-4-OBFL_INIT_FAILED : OBFL initialization failed.

| | |
|---------------------------|---|
| Explanation | This error indicates the OBFL dedicated filesystem is not mounted. OBFL diagnostic information will not be retained for customer troubleshooting. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CMFP

%CMFP-3-DDR_SINGLE_BIT_ERROR : Single-bit DRAM ECC error: mme: [int], sbe: [int], address: [hex], pid: [int], name: [chars]

| | |
|---------------------------|---|
| Explanation | A single-bit data corruption error has occurred in the forwarding processor (FP). |
| Recommended Action | These errors are self-correcting. If the problem persists, the FP hardware may need to be replaced. |

%CMFP-3-IDPROM_ACCESS : Failed access or process an IDPROM because [chars]

| | |
|---------------------------|---|
| Explanation | Access to an IDPROM failed due to a hardware or software defect, or incorrect IDPROM content. |
| Recommended Action | Examine the system logs for IDPROM and hardware errors. Copy the error message and related information exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMFP-3-IDPROM_SENSOR : One or more sensor fields from the idprom failed to parse properly because [chars].

| | |
|---------------------------|--|
| Explanation | Output from the IDPROM sensors failed to parse, commonly caused by a checksum failure in the IDPROM. |
| Recommended Action | Examine the system logs for IDPROM and hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMFP-3-MASTERSHIP_UPDATE : An error ([chars]) has occurred while communicating the mastership role of this FP to the CPP. The FP is currently [chars]

| | |
|--------------------|--|
| Explanation | An error occurred while communicating a change in the state (Active, Active with a Standby, or Standby) of the forwarding processor (FP). The error can cause an inconsistency of expected states between FPs and could affect the replication of state between the FPs. |
|--------------------|--|

%CMFP-3-MASTERSHIP_UPDATE : An error ([chars]) has occurred while communicating the mastership role of this FP to the CPP. The FP is currently [chars]

Recommended Action Examine the system logs for errors. This error is usually temporary.

%CMFP-0-SPI4_MUX_HALT : SPI4 MUX driver has detected a critical error [chars]

Explanation A SPI4 MUX driver has failed or detected a critical hardware fault. This could be due to a hardware defect or driver defect.

Recommended Action The only corrective action is to restart the FP

%CMFP-3-SPI4_MUX_STATUS : SPI4 MUX driver has detected a informational error [chars] (occurred [dec] time(s))

Explanation A SPI4 MUX driver has failed or detected a information hardware fault. This could be due to a hardware defect or driver defect.

Recommended Action Examine the logs for SPI4 MUX and hardware errors.

%CMFP-3-CPLD_ECSR_ERROR :

Explanation An error has been detected on the ECSR bus. This may cause problems when accessing the forwarding processor

Recommended Action Some of these errors are catastrophic and others are not. If the FRU did not restart assume corrective action was taken. Please check the chassis-manager logs for errors.

%CMFP-3-CPLD_ERP_ERROR :

Explanation An error has been detected on the ERP bus. This may cause problems when accessing the forwarding processor

Recommended Action Some of these errors are catastrophic and others are not. If the FRU did not restart assume corrective action was taken. Please check the chassis-manager logs for errors.

%CMFP-3-N2_DDR_MBE : The encryption processor has detected an uncorrectable multi-bit error in memory at address [dec]

Explanation The encryption processor has detected an uncorrectable multi-bit in memory. This could be due to a hardware defect.

Recommended Action Examine the logs for encryption processor hardware errors.

%CMFP-6-N2_DRV_UPDATE : Hardware crypto device disabled. [chars]: [chars]

Explanation A crypto device driver has failed or detected a hardware fault. This could be due to a hardware defect or driver defect.

Recommended Action The only corrective action is to restart the ESP

%CMFP-3-N2_FATAL_ERROR :

Explanation An error has been detected on encryption processor.

Recommended Action Please check the chassis-manager logs for errors.

%CMFP-3-N2_INPUT_EXCEPT :

Explanation An exception has been detected on encryption processor.

Recommended Action Please lower crypto traffic rate. If the error still happens, encryption processor may stop processing. Need to reload ESP.

%CMFP-3-OCT_DRV_ERROR :

Explanation An error has been detected on encryption processor.

Recommended Action Please check the chassis-manager logs for errors.

%CMFP-3-HT_FATAL_ERROR : Failed to initialize the HyperTransport interface to the QFP

Explanation The HyperTransport interface to the QFP failed to initialize completely. Software will restart the ESP to recover

Recommended Action No action is required.

%CMFP-3-HB_TIMEOUT : Peroidic Heartbeat message from RP timed out.

Explanation RP sends peroidic heartbeat message to the ESP. The ESP did not receive this heartbeat message for last timeout period.

Recommended Action Examine the system logs for errors.

%CMFP-3-STANDBY_EOBC_LINK_ERROR : Standby EOBC link error detected.

| | |
|---------------------------|---|
| Explanation | Standby EOBC link error: either link state is down, or duplexity is not full, or speed is not 1Gbps. |
| Recommended Action | Examine the system hardware. Re-seat and securely screw in all FRUs. If the problem persists, please contact TAC support. |

%CMFP-0-CPLD_INITIALIZATION : CPLD initialization has failed because [chars]

| | |
|---------------------------|--|
| Explanation | The CPLD has failed to initialize. This could be due to a hardware or software driver defect. |
| Recommended Action | Examine the hardware and CPLD driver logs and see if the logs provide information about a correctable problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMFP-0-CPLD_IOCTL : A CPLD driver I/O control has failed because [chars]

| | |
|---------------------------|---|
| Explanation | A complex programmable logic device (CPLD) I/O driver control has failed. This error could be caused by a hardware or software driver defect. |
| Recommended Action | Examine the logs for CPLD driver and hardware errors. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information |

%CMFP-0-EVENT_LIBRARY : An event facility initialization or maintenance function failed because [chars]

| | |
|---------------------------|--|
| Explanation | An event facility initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMFP-2-BAD_ID_HW : Failed Identification Test in [chars]. The module [chars] may not be a genuine Cisco product. Cisco warranties and support programs only apply to genuine Cisco products. If Cisco determines that your insertion of non-Cisco memory, WIC cards, AIM cards, Network Modules, SPA cards, GBICs or other modules into a Cisco product is the cause of a support issue, Cisco may deny support under your warranty or under a Cisco support program.

| | |
|---------------------------|--|
| Explanation | Hardware in the specified location could not be identified as a genuine Cisco product |
| Recommended Action | Replace the hardware with a genuine Cisco product. If this message recurs, contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMFP-3-SIF_SERDES_SYNC_ERROR : Sif Serdes Sync Failed for Supervisor Failure Bitmap [hex]

| | |
|---------------------------|---|
| Explanation | One of more Supervisor ASIC Sif Serdes failed to sync, This could be due to a hardware defect. |
| Recommended Action | Note the time of the error message and examine the show hardware platform cman fp for detailed Sif Serdes Report. |

%CMFP-4-UADP_EVENT : UADP EVENT (ASIC #[dec] [chars])

| | |
|---------------------------|---|
| Explanation | Unified Access Datapath ASIC Event |
| Recommended Action | Copy the message exactly as it appears on the console or in the system log. |

%CMFP-3-DPP_SERDES_SYNC_ERROR : UADP fabric interface synchronisation [chars]

| | |
|---------------------------|--|
| Explanation | One of more UADP fabric interface Serdes failed to sync, This could be due to a hardware defect. |
| Recommended Action | No action is required. |

%CMFP-3-SBUS_FATAL_ERROR : SBUS Controller not responding, bringing down [chars]

| | |
|---------------------------|---|
| Explanation | Spico SBUS controller fails to repond, This could be due to a hardware defect. Reset the CHIP |
| Recommended Action | No action is required. |

%CMFP-6-CRYPTO_MODULE : Crypto Hardware Module is [chars]

| | |
|--------------------|--|
| Explanation | The log is to indicate whether Crypto Hardware Module IPSECHW is physically inserted in the chassis. |
|--------------------|--|

%CMFP-6-CRYPTO_MODULE : Crypto Hardware Module is [chars]

Recommended Action No action is required.

CMLIB

%CMLIB-6-THROUGHPUT_VALUE : Throughput [chars] [chars], throughput set to [chars] kbps

Explanation Status indicating whether appropriate throughput is found or enabled and ensuring the value is used to configure the CPP hardware.

Recommended Action No user action is necessary. This is an informational message indicating that the throughput is configured.

%CMLIB-3-THROUGHPUT_VALUE_SETUP_FAILED : Throughput [chars] [chars], throughput set to [chars] kbps. Error: [chars]

Explanation Status indicating that a failure was observed during the setup of the throughput. The error reason may shed light on the cause. The set value is used to configure the CPP hardware.

Recommended Action Examine the ios, chassis-manager and license-manager logs for possible clues.

%CMLIB-3-THROUGHPUT_VALUE_APPLY_FAILED : Throughput [chars] [chars] - failed to persist throughput of [chars] kbps. Error: [chars]

Explanation Status indicating that a failure was observed during the writing of the throughput to persistent store. The error reason may shed light on the cause. The throughput value may have be used to configure the CPP hardware.

Recommended Action Examine the ios, chassis-manager and license-manager logs for possible clues.

%CMLIB-2-IDPROM_INVALID : Invalid IDPROM assembly number [hex]. IDPROM update required

Explanation IDPROM assembly number is not supported.

Recommended Action IDPROM update is required

%CMLIB-4-FW_CHECK : slot [chars]: [chars] current firmware version is [chars], while the minimum \ required version is [chars]. Please upgrade it to minimum required version or higher.

Explanation Firmware version in the specified location is lower than minimum required version

%CMLIB-4-FW_CHECK : slot [chars]: [chars] current firmware version is [chars], while the minimum \ required version is [chars]. Please upgrade it to minimum required version or higher.

Recommended Action Upgrade firmware version to latest.

CMRP

%CMRP-0-CPLD_INITIALIZATION : The RP CPLD has failed initialization because [chars]

Explanation The RP CPLD has failed to initialize. This could be due to a hardware or software driver defect.

Recommended Action Examine the hardware and CPLD driver logs and see if the logs provide information about a correctable problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-CPLD_IOCTL : A CPLD driver I/O control has failed because [chars]

Explanation A CPLD driver I/O control has failed. This could be due to a hardware or software driver defect.

Recommended Action Examine the hardware and CPLD driver logs and see if the logs provide information about a correctable problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-I2C_INITIALIZATION : The RP I2C has failed initialization because [chars]

Explanation The RP I2C has failed to initialize. These components provide low-level communications between the RP and the other cards in the system.

Recommended Action Note the time of the error message and examine the logs for I2C errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-I2C_READ : An I2C read has failed because [chars]

Explanation An I2C read has failed. This could be due to a hardware or software defect.

Recommended Action Note the time of the error message and examine the logs for I2C errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-I2C_WRITE : An I2C write has failed because [chars]

| | |
|---------------------------|---|
| Explanation | An I2C write has failed. This could be due to a hardware or software defect. |
| Recommended Action | Note the time of the error message and examine the logs for I2C errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-3-BITS_INITIALIZATION : The RP BITS E1/T1 interface has failed initialization because [chars]

| | |
|---------------------------|--|
| Explanation | The RP BITS E1/T1 interface has failed to initialize. This could be due to a hardware defect, a software driver defect or improper configuration. |
| Recommended Action | Note the time of the error message and examine the logs for BITS driver or hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative |

%CMRP-0-WANPLL_INITIALIZATION : The RP WAN PLL has failed initialization because [chars]

| | |
|---------------------------|---|
| Explanation | The RP WAN PLL has failed to initialize. This could be due to a hardware or software driver defect. |
| Recommended Action | Note the time of the error message and examine the logs for WAN PLL or hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-3-WANPLL_SETUP : Failed to setup the [chars] of the RP WAN PLL because [chars]

| | |
|---------------------------|--|
| Explanation | Failed to setup the RP WAN PLL appropriately. This could be due to a hardware defect of the device. |
| Recommended Action | Note the time of the error message and examine the logs for WAN PLL related hardware errors. Check if the issue is transient or repeatable. If the problem is not recoverable collect the output of the error message and the chassis- manager and IOS logs. Provide the gathered information to a Cisco technical support representative. |

%CMRP-0-DDR_INITIALIZATION : The RP DDR has failed initialization because [chars]

| | |
|--------------------|---|
| Explanation | The RP DDR has failed to initialize. This could be due to a hardware or software driver defect. |
|--------------------|---|

%CMRP-0-DDR_INITIALIZATION : The RP DDR has failed initialization because [chars]

| | |
|---------------------------|---|
| Recommended Action | Note the time of the error message and examine the logs for DDR or hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|---|

%CMRP-3-DDR_SINGLE_BIT_ERROR : Single-bit DRAM ECC error: mme: [int], sbe: [int], address: [hex], pid: [int], name: [chars]

| | |
|---------------------------|--|
| Explanation | The RP DRAM has single-bit ECC errors. |
| Recommended Action | In most cases, the system self-corrects these single-bit ECC errors and no user action is necessary. If the problem persists, gather the console output with the error message along with the show tech-support command output and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-SERDES_INITIALIZATION : The RP Serial Bridge ASIC has failed initialization because [chars]

| | |
|---------------------------|---|
| Explanation | The RP Serial Bridge ASIC has failed to initialize. This could be due to a hardware defect, software driver defect or improper internal configuration. |
| Recommended Action | Note the time of the error message and examine the logs for Serial Bridge ASIC and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-3-HWLIB_INITIALIZATION : The hardware library has failed to initialize because [chars]

| | |
|---------------------------|---|
| Explanation | This could be due to a hardware defect, software driver defect or improper internal configuration. |
| Recommended Action | Note the time of the error message and examine the logs for CPLD hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-SERDES_IOCTL : A Serial Bridge driver I/O control has failed because [chars]

| | |
|--------------------|---|
| Explanation | A Serial Bridge driver I/O control has failed. This could be due to a hardware or software driver defect. |
|--------------------|---|

%CMRP-0-SERDES_IOCTL : A Serial Bridge driver I/O control has failed because [chars]

Recommended Action Note the time of the error message and examine the logs for Serial Bridge driver or hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-SERDES_INTERRUPT_DISPATCH : Serial Bridge interrupt dispatch error: [chars]

Explanation Failed to dispatch an error interrupt from the Serial Bridge. This could be due to a software defect or inconsistent internal state.

Recommended Action Note the time of the error message and examine the logs for Serial Bridge errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-SERDES_ESI_LOCK_FAIL : Serial Bridge ESI link [chars] between [chars] and [chars] failed to lock

Explanation A Serial Bridge ESI link did not lock. This could be due to a hardware defect or a software configuration error.

Recommended Action Note the time of the error message and examine the logs for Serial Bridge and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-SERDES_ESI_INIT_FAIL : Serial Bridge ESI link [chars] between [chars] and [chars] failed to config

Explanation A Serial Bridge ESI link did not configure. This could be due to a software error.

Recommended Action Note the time of the error message and examine the logs for Serial Bridge and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-PFU_INITIALIZATION : The RP has failed to initialize a Power Supply/Fan module controller because [chars]

Explanation The RP failed to initialize a Power Supply or Fan module controller. This could be due to a hardware defect or C2W access failure.

%CMRP-3-PFU_INITIALIZATION : The RP has failed to initialize a Power Supply/Fan module controller because [chars]

| | |
|---------------------------|--|
| Recommended Action | Note the time of the error message and examine the logs for C2W and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%CMRP-3-FAN_INITIALIZATION : The RP has failed to initialize Fan [dec] module controller because [chars]

| | |
|---------------------------|--|
| Explanation | The RP failed to initialize the Fan. This could be due to a software defect. |
| Recommended Action | Note the time of the error message and examine the logs. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-HT_INITIALIZATION : The RP HyperTransport has failed initialization because [chars]

| | |
|---------------------------|--|
| Explanation | The RP HyperTransport has failed initialization. This could be due to a hardware defect or HT driver defect. |
| Recommended Action | Note the time of the error message and examine the logs for HT driver and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-HT_IOCTL : A RP HyperTransport driver I/O control has failed because [chars]

| | |
|---------------------------|--|
| Explanation | A RP HyperTransport driver I/O has failed. This could be due to a hardware defect or HT driver defect. |
| Recommended Action | Note the time of the error message and examine the logs for HT driver and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-6-HT_STATUS : R[dec] hypertransport configured for F[dec] active

| | |
|---------------------------|---|
| Explanation | The RP HyperTransport driver was properly configured for a newly active FP. |
| Recommended Action | No user action is necessary. This is an informational message indicating normal system operation. |

%CMRP-6-HT_CLOSURE_MODE : The HTPI driver failed to set it's closure mode properly

Explanation This is not a critical error, but it will result in possible traffic interruption during certain software failure cases or ISSU operations.

Recommended Action Note the error message and contact a Cisco technical support representative.

%CMRP-0-EHSA_INITIALIZATION : EHSA initialization has failed because [chars]

Explanation EHSA has failed initialization. This could be due to a hardware or software defect.

Recommended Action Note the time of the error message and examine the logs for EHSA and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-EHSA_STATE_GET : Failed to get EHSA state because [chars]

Explanation Failed to get EHSA state. This could be due to a hardware or software defect.

Recommended Action Note the time of the error message and examine the logs for EHSA and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-EHSA_STATE_SET : Failed to set EHSA state because [chars]

Explanation Failed to set EHSA state. This could be due to a hardware or software defect.

Recommended Action Note the time of the error message and examine the logs for EHSA and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-IDPROM_ACCESS : Failed to access or process IDPROM '[chars]': [chars]

Explanation Failed access or process an IDPROM. This could be due to a hardware defect, software defect or incorrect IDPROM content.

%CMRP-3-IDPROM_ACCESS : Failed to access or process IDPROM '[chars]': [chars]

Recommended Action Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-IDPROM_SENSOR : One or more sensor fields from the idprom failed to parse properly because [chars].

Explanation One or more sensor fields from the IDPROM failed to parse properly. This problem is often the result of a checksum failure in the IDPROM.

Recommended Action Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-CHASSIS_TYPE : The chassis type [chars] is invalid.

Explanation The chassis type is invalid. This could be due to a hardware defect, software defect or incorrect IDPROM content.

Recommended Action Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-CHASSIS_ID : Error while updating chassis id, Error: [chars]

Explanation The chassis Id is invalid. This could be due to a hardware defect, software defect or incorrect IDPROM content.

Recommended Action Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-PLATFORM_FAMILY_TYPE : The platform family type [chars] is invalid.

Explanation The platform family type is invalid. This could be due to a hardware defect, software defect or incorrect IDPROM content.

%CMRP-0-PLATFORM_FAMILY_TYPE : The platform family type [chars] is invalid.

Recommended Action Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-CHASSIS_STATUS : Failed to get chassis hardware status because [chars]

Explanation The system failed to get the chassis hardware status.

Recommended Action Note the time of the error message and examine the logs for CPLD driver or hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-SENSOR_INITIALIZATION : Failed to initialize sensor monitoring because [chars].

Explanation Sensor monitoring failed to initialize.

Recommended Action Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-SENSOR_TYPE : The sensor type is [dec] is invalid.

Explanation A sensor type is invalid. This could be due to a hardware defect, software defect or incorrect IDPROM content.

Recommended Action Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-CHASFS_OBJECT_CREATE : Failed to create chassis filesystem object [chars] because [chars]

Explanation The hardware failed to create a chassis filesystem object.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-CHASFS_OBJECT_DESTROY : Failed to destroy chassis filesystem object [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem object that should have been destroyed was not destroyed. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-CHASFS_PROPERTY_CREATE : Failed to create chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem property was not properly created. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-3-CHASFS_PROPERTY_DESTROY : Failed to destroy chassis filesystem property [chars]/[chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem property that should have been destroyed was not destroyed. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-CHASFS_PROPERTY_GET : Failed to read chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem property was not properly read by the system. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-CHASFS_PROPERTY_SET : Failed to write chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem property failed to write. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-CHASFS_OBJECT_WATCH : Failed to watch chassis filesystem object [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem object was not watched because of the reason stated in the error message. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-CHASFS_OBJECT_NOT_PRESENT : Expected chassis filesystem object [chars] not present.

| | |
|---------------------------|--|
| Explanation | A chassis filesystem object expected to be present is not. This could be due to a software defect or filesystem failure. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-CHASFS_PROPERTY_NOT_PRESENT : Expected chassis filesystem object [chars] property [chars] not present.

| | |
|---------------------------|--|
| Explanation | A chassis filesystem object property expected to be present is not. This could be due to a software defect or filesystem failure. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-CHASFS_LOCATION_TRANSLATE : Failed to translate a location to a chasfs object name because [chars]

| | |
|---------------------------|--|
| Explanation | The chassis manager failed to translate a location to a chasfs object name. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-INVALID_ARGUMENT : A system function was given an invalid argument.

| | |
|---------------------------|--|
| Explanation | A system function was given an invalid argument. This is due to a software defect. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-ROLE_ADDRESS_UPDATE : Failed to update role-based EOBC IP addresses because [chars].

| | |
|---------------------------|--|
| Explanation | The system failed to update a role-based EOBC IP address for the reason stated in the message line. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-4-ACTIVE_SLOTBAY_BIAS : The configured active slot/bay bias [dec] is invalid.

| | |
|---------------------------|--|
| Explanation | The configured active slot/bay bias is not 0 or 1. The default value of 0 is used. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-EVENT_LIBRARY : An event facility initialization or maintenance function failed because [chars]

| | |
|--------------------|--|
| Explanation | An event facility initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion. |
|--------------------|--|

%CMRP-0-EVENT_LIBRARY : An event facility initialization or maintenance function failed because [chars]

| | |
|---------------------------|--|
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%CMRP-0-PEER_TABLE : A peer table initialization or maintenance function failed because [chars]

| | |
|---------------------------|--|
| Explanation | A peer table initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-3-PEER_INVALID : A peer table entry has invalid state.

| | |
|---------------------------|--|
| Explanation | A peer table entry has an invalid state. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-UIPEER_CREATE : Failed to create user interface peer.

| | |
|---------------------------|--|
| Explanation | The system failed to create a user interface peer. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-SLOTS_INITIALIZATION : Failed to initialize chassis slot information because [chars]

| | |
|--------------------|---|
| Explanation | The system failed to initialize the chassis slot information. |
|--------------------|---|

%CMRP-0-SLOTS_INITIALIZATION : Failed to initialize chassis slot information because [chars]

| | |
|---------------------------|--|
| Recommended Action | Note the time of the error message and examine the logs for IDPROM or software errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%CMRP-0-SLOT_INVALID : A card absolute slot number cannot be determined for this chassis type

| | |
|---------------------------|--|
| Explanation | An absolute slot number is invalid. This could be due to a software defect or incorrect IDPROM content. |
| Recommended Action | Note the time of the error message and examine the logs for IDPROM or software errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-SIGNAL_INITIALIZATION : Failed to initialize signals because [chars]

| | |
|---------------------------|--|
| Explanation | The system failed to initialize signals. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-SERVICES_INITIALIZATION : Failed to initialize general application services because [chars]

| | |
|---------------------------|--|
| Explanation | The system failed to initialize application services. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-INTERNALS_INITIALIZATION : Failed to initialize internal state because [chars]

| | |
|--------------------|---|
| Explanation | The system failed to initialize the internal state for the reason mentioned in the error message. |
|--------------------|---|

%CMRP-0-INTERNALS_INITIALIZATION : Failed to initialize internal state because [chars]

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-FP_MASTERSHIP_SET : Failed to set FP mastership because [chars]

Explanation The router failed to establish ESP mastership.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-RP_MASTERSHIP_SET : Failed to set RP mastership [chars] because [chars]

Explanation The router failed to establish RP mastership.

Recommended Action Reload the router.

%CMRP-0-RESOLVE_FRU : Failed to determine [chars] card because [chars]

Explanation The router failed to determine a FRU state.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-IPC_INITIALIZATION : IPC initialization failed because [chars]

Explanation IPC initialization failed. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-IPC_CONNECT_MASTER : IPC connection to the active RP failed because [chars]

| | |
|---------------------------|--|
| Explanation | IPC connection to the active RP failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-IPC_CONNECT_REMOTE_IOS : IPC connection to a remote IOSd failed because [chars]

| | |
|---------------------------|--|
| Explanation | IPC connection to a remote IOSd failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-IPC_CONNECTION_INVALID : An IPC connection has invalid state.

| | |
|---------------------------|--|
| Explanation | An IPC connection has an invalid state. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-MQIPC_INITIALIZATION : MQIPC initialization failed because [chars]

| | |
|---------------------------|--|
| Explanation | MQIPC initialization failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-MQIPC_ADVANCE : Failed to advance MQIPC queue because [chars]

| | |
|--------------------|----------------------------------|
| Explanation | The MQIPC initialization failed. |
|--------------------|----------------------------------|

%CMRP-0-MQIPC_ADVANCE : Failed to advance MQIPC queue because [chars]

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-MESSAGE_REGISTER : Failed to register with active RP because [chars]

Explanation The active RP failed to register.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-MESSAGE_RESPONSE : An invalid message response was received because [chars]

Explanation An invalid message response was received. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-MESSAGE_RELAY : Failed to relay a message because [chars]

Explanation Failed to relay a message. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-PFU_MISSING : The platform does not detect a power supply in slot [dec]

Explanation There is no power supply in one of the power supply slots.

Recommended Action Insert a power supply into the empty slot. The router requires two power supplies because the fans in the power supply are needed to cool the router.

%CMRP-3-PFU_OIR : Failed to handle a [chars] oir event for PEM in slot [dec], [chars]

| | |
|---------------------------|--|
| Explanation | A power supply was inserted or removed into or from a router and the software did not properly handle the event. |
| Recommended Action | Force an RP switchover if the system is configured with two RPs. If a switchover does not correct the problem or cannot be performed, reloading the router should resolve the issue. |

%CMRP-3-PFU_FAN : Failed to handle fan failure for [chars] in slot [dec], [chars]

| | |
|---------------------------|--|
| Explanation | One or more fans have failed and the system is unable to properly handle the fan failure. |
| Recommended Action | Force an RP switchover if the system is configured with two RPs. If a switchover does not correct the problem or cannot be performed, reloading the router should resolve the issue. |

%CMRP-3-PFU_FAILURE : Failed to handle power supply failure for [chars] in slot [dec], [chars]

| | |
|---------------------------|--|
| Explanation | A power supply has failed and the system is unable to properly handle the failure. |
| Recommended Action | Force an RP switchover if the system is configured with two RPs. If a switchover does not correct the problem or cannot be performed, reloading the router should resolve the issue. |

%CMRP-3-PEM_REMOVE_SHUT : The system will shut down in [dec] minutes

| | |
|---------------------------|--|
| Explanation | A power supply has been removed and the router will shutdown to protect itself from overheating in the amount of time stated in the error message. |
| Recommended Action | Reinsert a power supply into the power supply slot as soon as possible. The second power supply is required because the fans in the power supply are essential in monitoring router temperature. |

%CMRP-6-FP_HA_STATUS : F[dec] redundancy state is [chars]

| | |
|---------------------------|--|
| Explanation | The ESP has transitioned into a new High Availability state. |
| Recommended Action | No user action is necessary. This is an informational message. |

%CMRP-6-FP_HA_SB_NOTREADY : FP switchover: F[dec] [chars]

| | |
|---------------------------|--|
| Explanation | The standby ESP is not ready for a switchover. |
| Recommended Action | No user action is necessary. |

%CMRP-3-FRU_NOPARTNUM : Cannot get part number from IDPROM for [chars]: [chars].

Explanation The FRU IDPROM cannot be read or does not contain a valid part number field.

Recommended Action The FRU IDPROM should be repaired.

%CMRP-3-FRU_INVPARTNUM : [chars] has been held in reset because the part number [hex] is invalid.

Explanation The FRU IDPROM contains an invalid part number.

Recommended Action The FRU IDPROM should be repaired or the board replaced.

%CMRP-3-FRU_INCOMPATIBLE : [chars] has been held in reset: [chars] is incompatible with [chars]

Explanation The part number read from the FRU IDPROM is invalid for this chassis type.

Recommended Action Remove the FRU from the chassis.

%CMRP-3-INCOMPATIBLE_FRU : [chars] in slot [chars] is not compatible with [chars] and so it is disabled

Explanation The Product ID read from the FRU IDPROM is invalid for this hardware configuration.

Recommended Action Remove the FRU from the chassis. Review the Hardware and Software Compatibility Matrix in IOS XE release notes to determine currently supported configurations.

%CMRP-3-UNSUPPORTED_FRU : [chars] in slot [chars] is not supported with [chars] and so it is disabled

Explanation The Product ID read from the FRU IDPROM is not supported in this router. This is due to either Hardware or Software compatibility limitation indicated in the console log

Recommended Action Remove the FRU from the chassis. Review the Hardware and Software Compatibility Matrix in IOS XE release notes to determine currently supported configurations.

%CMRP-6-REDT_RP_UNSUPPORTED_IN_INTER_CHASSIS_MODE : [chars] redundant RP in slot [chars] is not supported in inter-chassis redundancy mode. Please remove it for inter-chassis redundancy to work properly on system reload.

Explanation Because the system is configured in box-to-box or inter-chassis redundancy mode, the intra chassis redundancy mode is not supported and redundant RP, if any, will be disabled.

%CMRP-6-REDT_RP_UNSUPPORTED_IN_INTER_CHASSIS_MODE : [chars] redundant RP in slot [chars] is not supported in inter-chassis redundancy mode. Please remove it for inter-chassis redundancy to work properly on system reload.

Recommended Action No user action is necessary.

%CMRP-6-REDT_FP_UNSUPPORTED_IN_INTER_CHASSIS_MODE : [chars] redundant FP in slot [chars] is not supported in inter-chassis redundancy mode

Explanation Because the system is configured in box-to-box or inter-chassis redundancy mode, the intra chassis redundancy mode is not supported and redundant FP, if any, will be disabled.

Recommended Action No user action is necessary.

%CMRP-3-UNSUPPORTED_PEM : [chars] in slot [chars] is not supported with [chars] and it needs to be replaced immediately

Explanation The Product ID read from the PEM IDPROM is not supported in this hardware configuration. It will be allowed to continue but immediate replacement is required

Recommended Action Remove the PEM from the chassis and replace it with a supported PEM. Review the Hardware and Software Compatibility Matrix in IOS XE release notes to determine currently supported configurations.

%CMRP-2-FRU_CPLD_INCOMPATIBLE : [chars] in slot [chars] has been held in reset as its CPLD firmware version is incompatible with [chars]

Explanation This FRU requires a newer CPLD firmware to function properly in this chassis

Recommended Action Upgrade the CPLD firmware on this FRU using the ` upgrade hw-programmable CPLD file <pkg_file> slot <fru_slot> ` command. Please see http://www.cisco.com/en/US/docs/routers/asr1000/cpld/hw_fp_upgrade.html for more details.

%CMRP-2-RP_CPLD_INCOMPATIBLE : All other cards in the system have been held in reset as the Active RP [chars] in slot [chars] has CPLD firmware version that is incompatible with [chars]

Explanation Active RP requires a newer CPLD firmware to function properly in this chassis

Recommended Action Upgrade the CPLD firmware on this FRU using the ` upgrade hw-programmable CPLD file <pkg_file> slot <fru_slot> ` command. Please see http://www.cisco.com/en/US/docs/routers/asr1000/cpld/hw_fp_upgrade.html for more details.

%CMRP-2-RP_CPLD_INCOMPATIBLE_OTHER : [chars] in slot [chars] has been held in reset because [chars]

| | |
|---------------------------|---|
| Explanation | Active RP requires a newer CPLD firmware to function properly in this chassis. |
| Recommended Action | Upgrade the CPLD firmware on this FRU using the upgrade hw-programmable CPLD file <pkg_file> slot <fru_slot> command. Please see http://www.cisco.com/en/US/docs/routers/asr1000/cpld/hw_fp_upgrade.html for more details. |

%CMRP-2-FRU_HWPRG_UPG_FAILED : Failed to [chars] [chars] hardware programmable on [chars] in [chars].

| | |
|---------------------------|---|
| Explanation | Upgrade hw-programmable failed to upgrade the CPLD/FPGA firmware on the given FRU |
| Recommended Action | Reload the card and retry to program the hw-programmable. If the card fails to come up please contact TAC |

%CMRP-3-FRU_HWPRG_UPG_SUCCESS : Hardware programmable [chars] on [chars] in slot [chars] was successfully programmed. The card will now be power-cycled or reset.

| | |
|---------------------------|---|
| Explanation | The hw-programmable CPLD/FPGA was upgraded successfully |
| Recommended Action | No action is required. This is informational message |

%CMRP-3-FRU_HWPRG_UPG_UNSUPP : Upgrade of hardware programmable [chars] on [chars] in slot [chars] is not supported. Card will now be powered down.

| | |
|---------------------------|--|
| Explanation | upgrade of hw-programmable CPLD/FPGA not supported. |
| Recommended Action | No action is required. This is informational message |

%CMRP-3-FRU_HWPRG_NO_FILE_ENTRY : Cannot find file or directory on [chars] in slot [chars].

| | |
|---------------------------|--|
| Explanation | Cannot find a file or a directory when upgrade CPLD or FPGA. |
| Recommended Action | No action is required. This is an informational message |

%CMRP-3-FRU_HWPRG_BAD_DEVICE : Invalid HW programming device for [chars] in slot [chars].

| | |
|---------------------------|---|
| Explanation | The device is not supported in hardware programming. |
| Recommended Action | No action is required. This is an informational message |

%CMRP-3-FRU_HWPRG_LOAD_KMODULE_FAIL : Cannot load a kernel module on [chars] in slot [chars].

| | |
|---------------------------|---|
| Explanation | Cannot load a Kernel module when upgrade CPLD or FPGA. |
| Recommended Action | Reload the card and retry to program the hw-programmable. If you get the same error, please contact TAC |

%CMRP-3-HWPRG_UPG_UNSUPP_SLOT : upgrade of hardware programmables on [chars] is not supported while in slot [chars]. Card will now be powered down.

| | |
|---------------------------|---|
| Explanation | upgrade of hw-programmable CPLD/FPGA not supported in the given slot. Move the card to a different slot and perform the upgrade |
| Recommended Action | Move the card to a different slot and perform the upgrade |

%CMRP-3-FRU_HWPRG_RESTART_ERROR : Error [chars] when Chassis Manager restarts [chars] in slot [chars].

| | |
|---------------------------|---|
| Explanation | Restart procedure has an error after upgrade. |
| Recommended Action | Try hw-module command to reload the FRU. |

%CMRP-3-FRU_HWPRG_UPG_PS_FAILED : Power-Supply Module MCU [chars] in slot [chars] program failed

| | |
|---------------------------|---|
| Explanation | The hw-programmable power-supply upgrade failed |
| Recommended Action | Please check Power-Supply model and PKG file. |

%CMRP-6-FRU_HWPRG_UPG_PS_SUCCESS : Power-Supply Module MCUs in slot [chars] were successfully programmed.

| | |
|---------------------------|--|
| Explanation | The hw-programmable power-supply was upgraded successfully |
| Recommended Action | No action is required. This is informational message |

%CMRP-6-FRU_HWPRG_UPG_PSOC_START : Hardware programmable PSOCs on [chars] in slot [chars] are upgrading, \ please don't reload or power-cycle this card. \ It will take about 10 mins to finish.

| | |
|--------------------|---------------------------------------|
| Explanation | The hw-programmable PSOC is upgrading |
|--------------------|---------------------------------------|

%CMRP-6-FRU_HWPRG_UPG_PSOC_START : Hardware programmable PSOCs on [chars] in slot [chars] are upgrading, \please don't reload or power-cycle this card. \ It will take about 10 mins to finish.

Recommended Action No action is required. This is informational message

%CMRP-6-FRU_HWPRG_UPG_PSOC_SUCCESS : Hardware programmable PSOCs on [chars] in slot [chars] were successfully programmed. Please power-cycle or OIR the card to make them work

Explanation The hw-programmable PSOC was upgraded successfully

Recommended Action No action is required. This is informational message

%CMRP-6-FRU_HWPRG_UPG_PSOC_PREPARE : Hardware programmable PSOCs on [chars] in slot [chars] were set in the golden mode. Please power-cycle or OIR the card to finish the upgrading

Explanation The hw-programmable PSOCs were set in the golden mode for FPD

Recommended Action No action is required. This is informational message

%CMRP-6-FRU_HWPRG_UPG_PSOC_DONE : Hardware programmable PSOCs on [chars] in slot [chars] were upgraded successfully

Explanation The hw-programmable PSOC was upgraded successfully

Recommended Action No action is required. This is informational message

%CMRP-6-FRU_HWPRG_UPG_ADM1266_FM_START : Hardware programmable ADM1266s on [chars] in slot [chars] are upgrading, \please don't reload or power-cycle this card. \ It will take about 10 mins to finish.

Explanation The hw-programmable ADM1266 Firmware is upgrading

Recommended Action No action is required. This is informational message

%CMRP-6-FRU_HWPRG_UPG_ADM1266_FM_SUCCESS : Hardware programmable ADM1266s on [chars] in slot [chars] were successfully programmed. The card is reloading to make them work

Explanation The hw-programmable ADM1266 fimware was upgraded successfully

Recommended Action No action is required. This is informational message

%CMRP-3-RP_MISMATCH : [chars] has been held in reset because the part number differs from that of the active RP

Explanation The part number read from the FRU IDPROM is not compatible with part number of the active RP therefore, it may not

Recommended Action Remove the FRU from the chassis.

%CMRP-3-FP_DOWNREV : [chars] has been held in reset because it is down-rev to the previous FP ([hex] -> [hex]) in the chassis. Reboot the router to bring it up.

Explanation The FP inserted is a lower version than the previous Active FP in the router. Downrev of FP is not supported.

Recommended Action Reboot the router.

%CMRP-3-FP_UNSUPP_UPREV : [chars] has been held in reset because of an unsupported upgrade of FP ([hex] -> [hex]) in the chassis. Reboot the router to bring it up.

Explanation The FP inserted is a higher version than the previous Active FP in the router but this upgrade of FP is not supported.

Recommended Action Reboot the router.

%CMRP-3-FP_LESSTHAN : [chars] has been held in reset because it is down-rev to the active and cannot act as a standby.

Explanation The part number read from the FP IDPROM is not compatible with part number of the active FP therefore, it may not

Recommended Action Remove the FP from the chassis.

%CMRP-3-PWR_FAULT : Shutting down [chars] because power fault on primary is [chars] and secondary is [chars]

Explanation The FRU has been shutdown as a result of a power issue.

Recommended Action Check to ensure the router is receiving power. Otherwise, note the time of the error message and examine the logs for power-related errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-0-PWR_FAULT_INITIALIZATION : Power fault monitor initialization has failed because [chars]

| | |
|---------------------------|--|
| Explanation | The power fault monitor has failed to initialize. |
| Recommended Action | Note the time of the error message and examine the Chassis Manager logs. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-0-RESOURCE : Resource allocation failed in [chars] because [chars]

| | |
|---------------------------|---|
| Explanation | The system is unable to allocate the requested resource. |
| Recommended Action | In most cases, this message is seen as a result of a temporary resource issue. Retry the request for the resource when the system is experiencing lower traffic volumes. If the message persists, reload the router using the reload command. |

%CMRP-6-RP_SWITCH_SB_SYNC : RP switchover: [chars]

| | |
|---------------------------|--|
| Explanation | The RP switch synchronization timer expired. |
| Recommended Action | No user action is necessary. |

%CMRP-3-RP_SWITCH_SB_NOT_READY : RP switchover: [chars]

| | |
|---------------------------|--|
| Explanation | An RP switchover occurred when the standby RP was not ready. The standby RP reset. |
| Recommended Action | No user action is necessary. Allow the standby RP to reset. |

%CMRP-0-SYSPAGE_WRITE_ERROR : The syspage chassis-type write has failed because [chars]

| | |
|---------------------------|--|
| Explanation | The syapge chassis-type write failed. This could be due to a software defect. |
| Recommended Action | Note the time of the error message and examine the Chassis Manager logs. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-3-HWMOD_FAIL : hw-module [chars] command for slot [chars] failed ([chars])

| | |
|--------------------|--|
| Explanation | The last hw-module command that was entered failed to complete |
|--------------------|--|

%CMRP-3-HWMOD_FAIL : hw-module [chars] command for slot [chars] failed ([chars])

Recommended Action Retry the command. If the retry of the command fails, reload the router. If reloading the router fails to resolve the problem, note the time of the error message and examine the Chassis Manager logs. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-RP_SB_RELOAD : Reload of Standby RP failed: [chars]

Explanation A request to reload the standby RP failed.

Recommended Action Manually reload the standby RP. If that fails, configure SSO or RPR and then attempt the reload. If the problem persists, note the time of the error message and examine the Chassis Manager logs. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, show redundancy state, and the output of show tech-support and provide the gathered information to a Cisco technical support representative

%CMRP-6-RP_SB_RELOAD_REQ : Reloading Standby RP: [chars]

Explanation A reload of Standby RP has been requested.

Recommended Action No action is necessary.

%CMRP-3-RP_RESET : RP is resetting : [chars]

Explanation This RP is resetting due to the reason specified.

Recommended Action No action is necessary.

%CMRP-6-FP_SB_RELOAD_REQ : Reloading Standby FP: [chars]

Explanation A reload of Standby FP has been requested.

Recommended Action No action is necessary.

%CMRP-6-DUAL_IOS_STARTING : Software redundant IOS configured starting standby

Explanation Chassis manager received notification that IOS software redundancy has been configured. The standby IOS will be started in the time specified.

%CMRP-6-DUAL_IOS_STARTING : Software redundant IOS configured starting standby

Recommended Action No action is necessary.

%CMRP-6-DUAL_IOS_STOPPING : Bringing down standby IOS

Explanation Chassis manager received notification to stop the standby IOS instance. This may be for a redundancy mode change. Depending on the reason, the standby may be subsequently restarted.

Recommended Action No action is necessary.

%CMRP-6-DUAL_IOS_REBOOT_REQUIRED : Configuration must be saved and the chassis must be rebooted for IOS redundancy changes to take effect

Explanation Chassis manager received notification that IOS software redundancy has been configured. For these changes to take effect, the system must be restarted.

Recommended Action Reload the chassis.

%CMRP-6-SINGLE_IOS_REBOOT_RECOMMENDED : Configuration must be saved and the chassis should be rebooted for optimal single-IOS execution

Explanation Chassis manager received notification that IOS software redundancy has been unconfigured. For optimal runtime resource allocation, the system must be restarted.

Recommended Action Reload the chassis.

%CMRP-3-CHASSIS_MONITOR_FRU_BOOT_STATUS : Reloading [chars] because the FRU boot status is unknown

Explanation The time at which the FRU started booting is not available. This time is used to check the boot status of the FRU.

Recommended Action Remove the FRU from the chassis if the FRU is continuously reloaded.

%CMRP-3-CHASSIS_MONITOR_FRU_BOOT_RETRIES_EXCEEDED : [chars] has been held in reset because it has failed to successfully boot in [dec] tries

Explanation The FRU has failed to successfully boot in the maximum allowable attempts and is held in reset.

%CMRP-3-CHASSIS_MONITOR_FRU_BOOT_RETRIES_EXCEEDED : [chars] has been held in reset because it has failed to successfully boot in [dec] tries

Recommended Action Remove the FRU from the chassis if the FRU continuously fails to boot.

%CMRP-3-CHASSIS_MONITOR_ONLINE_TIME_EXCEEDED : Reloading [chars] because it has failed to come online

Explanation A FRU has failed to come online within the maximum boot time.

Recommended Action Remove the FRU from the chassis if the FRU is continuously reloaded.

%CMRP-3-CHASSIS_MONITOR_READY_TIME_EXCEEDED : Reloading [chars] because it has failed to become ready for packet processing

Explanation The FRU failed to become ready within the maximum ready time. This message applies to FP FRUs. A switchover will be performed if another FP is available.

Recommended Action Remove the FRU from the chassis if the FRU is continuously reloaded.

%CMRP-3-CHASSIS_MONITOR_ONLINE_TIME_IGNORED : [chars] exceeded online time but will not be reset because fault ignore is configured

Explanation The FRU failed to come online within the maximum online time. This message applies to all FRUs. A reload will not be performed because fault ignore is configured.

Recommended Action No action is necessary.

%CMRP-3-CHASSIS_MONITOR_READY_TIME_IGNORED : [chars] exceeded ready time but will not be reset because fault ignore is configured

Explanation The FRU failed to become ready within the maximum ready time. This message applies to FP FRUs. A switchover and/or reload will not be performed because fault ignore is configured.

Recommended Action No action is necessary.

%CMRP-3-CHASSIS_FRU_FAULT_IGNORED_ISSET : CMAN_IGNORE_FRU_FAULTS is set. Some FRU faults will be ignored and FRU may not restart due to a fault

Explanation Debug variable will prevent a FRU from being restarted due to some faults.

%CMRP-3-CHASSIS_FRU_FAULT_IGNORED_ISSET : CMAN_IGNORE_FRU_FAULTS is set. Some FRU faults will be ignored and FRU may not restart due to a fault

Recommended Action No action is necessary.

%CMRP-3-CHASSIS_FRU_FAULT_IGNORED : CMAN_IGNORE_FRU_FAULTS is set. [chars]: [chars]

Explanation Debug variable will prevent a FRU from being restarted due to some faults.

Recommended Action No action is necessary.

%CMRP-6-TEST_SPA_OIR_ONLINE_OPS : SPA [dec]/[dec] oir online status is set to [chars]

Explanation test command executed to either allow/deny the spa coming online.

Recommended Action oir online action If the card does not come online, execute the test command to allow the spa to come online.

%CMRP-6-TEST_SPA_OIR_ONLINE_INSERT_DENIED : SPA [dec]/[dec] oir insert is denied

Explanation test command executed disallowing the spa to be inserted.

Recommended Action Execute the test command allowing the insertion of the spa for normal operation

%CMRP-2-CRYPTOGRAPHIC_HW_MISMATCH : ESP[dec] does not support strong cryptography. Chassis will reload.

Explanation IOS software featuring strong cryptography is invalid for use with any non-strong-cryptography Embedded Service Processor. The router node will reload if this combination is encountered.

Recommended Action Install a non-strong-cryptography image of the RP IOS package or replace the indicated Embedded Service Processor with one that supports strong-cryptography

%CMRP-3-INVENTORY_INITIALIZATION : [chars] inventory file could not be read. FRU may need a reload to initialize properly, [chars]

Explanation The FRU inventory file could not be read. The file can possibly be corrupt. The FRU will possibly not initialize properly. The FRU should reset automatically. If it does not, it should be reloaded manually. If the error persists, the FRU will need to be replaced.

Recommended Action Wait a few minutes. If FRU does not reset automatically, it should be manually reloaded. If error persists, the FRU needs to be replaced.

%CMRP-5-PRERELEASE_HARDWARE : [chars] is pre-release hardware

Explanation The board does have an official production part number.

Recommended Action Immediately contact Cisco for a replacement board.

%CMRP-6-RFROLE : RP switchover, [chars]

Explanation On RP switchover chasfs rfrole property has been changed.

Recommended Action No user action is necessary.

%CMRP-3-DUAL_IOS_STANDBY_BAY : Standby bay cannot be launched due to failure in bringing down existing processes (Attempts: [dec])

Explanation During standby bay shutdown, some related processes still remain running for an unexpectedly prolonged period of time. Chassis-manager has timed-out waiting for all related processes to shutdown. As a result, it is unable to notify Process-manager to restart the bay

Recommended Action Examine the logs for standby bay's Forwarding-manager (fman), Interface-manager (iman), Pluggable-Service-Daemon (psd) and IOS. Ascertain which of these processes is taking too long to shutdown and note the reason. Take corrective action based on the error noted in the log

%CMRP-3-INCOMPATIBLE_STANDBY_SUPERVISOR :

Explanation Supervisor found in Standby slot may not be fully compatible with the active supervisor and may cause issues.

Recommended Action Use supervisors with the same specifications to enable High Availablilty features.

%CMRP-6-THROUGHPUT_LICENSE : Throughput license [chars], throughput set to [chars]

Explanation Status indicating whether throughput license is found and the corresponding throughput the CPP hardware is configured to provide.

Recommended Action No user action is necessary. This is an informational message indicating throughput configured.

%CMRP-3-THROUGHPUT_LICENSE_APPLY_FAILED : Throughput license look-up failed due to '[chars]'

Explanation This message is to notify the user that a license look-up did not succeed because license manager process could not be contacted. This is a rare case but is due to either a crashed license daemon(licensed) or it encountered an internal error.

Recommended Action No user action is necessary. However, it is possible that a re-boot of the box may correct this behavior.

%CMRP-3-UDI_AUTH : Quack Unique Device Identifier authentication failed

Explanation This chassis seems to be compromised or tampered with. UDI burned on to the Quack chip and the one read from chassis EEPROM do not match. It can also be a case of either EEPROM or Quack device failure. More details about which specific field failed to match are logged in license daemon log file (licensed_R0.log).

Recommended Action User immediately needs to contact Cisco support. This device appears to be tampered with or is a counterfeit device or had a system failure.

%CMRP-3-SIP_MDR_FAIL : The SIP[dec] failed Minimal Disruptive Restart because [chars]

Explanation The SIP failed Minimal Disruptive Restart. Minimal Disruptive Restart process is aborted and an attempt will be made to recover the SIP by resetting the SIP hardware.

Recommended Action Examine the system logs for errors.

%CMRP-3-INTERNAL_HW_ERROR : An nternal error condition was detected and resolved.

Explanation An internal error condition was detected, and affected part of hardware was reset. If this error condition reoccurs, the hardware may need to be replaced.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP-0-INTERNAL_HW_SHUTDOWN : Internal unrecoverable error condition was detected. System is being reset.

Explanation Internal unrecoverable error condition was detected, and so the system was reset. If this error condition reoccurs, the hardware may need to be replaced.

%CMRP-0-INTERNAL_HW_SHUTDOWN : Internal unrecoverable error condition was detected. System is being reset.

| | |
|---------------------------|--|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%CMRP-4-SYSTEM_OVER_CURRENT : Overall system over-current has been detected. System will be reset.

| | |
|---------------------------|--|
| Explanation | Internal error (system over-current) condition was detected, and so the system was reset. If this error condition reoccurs, the hardware may need to be replaced. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP-4-NGWICS_OVER_CURRENT : A NIM over-current condition has been detected. System will be reset.

| | |
|---------------------------|--|
| Explanation | Internal error (NIM over-current) condition was detected, and so the system was reset. If this error condition reoccurs, the hardware may need to be replaced. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP-4-FAN_TRAY_OVER_CURRENT : A Fan Tray over-current has been detected. System will be reset.

| | |
|---------------------------|--|
| Explanation | Internal error (Fan Tray over-current) condition was detected, and so the system was reset. If this error condition reoccurs, the hardware may need to be replaced. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP-4-MOTHERBOARD_OVER_CURRENT : Motherboard over-current has been detected. System will be reset.

| | |
|---------------------------|---|
| Explanation | Internal error (Motherboard over-current) condition was detected, and so the system was reset. If this error condition reoccurs, the hardware may need to be replaced. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP-2-FRU_FPGA_INCOMPATIBLE : [chars] in slot [chars] has been held in reset as its FPGA firmware version is incompatible with [chars]

| | |
|---------------------------|---|
| Explanation | This FRU requires a newer FPGA firmware to function properly in this chassis |
| Recommended Action | Upgrade the FPGA firmware on this FRU using the <code> upgrade hw-programmable FPGA file <pkg_file> slot <fru_slot> </code> command. |

%CMRP-6-FRU_FPGA_UPG_REQUIRED : [chars] in slot [chars] has INCOMPATIBLE FPGA firmware version with [chars]. Upgrade the FPGA firmware

| | |
|---------------------------|---|
| Explanation | This FRU requires a newer FPGA firmware to function properly in this chassis |
| Recommended Action | Upgrade the FPGA firmware on this FRU using the <code> upgrade hw-programmable FPGA file <pkg_file> slot <fru_slot> </code> command. |

%CMRP-3-FAN_REMOVE_IM_SHUT : The Interface Modules (IM's) may shutdown in [dec] minutes [dec] seconds.

| | |
|---------------------------|--|
| Explanation | Fan tray has been removed and the router will shutdown to protect itself from overheating in the amount of time stated in the error message. |
| Recommended Action | Reinsert a fan tray into the fan tray slot as soon as possible. |

%CMRP-3-FAN_REMOVE_SHUT : The system will shut down in [dec] minutes [dec] seconds

| | |
|---------------------------|--|
| Explanation | Fan tray has been removed and the router will shutdown to protect itself from overheating in the amount of time stated in the error message. |
| Recommended Action | Reinsert a fan tray into the fan tray slot as soon as possible. |

%CMRP-3-FAN_REMOVE_RSP3_SHUT : System received fan tray removal notification, Reinsert or service the faulty fan tray to avoid system shutdown due to high temperature. System will shutdown in [dec] minutes [dec] seconds based on current ambient temperature.

Explanation Fan tray has been removed and the router will shutdown when the ARAD temp reaches Critical temperature i.e 105C to protect itself from overheating.

Recommended Action Reinsert a fan tray into the fan tray slot as soon as possible.

%CMRP-3-FAN_REMOVE_RSP2_SHUT : The system will shut down when CYLON temp reaches 105C

Explanation Fan tray has been removed and the router will shutdown when cylon temperature reaches critical temperature i.e. 105C to protect itself from overheating in the amount of time stated in the error message.

Recommended Action Reinsert a fan tray into the fan tray slot as soon as possible.

%CMRP-3-FAN_REMOVE_SYS_SHUTDOWN_PENDING : System shutdown will occur in [dec] minutes.

Explanation The FRU is overheating and will be shut down in order to protect the components.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP-3-EXT_ALARM_INTERRUPT : Alarm [chars]:external alarm contact [dec]

Explanation There is an external alarm on the line.

Recommended Action If alarm is asserted, then clear at the source.

%CMRP-3-FAN_FAILURE_SYS_SHUTDOWN : WARNING: More than one Fan Failure detected and shutdown SYS state. System shutdown now TRUE:[hex].

Explanation More than one fan failures are identified this causing overheating the system and will be shut down in order to protect the components.

%CMRP-3-FAN_FAILURE_SYS_SHUTDOWN : WARNING: More than one Fan Failure detected and shutdown SYS state. System shutdown now TRUE:[hex].

| | |
|---------------------------|---|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CMRP-3-POWERBUDGET : not enough power budget left for : [chars]:[dec]

| | |
|---------------------------|--|
| Explanation | The system do not have enough power budget for the new card. |
| Recommended Action | the message will be displayed when not enough power budget left for the new card inserted. |

%CMRP-2-BAD_ID_HW : Failed Identification Test in [chars]. The module [chars] may not be a genuine Cisco product. Cisco warranties and support programs only apply to genuine Cisco products. If Cisco determines that your insertion of non-Cisco memory, WIC cards, AIM cards, Network Modules, SPA cards, GBICs or other modules into a Cisco product is the cause of a support issue, Cisco may deny support under your warranty or under a Cisco support program.

| | |
|---------------------------|--|
| Explanation | Hardware in the specified location could not be identified as a genuine Cisco product |
| Recommended Action | Replace the hardware with a genuine Cisco product. If this message recurs, contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP-2-ACT2_UDI_DATA_INVALID : The act2 udi secure area format mismatch with unsecure area

| | |
|---------------------------|---|
| Explanation | This Router may not have been manufactured by Cisco or with Cisco's authorization. This product may contain software that was copied in violation of Cisco's license terms. If your use of this product is the cause of a support issue, Cisco may deny operation of the product, support under your warranty or under a Cisco technical support program such as Smartnet. Please contact Cisco's Technical Assistance Center for more information. |
| Recommended Action | Replace the current product with a Cisco authorised product. If this message recurs, contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP-5-PEM_OUTPUT_DETECT : Output of PEM [dec] is [dec] V

| | |
|---------------------------|--|
| Explanation | Value of Output of PEM. |
| Recommended Action | If PEM Output is 0, check Power Cable. |

%CMRP-0-CLOCK_MASTERSHIP_SET : Failed to set CLOCK mastership because [chars]

| | |
|---------------------------|--|
| Explanation | The router failed to establish CLOCK mastership. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-3-ODD_OPR : An OOD operation has failed because [chars]

| | |
|---------------------------|---|
| Explanation | An OOD operation has failed. This could be due to a hardware or software defect. |
| Recommended Action | Note the time of the error message and examine the logs for OOD errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-6-STBY_HARDDISK_UNAVAIL : stby-harddisk is offline

| | |
|---------------------------|--|
| Explanation | The stby-harddisk is not available. |
| Recommended Action | No user action is necessary. This is an informational message. |

%CMRP-3-LICENSE_TIMEOUT : Throughput license request timed out. Throughput level set to default

| | |
|---------------------------|---|
| Explanation | Throughput license was never received from lman |
| Recommended Action | Examine logs for error messages |

%CMRP-5-UNSUPPORTED_MODULE : Unsupported Module inserted. The module [chars] on the slot [dec] may not be a genuine Cisco product. Cisco warranties and support programs only apply to genuine Cisco products. If Cisco determines that your insertion of non-Cisco memory, WIC cards, AIM cards, Network Modules, SPA cards, GBICs or other modules into a Cisco product is the cause of a support issue, Cisco may deny support under your warranty or under a Cisco support program.

| | |
|--------------------|---|
| Explanation | Hardware in the specified location could not be identified as a genuine Cisco product |
|--------------------|---|

%CMRP-5-UNSUPPORTED_MODULE : Unsupported Module inserted. The module [chars] on the slot [dec] may not be a genuine Cisco product. Cisco warranties and support programs only apply to genuine Cisco products. If Cisco determines that your insertion of non-Cisco memory, WIC cards, AIM cards, Network Modules, SPA cards, GBICs or other modules into a Cisco product is the cause of a support issue, Cisco may deny support under your warranty or under a Cisco support program.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP-3-SERDES_NSTEP_SYNC_ERROR : Link down in Slot=[int], Link-Type=[int], Link-Status=[hex], Link=[int]

Explanation One or more Backplane Link didn't come up. This could be due to a hardware defect.

Recommended Action Note the time of the error message and examine the logs for repeated SYNC errors after repeated retries. If the logs, provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%CMRP-3-SOFT_ERROR_RELOAD : Uncorrected Soft error on [chars], reloading RP to recover

Explanation Uncorrected Soft error on critical module, reloading the RP to recover

Recommended Action If this reoccures frequently, contact asr903-system

%CMRP-3-SOFT_ERROR_RELOAD_RECOMMENDED : Uncorrected Soft error on [chars], reload is recommended to recover.

Explanation Uncorrected Soft error on critical module, reload is recommended to recover

Recommended Action If this reoccures frequently, contact asr903-system

%CMRP-3-SOFT_ERROR_WAIT : Uncorrected Soft error on [chars], waiting for standby to switchover

Explanation Uncorrected Soft error on critical module, waiting for standby to reach SSO to switchover

Recommended Action If this reoccures frequently, contact asr903-system

%CMRP-3-SOFT_ERROR_UPDATE : Critical soft error on [chars]

| | |
|---------------------------|---|
| Explanation | Update for each soft error on different components |
| Recommended Action | If this reoccures frequently, contact asr903-system |

%CMRP-6-FRU_HWPRG_CPLD_POSTUPG_SUCCESS : Hardware CPLD postupgrade on CLC[dec] was successfully programmed.The LC is reloading to make it take effect.

| | |
|---------------------------|---|
| Explanation | The hw-programmable CPLD postupgrade was upgraded succesfully |
| Recommended Action | No action is required. This is informational message |

%CMRP-3-PSU_INCOMPATIBLE : The combination of Power Supply in P0: [chars] and P1: [chars] is not supported in power [chars] mode

| | |
|---------------------------|--|
| Explanation | An incompatible power supplies combination has been identified in P0 and P1 power supply slots. This could cause unpredictable behavior in power management in the router. |
| Recommended Action | This error indicates that the combination of the two power supplies in P0 and P1 is an unsupported combination. In order to fix this issue, please review the installation guide, plug out one of the power supplies based on the requirement. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-3-FAN_INCOMPATIBLE : The combination of Power Supply and Fan Tray is incompatible

| | |
|---------------------------|---|
| Explanation | The combination of Fan tray and one of the power supply slots is not supported. This could cause unpredictable system behavior. |
| Recommended Action | This error indicates that the combination of one of the power supplies in P0 or P1 is not supported with the Fan Tray. In order to fix this issue, please review the installation guide, replace the fan tray or the power supply based on the requirement. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%CMRP-6-FRU_HWPRG_UPG_START : Hardware programmable [chars] on [chars] in slot [chars] is upgrading. please don't reload or power-cycle this card. It will take about 5 mins to finish.

| | |
|---------------------------|--|
| Explanation | The hw-programmable was upgrading |
| Recommended Action | No action is required. This is informational message |

CMRP_ENVMON

%CMRP_ENVMON-3-TEMP_FRU_SHUTDOWN_PENDING : WARNING: [chars] temperature sensor on [chars] is in a shutdown FRU state. FRU shutdown will occur in [dec] minutes.

| | |
|---------------------------|---|
| Explanation | The FRU is overheating and will be shut down in order to protect the components. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_ENVMON-3-TEMP_SYS_SHUTDOWN_PENDING : WARNING: [chars] temperature sensor on [chars] is in a shutdown SYS state. System shutdown will occur in [dec] minutes.

| | |
|---------------------------|---|
| Explanation | The FRU is overheating and will be shut down in order to protect the components. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_ENVMON-3-TEMP_FRU_SHUTDOWN_NOW : WARNING: [chars] temperature sensor on [chars] is in a shutdown FRU state. FRU shutdown now.

| | |
|---------------------------|---|
| Explanation | The FRU is overheating and will be shut down in order to protect the components. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_ENVMON-3-TEMP_PSU_SHUTDOWN_NOW : WARNING: [chars] temperature sensor on [chars] is in a shutdown PSU state. PSU shutdown now.

| | |
|--------------------|--|
| Explanation | The PSU is overheating and will be shut down in order to protect the components. |
|--------------------|--|

%CMRP_ENVMON-3-TEMP_PSU_SHUTDOWN_NOW : WARNING: [chars] temperature sensor on [chars] is in a shutdown PSU state. PSU shutdown now.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_ENVMON-3-TEMP_SYS_SHUTDOWN_NOW : WARNING: [chars] temperature sensor on [chars] is in a shutdown SYS state. System shutdown now.

Explanation The FRU is overheating and will be shut down in order to protect the components.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_ENVMON-3-TEMP_WARN_CRITICAL : WARNING: [chars] temperature sensor on [chars] is in a critical state reading [dec]

Explanation The FRU is overheating and will be shut down in order to protect the components.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_ENVMON-3-TRANSCEIVER_TEMP_SYS_SHUTDOWN_NOW : WARNING: transceiver temperature sensor is in a shutdown SYS state. System shutdown now [hex].

Explanation The Transceiver is overheating and will be shut down in order to protect the components.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_ENVMON-3-TEMP_FRU_HW_AUTO_SHUTDOWN : WARNING: The card on slot [dec] is overheating. it has been auto-shutdown by hardware for protection

| | |
|---------------------------|---|
| Explanation | The FRU is overheating and has been auto-shutdown in order to protect the components. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_ENVMON-3-PWR_FRU_HW_AUTO_SHUTDOWN : WARNING: The card on slot [dec] hit abnormal voltage or current. it has been auto-shutdown by hardware for protection

| | |
|---------------------------|---|
| Explanation | The FRU hit abnormal voltage or current and has been auto-shutdown in order to protect the components. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_ENVMON-6-TEMP_SYS_SHUTDOWN_DISABLED : WARNING: System is in a thermal shutdown disabled state. System won't shut down now.

| | |
|---------------------------|---|
| Explanation | Thermal shutdown disable is configured to bypass system shutdown. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CMRP_PFU

%CMRP_PFU-6-PFU_INSERTED : [chars] inserted. System shutdown aborted.

| | |
|--------------------|---|
| Explanation | When either a PEM or a FM are removed, the system lacks sufficient cooling capacity. To prevent damage, the system will automatically shut down unless it is replaced. This message serves as notice that the module has been replaced within the required time |
|--------------------|---|

%CMRP_PFU-6-PFU_INSERTED : [chars] inserted. System shutdown aborted.

| | |
|---------------------------|--|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%CMRP_PFU-3-PFU_SHUTDOWN : Shutting down system now because the PEM in slot [dec] was removed or not seated correctly.

| | |
|---------------------------|--|
| Explanation | When either a PEM or a FM are removed, the system lacks sufficient cooling capacity. To prevent damage, the system will automatically shut down unless it is replaced. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-3-PFU_SLOT_VACANT : The platform does not detect a power supply in slot [dec]

| | |
|---------------------------|--|
| Explanation | There is no power supply in one of the power supply slots. |
| Recommended Action | Insert a power supply into the empty slot. |

%CMRP_PFU-3-PFU_FANS_DEAD_SHUTDOWN : Shutting down system now because the fans in slot [dec] have all failed.

| | |
|---------------------------|--|
| Explanation | When the fans fail then system does not have sufficient cooling capacity. To prevent damage, the system will automatically shut down. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-3-TEMP_FRU_SHUTDOWN : [chars] temperature sensor on [chars] is in a shutdown FRU state. FRU shutdown will occur in [dec] minutes.

| | |
|--------------------|--|
| Explanation | The FRU is overheating and will be shut down in order to protect the components. |
|--------------------|--|

%CMRP_PFU-3-TEMP_FRU_SHUTDOWN : [chars] temperature sensor on [chars] is in a shutdown FRU state. FRU shutdown will occur in [dec] minutes.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-3-TEMP_SYSTEM_SHUTDOWN : [chars] temperature sensor is in a shutdown system state. System shutdown will occur in [dec] minutes.

Explanation The system is overheating and will be shut down in order to protect the components.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-3-PFU_FANS_DEAD : The fans in the [chars] in slot [dec] have all failed.

Explanation The system is in danger of overheating because none of the fans in one of the PEMs are working properly.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-3-PFU_FAN_DEAD : WARNING: Fan [dec] in the [chars] in slot [dec] has failed.

Explanation A fan is not functioning properly.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-3-PFU_IDPROM_READ_ERR : Could not read the PEM/FM idprom in slot P[dec]. The system will run without environmental monitoring for this component

| | |
|---------------------------|---|
| Explanation | The idprom contains information required in order to properly operate the environmental monitoring subsystems. The idprom could not be read, therefore no monitoring will take place. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-3-PFU_IDPROM_CORRUPT : The PEM/FM idprom could be read, but is corrupt in slot P[dec] The system will run without environmental monitoring for this component

| | |
|---------------------------|---|
| Explanation | The idprom contains information required in order to properly operate the environmental monitoring subsystems. The idprom could not be read, therefore no monitoring will take place. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-3-SHUTDOWN_FAILURE : The system attempted to shut itself down, but failed because [chars]

| | |
|---------------------------|---|
| Explanation | The system reached a condition where it should be shut down, but the shutdown call failed. The system should be manually rebooted. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-6-PEM_INSERTED : PEM in slot [dec] not operational.

| | |
|---------------------------|--|
| Explanation | A PEM seems to be inserted without the power cable connected. This message is a notice that the power supply is not operational, will not provide power to the system, and may not be completely detected by the software until the power cable is connected and the PEM is supplied with the power. |
| Recommended Action | Insert the power supply cable in the PEM and provide power. |

%CMRP_PFU-3-FANASSY_REMOVED : Fan Assembly is removed. Please insert to avoid system from heating.

Explanation Fan Assembly has been removed from the system. It needs to be inserted back to prevent system from heating. If the system over heats, parts of the system will not function normally and system may shut itself down.

Recommended Action Insert the fan assembly in the system to prevent system from over heating.

%CMRP_PFU-6-FANASSY_INSERTED : Fan Assembly is inserted.

Explanation Fan Assembly that was previously removed has been inserted in the system. Preventing the system from over heating is important. So fan assembly should not be removed for extended period of time during normal operation.

Recommended Action No further action is necessary.

%CMRP_PFU-3-PFU_FAN_ERR : WARNING: Fan [dec] in slot [dec] has the error: [chars], Please replace it with a new fan.

Explanation A fan is not functioning properly.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-4-PFU_FAN_WARN : WARNING: Fan [dec] in slot [dec] has the error: [chars].

Explanation A fan is not functioning properly.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-6-PFU_FAN_RECOVERED : Fan in slot [dec] has been recovered from error conditions, Now it's working normally.

Explanation Fans are just recovered from an error condition,

%CMRP_PFU-6-PFU_FAN_RECOVERED : Fan in slot [dec] has been recovered from error conditions, Now it's working normally.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-6-PFU_FAN_RECOVERED_I2C : Successfully restored I2C communication to PSoC [dec] on fan module in slot [dec].

Explanation Fans are just recovered from an I2C communication.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-4-PFU_FAN_INSUFFICIENT : WARNING: Insufficient number of fan modules installed. There are only [dec] fan modules, expecting [dec]

Explanation Insufficient number of fan modules installed, should insert new fans as soon as possible to avoid system from over heating.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-6-PWR_MGMT_OK : Sufficient number of power supplies ([dec]) are installed for power redundancy mode [chars] (excess power [dec] watts).

Explanation Sufficient number of power supplies are installed.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-4-PWR_MGMT_WARN : WARNING: Insufficient number of power supplies ([dec]) are installed for power redundancy mode [chars]. The system needs [dec] watts additional power.

Explanation Insufficient number of power supplies are installed. Should insert new power supplies as soon as possible

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-3-PWR_MGMT_ALARM : WARNING: System does not have sufficient input power for minimum reliable operation requiring [dec] watts. The system needs [dec] watts of additional power.

Explanation System power does not meet minimum requirements. Insert additional power supplies or provide current power supplies with a greater input voltage source if applicable.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-4-PWR_MGMT_CAPACITY_MIXED : System contains power supplies of mixed power capacity. Redundancy operating mode Full protected is not supported with this configuration. System will run in Normal protected state.

Explanation HW does not support Full protected mode with mixed capacity power supplies. This is due to current sharing specifically

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-3-PWR_REDUN_ALARM_STATE : WARNING: An active power supply has failed and the system has entered alarm state. The system is operating without power redundancy and has [dec] watts of power remaining

Explanation An active power supplied failed while in redundant power mode.

%CMRP_PFU-3-PWR_REDUN_ALARM_STATE : WARNING: An active power supply has failed and the system has entered alarm state. The system is operating without power redundancy and has [dec] watts of power remaining

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-6-PWR_REDUN_RECOVERED : System has recovered from the alarm state and has [dec] watts of power remaining

Explanation User has recovered the system from the alarm state triggered by a power failure

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-3-PWR_MGMT_LC_SHUTDOWN : WARNING: Linecard in slot [dec] with priority [dec] and a power requirement of [dec] watts has shutdown.

Explanation A LC was shutdown due to a power loss.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-6-PWR_MGMT_LC_RECOVERED : Linecard in slot [dec] with priority [dec] has been recovered from shutdown

Explanation A LC was recovered from a shutdown

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%CMRP_PFU-6-PWR_MGMT_SINGLE_SUP_NOTICE : NOTICE([dec] of [dec]): System is now running in SINGLE-SUP power budget mode. Insertion of the remote supervisor is not supported in this power mode. System may shutdown if second supervisor is inserted.

| | |
|---------------------------|---|
| Explanation | User needs to be notified that single-sup mode is enabled |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-3-PWR_MGMT_SINGLE_SUP_ERROR : ERROR: Remote supervisor has been detected in slot [dec]. System is configured to SINGLE-SUP power mode. Remove remote supervisor IMMEDIATELY.

| | |
|---------------------------|---|
| Explanation | User inserted a second supervisor in a single-sup power mode. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-3-DCPOWERREDUNDANCY : dc input [chars] failed for pem: [dec]

| | |
|---------------------------|---|
| Explanation | The DC input failed for pem module. |
| Recommended Action | the message will be displayed when DC input failed. |

%CMRP_PFU-5-DCPOWERINPUT : dc input [chars] recovered for pem: [dec]

| | |
|---------------------------|--|
| Explanation | The DC input recovered for pem module. |
| Recommended Action | the message will be displayed when DC input recovered. |

%CMRP_PFU-3-PEM_STATUS : WARNING: The power supply module on slot [dec] hits [chars],

| | |
|--------------------|---|
| Explanation | The power supply module are not functioning properly. |
|--------------------|---|

%CMRP_PFU-3-PEM_STATUS : WARNING: The power supply module on slot [dec] hits [chars],

| | |
|---------------------------|--|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%CMRP_PFU-3-PEM_VOLTAGENOTSUPPORTED : WARNING: Input voltage of power supply module on PS[dec] is not supported. Please use the supported range of either [dec]-[dec] volts for [dec]W or [dec]-[dec] volts for [dec]W

| | |
|---------------------------|--|
| Explanation | The input voltage of the power supply module is out of range |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-3-PWR_PROTECTION_MODE : WARNING: Detected low input voltage ([dec]V) on the power supply in slot P[dec], the power budget may not be enough, some cards may be shutdown due to the power budget reduction. Please check the power input.

| | |
|---------------------------|--|
| Explanation | Input voltage of power supply is too low. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-6-PWR_PROTECTION_RECOVERED : The power supply in slot P[dec] has been recovered from the power protection mode.

| | |
|---------------------------|--|
| Explanation | Power supply input are just recovered from an error condition, |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-3-PWR_PROTECTION_ACTION : Shutdown the card [chars] due to insufficient power budget.

| | |
|---------------------------|---|
| Explanation | The total power is not enough, shutdown FRUs for power protection. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-6-PWR_UP_FRU : Power up the card [chars] due to power budget change.

| | |
|---------------------------|---|
| Explanation | The total power become enough, power FRUs. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CMRP_PFU-6-PFU_BEACON_LED_ON_OFF : [chars] beacon LED for PFU[dec] is TURNED [chars].

| | |
|---------------------------|--|
| Explanation | Power Supply or Fan-tray, Beacon LED turned ON/OFF. This is a notification message only.No action is required. |
| Recommended Action | This is a notification message only. No action is required. |

%CMRP_PFU-1-PFU_FAN_FAILED : System detected fan tray removal or fan failure, reinsert or service the faulty fan tray to avoid system shutdown due to high temperature.

| | |
|---------------------------|--|
| Explanation | Fan tray has been removed or one of the fan failed and the router will shutdown when the temp reaches Critical temperature to protect itself from overheating. |
| Recommended Action | Reinsert a fan tray into the fan tray slot as soon as possible. |

COMMON_FIB

%COMMON_FIB-3-NOMEM : Memory allocation failure for [chars] in [chars] CEF [[hex]] ([chars])[chars].

| | |
|---------------------------|---|
| Explanation | An attempt to allocate memory has failed. Depending on the criticality of the data to be stored, CEF operation may be impacted. |
| Recommended Action | Verify that the configuration is supported by the memory present in the system. Copy the message exactly as it appears, and report it to your technical support representative. |

%COMMON_FIB-4-UNEQUAL : Ratio of unequal path weightings ([chars]) prevents oce [chars] from being used.

Explanation When attempting to setup the load balancing infrastructure for a prefix with unequal path weightings, CEF discovered that the range of weightings caused one or more paths to be excluded from the final set of load balancing paths. Load balancing will continue with the remaining paths.

Recommended Action Reduce the range of weightings to allow all the paths to be used.

%COMMON_FIB-3-ILLEGALARGS : Illegal arguments - [chars]

Explanation COMMON_FIB_INTERNAL_ERROR

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-ILIST_OP : Manipulating interest list - [chars]

Explanation COMMON_FIB_INTERNAL_ERROR

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-NOBROKER : [chars] distribution broker not found - distributing [chars]

Explanation COMMON_FIB_INTERNAL_ERROR

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-BROKER_ENCODE : [chars] broker failed to encode msg type [dec] for slot(s) [chars]

Explanation COMMON_FIB_INTERNAL_ERROR

%COMMON_FIB-3-BROKER_ENCODE : [chars] broker failed to encode msg type [dec] for slot(s) [chars]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%COMMON_FIB-3-FIBXDRINV : Invalid XDR format. [chars]

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBXDRLEN : Invalid XDR length. Type [dec] ([chars]). XDR/buffer len [dec]/[dec]

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBXDRCLIENT : FIB XDR Client error detected, invalid wkid: ([int])

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-LCPREFIXINCONST1 : Slot [chars] missing prefix entry for [chars] in FIB table [chars] when looking up [chars] [[chars]]

| | |
|---------------------------|--|
| Explanation | A packet arrived on the linecard, but the lookup of the destination IP address failed to find this prefix in the forwarding table. However the prefix is present on the RP. This may be a transient condition. |
| Recommended Action | If the same prefix gives repeated errors check the CEF prefix on the RP and linecard. If necessary, a clear cef linecard <slot> will download a new CEF table to the linecard. You can also try a clear adjacency command to reload host prefixes. |

%COMMON_FIB-4-LCPREFIXINCONST2 : Slot [chars] prefix entry for [chars]/[dec] in FIB table [chars] [[chars]] reason: [chars]

| | |
|---------------------------|--|
| Explanation | A passive consistency checker discovered a prefix that is present on the RP, but is inconsistent in the forwarding table of the linecard. This may be a transient condition. |
| Recommended Action | If the same prefix gives repeated errors check the CEF prefix on the RP and linecard. If necessary, a clear cef linecard <slot> will download a new CEF table to the linecard. You can also try a clear adjacency command to reload host prefixes. |

%COMMON_FIB-4-RPPREFIXINCONST1 : RP prefix for [chars]/[dec] in FIB table [chars] (inconsistent on slot [chars] - [chars]) [[chars]]

| | |
|---------------------------|--|
| Explanation | A passive consistency checker discovered a prefix in the forwarding table of the linecard which is inconsistent on the RP. This may be a transient condition. |
| Recommended Action | If the same prefix gives repeated errors check the CEF prefix on the RP and linecard. If necessary, a clear cef linecard <slot> will download a new CEF table to the linecard. |

%COMMON_FIB-4-RPPREFIXINCONST2 : RP missing prefix for [IP_address]%m in FIB table [chars] (present in routing table) [[chars]]

| | |
|---------------------------|---|
| Explanation | A passive consistency checker discovered a prefix in the routing table which is not present in the CEF forwarding table on the RP. This may be a transient condition. |
| Recommended Action | If the same prefix gives repeated errors check the prefix in CEF and routing table. Try disable/enable CEF if the prefix is missing. |

%COMMON_FIB-4-RPPREFIXINCONST3 : RP has prefix [chars]/[dec] in FIB table [chars] (missing in routing table) [[chars]]

| | |
|---------------------------|---|
| Explanation | A passive consistency checker discovered a prefix in the CEF forwarding table which is not present in the routing table. This may be a transient condition. |
| Recommended Action | If the same prefix gives repeated errors check the prefix in CEF and routing table. Try disable/enable CEF if the prefix is missing. |

%COMMON_FIB-4-HWPREFIXINCONST1 : Hardware on RP missing prefix for [chars]/[dec] in FIB table [chars] (present in RP FIB) [[chars]]

| | |
|---------------------------|---|
| Explanation | A passive consistency checker discovered a prefix in the RP FIB table which is not present in the hardware forwarding table on the RP. This may be a transient condition. |
| Recommended Action | If the same prefix gives repeated errors check the prefix in CEF and routing table. Try disable/enable CEF if the prefix is missing. |

%COMMON_FIB-4-HWPREFIXINCONST2 : Hardware in slot [chars] missing prefix for [chars]/[dec] in FIB table [chars] (present in LC FIB) [[chars]]

| | |
|---------------------------|--|
| Explanation | A passive consistency checker discovered a prefix in the LC FIB table which is not present in the hardware forwarding table on this linecard. This may be a transient condition. |
| Recommended Action | If the same prefix gives repeated errors check the prefix in CEF and routing table. Try disable/enable CEF if the prefix is missing. |

%COMMON_FIB-4-HWPREFIXINCONST3 : RP missing prefix for [chars]/[dec] in FIB table [chars] (present in RP hardware) [[chars]]

| | |
|---------------------------|--|
| Explanation | A passive consistency checker discovered a prefix in the hardware table which is not present in the FIB forwarding table on the RP. This may be a transient condition. |
| Recommended Action | If the same prefix gives repeated errors check the prefix in CEF and routing table. Try disable/enable CEF if the prefix is missing. |

%COMMON_FIB-4-HWPREFIXINCONST4 : Slot [chars] missing prefix for [chars]/[dec] in FIB table [chars] (present in LC hardware) [[chars]]

| | |
|---------------------------|--|
| Explanation | A passive consistency checker discovered a prefix in the LC hardware table which is not present in the FIB forwarding table on this linecard. This may be a transient condition. |
| Recommended Action | If the same prefix gives repeated errors check the prefix in CEF and routing table. Try disable/enable CEF if the prefix is missing. |

%COMMON_FIB-4-AUTOREPAIR : CEF [chars] database auto-repair executed

| | |
|---------------------------|--|
| Explanation | The CEF consistency checkers have detected an inconsistent prefix in one of the CEF forwarding databases. The auto-repair function has been executed to repair the problem. Details of the prefix can be found using the 'show cef table consistency' command. |
| Recommended Action | Copy the message exactly as it appears, together with the output of the 'show cef table consistency' command and report it to your technical support representative, |

%COMMON_FIB-3-TABLE : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIB_GSB : Generic subblock error: [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIB_GSB2 : Generic subblock error: [chars][chars][chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-6-FIB_GSB_TEST_MSG : Test subblock error: [chars]

| | |
|---------------------------|---|
| Explanation | The subblock test command could not be completed successfully |
| Recommended Action | No action is required. |

%COMMON_FIB-3-FIB_ATTACHED_EXPORT : Attached export tracking error: [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIB_FIB_SOURCE : [chars] for [chars] - [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIB_FIB_SOURCE_NULL_FIBIDB : [chars] NULL fibidb in broadcast sb

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIB_FIB_SOURCE_IPL_SB : [chars] - [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-6-FIB_RECURSION : [chars] has too many ([int]) levels of recursion during [chars]

| | |
|---------------------------|---|
| Explanation | CEF discovered that the routing for a prefix involved excessive many levels of recursion and was forced to terminate an operation on the entry for that prefix. This is likely to be caused by a recursion loop |
| Recommended Action | If the problem persists use show commands show ip route A.B.C.D and show ip cef A.B.C.D <mask> internal or the ipv6 equivalents show ipv6 route X:X:X:X::X and show ipv6 cef X:X:X:X::X/<0-128> internal to display the RIB and CEF information for the prefix in question and check its configuration. If this prefix is in a VRF, please also check show ip cef vrf <VRF> A.B.C.D/mask internal or show ipv6 cef vrf <VRF> X:X:X:X::X/<0-128> internal. If there is still a problem, please contact the technical support center with the output of these commands and show tech. |

%COMMON_FIB-4-BADXDRHWSBDECODE : HW subblock decode ([chars] / [dec]) - wrong length read (expected [dec], decoded [dec])

| | |
|---------------------------|---|
| Explanation | The given HW subblock is not being processed correctly on the linecard. The error has been corrected, but should be reported in case there are related problems that need to be addressed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-BADXDRSWSBDECODE : SW subblock decode ([chars] / [dec]) - wrong length read (expected [dec], decoded [dec])

| | |
|---------------------------|---|
| Explanation | The given SW subblock is not being processed correctly on the linecard. The error has been corrected, but should be reported in case there are related problems that need to be addressed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-SBWITHOUTISSUSUPPORT : [chars] [chars] subblock doesn't support ISSU and can't be used.

| | |
|---------------------------|---|
| Explanation | The given SW subblock doesn't support ISSU so may not be processed correctly on the LC. It has not been registered by the CEF component. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-ILLEGAL_MSG_TYPE : Cannot find ISSU message type for FIB [chars] ([dec]) [chars]SB [chars] msg

| | |
|---------------------------|---|
| Explanation | The given SW subblock is being sent to an ISSU aware endpoint but CEF cannot verify that this message has been negotiated successfully and cannot send it. This is a coding error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-FIBIDB : No fibidb found for [chars] during [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-FIBHWIDB : No fibhwidb for [chars] found during [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-FIBXDR_REGISTRATION : Unable to register XDR client ([chars]).

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-ASSERT : Assertion '[chars]' failed in [chars] CEF [[hex]]: [chars] ([chars])[chars].

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-ASSERT_RL : Assertion '[chars]' failed in [chars] CEF [[hex]]: [chars] ([chars])[chars].

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-DISABLING : [chars] CEF is being disabled due to a fatal error.

| | |
|--------------------|---------------------------|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
|--------------------|---------------------------|

%COMMON_FIB-4-DISABLING : [chars] CEF is being disabled due to a fatal error.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%COMMON_FIB-3-DEPENDENCY_WALK : Walk specification [IPv6 address] missing handler for type [dec] dependency

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-DEPENDENCY_CHAIN : Missing handler for type [dec] dependency

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBDEPDUMP : [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBPLDEPDUMP : [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBCOVEREDEPDUMP : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-BROKERINVMMSG : Invalid message: [chars], type [chars], len [dec]

| | |
|---------------------------|---|
| Explanation | An invalid message has been received by this broker. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-ISSUBUFFERTOOSHORTMSG : Message [chars] for slots [chars] is too large ([dec] bytes, max [dec])

| | |
|---------------------------|---|
| Explanation | There is not enough buffer space for ISSU transformations. The message must not proceed any further or a buffer overrun may result. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-ISSUENCODEWRONGLEN : Message [chars] for slots [chars] is wrong length ([dec], should be [dec])

| | |
|---------------------------|---|
| Explanation | The encoded message length doesn't match the expected length. Message will not be sent. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-SBNOTISSUAWARE : Subblock [chars] is not ISSU aware and should be!

| | |
|---------------------------|---|
| Explanation | ALL FIB subblocks must be ISSU aware. The subblock code must be rewritten for ISSU. Otherwise this may lead to unpredictable behaviour when running in SSO mode with two different versions of IOS. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-MSGISSUAWARE : Message [chars] ([dec]) is ISSU aware so cannot use old FIB API.

| | |
|---------------------------|---|
| Explanation | ALL FIB subblocks must be ISSU aware. The subblock code must be rewritten for ISSU. Otherwise this may lead to unpredictable behaviour when running in SSO mode with two different versions of IOS. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-SB_STAT_ENCODE : Encoding of [chars] [chars] stats XDR too big

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-CHAIN_INSERT_INCONS1 : Attempting to insert [IPV6 address] after [IPV6 address] but it is still pointed at by [IPV6 address]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-CHAIN_INSERT_INCONS2 : Attempting to insert [IPV6 address] after [IPV6 address] but it has prev set to [IPV6 address]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-CHAIN_REMOVE_INCONS1 : Attempting to remove [IPV6 address] but prev [IPV6 address] points at [IPV6 address] instead

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-CHAIN_REMOVE_INCONS2 : Attempting to remove [IPV6 address] but it has no prev (next is [IPV6 address])

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-CHAIN_REMOVE_INCONS3 : Attempting to remove [IPV6 address] with next [IPV6 address] thinks its prev is [IPV6 address]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-CHAIN_BAD_MAGIC : Bad magic for element [IPV6 address] ([hex] != [hex])

| | |
|--------------------|---------------------------|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
|--------------------|---------------------------|

%COMMON_FIB-3-CHAIN_BAD_MAGIC : Bad magic for element [IPv6 address] ([hex] != [hex])

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-DQUEUE_BAD_PREV : elem [IPv6 address] type [hex] elem->prev [IPv6 address] elem->prev_type [hex] elem->prev->next [IPv6 address]

Explanation COMMON_FIB_INTERNAL_ERROR

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-DQUEUE_BAD_NEXT : elem [IPv6 address] type [hex] elem->next [IPv6 address] elem->next_type [hex] elem->next->prev [IPv6 address]

Explanation COMMON_FIB_INTERNAL_ERROR

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-FIBIDB_DB_MEM : [chars] chunk pool could not be [chars]. Possible memory leak.

Explanation COMMON_FIB_INTERNAL_ERROR

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-FIBIDB_DB_INTERNAL : fibidb [chars] if_nb [dec] could not be [chars] db

Explanation COMMON_FIB_INTERNAL_ERROR

%COMMON_FIB-3-FIBIDB_DB_INTERNAL : fibidb [chars] if_nb [dec] could not be [chars] db

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%COMMON_FIB-3-FIBIDB_DB_NULL_FIBIDB : API called with NULL fibidb

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-EPOCH : Failed to start [chars] of [chars]entries in table [chars]

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-IPMFI_TIMING_PRESENT : IPMFI Timing Tool present in image - performance will be degraded

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-FIBMSG : Invalid message received. Type [chars], event/sub-type [dec], length [dec]

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-ILLEGAL_TABLEID : Attempt to create [chars] table with illegal tableid [dec] ([chars]:[chars])

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-NO_TABLE_NAME : Attempt to clear the name of [chars] table with tableid [dec], previous name [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-2-FIBTABLEILLEGAL : Attempt to used uninitialized CEF data structure.

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBIDBEARLYCALL : Attempt to update fibidb prior to completion of idb initialization.

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-2-IFINDEXBOUNDS : Attempt to use out of bounds interface index: [dec]

| | |
|--------------------|---------------------------|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
|--------------------|---------------------------|

%COMMON_FIB-2-IFINDEXBOUNDS : Attempt to use out of bounds interface index: [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%COMMON_FIB-2-HW_IF_INDEX_ILLEGAL : Attempt to create CEF interface for [chars] with illegal index: [dec]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-2-IF_NUMBER_ILLEGAL : Attempt to create CEF interface for [chars] with illegal if_number: [dec]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBIDBINCONS1 : An internal software error occurred. [chars] should be first fibidb

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBIDBINCONS2 : An internal software error occurred. [chars] linked to wrong idb [chars]

| | |
|--------------------|---------------------------|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
|--------------------|---------------------------|

%COMMON_FIB-3-FIBIDBINCONS2 : An internal software error occurred. [chars] linked to wrong idb [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%COMMON_FIB-3-FIBHWIDBINCONS : An internal software error occurred. [chars] linked to wrong hwidb [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-FIBIDBMISMATCH : Mis-match between idb [chars] (if_number [dec]) and fibidb [chars] (if_number [dec])

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-FIBHWIDBMISMATCH : Mis-match between hwidb [chars] (ifindex [dec]) and fibhwidb [chars] (ifindex [dec])

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-FIBNULLIDB : Missing idb for fibidb [chars] (if_number [dec]).

| | |
|--------------------|---------------------------|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
|--------------------|---------------------------|

%COMMON_FIB-4-FIBNULLIDB : Missing idb for fibidb [chars] (if_number [dec]).

| | |
|---------------------------|--|
| Recommended Action | Please check Bug Toolkit BUG_TOOLKIT on the Cisco web-site for existing bugs and upgrade your software accordingly. If you do not find an existing bug, please contact technical support TAC_CASE_OPEN with the contents of the message log and the output of the 'show tech' command. |
|---------------------------|--|

%COMMON_FIB-4-FIBNULLHWIDB : Missing hwidb for fibhwidb [chars] (ifindex [dec])

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-FIBMISSINGHWIDB : No fibhwidb while initializing fibidb for [chars] (if_number [dec])

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-HW_API : HW API failure for [chars] CEF [[hex]]: [chars] ([chars])[chars].

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-TABLE_CONCURRENT_UPDATE : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBTOPO : Error for topology [dec]: [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBTOPOSTAT : Error pulling topology stats [chars][chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIB_MPLS_EXT_FIND_OCE : Unable to find MPLS oce for [chars] IP oce

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-INVALID_AF : Invalid address family [dec][chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBIDBNONBASETABLE : interface [chars] being set with non-base table: [chars]

| | |
|--------------------|---------------------------|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
|--------------------|---------------------------|

%COMMON_FIB-3-FIBIDBNONBASETABLE : interface [chars] being set with non-base table: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%COMMON_FIB-3-DQUEUE_ACTIVE_COLLECTION : dqueue has an active collection just prior to destruction

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-INVALID_ADDR_TYPE : Invalid address type [dec][chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-DQUEUE_NON_EMPTY : dqueue is not empty just prior to destruction

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBHWIDB_NONAME : Missing name for fibhwidb (ifindex [dec])

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBSUBTREECONTEXT : Subtree context unexpected error: app [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-NOHWSBDECODE : No [chars] subblock control decode function for [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-NOSWSBDECODE : No [chars] subblock control decode function for [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-NOLABELNOLABEL : Unexpected disposition information for [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-NOPATHFIBIDB : No fibidb for [chars] (ignoring path) during path no [dec] update for [chars]

| | |
|--------------------|---------------------------|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
|--------------------|---------------------------|

%COMMON_FIB-3-NOPATHFIBIDB : No fibidb for [chars] (ignoring path) during path no [dec] update for [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%COMMON_FIB-4-TOPO_STAT_ID_MGR : Id manager error [chars]. Topology statistics accounting may not show the correct result

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-UNHANDLED_UNITS : No handler for units ([chars]) - from slot [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-NAMETOOLONG : FIB[chars]IDB name [chars] error (lengths [dec] ([dec]), short [dec] ([dec]))

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-4-FIB_SB_ADD_FAIL : Attempted add of subblock of type '[chars]' ([dec]) for [chars] failed[chars]

| | |
|--------------------|---------------------------|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
|--------------------|---------------------------|

%COMMON_FIB-4-FIB_SB_ADD_FAIL : Attempted add of subblock of type '[chars]' ([dec]) for [chars] failed[chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%COMMON_FIB-3-FIB_LOADBALANCE_MAP : [chars] map [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIB_LOADBALANCE_MAP_NO_USEABLE_CHOICES : No useable choices [hex] bucket count [int]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIB_LOADBALANCE_USAGE : Unhandled usage flag [hex]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIB_PATH_LIST_DB : [chars] path list [chars]

| | |
|--------------------|---------------------------|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
|--------------------|---------------------------|

%COMMON_FIB-3-FIB_PATH_LIST_DB : [chars] path list [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%COMMON_FIB-3-NO_VALID_PATHS : No valid paths for prefix [chars] in vrf [chars].

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-DQUEUE_BAD_ELEM : Unexpected element type [int]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-VRFID_INVALID : Error invalid vrfid [chars][chars]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-ACL_PBR_NAMETOOLONG : IPV6_SW_SBS_CTRL name length error, [chars] (acl_in [dec] ([dec]), acl_out [dec] ([dec]), pbr [dec] ([dec]))

| | |
|--------------------|---|
| Explanation | IPv6 in/out ACL and IPv6 PBR name lengths for/from an IPC XDR message are invalid. The names will not be used so as to prevent any buffer overrun errors. There is a possibility that either the XDR message or an internal IPv6 FIB structure is corrupted |
|--------------------|---|

%COMMON_FIB-3-ACL_PBR_NAMETOOLONG : IPV6_SWSB_CTRL name length error, [chars] (acl_in [dec] ([dec]), acl_out [dec] ([dec]), pbr [dec] ([dec]))

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%COMMON_FIB-3-BFD_SESS : [chars]:[chars] failed to [chars] BFD session, error [[chars]]

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-BFD : [chars][chars][chars][chars][chars][chars][chars]

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-NOSUCHCAPTURE : Error finding capture point.

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIBTABLE : Error for table [dec]: [chars]

| | |
|---------------------------|--|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-VRFMGR_INVALID : Error invalid [chars] [int]

Explanation COMMON_FIB_INTERNAL_ERROR**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-FIB_NON_IP_ENTRY_INCR : [chars] non-ip entry [hex], path list [chars]

Explanation COMMON_FIB_INTERNAL_ERROR**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-PATH_EXT_ENCODE : Failed to encode [chars] path extension [chars]

Explanation One or more path extensions could not be encoded for distribution and will not be sent. This indicates an internal code error and may impact CEF operation for prefixes using the affected path extensions.**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-PATH_INVALID_REPAIR : Primary or repair paths configured by RIB are of invalid type: primary: [chars] repair: [chars]

Explanation Either the primary path or the repair path is not of the correct type, i.e. an attached nexthop, that provides both interface and nexthop**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_FIB-3-ISSU_REG : ISSU client [chars] [(dec)], entity [dec], failed ISSU registration: [chars]

| | |
|---------------------------|---|
| Explanation | ISSU negotiation failed for this XDR client. |
| Recommended Action | This error indicates a coding problem. It is an error that will occur every time this image is run, and requires a code change to fix it. |

%COMMON_FIB-3-ISSU_ENUM_ERROR : Enum for [chars] is not ISSU-compliant: [chars]

| | |
|---------------------------|--|
| Explanation | The given enumeration is not ISSU-compliant for the reason given. Unpredictable behaviour will result when interoperating with different IOS versions. |
| Recommended Action | This requires a code fix before the image can be shipped or ISSU will be broken. |

%COMMON_FIB-3-FIBINVPEXTLEN : [chars] ext, attempt to decode beyond XDR buffer, cp_cur [hex], cp_end [hex], num_ext [dec], curr_ext_idx [dec]

| | |
|---------------------------|---|
| Explanation | The path extension decode logic is trying to access memory beyond XDR buffer, which can lead to memory corruption. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-PATH_EXT_ISSU_SR_LDP : Downgrading to a version that doesn't support Segment Routing and LDP on the same path, labels [[dec]][dec].

| | |
|---------------------------|--|
| Explanation | This indicates there's an issue in ISSU transformation when downgrading to a lower version. Configuration changes might be required to avoid this issue. See recommended action. |
| Recommended Action | Find out the prefix which is using the two outgoing labels as shown in the message with 'show mpls forwarding-table'. Check IGP configuration and disable either LDP or SR on that prefix. |

%COMMON_FIB-4-MAX_PATHS_EXCEEDED : Prefix [chars] in vrf [chars] has paths in excess of the maximum. Some may be dropped.

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-PATH_EXT_DUPLICATE : Detected identical [chars] path extension [chars] (ext [IPv6 address]) - replacing.

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-PATH_EXT_PLIST_CHG_DUP_SHORT : Detected identical short path extension following path list change idx [dec] type [int] [[chars] --> [chars]] conv [int], renum [int], total short [int] (ext list [IPv6 address]).

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_FIB-3-FIB_XDR_BUF_OVERFLOW : FIB XDR buffer overflow while encoding [chars] [[chars]]

| | |
|---------------------------|---|
| Explanation | COMMON_FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

COMMON_MFIB

%COMMON_MFIB-3-NOMEM : Memory allocation failure for [chars] in [chars] MFIB [[hex]].

| | |
|---------------------------|---|
| Explanation | An attempt to allocate memory has failed. Depending on the criticality of the data to be stored, MFIB operation may be impacted. |
| Recommended Action | Verify that the configuration is supported by the memory present in the system. Copy the message exactly as it appears, and report it to your technical support representative. |

%COMMON_MFIB-3-ILLEGALARGS : Illegal arguments - [chars]

| | |
|--------------------|----------------------------|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
|--------------------|----------------------------|

%COMMON_MFIB-3-ILLEGALARGS : Illegal arguments - [chars]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%COMMON_MFIB-3-NOBROKER : [chars] distribution broker not found - distributing [chars]

| | |
|---------------------------|--|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-3-BROKERINITFAIL : Failed to initialise [chars] RP broker facility

| | |
|---------------------------|--|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-3-BROKER_ENCODE : [chars] broker failed to encode msg type [dec] for slot(s) [chars]

| | |
|---------------------------|--|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-3-MFIBXDRINV : Invalid XDR format. [chars]

| | |
|---------------------------|--|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-3-MFIBXDRLLEN : Invalid XDR length. Type [dec] [chars]. XDR/buffer len [dec]/[dec]

Explanation COMMON_MFIB_INTERNAL_ERROR**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_MFIB-3-TABLE : [chars]: [chars]

Explanation COMMON_MFIB_INTERNAL_ERROR**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_MFIB-3-MFIB_GSB : Generic subblock error: [chars]

Explanation COMMON_MFIB_INTERNAL_ERROR**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_MFIB-4-MFIBXDR_REGISTRATION : Unable to register XDR client ([chars]).

Explanation COMMON_MFIB_INTERNAL_ERROR**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMMON_MFIB-4-MFIBXDR_NOTREG : XDR client ([chars]) should be registered.

Explanation COMMON_MFIB_INTERNAL_ERROR

%COMMON_MFIB-4-MFIBXDR_NOTREG : XDR client ([chars]) should be registered.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%COMMON_MFIB-3-MFIBXDR_ISSUREGERROR : ISSU client [chars] ([dec]), entity [dec], failed ISSU registration: [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-3-ASSERT : Assertion '[chars]' failed in [chars] MFIB [[hex]]: [chars] ([chars])[chars].

| | |
|---------------------------|---|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-4-DISABLING : [chars] MFIB is being disabled due to a fatal error.

| | |
|---------------------------|---|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-4-BROKERINVMMSG : Invalid message: [chars], type [chars], len [dec]

| | |
|---------------------------|---|
| Explanation | An invalid message has been received by this broker. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-3-EPOCH : Failed to [chars] table [chars][chars]

| | |
|---------------------------|---|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-4-MFIBTABLE : Failed to [chars] table [chars] [chars]

| | |
|---------------------------|---|
| Explanation | An MFIB table was found to be missing when attempting to perform a change to it. This may be a transient condition |
| Recommended Action | If the same table gives repeated warnings or generates more serious errors, copy the message exactly as it appears and report it to your technical support representative |

%COMMON_MFIB-4-MFIBMSG : Invalid message received. Type [chars], event/sub-type [dec], length [dec]

| | |
|---------------------------|---|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-3-ILLEGAL_TABLEID : Attempt to create [chars] table with illegal tableid [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-3-NO_TABLE_NAME : Attempt to clear the name of [chars] table with tableid [IPV6 address], previous name [chars]

| | |
|--------------------|----------------------------|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
|--------------------|----------------------------|

%COMMON_MFIB-3-NO_TABLE_NAME : Attempt to clear the name of [chars] table with tableid [IPv6 address], previous name [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%COMMON_MFIB-3-INVALID_AF : Invalid address family [dec][chars]

| | |
|---------------------------|---|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-3-MFIBISSU_REGISTRATION : Unable to register [chars] ISSU client([int]).

| | |
|---------------------------|---|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COMMON_MFIB-3-BG_POPULATE : MFIB master background process failed to populate tables for [chars]

| | |
|---------------------------|---|
| Explanation | COMMON_MFIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

COMP

%COMP-5-NOBUF : Interface [chars] [chars]

| | |
|---------------------------|---|
| Explanation | Interface serial0 compression getbuffer failed, causing Link Access Procedure, Balanced (LAPB) retransmissions. |
| Recommended Action | Configure additional large and big buffers. |

%COMP-3-SYNCBAD : Interface [chars] Decompression sync error

Explanation One interface is configured for predictor compression, the other is not.**Recommended Action** Configure both interfaces for predictor compression.

%COMP-3-VERSIONBAD : Interface [chars] Compression Version mismatch expected [hex] received [hex]

Explanation One interface is configured for predictor compression, the other is not.**Recommended Action** Configure both interfaces for predictor compression.

%COMP-3-SIZEBAD : Interface [chars] Decompression size error

Explanation One interface is configured for predictor compression, the other is not.**Recommended Action** Configure both interfaces for predictor compression.

%COMP-3-COMPERR : [chars]: COMPRESS: (stac error!) status: [dec], size in: [dec], size out: [dec]

Explanation An internal software error occurred.**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

%COMP-3-CONFIGBAD : Interface [chars] Compression internal configuration error

Explanation An internal software error occurred.**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

%COMP-3-BADCOMP : Interface [chars] Bad status returned from packet compression operation

Explanation An internal software error occurred.**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

%COMP-3-SUBBLOCKERR : Interface [chars] compression subblock creation failed.

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

COMPILED_ACL**%COMPILED_ACL-3-INTERNAL_ERROR : an unexpected internal error occurred: [chars]**

| | |
|---------------------------|---|
| Explanation | An unexpected internal error occurred. This error may result in one or more flows being punted to the RP or in Turbo ACL not functioning. |
| Recommended Action | RECOMMENDED_ACTION |

%COMPILED_ACL-4-BACKPOINTER_WRONG : [chars]: entry at row [int], column [int] in node [int] does not reference row [int] in the node's child

| | |
|---------------------------|--|
| Explanation | EXPLANATION_INTERNAL_CONSISTENCY_ERROR EXPLANATION_IMPACT_PUNTING |
| Recommended Action | RECOMMENDED_ACTION |

%COMPILED_ACL-4-BACKPOINTER_PROCESSING_OVERFLOWED : [chars]: processing back-pointers in row [int] in node [int] but the list is marked as overflowed

| | |
|---------------------------|--|
| Explanation | EXPLANATION_INTERNAL_CONSISTENCY_ERROR EXPLANATION_IMPACT_PUNTING |
| Recommended Action | RECOMMENDED_ACTION |

%COMPILED_ACL-4-BACKPOINTER_OVERFLOWED_NOT_EMPTY : [chars]: the back-pointer list for row [int] in node [int] is marked as overflowed but is not empty

| | |
|---------------------------|--|
| Explanation | EXPLANATION_INTERNAL_CONSISTENCY_ERROR EXPLANATION_IMPACT_PUNTING |
| Recommended Action | RECOMMENDED_ACTION |

%COMPILED_ACL-4-BACKPOINTER_OVERFLOWED_NOT_EMPTY_REFERENCES : [chars]: the back-pointer list for row [int] in node [int] is marked as overflowed but is not empty

Explanation EXPLANATION_INTERNAL_CONSISTENCY_ERROR
EXPLANATION_IMPACT_PUNTING

Recommended Action RECOMMENDED_ACTION

%COMPILED_ACL-4-BAD_PROCESS_REFERENCES : [chars]: error while processing references for row [int] in node [int]: [chars]

Explanation EXPLANATION_INTERNAL_CONSISTENCY_ERROR
EXPLANATION_IMPACT_PUNTING

Recommended Action RECOMMENDED_ACTION

%COMPILED_ACL-4-DEFERRED_ENTRY_CONSISTENCY : [chars]: while [chars] in row [int] in node [int], found deferred entry bitmap is [chars] but count is [int]

Explanation EXPLANATION_INTERNAL_CONSISTENCY_ERROR
EXPLANATION_IMPACT_PUNTING

Recommended Action RECOMMENDED_ACTION

%COMPILED_ACL-4-ROW_UPDATE : [chars]: cannot process row queue update for row [int] in node [int]: [chars]

Explanation EXPLANATION_INTERNAL_ERROR
EXPLANATION_IMPACT_POSSIBLE_PUNTING

Recommended Action RECOMMENDED_ACTION

%COMPILED_ACL-4-ROW_UPDATE_ENQUEUE : [chars]: cannot process row queue update for row [int] in node [int]: enqueue failed ([int]/[int] entries, list is [chars]valid, entry is [chars]enqueued)

Explanation EXPLANATION_INTERNAL_ERROR
EXPLANATION_IMPACT_POSSIBLE_PUNTING

Recommended Action RECOMMENDED_ACTION

%COMPILED_ACL-4-ROW_THROTTLE : [chars]: unable to re-queue row [int] on row queue for node [int]; node should not have been freed as it was written to only [int] ms ago

Explanation EXPLANATION_INTERNAL_ERROR EXPLANATION_IMPACT_PUNTING

Recommended Action RECOMMENDED_ACTION

%COMPILED_ACL-2-LIST_CREATE : [chars]: failed to create row queue for node [int], Turbo ACL has been disabled temporarily

Explanation The system encountered an error while initializing a data structure required for the correct operation of Turbo ACL processing. Turbo ACL will be disabled until another recompilation has completed successfully.

Recommended Action RECOMMENDED_ACTION

%COMPILED_ACL-2-QUEUE_INIT : [chars]: failed to initialize back-pointer list for row [int] in node [int], Turbo ACL has been disabled temporarily

Explanation The system encountered an error while initializing a data structure required for the correct operation of Turbo ACL processing. Turbo ACL will be disabled until another recompilation has completed successfully.

Recommended Action RECOMMENDED_ACTION

%COMPILED_ACL-5-LIST_INFO : [chars]: failed to set list information function for node [int]'s row queue (ID [int])

Explanation The system encountered an error while initializing a function vector used for debugging purposes. Turbo ACL will continue to function correctly, but the **show list ID** command will not show Turbo ACL-specific information for the specified list ID number.

Recommended Action RECOMMENDED_ACTION

%COMPILED_ACL-4-BAD_ROW_FREE : [chars]: cannot free row [int] in node [int]: [chars]

Explanation EXPLANATION_INTERNAL_CONSISTENCY_ERROR
EXPLANATION_IMPACT_PUNTING

Recommended Action RECOMMENDED_ACTION

%COMPILED_ACL-4-ENTRY_COUNT : [chars]: row entry counters not allocated for node [int] while freeing row [int]

COMP_MATRIX

%COMP_MATRIX-4-DISABLED : Compatibility Matrix has been disabled. No image compatibility checking will be done.

Explanation The ISSU compatibility matrix check has been disabled via configuration command **no service image-version compatibility**. When the standby comes up, no image compatibility checking will be done, which results in SSO redundancy mode even if the active and standby are running different images.

Recommended Action The ISSU compatibility matrix check has been disabled using the global configuration command **no service image-version compatibility**. Redundancy mode would be SSO. Please be sure this is your intention or change configuration using **service image-version compatibility**.

%COMP_MATRIX-3-PRST_VBL_GET : ISSU Compatibility Matrix was unable to read a persistent variable from the local system (rc = [dec]).

Explanation The ISSU compatibility matrix was unable to access a persistent variable. There is no way to determine if issu image-version compatibility checking should be enabled or disabled.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show persistent variable** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMP_MATRIX-3-PRST_VBL_DELETE : ISSU Compatibility Matrix was unable to delete a persistent variable from the [chars] system (rc = [dec]).

Explanation The ISSU compatibility matrix was unable to access a persistent variable. There is no way to determine if issu image-version compatibility checking should be enabled or disabled.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show persistent variable** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%COMP_MATRIX-3-PRST_VBL_WRITE : ISSU Compatibility Matrix was unable to write to persistent variables on the [chars] system (rc = [dec]).

| | |
|---------------------------|---|
| Explanation | The ISSU compatibility matrix was unable to access a persistent variable. There is no way to determine if issu image-version compatibility checking should be enabled or disabled. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show persistent variable command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

COND_DEBUG_HA

%COND_DEBUG_HA-2-INIT : COND_DEBUG ISSU client initialization failed to [chars]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The COND_DEBUG ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%COND_DEBUG_HA-3-TRANSFORM : COND_DEBUG ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The COND_DEBUG ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the COND_DEBUG state between the active device and the standby device is not identical. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>) |

%COND_DEBUG_HA-3-MSG_SIZE : COND_DEBUG ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

| | |
|--------------------|--|
| Explanation | The COND_DEBUG ISSU client failed to calculate the MTU for the specified message. The COND_DEBUG ISSU client will not be able to send the message to the standby device. |
|--------------------|--|

%COND_DEBUG_HA-3-MSG_SIZE : COND_DEBUG ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

Recommended Action LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>)

%COND_DEBUG_HA-3-INVALID_SESSION : COND_DEBUG ISSU client does not have a valid registered session.

Explanation The COND_DEBUG ISSU client does not have a valid registered session.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%COND_DEBUG_HA-2-SESSION_REGISTRY : COND_DEBUG ISSU client failed to register session information. Error: [dec] ([chars])

Explanation The COND_DEBUG ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%COND_DEBUG_HA-3-SESSION_UNREGISTRY : COND_DEBUG ISSU client failed to unregister session information. Error: [dec] ([chars])

Explanation The COND_DEBUG ISSU client failed to unregister session information.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%COND_DEBUG_HA-2-SESSION_NEGO : COND_DEBUG ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

Explanation An ISSU-compliant client transitions through a series of internal states. The COND_DEBUG ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%COND_DEBUG_HA-2-SEND_NEGO_FAILED : COND_DEBUG ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The COND_DEBUG ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%COND_DEBUG_HA-2-GET_BUFFER : COND_DEBUG ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The COND_DEBUG HA client failed to get buffer space for building chkpt message. Message cannot be sent to standby device. If a problem occurs, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

CONFIG_CSRLXC

%CONFIG_CSRLXC-2-INIT_FAILED : CSRLXC configuration cannot occur: [chars]

Explanation The system was unable to even attempt to apply LXC configuration for the given reason.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CONFIG_CSRLXC-3-FILE_ERROR : Could not [chars] file [chars]: [chars]

Explanation The system was unable to perform the indicated operation on the indicated file for the indicated reason

Recommended Action Make sure the given disk is correctly formatted and has sufficient free space available.

%CONFIG_CSRLXC-3-CONFIG_NOT_SAVED : Configuration not saved to NVRAM. Please inspect [chars] for details.

| | |
|---------------------------|--|
| Explanation | Out of the generated VM configuration commands, the given number of commands were rejected by the IOSd parser. The configuration is only automatically saved to NVRAM if no errors are encountered, so in this case it was not saved. The indicated log file will describe exactly which commands were rejected, as will any accompanying CSRLXC-4-CLI_FAILURE messages in this log. |
| Recommended Action | Inspect the current running-config of the router using the show running-config command. If it appears valid, you may manually save the configuration using copy running- config startup-config . If it does not appear valid, manually correct the configuration or use the config replace nvram:startup-config command to revert to the startup-config. |

%CONFIG_CSRLXC-4-CLI_FAILURE : Configuration command failure: '[chars]' was rejected

| | |
|---------------------------|---|
| Explanation | The indicated IOSd configuration command generated by the CSRLXC subsystem was rejected by the IOSd CLI. Look for a subsequent CSRLXC-3-CONFIG_NOT_SAVED log message, which will contain a reference to a logfile containing more information about this failure. |
| Recommended Action | Inspect the log file to determine why the command was rejected and how to correct it. If necessary, manually re-issue the corrected command. |

%CONFIG_CSRLXC-5-CONFIG_DONE : Configuration was applied and saved to NVRAM. See [chars] for more details.

| | |
|---------------------------|---|
| Explanation | The generated configuration was successfully applied (no commands were rejected by the IOSd CLI), and the resulting system configuration has been saved to the startup-config in NVRAM. The indicated logfile may contain additional information. |
| Recommended Action | No action is required. |

CONF_SW

%CONF_SW-3-FEAT_DOWN : Invalid request [chars] while feature down, conf id [int]

| | |
|---------------------------|--|
| Explanation | While the feature was not active, an invalid request was received from another layer of the CONF_SW software stack for the specified conf ID. Some requests do not have an associated conf ID. For them the displayed conf ID is zero. |
| Recommended Action | This is a software issue. The consequences could be limited to only one or a few confs. LOG_STD_RECUR_ACTION |

%CONF_SW-3-FEAT_UP : Invalid request [chars] while feature up

| | |
|---------------------------|---|
| Explanation | While the feature was active, an invalid request was received from another layer of the CONF SW software stack. |
| Recommended Action | This is a software issue. There are no consequences as this can only have been an Init request while the feature was already active. LOG_STD_RECUR_ACTION |

%CONF_SW-3-NO_RES : [chars] resource not available for the [chars] request, conf id [int]

| | |
|---------------------------|---|
| Explanation | The specified software resource was not available or could not be located for the specified request from upper CONF SW software stack layers for the specified conf ID. |
| Recommended Action | This is a software issue. The consequences are that the specified request could not be performed. LOG_STD_RECUR_ACTION |

%CONF_SW-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]

| | |
|---------------------------|---|
| Explanation | For a request from upper CONF SW software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck conf that cannot be established etc. In rare cases this could also affect other operations such as feature activation, deactivation, modification, High-Availability switchover operations. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%CONF_SW-3-IPC_NORES : No space for the IPC reply, size [int]

| | |
|---------------------------|---|
| Explanation | For a request from upper CONF SW software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck conf that cannot be established etc. In rare cases this could also affect other operations such as feature activation, deactivation, modification, High-Availability switchover operations. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%CONF_SW-2-IPC_INIT : IPC message handler registration failure, rc [int]

| | |
|---------------------------|--|
| Explanation | Registering an IPC message handler for the CONF SW feature failed. This will cause the feature not to function. The function |
| Recommended Action | This is normally a software issue. The consequences are that the CONF SW feature will not function. LOG_STD_ACTION |

CONST_ISSU**%CONST_ISSU-3-MSG_NOT_OK : [chars]([dec]): ISSU message type ([dec]) is not compatible**

| | |
|---------------------------|--|
| Explanation | ISSU received a message not compatible with the running version. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show message type <Client_ID>) |

%CONST_ISSU-3-MSG_MTU : [chars]([dec]): Client failed to get mtu for message [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | %s(%d): client cannot get the MTU for a message type |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-TRANSFORM_FAILED : [chars]([dec]): [chars] transformation failed ([chars])

| | |
|---------------------------|---|
| Explanation | The transformation operation for the ISSU message has failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-CF_SEND : [chars]([dec]): Client failed to send message ([dec])

| | |
|---------------------------|---|
| Explanation | ISSU client cannot send a negotiation message to a peer |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-ICC_SEND : [chars]([dec]): Client failed to send message

| | |
|---------------------------|---|
| Explanation | ISSU client cannot send a negotiation message to a peer |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-CLIENT_REG : [chars]([dec]): Client failed to register ([chars])

| | |
|---------------------------|---|
| Explanation | The ISSU Client could not be registered |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-CLIENT_REG_FAILED : [chars]([dec]): Client is not initialized

| | |
|---------------------------|---|
| Explanation | The ISSU Client is not yet initialized. The negotiation for this client is not yet done. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-SESSION_REG : [chars]([dec]): session failed to register ([chars])

| | |
|---------------------------|---|
| Explanation | The client's ISSU session could not be registered |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-SESSION_UNREG : [chars]([dec]): session ([dec]) failed to unregister ([chars])

| | |
|---------------------------|---|
| Explanation | The client's ISSU session could not be unregistered |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-START_NEGO_FAILED : [chars]([dec]): failed to start negotiation ([chars])

| | |
|--------------------|--|
| Explanation | The ISSU client cannot start its negotiation |
|--------------------|--|

%CONST_ISSU-3-START_NEGO_FAILED : [chars]([dec]): failed to start negotiation ([chars])

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CONST_ISSU-3-CAPTYPE_REG : [chars]([dec]): failed to register capability type ([chars])

| | |
|---------------------------|---|
| Explanation | The ISSU client failed to register a capability type |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-CAPENTRY_REG : [chars]([dec]): failed to register a capability entry ([chars])

| | |
|---------------------------|---|
| Explanation | The ISSU client failed to register a capability entry |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-CAPGROUP_REG : [chars]([dec]): failed to register a capability group ([chars])

| | |
|---------------------------|---|
| Explanation | The ISSU client failed to register a capability group |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-MSGTYPE_REG : [chars]([dec]): failed to register a message type ([chars])

| | |
|---------------------------|---|
| Explanation | The ISSU client failed to register a message type |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-MSGGROUP_REG : [chars]([dec]): failed to register a message group ([chars])

| | |
|---------------------------|---|
| Explanation | The ISSU client failed to register a message group |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-ENTITY_REG : [chars]([dec]): failed to register the entity ([chars])

| | |
|---------------------------|---|
| Explanation | The ISSU entity could not be registered |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-ENTITY_UNREG : [chars]([dec]): failed to unregister the entity ([chars])

| | |
|---------------------------|---|
| Explanation | The ISSU entity could not be unregistered |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-CAP_REG : [chars]([dec]): failed to register its capabilities ([chars])

| | |
|---------------------------|---|
| Explanation | The capabilities of the ISSU client could not be registered |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-MSG_REG : [chars]([dec]): failed to register its messages ([chars])

| | |
|--------------------|--|
| Explanation | Messages for the ISSU client could not be registered |
|--------------------|--|

%CONST_ISSU-3-MSG_REG : [chars]([dec]): failed to register its messages ([chars])

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CONST_ISSU-3-CAP_EXCHANGE : [chars]([dec]): Capability exchange failed with error ([chars])

| | |
|---------------------------|---|
| Explanation | The capability exchange failed, the ISSU client is unable to process the received capability |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-NEGO_PROCESS : [chars]([dec]): Cannot create process: [chars]

| | |
|---------------------------|---|
| Explanation | The process to negotiate the session for the specified ISSU client cannot be created. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-CONST_MTU_NOT_ENOUGH : [chars]([dec]): Requested buffer size ([dec]) is greater than the max MTU size ([dec])

| | |
|---------------------------|---|
| Explanation | Checkpoint buffer size requested is greater than the max MTU size checkpoint supports |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONST_ISSU-3-MSG_POLICY : [chars]([dec]): Client failed to negotiate version for message type ([dec]), error ([chars])

| | |
|--------------------|--|
| Explanation | ISSU client cannot negotiate message to a peer |
|--------------------|--|

%CONST_ISSU-3-MSG_POLICY : [chars]([dec]): Client failed to negotiate version for message type ([dec]), error ([chars])

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CONST_ISSU-2-NEGO_NOT_DONE : [chars]([dec]): ISSU Negotiation not complete

Explanation Unable to complete ISSU negotiation.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

CONTROLLER

%CONTROLLER-5-UPDOWN : Controller [chars], changed state to [chars]

Explanation A configurable controller changed its state.

Recommended Action No action is required.

%CONTROLLER-5-DOWNDetail : Controller [chars], changed state to [chars] due to [chars]

Explanation A configurable controller changed its state.

Recommended Action No action is required.

%CONTROLLER-5-REMLOOP : Controller [chars], remote loop [chars] [chars]

Explanation A configurable controller entered remote loopback.

Recommended Action No action is required.

%CONTROLLER-5-REMLOCALLOOP : Controller [chars], local loop [chars] [chars]

Explanation A configurable controller entered local loopback.

%CONTROLLER-5-REMLOCALLOOP : Controller [chars], local loop [chars] [chars]

Recommended Action No action is required.

%CONTROLLER-5-LOOPSTATUS : Controller [chars], [chars]

Explanation A configurable controller loopback status.

Recommended Action No action is required.

%CONTROLLER-2-CRASHED : Interface Processor in slot [dec] not responding ([hex]): shutting it down

Explanation A controller stopped responding to commands over the cBus, so it was put into shutdown mode.

Recommended Action Re-enable the controllers by issuing the no shut configuration command on all controllers on the card, or hotswap out the bad card and install the new one. You must still manually **no shut** the controllers.

%CONTROLLER-2-NOTFOUND : For controller [chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CONTROLLER-2-FIRMWARE : Controller [chars], [chars]

Explanation A software or hardware error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CONTROLLER-5-CALLDROP : Controller [chars], [chars]

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%CONTROLLER-5-HDLC_INSUFF_RESOURCE : Insufficient HDLC resources to enable channel [dec]

| | |
|---------------------------|--|
| Explanation | Limited number of HDLC channels can be allocated for this trunk |
| Recommended Action | Please check the number of HDLC resources supported for this trunk card. Please contact your technical support representative. |

%CONTROLLER-5-CLOCKSTATE : Controller [chars], [chars]

| | |
|---------------------------|--|
| Explanation | A configurable controller clock changed its state. |
| Recommended Action | No action is required. |

%CONTROLLER-2-CDB_NULL : cdb is NULL

| | |
|---------------------------|---|
| Explanation | A NULL pointer is detected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONTROLLER-2-DSX_NULL : dsx pointer is NULL

| | |
|---------------------------|---|
| Explanation | A NULL pointer is detected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CONTROLLER-4-ACR_DCR_CLOCK_DS1 : [chars]: [chars] Clock status is [chars] for clock_id [dec] on circuit: [int] ([chars])

Explanation DS1 Recovered clock status change message

Recommended Action No action is required.

%CONTROLLER-4-ACR_DCR_CLOCK_DS3 : [chars]: [chars] Clock status is [chars] for clock_id [dec] on circuit: [int] ([chars])

Explanation DS3 Recovered clock status change message

Recommended Action No action is required.

%CONTROLLER-4-ACR_DCR_CLOCK_DS3_CHANNEL : [chars]: [chars] Clock status is [chars] for clock_id [dec] on circuit: [int]/[int] ([chars])

Explanation DS3:channelized Recovered clock status change message

Recommended Action No action is required.

%CONTROLLER-4-ACR_DCR_CLOCK_OCN_VT_T1 : [chars]: [chars] Clock status is [chars] for clock_id [dec] on circuit: [int]/[int]/[int]/[int] ([chars])

Explanation OCN_VT_T1: Recovered clock status change message

Recommended Action No action is required.

%CONTROLLER-4-ACR_DCR_CLOCK_OCN_CT3 : [chars]: [chars] Clock status is [chars] for clock_id [dec] on circuit: [int]/[int]/[int] ([chars])

Explanation OCN_CT3: Recovered clock status change message

Recommended Action No action is required.

%CONTROLLER-4-ACR_DCR_CLOCK_OCN_T3 : [chars]: [chars] Clock status is [chars] for clock_id [dec] on circuit: [int]/[int] ([chars])

Explanation OCN_T3: Recovered clock status change message

Recommended Action No action is required.

%CONTROLLER-4-ACR_DCR_CLOCK_STMN_T3 : [chars]: [chars] Clock status is [chars] for clock_id [dec] on circuit: [int]/[int]/[int] ([chars])

Explanation STMN_T3: Recovered clock status change message

Recommended Action No action is required.

%CONTROLLER-4-ACR_DCR_CLOCK_STMN_E3 : [chars]: [chars] Clock status is [chars] for clock_id [dec] on circuit: [int]/[int]/[int] ([chars])

Explanation STMN_E3: Recovered clock status change message

Recommended Action No action is required.

%CONTROLLER-4-ACR_DCR_CLOCK_STMN_VC1x : [chars]: [chars] Clock status is [chars] for clock_id [dec] on circuit: [int]/[int]/[int]/[int] ([chars])

Explanation STMN_VC1x: Recovered clock status change message

Recommended Action No action is required.

%CONTROLLER-4-ACR_DCR_CLOCK_STMN_CT3 : [chars]: [chars] Clock status is [chars] for clock_id [dec] on circuit: [int]/[int]/[int]/[int] ([chars])

Explanation STMN_CT3: Recovered clock status change message

Recommended Action No action is required.

CPPDRV

%CPPDRV-6-INTR : [chars]([dec]) Interrupt : [chars]

Explanation A CPP hardware interrupt has occurred.

Recommended Action No action is required.

%CPPDRV-2-HALT : [chars]([dec]) Interrupt : [chars] Seq:%03d Halt bit set.

Explanation A Serious CPP hardware error has occurred.

%CPPDRV-2-HALT : [chars]([dec]) Interrupt : [chars] Seq:%03d Halt bit set.

Recommended Action No action is required.

%CPPDRV-3-HOT : [chars]([dec]) Interrupt : [chars] Seq:%03d repeating interrupt has been disabled.

Explanation A repeating hardware interrupt has been disabled.

Recommended Action No action is required.

%CPPDRV-3-TCAM_PERR : [chars]([dec]) TCAM Parity error TCAM device #[dec] at offset [hex].

Explanation A Parity error has occurred in a TCAM device.

Recommended Action No action is required.

%CPPDRV-3-TCAM_PERR_FAILURE : [chars]([dec]) Failed to correct TCAM Parity error. Parity error detection disabled.

Explanation Failed to correct a TCAM Parity error and further detection has been disabled.

Recommended Action No action is required.

%CPPDRV-3-SRT_PERR_FAILURE : [chars]([dec]) Failed to correct BQS SRT Parity error.

Explanation Failed to correct a BQS SRT Parity error.

Recommended Action No action is required.

%CPPDRV-3-LOCKDOWN : QFP[int].[int] CPP Driver LOCKDOWN encountered due to previous fatal error ([chars]: [chars]).

Explanation A fatal error has caused the driver to LOCKDOWN.

Recommended Action No action is required.

%CPPDRV-3-LOCKDOWN_INITIATED : QFP[int].[int] CPP Driver LOCKDOWN being triggered due to fatal error.

Explanation A fatal error has caused the process to initiate LOCKDOWN.

Recommended Action No action is required.

%CPPDRV-3-INIT_NOTF_ID : CPP[dec]: Failed to initialize: ([chars])

Explanation A function failed to initialize.

Recommended Action No action is required.

%CPPDRV-3-INIT_NOTF : Failed to initialize: ([chars])

Explanation A function failed to initialize.

Recommended Action No action is required.

%CPPDRV-3-DESTROY_NOTF : Failed to destroy connection :([chars])

Explanation A function failed to destroy a connection.

Recommended Action No action is required.

%CPPDRV-3-CLEANUP_NOTF : Failed to Cleanup: ([chars])

Explanation A function failed to cleanup data.

Recommended Action No action is required.

%CPPDRV-3-ALLOC_NOTF : CPP[dec]: Failed to Allocate: ([chars])

Explanation A function failed to allocate data.

Recommended Action No action is required.

%CPPDRV-3-FATAL_PLAT_DB : CPP[dec]: ([hex]) Platform failure accessing [chars]

Explanation Platform DB query failed

%CPPDRV-3-FATAL_PLAT_DB : CPP[dec]: ([hex]) Platform failure accessing [chars]

Recommended Action No action is required.

%CPPDRV-3-FATAL_INTERRUPT_CLEAR : CPP[dec]: ([hex]) Failed to clear [chars] interrupt

Explanation Failed to clear an interrupt node

Recommended Action No action is required.

%CPPDRV-3-FATAL_INTERRUPT_OPEN : CPP[dec]: ([hex]) Failed to access [chars] interrupt node - [chars]

Explanation Failed to open an interrupt

Recommended Action No action is required.

%CPPDRV-3-FATAL_INTERRUPT_HANDLER : CPP[dec]: ([hex]) Failed to register [chars] interrupt handler - [chars]

Explanation Failed to register interrupt handler

Recommended Action No action is required.

%CPPDRV-3-FATAL_INTERRUPT_INIT : CPP[dec]: ([hex]) Failed to initialize [chars] interrupt - [chars]

Explanation Failed to initialize an interrupt

Recommended Action No action is required.

%CPPDRV-3-FATAL_ATTACH : CPP[dec]: ([hex]) FAILED: to attach [chars]

Explanation Device Failed to attach

Recommended Action No action is required.

%CPPDRV-3-FATAL_UNSupport : CPP[dec]: ([hex]) - unsupported CPP TYPE. CPP TYPE:[dec]

Explanation Unsupported CPP TYPE

%CPPDRV-3-FATAL_UNSupport : CPP[dec]: ([hex]) - unsupported CPP TYPE. CPP TYPE:[dec]

Recommended Action No action is required.

%CPPDRV-3-FATAL_INIT : ([hex]) Failed to initialize [chars] - [chars]

Explanation Failed to init device

Recommended Action No action is required.

%CPPDRV-3-FATAL_INIT_ID : CPP[dec]: ([hex]) Failed to initialize [chars] - [chars]

Explanation Failed to init device

Recommended Action No action is required.

%CPPDRV-3-FATAL_CREATE : ([hex]) Failed to create [chars] - [chars]

Explanation Failed to create device

Recommended Action No action is required.

%CPPDRV-3-FATAL_CREATE_ID : CPP[dec]: ([hex]) Failed to create [chars] - [chars]

Explanation Failed to create device

Recommended Action No action is required.

%CPPDRV-3-FATAL_GET_DETAILS : CPP[dec]: ([hex]) Failed to get [chars] details - [chars]

Explanation Failed to get device details

Recommended Action No action is required.

%CPPDRV-3-FATAL_ALLOCATE : CPP[dec]: ([hex]) Failed to allocate [chars] - [chars]

Explanation Failed to allocate data

Recommended Action No action is required.

%CPPDRV-3-FATAL_INTERNAL : CPP[dec]: ([hex]) Internal Error [chars]

Explanation Internal coding error.**Recommended Action** No action is required.

%CPPDRV-3-FATAL_CPP_SUBDEV_ACCESS : CPP[dec].[dec]: An access error has been reported. Error count [int].

Explanation The system has reported an error while accessing a CPP subdevice**Recommended Action** No action is required.

%CPPDRV-3-FATAL_MEM_CLEAR : CPP[dec]: ([hex]) Failed to clear memory [chars]

Explanation SW failed to clear memory location**Recommended Action** No action is required.

%CPPDRV-3-FATAL_MEM_WRITE : CPP[dec]: ([hex]) Failed to write to memory [chars]

Explanation SW failed to write to a memory location**Recommended Action** No action is required.

%CPPDRV-3-FATAL_ACQUIRE_LOCK : CPP[dec]: ([hex]) Failed to acquire memory lock [chars]

Explanation SW failed to acquire shared memory lock**Recommended Action** No action is required.

%CPPDRV-3-FATAL_RELEASE_LOCK : CPP[dec]: ([hex]) Failed to release memory lock [chars]

Explanation SW failed to release shared memory lock**Recommended Action** No action is required.

%CPPDRV-4-HW_REV_OLD : Found HW revision [chars], using [chars] based on [chars]. No customer deployment.

| | |
|---------------------------|---|
| Explanation | The specified board or chip showed an incorrect, invalid or too old hardware revision. That hardware revision was (possibly) overridden to a different value based on some other data available at the time. For instance, the QFP hardware revision might be unprogrammed, so the correct revision was derived from the board type and revision or the QFP's die ID. Boards showing this warning should not be deployed at customer sites. |
| Recommended Action | No action is required. |

%CPPDRV-3-FATAL_MEM_SIZE : CPP[dec]: ([hex]) Failed to acquire memory size [chars]

| | |
|---------------------------|--|
| Explanation | SW failed to acquire the size of a block of memory |
| Recommended Action | No action is required. |

%CPPDRV-4-ADRSPC_LIMIT : Address space limit [int] KB reached, mapping block [chars] size [int] dynamically, over limit space: [int] KB

| | |
|---------------------------|---|
| Explanation | The process indicated tried to map more of the Forwarding Engine's address space than was allocated for it. A slower access method will be used instead. This will lower the performance of some operations which require accesses to the Forwarding Engine |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPPDRV-6-ACCTRC8B : Access CPP [dec] address 0x%08IIX (Blk/Off:[chars]/0x%08IIX) [chars] %3d bytes 0x%016IIX flags [hex]

| | |
|---------------------------|-------------------------|
| Explanation | A CPP access was traced |
| Recommended Action | No action is required. |

%CPPDRV-6-ACCTRC16B : Access CPP [dec] address 0x%08IIX (Blk/Off:[chars]/0x%08IIX) [chars] %3d bytes 0x%016IIX_%016IIX flags [hex]

| | |
|--------------------|-------------------------|
| Explanation | A CPP access was traced |
|--------------------|-------------------------|

%CPPDRV-6-ACCTRC16B : Access CPP [dec] address 0x%08IIX (Blk/Off:[chars]/0x%08IIX) [chars] %3d bytes 0x%016IIX_%016IIX flags [hex]

Recommended Action No action is required.

%CPPDRV-4-CORE_TABLE : CPP[dec] specific core dump table '[chars]' not found, using minimal fallback table '[chars]' instead

Explanation The QFP configuration found on this board did not match any of the tables which define which data has to be collected if a fatal error is detected. Instead a minimal table is used which covers most of the QFP registers. The QFP is fully operational.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPPDRV-3-FATAL_MIN_CPU : CPP[dec]: Insufficient number of CPUs (detected = [dec], required = [dec])

Explanation The current system lacks a sufficient number of CPUs (or cores) to operate.

Recommended Action No action is required.

%CPPDRV-4-CPU_FEATURE : CPP[dec]: CPU lacks feature ([chars]). Performance may be sub-optimal.

Explanation The currently installed CPU lacks a certain feature that improve performance of the forwarding engine. The QFP is fully operational, but may operate at a reduced capacity.

Recommended Action No action is required.

%CPPDRV-3-GUEST_CPU_FEATURE : CPP[dec]: Guest CPU lacks feature ([chars]).

Explanation The currently installed Guest CPU lacks a certain feature that is required by the forwarding engine, but that feature is supported by the Host CPU. The QFP is operating with normal functionality using the host CPU feature, but live migration to a host which lacks this feature will result in a crash.

Recommended Action No action is required.

%CPPDRV-3-FATAL_CPU_FEATURE : CPP[dec]: CPU lacks feature ([chars]). Packet forwarding disabled.

Explanation The currently installed CPU lacks a certain feature that is required by the forwarding engine. The QFP is operating with reduced functionality with packet forwarding disabled.

Recommended Action No action is required.

%CPPDRV-4-FUTURE_FATAL_CPU_FEATURE : CPP[dec]: CPU lacks feature ([chars]) required in a future release.

Explanation The currently installed CPU lacks a certain feature that will be required by the forwarding engine in a future release. Caution is advised before upgrading to a newer release to ensure the CPU has the minimum set of CPU features necessary to operate.

Recommended Action No action is required.

CPPFPM**%CPPFPM-6-IPACCESSLOGP : list [chars] [chars] [chars] [chars]([int]) [chars]-> [chars]([int]), [int] packet[chars]**

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%CPPFPM-6-IPACCESSLOGNP : list [chars] [chars] [int] [chars] [chars]-> [chars], [int] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%CPPFPM-6-IPACCESSLOGDP : list [chars] [chars] [chars] [chars] [chars]-> [chars] ([int]/[int]), [int] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%CPPFPM-6-FMANACLLOGMISSMSG : access-list logging datapath rate-limited or missed [int] packet[chars]

Explanation Some packet matching logs were missed because the access list log messages were rate-limited or no access list log buffers were available.

Recommended Action No action is required.

CPPOSLIB

%CPPOSLIB-3-INIT_NOTIFY : Failed to initialize: ([chars])

Explanation A function failed to initialize.

Recommended Action No action is required.

%CPPOSLIB-3-ERROR_NOTIFY : [chars] encountered an error

Explanation Print error message to console

Recommended Action No action is required.

%CPPOSLIB-3-REGISTER_NOTIFY : Failed to register: ([chars])

Explanation A function failed to register.

Recommended Action No action is required.

%CPPOSLIB-3-GET_NOTIFY : Failed to get data: ([chars])

Explanation A function failed to get data.

Recommended Action No action is required.

%CPPOSLIB-3-CLEAN_NOTIFY : Failed to cleanup: ([chars])

Explanation A function failed to cleanup data.

Recommended Action No action is required.

CPPTCAMRM

%CPPTCAMRM-6-HIGH_WATER_MARK : TCAM resources in the system is limited.

Explanation The TCAM device has limited number of free cells left to allocate.

Recommended Action No action is required.

%CPPTCAMRM-6-LOW_WATER_MARK : There is sufficient TCAM resources in the system.

Explanation The TCAM device has sufficient number of free cells left.

Recommended Action No action is required.

%CPPTCAMRM-6-TCAM_RSRC_ERR : Allocation failed because of insufficient TCAM resources in the system.

Explanation The TCAM device has no free cells to accomodate the current allocation request.

Recommended Action No action is required.

CPPUI

%CPPUI-3-ERROR_NOTIFY : [chars]

Explanation An UI fault has occurred.

%CPPUI-3-ERROR_NOTIFY : [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

CPP_BQS

%CPP_BQS-3-INVALID_SUBTYPE : CPP BQS RM Proxy subtype [int]

| | |
|---------------------------|---|
| Explanation | BQS proxy failed because of receiving invalid sub-type or failed to allocate ipc response buffer. |
| Recommended Action | LOG_STD_ACTION |

%CPP_BQS-3-INIT_FAILED : CPP BQS RM Proxy, region [chars]

| | |
|---------------------------|--|
| Explanation | BQS proxy failed due initialize or resize software managed memory. |
| Recommended Action | LOG_STD_ACTION |

%CPP_BQS-3-CMD_ACTIVE : CPP BQS Proxy Command, correlator [int]

| | |
|---------------------------|---|
| Explanation | A BQS Proxy command was received, but the correlator was still in use. Command was not processed. |
| Recommended Action | LOG_STD_ACTION |

%CPP_BQS-2-MPASS_FS_REG : CPP BQS PROXY feature special vector [dec] registration failed (result: [dec])

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP multipass registration of a feature special processing vector for BQS Proxy failed. The BQS proxy will not be fully functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_BQS-3-CARVE : [chars]: size [int] SW carved out memory region initialization failed.

| | |
|---------------------------|--|
| Explanation | A BQS proxy failed to initialize the software memory region. |
| Recommended Action | LOG_STD_ACTION |

%CPP_BQS-3-RESIZE : CPP BQS Proxy Memory Manager, region [chars]

| | |
|---------------------------|---|
| Explanation | BQS proxy failed to resize software managed memory. |
| Recommended Action | LOG_STD_ACTION |

%CPP_BQS-2-PROXY_IPC_INIT_FAILED : CPP BQS Proxy IPC interface initialization failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP BQS initialization detected that the Proxy IPC interface initialization failed. The BQS Proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_BQS-3-PROXY_IPC_SEND : failure: [chars]

| | |
|---------------------------|---|
| Explanation | BQS Proxy send response failed, response was dropped. |
| Recommended Action | LOG_STD_ACTION |

%CPP_BQS-3-MAX_GPM_TX_LEN_EXCEED : CPP BQS Proxy Command, exceed GPM tx len [int]

| | |
|---------------------------|--|
| Explanation | A BQS Proxy command recycle a packet exceed GPM tx len |
| Recommended Action | LOG_STD_ACTION |

CPP_FM

%CPP_FM-4-CPP_FM_FIELD_IGNORED : Matching on field type [int] ([chars] value [int] ([hex])) not supported for client [chars] ([int]), rule oid: [chars], seqnos: [int], [int], [int]: RULE *IGNORED*

Explanation User is trying to use a classification criterion not supported by the feature. For example, user is trying to apply a with a class matching matched on an IPv6 ACL that contains a match on flow-label. The entire rule (e.g. ACE) containing the unsupported criterion is ignored. In our example, only the ACEs containing match on flow label are ignored. All other ACEs are still downloaded to CPP.

Recommended Action No action is required.

CPP_FR

%CPP_FR-2-PROXY_IPC_INIT_FAILED : Frame Relay Proxy IPC interface initialization failure (result: [dec]).

Explanation Cisco internal software error. FR initialization detected that the Proxy IPC interface initialization failed. The FR interfaces may not function properly while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-INV_PROXY_MSG : CPP FR Proxy received invalid IPC message ID [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP FR Proxy received an invalid message ID. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_FR-3-PROXY_IPC_ALLOC_FAIL : CPP Frame Relay Proxy response to msg id [int] lost due to buffer allocation failure

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP Frame Relay Proxy message processing detected a IPC buffer allocation failure during response processing. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_FR-4-PROXY_IPC_ALLOC_FAIL2 : QFP Frame Relay MFR Proxy ([chars]) response lost due to buffer allocation failure (Interface [chars])

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Frame Relay MFR Proxy message processing detected a IPC buffer allocation failure during proxy response processing. The associated Frame Relay MFR functionality may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_FR-3-PROXY_SID_UPDATE_LOCK_ERROR : QFP Frame Relay Proxy ([chars]) Multiple SID Update Locks to same interface (Interface [chars], SID: [hex])

| | |
|--------------------|---|
| Explanation | Cisco internal software error. QFP Frame Relay MFR Proxy message processing detected a Bundle Schedule SID update sequence error. One or more interface schedules could have been affected. |
|--------------------|---|

%CPP_FR-3-PROXY_SID_UPDATE_LOCK_ERROR : QFP Frame Relay Proxy ([chars]) Multiple SID Update Locks to same interface (Interface [chars], SID: [hex])

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_SID_UPDATE_COMPLETE_ERROR : QFP Frame Relay MFR Proxy ([chars]) SID Update Complete w/o Preceding Lock (Interface [chars], SID: [hex])

Explanation Cisco internal software error. QFP Frame Relay MFR Proxy message processing detected a Bundle Schedule SID update sequence error. One or more interface schedules could have been affected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-2-BQS_SCRATCH_TOOSMALL : QFP BQS Scratch area too small for Frame Relay MFR feature usage (size: [dec], need: [dec]).

Explanation Cisco internal software error. QFP Frame Relay MFR initialization detected that the BQS scratch memory area is insufficient for Frame Relay MFR usage. The Frame Relay MFR Bundle interfaces will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_INV_RX_TX_INTF_VALUE : QFP Frame Relay MFR Proxy ([chars] [chars]) invalid Rx/Tx interface value [dec] for interface [dec] (handle)

Explanation Cisco internal software error. QFP Frame Relay MFR Proxy was unable to complete the requested Frame Relay MFR Bundle state change or configuration update due to an invalid interface Rx/Tx designation in the proxy request. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_NULL_BUNDLE : QFP Frame Relay MFR Proxy ([chars] [chars]) NULL Bundle sub-block for interface [dec] (handle)

Explanation Cisco internal software error. QFP Frame Relay MFR Proxy was unable to complete the requested Frame Relay MFR Bundle state change or configuration update due to an invalid or uninitialized Bundle sub-block. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_NULL_LINK : QFP Frame Relay MFR Proxy ([chars] [chars]) NULL Member Link sub-block for interface [dec] (handle)

Explanation Cisco internal software error. QFP Frame Relay MFR Proxy was unable to complete the requested Frame Relay MFR Member Link state change or configuration update due to an invalid or uninitialized Member Link sub-block. The associated Frame Relay MFR Member Link interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_NULL_DLCI : QFP Frame Relay MFR Proxy ([chars] [chars]) NULL PVC sub-block for interface [dec] (handle)

Explanation Cisco internal software error. QFP Frame Relay MFR Proxy was unable to complete the requested Frame Relay MFR Member PVC state change or configuration update due to an invalid or uninitialized PVC sub-block. The associated Frame Relay MFR PVC interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_INV_BUNDLE_STATE : QFP Frame Relay MFR Proxy ([chars] [chars]) invalid Bundle state [chars] ([dec]) for interface [chars]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Frame Relay MFR Proxy message could not be processed due to the Frame Relay MFR Bundle being in an incorrect state to accept the message. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_FR-3-PROXY_INV_LINK_STATE : QFP Frame Relay MFR Proxy ([chars] [chars]) invalid Link state [chars] ([dec]) for interface [chars]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Frame Relay MFR Proxy message could not be processed due to the Frame Relay MFR Link being in an incorrect state to accept the message. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_FR-3-PROXY_INV_SUB_DEV_ID : QFP Frame Relay MFR Proxy ([chars] [chars]) invalid Sub-Device ID [dec] for interface [chars]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Frame Relay MFR Proxy message Bundle Add could not be processed for the indicated interface due to an invalid Sub-Device ID. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_FR-3-PROXY_INV_LINK_ID : QFP Frame Relay MFR Proxy ([chars] [chars]) invalid Link ID [dec] for interface [chars]

| | |
|--------------------|--|
| Explanation | Cisco internal software error. QFP Frame Relay MFR Proxy message Link Add could not be processed for the indicated interface due to an invalid Link ID. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition. |
|--------------------|--|

%CPP_FR-3-PROXY_INV_LINK_ID : QFP Frame Relay MFR Proxy ([chars] [chars]) invalid Link ID [dec] for interface [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_DUP_LINK_ID : QFP Frame Relay MFR Proxy ([chars] [chars]) duplicate Link ID [dec] for interface [chars] and [chars]

Explanation Cisco internal software error. QFP Frame Relay MFR Proxy message Link Add could not be processed for the indicated interface due use of a given Link ID on multiple member links within the same Frame Relay MFR Bundle. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_INV_DLCI_INFO : QFP Frame Relay MFR Proxy ([chars] [chars]) invalid PVC Info (Base: [hex], Num: [dec]) for interface [chars]

Explanation Cisco internal software error. QFP Frame Relay MFR Proxy message contained invalid Frame Relay MFR PVC information. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_DUP_DLCI_ID : QFP Frame Relay MFR Proxy ([chars] [chars]) duplicate DLCI [dec] for interface [chars] and [chars]

Explanation Cisco internal software error. QFP Frame Relay MFR Proxy message DLCI Add could not be processed for the indicated interface due use of a given DLCI on multiple member links within the same Frame Relay MFR Bundle. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_INV_LOST_SEQ_TO : QFP Frame Relay MFR Proxy ([chars] [chars]) indicated an invalid lost sequence timeout ([dec]) for interface [chars]

Explanation Cisco internal software error. QFP Frame Relay MFR was provided a invalid lost sequence timeout value. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_INV_BUFFER_LIMIT : QFP Frame Relay MFR Proxy ([chars] [chars]) indicated an invalid Rx buffer limit ([dec]) for interface [chars]

Explanation Cisco internal software error. QFP Frame Relay MFR was provided a invalid Rx buffer limit value. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-3-PROXY_INV_TX_LINK_WEIGHT : QFP Frame Relay MFR Proxy ([chars] [chars]) indicated an invalid Tx Link weight ([dec]) for interface [chars]

Explanation Cisco internal software error. QFP Frame Relay MFR Proxy message contained invalid Tx Link weight information. The associated Frame Relay MFR Member Link and/or Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CPP_FR-4-PROXY_SYNC : QFP Frame Relay MFR Proxy ([chars] [chars]) Bundle/Link sync issue with interface [chars]

Explanation Cisco internal software error. QFP Frame Relay MFR Proxy message processing detected a Bundle-Link state synchronization abnormality. This condition should be cosmetic. Full context of the message will aid in problem isolation.

%CPP_FR-4-PROXY_SYNC : QFP Frame Relay MFR Proxy ([chars] [chars]) Bundle/Link sync issue with interface [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CPP_FR-3-MFR_INVALID_RX_DLCI : Frame Relay MFR DLCI ([dec]) received from the peer must be configured for interface [chars] (Peer error), MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Explanation | Possible error on the peer device with Multilink FR. Received Multilink FR packet contained wrong DLCI number. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_FR-4-TX_BUNDLE_FLOWED_OFF : QFP Frame Relay MFR Tx Bundle [chars] flowed off for an abnormal duration due to one or more congested member link(s)

| | |
|---------------------------|---|
| Explanation | Possible Cisco internal software or hardware error. QFP Frame Relay MFR Tx processing detected that a Frame Relay MFR Bundle interface was flowed off for an extended period of time due to a congested member link queue. The associated Frame Relay MFR Bundle interface may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CPP_IPHC_PROXY

%CPP_IPHC_PROXY-3-INVALID_IPC_INPUT : [chars] CPP IPHC Client Proxy failure

| | |
|---------------------------|--|
| Explanation | IPHC proxy failed because of receiving invalid sub-type or failed to allocate ipc response buffer. |
| Recommended Action | LOG_STD_ACTION |

CPP_LDN**%CPP_LDN-2-PROXY_IPC_INIT_FAILED : CPP LDN Proxy IPC interface initialization failure (result: [dec]).**

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP LDN initialization detected that the Proxy IPC interface initialization failed. The LDN Proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_LDN-3-PROXY_IPC_SEND : failure: [chars]

| | |
|---------------------------|---|
| Explanation | LDN Proxy send response failed, response was dropped. |
| Recommended Action | LOG_STD_ACTION |

%CPP_LDN-3-PROXY_IPC_INVALID : failure: [dec]

| | |
|---------------------------|---|
| Explanation | LDN Proxy received an invalid IPC msg from the client. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_LDN-3-PROXY_GPM_RSRC_FAIL : failure: [chars]

| | |
|---------------------------|---|
| Explanation | LDN Proxy failed in performing a GPM operation. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CPP_LDN-3-PROXY_METAPKT_ENQ : subdevice id: [dec] failure: [dec]

| | |
|--------------------|--------------------------------------|
| Explanation | LDN Proxy metapacket enqueue failed. |
|--------------------|--------------------------------------|

%CPP_LDN-3-PROXY_METAPKT_ENQ : subdevice id: [dec] failure: [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

CRASH_DUMP**%CRASH_DUMP-3-FILE_OP : FILE operation [chars] failed CRASH DUMP May not be successfull**

| | |
|---------------------------|--|
| Explanation | The File operation for dumping DSP crash details failed The error message could be a software issue or due to not enough disk space. |
| Recommended Action | No action is required. |

%CRASH_DUMP-6-TIMEOUT : CRASH DUMP may not be successfull for the device [dec]

| | |
|---------------------------|---|
| Explanation | Crash dump process timed out waiting for diaganostic messages |
| Recommended Action | No action is required. |

%CRASH_DUMP-6-ABORT : CRASH DUMP aborted for device [dec]

| | |
|---------------------------|---|
| Explanation | Crash dump aborted. Crash Dump may not be successfull |
| Recommended Action | No action is required. |

CRYPTO_DEV_PROXY**%CRYPTO_DEV_PROXY-2-PROXY_IPC_INIT_FAILED : QFP Crypto device Proxy IPC interface initialization failure (result: [dec]).**

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Crypto device Proxy initialization detected that the IPC interface initialization failed. QFP Crypto device proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CRYPTO_DEV_PROXY-2-PROXY_REG_NULL_MSG_HNDLR : QFP Crypto device Proxy registered invalid message handlers (source: [chars]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Crypto device Proxy registered with invalid message handler. QFP Crypto device Proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CRYPTO_DEV_PROXY-3-PROXY_BAD_MSG : QFP Crypto device Proxy received bad length message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Crypto device Proxy received a corrupted message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CRYPTO_DEV_PROXY-3-PROXY_INV_MSG : QFP Crypto device Proxy received invalid message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Crypto device Proxy received an invalid message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CRYPTO_DEV_PROXY-3-PROXY_IPC_ALLOC_FAILED : QFP Crypto device Proxy [chars] message lost due to message buffer allocation failure.

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Crypto device Proxy message processing detected a message buffer allocation failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CRYPTO_DEV_PROXY-3-PROXY_IPC_SEND_FAILED : QFP Crypto device Proxy [chars] message lost due to message sent failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Crypto device Proxy message processing detected a message sent failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CRYPTO_RSA_ISSU

%CRYPTO_RSA_ISSU-3-INIT : Crypto RSA ISSU client initialization failed to [chars]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | Crypto RSA ISSU client could not be initialized, this will cause catastrophic failure when ISSU upgrade or downgrade is performed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CRYPTO_RSA_ISSU-3-TRANSFORM_FAIL : Crypto RSA ISSU client [chars] transform failed for message type [dec]. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | Crypto RSA ISSU client could not transform the message. If the transmit transformation failed, it means that the checkpoint message can not be sent to the standby unit. If the receive transformation failed, it means that the checkpoint message can not be applied on the standby unit. In both cases the Crypto RSA state will not be identical with the active unit. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>) |

%CRYPTO_RSA_ISSU-3-MSG_NOT_OK : Crypto RSA ISSU client message type [dec] is not compatible

| | |
|---------------------------|---|
| Explanation | Crypto RSA ISSU client received an incompatible message from the peer unit. Since the message is not compatible it cannot be processed by this unit |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%CRYPTO_RSA_ISSU-3-MSG_SIZE : Crypto RSA ISSU client failed to get the MTU for message type [dec]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | Crypto RSA ISSU client failed to calculate MTU for the message specified. The dot1x ISSU client will not be able to send message to the standby unit. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%CRYPTO_RSA_ISSU-3-INVALID_SESSION : Crypto RSA ISSU client does not have a valid registered session.

| | |
|---------------------------|---|
| Explanation | Crypto RSA ISSU client does not have a valid registered session. When there is a problem with the session the standby unit cannot be brought up. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%CRYPTO_RSA_ISSU-3-SESSION_REGISTRY : Crypto RSA ISSU client failed to register session information. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | Crypto RSA ISSU client failed to register session information. When there is a problem with the session the standby unit cannot be brought up. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%CRYPTO_RSA_ISSU-3-SESSION_UNREGISTRY : Crypto RSA ISSU client failed to unregister session information. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | Crypto RSA ISSU client failed to unregister session information. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%CRYPTO_RSA_ISSU-3-SESSION_NEGO : Crypto RSA ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | Crypto RSA ISSU client encountered an unexpected 'client negotiation done'. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%CRYPTO_RSA_ISSU-3-SEND_NEGO_FAILED : Crypto RSA ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation Crypto RSA ISSU client failed to send a session negotiation message to the peer. When there is a problem in the ISSU negotiation the standby unit can not be brought up.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%CRYPTO_RSA_ISSU-3-GET_BUFFER : Crypto RSA ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation Crypto RSA ISSU client failed to get buffer for building a negotiation message. Hence, it cannot send the negotiation message to the standby unit. When there is a problem in the negotiaiton the standby unit can not be brought up.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

CSVERIFY

%CSVERIFY-3-CSVERIFY_FAIL : Signature verification: [[chars]]

Explanation During digital signature verification, an error has occurred

Recommended Action Check the diagnostic csverify trace file for more information on the underlying failure.

%CSVERIFY-6-CSVERIFY_SUCCESS : Signature verification success for [chars]

Explanation Signature verification was successful for the file mentioned.

Recommended Action This is an informational message. No action is required.

CTLPROVIDERSERV through CWAN_CHOC_DSO

CTLPROVIDERSERV

%CTLPROVIDERSERV-3-NOINIT : Can't initialize Credentials server

| | |
|---------------------------|--|
| Explanation | Internal problems with initializing ports for the Credentials server |
| Recommended Action | Make sure the Credentials server port is available on the local machine. |

%CTLPROVIDERSERV-3-NOMEM : Can't initialize memory for Credentials server

| | |
|---------------------------|--|
| Explanation | Insufficient Memory for Credentials server |
| Recommended Action | Increase amount of available memory |

%CTLPROVIDERSERV-3-NOSOCKETS : Max Number of Credentials Server sockets exceeded

| | |
|---------------------------|---|
| Explanation | There are too many Credentials clients requesting service |
| Recommended Action | Reduce number of Credentials requesting service |

%CTLPROVIDERSERV-3-NOPROC : Could not start Credentials Server

| | |
|---------------------------|--------------------------------------|
| Explanation | Internal Problem in process creation |
| Recommended Action | None |

CTS_PD

%CTS_PD-3-IPC_INVALID_MSG : CTS-Invalid request [int]

| | |
|--------------------|--|
| Explanation | We received an invalid message from another layer of the CTS software stack. |
|--------------------|--|

%CTS_PD-3-IPC_INVALID_MSG : CTS-Invalid request [int]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CTS_PD-3-FEAT_DOWN : CTS-Invalid request [chars] ([int]) while feature is down

Explanation While the feature was not active, an invalid request was received from another layer of the CTS software stack.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CTS_PD-3-FEAT_CTX_DOWN : CTS-Invalid request [chars] ([int]) while context is down

Explanation While the feature context was not active, an invalid request was received from another layer of the CTS software stack.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CTS_PD-3-IPC_OPEN_REPLY : CTS-IPC Open Reply failed, request [int]

Explanation For a request from upper CTS software stack layers it was not possible to open the reply buffer.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%CTS_PD-3-IPC_NORES : CTS-No space for the IPC reply, size [int], request [int]

Explanation For a request from upper CTS software stack layers it was not possible to allocate space for a reply for the specified size.

%CTS_PD-3-IPC_NORES : CTS-No space for the IPC reply, size [int], request [int]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CTS_PD-3-IPC_INVALID_MSG_LEN : CTS-Invalid IPC length, [dec]:[dec] len [dec] flags [hex] source [dec]

Explanation Invalid IPC message length

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CTS_PD-3-IPC_SEND_FAILED : CTS-IPC [chars] [int] send failed [int]

Explanation IPC message send failure

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CTS_PD-3-IPC_INIT_FAILED : CTS-IPC message handler registration failure, rc [int]

Explanation Registering an IPC message handler for the CTS feature failed. This will cause the feature to not function.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CTS_PD-2-IPC_FAILURE : CTS-IPC message [chars] handler failed, rc [int]

Explanation An IPC message handler for the CTS feature failed. This will cause the feature to not function.

%CTS_PD-2-IPC_FAILURE : CTS-IPC message [chars] handler failed, rc [int]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

CUBE

%CUBE-1-LICENSING : [chars]

| | |
|---------------------------|---|
| Explanation | CUBE Licensing Enforcement |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CVAC

%CVAC-2-INIT_FAILED : Virtual appliance configuration cannot occur: [chars]

| | |
|---------------------------|---|
| Explanation | The system was unable to even attempt to apply virtual appliance configuration for the given reason. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CVAC-3-FILE_ERROR : Could not [chars] file [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | The system was unable to perform the indicated operation on the indicated file for the indicated reason |
| Recommended Action | Make sure the given disk is correctly formatted and has sufficient free space available. |

%CVAC-3-XML_ERROR : Error while parsing XML from file [chars]: error '[chars]', element '[chars]', attribute '[chars]', explanation '[chars]'. File will be saved to [chars]

Explanation The contents of the given file were not correct XML and as a result, XML parsing aborted due to the given reason. No new configuration was applied to the router from this file.

Recommended Action Investigate the contents of the saved file to determine the cause of the reported error, and if possible, fix the file contents, restore it to its original location, and reload to re-process it. LOG_STD_RECUR_ACTION

%CVAC-3-CONFIG_ERROR : [int] error(s) while applying configs generated from file [chars]. Please inspect [chars] for details.

Explanation Out of the generated virtual appliance configuration commands, the given number of commands were rejected by the IOSd parser. The indicated log file will describe exactly which commands were rejected, as will any accompanying CVAC-4-CLI_FAILURE messages in this log.

Recommended Action Consult the indicated log file for details of the errors that were encountered. Also inspect the current running-config and startup-config of the router using the **show running-config** and **show startup-config** commands in order to confirm that the configuration is valid.

%CVAC-4-FILE_IGNORED : Configuration file [chars] is ignored: [chars]

Explanation The indicated configuration file was ignored and not used for configuration for the given reason.

Recommended Action No action is required.

%CVAC-4-PROPERTY_IGNORED : Property (key '[chars]', value '[chars]') ignored: [chars]

Explanation The indicated XML configuration property was ignored for the indicated reason

Recommended Action If the property was not applied due to an invalid key or value, either change these attribute(s) to a valid value(s) or else remove the property entirely from the OVF environment, then reload to cause the configuration to be re-applied. As any other configuration from the file is unaffected, if the property described by this warning does not appear important, you may choose to ignore this warning.

%CVAC-4-CLI_FAILURE : Configuration command failure: '[chars]' was rejected

Explanation The indicated IOSd configuration command generated by the CVAC subsystem was rejected by the IOSd CLI. Look for a subsequent CVAC-3-CONFIG_ERROR log message, which will contain a reference to a logfile containing more information about this failure.

%CVAC-4-CLI_FAILURE : Configuration command failure: '[chars]' was rejected

| | |
|---------------------------|--|
| Recommended Action | Inspect the log file to determine why the command was rejected and how to correct it. If necessary, manually re-issue the corrected command. |
|---------------------------|--|

%CVAC-4-CONFIG_DONE : Configuration generated from file [chars] was applied and saved to NVRAM. See [chars] for more details.

| | |
|--------------------|---|
| Explanation | The generated configuration was applied and the resulting system configuration has been saved to the startup-config in NVRAM. The indicated logfile may contain additional information. |
|--------------------|---|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%CVAC-4-WRITE_FAIL : Configuration generated from file [chars] was applied but could not be saved to NVRAM. See [chars] for more details.

| | |
|--------------------|--|
| Explanation | The generated configuration was applied but the resulting system configuration was not saved to the startup-config in NVRAM. The indicated logfile may contain additional information. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Issue the write memory command on the IOS CLI |
|---------------------------|---|

%CVAC-5-XML_PARSED : [int] line(s) of configuration generated from file [chars]

| | |
|--------------------|--|
| Explanation | The indicated file was successfully parsed to generate IOSd configuration commands. The generated configs have not yet been applied to the system. |
|--------------------|--|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

CVLA

%CVLA-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]

| | |
|--------------------|--|
| Explanation | For a request from upper CVLA software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as infra activation. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |
|---------------------------|---|

%CVLA-3-IPC_NORES : No space for the IPC reply, size [int]

Explanation For a request from upper CVLA software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as infra activation.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%CVLA-2-IPC_INIT : IPC message handler registration failure, rc [int]

Explanation Registering an IPC message handler for the CVLA infra failed. This will cause the infra to not function.

Recommended Action This is normally a software issue. The consequences are that the CVLA infra will not function. LOG_STD_ACTION

CWANLC

%CWANLC-6-BUSSTALL : Constellation BUS Stall detected

Explanation This message indicates that a stall was detected on the Constellation Bus probably due to some OIR activity on the Bus.

Recommended Action No action needed, Informational.

%CWANLC-6-LONGSTALL : Long bus stall ([int] ms), check for improperly seated cards

Explanation This message indicates that a stall was detected, but the backplane stall was longer than expected.

Recommended Action Make sure all cards are firmly seated. If the problem reoccurs, it may indicate a hardware failure.

%CWANLC-6-BUSSTALLCLEAR : Constellation BUS Stall cleared

Explanation This message indicates that a stall was cleared on the Constellation Bus.

Recommended Action No action needed, Informational.

%CWANLC-5-NOSCPPING : Linecard has not sent SCP PING responses for too long

| | |
|---------------------------|--|
| Explanation | SCP ping mechanism is used by RP/SP processors to monitor if the linecard executing IOS is in a healthy state. This SCP ping response has not been sent by the line card for long time now - the line card has exported its context information to the RP and may be powercycled. The exported context is available in the output of 'show diag' |
| Recommended Action | Save the 'show diag' output generated and contact your technical support representative if the line card is reset |

%CWANLC-2-PCIERROR : Fatal PCI Error [chars] seen on PCI Bus [dec]

| | |
|---------------------------|--|
| Explanation | A Fatal PCI Error was detected on the PCI bus. Most likely it is a hardware problem. |
| Recommended Action | Call your technical support representative for assistance if this message persists. |

%CWANLC-4-LOGMSGTOOBIG : Logger message length exceeds max, [int] bytes

| | |
|---------------------------|---|
| Explanation | The Linecard attempted to send a large message to the Route Processor (Draco). |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWANLC-3-IPCPORT : Failed to [chars] IPC port '[chars]', error [chars]

| | |
|---------------------------|---|
| Explanation | The Linecard failed to create a port for communication with the Route Processor (Draco). |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%CWANLC-3-IPCPORTFAIL : Failed to open IPC port '[chars]' [chars]

| | |
|---------------------------|---|
| Explanation | The Linecard failed to open a port for communication with the Route Processor (Draco). |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%CWANLC-3-IPCALLOCFAIL : Failed to allocate IPC buffer [chars]

| | |
|--------------------|--|
| Explanation | The Linecard failed to allocate a buffer for communication with the Route Processor (Draco). |
|--------------------|--|

%CWANLC-3-IPCALLOCFAIL : Failed to allocate IPC buffer [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWANLC-3-IPCSENFFAIL : Failed to send IPC message [chars]

| | |
|--------------------|---|
| Explanation | The Linecard failed to send a message to the Route Processor (Draco). |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWANLC-3-HWREVREADFAIL : Failed to retrieve h/w version from EEPROM

| | |
|--------------------|---|
| Explanation | The Linecard failed to read the hardware version from the CPU eeprom. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CWANLC-5-IPCENDING : Too many messages ([dec]) in IPC pending queue

| | |
|--------------------|---|
| Explanation | The IPC pending queue is growing. Will soon deplete the IPC header cache and the IO buffers |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CWANLC-3-FATAL : [chars]

| | |
|--------------------|--|
| Explanation | The Optical Services Module line card has encountered a fatal error. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CWANLC-3-CWANLC_EARL_VERSION_NOTICE : CWAN receives mismatch Earl version notification. New Earl[int] vs Earl[int]

| | |
|---------------------------|---|
| Explanation | The RP has determined, via an SCP find operation, that the version of the EARL switching engine on the line card has changed. This message occurs during switchover operation. The version of the EARL switching engine is specified in the message text. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWANLC-3-TVPN_NOMEM : Failed to start vpn, not enough memory

| | |
|---------------------------|--|
| Explanation | The OSM card could not start VPN due to a memory exhaustion |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. If this message recurs, LOG_STD_ACTION |

%CWANLC-3-LTL_NOPPEPORTMAP : Failed to retrieve default port mapping for packet processor [int]

| | |
|---------------------------|---|
| Explanation | The linecard software initialization was not completed correctly |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWANLC-3-FPD_INCOMPATIBLE : FPD ID=[int] image in this FPD package is for revision [int].x boards. It is incompatible with current board revision of [int].[int]

| | |
|---------------------------|--|
| Explanation | This FPD package does not contain images that are compatible with the current board revision. |
| Recommended Action | Perform the FPD upgrade operation with a newer version of FPD image package that is compatible with the running Cisco IOS software. Consult with the FPD image package section of the Cisco IOS software release note to confirm if your board revision is supported for a particular release. |

CWANLC_ATM

%CWANLC_ATM-4-UNSUP : [chars]: unsupported feature: [chars]

| | |
|--------------------|--|
| Explanation | This feature is not supported by Draco ATM RP. |
|--------------------|--|

%CWANLC_ATM-4-UNSUP : [chars]: unsupported feature: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWANLC_ATM-3-CMDERR : [chars]: [chars] IPC command fails (cause: [hex])

| | |
|--------------------|--|
| Explanation | The ATM RP driver experienced IPC command error. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWANLC_ATM-3-IPC_ERROR : [chars]: IPC command [chars] failure due to [chars]

| | |
|--------------------|--|
| Explanation | The SPA ATM RP driver experienced IPC command error. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWANLC_ATM-4-MISMATCH_VCENCAP : [chars]: Cannot mix VC encapsulation types in multipoint interfaces

| | |
|--------------------|--|
| Explanation | This ATM card only allows VC encapsulations of the same type on the main interface or multipoint subinterfaces |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Reconfigure the ATM interface with matching VC encapsulations |
|---------------------------|---|

%CWANLC_ATM-3-VCCLOSEFAIL : [chars]: Failed to remove VC [dec]/[dec] cause [int]

| | |
|--------------------|--|
| Explanation | Attempt to remove VC on the linecard failed. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWANLC_ATM-3-VPCLOSEFAIL : [chars]: Failed to remove VP [dec] cause [int]

| | |
|--------------------|--|
| Explanation | Attempt to remove VP on the linecard failed. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWANLC_ATM-3-NOVPSPACE : [chars]: out of VP space for VPI [dec]

| | |
|--------------------|------------------------|
| Explanation | Out of VPs on the SAR. |
|--------------------|------------------------|

%CWANLC_ATM-3-NOVSPACE : [chars]: out of VP space for VPI [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWANLC_ATM-4-SEMHOOG : [chars]: Process [dec] ([chars]) hogging semaphore -- called by process [dec] ([chars])

| | |
|--------------------|---|
| Explanation | The named process has held the resource semaphore longer than expected. |
|--------------------|---|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%CWANLC_ATM-4-CLOSEPEND : [chars]: The TX SAR is currently freeing internal buffers previously allocated for the identical channel id. The execution of the current command is delayed.

| | |
|--------------------|---|
| Explanation | The TX SAR has taken longer than expected to free its internal buffers. |
|--------------------|---|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

CWAN_ALARM

%CWAN_ALARM-6-SONET : [chars] [chars] [chars] [chars] [chars]

| | |
|--------------------|---|
| Explanation | This message is generated whenever (a) an alarm is present in the system (and the alarm status has been reported to the RP) or (b) an alarm has been removed from the system (and the alarm status has been reported to the RP) |
|--------------------|---|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%CWAN_ALARM-6-INFO : [chars] [chars] [chars] [chars] [chars]

| | |
|--------------------|---|
| Explanation | This message provides alarm assertion or deassertion information. |
|--------------------|---|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

CWAN_CHOC

%CWAN_CHOC-4-ALLOCFAIL : Interface [dec]/[dec] allocation failed: [chars]

| | |
|--------------------|---------------------------------|
| Explanation | required resources unavailable. |
|--------------------|---------------------------------|

| | |
|---------------------------|---|
| Recommended Action | Either upgrade system memory or reconfigure memory usage. |
|---------------------------|---|

%CWAN_CHOC-4-UNSUP : Slot [dec]: Unknown [chars] ([dec])

| | |
|---------------------------|--|
| Explanation | This value is not recognized by this version of software. |
| Recommended Action | Check linecard version. Normally this is harmless but worth contacting cisco technical support representative. |

%CWAN_CHOC-4-IFCONFIG : [chars] config error ([dec], lc delay:[dec] ms): [chars]

| | |
|---------------------------|--|
| Explanation | RP received configuration error from linecard. |
| Recommended Action | Reconfigure or shut/no shut the error channel. |

%CWAN_CHOC-4-PROV_FAIL : Interface [chars] provisioning ch([dec]) failed: [chars]

| | |
|---------------------------|--|
| Explanation | provisioning conflict or resource shortage |
| Recommended Action | workaround: under 'controller sonet', do 'no channelized' followed by 'channelized', twice. If problem persists, do a 'show controller sonet <slot>/<port>' and 'show controller {pos/serial} <slot>/<port>:<chan>' then contact cisco technical support representative. |

%CWAN_CHOC-4-UNPROV_FAIL : Interface [chars] unprovisioning failed: [chars]

| | |
|---------------------------|---|
| Explanation | Linecard failed to response unprovisioning command. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_CHOC-4-CORRUPT : [chars] information seems to be corrupted, bad value =[int]

| | |
|---------------------------|--|
| Explanation | wrong parameters detected internally |
| Recommended Action | This is only a debug warning message. The unexpected value is discarded. |

%CWAN_CHOC-4-LCLOCK_FAIL : Interface [chars] failed to acquire semaphore for LC access: [chars]

| | |
|--------------------|--|
| Explanation | Other process locked the semaphore for too long. |
|--------------------|--|

%CWAN_CHOC-4-LCLOCK_FAIL : Interface [chars] failed to acquire semaphore for LC access: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CWAN_CHOC-4-LCCFG_MISMATCH : LC needs reboot due to config mismatch on [chars], (rc=[int])

| | |
|---------------------------|---|
| Explanation | RP detects LC's channel provisioning mismatching start-config |
| Recommended Action | reset linecard: hw-module module <slot> reset |

%CWAN_CHOC-4-WRONG_LL : %.16s received wrong loveletter : type=[int], length=[int]

| | |
|---------------------------|--|
| Explanation | wrong parameters detected internally |
| Recommended Action | This is only a debug warning message. The unexpected messages from linecard is harmlessly discarded. |

%CWAN_CHOC-6-WRONG_GULF : [chars] hardware version (gulf v[int]) does not support OC-12 or OC-48

| | |
|---------------------------|---|
| Explanation | Early version of hw asic (GULF2.0 and below) has bugs in rx fifo depth which can not handle oc-12 or oc-48 rate. Either limiting channel provisioning or upgrading hw |
| Recommended Action | Limit channel provisioning to DS3 and/or OC3 |

%CWAN_CHOC-6-LCDRIVER : OIR failed: slot [int] linecard not responding to initial query

| | |
|---------------------------|---|
| Explanation | OIR insertion aborted due to failing to contact lc |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CWAN_CHOC_DSO**%CWAN_CHOC_DSO-3-UNKNOWNCTRLR : Slot [dec] - Unknown linecard type [dec]**

| | |
|--------------------|--|
| Explanation | This hardware can't be recognized by this version of software. |
|--------------------|--|

%CWAN_CHOC_DS0-3-UNKNOWNCTRLR : Slot [dec] - Unknown linecard type [dec]

Recommended Action Check software version. Make sure the software supports the hardware.

%CWAN_CHOC_DS0-3-RMCTRLR_UNKNOWN : Slot [dec] - Unknown linecard type [dec] removed

Explanation This hardware can't be recognized by this version of software.

Recommended Action Check software version. Make sure the software supports the hardware.

%CWAN_CHOC_DS0-3-CDBFAIL : Port [dec]/[dec] - fail to create a SONET controller data structure

Explanation The software resource can't be allocated for this hardware

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DS0-3-PORTFAIL : Port [dec]/[dec] - fail to create a port instance data structure

Explanation The software resource can't be allocated for this hardware

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DS0-3-T1CFG_CCBERROR : CCB command error (cmd, [dec], arg [dec]) on T1 [dec]/[dec]/[dec]

Explanation A command sent from the system to a linecard failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DS0-3-VCCFG_CCBERROR : CCB command error (cmd, [dec], arg [dec]) on port [dec]/[dec] channel [dec]

Explanation A command sent from the system to a linecard failed

%CWAN_CHOC_DSO-3-VCCFG_CCBERROR : CCB command error (cmd, [dec], arg [dec]) on port [dec]/[dec] channel [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DSO-3-IFCONFIG_ERR : config error on port [dec]/[dec]([chars]), cmd [dec] [chars]

Explanation A configuration command sent from the system to a linecard failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DSO-4-UNSUP : Slot [dec]: Unknown [chars] ([dec])

Explanation This value is not recognized by this version of software.

Recommended Action Check linecard version. Normally this is harmless but worth contacting cisco technical support representative.

%CWAN_CHOC_DSO-3-CFG_BAD_PARA : [chars]: invalid config parameter [chars]

Explanation Configuration parameter is invalid

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DSO-4-IFCONFIG : [chars] config error ([dec], lc delay:[dec] ms): [chars]

Explanation RP received configuration error from linecard.

Recommended Action Reconfigure or shut/no shut the error channel.

%CWAN_CHOC_DSO-4-ALLOCFAIL : Interface [dec]/[dec] allocation failed: [chars]

Explanation required resources unavailable.

%CWAN_CHOC_DSO-4-ALLOCFAIL : Interface [dec]/[dec] allocation failed: [chars]

Recommended Action Either upgrade system memory or reconfigure memory usage.

%CWAN_CHOC_DSO-4-PROV_FAIL : Interface [chars] provisioning ch([dec]) failed: [chars]

Explanation provisioning conflict or resource shortage

Recommended Action workaround: under 'controller sonet', do 'no channelized' followed by 'channelized', twice. If problem persists, do a 'show controller sonet <slot>/<port>' and 'show controller {pos/serial} <slot>/<port>:<chan>' then contact cisco technical support representative.

%CWAN_CHOC_DSO-4-UNPROV_FAIL : Interface [chars] unprovisioning failed: [chars]

Explanation Linecard failed to response unprovisioning command.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DSO-4-WRONG_LL : %.16s received wrong loveletter : type=[int], length=[int]

Explanation wrong parameters detected internally

Recommended Action This is only a debug warning message. The unexpected messages from linecard is harmlessly discarded.

%CWAN_CHOC_DSO-4-CORRUPT : [chars] information seems to be corrupted, bad value =[int]

Explanation wrong parameters detected internally

Recommended Action This is only a debug warning message. The unexpected value is discarded.

%CWAN_CHOC_DSO-4-LCLOCK_FAIL : Interface [chars] failed to acquire semaphore for LC access: [chars]

Explanation Other process locked the semaphore for too long.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DS0-3-UNKNOWN_MIB_TYPE : Unknown MIB type [int] from slot [int]

| | |
|---------------------------|---|
| Explanation | Draco received unknown communication message from linecard |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%CWAN_CHOC_DS0-5-LOOPSTATUS : [chars], [chars]

| | |
|---------------------------|---------------------------------|
| Explanation | A configurable loopback status. |
| Recommended Action | No action is required. |

CWAN_CHOC_DSX

%CWAN_CHOC_DSX-3-UNKNOWN_CTRLR : Slot [dec] - Unknown linecard type [dec]

| | |
|---------------------------|---|
| Explanation | This hardware can't be recognized by this version of software. |
| Recommended Action | Check software version. Make sure the software supports the hardware. |

%CWAN_CHOC_DSX-3-T3CFG_ERROR : T3 [int]/[int] config command error (cmd [int], arg [int], retval [int])

| | |
|--------------------|---|
| Explanation | A command sent from the system to a linecard failed |
|--------------------|---|

%CWAN_CHOC_DSX-3-T3CFG_ERROR : T3 [int]/[int] config command error (cmd [int], arg [int], retval [int])

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DSX-3-T1CFG_ERROR : T1 [int]/[int]/[int] config command error (cmd [int], arg [int], retval [int])

Explanation A command sent from the system to a linecard failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DSX-3-VCCFG_ERROR : VC [int]/[int]:[int] config command error (cmd [int], arg [int], retval [int])

Explanation A command sent from the system to a linecard failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_CHOC_DSX-3-NULDS3MIBTABLE : Null DS3 MIB table (snmp_if_index [int])

Explanation System cannot find the DS3 MIB table pointer

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CWAN_CHOC_DSX-3-SEND_DRIVER_READY : send driver ready msg failed for [dec]

Explanation IPC message failure

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CWAN_CHOC_DSX-5-DEF_SUBRATE : [chars] [chars]

Explanation Remote subrate configuration changed**Recommended Action** Inform the network operator that subrate configuration changed by remote end

%CWAN_CHOC_DSX-3-ENQUEUE_FAIL : [chars]

Explanation cmd enqueue failure**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

%CWAN_CHOC_DSX-5-UNKNOWN_EVENT : [chars]

Explanation Unexpected event received by the process**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

%CWAN_CHOC_DSX-3-PROCESS_FAIL : process creation failed for [chars]

Explanation process creation failed for handling cmd**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

%CWAN_CHOC_DSX-3-PROCESS_ERROR : process error - [chars]

Explanation process encountered fatal error**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

%CWAN_CHOC_DSX-3-INVALID_SUBR_HWIDB : Invalid Subrate hwidb on T3 [dec]/[dec]

Explanation invalid subrate hwidb**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

%CWAN_CHOC_DSX-3-VC_CONFIG_ERR : [chars] T1 [dec] channel group [dec] of T3 [dec]/[dec] unsuccessful (error code [dec])

Explanation channel configuration error

%CWAN_CHOC_DSX-3-VC_CONFIG_ERR : [chars] T1 [dec] channel group [dec] of T3 [dec]/[dec] unsuccessful (error code [dec])

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%CWAN_CHOC_DSX-3-NODESTROYSUBBLOCK : The [chars] subblock named [chars] was not removed

Explanation A software error has occurred, this message is displayed when IDB subblocks cannot be removed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

CWAN_CONTAINER_ACCESS

%CWAN_CONTAINER_ACCESS-5-CWAN_VRF_MISMATCH : VRF of [chars] access does not match with [chars]

Explanation VRF of access interface does not match with that of associated container interface. Either container interface is deleted or VRF of container interface is changed

Recommended Action No action is required.

%CWAN_CONTAINER_ACCESS-5-CWAN_NO_CONTAINER : Associated container interface does not exist for [chars]

Explanation The container interface no longer exists for access interface.

Recommended Action No action is required.

CWAN_HA

%CWAN_HA-3-CCB_INIT_ERROR : Failed to initialize CCB list for slot [dec].

Explanation The High Availability component for WAN modules failed to properly initialize state information for the specified slot.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_HA-4-CCB_PLAYBACK_ERROR : CCB playback failed for slot [dec].

| | |
|---------------------------|--|
| Explanation | The High Availability component for WAN modules failed to synchronize some new state information for the specified slot. |
| Recommended Action | Reload the standby supervisor module to force a fresh bulk synchronization. If this error recurs, LOG_STD_ACTION |

%CWAN_HA-4-CCB_RECORD_ERROR : CCB record failed for slot [dec].

| | |
|---------------------------|---|
| Explanation | The High Availability component for WAN modules failed to record some new state information for the specified slot. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_HA-3-IFCFG_INIT_ERROR : Failed to initialize Interface Configuration list for slot [int]/[int].

| | |
|---------------------------|---|
| Explanation | The High Availability component for WAN modules failed to properly initialize state information for the specified slot. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_HA-4-IFCFG_PLAYBACK_ERROR : Interface Configuration command [int] playback failed for slot [int]/[int].

| | |
|---------------------------|---|
| Explanation | The High Availability component for WAN modules failed to synchronize some new state information for the specified slot. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_HA-4-IFCFG_RECORD_ERROR : Interface Configuration command [int] record failed for slot [int]/[int].

| | |
|--------------------|---|
| Explanation | The High Availability component for WAN modules failed to record some new state information for the specified slot. |
|--------------------|---|

%CWAN_HA-4-IFCFG_RECORD_ERROR : Interface Configuration command [int] record failed for slot [int]/[int].

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_HA-3-IFCFG_NO_UNIQUE_KEY : No unique-key generator registered for interface configuration command [int].

Explanation The High Availability component for WAN modules is unable to properly synchronize state information for the current configuration.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_HA-3-IFCFG_CMD_NOT_UNIQUE : More than one command registered for unique-key generator for interface configuration command [int].

Explanation The High Availability component for WAN modules is unable to properly synchronize state information for the current configuration due to a conflict in command identifiers.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_HA-4-IFCFG_DFLT_LIST_ERROR : For Interface Configuration command [int], default retval list search resulted [hex] for slot [int]/[int]

Explanation The High Availability component for WAN modules failed to synchronize some new state information for the specified slot.

Recommended Action LOG_STD_SH_CMD_ACTION(show platform redundancy if-config default-retvals)

%CWAN_HA-4-SRPSYNC : Slot [dec]: [chars]

Explanation An error occurred while syncing SRP states from active RP to standby RP.

%CWAN_HA-4-SRPSYNC : Slot [dec]: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CWAN_HA-4-NOSRPBULKSYNC : Failed to [chars] SRP bulk data (slot=[dec], intf=[dec], type=[dec]), ret code [dec]

| | |
|---------------------------|---|
| Explanation | Some SRP-related state information failed to sync correctly from the active RP to the standby RP during the HA bulk-synchronization phase. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_HA-4-NOSRPSYNC : Failed to sync SRP packet (slot=[dec],intf=[dec]) to standby, HA_SYNC_STATUS=[dec]

| | |
|---------------------------|---|
| Explanation | Some SRP-related state information failed to sync correctly from the active RP to the standby RP when the configuration changed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_HA-4-LTLSYNCFail : Failed to sync LTL data during [chars] for [chars] [int]: (slot=[dec],slotunit=[dec], if_num=[dec]) to standby (vlan=[int],hash=[int],ltl=[int])

| | |
|---------------------------|---|
| Explanation | Some LTL data did not sync correctly from active to standby RP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_HA-4-IFEVENT_INCRSYNCFail : [chars] for ifevent: [dec] with error: [dec]

| | |
|--------------------|--|
| Explanation | Failed CWAN if-event incremental sync. |
|--------------------|--|

%CWAN_HA-4-IFEVENT_INCRSYNCFAIL : [chars] for ifevent: [dec] with error: [dec]

Recommended Action No action is required.

%CWAN_HA-4-IFEVENT_BULKSYNCFAIL : [chars] ifevent: [dec] error: [dec]

Explanation Failed CWAN if-event bulk sync.

Recommended Action No action is required.

%CWAN_HA-4-IFEVENT_UNEXPECTED_BULKTYPE : Unexpected value for bulk sync type ([dec]) received.

Explanation Received a unexpected type in bulk sync message.

Recommended Action No action is required.

CWAN_RP

%CWAN_RP-6-LC_PRESENT : [chars] in slot [int]

Explanation A WAN module was detected by the hardware.

Recommended Action No action is required.

%CWAN_RP-6-IMAGE_UPGRADE : Bootflash image upgrade [chars] for slot [int]/[int][chars]

Explanation The bootflash image on the WAN module has been or is being automatically upgraded.

Recommended Action No action is required.

%CWAN_RP-6-QUIESCE_FAIL : Quiesce failed for slot [int]/[int]

Explanation The RP failed to contact the WAN module during failover. The WAN module will be reset.

Recommended Action No action is required.

%CWAN_RP-6-UNQUIESCE_FAIL : Unquiesce failed for slot [int]/[int]. Error = [dec]

| | |
|---------------------------|--|
| Explanation | The RP failed to unquiesce the WAN module. The WAN module will be reset. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show diagbus and show ipc status command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-RESET_FAIL : The WAN module in slot [int] failed even after several resets

| | |
|---------------------------|---|
| Explanation | The WAN module in the slot specified in the error message did not boot successfully, even after multiple attempts. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-POWER_CYCLE : Power cycling WAN module in slot [int]/[int]. [chars]

| | |
|---------------------------|---------------------------------------|
| Explanation | The WAN module is being power cycled. |
| Recommended Action | No action is required. |

%CWAN_RP-3-POWER_CYCLE_IMMIDENT : The WAN module in slot [int]/[int] will be power cycled in [dec] seconds.

| | |
|---------------------------|---|
| Explanation | The WAN module in the slot specified in the error message will be power cycled in the amount of time specified in the error message |
| Recommended Action | No action is required. |

%CWAN_RP-3-BOOTFAIL : The WAN module in slot [int]/[int] failed to boot

| | |
|--------------------|--|
| Explanation | The WAN module in the slot indicated in the error messages failed to boot and will be reset. |
|--------------------|--|

%CWAN_RP-3-BOOTFAIL : The WAN module in slot [int]/[int] failed to boot

| | |
|---------------------------|---|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CWAN_RP-3-KEEPFAIL : The WAN module in slot [int]/[int] is not responding to keepalives

| | |
|---------------------------|---|
| Explanation | The WAN module was either reset or has crashed and will be reset. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-SCPALLOCFAIL : Failed to allocate SCP packet [chars]

| | |
|---------------------------|---|
| Explanation | The RP failed to allocate a packet for communication with other slots in the chassis. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-HV_ALLOCFAIL : [chars]: Failed to allocate a VLAN: [chars]

| | |
|---------------------------|---|
| Explanation | VLAN allocation failed for the stated reason. |
| Recommended Action | First, power down any unused linecards. Next, delete any unused interfaces/subinterfaces, and any unused L2 VLANs from the VLAN database. Then wait for >3 minutes and retry. |

%CWAN_RP-3-IPCPORTFAIL : Failed to open IPC port '[chars]' [chars] with error [chars]

| | |
|---------------------------|---|
| Explanation | The RP failed to open a port for communication with a WAN module. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-IPCALLOCFAIL : Failed to allocate IPC buffer [chars]

| | |
|---------------------------|---|
| Explanation | The RP failed to allocate a buffer for communication with a WAN module. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-IPCFSENDFAIL : Failed to send IPC message [chars]

| | |
|---------------------------|---|
| Explanation | The RP failed to send a message to a WAN module. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-BAD_IFCOMTYPE : Bad ifcom message type=[int]

| | |
|---------------------------|---|
| Explanation | A WAN module passed down a message that the RP software was not prepared to handle. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-FOREVER : cmd [int] to [chars] (slot [int]/[int]) took [int]secs, done [hex]

| | |
|---------------------------|---|
| Explanation | A CCB command from the RP to a WAN module took longer than expected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-IFCFG_FOREVER : to [chars] (slot [int]/[int]) took [int]secs, ret_val [int]

| | |
|--------------------|---|
| Explanation | A interface config command from the RP to a WAN module took longer than expected. |
|--------------------|---|

%CWAN_RP-3-IFCFG_FOREVER : to [chars] (slot [int]/[int]) took [int]secs, ret_val [int]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CWAN_RP-3-ERROR : NULL

| | |
|---------------------------|---|
| Explanation | This message can take many forms. It provides information about a software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-6-CARDRELOAD : Module reloaded on slot [int]/[int]

| | |
|---------------------------|----------------------------|
| Explanation | The WAN module has booted. |
| Recommended Action | No action is required. |

%CWAN_RP-6-CARDRECONCILE : Module type changed on slot [int]/[int] from [int] to [int]

| | |
|---------------------------|--|
| Explanation | The WAN module has booted, and it has been detected that it is of a different type to the WAN module that was previously in this slot. |
| Recommended Action | No action is required. |

%CWAN_RP-3-LC_CRASHINFO : [chars] copied onto RP bootflash

| | |
|---------------------------|---|
| Explanation | The WAN module has crashed, and the crashinfo file has been copied onto the RP bootflash. The crashinfo filename indicates the module's slot. The file can be viewed using the more command. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-LC_CRASHINFO_BLOCKED : Duplicate crashinfo upload from slot [int]/[int] blocked

| | |
|---------------------------|---|
| Explanation | The WAN module has crashed, and the crashinfo was not saved because the WAN module has already crashed recently. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-LC_CRASHINFO_NOSPACE : Not enough space on RP bootflash for crashinfo from slot [int]/[int] ([int] bytes needed, [int] available)

| | |
|---------------------------|---|
| Explanation | The WAN module has crashed, and there is not enough space on the RP bootflash to store the crashinfo. |
| Recommended Action | Free up space on the RP's bootflash by using the delete and squeeze commands. |

%CWAN_RP-3-LC_CRASHINFO_IFSERR : Error [chars] [chars]: [chars] ([int])

| | |
|---------------------------|---|
| Explanation | The WAN module has crashed, and an error occurred while trying to access the RP's bootflash to save the crashinfo. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-LC_CRASHINFO_CORRUPT : Verification of crashinfo from slot [int]/[int] failed

| | |
|---------------------------|---|
| Explanation | The WAN module has crashed, and verification of the crashinfo it sent failed. The crashinfo has not been saved to RP bootflash. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-LC_CRASHINFO_ERR : Unexpected error while receiving crashinfo from slot [int]/[int]

| | |
|--------------------|--|
| Explanation | The WAN module has crashed, and an unexpected error occurred while the crashinfo was being copied onto RP bootflash. |
|--------------------|--|

%CWAN_RP-3-LC_CRASHINFO_ERR : Unexpected error while receiving crashinfo from slot [int]/[int]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_RP-4-LCLOG_TOOLONG : Message too long from slot [int]/[int]: [int] bytes

Explanation The WAN module passed down a logger message that is too long for the RP to handle.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_RP-3-LCLOG_BADSEV : Invalid message severity from slot [int]/[int]: [int]

Explanation The WAN module passed down a logger message with an invalid severity level that the RP could not handle.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_RP-3-SLOTCACHE_SYNTAX : Error ([chars])!

Explanation The RP failed to parse the slot configuration string.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_RP-7-SLOTCACHE_CARDTYPE : parsed slot [dec], fci_type [dec]

Explanation Information parsed from the slot configuration string by the RP.

Recommended Action No action is required.

%CWAN_RP-7-SLOTCACHE_PATYPE : Bay [chars] has type [dec] ports([hex])

| | |
|---------------------------|--|
| Explanation | Information parsed from the slot configuration string by the RP. |
| Recommended Action | No action is required. |

%CWAN_RP-3-CHANGE_POSEIDON_NEGOTIATION : Unable to change negotiation. Failed to send message to slot [dec] port [dec]!

| | |
|---------------------------|---|
| Explanation | MSFC2 failed to send message to change negotiation to OSM-4GE-WAN-GBIC |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-OIRTWICE : Slot [int] OIR insertion/removal not paired up: [chars]

| | |
|---------------------------|---|
| Explanation | An internal OIR-related error occurred for the specified WAN module. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-IFCONFIG_ERR : Interface config failed on port [dec]/[dec], cmd [dec], retval [dec]

| | |
|---------------------------|---|
| Explanation | A configuration command sent from the system to a linecard failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-4-SEMAHOG : Process [dec] ([chars]) hogging [chars]! calling proc [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The RP waited too long for a reply to a command sent to a WAN module. |
| Recommended Action | No action is required. |

%CWAN_RP-4-IPCFAILED : IPC failed to send RPC message to WAN module

| | |
|---------------------------|---|
| Explanation | The RP failed to send an RPC message via IPC to a WAN module. |
| Recommended Action | No action is required. |

%CWAN_RP-3-PROCMSG : Process msg send failed for process[dec]

| | |
|---------------------------|---|
| Explanation | Process message send failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-MODULE_TYPE : cannot find FCI for module type [int] in slot [int]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred while the system was detecting the module type for the module in the specified slot. The operation of the module will be affected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-4-MODULE_CONFIG_MISSING : configuration not available/not matching in startup-config for slot [int]

| | |
|--------------------|--|
| Explanation | Some information regarding the configuration of the module in the specified slot is missing. Any configuration in the startup-config for the interfaces will not be applied. If the module in the specified slot is a FlexWAN, the missing configuration information is details of the Port Adapters in the FlexWAN module. This information is missing from the SLOTCACHE ROMMON variable. |
|--------------------|--|

%CWAN_RP-4-MODULE_CONFIG_MISSING : configuration not available/not matching in startup-config for slot [int]

| | |
|---------------------------|---|
| Recommended Action | If the module in the slot specified in the error message has not previously been inserted, it has no previous configuration; therefore, no action is required. If the configuration for the specified slot in the startup-config is suitable for the module in that slot, manually apply the configuration after the module has loaded by one of the following two methods. The second method requires a system reload: - Enter the copy nvram:startup-config system:running-config command to re-apply your saved configuration, then enter the no shutdown command on all interfaces whose configuration was rejected, then enter the copy system:running-config nvram:startup-config command to save your configuration and the WAN module slot configuration. - Enter the copy command to copy your startup-config to a temporary location (for example, copy nvram:startup-config bootflash:tmp-config), then enter the copy system:running-config nvram:startup-config command to update the WAN module slot configuration, then enter the copy command to restore the temporary copy of the startup-config (for example, copy bootflash:tmp-config nvram:startup-config), then enter the reload command to reload the system. After using the second method, you may wish to use the delete command to remove the temporary copy of the startup-config. To prevent this condition from recurring, ensure that the SLOTCACHE variable is updated whenever modules that require it (FlexWANs, but not OSMs) are moved between slots in the chassis. The SLOTCACHE variable is updated when the running-config is written to the startup-config using the copy system:running-config nvram:startup-config command (or the deprecated write memory equivalent). The two methods of restoring the configuration for the module shown above ensure the SLOTCACHE variable is updated. |
|---------------------------|---|

%CWAN_RP-4-LL_UNKNOWN : Unknown linecard message: type [int], [chars]

| | |
|---------------------------|---|
| Explanation | Mismatch version between RP and LC, or internal message format mismatch |
| Recommended Action | No action is required. |

%CWAN_RP-3-GBIC_INSERTED : GBIC media type [dec] inserted in [chars]

| | |
|---------------------------|---------------------------------------|
| Explanation | A GBIC was inserted in the interface. |
| Recommended Action | No action is required. |

%CWAN_RP-3-GBIC_REMOVED : GBIC removed from [chars]

| | |
|---------------------------|--|
| Explanation | The GBIC was removed from the interface. |
| Recommended Action | No action is required. |

%CWAN_RP-1-TOO_MANY_VRF : Slot [int] can not support all the VRFs configured!

| | |
|---------------------------|--|
| Explanation | A non-Enhanced OSM card has been inserted into a router with more than 511 IP VRFs already configured. This router cannot support more than 511 IP VRFs if there is at least one non-Enhanced OSM in the system. |
| Recommended Action | Replace the inserted non-Enhanced OSM with an Enhanced OSM, or decrease the number of IP VRFs to 511 or fewer. |

%CWAN_RP-4-IFCFG_CMD_TIMEOUT : Interface configuration command ([hex]) to slot [int]/[int] timed out

| | |
|---------------------------|---|
| Explanation | The RP sent an configuration command to the slot specified in the error message and received no confirmation for the command. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-3-IFCFG_CMD_NOT_OWNER : Process '[chars]' waiting for interface configuration command ([hex]) to slot [int]/[int] without acquiring lock owned by process '[chars]'

| | |
|---------------------------|---|
| Explanation | A process on the RP sent an configuration command to the slot specified in the error message and a different process waited for the result. This could cause incorrect line card configuration states. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_RP-6-UPGRADE_COMPLETE : Slot [int]: ROMMON upgrade complete. Reset the card for the changes to take effect.

| | |
|---------------------------|---|
| Explanation | The ROMMON upgrade has completed successfully. The card must be reloaded for the changes to take effect |
| Recommended Action | No action is required. |

%CWAN_RP-3-UPGRADE_ERROR : Slot [int]: The ROMMON upgrade failed to complete.

| | |
|--------------------|---|
| Explanation | An error occurred during the upgrade process. |
|--------------------|---|

%CWAN_RP-3-UPGRADE_ERROR : Slot [int]: The ROMMON upgrade failed to complete.

| | |
|---------------------------|--|
| Recommended Action | If the module reloads successfully, please check the file and try again, otherwise please contact your Cisco technical support representative. |
|---------------------------|--|

%CWAN_RP-6-AUX_FILE : Slot [int]: Found VPN-SM Firmware in File: [chars]

| | |
|--------------------|---|
| Explanation | The file specified in the message was found and will be loaded by the VPN Services Module instead of the bundled image. |
|--------------------|---|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%CWAN_RP-6-ADF_FILE : Slot [int]: Using VPN-SM Upgrade File: [chars]

| | |
|--------------------|--|
| Explanation | Booting specified upgrade image for VPN Services Module. |
|--------------------|--|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%CWAN_RP-6-OVERRIDE : Slot [int]: ...Overriding Intrinsic VPN-SM Firmware.

| | |
|--------------------|--|
| Explanation | Specified image will be used instead of bundled image. |
|--------------------|--|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%CWAN_RP-1-OVERRIDE_MAC_INVALID : [chars] has invalid override-mac-address.

| | |
|--------------------|--|
| Explanation | The user has issued an override-mac-address that does not match the mac address of the MSFC. This can occur if the config has been moved to new hardware or the mac-address command has been used on another interface. while the system automatically corrects this, the config needs to be adjusted. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Modify the override-mac-address command in the config. |
|---------------------------|--|

%CWAN_RP-3-WAN_BRIDGING_CFG_EXCD : The number of VPLS/EoMPLS/Bridging/QinQ VCs exceeded the maximum([int]) supported by slot: [int] [chars]

| | |
|--------------------|--|
| Explanation | The user has attempted to configure more VPLS, EoMPLS, Bridging VCs than the number that is supported by the platform. Review the configuration guidelines for the features that are being configured and reduce the number of VPLS, EoMPLS, Bridging to the number that is supported by the platform. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | |
|---------------------------|--|

%CWAN_RP-6-OUT_OF_RESOURCE : [chars] configuration has exceeded available internal resources.

Explanation The resources required for configuration are no longer available. They may have been acquired by another application.

Recommended Action If the requested resources have not been allocated to another application, call your technical support representative for further assistance.

%CWAN_RP-4-EMPTY_CWANBAYS : FLEXWAN in slot [dec] is empty. Please remove the Flexwan or insert it with atleast one PA

Explanation The FLEXWAN in the specified slot does not contain any Port Adapters.

Recommended Action The FLEXWAN should be removed as this is an unsupported configuration

%CWAN_RP-6-LC_RESET : The RP is reloaded, resetting slot [dec] is necessary. Please ignore errors if any, till the linecard comes up.

Explanation If the system is running Catalyst operating system software on the supervisor engine and Cisco IOS software on the MSFC, the WAN line cards that power up before the RP powers up will be reset automatically.

Recommended Action No action is required.

%CWAN_RP-3-FAILED_CONFIG : Failed to send line card config message [chars] for slot [int] port [int]

Explanation The RP could not send the specified configuration message to the line card

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_RP-4-INVALID_UNIT : Invalid 7600 Unit: [[dec]/[dec]].

Explanation The specified 7600 slot/cpu beyonds the Chassis's limit.

Recommended Action Power cycle the redundant supervisor

%CWAN_RP-4-INCR_CFG_SYNC_FAIL : 7600 incremental running-config sync for [[dec]/[dec]] failed - [chars]([dec]) , Reload Standby

Explanation The specified 7600 incremental running-config sync failed

Recommended Action Power cycle the redundant supervisor

%CWAN_RP-4-CONFIG_MISMATCH : Irreconcilable Configuration difference between Active & Standby Supervisors due to OIR/Config Event for [dec]/[dec] -> Reloading Standby Supervisor to synchronize the configuration.

Explanation Unexpected configuration difference between Supervisors.

Recommended Action None. This is expected behavior.

%CWAN_RP-6-NOPWRISSU : Spa inserted in [chars] powered down because ISSU is in progress

Explanation The Spa insertion detected during ISSU upgrade process. It will be acted upon completion of the ISSU process.

Recommended Action No action is required.

%CWAN_RP-3-CWAN_IFCOM_RMI : Cwan ifcom RMI failure - [chars]([dec])

Explanation The CWAN IFCOM RMI Registration.

Recommended Action No action is required.

%CWAN_RP-6-COREDUMP_ENABLED : No heartbeat or keepalive resets will occur for slot [int] since coredump has been enabled

Explanation The module in the slot has crashed and is configured to generate a coredump file. The module will not be reset due to heartbeat and keepalive failures to ensure the coredump file generation is not prematurely terminated.

Recommended Action No action is required.

%CWAN_RP-6-SESS_LIMITS_CHASSIS : Exceeded max number of sessions supported. Supported limit 32000/chassis

Explanation Total number of subscriber sessions on this chassis exceeded the allowed limits. The supported limit is 32000 sessions per chassis

%CWAN_RP-6-SESS_LIMITS_CHASSIS : Exceeded max number of sessions supported. Supported limit 32000/chassis

Recommended Action Avoid bringing up more number of sessions than the supported limit

%CWAN_RP-6-SESS_LIMITS_SIP400 : Exceeded max number of sessions supported on SIP400 LC in slot [dec]. Supported limit 8000/SIP400

Explanation Total number of subscriber sessions on SIP400 line card exceeded the allowed limits. The supported limits is, 8000 sessions per SIP400

Recommended Action Avoid bringing up more number of sessions than the supported limit

%CWAN_RP-6-SESS_LIMITS_ES_PLUS : Exceeded max number of sessions supported on ES+ LC in slot [dec]. Supported limit 16000/ES+

Explanation Total number of subscriber sessions on ES+ line card exceeded the allowed limits. The supported limit is 16000 sessions per ES+

Recommended Action Avoid bringing up more number of sessions than the supported limit

%CWAN_RP-6-SESS_LIMITS_PORT_GROUP : Exceeded max number of sessions supported on port-group Gig[dec]/[dec] to Gig[dec]/[dec].Supported limit 4000/port-group on ES+ LC

Explanation Total number of subscriber sessions on a single port-group in ES+ exceeded the allowed limits. The supported limit is 4000 sessions per port-group

Recommended Action Rearrange the subscribers on ES+ in such a way maximum number of sessions supported in a port-group is 4000.

%CWAN_RP-6-SESS_LIMITS_TEN_GIG_PORT : Exceeded max number of sessions supported on port Te[dec]/[dec]. Supported limit 8000/port on a Ten Gig port on ES+ LC.

Explanation Total number of subscriber sessions on a single Ten Gig port in ES+ exceeded the allowed limits. The supported limit is 8000 sessions per Ten Gig port.

Recommended Action Rearrange the subscribers on ES+ in such a way that maximum number of sessions per Ten Gig port is 8000

%CWAN_RP-6-PLAT_AVL_DEL_FAILED : Platform AVL delete failed for PPPoE session due to wrong slot id [dec]

Explanation Deletion of session related information from the AVL tree failed, because the slot number used to index it is wrong

Recommended Action No action is required.

CWAN_SLOT

%CWAN_SLOT-1-CF_NOBUF : Failed to get chkpt buffer, client = [dec]

Explanation Failed to get enough memory for checkpointing.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%CWAN_SLOT-1-CF_ADDFAILED : Failed to register chkpt client, client = [dec]

Explanation The CF client could not be registered.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

CWAN_SPA

%CWAN_SPA-3-CREATION_FAILURE : slot=[dec] subslot=[dec], spa_type=[hex], lc_type=[hex].

Explanation Failed to create a SPA object.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_SPA-3-SPA_CREATION_FAILURE : slot=[dec] subslot=[dec], PID=[chars] lc_type=[hex].

Explanation Failed to create a SPA object.

%CWAN_SPA-3-SPA_CREATION_FAILURE : slot=[dec] subslot=[dec], PID=[chars] lc_type=[hex].

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_SPA-3-FAILURE : [chars]: SPA failure - cause: [chars] ([hex]), recovery action: [chars] ([dec])

Explanation The SPA failed for the specified reason

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_SPA-3-NULL_VFT : [chars] virtual function table is not initialized. spaType=[hex]

Explanation A required function table is not initialized

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_SPA-3-NULL_VFUNC : [chars] vector is not initialized. spaType=[hex]

Explanation A required function vector is not initialized

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWAN_SPA-3-MEM_ALLOC_ERROR : [chars]

| | |
|---------------------------|--|
| Explanation | Memory allocation error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_SPA-3-NULL_SPA_PTR :

| | |
|---------------------------|--|
| Explanation | Pointer to a SPA object is NULL. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_SPA-3-INVALID_INDX_RANGE : index1= [dec], index2= [dec], maxIndex= [dec]

| | |
|---------------------------|--|
| Explanation | Invalid index range. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_SPA-3-INVALID_IF_INDEX : index= [dec], cardType=[hex], spaType=[hex], slot [dec] subSlot [dec] slotunit [dec] vc [dec]

| | |
|---------------------------|--|
| Explanation | Index for the interface is not valid. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_SPA-3-INVALID_DATA_INSTANCE : interface type [chars], slot [dec] port [dec] vc [dec] : [chars]

| | |
|---------------------------|---|
| Explanation | Data required to support the interface is not available. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_SPA-3-NULL_ATM_DB : Unable to create ATM DB for [chars]

| | |
|---------------------------|---|
| Explanation | Data required to support the interface is not available. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_SPA-3-POWER_CYCLE : [chars] occurred on Shared Port Adapter [int]/[int]

| | |
|---------------------------|---|
| Explanation | An error has occurred which will cause the Shared Port Adapter to be power cycled |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_SPA-3-DIAG_CONFIG : [chars] did not complete [dec]/[dec]

| | |
|---------------------------|---|
| Explanation | An error has occurred during diagnostic test. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWAN_SPA-3-INTR_THROTTLE : Interface [chars] MAC interrupt was throttled. Reenabling MAC interrupts via one sec spa process

| | |
|---------------------------|---|
| Explanation | MAC interrupt burst has occurred on one of the interfaces on the link daughtercard. The error message indicates that a throttling mechanism has been applied to this port to avoid any operational damage that could be provoked by this event. The cause for this problem could be bad transceiver, highly frequent flapping optical signals, or mismatched path signals (e.g. receiving 10GBASE-W signal on 10GE LAN interface), etc. |
| Recommended Action | Check the interface configuration and received signal characteristics. Also verify the XFP transceiver and receive signal path to determine the If this message recurs, LOG_STD_ACTION |

CWAN_T3E3

%CWAN_T3E3-3-IFCONFIG_ERR : Interface config error on T3 port [dec]/[dec], cmd [dec], retval [dec]

| | |
|---------------------------|---|
| Explanation | A configuration command sent from the system to a linecard failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CWMP_DOWNLOAD

%CWMP_DOWNLOAD-5-CONFIG_SUCCESS : CWMP download: config file successfully downloaded and applied [chars]

| | |
|---------------------------|--|
| Explanation | The configuration apply operation with CWMP DOWNLOAD RPCmethod is success. |
| Recommended Action | No action required. |

%CWMP_DOWNLOAD-5-CONFIG_FAILURE : CWMP download: config apply operation failed [chars]

| | |
|---------------------------|---|
| Explanation | The configuration apply operation with CWMP DOWNLOAD RPCmethod is failed. |
| Recommended Action | No action required. |

CWPA

%CWPA-3-NODISPATCH : Dispatch vector Null, cmd=[dec], dintf=[dec]

| | |
|---------------------------|---|
| Explanation | No command dispatch vector was found for the specified interface. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%CWPA-3-BADMALUCMD : Unsupported MALU command [dec], arg=[hex], pascb=[hex]

| | |
|---------------------------|---|
| Explanation | The Route Processor (Draco) passed down a command that the software was not prepared to handle. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%CWPA-3-BADMALUCMD2 : CWPA([int]): Unsupported MALU cmd/arg0=[hex][hex], arg1arg2=[hex][hex], pascb=[hex]

| | |
|---------------------------|---|
| Explanation | The Route Processor (Draco) passed down a command that the software was not prepared to handle. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%CWPA-3-CMDNOPASCB : PASCB Null for command [dec], arg=[hex]

| | |
|---------------------------|---|
| Explanation | The Route Processor (Draco) passed down a command that the software was unprepared to handle. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%CWPA-3-BAD_IFCOMTYPE : Bad ifcom message type=[int]

| | |
|---------------------------|---|
| Explanation | The Route Processor (Draco) passed down a message that the software was not prepared to handle. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%CWPA-3-IPCALLOCFAIL : Failed to allocate IPC buffer [chars]

| | |
|--------------------|---|
| Explanation | The FlexWAN line card failed to allocate a buffer for communication with the Route Processor (Draco). |
|--------------------|---|

%CWPA-3-IPCALLOCFAIL : Failed to allocate IPC buffer [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWPA-3-IPCSENFFAIL : Failed to send IPC message [chars]

| | |
|--------------------|--|
| Explanation | The FlexWAN line card failed to send a message to the Route Processor (Draco). |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWPA-3-DIAGFAIL : Failed to handle diag [chars] [dec]

| | |
|--------------------|--|
| Explanation | The FlexWAN line card failed to execute diag command. Further details are specified in the text that is displayed on the console or in the system log. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWPA-3-LVLRTOOBIG : Loveletter length exceeds max, [int] bytes

| | |
|--------------------|---|
| Explanation | The FlexWAN line card attempted to send a large message to the Route Processor (Draco). |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%CWPA-2-BAD_HWVERS : Unable to determine board hardware version

| | |
|--------------------|---|
| Explanation | The line card software cannot read the line card hardware version. This condition indicates a hardware error. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%CWPA-2-PA_VOLFAIL : Port adapter [dec]V failed, Reloading flexwan

| | |
|--------------------|--|
| Explanation | The line card has encountered an error involving power delivery to the line card. Likely causes for this error are an environmental condition, an overtemperature condition, or inconsistent voltage to the line card. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Check the input voltage and temperature of the line card. LOG_STD_RECUR_ACTION |
|---------------------------|--|

%CWPA-2-PAOIR : Port adapter OIR not supported, reloading

Explanation An OIR operation occurred on the port adapters of the specified line card. OIR operations are not supported on the port adapter. This error has caused the line card to crash and reload.

Recommended Action Do not attempt an OIR operation on the port adapters of the specified line card.

%CWPA-2-WHICH_INT : Unexpected [chars] interrupt, INT status = [hex]

Explanation The line card specified in the error message has encountered an unexpected interrupt.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWPA-4-HEADER_TOO_BIG : Needs [dec] bytes, with only [dec] bytes available. Packet size [int], received from [chars], buffer [hex] packet start [hex]: %-08x:[hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex] %-08x:[hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

Explanation A packet was sent from the PA to either the route processor or the line card. That packet did not have enough available space to append the header. A new particle has been linked to the packet to store the header.

Recommended Action No action is required.

%CWPA-3-PROCCREATEFAIL : Failed to create [chars] process

Explanation The Linecard failed to create a process which which is necessary for proper functioning of the linecard.

Recommended Action Copy the error message as it appears, and report it to your technical support representative. If it is the 'stats export process' then you might not see input/output rate and bytes getting incremented in 'show interface' output for flexwan/flexwan2 non-channelised interfaces. However you can get the stats from 'show interface acc' or 'show interface stats'.

CWPAATOM

%CWPAATOM-3-BADLTL : Bad LTL index [hex] for vlan [int] local_vc_label [int]

Explanation Local Target Logic index value is invalid

%CWPATOM-3-BADLTL : Bad LTL index [hex] for vlan [int] local_vc_label [int]

| | |
|---------------------------|--|
| Recommended Action | If your EoMPLS traffic is fine then ignore this If not then contact your Cisco technical support representative. |
|---------------------------|--|

CWRPSPA

%CWRPSPA-3-NO_HOST_INFO : slot [dec] subSlot [dec], spaType [hex]

| | |
|---------------------------|--|
| Explanation | Failed to get information about the host linecard. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWRPSPA-3-MAX_SPA : Power to IPSEC-SPA-2G in [chars] is denied because it has exceeded the number allowed([dec])

| | |
|---------------------------|---|
| Explanation | The number of IPSEC-SPA-2G in a chassis is limited. This message is displayed when the number of IPSEC-SPA-2G in the chassis has exceeded this limit. |
| Recommended Action | Use only the number of supported IPSEC-SPA-2G |

%CWRPSPA-3-SPA_NO_HOST_INFO : slot [dec] subSlot [dec], PID [chars]

| | |
|---------------------------|---|
| Explanation | Failed to get information about the host linecard. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWRPSPA-3-HWIDB_FAILURE : Creation: slot [dec] subSlot [dec] port [dec] vc [dec]

| | |
|---------------------------|---|
| Explanation | Failed to create an interface hwidb. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWRPSPA-3-INVALID_PORT_NUM : slot=[dec] port=[dec], hwidbType=[hex], max_port_num=[dec], LCtype=[hex]

| | |
|---------------------------|---|
| Explanation | The port number is out of range. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%CWRPSPA-4-SPA_RESP_CMD_MISMATCH : [chars]: Expecting response to interface configuration command [chars] but received response to command [chars].

| | |
|---------------------------|---|
| Explanation | An internal synchronization error occurred while configuring the interface. The configuration may not have succeeded. |
| Recommended Action | Check that the running configuration for the interface is correct. If this message occurred on the standby, try reloading the standby to ensure that its configuration is in sync. If this message is repeatable, please LOG_STD_SH_TECH_ACTION |

%CWRPSPA-6-CARDRELOAD : Module [int] reload due to SPA insert in [int]/[int].

| | |
|---------------------------|---|
| Explanation | When inserting a SPA on this carrier card, the card is reset. |
| Recommended Action | No action is required. |

%CWRPSPA-4-SPA_CMD_NO_RESP : [chars]: No response for interface configuration command [chars]

| | |
|---------------------------|---|
| Explanation | A timeout occurred while RP was waiting for a response from line card. This may happen due to line card CPU being too busy to respond to the command. |
| Recommended Action | No action is required. |

%CWRPSPA-5-OUT_OF_RESOURCES : [chars]: Unable to create [chars] due to SPA resource limitations.

| | |
|---------------------------|---|
| Explanation | The SPA was unable to create the requested resource due to limited hardware or software resources |
| Recommended Action | No action is required. |

CWS

%CWS-5-CWS_ON_PATH_DEBUG : NSH D-bit set for SIP: %CA DIP: %CA Src_node: [dec] Src_if_Id: [dec] Tenant_Id: [dec]

| | |
|---------------------------|---|
| Explanation | CTR has seen an NSH header with D-bit set |
| Recommended Action | This message is for informational purposed only, and used for CWS Per Flowing debugging in the Cloud. LOG_STD_NO_ACTION |

%CWS-5-CWS_INVALID_REF_COUNT : Invalid ref count [dec] in chunk [hex]

| | |
|---------------------------|--|
| Explanation | CTR has seen an invalid ref count in the NSH pool |
| Recommended Action | This message is for informational purposed only, and used for CWS troubleshooting. LOG_STD_NO_ACTION |

%CWS-3-IPC_INVALID_MSG : CWS-Invalid request [int]

| | |
|--------------------|--|
| Explanation | Received Invalid message from CWS client proxy |
|--------------------|--|

%CWS-3-IPC_INVALID_MSG : CWS-Invalid request [int]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWS-3-IPC_OPEN_REPLY : CWS-IPC Open Reply failed, request [chars]

Explanation For a request from CWS client proxy opening the reply buffer failed

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%CWS-3-IPC_NORES : CWS-No space for the IPC reply, size [int], request [chars]

Explanation For a request from CWS client proxy it was not possible to allocate space for a reply for the specified size.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWS-3-IPC_SEND_FAILED : CWS-IPC [chars] [chars] send failed [int]

Explanation IPC message send failure

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%CWS-2-IPC_INIT_FAILED : CWS-IPC message handler registration failure, rc [int]

Explanation Registering an IPC message handler for the CWS feature failed. This will cause the feature to not function.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

DAPR**%DAPR-4-INTERNAL_ERROR : [chars]**

| | |
|---------------------------|---|
| Explanation | Internal error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

DAPR_BR**%DAPR_BR-5-STATUS : [chars]**

| | |
|---------------------------|------------------------|
| Explanation | Border-Router status |
| Recommended Action | No action is required. |

%DAPR_BR-5-RESET : reason: [chars]

| | |
|---------------------------|---|
| Explanation | Border-Router reset due to mentioned reason |
| Recommended Action | No action is required. |

%DAPR_BR-5-RM_ROUTE_INVALID : No route or route is via egress

| | |
|---------------------------|---|
| Explanation | Invalid route from Border-Router to Route-Manager |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_BR-5-NBR_ROUTE_INVALID : Neighbor-BR [IP_address]

| | |
|---------------------------|---|
| Explanation | Invalid route to neighbor Border-Router |
| Recommended Action | No action is required. |

%DAPR_BR-5-NBR_TUNNEL_UPDOWN : Neighbor-BR [IP_address] tunnel [chars]

| | |
|---------------------------|---|
| Explanation | Status of tunnel to neighbor Border-Router |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_BR-5-EGRESS_INTF_THRESHOLD_EXCEED : [chars] curr-util [int]%%, max-util %ld%%

| | |
|---------------------------|--|
| Explanation | DAPR egress interface utilization threshold exceeded |
| Recommended Action | No action is required. |

%DAPR_BR-5-EGRESS_INTF_NOT_VIABLE : [chars] curr-bw(kbps) [int] min-bw(kbps) %ld

| | |
|---------------------------|----------------------------------|
| Explanation | DAPR egress interface not viable |
| Recommended Action | No action is required. |

%DAPR_BR-5-EGRESS_INTF_UPDOWN : [chars] [chars]

| | |
|---------------------------|------------------------------|
| Explanation | DAPR egress interface status |
| Recommended Action | No action is required. |

%DAPR_BR-5-INGRESS_INTF_UPDOWN : [chars] [chars]

| | |
|---------------------------|-------------------------------|
| Explanation | DAPR ingress interface status |
| Recommended Action | No action is required. |

%DAPR_BR-4-PREFIX_LIMIT_EXCEEDED : curr [dec], max [dec]

| | |
|---------------------------|----------------------------|
| Explanation | DAPR RIB prefixes exceeded |
| Recommended Action | No action is required. |

%DAPR_BR-4-FLOW_LIMIT_EXCEEDED : curr [dec], max [dec]

Explanation DAPR Flows exceeded**Recommended Action** No action is required.

%DAPR_BR-4-RMAP_LIMIT_EXCEEDED : curr [dec], max [dec]

Explanation DAPR route-map entries exceeded max allowed**Recommended Action** No action is required.

DAPR_RM

%DAPR_RM-6-APP_RT_INSTALL : [chars] (BW:[dec]) [chars]

Explanation App route installed for flow-group**Recommended Action** No action is required.

%DAPR_RM-6-APP_RT_DEL : [chars] (BW:[dec])

Explanation App route deleted for flow-group**Recommended Action** No action is required.

%DAPR_RM-4-NO_VIABLE_PATH : [chars]

Explanation No viable path found for flow-group**Recommended Action** No action is required.

%DAPR_RM-3-APP_RT_COMPUTE_FAILED : [chars]

Explanation App route compute failed for flow-group**Recommended Action** No action is required.

%DAPR_RM-4-APP_REROUTE_FAILED : [chars]

| | |
|---------------------------|--|
| Explanation | App route re-compute failed for flow-group |
| Recommended Action | No action is required. |

%DAPR_RM-5-BR_STATUS : BR [chars] [chars]

| | |
|---------------------------|----------------------------|
| Explanation | Border-Router status on RM |
| Recommended Action | No action is required. |

%DAPR_RM-3-BR_RESET : BR [chars] reason: [chars]

| | |
|---------------------------|---|
| Explanation | RM reset the BR due to mentioned reason |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_RM-6-BR_EVENT : BR [chars] event: [chars]

| | |
|---------------------------|---|
| Explanation | RM received event from BR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_RM-4-RIB_MISMATCH : route-count: old [dec] new [dec]

| | |
|---------------------------|---|
| Explanation | Mismatch of RIB database between BRs and RM |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_RM-3-BR_REG_FAILED : BR [chars] reason: [chars]

| | |
|--------------------|------------------------|
| Explanation | BR Registration failed |
|--------------------|------------------------|

%DAPR_RM-3-BR_REG_FAILED : BR [chars] reason: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DAPR_RM-6-RM_RESET : reason: [chars]

| | |
|---------------------------|---|
| Explanation | RM reset due to the mentioned reason |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_RM-5-RM_STATUS : [chars]

| | |
|---------------------------|------------------------|
| Explanation | Route-Manager status |
| Recommended Action | No action is required. |

%DAPR_RM-4-FLOW_EXP_PKT_INVALID_SEQ : BR [chars] last-seq [dec] curr-seq [dec]

| | |
|---------------------------|---|
| Explanation | Unexpected seq num in flow export pkt |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_RM-3-FLOW_EXP_PKTS_MISSED : BR [chars] missed-pkts [dec]

| | |
|---------------------------|---|
| Explanation | Flow export packets missed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_RM-4-FLOW_DATA_RECS_IGNORED : BR [chars] reason: [chars]

| | |
|---------------------------|---|
| Explanation | Flow data records ignored |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_RM-3-FLOW_INVALID_EGRESS : flow-group [chars]/[chars]/[dec], state [chars], uptime [dec]s, last-transition [dec]s, ingress-BR [chars], expected-egress [chars]/[dec], reported-egress [chars]/[dec]

| | |
|---------------------------|---|
| Explanation | Flow discovered from unexpected egress |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_RM-4-FLOW_INVALID_INGRESS : flow-group [chars]/[chars]/[dec], state [chars], uptime [dec]s, last-transition [dec]s, ingress-BR [chars], egress-BR/intf [chars]/[dec], ingress-intf [chars]

| | |
|---------------------------|---|
| Explanation | Flow discovered from unexpected ingress |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DAPR_RM-4-FLOW_MULTI_EGRESS : flow-group [chars]/[chars]/[dec], state [chars], uptime [dec]s, num-egress [dec], prev-egress [chars]/[dec], curr-egress [chars]/[dec]

| | |
|---------------------------|---|
| Explanation | New flow discovered from multiple egresses |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

DATACORRUPTION**%DATACORRUPTION-1-DATAINCONSISTENCY : [chars], -PC= [chars]**

Explanation

%DATACORRUPTION-1-DATAINCONSISTENCY : [chars], -PC= [chars]**Recommended
Action**

%DATACORRUPTION-1-DATAINCONSISTENCY : [chars], -PC= 0x[chars]

Explanation Software has detected that some internal data structures may be corrupt. This may lead to unpredictable device operation; including, but not limited to, unexpected reloads or spurious memory accesses. This detection is a proactive check for operating system consistency.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

DATA_DESCR

**%DATA_DESCR-3-HWIDB_DECODE : Lookup Failure: %0-8x.%0-8x.%0-8x.%0-8x.%0-8x
([int]-[int]/[int]/[int]/[int])**

Explanation Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An interface corresponding to a data descriptor index was not found on the Standby unit when it was looked up. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

Recommended Action Gather system logs and error messages at both the active and the standby units. Issue the recommended show commands at the active unit.
LOG_STD_SH_CMD_ACTION(show data-descriptor hwidb)

**%DATA_DESCR-3-SWIDB_DECODE : Lookup Failure: %0-8x.%0-8x.%0-8x.%0-8x.%0-8x
([int]-[int]/[int]/[int]/[int])**

Explanation Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An interface corresponding to a data descriptor index was not found on the Standby unit when it was looked up. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

Recommended Action Gather system logs and error messages at both the active and the standby units. Issue the recommended show commands at the active unit.
LOG_STD_SH_CMD_ACTION(show data-descriptor swidb)

%DATA_DESCR-3-CTRLR_DECODE : Lookup Failure: %0-8x.%0-8x.%0-8x.%0-8x.%0-8x ([int]-[int]/[int])

Explanation Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An interface corresponding to a data descriptor index was not found on the Standby unit when it was looked up. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

Recommended Action Gather system logs and error messages at both the active and the standby units. Issue the recommended show commands at the active unit.
LOG_STD_SH_CMD_ACTION(show data-descriptor controller)

%DATA_DESCR-3-GENERIC_VIRTUAL_DECODE : Lookup Failure: %0-8x.%0-8x.%0-8x.%0-8x.%0-8x ([int]-[int]/[int]/[int])

Explanation Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An interface corresponding to a data descriptor index was not found on the Standby unit when it was looked up. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

Recommended Action Gather system logs and error messages at both the active and the standby units. Issue the recommended show commands at the active unit.
LOG_STD_SH_CMD_ACTION(show data-descriptor [hwidb|swidb])

%DATA_DESCR-3-GENERIC_DECODE : Lookup Failure: %0-8x.%0-8x.%0-8x.%0-8x.%0-8x ([int]-[int]/[int]/[int]/[int]/[int])

Explanation Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An interface corresponding to a data descriptor index was not found on the Standby unit when it was looked up. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

Recommended Action Gather system logs and error messages at both the active and the standby units. Issue the recommended show commands at the active unit.
LOG_STD_SH_CMD_ACTION(show data-descriptor [hwidb|swidb|controller])

%DATA_DESCR-3-GENERIC_ENCODE : Encode failure: [chars], descriptor type=[dec]

| | |
|---------------------------|---|
| Explanation | An internal data descriptor could not be encoded for synchronization for the interface or controller in the run-time module specified in the message output. The failure most likely occurred because of a software error. The descriptor type specified in the message output identifies the type of failure. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DATA_DESCR-3-DEFER_FAILURE : Defer failure on [chars] for descriptor [int]-[int]/[int]/[int]/[int]

| | |
|---------------------------|---|
| Explanation | Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An error occurred during the processing of a data descriptor. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DATA_DESCR-3-QUEUE_INTERNAL_ERROR : Internal error on data descriptor queue: [chars]

| | |
|---------------------------|---|
| Explanation | Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An error occurred during the processing of a data descriptor. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DATA_DESCR-3-ENTRY_EXPIRED : Found expired message entry for descriptor [int]-[int]/[int]/[int]/[int]

Explanation Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An error occurred during the processing of a data descriptor. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

DBAL

%DBAL-3-MQIPC_EVENTLOSS :

Explanation MQIPC event notifying of non-empty queue not delivered to DBAL

Recommended Action Report this occurrence to Cisco TAC

%DBAL-3-MQIPC_PEEKERR :

Explanation MQIPC fails to peek and fetch a msg in DBAL

Recommended Action Report this occurrence to Cisco TAC

%DBAL-3-MQIPC_ADVANCEERR :

Explanation MQIPC fails to advance to the next msg in DBAL

Recommended Action Report this occurrence to Cisco TAC

%DBAL-4-DELAYED_BATCH :

Explanation DBAL batch with an extended lifetime. This may or may not be a problem depending on the circumstances

Recommended Action Collect log archive and show tech-support and report this occurrence to Cisco TAC

%DBAL-4-LONG_EXEC_BATCH :

Explanation DBAL batch execution took an extended period of time. This may or may not be a problem depending on the circumstances

Recommended Action Collect log archive and show tech-support and report this occurrence to Cisco TAC

%DBAL-3-MQIPC_READER_INIT_BY_TIMER :

Explanation MQIPC reader initialized by timer not chasfs watcher.

Recommended Action Report this occurrence to Cisco TAC

DC

%DC-4-FILE_OPEN_WARNING : Not able to open [chars]

Explanation The device classifier did not find the default profile file or it may be corrupted. DC is working using built-in profiles.

Recommended Action Perform archive download using the tar bundle image to install the profile file in the flash. Reload the switch with the image to see the warning message is gone.

%DC-3-PATTERN_NOT_FOUND : [chars]

Explanation The device profiles file parsing failed. This indicates that the file may be corrupt. The device classifier will be operationally down if failure occurred for the Embedded profiles.

Recommended Action Reload the Device Profiles file to the flash and re-enable the device classifier

%DC-3-INCOMPATIBLE_PROFILE_VERSION : Incompatible version of Profile detected in [chars]. Expected version:[dec], Version found:[dec]

Explanation An incompatible profile version is detected. The device classifier feature will be operationally down.

Recommended Action Reload the expected version of device profiles file to the system and re-enable the device classifier

%DC-3-BUILTIN_INIT_FAIL : [chars]

Explanation Initialization of Device classifier Built-in database failed. So the device classifier will be operationally down.

%DC-3-BUILTIN_INIT_FAIL : [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DC-6-DEFAULT_INIT_INFO : [chars]

| | |
|---------------------------|---|
| Explanation | The default profiles are not loaded and those devices will not be classified. Device classifier will continue to work with built-in profiles. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DC-3-SM_INIT_FAIL : Device Classifier disabled. [chars] initialization failed

| | |
|---------------------------|---|
| Explanation | Registraton of Device classifier with SM failed. So the device classifier will be operationally down. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DC-3-OUI_INIT_FAIL : OUI Table initialization failed for [chars]

| | |
|---------------------------|---|
| Explanation | Loading of the OUI databae in Device classifier failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DC-3-CHECK_INIT_FAIL : [chars]

| | |
|--------------------|--|
| Explanation | Loading of the Checks databae in Device classifier failed. |
|--------------------|--|

%DC-3-CHECK_INIT_FAIL : [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DC-3-DB_INIT_FAIL : Device Classifier disabled. [chars] initialization failed

| | |
|---------------------------|---|
| Explanation | Initialization of Device classifier Internal database failed So the device classifier will be operationally down. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DC-3-MAX_RULES_EXCEEDED : [chars].

| | |
|---------------------------|--|
| Explanation | The maximum number of rules that can be defined in device profiles exceeded the maximum limit. The device classifier will be operationally down if failure occurred for the Embedded profiles. |
| Recommended Action | Reduce the number of rules in the device profiles file and reload it into the system and re-enable the device classifier |

%DC-3-MAX_PROFILES_EXCEEDED : [chars].

| | |
|---------------------------|---|
| Explanation | The maximum number of profiles that can be defined in device profiles exceeded the maximum limit. The device classifier will be operationally down if failure occurred for the Embedded profiles. |
| Recommended Action | Reduce the number of rules in the device profiles file and reload it into the system and re-enable the device classifier |

%DC-3-MAX_OUI_EXCEEDED : [chars].

| | |
|---------------------------|--|
| Explanation | The maximum number of OUI codes that can be defined in device profiles exceeded the maximum limit. The device classifier will be operationally down if failure occurred for the Embedded profiles. |
| Recommended Action | Reduce the number of rules in the device profiles file and reload it into the system and re-enable the device classifier |

%DC-3-NO_MEM : [chars].

Explanation There is no memory left to allocate in the system The device classifier will be operationally down if failure occurred for the Embedded profiles.

Recommended Action Increase the memory size in the system and re-enable the device classifier

%DC-3-DC_DISABLED : [chars].

Explanation The device classifier is disabled due to an error condition encountered during initialization or parsing the profiles

Recommended Action The specified error message is logged. After the error condition is resolved re-enable the device classifier

%DC-3-SM_UPDATE : Failed to update [chars].

Explanation Internal error occurred during device classification . This may cause the device to be unknown.

Recommended Action

%DC-3-SM_API : [chars] return [chars].

Explanation Internal error returned by Session Manager api.

Recommended Action

%DC-3-FILE_READ_ERROR : Error [chars] the profile file: [chars]

Explanation There was an error reading the profile file contents. The profiles in the errored file cannot be loaded into the device classifier.

Recommended Action

%DC-3-FILE_CHECKSUM : Checksum [chars] failed for the profile file: [chars]

Explanation Checksum computation or verification failed for the profiles file. The profiles in the errored file cannot be loaded into the device classifier.

Recommended Action

%DC-3-SM_GET : Failed to get [chars].

Explanation Internal error occurred during communication with Session Manager. This may cause the show command not to display the device classification results.

Recommended Action

%DC-3-DISABLE_FAIL : Failed to disable DC.

Explanation Internal error occurred trying to disable Device Classifier.

Recommended Action Please run the command: show macro auto monitor clients and try disabling the clients

%DC-3-ENABLE_FAIL : Failed to enable DC.

Explanation Internal error occurred trying to enable Device Classifier.

Recommended Action Please check the previous DC error messages and take the relevant action

%DC-3-HRPC_SYNC : Error on member switch [dec], error_code = [dec]

Explanation Internal error occurred while trying to sync Device Classifier.state

Recommended Action Please check the state of the stack members

DFP

%DFP-4-UKN_CON : Manager [IP_address] Service [chars] - Unknown connection state [int]

Explanation Unknown connection state processing DFP timer

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DFP-4-BAD_SEND : Manager [IP_address]:[int] - Send failed

Explanation Sending a message to DFP Manager failed

%DFP-4-BAD_SEND : Manager [IP_address]:[int] - Send failed

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DFP-4-SOCK_ERR : Manager [IP_address]: Service [chars] - Socket_rcv error [dec]

Explanation Socket_rcv error receiving message from DFP Manager

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DFP-4-READ_ERR : Manager [IP_address]: Service [chars] - Too many read errors

Explanation Too many errors reading message header from DFP Manager

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DFP-4-NO_PARSE : Manager [IP_address]: Service [chars] - Could not parse message

Explanation Could not parse message from DFP Manager

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DFP-4-UNK_TYPE : Manager [IP_address]: Service [chars] - Unknown message type [int]

Explanation Message from DFP Manager has unknown type

%DFP-4-UNK_TYPE : Manager [IP_address]: Service [chars] - Unknown message type [int]

| | |
|---------------------------|--|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%DFP-4-ENQUEUE : Process enqueue failed: [chars]

| | |
|---------------------------|--|
| Explanation | An unexpected error occurred while enqueueing a DFP element |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DFP-4-BAD_POINTER : [chars] Application did not set pointer

| | |
|---------------------------|--|
| Explanation | Application passed invalid pointer to DFP subsystem |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DFP-4-NUM_TOO_LARGE : [chars] Application sent too many values

| | |
|---------------------------|--|
| Explanation | Application sent too many values to DFP subsystem |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DFP-4-AGENT_NOT_FOUND : [chars] Service has not been registered with DFP.

| | |
|--------------------|--|
| Explanation | No such service registered with DFP subsystem. |
|--------------------|--|

%DFP-4-AGENT_NOT_FOUND : [chars] Service has not been registered with DFP.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DFP-4-BAD_LISTEN : Service [chars] - Listen failed

Explanation Listen for DFP Manager failed.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DFP-4-NO_PROCESS_START : Could not start process for service [chars]

Explanation Could not start DFP Process for service %s

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DFP-4-STRING_TOO_LONG : The string [chars] exceeds 15 characters - too long for service name.

Explanation The user input a service string that exceeds 15 characters

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DFP-4-PACKET_TOO_SMALL : The DFP packet is too small from manager [IP_address] service [chars].

Explanation A DFP packet has been received that is too small.

%DFP-4-PACKET_TOO_SMALL : The DFP packet is too small from manager [IP_address] service [chars].

| | |
|---------------------------|--|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%DFP-4-REPEAT_SERVICE_INIT : Service [chars] is already intialized, cannot re-initialize

| | |
|---------------------------|--|
| Explanation | The application has attempted to re-initialize a service |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DFP-4-NO_QUEUE_REQUEST : Could not queue request for [chars] for service [chars]

| | |
|---------------------------|--|
| Explanation | Could not queue request to the DFP process for specific action |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DFP-4-SUBSYS_NOT_UP : Service [chars] - attempted to register before DFP Subsystem is up.

| | |
|---------------------------|--|
| Explanation | Problem with order of subsystem initialization. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DFP-4-SECURITY_FAIL : [chars] security information in CASA packet from manager [IP_address] service [chars].

| | |
|--------------------|------------------------|
| Explanation | Security check failed. |
|--------------------|------------------------|

%DFP-4-SECURITY_FAIL : [chars] security information in CASA packet from manager [IP_address] service [chars].

Recommended Action Make sure all CASA/DFP systems are configured with the same password.

%DFP-4-BIND_FAIL : Failure binding port [int] to socket for service [chars].

Explanation Problem with call to socket bind.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

DHCP through DLC

- [DHCP](#)
- [DHCPD](#)
- [DHCPV6C](#)
- [DHCPV6R](#)
- [DHCPV6S](#)
- [DHCP_SNOOPING](#)
- [DIALER](#)
- [DIALER_LIST_PROXY](#)
- [DIALPEER_DB](#)
- [DLC](#)

DHCP

%DHCP-6-ADDRESS_ASSIGN : Interface [chars] assigned DHCP address [IP_address], mask [IP_address], hostname [chars]

Explanation The interface has been allocated an address via DHCP

Recommended Action This is an informational message. No action is required

%DHCP-5-RESTART : Interface [chars] is being restarted by DHCP

| | |
|---------------------------|-----------------------------------|
| Explanation | DHCP is restarting the interface. |
| Recommended Action | No action is required. |

%DHCP-3-HA_INIT_FAIL : Function [chars] in DHCP client failed to initialize: [chars]

| | |
|---------------------------|---|
| Explanation | A high availability related function in the DHCP client failed to initialize properly. If you are using a platform with a redundant processor or box-to-box redundancy, DHCP client settings may fail to be preserved if the main processor fails forcing use of the standby. |
| Recommended Action | Please contact the TAC for assistance. |

DHCPD**%DHCPD-2-NO_PROCESS : DHCP could not start its [chars] process.**

| | |
|---------------------------|--|
| Explanation | DHCP could not start one of its processes. |
| Recommended Action | Add more memory. |

%DHCPD-2-SOCKET_ERROR : DHCP could not open UDP port [int].

| | |
|---------------------------|---|
| Explanation | DHCP could not open UDP port 67 (bootps). |
| Recommended Action | Check if another application is using UDP port 67. If the port is available, add more memory. |

%DHCPD-2-MALLOC_ERROR : There is inadequate memory for DHCP services.

| | |
|---------------------------|--|
| Explanation | DHCP could not allocate mandatory data structures. |
| Recommended Action | Add more memory. |

%DHCPD-2-RCVMSG_ERROR : Rcvmsg failed unexpectedly. DHCP services have been terminated.

| | |
|---------------------------|---|
| Explanation | Reason for failure is unknown. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DHCPD-4-RELAY_ONLY : DHCP will run as a relay agent only.

Explanation DHCP could not start its database process. The server component has been disabled. Only the relay agent is active.

Recommended Action Add more memory.

%DHCPD-3-READ_ERROR : DHCP could not read bindings from [chars].

Explanation The DHCP server could not read bindings from the specified database agent.

Recommended Action Verify that the URL is correct and connectivity exists between the server and database agent. Check for a corrupt database file. The file must contain the *time* and *end* keywords. Execute the command, show ip dhcp database. If there are aborted file transfers, increase the database transfer timeout.

%DHCPD-2-READ_DEADLOCK : DHCP has detected a deadlock condition (excessive read failures).

Explanation The DHCP server could not read bindings from any database agent. All read attempts have failed. To prevent a possible deadlock, the server has made all pool addresses available for assignment.

Recommended Action Verify that all URLs are correct and connectivity exists between the server and all database agents. Check for corrupt database files. All files must contain the *time* and *end* keywords. Execute the command, show ip dhcp database. If there are aborted file transfers, increase the appropriate timeouts. Restart the DHCP server.

%DHCPD-3-WRITE_ERROR : DHCP could not write bindings to [chars].

Explanation The DHCP server could not write bindings to the specified database agent.

Recommended Action Verify that the URL is correct and connectivity exists between the server and database agent. Execute the command, show ip dhcp database. If there are aborted file transfers, increase the database transfer timeout.

%DHCPD-4-PING_CONFLICT : DHCP address conflict: server pinged [IP_address].

Explanation The DHCP server has detected an address conflict. Another host is using the specified IP address. After resolving the conflict, execute the command, clear ip dhcp conflict.

Recommended Action Resolve the misconfiguration. Clear the conflict from the DHCP database.

%DHCPD-4-DECLINE_CONFLICT : DHCP address conflict: client [chars] declined [IP_address].

Explanation The DHCP client has detected an address conflict. Another host is using the specified IP address. After resolving the conflict, execute the command, clear ip dhcp conflict.

Recommended Action Resolve the misconfiguration. Clear the conflict from the DHCP database.

%DHCPD-4-HA_CONFIG_MISMATCH : DHCP pool [chars] configuration on Active is not matched on the Standby.

Explanation The software has detected a possible DHCP configuration mismatch on the Active and Standby units. Please verify that the configuration on the Standby matches that of the Active.

Recommended Action Resolve the misconfiguration.

%DHCPD-2-HA_INSUFFICIENT_BUFFER : DHCP insufficient buffer; information is not synced to Standby.

Explanation Reason for failure is unknown.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%DHCPD-6-HIGH_UTIL : Pool [chars] is in high utilization state ([int] addresses used out of [int]). Threshold set at [int]%%.

Explanation The pool's utilization has exceeded the user configured high watermark.

Recommended Action Examine the DHCP pool and determine if the pool needs more IP addresses than currently allocated.

%DHCPD-6-LOW_UTIL : Pool [chars] is in low utilization state ([int] addresses used out of [int]). Threshold set at [int]%%.

Explanation The pool's utilization has fallen below the user configured high watermark.

Recommended Action Examine the DHCP pool and determine if the pool needs more IP addresses than currently allocated.

%DHCPD-3-HA_INIT_FAIL : Function [chars] in DHCP server failed to initialize: [chars]

Explanation A high availability related function in the DHCP server failed to initialize properly. If you are using a platform with a redundant processor or box-to-box redundancy, DHCP server data may fail to be preserved if the main processor fails forcing use of the standby.

%DHCPD-3-HA_INIT_FAIL : Function [chars] in DHCP server failed to initialize: [chars]

Recommended Action Please contact the TAC for assistance.

%DHCPD-3-NO_AAA_CONTEXT : AAA configured, but no AAA context in [chars]

Explanation DHCP is attempting to use AAA to grant a DHCP lease, but no AAA context is associated with the binding

Recommended Action Please contact the TAC for assistance.

DHCPV6C

%DHCPV6C-3-NOSOCKET : Cannot create DHCPv6 client socket

Explanation Most likely no IP enabled on any interface or a resource problem within the system.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%DHCPV6C-3-NOPACKET : Cannot setup or duplicate a socket packet

Explanation Most likely a resource problem within the system.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%DHCPV6C-4-ZEROXID : Calculated DHCPv6 Lease Query xid is zero. Nothing is wrong, just drop the LQv6 msg

Explanation After multiple tries, the generated LQv6 msg xid is zero by accident. Just drop the LQv6 msg.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

DHCPV6R

%DHCPV6R-3-INVALID_USR_SRCADDR : Invalid user specified source-address [IPV6 address] idb [chars] in ipv6 dhcp relay CLI. Removing user specified invalid address from the CLI and auto-computing source with SAS.

Explanation Invalid source-address has been provisioned in the ipv6 relay destination CLI.

%DHCPV6R-3-INVALID_USR_SRCADDR : Invalid user specified source-address [IPv6 address] idb [chars] in ipv6 dhcp relay CLI. Removing user specified invalid address from the CLI and auto-computing source with SAS.

| | |
|---------------------------|---|
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |
|---------------------------|---|

%DHCPV6R-3-INVALID_USR_LINKADDR : Invalid user specified link-address [IPv6 address] idb [chars] in ipv6 dhcp relay CLI. Removing user specified invalid address from the CLI.

| | |
|--------------------|--|
| Explanation | Invalid link-address has been provisioned in the ipv6 relay destination CLI. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |
|---------------------------|---|

DHCPV6S

%DHCPV6S-3-NOPACKET : Cannot setup or duplicate a DHCPv6 server socket packet

| | |
|--------------------|---|
| Explanation | Most likely a resource problem within the system. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |
|---------------------------|---|

%DHCPV6S-3-DBNOTLOADED : Binding database not loaded

| | |
|--------------------|---|
| Explanation | Fail to load the DHCPv6 binding database. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DHCPV6S-3-DBOPEN : Openning [chars]: [chars]

| | |
|--------------------|--|
| Explanation | Fail to open a DHCPv6 binding database file. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DHCPV6S-3-DBWRITE : Writing file: [chars]

| | |
|---------------------------|---|
| Explanation | Fail to write a DHCPv6 binding database file. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DHCPV6S-3-DBREAD : Reading file: [chars]

| | |
|---------------------------|---|
| Explanation | Fail to read a DHCPv6 binding database file. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

DHCP_SNOOPING**%DHCP_SNOOPING-3-DHCP_SNOOPING_INTERNAL_ERROR : DHCP Snooping internal error, [chars]**

| | |
|---------------------------|---|
| Explanation | A software sanity check failed in the DHCP Snooping process. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DHCP_SNOOPING-4-DHCP_SNOOPING_PVLAN_WARNING : DHCP Snooping configuration may not take effect on secondary vlan [dec]. [chars]

| | |
|---------------------------|--|
| Explanation | If private vlan feature is enabled, DHCP Snooping configuration on primary vlan will automatically propagate to all secondary vlans. |
| Recommended Action | No action is required. |

%DHCP_SNOOPING-4-IP_SOURCE_BINDING_PVLAN_WARNING : IP source filter may not take effect on secondary vlan [dec] where IP source binding is configured. [chars]

| | |
|--------------------|---|
| Explanation | If private vlan feature is enabled, IP source filter on primary vlan will automatically propagate to all secondary vlans. |
|--------------------|---|

%DHCP_SNOOPING-4-IP_SOURCE_BINDING_PVLAN_WARNING : IP source filter may not take effect on secondary vlan [dec] where IP source binding is configured. [chars]

Recommended Action No action is required.

%DHCP_SNOOPING-4-IP_SOURCE_BINDING_NON_EXISTING_VLAN_WARNING : IP source binding is configured on non existing vlan [dec].

Explanation IP source binding is configured on a non existing vlan.

Recommended Action Please make sure that the L2 VLAN is configured before configuring a DHCP Snooping Binding. If you see this message even though L2 VLAN is configured in the system, please contact Cisco Technical Assistance Center.

%DHCP_SNOOPING-4-DHCP_SNOOPING_ERRDISABLE_WARNING : DHCP Snooping received [dec] DHCP packets on interface [chars]

Explanation DHCP Snooping detected a DHCP packet rate limit violation on a particular interface. The interface will be error disabled.

Recommended Action No action is required.

%DHCP_SNOOPING-4-AGENT_OPERATION_FAILED : DHCP snooping binding transfer failed. [chars]

Explanation This message provides the reason of failure when a database transfer has failed.

Recommended Action No action is required.

%DHCP_SNOOPING-4-STANDBY_AGENT_OPERATION_FAILED : DHCP snooping binding transfer failed on the Standby Supervisor. [chars]

Explanation This message provides the reason of failure when a database transfer has failed on the Standby Supervisor.

Recommended Action No action is required.

%DHCP_SNOOPING-4-AGENT_OPERATION_FAILED_N : DHCP snooping binding transfer failed([dec]). [chars]

Explanation This message provides the reason of failure when a database transfer has failed. This log message is rate limited.

%DHCP_SNOOPING-4-AGENT_OPERATION_FAILED_N : DHCP snooping binding transfer failed([dec]). [chars]

Recommended Action No action is required.

%DHCP_SNOOPING-6-AGENT_OPERATION_SUCCEEDED : DHCP snooping database [chars] succeeded.

Explanation This message indicates that the given binding transfer has succeeded. This message is logged only once after some failure to indicate that the switch has recovered from failures.

Recommended Action No action is required.

%DHCP_SNOOPING-6-BINDING_COLLISION : Binding collision. [dec] bindings ignored

Explanation This message indicates that the given number of bindings from the database file have been ignored when the file is read. The bindings are ignored because the system has a binding for the given mac address and vlan combination by the time the switch read the ignored binding from the file.

Recommended Action No action is required.

%DHCP_SNOOPING-6-LEASE_EXPIRED : Lease Expired. [dec] bindings ignored.

Explanation This message indicates that the given number of bindings from the database file have been ignored when the file is read. The bindings are ignored because their lease has expired.

Recommended Action No action is required.

%DHCP_SNOOPING-6-INTERFACE_NOT_VALID : Interface not valid. [dec] bindings ignored.

Explanation This message indicates that the given number of bindings from the database file have been ignored when the file is read. The bindings are ignored because the interface indicated by the ignored binding either does not exist in the system or it's a router or dhcp snooping trusted port.

Recommended Action No action is required.

%DHCP_SNOOPING-6-VLAN_NOT_SUPPORTED : Vlan not supported. [dec] bindings ignored.

Explanation This message indicates that the given number of bindings from the database file have been ignored when the file is read. The bindings are ignored because the vlan indicated by the ignored binding no longer exists in the system.

Recommended Action No action is required.

%DHCP_SNOOPING-4-DHCP_SNOOPING_DATABASE_FLASH_WARNING : Saving DHCP snooping bindings to [chars] can fill up your device causing the writes of bindings to device, to fail.

Explanation Saving DHCP Snooping bindings to a flash file system such as bootflash or slot0 could cause the flash to fill up. Possible consequences include the long delay to regain console, write failures for database config, regular squeeze requirements, and reduced life of flash due to regular squeeze operations, etc.

Recommended Action Alternate destination locations for database agent include tftp, ftp, rcp, etc. Please see the help at command line for a complete list of options.

%DHCP_SNOOPING-6-PARSE_FAILURE : Parsing failed for [dec] bindings.

Explanation This message indicates that the given number of bindings from the database file have been ignored when the file is read. The bindings are ignored because of parsing failures.

Recommended Action No action is required.

%DHCP_SNOOPING-4-SSO_SYNC_ACK_ERROR : Error is encountered in processing acknowledgement for DHCP snooping binding sync, [chars]. ack message txn id: [hex]

Explanation This message indicates that there is an error in handling of the dhcp snooping binding sync acknowledgement. In most of these cases, the ack message is ignored.

Recommended Action No action is required.

%DHCP_SNOOPING-4-QUEUE_FULL : Fail to enqueue DHCP packet into processing queue: [chars], the queue is most likely full and packet will be dropped.

Explanation This message indicates that DHCP packets are coming into cpu at a much higher rate than DHCP snooping process can handle them. These unhandled DHCP packets will be dropped to prevent system from denial of service attack.

Recommended Action No action is required.

%DHCP_SNOOPING-4-NTP_NOT_RUNNING : NTP is not running; reloaded binding lease expiration times are incorrect.

Explanation If the DHCP snooping bindings are loaded by the DHCP snooping database agent and NTP is not running, then the calculated lease duration for the bindings will be incorrect.

Recommended Action Configure NTP on the switch to provide an accurate time and date for the system clock. Then disable and re-enable DHCP snooping to clear the bindings database.

%DHCP_SNOOPING-4-NTP_NOT_SYNC : NTP is not sync; reloaded binding lease expiration times are incorrect.

Explanation If the DHCP snooping bindings are loaded by the DHCP snooping database agent and NTP is not sync, then the calculated lease duration for the bindings will be incorrect.

Recommended Action Synchronize NTP on the switch to provide an accurate time and date for the system clock. Then disable and re-enable DHCP snooping to clear the bindings database.

%DHCP_SNOOPING-4-DHCP_SNOOPING_RATE_LIMIT_EXCEEDED : The interface [chars] is receiving more than the threshold set

Explanation This message indicates that a DHCP packets are coming into cpu at a much higher rate than the specified threshold.

Recommended Action No action is required.

%DHCP_SNOOPING-5-DHCP_SNOOPING_UNTRUSTED_PORT : [chars] drop message on untrusted port, message type: [chars], MAC sa: [enet]

Explanation DHCP Snooping discovers certain types of DHCP message not allowed on the untrusted interface, some host maybe trying to act as a DHCP server.

Recommended Action No action is required.

%DHCP_SNOOPING-5-DHCP_SNOOPING_NONZERO_GIADDR : [chars] drop message with non-zero giaddr or option82 value on untrusted port, message type: [chars], MAC sa: [enet]

Explanation DHCP Snooping discovers DHCP packet with certain option value not allowed on the untrusted port, some host maybe trying to act as a DHCP relay or server.

Recommended Action No action is required.

%DHCP_SNOOPING-5-DHCP_SNOOPING_FAKE_INTERFACE : [chars] drop message with mismatched source interface, the binding is not updated, message type: [chars], MAC sa: [enet]

Explanation DHCP Snooping discovers some host is trying to act as another host on the network and trying to carry out a DOS attack on that host.

Recommended Action No action is required.

%DHCP_SNOOPING-5-DHCP_SNOOPING_MATCH_MAC_FAIL : [chars] drop message because the chaddr doesn't match source mac, message type: [chars], chaddr: [enet], MAC sa: [enet]

Explanation DHCP Snooping enables match-source-mac validation and the check is failed. There maybe a malicious host trying to carry out a DOS attack on the DHCP server.

Recommended Action No action is required.

%DHCP_SNOOPING-4-OPTION82_INSERTION_FAIL : The interface [chars] is not able to insert opt82 into the packet because of insufficient space in the packet

Explanation This message indicates that a DHCP packet was not inserted with opt82 data due to insufficient space in the packet.

Recommended Action No action is required.

%DHCP_SNOOPING-4-INVALID_RELEASE_OR_DECLINE_PKT : The interface [chars] has received a DHCP Release/Decline packet with no existing binding entry for it

Explanation This message indicates that a DHCP Release/Decline packet was received with no corresponding binding entry.

Recommended Action No action is required.

DIALER

%DIALER-2-NOSWIDB : No software interface associated with hw interface [chars]

Explanation An internal software error occurred.

Recommended Action Call your technical support representative and report the error message, the system version, and the router configuration. (Use the show version command to obtain the software version.)

%DIALER-2-CIRCUITCOUNT : Dialer count 0 on [chars]

| | |
|---------------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
| Recommended Action | LOG_STD_SH_TECH_ACTION |

%DIALER-2-NULLPTR : Unexpected null pointer in [chars]

| | |
|---------------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
| Recommended Action | LOG_STD_SH_TECH_ACTION |

%DIALER-6-BIND : Interface [chars] bound to profile [chars]

| | |
|---------------------------|---|
| Explanation | This is a status message indicating that a dialer interface has been bound to a dialer profile. |
| Recommended Action | LOG_STD_NO_ACTION |

%DIALER-6-UNBIND : Interface [chars] unbound from profile [chars]

| | |
|---------------------------|---|
| Explanation | This is a status message indicating that a dialer interface has been unbound to a dialer profile. |
| Recommended Action | LOG_STD_NO_ACTION |

%DIALER-4-MTU_WARNING : Current MTU setting of [dec] on [chars] is being overwritten by setting of [dec] defined by [chars].

| | |
|---------------------------|--|
| Explanation | This is a warning message indicating that an interface setting is changed based on a dialer rotary group membership. |
| Recommended Action | LOG_STD_NO_ACTION |

%DIALER-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

| | |
|---------------------------|--|
| Explanation | Initialization of the specified subblock data structure could not be accomplished. |
| Recommended Action | LOG_STD_ACTION |

DIALER_LIST_PROXY**%DIALER_LIST_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]**

| | |
|---------------------------|---|
| Explanation | IPC handler initialization failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DIALER_LIST_PROXY-4-PROXY_IPC_INVALID_MSG : [hex]

| | |
|---------------------------|---|
| Explanation | Received an invalid IPC messages subtype. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DIALER_LIST_PROXY-3-PROXY_MEM_EXTEND_FAILED : IPC subtype: [dec]

| | |
|---------------------------|---|
| Explanation | add more memory failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DIALER_LIST_PROXY-3-PROXY_IPC_FAILED : [chars] failed to send ipc rc: [int]

| | |
|---------------------------|---|
| Explanation | send ipc failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DIALER_LIST_PROXY-4-PROXY_IPC_INVALID_MSG_LEN : [dec]:[dec] len [dec] flags [hex] source [dec]

| | |
|--------------------|-----------------------------|
| Explanation | Invalid IPC message length. |
|--------------------|-----------------------------|

%DIALER_LIST_PROXY-4-PROXY_IPC_INVALID_MSG_LEN : [dec];[dec] len [dec] flags [hex] source [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DIALER_LIST_PROXY-3-PROXY_ALLOC_PAK_FAILED : alloc pak failed, MSGDEF_LIMIT_MEDIUM

| | |
|---------------------------|---|
| Explanation | alloc pak failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

DIALPEER_DB

%DIALPEER_DB-3-ADDPEER_MEM_THRESHOLD : Addition of dial-peers limited by available memory

| | |
|---------------------------|--|
| Explanation | The available memory does not permit the addition of more dial-peers. |
| Recommended Action | Increase the processor memory in order to be able to add more dialpeers. |

%DIALPEER_DB-6-ADDPEER_WARNING : Addition of too many dial-peers may affect performance

| | |
|---------------------------|---|
| Explanation | The number of dial-peers is high. This will have an effect on the dial-peer lookup time, resulting in longer call setup time. |
| Recommended Action | Use the minimum number of dial-peers necessary for your numbering plan. |

%DIALPEER_DB-3-ADDPEER_PLATFORM_LIMIT : Addition of dial-peers limited by platform

| | |
|---------------------------|--|
| Explanation | This platform does not permit the addition of more dial-peers. |
| Recommended Action | Reduce the number of dial-peers in your numbering plan. |

%DIALPEER_DB-3-NOMAP : Could not load dnis-map [chars] url=[chars] errno=[dec]=[chars]

| | |
|--------------------|--------------------------------|
| Explanation | Could not read in the dnis-map |
|--------------------|--------------------------------|

%DIALPEER_DB-3-NOMAP : Could not load dnis-map [chars] url=[chars] errno=[dec]=[chars]

Recommended Action Check that map exists on the server, and is readable.

%DIALPEER_DB-3-DP_MALLOC_FAIL : Could not allocate memory in [chars] for tag [dec]

Explanation Ran out of memory
Recommended Action Observe why memory is exhausted

%DIALPEER_DB-6-FB_ENTRY_NOT_CREATED : Could not create probe for tag [dec]

Explanation Fallback cache full
Recommended Action Increase Fallback cache size

%DIALPEER_DB-3-DIALPEER_ACCOUNTING : Connections for dial-peer [dec] is negative. Resetting connections to 0.

Explanation Active Connections for dial-peer is negative.
Recommended Action Verify if dial-peers were removed with active calls associated to them and added back while the calls were still connected.

%DIALPEER_DB-3-NODEPMAP : Could not load e164-pattern-map [dec] url=[chars] errno=[dec]=[chars]

Explanation Could not read in the e164-pattern-map
Recommended Action Check that map exists on the server, and is readable.

%DIALPEER_DB-3-NOE164TRANSURL : Could not load e164-translation [dec] url=[chars] error=[chars]([dec])

Explanation Could not get the voice class e164-translation url data file
Recommended Action Check that url data file exists on the server, and is readable.

DLC**%DLC-3-BADPARAM : Function [chars]: value [hex] passed in parameter [chars]**

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DLC-2-NOMEMORY : no memory for [chars]

| | |
|---------------------------|---|
| Explanation | There was not enough free memory to complete the operation. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DLC-3-WPUTERR : unknown port type [hex]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DLC-3-INVPCP : Close Station, invalid P_CEP

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

DLINK through DPSS

- [DLINK](#)
- [DLSWC](#)

- DLSWMasterSlave
- DLSWP
- DMI
- DNET
- DOSFS
- DOT1X
- DOT1X_SWITCH
- DPSS

DLINK

%DLINK-3-BAD_QELEM : Bad queue elem - [hex]: flink [hex], blink [hex] , flink->blink [hex], blink->flink [hex]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DLINK-3-NULL_QELEM : Null queue elem

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

DLSWC

%DLSWC-3-NODLSW : [chars] [dec]

| | |
|---------------------------|---|
| Explanation | A data-link switching system error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DLSWC-3-IDMGR : [chars]

| | |
|---------------------------|---|
| Explanation | A data-link switching system error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DLSWC-3-NOPEER : [chars]

| | |
|---------------------------|---|
| Explanation | A data-link switching system error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DLSWC-3-BADPEEROP : bad peer op in peer_to_core [dec]

| | |
|---------------------------|---|
| Explanation | A data-link switching system error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DLSWC-3-BADSSPHDR : bad ssp hdr in proc ssp - [chars] = [hex]

| | |
|---------------------------|---|
| Explanation | A Silicon Switch Processor (SSP) header received from the remote peer contains errors in one of the fields. |
| Recommended Action | If the remote peer is a nonCisco router, confirm that it supports the DLSw RFC 1795 standard. |

%DLSWC-3-BADCLSIIND : [chars] Invalid indication [chars], [chars]

| | |
|--------------------|--|
| Explanation | A data-link switching system error occurred. |
|--------------------|--|

%DLSWC-3-BADCLSIIND : [chars] Invalid indication [chars], [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DLSWC-3-BADCLSIRET : [chars] Invalid ret code ([hex]) [chars], [chars]

Explanation A data-link switching system error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DLSWC-3-BADCLSI CNF : [chars] Invalid confirm [chars] [chars]

Explanation A data-link switching system error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DLSWC-3-BADCLSI : [chars] primitive not valid for dlsw [chars] [chars]

Explanation A data-link switching system error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DLSWC-3-BADCLSI SAP : [chars] Bad clsi SAP id = [hex] [chars]

Explanation A data-link switching system error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DLSWC-3-SENDSSP : SSP OP = [dec]([chars]) [chars] to [chars] [chars]

Explanation A Silicon Switch Program (SSP) frame was sent to the remote peer.**Recommended Action** No action is required.

%DLSWC-3-RECVSSP : SSP OP = [dec]([chars]) [chars] from [chars]

Explanation A Silicon Switch Program (SSP) frame was received from the remote peer.**Recommended Action** No action is required.

DLSWMasterSlave

%DLSWMasterSlave-3-DLSWMS : [chars]

Explanation DLSw Master-Slave Error**Recommended Action** No action is required.

%DLSWMasterSlave-3-DLSWMSCSM : [chars], [chars]

Explanation DLSw Master-Slave Error**Recommended Action** No action is required.

%DLSWMasterSlave-3-DLSWMSFSM : [chars]: [chars] from [enet]

Explanation DLSw Master-Slave Error**Recommended Action** No action is required.

%DLSWMasterSlave-3-DLSWMSTX : [chars]: [chars] to [enet]

Explanation DLSw Master-Slave Error**Recommended Action** No action is required.

%DLSWMasterSlave-3-DLSWMSDLX : [chars] [hex] from [enet]

Explanation DLSw Master-Slave Error**Recommended Action** No action is required.

%DLSWMasterSlave-3-DLSWMSSAP : [chars]: [chars]

Explanation DLSw Master-Slave Error**Recommended Action** No action is required.

%DLSWMasterSlave-3-DLSWMSRCV : [chars] from [enet]

Explanation DLSw Master-Slave Error**Recommended Action** No action is required.

DLSWP

%DLSWP-3-PGENERAL : [chars]

Explanation A general error condition was detected as described in the message text. This error should not cause any network problems unless it happens repeatedly.**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DLSWP-3-PNOMEM : No memory to [chars]

Explanation The router ran out of system memory for operation, as described in the message text. Most likely, the router image requires more system memory (RAM) than the router contains.**Recommended Action** Consult with your Cisco technical support representative about memory requirements for a specific image.

%DLSWP-3-PPASSIVE : passive open failed from [IP_address]([dec]) -> [dec]

Explanation The system does not have enough main memory (RAM) for TCP to allocate the data structures required to accept an incoming TCP connection. Most likely, the router image requires more system memory (RAM) than the router contains.

Recommended Action Consult with your Cisco technical support representative about memory requirements for a specific image.

%DLSWP-3-PBADVALUE : [chars]: invalid [chars] [dec]

Explanation A bad parameter value was passed to function chars1 - invalid parameter chars2 with value. This error should not cause any network problems unless it happens repeatedly.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DLSWP-3-PCAPMISMATCH : [chars]: [chars]

Explanation Priority keyword was used on one router but not on the other. The priority keyword is an option on the DLSW remote peer definition. If priority keyword is used on one router, it must be used on the other.

Recommended Action If you wish to use prioritization, use it on both routers.

%DLSWP-3-PLFCHANGE : [chars] [dec]; [chars]

Explanation The largest frame size configured in the DLSW remote peer definition is being changed because the MTU size configured on the interface, used by DLSW, is less than the configured value of the largest frame on DLSW remote peer definition. The largest frame size is being changed to that configured on the interface.

Recommended Action If you wish to use this largest frame size for DLSW, increase the MTU on the interface to a value larger than the configured largest frame size.

%DLSWP-3-PNOCookie : uninitialized peer [chars] from [IP_address]([dec]) to [IP_address]([dec])

Explanation DLSw received a packet on an uninitialized peer connection.

Recommended Action Verify configuration and DLSw peer status on both routers.

%DLSWP-5-PEERUPDOWN : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | A DLSW peer is either connected or disconnected |
| Recommended Action | None, informational message only. |

%DLSWP-3-PEERFAILURE : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | A DLSW peer failed: - keepalive failure, dlsw between cisco peers is sending a peer keepalive by default every 30 sec. After missing 3 consecutive keepalives the peer is taken down. - We are not promiscuous, Rej conn from peer a.b.c.d The local dlsw peer is not configured for promiscuous and we receive a request to open a dlsw peer for which we have no corresponding dlsw remote peer statement. - received tcp fini, dlsw peer code has received a tcp fini from the underlying tcp subsystem. To obey the tcp fini dlsw wring bring down the peer connection for which the tcp fini was received. |
| Recommended Action | - keepalive failure Check end to end connectivity between the DLSW peers - We are not promiscuous, Rej conn from peer a.b.c.d correct your configuration. - received tcp fini, Check the underlying tcp connection between the two dlsw peers. |

DMI

%DMI-3-MEM_UNAVAIL :

| | |
|---------------------------|---|
| Explanation | Insufficient system memory is available to perform the DMI action. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%DMI-5-CONFIG_I :

| | |
|---------------------------|--|
| Explanation | A change to the running configuration was performed using NETCONF or RESTCONF. |
| Recommended Action | Informational only. No action required. |

%DMI-5-SYNC_COMPLETE :

| | |
|---------------------------|--|
| Explanation | An external change (outside of NETCONF or RESTCONF) has been detected thus, the running-config has been sent to Confd to |
| Recommended Action | Informational only. No action required. |

%DMI-3-SYNC_FAIL :

Explanation An external change (outside of NETCONF or RESTCONF) has been detected. An attempt to send the running-config to ConfD to repopulate its data store has failed.

Recommended Action Force a full sync via the 'sync-from' RPC.

%DMI-5-SYNC_START :

Explanation An external change (outside of NETCONF or RESTCONF) has been detected thus, the running-config will be sent to ConfD to

Recommended Action Informational only. No action required.

%DMI-5-SYNC_NEEDED :

Explanation A configuration change that may trigger additional changes has been detected thus, the running-config will be sent to ConfD to

Recommended Action Informational only. No action required.

%DMI-3-DIFF_FAIL :

Explanation An operating system error occurred while performing a diff of two files and redirecting to a third file.

Recommended Action Check free space on device. Clean up if necessary. Also, reducing the value of max-diag-messages-saved in the cisco-ia model may help.

%DMI-3-SAVE_FAIL :

Explanation An operating system error occurred while opening or writing to a diagnostic file.

Recommended Action Check free space on device. Clean up if necessary. Also, reducing the value of max-diag-messages-saved in the cisco-ia model may help.

%DMI-3-CLI_ENGINE_WRITE_FAIL :

Explanation A CLI engine error occurred while send a command line to the network element's CLI parser

Recommended Action Enter the command line in question manually via the network element's console or vty. If successful, stop and restart netconf-yang and retry.

%DMI-3-INTERNAL_ERROR :

| | |
|---------------------------|--|
| Explanation | An unexpected internal error has occurred. |
| Recommended Action | Consult man page for impacted area to interpret the error code and string. |

%DMI-3-DIR_EXISTS :

| | |
|---------------------------|---|
| Explanation | A existing file is conflicting with a directory name. |
| Recommended Action | Remove or rename the offending file. |

%DMI-3-CDB_START_FAIL :

| | |
|---------------------------|---|
| Explanation | A Confd error has occurred attempting to open the DMI data store. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-3-CDB_SET_NAMESPACE_FAIL :

| | |
|---------------------------|---|
| Explanation | A Confd error has occurred attempting to set a specific model namespace for accessing the DMI data store. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-3-CDB_READ_FAIL :

| | |
|---------------------------|---|
| Explanation | A Confd error has occurred attempting to read a specific model path from the DMI data store. |
| Recommended Action | Download the model in question from the network element and verify the path exists. Update the model if needed. |

%DMI-3-CLI_ENGINE_CONNECT_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot connect to the network element in order to interact with its CLI parser. |
| Recommended Action | Check the CLI engine protocol settings. |

%DMI-2-CDB_MAN_SUB_FAIL :

| | |
|---------------------------|---|
| Explanation | A Confd error has occurred attempting to mark DMI as a mandatory subscriber |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-2-NESD_CREATE_FAIL :

| | |
|---------------------------|--|
| Explanation | Either an out-of-memory condition has been encountered, or the DMI CLI engine cannot connect to the network element. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-4-SUB_READ_FAIL :

| | |
|---------------------------|--|
| Explanation | A Confd error has occurred attempting to read the subscription socket. |
| Recommended Action | DMI will reset. No action necessary. |

%DMI-3-CDB_SYNC_FAIL :

| | |
|---------------------------|---|
| Explanation | A Confd error has occurred attempting to sync the subscription socket. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |

%DMI-3-CDB_ABORT_FAIL :

| | |
|---------------------------|---|
| Explanation | A Confd error has occurred attempting to abort a transaction. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |

%DMI-4-CONTROL_SOCKET_CLOSED :

| | |
|---------------------------|---|
| Explanation | The control socket connection to Confd has closed unexpectedly. |
| Recommended Action | DMI will reset. No action necessary. |

%DMI-2-CONTROL_SOCKET_ERROR :

| | |
|--------------------|---|
| Explanation | The control socket connection to Confd has returned an error. |
|--------------------|---|

%DMI-2-CONTROL_SOCKET_ERROR :

Recommended Action DMI will reset. No action necessary.

%DMI-2-WORKER_SOCKET_CLOSED :

Explanation The worker socket connection to Confd has closed unexpectedly.
Recommended Action DMI will reset. No action necessary.

%DMI-2-WORKER_SOCKET_ERROR :

Explanation The worker socket connection to Confd has returned an error.
Recommended Action DMI will reset. No action necessary.

%DMI-2-NOTIFICATION_READ_FAIL :

Explanation An attempt to read an event from the Confd notification socket failed.
Recommended Action DMI will reset. No action necessary.

%DMI-2-CLI_CHANNEL_CLOSED :

Explanation The CLI engine event channel to the network element closed unexpectedly.
Recommended Action DMI will reset. No action necessary.

%DMI-3-CLI_GEN_FAIL :

Explanation A Confd error has occurred when requesting the CLI change set for a transaction.
Recommended Action Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration.

%DMI-4-CLI_ROLLBACK_WARN :

Explanation A Confd induced CLI transaction was aborted and during the rollback CLIs, an error was returned

%DMI-4-CLI_ROLLBACK_WARN :

Recommended Action Confirm that the network element's running configuration is in the original state before the failed transaction

%DMI-4-NETCONF_TRACE_WARN :

Explanation An error occurred saving the Netconf trace information.

Recommended Action Please enable netconfTraceLog in Confd. Check for free file system space.

%DMI-4-CONFD_ROLLBACK_WARN :

Explanation An error occurred saving the Confd rollback information.

Recommended Action Please enable rollback in Confd. Check for free file system space.

%DMI-4-DIAG_WARN :

Explanation An error occurred saving DMI message diagnostics.

Recommended Action Check for free file system space.

%DMI-2-NESD_INIT_FAIL :

Explanation The nesd daemon failed to initialize.

Recommended Action Stop and restart netconf-yang.

%DMI-2-SD_INIT_FAIL :

Explanation The syncfd daemon failed to initialize.

Recommended Action Stop and restart netconf-yang.

%DMI-2-NESD_PREHOOK_INIT_FAIL :

Explanation The nesd daemon failed to initialize its component-specific add-ons.

Recommended Action Stop and restart netconf-yang.

%DMI-2-MAAPI_CONNECT_FAIL :

Explanation A Confd error has occurred attempting to connect via MAAPI socket.**Recommended Action** Stop and restart netconf-yang.

%DMI-3-MAAPI_SAVE_FAIL :

Explanation A Confd error has occurred attempting to save a model path via MAAPI.**Recommended Action** Stop and restart netconf-yang.

%DMI-3-MAAPI_START_USER_FAIL :

Explanation A Confd error has occurred attempting to start a user session via MAAPI.**Recommended Action** Stop and restart netconf-yang.

%DMI-3-MAAPI_START_TRANS_FAIL :

Explanation A Confd error has occurred attempting to start a transaction via MAAPI.**Recommended Action** via MAAPI. Stop and restart netconf-yang.

%DMI-3-MAAPI_DELETE_FAIL :

Explanation A Confd error has occurred attempting to delete a model path via MAAPI.**Recommended Action** Stop and restart netconf-yang.

%DMI-3-MAAPI_LOAD_FAIL :

Explanation A Confd error has occurred attempting to load commands to a model path via MAAPI.**Recommended Action** Stop and restart netconf-yang.

%DMI-3-MAAPI_LOAD_FILE_FAIL :

Explanation A ConfD error has occurred attempting to load commands from a file via MAAPI.

Recommended Action Stop and restart netconf-yang.

%DMI-3-MAAPI_APPLY_TRANS_FAIL :

Explanation A ConfD error has occurred attempting to apply a transaction via MAAPI.

Recommended Action via MAAPI. Stop and restart netconf-yang.

%DMI-3-MAAPI_FINISH_TRANS_FAIL :

Explanation A ConfD error has occurred attempting to finish a transaction via MAAPI.

Recommended Action via MAAPI. Stop and restart netconf-yang.

%DMI-3-MAAPI_LOCK_FAIL :

Explanation A ConfD error has occurred attempting to lock the DMI data store via MAAPI.

Recommended Action Stop and restart netconf-yang.

%DMI-3-MAAPI_UNLOCK_FAIL :

Explanation A ConfD error has occurred attempting to unlock the DMI data store via MAAPI.

Recommended Action Stop and restart netconf-yang.

%DMI-3-SYNC_LOCK_FAIL :

Explanation A ConfD error has occurred attempting to lock the DMI data store via MAAPI.

Recommended Action Stop and restart netconf-yang.

%DMI-3-SYNC_UNLOCK_FAIL :

Explanation A ConfD error has occurred attempting to unlock the DMI data store via MAAPI.

%DMI-3-SYNC_UNLOCK_FAIL :

Recommended Action Stop and restart netconf-yang.

%DMI-4-CLI_UNLOCK_FAIL :

Explanation An IOS parser error has occurred attempting to unlock the parser lock.
Recommended Action Retry NETCONF operation.

%DMI-4-CLI_LOCK_FAIL :

Explanation An IOS parser error has occurred attempting to obtain a configuration parser lock.
Recommended Action Retry NETCONF operation.

%DMI-2-MAAPI_WAIT_FAIL :

Explanation Confd did not initialize properly.
Recommended Action Back out any recent yang model updates. Stop and restart netconf-yang.

%DMI-2-CONFD_INIT_FAIL :

Explanation Confd did not initialize properly.
Recommended Action Back out any recent yang model updates. Stop and restart netconf-yang.

%DMI-2-CONFD_CONNECT_FAIL :

Explanation A DMI application cannot connect to Confd via a particular socket type.
Recommended Action Stop and restart netconf-yang.

%DMI-2-CONFD_SUB_FAIL :

Explanation A DMI application cannot subscribe for changes to a particular yang model.
Recommended Action Back out any recent model updates. Stop and restart netconf-yang.

%DMI-2-CONFD_SUB_DONE_FAIL :

| | |
|---------------------------|---|
| Explanation | A DMI application cannot complete subscriptions for changes to yang models. |
| Recommended Action | Back out any recent model updates. Stop and restart netconf-yang. |

%DMI-2-CONFD_CB_REG_FAIL :

| | |
|---------------------------|---|
| Explanation | A DMI application cannot register a particular callback with Confd. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-2-CONFD_CB_REG_DONE_FAIL :

| | |
|---------------------------|---|
| Explanation | A DMI application cannot complete callback registration with Confd. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-2-NES_RESET_FAIL :

| | |
|---------------------------|---|
| Explanation | The network element synchronizer daemon cannot reset in order to recover from a critical error. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-2-SD_RESET_FAIL :

| | |
|---------------------------|---|
| Explanation | The syncfd daemon cannot reset in order to recover from a critical error. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-2-CHG_VRF_FAIL :

| | |
|---------------------------|--|
| Explanation | The DMI application failed to set the correct virtual routing and forwarding network thus, it cannot communicate with Confd. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-3-CLI_ENGINE_EVENT_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot retrieve its CLI engine event in order to interact with the network element CLI parser. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |

%DMI-3-CLI_ENGINE_LOG_LVL_FAIL :

| | |
|---------------------------|--|
| Explanation | DMI cannot set its CLI engine logging level. |
| Recommended Action | Stop and restart DMI. |

%DMI-3-CLI_ENGINE_READ_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot read its CLI engine results in order to interact with the network element CLI parser. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |

%DMI-3-CLI_ENGINE_READ_EVENT_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot read its CLI engine event in order to interact with the network element CLI parser. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. If problem continues, stop and restart netconf-yang |

%DMI-3-CLI_ENGINE_POLL_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot read its CLI engine results in order to interact with the network element CLI parser. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. If problem continues, stop and restart netconf-yang |

%DMI-4-CLI_ENGINE_STATE_FAIL :

| | |
|--------------------|---------------------------------------|
| Explanation | DMI cannot read its CLI engine state. |
|--------------------|---------------------------------------|

%DMI-4-CLI_ENGINE_STATE_FAIL :

| | |
|---------------------------|---|
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. If problem continues, stop and restart netconf-yang |
|---------------------------|---|

%DMI-3-CLI_ENGINE_VTY_CREATE_FAIL :

| | |
|---------------------------|---|
| Explanation | The DMI CLI engine cannot create a VTY instance. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%DMI-3-CLI_ENGINE_VTY_OPEN_FAIL :

| | |
|---------------------------|---|
| Explanation | The DMI CLI engine cannot open a VTY. |
| Recommended Action | Free up available VTY resources by closing unused VTYS. Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. If problem continues, stop and restart netconf-yang |

%DMI-4-CLI_ENGINE_RC_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot read CLI engine return code for the particular command. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. If problem continues, stop and restart netconf-yang |

%DMI-3-MODEL_RESTORE_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI failed to restore the model '%s' from the network element's running configuration to the DMI data store. |
| Recommended Action | Check the netconf-yang section of the network element's running configuration. If populated with non-default values, stop and restart netconf-yang. If problem continues, restore the model's configuration in question via Netconf |

%DMI-3-VTY_NUM_FAIL :

| | |
|---------------------------|--|
| Explanation | DMI must keep track of its tty number it uses to send command lines to the network element's parser in order to avoid triggering its own sync events |
| Recommended Action | Check that the 'show users line' command line is working |

%DMI-3-CLI_ENGINE_VTY_TIMEOUT_FAIL :

Explanation DMI disables the VTY timeout for the network element synchronizer's VTY connection to ensure its number cannot be silently claimed by other VTY sessions.

Recommended Action None required

%DMI-3-CLI_ENGINE_RECONNECT_FAIL :

Explanation The CLI engine has lost its connection to the network element and attempted to reconnect with an error occurred.

Recommended Action Stop and restart netconf-yang.

%DMI-4-CLI_ENGINE_ENABLE_FAIL :

Explanation DMI cannot enter privileged mode when communicating with the network element's CLI parser.

Recommended Action Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. Check AAA settings for the Netconf/Restconf user account.

%DMI-3-CLI_ENGINE_CONNECT_LOSS :

Explanation DMI has lost connection to the network element.

Recommended Action No action necessary.

%DMI-3-SYNC_CLI_FILTER_CREAT_FAIL :

Explanation DMI cannot create a CLI filter to monitor for external CLI changes.

Recommended Action Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration.

%DMI-3-SYNC_CLI_FILTER_MODE_FAIL :

Explanation DMI cannot set the mode for its CLI filter to monitor for external CLI changes.

Recommended Action Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration.

%DMI-3-SYNC_CLI_FILTER_ADD_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot add a CLI filter to monitor for external CLI changes. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |

%DMI-3-SYNC_SYSLOG_FILTER_CREAT_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot create a syslog filter to monitor for external CLI changes. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |

%DMI-3-SYNC_SYSLOG_FILTER_ADD_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot add a syslog filter to monitor for external CLI changes. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |

%DMI-3-SYNC_MODULE_CHECK_ADD_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot add a module up check to monitor for module up status. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |

%DMI-3-SYNC_OIR_FILTER_CREAT_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot create an OIR filter to monitor for OIR induced configuration changes. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |

%DMI-3-SYNC_OIR_FILTER_ADD_FAIL :

| | |
|---------------------------|---|
| Explanation | DMI cannot add an OIR filter to monitor for OIR induced configuration changes. |
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |

%DMI-3-INIT_SYNC_FAIL :

| | |
|--------------------|---|
| Explanation | DMI failed to synchronize the network element's running configuration with the DMI data store upon DMI startup. |
|--------------------|---|

%DMI-3-INIT_SYNC_FAIL :

| | |
|---------------------------|---|
| Recommended Action | Perform a manual sync operation to ensure the DMI data store is in sync with the network element's running configuration. |
|---------------------------|---|

%DMI-3-LOAD_SCHEMAS_FAIL :

| | |
|---------------------------|--|
| Explanation | DMI failed to load Confd schemas for yang model namespaces. |
| Recommended Action | Back out any recent yang model updates. Stop and restart netconf-yang. |

%DMI-3-VTY_SERVER_CREAT_FAIL :

| | |
|---------------------------|--|
| Explanation | Failed to create VTY server utility instance for DMI operational data use. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-3-VTY_SERVER_START_FAIL :

| | |
|---------------------------|---|
| Explanation | Failed to start VTY server utility instance for DMI operational data use. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-2-VTY_SERVER_RESET_FAIL :

| | |
|---------------------------|---|
| Explanation | Failed to reset VTY server utility in order to recover from critical error. |
| Recommended Action | Stop and restart netconf-yang. |

%DMI-3-INVALID_PRESERVE_PATH :

| | |
|---------------------------|--|
| Explanation | A non-existent XPath has been specified to be preserved during complete syncs. |
| Recommended Action | Remove the offending path from the /native/cisco-ia/preserve-ned-path list. |

%DMI-7-GEN_DEBUG :

| | |
|---------------------------|--|
| Explanation | A debug message for syslog consumption. For troubleshooting without btrace |
| Recommended Action | Not applicable |

%DMI-2-NETCONF_SSH_CRITICAL :

| | |
|---------------------------|---|
| Explanation | A critical message from the NETCONF SSH daemon. |
| Recommended Action | Not applicable |

%DMI-3-NETCONF_SSH_ERROR :

| | |
|---------------------------|---|
| Explanation | An error message from the NETCONF SSH daemon. |
| Recommended Action | Not applicable |

%DMI-6-NETCONF_SSH_INFO :

| | |
|---------------------------|---|
| Explanation | An informational message from the NETCONF SSH daemon. |
| Recommended Action | Not applicable |

%DMI-3-INVALID_REG_EXP :

| | |
|---------------------------|--|
| Explanation | An invalid regular expression has been specified which will not compile. |
| Recommended Action | Remove the offending regular expression from the specified model or via o CLI. |

%DMI-3-EDIT_REJECTED :

| | |
|---------------------------|--|
| Explanation | A NETCONF running datastore edit request occurred simultaneously with a database synchronization operation. Thus, the request has been rejected. |
| Recommended Action | Retry the NETCONF edit again later. |

%DMI-5-AUTH_PASSED :

| | |
|---------------------------|---|
| Explanation | A user authenticated successfully and was authorized for a service. |
| Recommended Action | No action is required. |

%DMI-5-AUTHENTICATION_FAILED :

Explanation A user failed to authenticate.**Recommended Action** No action is required.

%DMI-5-AUTHORIZATION_FAILED :

Explanation A user was not authorized for the requested service.**Recommended Action** No action is required.

%DMI-3-AUTH_TIMED_OUT :

Explanation A AAA request timed out.**Recommended Action** Check connectivity to the configured AAA server.

%DMI-3-MAAPI_KILL_SESSION_FAIL :

Explanation A parser lock timeout has occurred, and DMI attempted to kill the session holding the global lock, but failed.**Recommended Action** Kill the NETCONF user session holding the global lock manually.

%DMI-3-NETCONF_KILL_SESSION :

Explanation A parser lock timeout has occurred, and DMI has killed the corresponding NETCONF session.**Recommended Action** Establish a new NETCONF session. Adjust your application to hold global locks for a shorter interval -- seconds, not minutes.

%DMI-5-NACM_INIT :

Explanation The running-config under the /nacm tree has been set to its initial configuration.**Recommended Action** No action is required.

%DMI-5-INITIALIZED :

| | |
|---------------------------|---|
| Explanation | process has initialized. |
| Recommended Action | Informational only. No action required. |

%DMI-5-ACTIVE :

| | |
|---------------------------|---|
| Explanation | process is in steady state. |
| Recommended Action | Informational only. No action required. |

%DMI-5-RESET :

| | |
|---------------------------|---|
| Explanation | process internal state reset. |
| Recommended Action | Informational only. No action required. |

%DMI-4-CLI_LOCK_OVERRIDE :

| | |
|---------------------------|---|
| Explanation | An IOS parser lock has been cleared to avoid conflict with NETCONF session. |
| Recommended Action | Retry CLI operation after NETCONF session completes. |

DNET

%DNET-4-MAPCON : Map entry [dec].[dec] conflicts with adjacency to [dec].[dec]

| | |
|---------------------------|--|
| Explanation | Your DECnet configuration is incorrect. A host that is specified as nonlocal is present on your local network. |
| Recommended Action | Correct the configuration. Call your technical support representative if you need assistance. |

%DNET-3-HEARSELF : Hello type [hex] for my address from [dec].[dec] via [chars]

| | |
|---------------------------|---|
| Explanation | The system is receiving its own DECnet packets. Either a serial line is looped back or another host with the same DECnet address is already present on the LAN. |
| Recommended Action | Check the serial lines (if present) and the DECnet configuration. |

%DNET-3-NOMEMORY : Insufficient memory for DECnet accounting entry

Explanation The traffic information for a particular pair of DECnet nodes cannot be recorded due to a low memory condition.

Recommended Action LOG_STD_REDUCE_ACTION

%DNET-4-DUPENTRY : Duplicate DECnet Accounting List Entry for nodes [dec],[dec] - [dec],[dec]

Explanation A synchronization problem has occurred whilst a new transit DECnet Accounting List Entry was being added and a duplicate entry has been found.

Recommended Action LOG_STD_SH_CMD_ACTION(show decnet accounting)

DOSFS

%DOSFS-5-DIBERR : [chars] [chars]

Explanation The system cannot boot a image from the Flash disk because the Device Information Block is different. The Flash disk can be read by the router, but will require formatting by the router before an image can be booted from it.

Recommended Action Follow any instructions provided in the error message. Before storing a image in the Flash disk and trying to boot from this device, enter the format command to format the flash disk from the router. Then copy the desired image to the Flash disk and then boot from this device.

%DOSFS-3-RESETEERR : [chars] [chars]

Explanation disk could not be reset while the system is initiated reload. This will cause a transient disk error, disk timeout error, when the ROMMON initialization code tries to reads the DIB. This is a transient error and the system will be able to access the disk and continue normal operation.

Recommended Action No action is required.

%DOSFS-5-DFS_CLOSE_ERR : Error during close of the file [chars]. [chars]

Explanation An error occurred during a file close operation.

Recommended Action Enter the **fsck filesystem prefix:** command to check and attempt to repair the disk. If this does not fix the problem, format the disk.

%DOSFS-4-DFS_FSCK_ERR : Error while running fsck on the file [chars].

| | |
|---------------------------|---|
| Explanation | Fsck is running in a loop while walking through the cluster chain of a file and has aborted. |
| Recommended Action | Report this occurrence to Engineering. Use Topic to search for a similar DDTs. If you find none, write a DDTs for this problem. |

DOT1X

%DOT1X-5-SUCCESS :

| | |
|---------------------------|--------------------------------------|
| Explanation | Dot1x authentication was successful. |
| Recommended Action | No action is required. |

%DOT1X-5-FAIL :

| | |
|---------------------------|--|
| Explanation | Dot1x authentication was unsuccessful. |
| Recommended Action | No action is required. |

%DOT1X-5-RESULT_OVERRIDE :

| | |
|---------------------------|--------------------------------------|
| Explanation | Authentication result was overridden |
| Recommended Action | No action is required. |

%DOT1X-3-PROC_START_ERR :

| | |
|---------------------------|--|
| Explanation | The system failed to create the Dot1x process. |
| Recommended Action | Restart Dot1x process by entering <code>dot1x system-auth-control</code> command. If this message recurs, Reload the device. |

%DOT1X-3-UNKN_ERR :

| | |
|---------------------------|---|
| Explanation | The Dot1x process cannot operate due to an internal system error. |
| Recommended Action | Reload the device/process |

%DOT1X-4-MEM_UNAVAIL :

| | |
|---------------------------|---|
| Explanation | Insufficient system memory is available to perform the Dot1x Authentication. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%DOT1X-4-INFO_EAPOL_PING_RESPONSE :

| | |
|---------------------------|---|
| Explanation | An EAPOL ping was sent out on this port to determine 802.1x readiness of the client attached. An EAPOL response has been received by the device such as a PC. |
| Recommended Action | No action required. |

%DOT1X-5-IGNORE_LARGER_EAPOL :

| | |
|---------------------------|---|
| Explanation | Targetted EAPOL packet size is larger than mtu size of the port on which client is connected and hence ignoring the packet to be sent out |
| Recommended Action | Configure AAA server to fragement eap-method data so that EAPOL size is smaller than interface MTU size |

DOT1X_SWITCH**%DOT1X_SWITCH-4-PROC_START_ERR : Unable to start dot1x switch process.**

| | |
|---------------------------|---|
| Explanation | The system failed to create the Dot1x switch process. |
| Recommended Action | Reload the device |

%DOT1X_SWITCH-5-ERR_VLAN_NOT_FOUND : Attempt to assign non-existent or shutdown VLAN [chars] to 802.1x port [chars] AuditSessionID [chars]

| | |
|---------------------------|---|
| Explanation | An attempt was made to assign a VLAN to an 802.1x port, but the VLAN was not found in the VTP database. |
| Recommended Action | Make sure the VLAN exists and is not shutdown or use another VLAN. |

%DOT1X_SWITCH-5-ERR_VLAN_RSPAN : Attempt to assign RSPAN VLAN [chars] to 802.1x port [chars]. 802.1x is incompatible with RSPAN AuditSessionID [chars]

| | |
|--------------------|--|
| Explanation | An attempt was made to assign a Remote SPAN VLAN to an 802.1x port. Remote SPAN should not be enabled on a VLAN in which ports are configured with 802.1x enabled. |
|--------------------|--|

%DOT1X_SWITCH-5-ERR_VLAN_RSPAN : Attempt to assign RSPAN VLAN [chars] to 802.1x port [chars]. 802.1x is incompatible with RSPAN AuditSessionID [chars]

Recommended Action Either disable Remote SPAN configuration on the VLAN OR disable 802.1x on all the ports in this VLAN.

%DOT1X_SWITCH-5-ERR_VLAN_EQ_VVLAN : Data VLAN [chars] on port [chars] cannot be equivalent to the Voice VLAN AuditSessionID [chars]

Explanation An attempt was made to assign a data VLAN to an 802.1x port that is the same as the voice VLAN.

Recommended Action Change either the Voice VLAN or the access/802.1x assigned VLAN on the interface so they are not equal anymore. This will cause the authentication to proceed normally on the next retry.

%DOT1X_SWITCH-5-ERR_VLAN_INTERNAL : Attempt to assign internal VLAN [chars] to 802.1x port [chars] AuditSessionID [chars]

Explanation An attempt was made to assign an invalid VLAN to an 802.1x port. The VLAN specified is used internally and cannot be assigned to this port.

Recommended Action Update the configuration not to use this VLAN.

%DOT1X_SWITCH-5-ERR_VLAN_RESERVED : Attempt to assign reserved VLAN [chars] to 802.1x port [chars] AuditSessionID [chars]

Explanation An attempt was made to assign an invalid VLAN to an 802.1x port. The VLAN specified is a reserved VLAN and cannot be assigned to this port.

Recommended Action Update the configuration not to use this VLAN.

%DOT1X_SWITCH-5-ERR_VLAN_INVALID : Attempt to assign invalid VLAN [chars] to 802.1x port [chars] AuditSessionID [chars]

Explanation An attempt was made to assign an invalid VLAN to an 802.1x port. The VLAN specified is out of range and cannot be assigned to this port.

Recommended Action Update the configuration to use a valid VLAN.

%DOT1X_SWITCH-5-ERR_INVALID_SEC_VLAN : Attempt to assign invalid secondary VLAN [chars] to PVLAN host 802.1x port [chars] AuditSessionID [chars]

| | |
|---------------------------|--|
| Explanation | An attempt was made to assign a non-secondary VLAN to a PVLAN host 802.1x port. |
| Recommended Action | Change the mode of the port so that it is no longer a PVLAN host port or use a valid secondary VLAN. |

%DOT1X_SWITCH-5-ERR_INVALID_PRIMARY_VLAN : Attempt to assign primary VLAN [chars] to 802.1x port [chars] AuditSessionID [chars]

| | |
|---------------------------|---|
| Explanation | An attempt was made to assign a primary VLAN to an 802.1x port, which is not allowed. |
| Recommended Action | Update the configuration to use a different VLAN. |

%DOT1X_SWITCH-5-ERR_PRIMARY_VLAN_NOT_FOUND : Attempt to assign VLAN [chars], whose primary VLAN does not exist or is shutdown, to 802.1x port [chars] AuditSessionID [chars]

| | |
|---------------------------|---|
| Explanation | An attempt was made to assign a private VLAN whose primary VLAN does not exist or is shutdown. |
| Recommended Action | Make sure the primary VLAN exists and is not shutdown. Also verify that the private VLAN is associated with a primary VLAN. |

%DOT1X_SWITCH-5-ERR_VLAN_ON_ROUTED_PORT : Attempt to assign VLAN [chars] to routed 802.1x port [chars] AuditSessionID [chars]

| | |
|---------------------------|--|
| Explanation | An attempt was made to assign a VLAN to a routed 802.1x port, which is not allowed. |
| Recommended Action | Change the mode of the port so that it is no longer a routed port or change the configuration so that no VLAN is assigned. |

%DOT1X_SWITCH-5-ERR_VLAN_PROMISC_PORT : Attempt to assign VLAN [chars] to promiscuous 802.1x port [chars] AuditSessionID [chars]

| | |
|---------------------------|---|
| Explanation | An attempt was made to assign a VLAN to a promiscuous 802.1x port, which is not allowed. |
| Recommended Action | Change the mode of the port so that it is no longer a promiscuous port or change the configuration so that no VLAN is assigned. |

%DOT1X_SWITCH-5-ERR_SEC_VLAN_INVALID : Attempt to assign secondary VLAN [chars] to non-PVLAN host 802.1x port [chars] AuditSessionID [chars]

Explanation An attempt was made to assign a secondary VLAN to a port that is not a PVLAN host port, which is not allowed.

Recommended Action Change the mode of the port so that it is configured as a PVLAN host port or use a different VLAN that is not configured as a secondary VLAN.

%DOT1X_SWITCH-5-ERR_SPAN_DST_PORT : Attempt to assign VLAN [chars] to 802.1x port [chars], which is configured as a SPAN destination AuditSessionID [chars]

Explanation An attempt was made to assign a VLAN to an 802.1x port which is configured as a SPAN destination port

Recommended Action Change the SPAN configuration so that the port is no longer a SPAN destination port or change the configuration so that no VLAN is assigned.

%DOT1X_SWITCH-5-ERR_ADDING_ADDRESS : Unable to add address [enet] on [chars] AuditSessionID [chars]

Explanation The authenticated host's address could not be added. This is likely because either the TCAM is full or the address exists as a secure address on another port.

Recommended Action If the TCAM is full, clear some dynamic addresses to make room for the host's address. If the host's address is secured on another port, manually remove it from that port.

%DOT1X_SWITCH-5-ERR_VLAN_EQ_MDA_INACTIVE : Multi-Domain Authentication cannot activate because Data and Voice VLANs are the same on port AuditSessionID [chars]

Explanation Multi-Domain Authentication host mode cannot activate if the configured Data VLAN on a port is the same as Voice VLAN.

Recommended Action Change either the Voice VLAN or the access VLAN on the interface so they are not equal anymore. This will cause Multi-Domain authentication to activate.

DPSS

%DPSS-3-MEM_INIT_FAILED : Allocation of [chars] memory failed for DPSS

Explanation DPSS Initialization of channel pool failed.

Recommended Action LOG_STD_ACTION

%DPSS-3-PKT_REPLICA_INIT_FAILED : Register to Generic Packet Replication failed for DPSS

| | |
|---------------------------|--|
| Explanation | DPSS Initialization of packet replication registration failed. |
| Recommended Action | LOG_STD_ACTION |

%DPSS-3-DPSS_INIT_FAILED : DPSS [chars] Register failed

| | |
|---------------------------|---|
| Explanation | DPSS Initialization of registration failed. |
| Recommended Action | LOG_STD_ACTION |

%DPSS-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]

| | |
|---------------------------|--|
| Explanation | For a request from upper DPSS software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%DPSS-3-IPC_NORES : No space for the IPC reply, size [int]

| | |
|---------------------------|--|
| Explanation | For a request from upper DPSS software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%DPSS-2-IPC_INIT : IPC message handler registration failure, rc [int]

| | |
|---------------------------|---|
| Explanation | Registering an IPC message handler for the DPSS feature failed. This will cause the feature to not function. |
| Recommended Action | This is normally a software issue. The consequences are that the DPSS feature will not function. LOG_STD_ACTION |

DRIP through DSPRM

- [DRIP](#)

- DRP
- DS0_DUMP
- DSA_PROXY
- DSM
- DSMP
- DSP
- DSPDUMP
- DSPFARM
- DSPRM

DRIP

%DRIP-3-DRIPFAIL : DRIP: Assertion failed: [chars]

| | |
|---------------------------|--|
| Explanation | An internal software error has occurred. |
| Recommended Action | LOG_STD_ACTION |

%DRIP-6-DRIP_CONFLICT : DRIP conflict with CRF [dec].

| | |
|---------------------------|--|
| Explanation | A DRIP conflict has occurred. The virtual ring or pseudo ring's CRF is being re-used in the network. |
| Recommended Action | Make sure that the CRF vlanid of the virtual ring and the pseudo ring is unique in the network. |

DRP

%DRP-3-SUBNETTED : unable to determine metric for [IP_address], [IP_address] subnetted

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DRP-7-NOROUTE : no route for destination [IP_address]

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DRP-3-NOWRITE : unable to send response to [IP_address]:[dec]

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DRP-3-MULTICOMMAND : multiple DRP commands encountered

| | |
|---------------------------|---|
| Explanation | Multiple DRP commands were found in a single DRP packet. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DRP-3-NOSOCKET : Unable to open socket

| | |
|---------------------------|---|
| Explanation | The requested operation could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

DS0_DUMP

%DS0_DUMP-3-MALLOC_PROC_MEM : Process memory allocation failed for PCM capture: size [hex].

| | |
|---------------------------|--|
| Explanation | The free process memory in the system is not enough for the PCM capture session. |
| Recommended Action | Refer to the user guide for the estimation of process memory needed for PCM capture. Do 'show memory' to make sure there is enough memory before PCM capture starts. |

%DS0_DUMP-3-INIT_FAIL : DS0 PCM Tracer is not initialized.

| | |
|---------------------------|---|
| Explanation | DS0 dump process can't be initialized. |
| Recommended Action | Make sure there is enough memory in the system and IOS is properly installed. |

%DS0_DUMP-3-PCM_TRACER_RUNNING : A previous session of PCM capture is in progress.

| | |
|---------------------------|--|
| Explanation | Can't start new PCM capture session since there is one going on now. |
| Recommended Action | Make sure there is no other PCM capture session going on before start the new capture. |

%DS0_DUMP-3-PCM_TRACE_NOT_SUPPORTED : PCM Trace/ds0 dump is not supported on slot [int].

Explanation Can't execute this command on the slot number specified.

Recommended Action Refer to the user guide for which slot ds0 dump is supported on.

%DS0_DUMP-3-PCM_TRACE_START_FAILED : PCM capture start failed.

Explanation Failed to start the ds0 dump in the TDM driver.

Recommended Action Make sure there is no hardware defect and there is no other ds0 dump/test tdm dump session going on.

%DS0_DUMP-6-PCM_TRACE_STARTED : PCM capture started.

Explanation

Recommended Action

%DS0_DUMP-6-PCM_TRACE_RSP_STARTED : module start PCM capture for [dec]/[dec]/[dec]/[dec]

Explanation

Recommended Action

%DS0_DUMP-6-PCM_TRACE_RSP_STOPPED : module stop or complete PCM capture for [dec]/[dec]/[dec]/[dec]

Explanation

Recommended Action

%DS0_DUMP-6-PCM_TRACE_RSP_ERROR : module fail and terminate the pcm capture for [dec]/[dec]/[dec]/[dec]

Explanation

Recommended Action

%DS0_DUMP-6-PCM_TRACE_RSP_UNKNOWN : module send unkonwn pcm capture response [dec] for [dec]/[dec]/[dec]/[dec]

Explanation

**Recommended
Action**

%DS0_DUMP-6-PCM_TRACE_STOPPING : stopping PCM capture

Explanation

**Recommended
Action**

%DS0_DUMP-6-PCM_TRACE_STOP_FAILED : failed to stop PCM capture

Explanation

**Recommended
Action**

%DS0_DUMP-6-PCM_TRACER_NOT_RUNNING : no PCM capture is in progress.

Explanation

**Recommended
Action**

DSA_PROXY

%DSA_PROXY-3-PROXY_MEM_EXTEND_FAILED :

Explanation Extending memory failed.

**Recommended
Action** LOG_STD_ACTION

%DSA_PROXY-4-PROXY_IPC_INVALID_MSG_LEN : [dec]:[dec] len [dec] flags [hex] source [dec]

Explanation Invalid IPC message length.

**Recommended
Action** LOG_STD_ACTION

%DSA_PROXY-3-PROXY_IPC_INVALID_PARAM :

| | |
|---------------------------|-------------------------|
| Explanation | IPC Invalid parameters. |
| Recommended Action | LOG_STD_ACTION |

%DSA_PROXY-4-PROXY_IPC_INVALID_MSG :

| | |
|---------------------------|---------------------|
| Explanation | Invalid IPC message |
| Recommended Action | LOG_STD_ACTION |

%DSA_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]

| | |
|---------------------------|------------------------------------|
| Explanation | IPC handler initialization failed. |
| Recommended Action | LOG_STD_ACTION |

%DSA_PROXY-3-PROXY_DEBUG_REG_FAILED :

| | |
|---------------------------|--|
| Explanation | DSA Conditional Debugging registration failed. |
| Recommended Action | LOG_STD_ACTION |

%DSA_PROXY-3-PROXY_IPC_SEND_CLEAR_FAILED : [dec]

| | |
|---------------------------|----------------------------|
| Explanation | DSA clear ip cache failed. |
| Recommended Action | LOG_STD_ACTION |

%DSA_PROXY-3-PROXY_IPC_SEND_UNINIT_FAILED : [dec]

| | |
|---------------------------|-----------------------------|
| Explanation | DSA Send UNINIT IPC failed. |
| Recommended Action | LOG_STD_ACTION |

%DSA_PROXY-3-PROXY_IPC_SEND_INIT_FAILED : [dec]

| | |
|--------------------|---------------------------------|
| Explanation | Send initialization IPC failed. |
|--------------------|---------------------------------|

%DSA_PROXY-3-PROXY_IPC_SEND_INIT_FAILED : [dec]

Recommended Action LOG_STD_ACTION

%DSA_PROXY-3-PROXY_UNINIT_FAILED :

Explanation UNINIT cleanup failed.
Recommended Action LOG_STD_ACTION

%DSA_PROXY-3-PROXY_IPC_ALLOC_FAILED :

Explanation Generating IPC failed.
Recommended Action LOG_STD_ACTION

%DSA_PROXY-3-PROXY_CHUNK_CLEAR_FAILED :

Explanation Chunk clear failed.
Recommended Action LOG_STD_ACTION

%DSA_PROXY-3-PROXY_CHUNK_CREATION_FAILED :

Explanation Chunk creation failed.
Recommended Action LOG_STD_ACTION

%DSA_PROXY-3-PROXY_LOW_MEM_REQ_FAILED :

Explanation Send low mem IPC failed.
Recommended Action LOG_STD_ACTION

%DSA_PROXY-3-PROXY_RETURN_MEM_FAILED :

Explanation return mem IPC failed.
Recommended Action LOG_STD_ACTION

%DSA_PROXY-3-PROXY_NO_IP_POOL_MEM :

Explanation IP Cache pool is not allocated.**Recommended Action** LOG_STD_ACTION

%DSA_PROXY-3-PROXY_TBL_INIT_FAILED :

Explanation IP Cache table init failed.**Recommended Action** LOG_STD_ACTION

%DSA_PROXY-3-PROXY_IP_CLEAR_FAILED : [dec]

Explanation IP Cache clear failed.**Recommended Action** LOG_STD_ACTION

%DSA_PROXY-3-PROXY_IP_CLEAR_TO_FAILED : [dec] [dec]

Explanation IP Cache clear failed.**Recommended Action** LOG_STD_ACTION

DSM

%DSM-6-SESSION_DATABASE_FAILED : Cannot create DSM session database

Explanation Failed to create DSM session.**Recommended Action** Check the size of free memory to make sure there is enough memory.

%DSM-3-MSGSNDFAIL : channel:[chars] DSP ID:[hex] Message ID:[hex]

Explanation A message could not be sent to the DSP. The session continued but may have experienced problems.**Recommended Action** Contact your technical support representative, include the full text of the error message.

%DSM-3-NOEVENT : no free event structure available from [chars] for DSM message

| | |
|---------------------------|---|
| Explanation | There were no event structures remaining in the system pools to alert the router of a voice or signaling event. |
| Recommended Action | Contact your technical support representative, include the full text of the error message. |

%DSM-3-DSPALARM : channel [chars], DSP ID [hex]: status=[hex] message=[hex] text=[chars]

| | |
|---------------------------|--|
| Explanation | The DSP reported a fatal error. All sessions on the DSP were dropped and a DSP reload was attempted. |
| Recommended Action | Contact your technical support representative, include the full text of the error message. |

%DSM-3-DSP_TIMEOUT : DSP timeout on channel [chars], event [hex]: DSP ID=[hex]: [chars]

| | |
|---------------------------|--|
| Explanation | Timeout on DSP response. |
| Recommended Action | The DSP has been automatically reset. If problem persists, contact your technical support representative |

%DSM-3-INTERNAL : Internal Error : [chars]

| | |
|---------------------------|---|
| Explanation | DSM Internal error |
| Recommended Action | Contact your technical support representative |

DSMP**%DSMP-6-SESSION_DATABASE_FAILED : Cannot create DSMP session database**

| | |
|---------------------------|--|
| Explanation | Failed to create DSMP session. |
| Recommended Action | Check the size of free memory to make sure there is enough memory. |

%DSMP-3-MSGSNDFAIL : channel:[chars] DSP ID:[hex] Message ID:[hex]

| | |
|---------------------------|--|
| Explanation | A message could not be sent to the DSP. The session continued but may have experienced problems. |
| Recommended Action | Contact your technical support representative, include the full text of the error message. |

%DSMP-3-NOEVENT : no free event structure available from [chars] for DSMP message

Explanation There were no event structures remaining in the system pools to alert the router of a voice or signaling event.

Recommended Action Contact your technical support representative, include the full text of the error message.

%DSMP-3-DSPALARM : Alarm on DSP [chars]: status=[hex] message=[hex] text=[chars]

Explanation The DSP reported a fatal error. All sessions on the DSP were dropped and a DSP reload was attempted.

Recommended Action Contact your technical support representative, include the full text of the error message.

%DSMP-3-DSP_TIMEOUT : DSP timeout on DSP [chars]: event [hex], [chars]

Explanation Timeout on DSP response.

Recommended Action The DSP has been automatically reset. If problem persists, contact your technical support representative

%DSMP-3-INTERNAL : Internal Error : [chars]

Explanation DSMP Internal error

Recommended Action Contact your technical support representative

%DSMP-4-WARNING : Warning : [chars]

Explanation Resource temporarily not available

Recommended Action Contact your technical support representative if condition lasts

%DSMP-3-INVALID_EVENT : Unhandled event: current state:[chars] event:[chars]

Explanation The event is not handled in the DSMP gateway state machine specification

Recommended Action Contact your technical support representative

%DSMP-3-SUBSYS_UNINITIALIZED : Internal Error : [chars]

| | |
|---------------------------|---|
| Explanation | DSMP Subsystem not initialized |
| Recommended Action | Contact your technical support representative |

%DSMP-3-PRG_ERROR : Programming Error : [chars]

| | |
|---------------------------|---|
| Explanation | Programing error in DSMP subsys |
| Recommended Action | Contact your technical support representative |

%DSMP-3-NOLICENSE : [chars]:No License available, Tivan Recording could not be Triggered

| | |
|---------------------------|--|
| Explanation | There are no recording license remaining in the license pool |
| Recommended Action | Check your configuration for smart license availability |

DSP**%DSP-5-UPDOWN : DSP [dec] is [chars]**

| | |
|---------------------------|----------------------------------|
| Explanation | DSP device changed state up/down |
| Recommended Action | No action is required. |

%DSP-5-DNLD : DNLD started for device [dec]

| | |
|---------------------------|----------------------------|
| Explanation | DSP bootloader DNLD starte |
| Recommended Action | No action is required. |

%DSP-3-FIRMWARE_VER_INFO : Downloading streamware... for device [dec]. DSP firmware(ver:[int].[int]) contained in image has different version from the firmware(ver:[int].[int]) in harddisk or bootflash

| | |
|---------------------------|----------------------------|
| Explanation | DSP firmware version check |
| Recommended Action | No action is required. |

%DSP-3-DSP_DNLD : DSP device [dec] DNLD process exited. Trying to recover DSP device by rebooting the DSP

| | |
|---------------------------|---|
| Explanation | A DSP device on DSP-SPA is not responding. The error message indicates the slot, subslot, the SPA type and the name of the hardware device. |
| Recommended Action | Software will try to recover by reloading the failed DSP. If the problem persists then perform OIR of the SPA located in the specified subslot. Before removing the SPA, enter the hw-module subslot stop command. Remove the SPA, wait 5 seconds, and reinsert the SPA. If the problem persists, copy the error message text exactly as it appears on the console or in the system log, enter the show diag command, contact your Cisco technical support representative and provide the representative with the gathered information. |

%DSP-3-TIMER : [chars] timer expired for DSP [dec]

| | |
|---------------------------|------------------------|
| Explanation | DSP timer has expired |
| Recommended Action | No action is required. |

%DSP-3-DSP_WATCHDOG : DSP device [dec] is not responding. Trying to recover DSP device by reloading

| | |
|---------------------------|---|
| Explanation | A DSP device on DSP-SPA is not responding. The error message indicates the slot, subslot, the SPA type and the name of the hardware device. |
| Recommended Action | Software will try to recover by reloading the failed DSP. If the problem persists then perform OIR of the SPA located in the specified subslot. Before removing the SPA, enter the hw-module subslot stop command. Remove the SPA, wait 5 seconds, and reinsert the SPA. If the problem persists, copy the error message text exactly as it appears on the console or in the system log, enter the show diag command, contact your Cisco technical support representative and provide the representative with the gathered information. |

%DSP-3-DSP_ALARM : DSP device [dec] is not responding. Trying to recover DSP device by reloading

| | |
|---------------------------|---|
| Explanation | A DSP device on DSP-SPA is not responding. The error message indicates the slot, subslot, the SPA type and the name of the hardware device. |
| Recommended Action | Software will try to recover by reloading the failed DSP. If the problem persists then perform OIR of the SPA located in the specified subslot. Before removing the SPA, enter the hw-module subslot stop command. Remove the SPA, wait 5 seconds, and reinsert the SPA. If the problem persists, copy the error message text exactly as it appears on the console or in the system log, enter the show diag command, contact your Cisco technical support representative and provide the representative with the gathered information. |

%DSP-3-DSP_KEEPLIVE : DSP device [dec] is not responding. Trying to recover DSP device by reloading

| | |
|---------------------------|---|
| Explanation | A DSP device on DSP-SPA is not responding. The error message indicates the slot, subslot, the SPA type and the name of the hardware device. |
| Recommended Action | Software will try to recover by reloading the failed DSP. If the problem persists then perform OIR of the SPA located in the specified subslot. Before removing the SPA, enter the hw-module subslot stop command. Remove the SPA, wait 5 seconds, and reinsert the SPA. If the problem persists, copy the error message text exactly as it appears on the console or in the system log, enter the show diag command, contact your Cisco technical support representative and provide the representative with the gathered information. |

DSPDUMP

%DSPDUMP-5-DUMPSTART : DSP [dec] ([hex]) in slot [dec] starting dump

| | |
|---------------------------|---|
| Explanation | The DSP resource is beginning crash dump collection |
| Recommended Action | No action is required. |

%DSPDUMP-5-RX_CONTROL_DROP : DSP [dec] in slot [dec] Rx Control Message Dropped by DSP

| | |
|---------------------------|--|
| Explanation | The DSP has reported that a Rx Control Message was dropped |
| Recommended Action | No action is required. |

%DSPDUMP-5-TX_CONTROL_DROP : DSP [dec] in slot [dec] Tx Control Message Dropped by DSP

| | |
|---------------------------|--|
| Explanation | The DSP has reported that a Tx Control Message was dropped |
| Recommended Action | No action is required. |

DSPFARM

%DSPFARM-3-ERROR : Errors on DSPFARM module [chars]

| | |
|---------------------------|--------------------------|
| Explanation | Errors on DSPFARM module |
| Recommended Action | Check sh dspfarm all |

%DSPFARM-4-WARNING : Warning on DSPFARM module [chars]

| | |
|---------------------------|---------------------------|
| Explanation | Warning on DSPFARM module |
| Recommended Action | Check sh dspfarm all |

%DSPFARM-4-NOTICE : Failure on DSPFARM module [chars]

| | |
|---------------------------|---------------------------|
| Explanation | Failure on DSPFARM module |
| Recommended Action | Check sh dspfarm |

%DSPFARM-4-INFO : Info on DSPFARM module [chars]

| | |
|---------------------------|------------------------|
| Explanation | Info on DSPFARM module |
| Recommended Action | Check sh dspfarm |

DSPRM

%DSPRM-5-UPDOWN : DSP [dec] in slot [dec], changed state to [chars]

| | |
|---------------------------|---------------------------------|
| Explanation | The DSP resource changed state. |
| Recommended Action | No action is required. |

%DSPRM-5-UP_DOWN : DSP [dec] in subslot [chars], changed state to [chars]

| | |
|---------------------------|---------------------------------|
| Explanation | The DSP resource changed state. |
| Recommended Action | No action is required. |

%DSPRM-5-KEEPALIVE : DSP [dec] in slot [chars], NOT RESPONDING - auto restart([dec] times)

| | |
|---------------------------|--|
| Explanation | The DSP failed the background keep-alive test. |
| Recommended Action | No action is required. |

%DSPRM-3-INSUFFICIENT : Insufficient DSP resources for timeslot [dec] on port [chars]

| | |
|---------------------------|--|
| Explanation | The configuration requires more DSP resources than are available. |
| Recommended Action | Change the configuration to specify fewer used timeslots. Install additional DSP resources to allow more complex configurations. |

%DSPRM-3-INSUFFICIENT_DSP : voice-port : [chars] Not initialized due to insufficient DSP resources

| | |
|---------------------------|---|
| Explanation | More DSP resources are needed to initialize the analog voice-port |
| Recommended Action | Install additional DSP resources to allow voice-port initialization |

%DSPRM-5-DSPFAIL : DSP [dec] in slot [chars], is in the failed state

| | |
|---------------------------|--|
| Explanation | The DSP entered the FAILED state due to alarm indications. |
| Recommended Action | Replace the DSP resource. |

%DSPRM-5-DSPMSGFAIL : Failed to get dsprm msg for msg id [chars]

| | |
|---------------------------|-------------------------------------|
| Explanation | Unable to get dsprm control message |
| Recommended Action | No action is required. |

%DSPRM-5-JUKEBOX : Jukebox transmit overlay resp [dec] on slot [chars], failed

| | |
|---------------------------|--|
| Explanation | The Jukebox received failed response code. |
| Recommended Action | |

%DSPRM-5-JUKEBOX_UPDOWN : DSP Jukebox([dec]) in slot [chars], changed state to [chars]

| | |
|---------------------------|--------------------------------|
| Explanation | The DSP JUKEBOX changed state. |
| Recommended Action | No action is required. |

%DSPRM-5-SETCODEC : Configured codec [dec] is not supported with this dsp image.

| | |
|--------------------|---------------------------|
| Explanation | Codec negotiation failed. |
|--------------------|---------------------------|

%DSPRM-5-SETCODEC : Configured codec [dec] is not supported with this dsp image.

**Recommended
Action**

%DSPRM-2-DSPALARM : Received alarm indication from dsp ([dec]/[dec]). Resetting the DSP.

Explanation Fatal error detected in DSP.

**Recommended
Action** contact your technical support representative.

%DSPRM-3-DSPALARMINFO : [chars]

Explanation DSP Alarm Data

**Recommended
Action**

%DSPRM-5-NULLIDB_CREATE_FAIL : VoIP Null IDB creation failed.

Explanation VoIP nullidb creation failed.

**Recommended
Action**

%DSPRM-2-FORKFAIL : Process creation of [chars] failed.

Explanation Failed to create the process.

**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPRM-5-DSP_VIC_CONFIG_NAK : Received VIC config NAK from DSP([dec]/[dec]), resetting the DSP.

Explanation Received NAK message from DSP. Re-attempt initialization.

**Recommended
Action** No action is required.

DSPU

%DSPU-3-CLSIBadLength : CLSI bad length, header= [chars]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DSPU-3-CLSIBadPrimitiveType : CLSI bad primitive type, header= [chars]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DSPU-3-CLSIBadPrimitiveCmd : CLSI bad primitive command, header= [chars]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%DSPU-3-CLSIbadPrimitiveCmd : CLSI bad primitive command, header= [chars]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPU-3-CLSIbadIdentifierType : CLSI bad identifier type, header= [chars]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPU-3-CLSIbadIdentifier : CLSI bad identifier, header= [chars]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPU-3-CLSIbadReturnCode : CLSI bad return code: [dec], header= [chars]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPU-3-CLSIUnexpctActSapCnf : CLSI unexpected ActivateSapCnf, header= [chars]

Explanation An internal software error occurred.

%DSPU-3-CLSIUnexpctActSapCnf : CLSI unexpected ActivateSapCnf, header= [chars]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPU-3-CLSIUnexpctDeactSapCnf : CLSI unexpected DeactivateSapCnf, header= [chars]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPU-3-CLSIUnexpctIdStnInd : CLSI unexpected IdStnInd, header= [chars]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPU-3-CLSIUnexpctEnableCnf : CLSI unexpected EnableCnf, header= [chars]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPU-3-CLSIBadAdptCorr : CLSI bad Adaptor correlator, header= [chars]

Explanation An internal software error occurred.

%DSPU-3-CLSIBadAdptCorr : CLSI bad Adaptor correlator, header= [chars]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPU-3-DSPU_BufferCorrupted : DSPU could not free buffer - buffer corrupted

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DSPU-3-UnknownXid : XID Format not supported, XID= [chars]

Explanation Unsupported XID received from the remote station; connection with remote station could not be established.

Recommended Action Configure the remote station to send supported XID (if possible). Supported XID formats are: XID Format 0 XID Format 3

%DSPU-3-LSXIDNegotiationError : XID Negotiation Error, bad byte= [dec], bad bit= [dec], sense data= [chars]

Explanation XID3 with an error indication was received from the remote station; connection with the remote station could not be established.

Recommended Action Determine, from the CV 22 byte or bit information, which field in the XID3 is rejected by the remote station, and correct the link station configuration parameters at either the router or the remote station.

%DSPU-3-LSNoACTPUCapability : Connection attempt failed from XID= [chars], ACTPU not supported

Explanation The remote station did not request PU 2.0 activation; connection with remote station is terminated.

Recommended Action Correct link station configuration parameters at the remote station to request a system services control point (SSCP)-PU session with the router.

%DSPU-3-LSInvalidMaxIFrame : Connection attempt failed from XID= [chars], Invalid MaxIFrame= [dec]

Explanation An invalid MaxIFrame value in an exchange identification (XID) was received from the remote station; connection with remote station could not be established.

Recommended Action Correct link station configuration at the remote station.

%DSPU-3-LSInvalidWindowSize : Connection attempt failed from XID= [chars], Invalid WindowSize= [dec]

Explanation An invalid WindowSize value in an exchange identification (XID) was received from the remote station; connection with remote station could not be established.

Recommended Action Correct link station configuration at the remote station.

%DSPU-3-LSConnOutToHostFailed : Connect out to host [chars] failed.

Explanation Connection with the remote host could not be established.

Recommended Action Verify host configuration parameters at the router and at the host. Determine whether the host is active and responding to connection requests.

%DSPU-3-LSConnOutToPuFailed : Connect out to pu [chars] failed.

Explanation Connection with the remote PU could not be established.

Recommended Action Verify PU configuration parameters at the router and at the remote PU. Determine whether the remote PU is active and responding to connection requests.

%DSPU-3-LSConnInFromHostFailed : Connect in from host [chars] with remote address [chars] failed.

Explanation Connection with the remote host could not be established.

Recommended Action Verify host configuration parameters at the router and at the host. Determine whether the router is configured to accept connection from this host.

%DSPU-3-LSConnInFromPuFailed : Connect in from pu [chars] with remote address [chars] failed.

Explanation Connection with the remote PU could not be established.

Recommended Action Verify PU configuration parameters at the router and at the remote PU. Determine whether the router is configured to accept connectIn from this remote PU.

%DSPU-3-LSConnInFailed : Connect in from remote address [chars] failed.

| | |
|---------------------------|---|
| Explanation | Connection with remote station could not be established. |
| Recommended Action | Verify configuration parameters at the router and at the remote station. Determine whether the router is configured to accept connectIn from this remote station. |

%DSPU-3-LSConnInFailedNoMem : Connect in from remote address [chars] failed; insufficient memory.

| | |
|---------------------------|---|
| Explanation | Connection with the remote station could not be established because of insufficient memory in the router. |
| Recommended Action | Correct low memory problem in the router. If the problem persists, call your technical support representative for assistance. |

%DSPU-3-SnaBadData : Bad SNA data received from PU [chars], data= [chars]

| | |
|---------------------------|---|
| Explanation | Unrecognized SNA data was received from the remote PU. |
| Recommended Action | Correct the problem at the remote PU. If the problem persists, call your Cisco technical support representative for assistance. |

%DSPU-3-ActpuNegResponse : ACTPU Neg rsp received from PU [chars]

| | |
|---------------------------|---|
| Explanation | Remote PU rejected the router's request for an SSCP-PU session. |
| Recommended Action | Verify PU configuration parameters at the router and at the remote PU. Determine whether the problem exists at the remote PU, and correct it. If the problem persists, call your Cisco technical support representative for assistance. |

%DSPU-3-NotifyNegResp : LU [dec] received a Notify Neg Resp from host [chars]

| | |
|---------------------------|--|
| Explanation | Remote host rejected the router's request to activate/deactivate an SSCP-LU session. |
| Recommended Action | Verify host configuration parameters at the router and at the remote host. Determine whether the problem exists at the remote host and correct it. If the problem persists, call your technical support representative for assistance. |

DSP_SPA

%DSP_SPA-2-INITFAIL : Not Enough Resources:[chars]

| | |
|---------------------------|---|
| Explanation | The shared port adaptor failed to complete software initialization. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DSP_SPA-3-BUFF_FAIL : Not Enough MEM Buffers [chars]

| | |
|---------------------------|---|
| Explanation | Not enough memory buffers for shared port adaptor operation. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DSP_SPA-3-FILE_OP_FAIL : Failed to open file [chars] : [chars]

| | |
|---------------------------|---|
| Explanation | Failed to open file |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DSP_SPA-3-FILE_RD_FAIL : Failed to read [int] bytes from file: [chars]

| | |
|---------------------------|---|
| Explanation | Failed to read data from file |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DSP_SPA-3-NULL_FAIL : Non-Initialized ptr: [chars]

| | |
|---------------------------|---|
| Explanation | About to Access non-initialized pointer |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DSP_SPA-3-HW_ERROR : [chars]: A Hardware device error was detected. Trying to recover the SPA by reload. Error information : [chars]

| | |
|---------------------------|--|
| Explanation | An internal hardware device error has occurred on the services SPA. The error message indicates the slot, subslot, the SPA type and the name of the hardware device. The SPA has been deactivated and reactivated to resolve the problem. If the error occurs more than five times within an hour, no further attempts to reactivate the SPA will be made. This message is likely due to an unrecoverable hardware failure. |
| Recommended Action | Perform OIR of the SPA located in the specified subslot. Before removing the SPA, enter the hw-module subslot stop command. Remove the SPA, wait 5 seconds, and reinsert the SPA. If the problem persists, copy the error message text exactly as it appears on the console or in the system log, enter the show diag command, contact your Cisco technical support representative and provide the representative with the gathered information. |

%DSP_SPA-3-HW_ERROR_INFO : [chars]: Non fatal hardware device error was detected. Error information : [chars]

Explanation An internal hardware device error has occurred on the services SPA. The error message indicates the slot, subslot, the SPA type and the name of the hardware device. This message is likely due to a recoverable hardware failure.

Recommended Action Perform OIR of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA. If the problem persists, copy the error message text exactly as it appears on the console or in the system log, enter the **show diag** command, contact your Cisco technical support representative and provide the representative with the gathered information.

DSS

%DSS-5-UPDOWN : DSP core [dec] is [chars]

Explanation DSP core changed state up/down

Recommended Action No action is required.

%DSS-3-ACK_FAIL : Ack failed for dsp_id [dec], seq_no [dec]

Explanation DSP core not responding to host messages

Recommended Action No action is required.

%DSS-3-DSPID_INVALID : Invalid DSPID [dec]

Explanation Invalid DSP ID detected in the message

Recommended Action No action is required.

%DSS-3-TIMER : [chars] timer expired for DSPID [dec]

Explanation DSS timer has expired

Recommended Action No action is required.

DSX**%DSX-4-ALARM : [chars] [chars]: [chars]**

| | |
|---------------------------|--|
| Explanation | The specified T1/E1 or T3/E3 Alarm has been asserted or cleared |
| Recommended Action | The recommended action is to isolate and repair the source of the asserted alarm |

DTP**%DTP-4-MEM_UNAVAIL : Memory was not available to perform the trunk negotiation action**

| | |
|---------------------------|---|
| Explanation | Unable to negotiate trunks because of a lack of memory |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%DTP-4-UNKN_ERR : An unknown operational error occurred

| | |
|---------------------------|--|
| Explanation | Unable to negotiate trunks because an internal operation generated an error which was not expected to ever happen. |
| Recommended Action | Because of the unexpected nature of the problem, the only recommended action is to reload the device |

%DTP-5-TRUNKPORTON : Port [chars] has become [chars] trunk

| | |
|---------------------------|---|
| Explanation | The specified port has changed from being an access port to a trunk port using the specified encapsulation. |
| Recommended Action | |

%DTP-5-NONTRUNKPORTON : Port [chars] has become non-trunk

| | |
|---------------------------|---|
| Explanation | The specified port has changed from being a trunk port to an access port. |
| Recommended Action | |

%DTP-5-TRUNKPORTCHG : Port [chars] has changed from [chars] trunk to [chars] trunk

| | |
|---------------------------|--|
| Explanation | The specified trunk port has changed the encapsulation type it uses. |
| Recommended Action | |

%DTP-5-ILGLCFG : Illegal config(on,isl--on,dot1q) on [chars]

| | |
|---------------------------|---|
| Explanation | The two ports on the link are set to the ON mode, but one is set to 802.1Q encapsulation, while the other is set to ISL encapsulation. When both ports on a link are set to the ON mode, their encapsulation types must match |
| Recommended Action | Configure both ports on the link to have the same encapsulation. |

%DTP-4-TMRERR : An internal timer error occurred when trunking on interface [chars]

| | |
|---------------------------|--|
| Explanation | There might be some instances in which a timer used by the trunking protocol expires at a time when it is unexpected. This problem is corrected internally. |
| Recommended Action | There is likely no long-term ramifications from this problem. However, if further problems with trunking are seen, it is recommended that you reload the device. |

%DTP-5-DOMAINMISMATCH : Unable to perform trunk negotiation on port [chars] because of VTP domain mismatch.

| | |
|---------------------------|---|
| Explanation | The two ports involved in trunk negotiation belong to different VTP domains. Trunking is possible only when the ports involved belong to the same VTP domain. |
| Recommended Action | Ensure that the two ports that are involved in trunk negotiation belong to the same VTP domain. |

DUAL

%DUAL-3-SIA : Route [chars] stuck-in-active state in [chars] [dec]. Cleaning up

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-3-NOMATCH : Nexthop and infosource don't match. N = [chars], I = [chars]

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-3-NOHANDLE : Handle [dec] is not allocated in pool.

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-3-LINKSTILLUP : Link [dec] [chars] still exists on [chars]

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-3-LINKSEXIST : Interface [chars] going down and [dec] links exist

| | |
|---------------------------|---|
| Explanation | An interface is going down or is being removed from routing through IGRP, but not all links (neighbors) have been removed from the topology table. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-3-BADCOUNT : Route [chars], [dec] successors, [dec] rdbs

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-6-EVENT : [chars], [chars]

| | |
|--------------------|--|
| Explanation | A hardware or software error occurred. |
|--------------------|--|

%DUAL-6-EVENT : [chars], [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DUAL-3-NOSOCKET : Unable to open socket for AS [dec]

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-3-NOBUFFER : No buffers available for [int] byte packet

| | |
|---------------------------|---|
| Explanation | The DUAL software was unable to allocate a packet buffer. The system may be out of memory. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-3-UNKTIMER : Unknown timer type [dec] expiration

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-3-REFCOUNT : Negative reccount in pakdesc [hex]

| | |
|--------------------|--|
| Explanation | A software or hardware error occurred. |
|--------------------|--|

%DUAL-3-REFCOUNT : Negative refcount in pakdesc [hex]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DUAL-3-MULTIFLOW : Flow control error, [chars], on [chars]

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-3-PEERSEXIST : [dec] peers exist on IIDB [chars]

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-3-ANCHORCOUNT : Anchor count negative

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DUAL-5-NBRCHANGE : [chars] [dec]: Neighbor [chars] ([chars]) is [chars]: [chars]

| | |
|---------------------------|-----------------------------|
| Explanation | A neighbor went up or down. |
| Recommended Action | No action is required. |

%DUAL-6-NBRINFO : [chars] [dec]: Neighbor [chars] ([chars]) is [chars]: [chars]

Explanation Information regarding a neighbor.

Recommended Action No action is required.

%DUAL-3-RDBLEFT : Lingered DRDB deleting IIDB, dest [chars], nexthop [chars] ([chars]), origin [chars]

Explanation A software or hardware error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DUAL-3-INTERNAL : [chars] [dec]: Internal Error

Explanation A software or hardware error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DUAL-4-PFXLIMITHR : [chars] [dec]: [chars] threshold prefix level([int]) reached.

Explanation Number of prefixes in the topology database has reached the configured or default threshold level.

Recommended Action Take preventive action by identifying the source of the prefixes. Use show ip eigrp accounting for details.

%DUAL-3-PFXLIMIT : [chars] [dec]: [chars] prefix limit reached([int]).

Explanation Number of prefixes for eigrp has reached the configured or default limit.

Recommended Action Use show ip eigrp accounting for details on the source of the prefixes and take corrective measures.

%DUAL-3-BADIGRPSAP : Cannot send incremental SAP update to peer on [chars]. tlncreasing output-sap-delay may help

Explanation An incremental SAP update could not be sent, because this might cause the SAP tables between peers to become out of synch.

%DUAL-3-BADIGRPSAP : Cannot send incremental SAP update to peer on [chars]. Increasing output-sap-delay may help

Recommended Action Increase the output SAP delay on the listed interface to reduce buffer usage. If, after changing the delay the message remains, copy the error message exactly as it appears and report it to your technical support representative.

%DUAL-3-BADIGRPSATYPE : Unsupported SAP type for EIGRP being [chars] - type [hex]

Explanation There are two types of service access points (SAPs)-general queries and general responses. This message is sent when you receive or attempt to send an SAP with a type code which is not a general query or a general response. It is also sent when you receive a general query not addressed to the broadcast address.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative. If possible, also provide the output of the **debug ipx sap activity** and **debug ipx sap event** commands for the period during which this message appeared.

DWDM

%DWDM-4-G709ALARM : [chars]: [chars] [chars]

Explanation The specified G709 Alarm has been declared or released

Recommended Action Recommended action is to repair the source of the alarm.

%DWDM-3-RPC_PROCESSING_ERROR : DWDM RPC error: [chars]

Explanation Non Fatal error occurred in processing an RPC message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show version** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DWDM-3-RPC_INIT_FAIL : DWDM RPC init failure

Explanation The system failed to create the resources required to process user interface commands for transceivers. The error is not fatal but some show commands could fail.

%DWDM-3-RPC_INIT_FAIL : DWDM RPC init failure

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show version** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DWDM-3-RPC_FAILED : Application error rc = [dec]:

Explanation The system failed to retrieve the information required to execute the command

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show version** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DWDM-3-DWDM_NULL_INFO : DWDM info is NULL in [dec]

Explanation The SPA driver detected NULL information for DWDM

Recommended Action Reload the SPA and if the problem persists contact the technical support representative

%DWDM-3-DWDM_CONFIG_FAIL : Failed to [chars] [chars] in slot [dec] rc = [dec]

Explanation The SPA driver detected failure during configuring one of the DWDM parameters

Recommended Action Reload the SPA card and if the problem persists call the technical assistance centre

%DWDM-3-MALLOC_FAIL : malloc failure creating G.709 port on slot [dec]

Explanation The SPA driver detected a memory error on the SPA card

Recommended Action Reload the card and if the problem persists call TAC

%DWDM-3-CONFIG_TX_POWER : Failed to config transmit power [dec] on slot [dec] rc = [dec]

| | |
|---------------------------|--|
| Explanation | The SPA driver detected a error in configuring the Tx power level for the UT2 transponder module |
| Recommended Action | Please power down and reseal the indicated SPA card. If the condition persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at http://www.cisco.com/public/support/tac/tools.shtml . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%DWDM-3-RX_LOS_THRESHOLD : Failed to config rx los threshold = [dec] on slot [dec] rc = [dec]

| | |
|---------------------------|---|
| Explanation | The SPA driver detected an error in configuring the transponder receive power threshold |
| Recommended Action | Reload the SPA card and if the problem persists call TAC |

%DWDM-3-CONFIG_ALARM_REPORT : Failed to config report alarm [chars] slot [dec] rc = [dec]

| | |
|---------------------------|--|
| Explanation | The SPA driver could not configure one of the reporting status of the alarms |
| Recommended Action | Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative |

%DWDM-3-CONFIG_ALARM_THRESHOLD : Failed to config threshold alarm [chars] slot [dec] rc = [dec]

| | |
|---------------------------|--|
| Explanation | The SPA driver could not configure one of the threshold alarms for the optical data or transport unit |
| Recommended Action | Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative |

%DWDM-3-DWDM_GET_INFO_FAIL : Failed receiving [chars] from slot [dec] rc = [dec]

| | |
|---------------------------|--|
| Explanation | The SPA driver did not receive the necessary optics information from the slot |
| Recommended Action | Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative |

%DWDM-3-RX_G709_INFO : Failed receiving G709 info from slot [dec] rc = [dec]

Explanation The SPA driver did not receive the necessary G.709 OTN protocol information from the slot

Recommended Action Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative

%DWDM-3-CLEAR_G709_CTR : Unable to clear g709 counter in slot [dec] rc = [dec]

Explanation The SPA driver was unable to clear the G.709 OTN protocol counters for bit errors

Recommended Action Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative

%DWDM-3-IPC_SHIM_INIT : DWDM IPC SHIM init failed

Explanation The SPA driver detected failure during DWDM IPC SHIM initialization

Recommended Action Please power down and reseal the indicated SPA card. If the problem persists please contact your technical support representative

%DWDM-3-TIMER_ERR : Timer error

Explanation The Driver did not obtain an expired timer from the timer tree for the DWDM process

Recommended Action The SPA driver has encountered an error event on the SPA card. If the condition persists, copy the error message exactly as it appears or contact your technical support representative

%DWDM-3-LC_ERR_STATS : error sending LC stats to RP

Explanation The SPA driver encountered an error while sending the LC stats to the RP

Recommended Action Reload the SPA card and if the problem persists call the technical support representative

%DWDM-3-CONFIG_OVERHEAD_TTI : Failed to config [chars] [chars] slot [dec] rc = [dec]

Explanation The LC driver could not configure the tail trace identifier for the optical data or transport unit

Recommended Action Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative

%DWDM-3-CONFIG_PM : Failed to config [chars] [chars] slot [dec] rc = [dec]

| | |
|---------------------------|--|
| Explanation | The LC driver could not configure the PM parameters for the optical data or transport unit |
| Recommended Action | Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative |

%DWDM-3-OTN_STATS_CREATE_IF_FAILED_TO_ALLOCATE : stats for interface index [dec] could not be created with status [dec]

| | |
|---------------------------|---|
| Explanation | |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DWDM-3-OTN_STATS_CREATE_IF_FAIL : stats for interface index [dec] could not be created with status [dec]

| | |
|---------------------------|---|
| Explanation | |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%DWDM-3-OTN_STATS_DELETE_IF_FAIL : stats for interface index [dec] could not be deleted with status [dec]

| | |
|---------------------------|---|
| Explanation | |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

DYNCMD

%DYNCMD-3-MSGDISPATCHNULL : Received NULL TDL message

| | |
|---------------------------|---|
| Explanation | An unexpected condition in which IOS has received a NULL TDL message for Dynamic Commands. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-MSGDISPATCH : Unable to dispatch received TDL messages for Dynamic Commands

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS is trying to dispatch to the TDL message handler functions for received TDL messages for Dynamic Commands. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-MSGMISSINGFIELD : Missing field '[chars]' in TDL message '[chars]' received from the Shell Manager

| | |
|---------------------------|---|
| Explanation | A message missing a required field was received from the Shell Manager |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-MSGINVALIDFIELDINT : Invalid field '[chars]' in TDL message '[chars]' received: value '[int]' for Dynamic Commands

| | |
|---------------------------|---|
| Explanation | A message with an invalid field value was received for Dynamic Command creation |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-MSGINVALIDFIELDSTR : Invalid field '[chars]' value '[chars]' in TDL message '[chars]' received for Dynamic Commands

| | |
|---------------------------|---|
| Explanation | A message with an invalid field value was received for Dynamic Command creation |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-MSGERROR : Error '[chars]' handling a received TDL message '[chars]' for Dynamic Commands

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred while IOS is processing a received Dynamic Command TDL message |
|--------------------|---|

%DYNCMD-3-MSGERROR : Error '[chars]' handling a received TDL message '[chars]' for Dynamic Commands

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DYNCMD-3-MSGBUILDERROR : Error '[dec]' building TDL message '[chars]' to send to the Shell Manager

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred while IOS is building a TDL message to send to the Shell Manager |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DYNCMD-3-MSGMARSHALERROR : Error '[dec]' marshaling TDL message '[chars]' to send to the Shell Manager

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred while IOS is marshaling TDL message to send to the Shell Manager |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DYNCMD-3-MSGENQUEUEERROR : Error queueing TDL message '[chars]' to send to the Shell Manager

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred when IOS attempted to queue a TDL message to send to the Shell Manager |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DYNCMD-3-MSGBIPCERR : Unable to process received BIPC messages for Dynamic Commands, error: [chars]

| | |
|--------------------|--|
| Explanation | An unexpected condition has occurred while IOS was trying to process a received BIPC message for Dynamic Commands. |
|--------------------|--|

%DYNCMD-3-MSGBIPCERR : Unable to process received BIPC messages for Dynamic Commands, error: [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DYNCMD-3-MSGBIPCBUFFER : Unable to acquire a BIPC buffer for sending messages.

Explanation A message was to be sent by IOS, but no BIPC buffer was available. The message to be sent has been discarded and the associated operation failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DYNCMD-3-TREETOP : Unable to link top-level keyword '[chars]' into parse tree

Explanation IOS received a message to add a command into the CLI. The appropriate location to link in the command could not be found.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DYNCMD-3-TREETOPNOTKW : The top-level parser transition '[chars]' is not a keyword

Explanation IOS received a message to add a command into the CLI. The top-level node must be a keyword node.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DYNCMD-3-FLAGSINUSE : New feature flags list [int] invalid while feature flags in use [int]

Explanation IOS received a message to set the feature flags for the CLI. The message received to set the feature flags changed the number of feature flags which is unexpected. The message is ignored.

%DYNCMD-3-FLAGSINUSE : New feature flags list [int] invalid while feature flags in use [int]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DYNCMD-3-FLAGSINVALID : New feature flag list values ([int]) different than expected ([int])

| | |
|---------------------------|---|
| Explanation | IOS received a message to set the feature flags for the CLI. The message received does not contains the number of feature flag values that the message list size indicated. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-NODEOUTOFSEQ : Create node message received when in mode '[chars]'

| | |
|---------------------------|---|
| Explanation | IOS received a message to add a command node into the CLI. The message was received out of sequence |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-LINKOUTOFSEQ : Create node message received when in mode '[chars]'

| | |
|---------------------------|---|
| Explanation | IOS received a message to add a command node into the CLI. The message was received out of sequence |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-NODETYPEUNKNOWN : Create node message received for unknown node type '[dec]', '[chars]'

| | |
|--------------------|--|
| Explanation | IOS received a message to add a command into the CLI. One of the command nodes to be created is of a type unknown to IOS |
|--------------------|--|

%DYNCMD-3-NODETYPEUNKNOWN : Create node message received for unknown node type '[dec]', '[chars]'

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DYNCMD-3-NODEDUPLICATE : Create node message received for duplicate node '[int]'

| | |
|---------------------------|---|
| Explanation | IOS received a message to add a command into the CLI. One of the command nodes to be created has an identifier of an existing node. The new node is ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-LINKUNKNOWNNODE : Link node message received for unknown node '[int]'

| | |
|---------------------------|---|
| Explanation | IOS received a message to add a command into the CLI. One of the messages to link nodes referenced a node unknown to IOS |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-LINKUNKNOWNACCEPTNODE : Link node message received for unknown accept ([chars]) node '[int]'

| | |
|---------------------------|---|
| Explanation | IOS received a message to add a command into the CLI. One of the messages to link nodes referenced a node unknown to IOS |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-LINKUNKNOWNALTNODE : Link node message received for unknown alternate node '[int]'

| | |
|--------------------|--|
| Explanation | IOS received a message to add a command into the CLI. One of the messages to link nodes referenced a node unknown to IOS |
|--------------------|--|

%DYNCMD-3-LINKUNKNOWNALTNODE : Link node message received for unknown alternate node '[int]'

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DYNCMD-3-LINKINVALIDALT : Link alternate node message received for node '[chars]', which cannot have an alternate.

| | |
|---------------------------|---|
| Explanation | IOS received a message to add a command into the CLI. One of the messages to link nodes instructed IOS to link nodes which would result in an invalid construction. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-LINKINVALIDTRANS : Link transition '[chars]' message received for node '[chars]', which cannot have such a transition.

| | |
|---------------------------|---|
| Explanation | IOS received a message to add a command into the CLI. One of the messages to link nodes instructed IOS to link nodes which would result in an invalid construction. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-CHAINADDFAIL : Parse chain link add failed for '[chars]'

| | |
|---------------------------|---|
| Explanation | An error has occurred when a dynamic command is being added to the IOS command set. The commands specified will not be available. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-CHAINDELFAIL : Parse chain link delete failed for '[chars]'

| | |
|--------------------|--|
| Explanation | An error has occurred when a dynamic command is being removed from the IOS command set. The commands specified will stil not be available. |
|--------------------|--|

%DYNCMD-3-CHAINDELFAIL : Parse chain link delete failed for '[chars]'

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DYNCMD-7-CMDSET_LOADED : The Dynamic Command set has been loaded from the Shell Manager

Explanation IOS has completed loading the set of commands published and processed by components running in packages other than the IOS package.

Recommended Action No action is required.

%DYNCMD-7-CMDSET_UNLOADED : The Dynamic Command set from the Shell Manager has been unloaded

Explanation IOS has completed unloading the Dynamic Command set. This should only occur when a new package has been installed and should shortly be followed by a message indicating that the new Dynamic Command set has been loaded.

Recommended Action No action is required.

%DYNCMD-3-INIT : Dynamic command subsystem failed to initialize '[chars]'

Explanation Some features depend on portions of the dynamic command infrastructure. Such features will be unavailable.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DYNCMD-3-PKGINT_LOAD : Failed to load '[chars]': [chars]

Explanation Some features' configuration depends on a packaging infrastructure. Packaged configuration for the specified package will be unavailable.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DYNCMD-3-PKGINT_SYMBOL : Package [chars] incompatible: symbol '[chars]' is of type [chars], expected [chars]

| | |
|---------------------------|---|
| Explanation | Some features' configuration depends on a packaging infrastructure. Packaged configuration for the specified package will be unavailable. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_VALIDATE : Failed to validate '[chars]': [chars]

| | |
|---------------------------|---|
| Explanation | Some features' configuration depends on a packaging infrastructure. Packaged configuration for the specified package will be unavailable. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_API : Package interface failure for package '[chars]': [chars]

| | |
|---------------------------|---|
| Explanation | Some features' configuration depends on a packaging infrastructure. Packaged configuration for the specified package will be unavailable. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_INSTALL : Failed to install '[chars]': [chars]

| | |
|---------------------------|---|
| Explanation | Some features' configuration depends on a packaging infrastructure. Packaged configuration for the specified package will be unavailable. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_ARGS : Incorrect argument count for package '[chars]', operation '[chars]': [dec] not [dec]

| | |
|---------------------------|---|
| Explanation | An error has occurred loading the commandset for a newly installed package. The package is not compatible with the running IOS instance. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_ARG : Incorrect argument type for package '[chars]', operation '[chars]': [chars] ([int])

| | |
|---------------------------|---|
| Explanation | An error has occurred loading the commandset for a newly installed package. The package is not compatible with the running IOS instance. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_ARG_NUMBERVAL : Invalid argument value for package '[chars]', operation '[chars]': [int] ([int])

| | |
|---------------------------|---|
| Explanation | An error has occurred loading the commandset for a newly installed package. The package is not compatible with the running IOS instance. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_ARG_OPAQUEVAL : Invalid argument value for package '[chars]', operation '[chars]': [IPV6 address] ([int])

| | |
|---------------------------|---|
| Explanation | An error has occurred loading the commandset for a newly installed package. The package is not compatible with the running IOS instance. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_OFFSET : Invalid offset argument for package '[chars]', operation '[chars]': [chars] ([int])

| | |
|---------------------------|---|
| Explanation | An error has occurred loading the commandset for a newly installed package. The package is not compatible with the running IOS instance. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGNODE_ADD_FAIL : Parse node add failed for package '[chars]', [chars] ([int])

| | |
|---------------------------|---|
| Explanation | An error has occurred loading the commandset for a newly installed package. The node could not be added and the commandset for the package will not be available. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGHANDLER_FILE_WRITE : Package '[chars]' failed to write: [chars] ([chars])

| | |
|---------------------------|---|
| Explanation | An error has occurred when a package was attempting to write a file. The configuration for the package could not be propagated to associated components. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGHANDLER_FILE_REMOVE : Package '[chars]' failed to remove: [chars] ([chars])

| | |
|---------------------------|---|
| Explanation | An error has occurred when a package was attempting to remove a file. This should never fail. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_DIR_CREATE : Package integration failed to create directory: [chars] ([chars])

| | |
|---------------------------|---|
| Explanation | An error has occurred when attempting to create a package export directory. This should never fail. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_DIR_OPEN : Package integration failed to open directory: [chars] ([chars])

| | |
|---------------------------|---|
| Explanation | An error has occurred when attempting to open a package export directory. This should never fail. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_DIR_REMOVE : Package integration failed to remove directory: [chars] ([chars])

| | |
|---------------------------|---|
| Explanation | An error has occurred when attempting to remove a package export directory. This should never fail. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_DIR_MOVE : Package integration failed to move directory: [chars] to [chars] ([chars])

| | |
|---------------------------|---|
| Explanation | An error has occurred when attempting to move a package export directory. This should never fail. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_FILE_OPEN : Package integration failed to open file: [chars] ([chars])

| | |
|--------------------|---|
| Explanation | An error has occurred when attempting to open a file in a package export directory. This should never fail. |
|--------------------|---|

%DYNCMD-3-PKGINT_FILE_OPEN : Package integration failed to open file: [chars] ([chars])

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DYNCMD-3-PKGINT_FILE_REMOVE : Package integration failed to remove: [chars] ([chars])

| | |
|---------------------------|---|
| Explanation | An error has occurred when attempting to remove a package export file. This should never fail. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_LOCK : Failed to acquire package list lock for [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | An error occurred when a configuration package was being installed or removed. This may indicate a timeout which may be a temporary condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_PKGLOCK : [chars] failed to acquire package lock for [chars]

| | |
|---------------------------|---|
| Explanation | An error occurred when locking a configuration package. The package needs to be locked for processing configuration commands or timer-based processing of configuration data. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%DYNCMD-3-PKGINT_UNLOCK : Failed to release the package list lock: [chars]

| | |
|--------------------|---|
| Explanation | An error occurred when a configuration package was being installed or removed. This should not occur. |
|--------------------|---|

%DYNCMD-3-PKGINT_UNLOCK : Failed to release the package list lock: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%DYNCMD-7-PKGINT_INSTALLED : The command package '[chars]' has been successfully installed

Explanation IOS has completed installation of the specified command package. Configuration commands for the package are now available.

Recommended Action No action is required.

%DYNCMD-7-PKGINT_UNINSTALLED : The command package '[chars]' has been successfully uninstalled

Explanation IOS has completed uninstallation of the specified command package. Configuration commands for the package are no longer available.

Recommended Action No action is required.

%DYNCMD-3-PKGERR_LOG_FAIL : Failed to log errors for package '[chars]'

Explanation An error has occurred updating the commandset for a newly installed package. The commands which failed to transfer could not be saved for further analysis.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%DYNCMD-4-CMD_DEPRECATION : The command 'platform trace runtime' is being deprecated. Please use the exec mode command 'set platform software trace' instead. Note that using this command and 'set platform software trace' together will lead to indeterministic results

Explanation The command 'platform trace runtime' is being deprecated.

Recommended Action No action is required.

E911

%E911-4-CALLBACK_UNREACHABLE : Unable to contact the last emergency caller at [chars].

| | |
|---------------------------|--|
| Explanation | The Public Safety Answering Point is calling an Emergency Line Identification Number (ELIN). The last caller from that ELIN has its calling number saved for three hours from the time the emergency call was originated. If the ELIN cannot be translated to the caller's calling number, then one of the following has happened: 1) The emergency call information has expired. Forwarding has not been set-up when calls have expired. 2) A system reload has occurred, thereby erasing the emergency call information. |
| Recommended Action | The dial-peer created to accept ELIN calls could set-up Call Forwarding to a corporate operator or main help desk to avoid having the call backs rejected. |

%E911-5-EMERGENCY_CALL_HISTORY : calling number[[chars]]; called number[[chars]]; ELIN[[chars]]

| | |
|---------------------------|--|
| Explanation | A call has been made to an emergency response number. This message simply informs system administrators of the call. |
| Recommended Action | The administrator determines the policy for outbound emergency calls. The administrator may set-up an application to page or email a technician everytime this message is emitted. |

%E911-3-MISSING_DEFAULT_NUMBER : It is mandatory to configure an ELIN under 'voice emergency response settings.'

| | |
|---------------------------|--|
| Explanation | The administrator has enabled the Enhanced 911 feature without configuring a default ELIN under 'voice emergency response settings.' |
| Recommended Action | The administrator should enter the 'voice emergency response settings' mode and configure a value for the 'elin' CLI. |

EAP

%EAP-2-PROCESS_ERR :

| | |
|---------------------------|--|
| Explanation | This is critical condition where the router could not perform EAP process related operation. |
| Recommended Action | Review SM logs taking note of the timestamp information to select specific information to review. Copy the message and other related information exactly as it appears on the console or in the system log. Reload the device/process. |

%EAP-6-MPPE_KEY :

| | |
|---------------------------|---|
| Explanation | This messages informs that the router received MPPE KEY for the specified host. |
| Recommended Action | No action is required. |

%EAP-3-BADPKT :

| | |
|---------------------------|--|
| Explanation | This messages informs that the router received an invalid or malformed EAP packet from the specified host. |
| Recommended Action | Check specified host for EAP operation. |

%EAP-6-FIPS_UNSUPPORTED_METHOD :

| | |
|---------------------------|---|
| Explanation | This message informs that a method is not supported in FIPS mode. |
| Recommended Action | Use FIPS supported methods - PEAP, TLS and FAST |

EC through ENT_API

- [EC](#)
- [ECFM_PROXY](#)
- [EDSP](#)
- [EEM](#)
- [EFP_STORMCTRL](#)
- [EI_CLI_MT_SPI](#)
- [EM](#)
- [EMD](#)
- [EM_ISSU](#)
- [ENT_API](#)

EC

%EC-5-MINLINKS_NOTMET : Port-channel [chars] is down bundled ports ([dec]) doesn't meet min-links

| | |
|---------------------------|--|
| Explanation | The administrative configuration of minimum links is greater than the number of bundled ports. Therefore this port channel has been brought down |
| Recommended Action | Reduce the min-links configuration for this group or add more ports to this port-channel to have them bundle. |

%EC-5-MINLINKS_MET : Port-channel [chars] is up as its bundled ports ([dec]) meets min-links

Explanation The administrative configuration of minimum links is equal or less than the number of bundled ports. Therefore this port channel has been brought up

Recommended Action None.

%EC-3-BWMISMATCH : [chars] should be removed from the Port-channel[dec]

Explanation The member-link shouldn't have been part of the port-channel bundle because the bandwidth of the member-link doesn't match the bandwidth of the bundle. This configuration shouldn't have been allowed. This error indicates it was allowed due to some software issue.

Recommended Action Remove the member-link from the port-channel for proper operation.

ECFM_PROXY

%ECFM_PROXY-3-ECFM_MEM_REQ_FAILED : ECFM IPC subtype: [dec]

Explanation Requesting more memory failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ECFM_PROXY-3-ECFM_MEM_EXTEND_FAILED : ECFM IPC subtype: [dec]

Explanation Extending memory failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ECFM_PROXY-4-PROXY_INVALID_MSG_LEN : QFP ECFM Proxy IPC invalid length, [dec]:[dec] len [dec] flags [hex] source [dec]

Explanation Cisco internal software error. QFP ECFM Proxy received invalid IPC message length from control plane. This message will be ignored.

%ECFM_PROXY-4-PROXY_INVALID_MSG_LEN : QFP ECFM Proxy IPC invalid length, [dec]:[dec] len [dec] flags [hex] source [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%ECFM_PROXY-4-PROXY_INVALID_MSG : QFP ECFM Proxy received invalid message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP ECFM Proxy received an invalid message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ECFM_PROXY-2-PROXY_IPC_INIT_FAILED : QFP ECFM Proxy IPC interface initialization failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP ECFM Proxy initialization detected that the IPC interface initialization failed. QFP ECFM proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ECFM_PROXY-3-PROXY_BAD_MSG : QFP ECFM Proxy received bad length message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP ECFM Proxy received a corrupted message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ECFM_PROXY-3-PROXY_IPC_ALLOC_FAILED : QFP ECFM Proxy [chars] message lost due to message buffer allocation failure.

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP ECFM Proxy message processing detected a message buffer allocation failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ECFM_PROXY-3-PROXY_IPC_SEND_FAILED : QFP ECFM Proxy [chars] message lost due to message sent failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP ECFM Proxy message processing detected a message sent failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

EDSP

%EDSP-6-CEF_WAIT : NULL /* defined elsewhere */msgdef(CEF_TOOLONG, EDSP, LOG_WARNING, 0, NULL/* defined elsewhere *//CEF_TOOLONG, EDSP, LOG_WARNING, 0, NULL/* defined elsewhere *//msgdef(IPV6_ENABLED, EDSP, LOG_INFO, 0, NULL/* defined elsewhere *//IPV6_ENABLED, EDSP, LOG_INFO, 0, NULL/* defined elsewhere *//msgdef(IPV6_FAILED, EDSP, LOG_INFO, 0, NULL/* defined elsewhere *//IPV6_FAILED, EDSP, LOG_INFO, 0, NULL/* defined elsewhere *//voidedspmr_create_idb_for_vrfs (void

Explanation

Recommended Action

%EDSP-6-VEC_CHANGE : EDSP0's LES switching vector set to [chars]

Explanation To monitor CEF initialization for the hidden interface.

Recommended Action No action is required.

%EDSP-6-CEF_WAIT : Waiting for CEF initialization to complete first ... [dec]

Explanation Initialization of CEF RTP sending relies on system's CEF readiness.

%EDSP-6-CEF_WAIT : Waiting for CEF initialization to complete first ... [dec]

Recommended Action No action is required.

%EDSP-4-CEF_TOOLONG : CEF to SCCP devices may be disabled! See message below.

Explanation Given up waiting for CEF initialization to complete.

Recommended Action Check the message about CEF and the EDSP0 interface below. If the vector is EVENTUALLY set to Null, CEF RTP sending for SCCP devices is disabled. You may try to recover by restarting ip cef in IOS configuration.

%EDSP-6-IPV6_ENABLED : IPv6 on interface [chars] added.

Explanation IPv6 capability has been enabled for the (sub-)interface.

Recommended Action No action is required.

%EDSP-6-IPV6_FAILED : IPv6 on interface [chars] failed.

Explanation IPv6 initialization has failed for the (sub-)interface.

Recommended Action Please check IPv6 and interface related configurations.

EEM

%EEM-6-SUCCESS : [chars]

Explanation EEM Policy provisioning by the Auto deploy is successful.

Recommended Action No action is required.

%EEM-6-SUCCESS : [chars]

Explanation EEM Policy provisioning by the Auto-deploy is successful.

Recommended Action No action is required.

EFP_STORMCTRL

%EFP_STORMCTRL-6-ACTION_DEFAULT : Service Instance [dec] on interface [chars] has dropped packets due to storm-control

Explanation Configured Storm Control Threshold on Ethernet Service Instance Reached

Recommended Action No Action

EI_CLI_MT_SPI

%EI_CLI_MT_SPI-3-GENERAL_ERROR : Error occured: [chars]

Explanation An error occured during startup of the CLI Agent causing unwanted behavior and early exit.

Recommended Action Please contact TAC.

%EI_CLI_MT_SPI-3-FILE_ERROR : Error occured: [chars], for file: [chars]

Explanation An error occured while trying to manipulate a file.

Recommended Action Make sure file permissions are appropriate and locations are correct. Then try a restart.

EM

%EM-3-EXCEED : EM exceed maximum open events ([dec]).

Explanation The total number of open events exceeded the maximum number of possible open events. The maximum number that the EM server permits is specified in the error message. EM clients are either opening too many events or not closing events within the permitted time period.

%EM-3-EXCEED : EM exceed maximum open events ([dec]).

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show em state inc <em_type> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. Copy the error message exactly as it appears on the console or in the system log. Issue the show em state inc <em_type> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%EM-3-NULLPTR : The pointer in a specified EM function ([chars]) is incorrectly NULL.

| | |
|---------------------------|---|
| Explanation | The pointer in the specified EM function is incorrectly NULL. This condition might be caused by incorrect logic or a memory corruption. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Enter the show em state command or the show em status command to gather data that may help Cisco technical support to identify the nature of the error. Contact your Cisco technical support representative and provide the representative with the gathered information. |

%EM-3-FAIL : The specified EM Function failed ([chars]).

| | |
|---------------------------|---|
| Explanation | The specified EM function failed. This condition might be caused by incorrect logic or a memory corruption. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Enter the show em state command or the show em status command to gather data that may help Cisco technical support to identify the nature of the error. Contact your Cisco technical support representative and provide the representative with the gathered information. |

%EM-3-NOMEM : The EM failed to allocate memory resources for the specifiedEM function ([chars]).

| | |
|---------------------------|--|
| Explanation | The EM failed to allocate memory resources for the specified function because memory is running low. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Enter the show memory summary command to gather data that may help Cisco technical support to identify the nature of the error. Contact your Cisco technical support representative and provide the representative with the gathered information. |

%EM-4-AGED : The specified EM client ([chars] type=[dec], id=[dec]) did not close the EM event within the permitted amount of time ([dec] msec).

| | |
|---------------------------|---|
| Explanation | A timeout occurred. This condition is minor and should not affect the functionality of the switch. |
| Recommended Action | This message should not affect switch functionality but can be sign of a software bug condition. Please check Bug Toolkit on the Cisco web-site for relevant bugs against this message. If you do not find any, please contact the TAC with the output of show em client |

%EM-4-INVALID : The specified EM function ([chars]) received Invalid operands <[dec]>.

| | |
|---------------------------|---|
| Explanation | The EM client used invalid API parameters. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Enter the show em state command or the show em status command to gather data that may help Cisco technical support to identify the nature of the error. Contact your Cisco technical support representative and provide the representative with the gathered information. |

%EM-4-SENDFAILED : The specified EM client (type=[dec]) failed to send messages to standby.

| | |
|---------------------------|---|
| Explanation | Because the specified EM client failed to send messages to the standby supervisor engine, the standby supervisor engine is not updated. Do not attempt to failover to standby supervisor engine. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show checkpoint clients command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%EM-4-NOTUP : The EM is not available ([chars]).

| | |
|---------------------------|---|
| Explanation | Because some basic initialization failed, the EM is not available. This condition might be caused by failure of a basic infrastructure functionality or a memory corruption. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Enter the show em state command or the show em status command to gather data that may help Cisco technical support to identify the nature of the error. Contact your Cisco technical support representative and provide the representative with the gathered information. |

%EM-4-SEARCH : The EM function ([chars]) searched for the specified open event ([dec]),but the search failed.

| | |
|---------------------------|---|
| Explanation | The specified EM function could not find the specified open event. This condition might be caused by a memory corruption. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Enter the show em state command or the show em status command to gather data that may help Cisco technical support to identify the nature of the error. Contact your Cisco technical support representative and provide the representative with the gathered information. |

%EM-4-LIMIT : EM exceed open events limit ([dec]).

| | |
|---------------------------|---|
| Explanation | The EM has exceeded the permitted number of open events. The open event limit is 5000. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

EMD

%EMD-3-PFU_INITIALIZATION : The RP has failed to initialize a Power Supply/Fan module controller because [chars]

| | |
|---------------------------|---|
| Explanation | The route processor (RP) failed to initialize a power supply or a fan module controller. This error could be caused by a hardware defect or a C2W access failure. |
| Recommended Action | Examine the logs for C2W and hardware errors. |

%EMD-3-IDPROM_ACCESS : Failed access or process an IDPROM because [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to access an IDPROM or an IDPROM process failed. This error can occur from a hardware defect, software defect, or incorrect IDPROM content. |
| Recommended Action | Examine the logs for IDPROM and hardware errors. |

%EMD-3-IDPROM_SENSOR : One or more sensor fields from the idprom failed to parse properly because [chars].

| | |
|--------------------|--|
| Explanation | One or more IDPROM sensor fields failed to parse properly. The most likely reason is a checksum failure in the IDPROM from incorrect IDPROM content. |
|--------------------|--|

%EMD-3-IDPROM_SENSOR : One or more sensor fields from the idprom failed to parse properly because [chars].

Recommended Action Examine the logs for IDPROM and hardware errors.

%EMD-3-SENSOR_INITIALIZATION : Failed to initialize sensor monitoring because [chars].

Explanation The system failed to initialize an IDPROM sensor monitoring process. This error can occur from a hardware defect, software defect, or incorrect IDPROM content.

Recommended Action Examine the logs for IDPROM and hardware errors.

%EMD-0-EVENT_LIBRARY : An event facility initialization or maintenance function failed because [chars]

Explanation An event facility initialization or maintenance function failed. This error could be due to a software defect or system resource limitation.

Recommended Action Restart the card.

%EMD-0-RESOLVE_FRU : Failed to determine [chars] card because [chars]

Explanation The system was unable to to determine a card state. This error could be due to a software defect or system resource limitation.

Recommended Action Restart the card.

%EMD-0-SERVICES_INITIALIZATION : Failed to initialize general application services because [chars]

Explanation The system failed to initialize the application services. This error could be due to a software defect or system resource limitation.

Recommended Action Restart the card.

EM_ISSU

%EM_ISSU-2-INIT : Event Manager ISSU client initialization failed to [chars]. Error: [dec] ([chars])

Explanation The Event Manager ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade.

%EM_ISSU-2-INIT : Event Manager ISSU client initialization failed to [chars]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%EM_ISSU-3-TRANSFORM_FAIL : Event Manager ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Event Manager ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the Event Manager state between the active device and the standby device is not identical. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>) |

%EM_ISSU-3-MSG_NOT_OK : Event Manager ISSU client 'Message Type [dec]' is not compatible

| | |
|---------------------------|---|
| Explanation | The Event Manager ISSU client received an incompatible message from the peer device. The message cannot be processed. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%EM_ISSU-3-OPAQUE_MSG_NOT_OK : Event Manager ISSU client 'Opaque Message Type [dec]' is not compatible

| | |
|---------------------------|---|
| Explanation | The Event Manager ISSU client received an incompatible message from the peer device. The opaque message cannot be processed. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%EM_ISSU-3-MSG_SIZE : Event Manager ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Event Manager ISSU client failed to calculate the MTU for the specified message. The Event Manager ISSU client is not able to send the message to the standby device. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%EM_ISSU-3-INVALID_SESSION : Event Manager ISSU client does not have a valid registered session.

| | |
|---------------------------|---|
| Explanation | The Event Manager ISSU client does not have a valid registered session. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%EM_ISSU-2-SESSION_REGISTRY : Event Manager ISSU client failed to register session information. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Event Manager ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%EM_ISSU-3-SESSION_UNREGISTRY : Event Manager ISSU client failed to unregister session information. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The Event Manager ISSU client failed to unregister session information. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%EM_ISSU-2-SESSION_NEGO : Event Manager ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | An ISSU-compliant client transitions through a series of internal states. The Event Manager ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%EM_ISSU-2-SEND_NEGO_FAILED : Event Manager ISSU client failed to send negotiation message. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Event Manager ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |

%EM_ISSU-2-GET_BUFFER : Event Manager ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The Event Manager ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

ENT_API

%ENT_API-3-NOCREAT : EntityApiProcess not created - Entity MIB will not be initialised

Explanation Attempt to start EntityApiProcess failed when the entity subsystem was initialised. The Entity MIB will not be populated.

Recommended Action The Entity MIB API process was not created, possibly due to lack of memory. If you want to use the Entity MIB API, reconfigure the box so that less memory is used by other features, or add more memory to the system. Reload the box after reconfiguring.

%ENT_API-4-NOPARENT : Parent physical entity [int] did not exist when trying to add child physical entity [int], phyDescr = [chars], phyName = [chars].

Explanation An attempt to add a physical entity failed, because its parent physical entity did not exist in the entPhysicalTable of the Entity MIB.

Recommended Action Copy the error message exactly as it appears on the console or in the system log, call your Cisco technical support representative and provide the representative with the gathered information. Using your NMS tool, also provide the content of the Entity MIB table.

%ENT_API-4-NOLPMAP : [chars] entity not found when adding an LPMapping entry with logical index = [int] and physical index = [int] to the Entity MIB

Explanation An attempt to add an LPMapping entry to the Entity MIB was made. The logical or physical entity with the specified index does not exist, and so the LPMapping entry creation failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log, call your Cisco technical support representative and provide the representative with the gathered information. Using your NMS tool, also provide the content of the Entity MIB table.

%ENT_API-4-NOALIAS : [chars] entity not found when adding an alias with physical index = [int] and logical index = [int] to the Entity MIB

| | |
|---------------------------|---|
| Explanation | An attempt to add an alias entry to the Entity MIB was made. The logical or physical entity with the specified index does not exist, and so the alias entry creation failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log, call your Cisco technical support representative and provide the representative with the gathered information. Using your NMS tool, also provide the content of the Entity MIB table. |

%ENT_API-4-NOPORT : Physical entity does not have a Port PhysicalClass when adding an alias with physical index = [int], logical index = [int], phyDescr = [chars], phyName = [chars], phyClass = [int], phyContainedIn = [int], to the Entity MIB

| | |
|---------------------------|--|
| Explanation | An attempt to add an alias entry to the Entity MIB was made. The physical entity with the specified index does not have an entPhysicalClass of 10(Port class) and so the alias entry creation failed. See RFC2737 for the definition of the PhysicalClass textual-convention and the aliasMappingEntry object. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log, call your Cisco technical support representative and provide the representative with the gathered information. Using your NMS tool, also provide the content of the Entity MIB table. |

%ENT_API-4-NOENT : Trying to add or delete an unknown entity to the Entity MIB

| | |
|---------------------------|---|
| Explanation | An attempt to add/delete an unknown entity to the Entity MIB was made. The request could not be processed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log, call your Cisco technical support representative and provide the representative with the gathered information. Using your NMS tool, also provide the content of the Entity MIB table. |

%ENT_API-4-MULTIPLEREG : Multiple registration request with same entity name = [chars] using entity index [int] and phyDescr = [chars].

| | |
|---------------------------|---|
| Explanation | An attempt to register a physical entity happened and failed, because the same entity name is being used, for which a registration has already been done. |
| Recommended Action | Need to raise a DDTS with the component responsible for the for the registration to use different entity names for registering different entities. |

ENVIRONMENTAL**%ENVIRONMENTAL-3-TDLERROR : Error processing TDL message. [dec]**

| | |
|---------------------------|---|
| Explanation | An unexpected condition in which IOS has received a TDL message which it can not process. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ENVIRONMENTAL-1-ALERT : [chars], Location: [chars], State: [chars], Reading: [dec] [chars]

| | |
|---------------------------|---|
| Explanation | One of the sensors in the system is reading an out of normal value. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ENVIRONMENTAL-6-NOTICE : [chars], Location: [chars], State: [chars], Reading: [dec] [chars]

| | |
|---------------------------|---|
| Explanation | Informational message on the sensor reading |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ENVIRONMENTAL-5-SENSOROK : [chars], Location: [chars], State: normal

| | |
|---------------------------|---|
| Explanation | One of the sensors in the system had been in a failure condition but is now operating normally. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ENVIRONMENTAL-1-SENSORFAIL : [chars], Location [chars], State: fail

Explanation One of the sensors in the system has detected a failure condition from which it can not recover. This sensor is no longer reporting readings to the environmental monitoring subsystem.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ENVIRONMENTAL-3-CHASFSERR : Sensor [chars] on FRU [chars] has an invalid chasfs device state [chars]

Explanation The system does not understand the state that the sensor is reporting. This is most likely a filesystem corruption or ISSU problem. You may try rebooting the router to see if the problem corrects itself.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ENVIRONMENTAL-6-INFO : [chars]

Explanation Informational message of ambient sensor reading

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

ENVM

%ENVM-3-NOFORK : Could not create environmental polling process

Explanation

Recommended Action

%ENVM-4-READERROR : Error reading temperature sensor [dec]

Explanation

%ENVM-4-READERROR : Error reading temperature sensor [dec]**Recommended
Action**

%ENVM-4-LONGBUSYREAD : C2W Interface busy for long time reading temperature sensor [dec]**Explanation****Recommended
Action**

%ENVM-4-WRITEERROR : Error writing temperature sensor [dec]**Explanation****Recommended

%ENVM-4-LONGBUSYWRITE : C2W Interface busy for long time writing temperature sensor [dec]**Explanation****Recommended
Action**

EPBR_PROXY

%EPBR_PROXY-2-EPBR_MSG_PROXYINIT_FAILURE : EPBR - Failed to register IPC message handler, result code [int]**Explanation** QFP EPBR feature failed to register an IPC message handler for communication with control plane. This will cause the feature not to function.**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%EPBR_PROXY-3-EPBR_MSG_PROXY_UNKNOWN_IPCMMSG : EPBR - Received an unknown type (code [int]), IPC message**Explanation** QFP EPBR feature received an unknown message from another layer of EPBR feature's software stack.

%EPBR_PROXY-3-EPBR_MSG_PROXY_UNKNOWN_IPCMMSG : EPBR - Received an unknown type (code [int]), IPC message

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%EPBR_PROXY-3-EPBR_MSG_PROXY_INVALID_MSGLEN : EPBR - Received an invalid length IPC message

Explanation QFP EPBR feature received an incorrect length of IPC message from another layer of EPBR feature's software stack, m_enum %d, m_subtype %d, m_len %d, m_flags 0x%x, m_source %d.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%EPBR_PROXY-3-EPBR_MSG_PROXY_ALLOC_FAILURE : EPBR - Failed to get [int] bytes space for IPC reply message

Explanation QFP ET-Analytics feature detected buffer allocation failure while sending reply to a message from another layer of EPBR feature's software stack.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%EPBR_PROXY-3-EPBR_MSG_PROXY_OPENREPLY_FAIL : EPBR - Failed to open reply message part of IPC packet

Explanation QFP EPBR feature failed to open message part of IPC packet while sending a reply to another layer of EPBR feature's software stack.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%EPBR_PROXY-3-EPBR_MSG_PROXY_IPCSEND_FAIL : EPBR - Failed to send IPC message, result code [dec]

| | |
|---------------------------|---|
| Explanation | QFP EPBR feature failed to send IPC message to another layer of EPBR feature's software stack. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%EPBR_PROXY-3-EPBR_MSG_PROXY_DEBUG_REG_FAILED :

| | |
|---------------------------|---|
| Explanation | EPBR Conditional Debugging Registration failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%EPBR_PROXY-4-PROXY_IPC_INVALID_MSG_LEN : [dec]:[dec] len [dec] flags [hex] source [dec]

| | |
|---------------------------|---|
| Explanation | Invalid EPBR IPC message length. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

EPC

%EPC-3-MEM_INIT_FAILED : Allocation of [chars] memory failed for EPC

| | |
|---------------------------|--|
| Explanation | EPC Initialization of channel pool failed. |
| Recommended Action | LOG_STD_ACTION |

%EPC-3-PKT_REPLICA_INIT_FAILED : Register to Generic Packet Replication failed for EPC

| | |
|---------------------------|---|
| Explanation | EPC Initialization of packet replication registration failed. |
| Recommended Action | LOG_STD_ACTION |

EPM**%EPM-6-POLICY_REQ :**

| | |
|---------------------------|--|
| Explanation | This message indicates that a policy application/remove request has been received by the EPM |
| Recommended Action | No action required |

%EPM-6-POLICY_APP_SUCCESS :

| | |
|---------------------------|--|
| Explanation | This message indicates that the displayed policy for the client has been applied successfully by the EPM |
| Recommended Action | No action required |

%EPM-4-POLICY_APP_FAILURE :

| | |
|---------------------------|---|
| Explanation | This message indicates that the displayed policy for the client could not be applied by the EPM |
| Recommended Action | Policy application failure could happen due to multiple reasons. The reason for the failure is notified to the client and the client has to take appropriate action based on it |

%EPM-6-AAA :

| | |
|---------------------------|--|
| Explanation | This message indicates a download request has been sent/downloaded successfully for the specified dACL |
| Recommended Action | No action required |

%EPM-4-ACL_CONFIG_ERROR :

| | |
|---------------------------|---|
| Explanation | This message indicates that adding an ACE to the specified ACL was ignored because of wrong configuration |
| Recommended Action | Change ACE configuration for the specified ACL |

%EPM-6-IPEVENT :

Explanation This message indicates the IP event Wait/Release/Assignment that has occurred with respect to the specified host

Recommended Action No action required

%EPM-6-AUTH_ACL :

Explanation This message indicates a AUTH_DEF_ACL or AUTH_DEF_ACL_OPEN has been applied or removed

Recommended Action No action required

EPM_PLUGIN

%EPM_PLUGIN-5-ERR_VLAN_NOT_FOUND :

Explanation An attempt was made to assign a VLAN to an 802.1x port, but the VLAN was not found in the VTP database.

Recommended Action Make sure the VLAN exists and is not shutdown or use another VLAN.

EPOCH

%EPOCH-6-EPOCH_REJECTED : Peer [chars] has rejected epoch: [chars]

Explanation This error occurs if epoch from shell-manager has been rejected by the peer.

Recommended Action Check the epoch and peer state.

ERM

%ERM-6-NOTIFY : Owner: [chars](%0lx), User: [chars](%0lx), Threshold Type: [chars], Level: [chars], Direction: [chars], Limit: [int], Usage: [int], Policy ID: [dec]

Explanation A notification has been sent out by the resource owner because of a threshold violation.

Recommended Action This is just informational message only. This message appears because a threshold has been violated. Do 'show running' and look for the configuration under the mode 'resource manager' and check the thresholds that has been set. This is just a notification that the threshold has been violated - nothing to stop the resource exhaustion is being done here.

ERSPAN**%ERSPAN-3-MEM_INIT_FAILED : Allocation of [chars] memory failed for ERSPAN**

Explanation ERSPAN Initialization of channel pool failed.

Recommended Action LOG_STD_ACTION

%ERSPAN-3-PKT_REPLICA_INIT_FAILED : Register to Generic Packet Replication failed for ERSPAN

Explanation ERSPAN Initialization of packet replication registration failed.

Recommended Action LOG_STD_ACTION

ESS_FEATURE**%ESS_FEATURE-3-ESF_STUB : CPP ESS per-session feature ([chars]) executes stub entry in [chars] direction**

Explanation Cisco internal software error. CPP ESS per-session feature stub entry got executed. The packet will be dropped.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ESS_FEATURE-4-ESF_DROP_POLICY : CPP ESS feature encountered unexpected linktype=[dec]

Explanation Cisco internal software error. CPP ESS per-session feature encountered unexpected linktype when executing output drop policy

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

ESS_IPSUB

%ESS_IPSUB-3-ESS_IPSUB_STUB : CPP ESS IPSUB executes stub entry in [chars] direction

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP ESS IPSUB stub entry got executed. The packet will be dropped. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ESS_IPSUB-3-FSOL_THROTTLE_ERR : Allocation of [chars] memory failed for ESS IP Subscriber

| | |
|---------------------------|---|
| Explanation | Allocation of memory resource demanded by ESS IPSUB FSOL throttle failed. This is a serious problem at the ESS IPSUB FSOL initialization for throttling. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

ESS_PROXY

%ESS_PROXY-2-IPC_THROTTLE_ERR : Allocation of [chars] memory failed for ESS Proxy unsolicited event throttling

| | |
|--------------------|--|
| Explanation | Allocation of memory resource demanded by ESS Proxy throttle failed. This is a serious problem at the ESS Proxy IPC initialization for unsolicited event throttling. |
|--------------------|--|

%ESS_PROXY-2-IPC_THROTTLE_ERR : Allocation of [chars] memory failed for ESS Proxy unsolicited event throttling

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%ESS_PROXY-2-PROXY_IPC_INIT_FAILED : CPP ESS Proxy IPC interface initialization failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP ESS Proxy initialization detected that the IPC interface initialization failed. CPP ESS proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ESS_PROXY-3-PROXY_BAD_MSG : CPP ESS Proxy received bad length message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP ESS Proxy received a corrupted message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ESS_PROXY-3-PROXY_INV_MSG : CPP ESS Proxy received invalid message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP ESS Proxy received an invalid message type from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ESS_PROXY-3-PROXY_IPC_ALLOC_FAILED : CPP ESS Proxy [chars] message lost due to message buffer allocation failure., MSGDEF_LIMIT_MEDIUM

Explanation Cisco internal software error. CPP ESS Proxy message processing detected a message buffer allocation failure. The message is lost as the result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ESS_PROXY-3-PROXY_IPC_SEND_FAILED : CPP ESS Proxy [chars] message lost due to message sent failure (result: [dec]).

Explanation Cisco internal software error. CPP ESS Proxy message processing detected a message sent failure. The message is lost as the result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ESS_PROXY-3-PROXY_IPC_NO_HDLR : CPP ESS Proxy received unregistered message type [dec]

Explanation Cisco internal software error. CPP ESS Proxy received a message from control plane but there is no registered handler. The message is lost as the result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ESS_PROXY-2-KA_CHANNEL_ALLOC_FAILED : CPP ESS Proxy Session Keepalive channel creation failure.

Explanation Cisco internal software error. CPP ESS Proxy Session Keepalive detected that the channel creation failed. CPP ESS proxy session keepalive will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ESS_PROXY-2-KA_PKT_REPLICA_REG_FAILED : CPP ESS Proxy Session Keepalive packet replication registration failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP ESS Proxy Session Keepalive detected that the packet replication registration failed. CPP ESS proxy session keepalive will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ESS_PROXY-2-KA_TIMER_INIT_FAILED : CPP ESS Proxy Session Keepalive timer initialization failure.

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP ESS Proxy Session Keepalive detected that the timer initialization failed. CPP ESS proxy session keepalive will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ESS_PROXY-2-KA_PKT_TMPL_BFR_ALLOC_FAILED : CPP ESS Proxy Session Keepalive packet template allocation failure ([chars] buffer length: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP ESS Proxy Session Keepalive detected that the packet template buffer allocation failed. CPP ESS proxy session keepalive will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

ESS_SWITCH

%ESS_SWITCH-3-ESS_STUB : CPP ESS switching ([chars]) feature executes stub entry in [chars] direction

| | |
|--------------------|---|
| Explanation | Cisco internal software error. CPP ESS Switching feature stub entry got executed. The packet will be dropped. |
|--------------------|---|

%ESS_SWITCH-3-ESS_STUB : CPP ESS switching ([chars]) feature executes stub entry in [chars] direction

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%ESS_SWITCH-3-STATS_INVALID_PTR : CPP ESS Switching invalid statistics block for session [chars],. MSGDEF_LIMIT_GLACIAL

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP ESS Switching session contains an invalid statistics block. The session statistics is lost. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

ETHERCHANNEL

%ETHERCHANNEL-2-PROXY_IPC_INIT_FAILED : QFP Etherchannel Proxy IPC interface initialization failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Etherchannel initialization detected that the Proxy IPC interface initialization failed. The EC Bundle interfaces will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERCHANNEL-3-INV_PROXY_MSG : QFP ETHERCHANNEL Proxy received invalid Message ID [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP Etherchannel Proxy received an invalid Message ID. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERCHANNEL-3-PROXY_IPC_ALLOC_FAIL : QFP ETHERCHANNEL Proxy ([chars]) response lost due to buffer allocation failure (Interface [chars])

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP ETHERCHANNEL Proxy message processing detected a IPC buffer allocation failure during response processing. The associated ETHERCHANNEL interface may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERCHANNEL-3-PROXY_SID_UPDATE_LOCK_ERROR : QFP EC Proxy ([chars]) Multiple SID Update Locks to same interface (Interface [chars], SID: [hex])

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP EC Proxy message processing detected a Bundle Schedule SID update sequence error. One or more interface schedules could have been affected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERCHANNEL-3-PROXY_SID_UPDATE_COMPLETE_ERROR : QFP EC Proxy ([chars]) SID Update Complete w/o Preceeding Lock (Interface [chars], SID: [hex])

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP EC Proxy message processing detected a Bundle Schedule SID update sequence error. One or more interface schedules could have been affected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERCHANNEL-3-LOCK_ERROR : QFP EC Lock Failure: retval:[dec] tries[dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP EC Lock Failure locking attempt failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERCHANNEL-3-LOCK_STATE_ERROR : QFP EC Lock State Failure: retval:[dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP EC Lock State Failure Illegal lock state |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

ETHERCHANNEL_LB

%ETHERCHANNEL_LB-3-MSG_SEND_FAIL : The load-balance message [dec] has failed to send

| | |
|---------------------------|---|
| Explanation | The load-balancing feature has detected an error while trying to send an internal message. |
| Recommended Action | If this message was the result of performing a configuration command, then try unconfiguring and reconfiguring the same command. If the error message continues to be displayed then it may indicate that the system is low on memory. The show memory free command should be used to check if the system has sufficient available memory. If the system appears to have available memory and the error continues to be displayed, then please contact your Cisco technical support representative and provide the representative with the exact error message being seen as well as the version of IOS being used. |

%ETHERCHANNEL_LB-3-XDR_MSG_XMIT_FAIL : Failed to transmit XDR message of size [dec] to slot [dec]

| | |
|---------------------------|---|
| Explanation | An error occurred while attempting to send a load-balancing XDR message to the specified slot. |
| Recommended Action | Because the message failed to send, the specified slot may now be out of sync with the rest of the system. To correct the issue the card in the specified slot may be rebooted, at which point the full configuration will be re-synced with the card in that slot. If the specified slot is zero, then that message was intended for cards in all slots, and the router should be reloaded to re-sync the entire system. |

ETHERNET_LACP

%ETHERNET_LACP-1-ISSU_NOMEMORY : msgtxt_nomemory

| | |
|---------------------------|---|
| Explanation | The requested operation could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%ETHERNET_LACP-3-ISSU_SENDFAILED : LACP ISSU: send message failed, rc = [dec]

| | |
|---------------------------|--|
| Explanation | The sending of a message has failed. This is an informational message only. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERNET_LACP-4-ISSU_INCOMPATIBLE : lacp-issu-compat: returned FALSE

| | |
|---------------------------|--|
| Explanation | The ISSU compatibility matrix check has failed. This is an informational message only. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERNET_LACP-4-ISSU_XFORM : [chars]: failed, rc=[chars]

| | |
|---------------------------|--|
| Explanation | The ISSU transform has failed. This is an informational message only. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERNET_LACP-4-RF_CLIENT_INIT : LACP HA: Unable to initiate RF client.

| | |
|---------------------------|--|
| Explanation | LACP is unable to initialize as a RF client. This is an informational message only. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERNET_LACP-4-RF_CLIENT_BUNDLE : LACP HA: Unable initiate checkpoint bundle mode.

Explanation LACP is unable to initialize checkpoint bundle mode. This is an informational message only.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

ETHERNET_MLACP

%ETHERNET_MLACP-3-SYS_CFG_DUPL_ID : Remote mLACP peer has duplicate mLACP node-id [dec]

Explanation A remote mLACP peer is configured with the same mLACP node-id as this device.

Recommended Action Reconfigure the mLACP node-id to be unique between the two devices with the **mLACP node-id** configuration command. Refer to the mLACP configuration section of the Cisco IOS documentation for more information on configuring mLACP.

%ETHERNET_MLACP-3-SYS_CFG_INVALID_ID : Received invalid mLACP node-id [dec] from peer

Explanation A remote mLACP peer is configured with an invalid mLACP node-id.

Recommended Action Reconfigure the peer to send a valid mLACP node-id with the **mLACP node-id** configuration command. Refer to the mLACP configuration section of the Cisco IOS documentation for more information on configuring mLACP.

%ETHERNET_MLACP-3-PEER_ICCP_VERSION_INCOMPATIBLE : Peer ICCP version [dec] is incompatible with local ICCP version [dec].

Explanation mLACP peer is running with a different version of ICCP. Incompatible ICCP would prevent mLACP from working properly.

Recommended Action Reboot peer with identical IOS version would correct the issue. Compatible ICCP version between different IOS images can still be achieved by doing show lacp multichassis group on the both devices to check if ICCP versions are compatible. If ICCP versions are incompatible, repeat IOS image loading and CLI above until a compatible image is loaded.

%ETHERNET_MLACP-4-ICRM_CLIENT_RECV_REJ : Received rejected mLACP TLV from peer with message ID [dec]

| | |
|---------------------------|---|
| Explanation | A remote mLACP peer has rejected an mLACP TLV. |
| Recommended Action | Issue the show version command on the local and remote devices to get the versions of IOS that are running. Reference the mLACP section of the IOS documentation to verify that mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative and provide the representative with the exact error message being seen as well as the versions of IOS from both devices. |

%ETHERNET_MLACP-4-ICRM_CLIENT_RECV_BAD_LEN : Received an mLACP TLV with bad length [dec], total message length [dec]

| | |
|---------------------------|--|
| Explanation | The mLACP TLV length is longer than the total message length. |
| Recommended Action | Issue the show version command on the local and remote devices to get the versions of IOS that are running. Reference the mLACP section of the IOS documentation to verify that mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative. Provide the representative with the exact message being seen as well as the output of the following commands, show version , show run , show lacp multi-chassis group , and show lacp multi-chassis port-channel . |

%ETHERNET_MLACP-4-ICRM_CLIENT_RECV_NO_TYPELEN : Received an mLACP TLV without a type and/or length field ([dec])

| | |
|---------------------------|---|
| Explanation | mLACP received an improperly formatted TLV from the peer. As a result the local and peer devices may have mismatched state data. |
| Recommended Action | Issue the show version command on the local and remote devices to get the versions of IOS that are running. Reference the mLACP section of the IOS documentation to verify that mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative and provide the representative with the exact error message being seen as well as the versions of IOS from both devices. |

%ETHERNET_MLACP-4-CORE_ISOLATION : mLACP Core isolation failure: Attempting to failover [dec] LAGs in redundancy group [int]

| | |
|---------------------------|---|
| Explanation | mLACP has detected isolation from the core and has attempted to failover. |
| Recommended Action | Use the show interchassis redundancy command to determine which core facing interface has triggered the isolation failure. Correct the failure for the given interface, this will clear the mLACP core isolation failure. Reference the mLACP section of the IOS documentation for more information on core isolation failures and related configuration commands. |

%ETHERNET_MLACP-4-CORE_CONNECTED : mLACP has recovered from a core isolation failure. Attempting to recover [dec] LAGs in redundancy group [int]

Explanation mLACP has recovered from core isolation and has attempted to recover the LAGs in the redundancy group.

Recommended Action This message may not require any action. However the **show lacp multi-chassis group** and **show lacp multi-chassis port-channel** commands may be used to verify the state of the mLACP port-channels. Reference the mLACP section of the IOS documentation for details on core isolation failures and related configuration commands.

%ETHERNET_MLACP-4-PEER_DOWN : mLACP Peer down failure: Attempting to make [dec] local LAGs active in redundancy group [int]

Explanation mLACP has detected a peer down failure and has attempted to make the local port-channels become active.

Recommended Action The peer down failure should be corrected by re-enabling communication with the peer mLACP device. Use the **show redundancy interchassis** command on both the local and peer mLACP devices to determine which peer member IP has lost communication. Use this information to further debug the network communication issue, and re-enable communication with the peer. Reference the mLACP section of the IOS documentation for more information on peer down failures.

%ETHERNET_MLACP-4-PEER_UP : mLACP has recovered from a peer down failure in redundancy group [int]

Explanation mLACP is now in communication with the peer device, and has recovered from a previous peer down failure.

Recommended Action This message may not require any action. However the **show lacp multi-chassis group** and **show lacp multi-chassis port-channel** commands may be used to verify the state of the mLACP port-channels. Reference the mLACP section of the IOS documentation for details on peer down failures and related configuration commands.

%ETHERNET_MLACP-4-PEER_DISCONNECT : An mLACP peer has disconnected from redundancy group [int], attempting to reconnect

Explanation mLACP has detected that a peer device from the specified redundancy group has disconnected. mLACP will attempt to reconnect to the device until successful.

%ETHERNET_MLACP-4-PEER_DISCONNECT : An mLACP peer has disconnected from redundancy group [int], attempting to reconnect

Recommended Action This message is typically caused by a configuration event on the peer router, and so no action may be necessary. However if this message is unexpected then issue the **show redundancy interchassis** command on both the local and peer mLACP devices to determine which peer member IP has lost communication. Use this information to further debug the network communication issue, and re-enable communication with the peer. Reference the mLACP section of the IOS documentation for more information on peer down failures.

%ETHERNET_MLACP-4-PEER_RECONNECT_FAILED : The attempt to reconnect to the peer in redundancy group [int] has failed

Explanation After an mLACP peer device disconnected, an attempt was made to reconnect, however that attempt has failed.

Recommended Action To reinitialize the connection, unconfigure **mLACP interchassis group** from the port-channel, and then reconfigure it. After doing that, issue **show redundancy interchassis** to get the peer member IP connection status and the mLACP connection state. If the peer member IP connection status is not CONNECTED then there is a more basic communication issue that needs to be fixed. Otherwise if the peer member IP is CONNECTED but the mLACP state is not CONNECTED, then there could be a software issue. In that case collect the output of **show redundancy interchassis**, **show lACP multi-chassis group**, and **show lACP multi-chassis port-channel**. Then please contact your Cisco technical support representative and provide the collected information.

%ETHERNET_MLACP-6-PEER_CONNECT : mLACP peer is now connected in redundancy group [int]

Explanation This message indicates that the local mLACP device is now connected to a peer device in the specified redundancy group.

Recommended Action No action is required. To view the peer information the command **show lACP multi-chassis port-channel** or **show lACP multi-chassis group** may be issued.

%ETHERNET_MLACP-4-PC_CHANGE : mLACP [chars] status changed to [chars]

Explanation A mLACP port-channel state change event has occurred. This might have been caused by a mLACP failure or recovery event on the local or peer POA in the same redundancy group. It is normal to get these messages during provisioning and administrative actions on the mLACP port-channel.

%ETHERNET_MLACP-4-PC_CHANGE : mLACP [chars] status changed to [chars]

| | |
|---------------------------|---|
| Recommended Action | User should debug further to analyze root cause of the event. Use show redundancy interchassis , show lacp multi-chassis port-channel , show lacp multi-chassis group and show lacp internal on both POAs to check mLACP port-channel health. If any failure exists, appropriate actions should be taken to recover port-channel from failure. If failure persists then please contact your Cisco technical support representative and provide the collected information. |
|---------------------------|---|

ETHERNET_OAM

%ETHERNET_OAM-2-CRIT_ERR : The Ethernet OAM protocol has encountered the critical error: [chars].

| | |
|---------------------------|---|
| Explanation | The protocol has run into a critical error. The reason should be given in the brackets. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERNET_OAM-6-CRITICAL_EVENT : The client on interface [chars] has received a Critical Event indication from its remote peer (action = [chars])

| | |
|---------------------------|---|
| Explanation | An OAMPDU has been received from the remote client that indicates a Critical Event has occurred. The indicated action will be performed. If the action is error-block the link will go into error-block state, where data traffic is blocked but link-oam can still be exchanged. If the action is error-disable, the link is brought down. |
| Recommended Action | Investigate the issue on the remote peer |

%ETHERNET_OAM-6-DYING_GASP : The client on interface [chars] has received a Dying Gasp indication from its remote peer (failure reason = [chars], action = [chars])

| | |
|---------------------------|---|
| Explanation | An OAMPDU has been received from the remote client that indicates a Dying Gasp, which may signal that the remote client is about to go down. The indicated action will be performed. If the action is error-block the link will go into error-block state, where data traffic is blocked but link-oam can still be exchanged. If the action is error-disable, the link is brought down. |
| Recommended Action | Investigate the issue on the remote peer |

%ETHERNET_OAM-6-LINK_FAULT : The client on interface [chars] has received a Link Fault indication from its remote peer (action = [chars])

Explanation An OAMPDU has been received from the remote client that indicates a Link Fault has been detected. This indicates a fault has occurred in the receive direction of the sending client. The indicated action will be performed. If the action is error-block the link will go into error-block state, where data traffic is blocked but link-oam can still be exchanged. If the action is error-disable, the link is brought down.

Recommended Action Check the wiring between the two interfaces.

%ETHERNET_OAM-6-CRITICAL_EVENT_CLEAR : The client on interface [chars] has received a clear of the Critical Event indication from its remote peer (action = [chars])

Explanation An OAMPDU has been received from the remote client that indicates that the Critical Event condition previously seen has cleared. If the action was error-block, traffic on the link will now be re-enabled. Error-disable state can only be cleared by performing a shut/no shut of the interface.

Recommended Action No action is required.

%ETHERNET_OAM-6-DYING_GASP_CLEAR : The client on interface [chars] has received a clear of the Dying Gasp indication from its remote peer (action = [chars])

Explanation An OAMPDU has been received from the remote client that indicates that the Dying Gasp condition previously seen has cleared. If the action was error-block, traffic on the link will now be re-enabled. Error-disable state can only be cleared by performing a shut/no shut of the interface.

Recommended Action No action is required.

%ETHERNET_OAM-6-LINK_FAULT_CLEAR : The client on interface [chars] has received a clear of the Link Fault indication from its remote peer (action = [chars])

Explanation An OAMPDU has been received from the remote client that indicates that the Link Fault condition previously seen has cleared. If the action was error-block, traffic on the link will now be re-enabled. Error-disable state can only be cleared by performing a shut/no shut of the interface.

Recommended Action No action is required.

%ETHERNET_OAM-5-LINK_MONITOR : [chars] detected over the last [chars] on interface [chars].

Explanation A monitored error has been detected to have crossed the user-specified threshold.

%ETHERNET_OAM-5-LINK_MONITOR : [chars] detected over the last [chars] on interface [chars].

Recommended Action No action is required.

%ETHERNET_OAM-5-EVENTTLV : [chars] is received from the remote client on interface [chars].

Explanation An Event TLV is received from the remote OAM client. It must have detected errors in receiving frames from this local interface.

Recommended Action No action is required.

%ETHERNET_OAM-6-LOOPBACK : Interface [chars] has [chars] the [chars] loopback mode.

Explanation The specified interface has entered or exited loopback mode because of protocol control or an external event, such as the interface link going down.

Recommended Action No action is required.

%ETHERNET_OAM-3-LOOPBACK_ERROR : Loopback operation on interface [chars] has encountered an error([chars]).

Explanation Because of the specified error, the loopback operation has ended abnormally.

Recommended Action No action is required.

%ETHERNET_OAM-6-ENTER_SESSION : The client on interface [chars] has entered the OAM session.

Explanation Ethernet OAM client on the specified interface has detected a remote client and has entered the OAM session.

Recommended Action No action is required.

%ETHERNET_OAM-6-EXIT_SESSION : The client on interface [chars] has left the OAM session.

Explanation Ethernet OAM client on the specified interface has experienced some state change.

Recommended Action No action is required.

%ETHERNET_OAM-6-LINK_TIMEOUT : The client on interface [chars] has timed out and exited the OAM session.

Explanation The Ethernet OAM client on the specified interface has not received any OAMPDUs in the number of seconds for timeout that were configured by the user. The client has exited the OAM session.

Recommended Action No action is required.

%ETHERNET_OAM-4-ISSU_INCOMPATIBLE : ether_oam-issu-compat: returned FALSE

Explanation The compatibility checking has failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ETHERNET_OAM-3-TRANSFORM_FAIL : ETHERNET OAM ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

Explanation The ETHERNET OAM ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the ETHERNET OAM state between the active device and the standby device is not identical.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>)

%ETHERNET_OAM-2-GET_BUFFER : ETHERNET OAM ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The ETHERNET OAM ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%ETHERNET_OAM-3-SESSION_UNREGISTRY : ETHERNET OAM ISSU client failed to unregister session information. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The ETHERNET OAM ISSU client failed to unregister session information. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%ETHERNET_OAM-2-INIT : ETHERNET OAM ISSU client initialization failed to [chars]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The ETHERNET OAM ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERNET_OAM-2-SEND_NEGO_FAILED : ETHERNET OAM ISSU client failed to send negotiation message. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The ETHERNET OAM ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |

%ETHERNET_OAM-2-SESSION_REGISTRY : ETHERNET OAM ISSU client failed to register session information. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The ETHERNET OAM ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%ETHERNET_OAM-3-INVALID_SESSION : ETHERNET OAM ISSU client does not have a valid registered session.

| | |
|---------------------------|---|
| Explanation | The ETHERNET OAM ISSU client does not have a valid registered session. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%ETHERNET_OAM-3-MSG_SIZE : ETHERNET OAM ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The ETHERNET OAM ISSU client failed to calculate the MTU for the specified message. The ETHERNET OAM ISSU client is not able to send the message to the standby device. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%ETHERNET_OAM-2-SESSION_NEGO : ETHERNET OAM ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | An ISSU-compliant client transitions through a series of internal states. The ETHERNET OAM ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

ETHERNET_PMLACP

%ETHERNET_PMLACP-3-SYS_CFG_DUPL_ID : Remote P-mLACP peer has duplicate P-mLACP node-id [dec]

| | |
|---------------------------|--|
| Explanation | A remote P-mLACP peer is configured with the same P-mLACP node-id as this device. |
| Recommended Action | Reconfigure the P-mLACP node-id to be unique between the two devices with the mlacp node-id configuration command. Refer to the P-mLACP configuration section of the Cisco IOS documentation for more information on configuring P-mLACP. |

%ETHERNET_PMLACP-3-SYS_CFG_INVALID_ID : Received invalid P-mLACP node-id [dec] from peer

| | |
|---------------------------|--|
| Explanation | A remote P-mLACP peer is configured with an invalid P-mLACP node-id. |
| Recommended Action | Reconfigure the peer to send a valid P-mLACP node-id with the mlacp node-id configuration command. Refer to the P-mLACP configuration section of the Cisco IOS documentation for more information on configuring P-mLACP. |

%ETHERNET_PMLACP-3-PEER_ICCP_VERSION_INCOMPATIBLE : Peer ICCP version [dec] is incompatible with local ICCP version [dec].

| | |
|--------------------|--|
| Explanation | P-mLACP peer is running with a different version of ICCP. Incompatible ICCP would prevent P-mLACP from working properly. |
|--------------------|--|

%ETHERNET_PMLACP-3-PEER_ICCP_VERSION_INCOMPATIBLE : Peer ICCP version [dec] is incompatible with local ICCP version [dec].

Recommended Action Reboot peer with identical IOS version would correct the issue. Compatible ICCP version between different IOS images can still be achieved by doing `show lacp multichassis load-balance group` on the both devices to check if ICCP versions are compatible. If ICCP versions are incompatible, repeat IOS image loading and CLI above until a compatible image is loaded.

%ETHERNET_PMLACP-4-ICRM_CLIENT_RECV_REJ : Received rejected P-mLACP TLV from peer with message ID [dec]

Explanation A remote P-mLACP peer has rejected an P-mLACP TLV.

Recommended Action Issue the `show version` command on the local and remote devices to get the versions of IOS that are running. Reference the P-mLACP section of the IOS documentation to verify that P-mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative and provide the representative with the exact error message being seen as well as the versions of IOS from both devices.

%ETHERNET_PMLACP-4-ICRM_CLIENT_RECV_BAD_LEN : Received an P-mLACP TLV with bad length [dec], total message length [dec]

Explanation The P-mLACP TLV length is longer than the total message length.

Recommended Action Issue the `show version` command on the local and remote devices to get the versions of IOS that are running. Reference the P-mLACP section of the IOS documentation to verify that P-mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative. Provide the representative with the exact message being seen as well as the output of the following commands, `show version`, `show run`, `show lacp multi-chassis load-balance group`, and `show lacp multi-chassis load-balance port-channel`.

%ETHERNET_PMLACP-4-ICRM_CLIENT_RECV_NO_TYPELEN : Received an P-mLACP TLV without a type and/or length field ([dec])

Explanation P-mLACP received an improperly formatted TLV from the peer. As a result the local and peer devices may have mismatched state data.

Recommended Action Issue the `show version` command on the local and remote devices to get the versions of IOS that are running. Reference the P-mLACP section of the IOS documentation to verify that P-mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative and provide the representative with the exact error message being seen as well as the versions of IOS from both devices.

%ETHERNET_PMLACP-4-CORE_ISOLATION : P-mLACP Core isolation failure: Attempting to failover [dec] ports in redundancy group [int]

| | |
|---------------------------|---|
| Explanation | P-mLACP has detected isolation from the core and has attempted to failover. |
| Recommended Action | Use the show interchassis redundancy command to determine which core facing interface has triggered the isolation failure. Correct the failure for the given interface, this will clear the P-mLACP core isolation failure. Reference the P-mLACP section of the IOS documentation for more information on core isolation failures and related configuration commands. |

%ETHERNET_PMLACP-4-CORE_CONNECTED : P-mLACP has recovered from a core isolation failure. Attempting to recover [dec] ports in redundancy group [int]

| | |
|---------------------------|--|
| Explanation | P-mLACP has recovered from core isolation and has attempted to recover the ports in the redundancy group. |
| Recommended Action | This message may not require any action. However the show lacp multi-chassis load-balance group and show lacp multi-chassis load-balance port-channel commands may be used to verify the state of the P-mLACP port-channels. Reference the P-mLACP section of the IOS documentation for details on core isolation failures and related configuration commands. |

%ETHERNET_PMLACP-4-PEER_DOWN : P-mLACP Peer down failure: Attempting to make [dec] local ports active in redundancy group [int]

| | |
|---------------------------|--|
| Explanation | P-mLACP has detected a peer down failure and has attempted to make the local port-channels become active. |
| Recommended Action | The peer down failure should be corrected by re-enabling communication with the peer P-mLACP device. Use the show redundancy interchassis command on both the local and peer P-mLACP devices to determine which peer member IP has lost communication. Use this information to further debug the network communication issue, and re-enable communication with the peer. Reference the P-mLACP section of the IOS documentation for more information on peer down failures. |

%ETHERNET_PMLACP-4-PEER_UP : P-mLACP has recovered from a peer down failure in redundancy group [int]

| | |
|---------------------------|---|
| Explanation | P-mLACP is now in communication with the peer device, and has recovered from a previous peer down failure. |
| Recommended Action | This message may not require any action. However the show lacp multi-chassis load-balance group and show lacp multi-chassis load-balance port-channel commands may be used to verify the state of the P-mLACP port-channels. Reference the P-mLACP section of the IOS documentation for details on peer down failures and related configuration commands. |

%ETHERNET_PMLACP-4-PEER_DISCONNECT : An P-mLACP peer has disconnected from redundancy group [int], attempting to reconnect

| | |
|---------------------------|---|
| Explanation | P-mLACP has detected that a peer device from the specified redundancy group has disconnected. P-mLACP will attempt to reconnect to the device until successful. |
| Recommended Action | This message is typically caused by a configuration event on the peer router, and so no action may be necessary. However if this message is unexpected then issue the show redundancy interchassis command on both the local and peer P-mLACP devices to determine which peer member IP has lost communication. Use this information to further debug the network communication issue, and re-enable communication with the peer. Reference the P-mLACP section of the IOS documentation for more information on peer down failures. |

%ETHERNET_PMLACP-4-PEER_RECONNECT_FAILED : The attempt to reconnect to the peer in redundancy group [int] has failed

| | |
|---------------------------|---|
| Explanation | After an P-mLACP peer device disconnected, an attempt was made to reconnect, however that attempt has failed. |
| Recommended Action | To reinitialize the connection, unconfigure mlacp interchassis group from the port-channel, and then reconfigure it. After doing that, issue show redundancy interchassis to get the peer member IP connection status and the P-mLACP connection state. If the peer member IP connection status is not CONNECTED then there is a more basic communication issue that needs to be fixed. Otherwise if the peer member IP is CONNECTED but the P-mLACP state is not CONNECTED, then there could be a software issue. In that case collect the output of show redundancy interchassis , show lacp multi-chassis load-balance group , and show lacp multi-chassis load-balance port-channel . Then please contact your Cisco technical support representative and provide the collected information. |

%ETHERNET_PMLACP-6-PEER_CONNECT : P-mLACP peer is now connected in redundancy group [int]

| | |
|---------------------------|--|
| Explanation | This message indicates that the local P-mLACP device is now connected to a peer device in the specified redundancy group. |
| Recommended Action | No action is required. To view the peer information the command show lacp multi-chassis load-balance port-channel or show lacp multi-chassis load-balance group may be issued. |

ETHERNET_PROXY**%ETHERNET_PROXY-2-PROXY_IPC_INIT_FAILED : CPP ETHERNET Proxy IPC interface initialization failure (result: [dec]).**

Explanation Cisco internal software error. CPP ETHERNET Proxy initialization detected that the IPC interface initialization failed. CPP ETHERNET proxy will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ETHERNET_PROXY-3-PROXY_BAD_MSG : CPP ETHERNET Proxy received bad length message type [dec]

Explanation Cisco internal software error. CPP ETHERNET Proxy received a corrupted message from control plane. This message will be ignored.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ETHERNET_PROXY-3-PROXY_INV_MSG : CPP ETHERNET Proxy received invalid message type [dec]

Explanation Cisco internal software error. CPP ETHERNET Proxy received an invalid message type from control plane. This message will be ignored.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ETHERNET_PROXY-3-PROXY_IPC_ALLOC_FAILED : CPP ETHERNET Proxy [chars] message lost due to message buffer allocation failure., MSGDEF_LIMIT_MEDIUM

Explanation Cisco internal software error. CPP ETHERNET Proxy message processing detected a message buffer allocation failure. The message is lost as the result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ETHERNET_PROXY-3-PROXY_IPC_SEND_FAILED : CPP ETHERNET Proxy [chars] message lost due to message sent failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP ETHERNET Proxy message processing detected a message sent failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ETHERNET_PROXY-3-PROXY_IPC_NO_HDLR : CPP ETHERNET Proxy received unregistered message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP ETHERNET Proxy received a message from control plane but there is no registered handler. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

ETHER_LMI through EVENT

- [ETHER_LMI](#)
- [ETHER_LMI_HA](#)
- [ETHER_PLATFORM_SW](#)
- [ETHER_SERVICE](#)
- [ETHER_SERVICE_IPC](#)
- [ETH_SPA_GEN](#)
- [ETH_SPA_GILA_FUGU](#)
- [ETH_SPA_MAC](#)
- [ETH_SPA_SERDES](#)
- [EVENT](#)

ETHER_LMI**%ETHER_LMI-6-MISMATCHED_VLAN_CONFIGURED : VLAN [chars] configured but not in VLAN mapping for UNI [chars]**

Explanation VLANs configured on UNI but do not exist according to VLAN mapping received from Network via Ethernet LMI.

Recommended Action Verify configurations of VLANs on UNI to match those assigned.

%ETHER_LMI-6-MISMATCHED_VLAN_NOT_CONFIGURED : VLAN [chars] not configured but in VLAN mapping for UNI [chars]

Explanation VLAN mapping received from Network via Ethernet LMI do not match those which are configured on the UNI.

Recommended Action Verify configurations of VLANs on UNI to match those assigned.

ETHER_LMI_HA**%ETHER_LMI_HA-2-INIT : Ether LMI ISSU client initialization failed to [chars]. Error: [dec] ([chars])**

Explanation The Ether LMI ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ETHER_LMI_HA-3-TRANSFORM : Ether LMI ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

Explanation The Ether LMI ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the Ether LMI state between the active device and the standby device is not identical.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>)

%ETHER_LMI_HA-3-MSG_NOT_OK : Ether LMI ISSU client 'Message Type [dec]' is not compatible

| | |
|---------------------------|---|
| Explanation | The Ether LMI ISSU client received an incompatible message from the peer device. The message cannot be processed. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%ETHER_LMI_HA-3-MSG_SIZE : Ether LMI ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Ether LMI ISSU client failed to calculate the MTU for the specified message. The Ether LMI ISSU client will not able to send the message to the standby device. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%ETHER_LMI_HA-3-INVALID_SESSION : Ether LMI ISSU client does not have a valid registered session.

| | |
|---------------------------|---|
| Explanation | The Ether LMI ISSU client does not have a valid registered session. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%ETHER_LMI_HA-2-SESSION_REGISTRY : Ether LMI ISSU client failed to register session information. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Ether LMI ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%ETHER_LMI_HA-3-SESSION_UNREGISTRY : Ether LMI ISSU client failed to unregister session information. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The Ether LMI ISSU client failed to unregister session information. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%ETHER_LMI_HA-2-SESSION_NEGO : Ether LMI ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | An ISSU-compliant client transitions through a series of internal states. The Ether LMI ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%ETHER_LMI_HA-2-SEND_NEGO_FAILED : Ether LMI ISSU client failed to send negotiation message. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Ether LMI ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |

%ETHER_LMI_HA-2-GET_BUFFER : Ether LMI ISSU client failed to get buffer for message. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Ether LMI HA client failed to get buffer space for building chkpt message. Message cannot be sent to standby device. If a problem occurs, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |

ETHER_PLATFORM_SW

%ETHER_PLATFORM_SW-3-DOT1AH_DEL_MAP_FAILED : Unable to remove 802.1ah mapping entry for B-MAC [enet], C-MAC [enet].

| | |
|---------------------------|--|
| Explanation | The Ethernet Software Platform was unable to remove an 802.1ah mapping entry from the tree of entries. |
| Recommended Action | This error may be transient. If the error persists you may need to reload the router. |

%ETHER_PLATFORM_SW-3-DOT1AH_CHNK_LCK_FAILED : Unable to lock memory while learning C-MAC to B-MAC mapping

| | |
|--------------------|---|
| Explanation | The Ethernet Software Platform was unable to lock a particular piece of memory while attempting to learn a C-MAC to B-MAC mapping |
|--------------------|---|

%ETHER_PLATFORM_SW-3-DOT1AH_CHNK_LCK_FAILED : Unable to lock memory while learning C-MAC to B-MAC mapping

Recommended Action This error may be transient. If the error persists you may need to reload the router.

%ETHER_PLATFORM_SW-3-DOT1AH_PROC_ENQ_FAILED : Unable to enqueue a request to learn a C-MAC to B-MAC mapping

Explanation An error occurred while trying to enqueue a request to learn a C-MAC to B-MAC mapping.

Recommended Action This error may be transient. If the error persists you may need to reload the router.

%ETHER_PLATFORM_SW-3-EFP_CANNOT_CLEAR_DIM : Unable to clear EFP's encapsulation data

Explanation An error occurred while trying to clear the encapsulation data for an EFP.

Recommended Action Enable debugging with 'debug ethernet service instace'. Retry the operation that caused the error to see if additional debugging messages are provided. If the error persists you may need to reload the router.

%ETHER_PLATFORM_SW-3-REWRITE_FAILED : Unable to apply rewrite to packet

Explanation An error occurred while trying to perform an ingress rewrite operation on a frame.

Recommended Action This error may be transient. If the error persists you may need to reload the router.

%ETHER_PLATFORM_SW-3-BD_NULL : Unable to get bridge-domain [dec] information for EFP [dec]

Explanation The software dataplane was unable to get the bridge-domain information for the EFP.

Recommended Action This error may be transient. If the error persists you may need to reload the router.

%ETHER_PLATFORM_SW-3-NO_PD_EFP : Unable to find software platform EFP information for EFP ID [dec]

Explanation The software dataplane was unable to get the platform dependent EFP information for the EFP with the given ID.

Recommended Action This error may indicate a bug in the software dataplane implementation. If the error occurs after a specific configuration was performed then precisely record those configuration steps. Contact your Cisco technical support representative and provide the gathered information.

ETHER_SERVICE**%ETHER_SERVICE-6-EVC_VLAN_NOT_CONFIGURED : VLANs [chars] not configured at [chars] but is in a CEVLAN/EVC map**

Explanation VLANs part of the CEVLAN/EVC map for an EVC associated to an interface but the interface doesn't have those VLANs configured

Recommended Action Verify configurations of VLANs on the interface

%ETHER_SERVICE-6-EVC_STATUS_CHANGED : status of [chars] changed to [chars]

Explanation EVC status has changed

Recommended Action No Action

%ETHER_SERVICE-6-UPDOWN : Service instance [dec] on interface [chars] changed to [chars]

Explanation Service instance shutdown due to errdisable

Recommended Action No Action

%ETHER_SERVICE-6-ERR_DISABLED : [chars] - shutdown service instance [dec] at [chars]

Explanation Service instance shutdown due to errdisable

Recommended Action No Action

%ETHER_SERVICE-4-UNSUP_MIRPENABLE : %% Not supported since no ethernet mac-flush notification mirp command is configured.

Explanation no ethernet mac-flush notification mirp is configured.

Recommended Action Configure ethernet mac-flush notification mirp command.

%ETHER_SERVICE-3-EFP_NO_MEMORY : [chars] : memory allocation failed for [chars]

Explanation memory allocation failed

%ETHER_SERVICE-3-EFP_NO_MEMORY : [chars] : memory allocation failed for [chars]

Recommended Action 'show proc mem' or 'show buffs' to check if memory or buffer is full. shutdown unused tasks or reset cards usually can recover those memory leak problem. Copy the error and send it to TAC if those actions does not help.

%ETHER_SERVICE-3-EFP_NULL_POINTER : [chars] : [chars] pointer is NULL

Explanation NULL pointer

Recommended Action Copy the error and send it to TAC

%ETHER_SERVICE-3-EFP_INVALID_TYPE : [chars] : [chars] is INVALID

Explanation invalid type

Recommended Action Copy the error and send it to TAC

%ETHER_SERVICE-3-ETHER_CHAN_SERV_INSTANCE_POLICY_REMOVED : [chars] service policy [chars] has been removed from service instance [dec] of ethernet channel [chars] due to failure to install the policy on member link [chars].

Explanation The member link does not support the service policy or installation failed due to resources limitation at the time.

Recommended Action Check for any error message that indicates incompatibility between the policy and the member link. Remove the member link from the ethernet channel and reconfigure the policy on the service instance. If the problem persists, copy the error exactly as it appears and report it to your technical support representative.

%ETHER_SERVICE-3-EFP_DEBUG_INIT_FAILURE : The Ether Infra Trace and Debug Library Failed to initialize successfully due to error: [int]

Explanation All trace and debug may not work

Recommended Action No Action

ETHER_SERVICE_IPC

%ETHER_SERVICE_IPC-3-IPCPOR_CREATE : Unable to create IPC port ([chars]).

Explanation Ethernet Service was unable to create an IPC port

%ETHER_SERVICE_IPC-3-IPCPORT_CREATE : Unable to create IPC port ([chars]).

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-3-IPCPORT_REGISTER : Unable to register IPC port ([chars]).

Explanation Ethernet Service was unable to register an IPC port

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-3-IPCPORT_REMOVE : Unable to remove IPC port ([chars]).

Explanation Ethernet Service was unable to remove an IPC port

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-3-IPCPROCESSES : Unable to create IPC processes on ([chars]).

Explanation Ethernet Service was unable to create IPC processes

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-4-NOIPCPORT : IPC port is NULL, ([chars])

Explanation Ethernet Service cannot send the message as the IPC port information is NULL. This is a warning message, no action is required.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-4-NOMESSAGE : Message is NULL, ([chars])

Explanation Cannot send the message as the message is NULL. This is a warning message, no action is required

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-4-NOIPCDATA : IPC Message has no data area, ([chars])

Explanation Cannot find data area in an IPC message. This is a warning message, no action is required

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-3-IPCSESSION : Unable to open an IPC session for communicating with ([chars]). Error: [chars]

Explanation This is an internal error

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-3-NOIPCDESC : Unable to allocate IPC descriptor for Ethernet Service on ([chars]).

Explanation This is an internal error

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-3-NOMEM : Unable to allocate memory for Ethernet Service on ([chars]).

Explanation This is an internal error

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-3-IPC_TRANSMIT_FAILED : IPC message transmission failure ([chars])

Explanation An error was detected when transmitting an IPC message between Standby RP and SP. The failure most likely occurred because of a software error. The message output identifies the type of error that occurred.

Recommended Action This could be a transient error. If this error persists, copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-3-IPC_RESP_ERROR : IPC send response error ([chars])

Explanation An error was detected in the response for an IPC message that was transmitted to the peer.

Recommended Action This error could be transient. If this error persists, copy the error message exactly as it appears, and report it to your technical support representative.

%ETHER_SERVICE_IPC-3-RMI_FAILED : Ethernet Infra failed to register with the Resource Manager (RMI), [chars]

Explanation Ethernet Infra registers with the Resource Manager (RMI) to get status notifications about resources (such as IPC) and uses them to throttle the sending of messages to the peer. The Ethernet Infra was unable to register itself with RMI and hence cannot throttle the sending of any messages. The system may still operate normally. This error most likely occurred because of a software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show tech** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ETHER_SERVICE_IPC-3-RMI_CALLBACK : Ethernet Infra encountered an error while processing a callback from the Resource Manager (RMI), [chars]

Explanation Ethernet Infra registers with the Resource Manager (RMI) to get status notifications about resources (such as IPC) and uses them to throttle the sending of messages to the peer. The Ethernet Infra encountered an error while processing a callback from RMI. This error most likely occurred because of a software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show tech** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

ETH_SPA_GEN

%ETH_SPA_GEN-3-CU_SFP_NOT_SUPP : CU-SFP is not supported on SPA-2x1GE-V2 / SPA-2x1GE-SYNCE

Explanation CU-SFP is not supported on SPA-2x1GE-V2 / SPA-2x1GE-SYNCE

Recommended Action Use PHY based ports for CU Connections

%ETH_SPA_GEN-3-UNSUPPORTED_XCVR : Transceiver type GLC-GE-100FX is not supported on SPA-8xGE-V2

Explanation Transceiver type GLC-GE-100FX is not supported on SPA-8xGE-V2

%ETH_SPA_GEN-3-UNSUPPORTED_XCVR : Transceiver type GLC-GE-100FX is not supported on SPA-8xGE-V2

Recommended Action Consult the documentation and ensure supported transceivers are plugged into the SPA

ETH_SPA_GILA_FUGU

%ETH_SPA_GILA_FUGU-3-SPI4_SYNC_FAIL : [chars] : Sync check failed in [chars] SPI4 interafce

Explanation Synchronization check failed in the Gila/Fugu SPI4 interafce

Recommended Action Try reseating the SPA. If the issue persists, contact Cisco Technical Assistance Center.

%ETH_SPA_GILA_FUGU-3-SPI4_RDOOF_ERR : [chars] : [chars] Rdata Out of Frame error

Explanation An internal SPI4 error (SPI4 Rdata Out of Frame error) occurred in the SPA.

Recommended Action If the issue persists, open a case with the Cisco Technical Assistance Center.

%ETH_SPA_GILA_FUGU-3-SPI4_OVF_ERR : [chars] : [chars] Overflow Error

Explanation An internal SPI4 error (SPI4 Overflow Error) occurred in the SPA.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%ETH_SPA_GILA_FUGU-3-SPI4_MCALPRTY_ERR : [chars] : [chars] Calender memory Parity error

Explanation An internal SPI4 error (SPI4 calender memory parity error) occurred in the SPA.

Recommended Action If the issue persists, it may be a case of bad hardware. Please open a case with Cisco technical support personnel for further assistance.

%ETH_SPA_GILA_FUGU-3-SPI4_MCALRBPTY_ERR : [chars] : [chars] Calender memory read back Parity error

Explanation An internal SPI4 error (SPI4 Calender memory read back parity error) occurred in the SPA.

Recommended Action Try reseating the SPA and if the issue persists, open a case with the Cisco Technical Assistance Center.

%ETH_SPA_GILA_FUGU-3-SPI4_MDATAPRTY_ERR : [chars] : [chars] Memory Parity error

| | |
|---------------------------|---|
| Explanation | An internal SPI4 error (SPI4 DATA FIFO Memory Parity error) occurred in the SPA. |
| Recommended Action | If the issue persists, open a case with Cisco Technical Assistance Center for further assistance. |

%ETH_SPA_GILA_FUGU-3-SPI4_MCNTPRTY_ERR : [chars] : [chars] Memory Parity error

| | |
|---------------------------|---|
| Explanation | An internal SPI4 error (SPI4 Control FIFO Memory Parity error) occurred in the SPA. |
| Recommended Action | If the issue persists, open a case with Cisco Technical Assistance Center for further assistance. |

%ETH_SPA_GILA_FUGU-3-VLAN_TCAM_ERR : TCAM programming error at offset [dec]

| | |
|---------------------------|--|
| Explanation | An error was encountered when programming the VLAN TCAM. Two tcam entries are seen to have the same logical address, so traffic drop will be seen on these subinterfaces |
| Recommended Action | Reload the Linecard. If the issue persists, please open a case with Cisco TAC for further assistance. |

%ETH_SPA_GILA_FUGU-3-DATA_VER_MISMATCH : TCAM checkpointed data version [dec] differs from current version [dec].

| | |
|---------------------------|--|
| Explanation | During Minimal Disruptive Restart, version of checkpointed team data is found to be different from the data in the current version. The SPA will be reset as normal and hence will impact traffic. |
| Recommended Action | Open a case with Cisco Technical Assistance Center for further assistance. |

%ETH_SPA_GILA_FUGU-3-HDR_VER_MISMATCH : TCAM checkpointed header version [dec] differs from current version [dec].

| | |
|---------------------------|--|
| Explanation | During Minimal Disruptive Restart, version of checkpointed team header is found to be different from the header in the current version. The SPA will be reset as normal and hence will impact traffic. |
| Recommended Action | Open a case with Cisco Technical Assistance Center for further assistance. |

%ETH_SPA_GILA_FUGU-3-HDR_PARAMS_MISMATCH : TCAM checkpointed header values differs from values in current version.

Explanation During Minimal Disruptive Restart, values of fields in the checkpointed tcam header is found to be differnt from the values in the current version of IOS. The SPA will be reset as normal and hence will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%ETH_SPA_GILA_FUGU-3-ELT_NOT_IN_CUR_VER : The element at address [dec] in [chars] tcam is found missing during Minimal Disruptive Restart reconciliation.

Explanation During the reconciliation phase of Minimal Disruptive Restart, an element was found to be present in the old IOS but not present in the new IOS image. This indicates that the config for this element was not played down from the RP during config-replay. This is an error condition, and the SPA will be reset as normal and hence will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance

%ETH_SPA_GILA_FUGU-6-ELT_IS_NEW : The element at address [dec] in [chars] tcam is found to be new during Minimal Disruptive Restart reconciliation.

Explanation During the reconciliation phase of Minimal Disruptive Restart, an element was found to be present in the new IOS but not present in the old IOS image. This is not an error condition, the SPA driver will program this new entry into the hardware.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance

%ETH_SPA_GILA_FUGU-3-HW_SW_MISMATCH : The hardware and software copies of the element at address [dec] in tcam [chars] do not match. This indicates reconciliation failure.

Explanation During reconciliation phase of Minimal Disruptive Restart, it is found that the software and hardware copies of an element in tcam do not match. This indicates an error and the SPA will be reset as normal and impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance

%ETH_SPA_GILA_FUGU-3-RECONFIG_FAILURE : Fugu reconfiguration failed for SPA in slot [int], bay [int] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, fugu reconfiguration error has occurred. This indicates an error and the SPA will be reset as normal and impact traffic.

%ETH_SPA_GILA_FUGU-3-RECONFIG_FAILURE : Fugu reconfiguration failed for SPA in slot [int], bay [int] during Minimal Disruptive Restart.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%ETH_SPA_GILA_FUGU-3-TCAM_RECONFIG_FAILURE : Fugu TCAM reconfiguration failed for SPA in slot [int], bay [int] with error [dec], reconfig_needed [dec] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, fugu tcam reconfiguration error has occurred. This indicates an error and SPA will be reset as normal and impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%ETH_SPA_GILA_FUGU-3-RESTART_FAILURE : Fugu restart failed for SPA in slot [int], bay [int] with error [dec] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, fugu restart error has occurred. This indicates an error and the SPA will be reset as normal and impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%ETH_SPA_GILA_FUGU-3-TCAM_RESTART_FAILURE : TCAM restart failed for SPA in slot [int], bay [int] with error [dec] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, fugu tcam restart has failed. This indicates an error and SPA will be reset as normal and impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

ETH_SPA_MAC

%ETH_SPA_MAC-3-UNREC_ECC_ERR : [chars] : An unrecoverable ECC error occurred in the MAC

Explanation An unrecoverable ECC error occurred in the MAC.

Recommended Action Try to reload the SPA to recover from the failure. If the problem persists, contact Cisco Technical Assistance Center for assistance.

%ETH_SPA_MAC-3-SPI4_ERROR : [chars] : SPI4 Error occurred in the MAC

Explanation SPI4 error occurred in the MAC.

%ETH_SPA_MAC-3-SPI4_ERROR : [chars] : SPI4 Error occured in the MAC

Recommended Action SPI error reported in the SPA. Try reseating the SPA if the error occurs multiple times. If you further need assistance please open a case with Cisco TAC at <https://mycase.cloudapps.cisco.com/case>

%ETH_SPA_MAC-3-SPI4_SINK_INIT_ERR : [chars] : Marvel spi4.1 sink init failed PL410 global status <lock> not set

Explanation An internal SPI4 error occurred in the SPA.

Recommended Action If the issue persists, return the SPA using the RMA process.

%ETH_SPA_MAC-3-RECONFIG_FAILURE : MAC reconfiguration failed for SPA in slot [int], bay [int] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, a mac reconfiguration error has occurred. This indicates an error and the SPA will be reset as normal and impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%ETH_SPA_MAC-3-PHY_RECONFIG_FAILURE : PHY reconfiguration failed for SPA in slot [int], bay [int] with error [dec] during Minimal Disruptive Restart. This indicates an error and the SPA will be reset as normal and impact traffic.

Explanation

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%ETH_SPA_MAC-3-RESTART_FAILURE : MAC restart failed for SPA in slot [int], bay [int] with error [dec] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, mac restart error has occurred. This indicates an error and the SPA will be reset as normal and impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%ETH_SPA_MAC-3-PHY_RESTART_FAILURE : PHY restart failed for SPA in slot [int], bay [int] with error [dec] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, phy restart error has occurred. This indicates an error and the SPA will be reset as normal and impact traffic.

%ETH_SPA_MAC-3-PHY_RESTART_FAILURE : PHY restart failed for SPA in slot [int], bay [int] with error [dec] during Minimal Disruptive Restart.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%ETH_SPA_MAC-6-INTR_BURST : Interrupts from [chars] have crossed burst limit of [dec] in [dec] msec for port [dec]/[dec]/[dec]

Explanation Interrupts that have crossed the burst limit are detected by the SPA.

Recommended Action Check the interface configuration and receive signal characteristics. Also verify the XFP transceiver and receive signal path. Re-enable the interface after corrective action.

%ETH_SPA_MAC-3-INTR_MAX_BURST : Bursts of interrupts from [chars] have crossed maximum limit [dec] for port [dec]/[dec]/[dec]

Explanation Burst of interrupts that have crossed the maximum limit are detected by the SPA.

Recommended Action Check the interface configuration and receive signal characteristics. Also verify the XFP transceiver and receive signal path. Re-enable the interface after corrective action.

ETH_SPA_SERDES

%ETH_SPA_SERDES-3-RECONFIG_FAILURE : Serdes reconfiguration failed for SPA in slot [int], bay [int] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, serdes reconfiguration error has occurred. This indicates an error and the SPA will be reset as normal and impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%ETH_SPA_SERDES-3-RESTART_FAILURE : Serdes restart failed for SPA in slot [int], bay [int] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, serdes restart error has occurred. This indicates an error and the SPA will be reset as normal and impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

EVENT**%EVENT-3-INSERT_FAILURE : Failed to insert [chars]**

| | |
|---------------------------|---|
| Explanation | The event process failed to insert the newly created row in its linked list data structure |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%EVENT-3-NULL_STRUCT : Null pointer to the [chars] structure

| | |
|---------------------------|---|
| Explanation | The process was woken up with an element, which had a null pointer to the test structure |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%EVENT-3-NULL_ELEMENT : Null pointer in the watched queue for [chars] test

| | |
|---------------------------|---|
| Explanation | The process was woken up with an NULL element |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

EVENTLIB through FEC_ISSU

- [EVENTLIB](#)
- [EVENT_TRACE](#)
- [EVTMON_PROXY](#)
- [EVUTIL](#)
- [EXTASSIGNER](#)
- [EZMAN_CLIENT](#)
- [EZMAN_INFRA](#)
- [EZMAN_RM](#)
- [FARM_DSPRM](#)
- [FEC_ISSU](#)

EVENTLIB**%EVENTLIB-3-CPUHOG : [chars]: [int]ms, Traceback=[chars]**

| | |
|--------------------|--|
| Explanation | This error occurs when a particular event consumes an unfair share of the CPU that may degrade overall system response time. |
|--------------------|--|

%EVENTLIB-3-CPUHOG : [chars]: [int]ms, Traceback=[chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show platform software process event** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%EVENTLIB-3-RUNHOG : [chars]: [int]ms, Traceback=[chars]

Explanation This error occurs when a particular event consumes an overall unfair share of the CPU that may degrade overall system response time.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show platform software process event** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%EVENTLIB-3-TIMEHOG : [chars]: [int]ms, Traceback=[chars]

Explanation This error occurs when a particular event takes an unusually long time to complete. This may affect overall system response time.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show platform software process event** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%EVENTLIB-3-HISTSUMM : dispatch start: [int]ms elapsed time: [int]ms detected hog: [int] set count: [int]

Explanation This event summary is part of a CPUHOG or TIMEHOG error, providing diagnostic details useful to engineering. Save this summary message along with the HOG error.

Recommended Action Report this occurrence to Engineering. Use Topic to search for a similar DDTS. If you find none, write a DDTS for this problem.

%EVENTLIB-3-HISTELEM : elem[[int]] event: [chars] [chars] set: [int]ms unset: [int]ms hog check: [dec] caller: [IPV6 address] app-info: [chars]

Explanation This event element is part of a CPUHOG or TIMEHOG error, providing diagnostic details useful to engineering. Save all element messages along with the HOG error.

Recommended Action Report this occurrence to Engineering. Use Topic to search for a similar DDTS. If you find none, write a DDTS for this problem.

%EVENTLIB-3-EVFDREAD : Event notification read failed with err [chars]

Explanation This occurs when we fail to read a thread notify event

Recommended Action Report this occurrence to Engineering. Use Topic to search for a similar DDTS. If you find none, write a DDTS for this problem.

EVENT_TRACE

%EVENT_TRACE-6-ENABLE : Trace already enabled.

Explanation Specified event trace has already been enabled

Recommended Action This is a debug message only. No action is required.

%EVENT_TRACE-3-SIZE_ELEM : Size of trace element = [dec] is greater than size = [dec] allowed

Explanation The size of the specified individual trace entry is greater than the allowed size.

Recommended Action Reduce the individual trace entry size so as not to exceed the max while initializing the event trace

%EVENT_TRACE-3-NUM_ELEM : Number of trace element = [dec] is greater than number = [dec] allowed

Explanation The number of trace entries exceed the allowed amount

Recommended Action Reduce the number of trace entries

%EVENT_TRACE-3-NO_MEM : Not enough memory for [dec] trace elements.

Explanation The system memory is insufficient for the number of trace elements specified.

Recommended Action Reduce the size of the event trace

%EVENT_TRACE-3-NO_FILENAME : Dump file not specified.

| | |
|---------------------------|--|
| Explanation | No filename has been specified as output for the event trace. |
| Recommended Action | You must specify the trace dump filename. To specify the trace dump filename, enter the monitor event-trace comp dump-file filename command in global configuration mode |

%EVENT_TRACE-3-SIZE_FILENAME : Trace filename size = [dec] greater than size = [dec] allowed

| | |
|---------------------------|---|
| Explanation | The length of the specified Event Trace filename exceeds the allowed. |
| Recommended Action | Shorten the filename. |

%EVENT_TRACE-3-OPEN_FILE : Couldn't open [chars]...

| | |
|---------------------------|---|
| Explanation | The Event Trace subsystem could not open a file for the specified event trace dump. |
| Recommended Action | If a file by the same name already exists, rename the dump file or remove the existing file from the file system. |

%EVENT_TRACE-3-WRITE_FILE : Error writing to file [chars]

| | |
|---------------------------|---|
| Explanation | Event trace is not able to write to the specified filesystem |
| Recommended Action | The filesystem might not be available. Try changing the destination filesystem and dumping there. If none work, copy the error message exactly as it and call your Cisco technical support representative |

%EVENT_TRACE-3-CLOSE_FILE : Error closing file [chars]

| | |
|---------------------------|---|
| Explanation | The Event Trace subsystem can not close the specified file |
| Recommended Action | No action required. This will not affect system functionality |

%EVENT_TRACE-6-NO_FORMATTER : [chars]: no formatter provided, binary dumping.

| | |
|---------------------------|--|
| Explanation | No formatter function was provided during the initialization of the specified event trace. |
| Recommended Action | No action is required. |

%EVENT_TRACE-3-RESIZE : Enable trace before resizing

Explanation The specified event trace must be enabled before resizing occurs.

Recommended Action Enable the specified event trace.

%EVENT_TRACE-3-OPEN : [chars]: Trace failed to open

Explanation Initialization of the specified event trace has failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%EVENT_TRACE-3-CONTINUOUS : Enable trace before setting continuous display

Explanation The specified event trace must be enabled before continuous display could occurs.

Recommended Action Enable the specified event trace.

%EVENT_TRACE-3-NO_TRACE_NAME : Invalid trace name [chars]

Explanation There is no trace buffer configured by the name entered.

Recommended Action Check whether there is an event trace buffer configured by the name entered and then enter the correct trace buffer name.

%EVENT_TRACE-3-GROUP_ID : Duplicate registration of group-id [dec]

Explanation Software subsystem is trying to register a group id for event trace which has already been used by another subsystem.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

EVTMON_PROXY

%EVTMON_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]

Explanation IPC handler initialization failed.

%EVTMON_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%EVTMON_PROXY-4-PROXY_IPC_INVALID_MSG : [hex]

| | |
|---------------------------|---|
| Explanation | Received an invalid IPC messages subtype. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%EVTMON_PROXY-4-PROXY_IPC_EVTMON_FEAT_UPDATE_FAILED : feature user failed to [chars] because of [chars]

| | |
|---------------------------|---|
| Explanation | Event monitor feature user failed to attach or detach. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%EVTMON_PROXY-4-PROXY_IPC_EVTMON_REC_UPDATE_FAILED : event record update failed

| | |
|---------------------------|---|
| Explanation | Event monitor failed to attach or detach event record. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

EVUTIL

%EVUTIL-6-PREREQUISITE : Preferred library is absent

| | |
|---------------------------|---|
| Explanation | Eventlib has detected that a preferred library is missing from the process. |
| Recommended Action | This is an informational message. |

%EVUTIL-3-PREREQUISITE_INIT : A preferred library has failed to initialize: [chars]

| | |
|---------------------------|--|
| Explanation | Eventlib has detected that a preferred library which provides infrastructure services has failed to fully initialize. |
| Recommended Action | Review the process logs taking note of the timestamp information to select specific information to review. Copy the message and other related information exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%EVUTIL-3-PERMISSION : Operation not permitted for pid [dec] tid [dec]

| | |
|---------------------------|--|
| Explanation | Eventlib has detected that a process has attempted to invoke an API that is listed as having a level of permission. |
| Recommended Action | Review the process logs taking note of the timestamp information to select specific information to review. Copy the message and other related information exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

EXTASSIGNER

%EXTASSIGNER-3-NOCB : Failed to find the skinnyCB

| |
|---------------------------|
| Explanation |
| Recommended Action |

%EXTASSIGNER-3-NOACTPHONE : Failed to find the calling phone

| |
|---------------------------|
| Explanation |
| Recommended Action |

%EXTASSIGNER-3-NOMEM : Failed to malloc

Explanation

**Recommended
Action**

%EXTASSIGNER-3-ERRTAG : Invalid tag([dec])

Explanation

**Recommended
Action**

%EXTASSIGNER-3-NULLPTR : Null pointer ([chars]:[dec])

Explanation

**Recommended
Action**

%EXTASSIGNER-3-ERRSYNC : Failed to sync tag([dec]) to standby CME

Explanation

**Recommended
Action**

%EXTASSIGNER-3-ERRSYNC2 : Failed to sync re-assign tag ([dec]) for [dec] to standby CME

Explanation

**Recommended
Action**

%EXTASSIGNER-6-ASSIGNED : Extension assignment successful for phone:SEP[chars]. New pool([dec]). Old pool([dec]).

Explanation Successfully assigned the pool

**Recommended
Action** No action is required.

%EXTASSIGNER-6-UNASSIGNED : Extension unassignment successful for phone:SEP[chars]. Unassigned pool([dec]).

Explanation Successfully unassigned the pool

Recommended Action No action is required.

EZMAN_CLIENT

%EZMAN_CLIENT-5-EZ_CLIENT_VLAN_FULL : TCAM Full VLAN is not Able to add

Explanation Rx Sync Failed for Interlaken, Status Timer Expired. So, Resetting the Rx Interlaken Core

Recommended Action No user action is required.

%EZMAN_CLIENT-3-OBJECT_FAIL : Failed to bringup [chars]. Failure reason is [chars]

Explanation Bringup of object(NP/Bay/Interface) has failed in EZMAN. This can be due to any hardware/software failures and can be a serious error

Recommended Action Restart the Linecard.

%EZMAN_CLIENT-3-ECC_SINGLE_BIT_ERROR : Single bit ECC error

Explanation ECC error observed on the NP device.Reset the NP Device.

Recommended Action This error is usually self-correcting. If the problem persists, the MIP100 hardware may need to be replaced.

%EZMAN_CLIENT-2-ECC_DOUBLE_BIT_ERROR : Double bit ECC errors observed. MIP100 is going to be reloaded to recover

Explanation ECC error observed on the NP device.Reset the NP Device.

Recommended Action This error is usually self-correcting. If the problem persists, the MIP100 hardware may need to be replaced.

EZMAN_INFRA

%EZMAN_INFRA-3-PLATFORM_ID_ERR : Invalid HW Part number([dec]) and HW Revision([dec])

Explanation HW Part number and revision read from the IDPROM are not showing up expected values which means the IDPROM is either corrupted or incorrectly programmed.

%EZMAN_INFRA-3-PLATFORM_ID_ERR : Invalid HW Part number([dec]) and HW Revision([dec])

Recommended Action Possible Hardware issue. Change the hardware.

EZMAN_RM

%EZMAN_RM-3-SERDES_AUTOTUNE_FAIL : Serdes Autotune [chars] on lane [dec]

Explanation NP5 Serdes RX is unable to autotune to the peer device's TX. This is a physical layer issue between NP5 and peer device.

Recommended Action OIR the Host-card if possible.

FARM_DSPRM

%FARM_DSPRM-4-NOC5510WARN : dspfarm service dspfarm can not be configured for this card type.

Explanation There is C549 NM-HDV card configured for dspfarm service. Only one dspfarm card type is allowed.

Recommended Action If C5510 card type dspfarm is desired then remove C549 NM-HDV dspfarm service and reconfigure dspfarm service for this card.

%FARM_DSPRM-6-CALLDROPIINFO : dspfarm active calls on this card dsp [dec] channel [dec] will be dropped.

Explanation The card has been removed. Dspfarm active calls on this card will be dropped.

Recommended Action No action is required.

%FARM_DSPRM-6-CARDREMOVEINFO : dspfarm card slot [dec] is removed.

Explanation dspfarm card type is removed from the slot.

Recommended Action No action is required.

%FARM_DSPRM-6-CARDINSERTINFO : dspfarm card slot [dec] is inserted.

Explanation dspfarm card type is inserted into the slot.

Recommended Action No action is required.

FEC_ISSU

%FEC_ISSU-3-INIT : FEC ISSU client initialization failed at [chars], error [chars]

| | |
|---------------------------|---|
| Explanation | FEC ISSU client could not be initialized, this will cause catastrophic failure when ISSU upgrade or downgrade is performed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FEC_ISSU-3-TRANSFORM : FEC ISSU client [chars] transform failed, error [chars]

| | |
|---------------------------|--|
| Explanation | FEC ISSU client could not transform the message. If the transmit transformation failed, it means that the checkpoint message can not be sent to the standby unit. If the receive transformation failed, it means that the checkpoint message can not be applied on the standby unit. In both cases the FEC state will not be identical with the active unit. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>) |

%FEC_ISSU-3-MSG_NOT_OK : FEC ISSU client message [dec] is not compatible

| | |
|---------------------------|--|
| Explanation | FEC ISSU client received an incompatible message from the peer unit. Since the message is not compatible it can be processed by this unit |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%FEC_ISSU-3-MSG_SIZE : FEC ISSU client failed to get the message size for message [dec]

| | |
|---------------------------|---|
| Explanation | FEC ISSU client failed to calculate message size for the message specified. The OIR ISSU client will not be able to send message to the standby unit. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%FEC_ISSU-3-SESSION : FEC ISSU client [chars]

| | |
|--------------------|---|
| Explanation | FEC ISSU client observed an error during a session negotiation with the peer unit. When there is a problem with the session the standby unit can not be brought up. |
|--------------------|---|

%FEC_ISSU-3-SESSION : FEC ISSU client [chars]

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%FEC_ISSU-3-SESSION_UNREGISTRY : FEC ISSU client failed to unregister session information. Error: [dec] ([chars])

Explanation The FEC ISSU client failed to unregister session information.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%FEC_ISSU-3-SEND_FAILED : FEC ISSU client failed to send a negotiation message, error [dec]

Explanation FEC ISSU client could not send a session negotiation message to the peer. When there is a problem in the negotiation the standby unit can not be brought up.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%FEC_ISSU-3-BUFFER : FEC ISSU client failed to get buffer for message, error [dec]

Explanation FEC ISSU client failed to get buffer for building a negotiation message. Hence, it can send the negotiation message to the standby unit. When there is a problem in the negotiaiton the standby unit can not be brought up.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%FEC_ISSU-3-CAPABILITY : FEC ISSU client [chars]

Explanation FEC SWITCH ISSU client observed an error during capability negotiaiton. When this error happens there is a mismatch between the client capability between the active and standby unit.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%FEC_ISSU-3-POLICY : FEC ISSU client message type [dec] is [chars]

Explanation FEC ISSU client received a message type which it does not support. The policy is applied to make the session compatible.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id>)

FED

%FED-2-INIT_FAILED : Module [chars] failed initialization[chars]

| | |
|---------------------------|---|
| Explanation | The specified module failed initialization. The switch will reload. |
| Recommended Action | No action is required |

%FED-0-HWSTALL : ASIC [dec] CORE [dec] Packet Buffer Complex Stalled. Switch will be reloaded

| | |
|---------------------------|---|
| Explanation | The specified ASIC/core packet buffer complex stalled. This is a critical error. This switch will reload. If there is a redundant switch, switch over will happen |
| Recommended Action | No action is required |

FED_FNF_ERRMSG

%FED_FNF_ERRMSG-6-UNSUPPORTED : [chars] is unsupported

| | |
|---------------------------|---|
| Explanation | The requested configuration is not supported. |
| Recommended Action | Please do not use the current configuration. |

%FED_FNF_ERRMSG-6-NOTALLOWED : [chars] is not allowed.

| | |
|---------------------------|---|
| Explanation | The requested configuration is not allowed. |
| Recommended Action | Please try to modify your configuration. |

%FED_FNF_ERRMSG-3-WDAVCATTACHERROR : Unable to attach flow monitor or IP NBAR to interface [chars]. Flow monitor and IP NBAR are not allowed on the same interface.

| | |
|---------------------------|---|
| Explanation | The requested configuration is not allowed. |
| Recommended Action | Please try to modify your configuration. |

%FED_FNF_ERRMSG-3-SGTCATTACHERROR : Detach the existing [chars] before attaching [chars] to interface [chars]. These features cannot co-exist.

| | |
|---------------------------|---|
| Explanation | The requested configuration is not allowed. |
| Recommended Action | Please try to modify your configuration. |

%FED_FNF_ERRMSG-3-ATTACHERROR : Failed to attach flow monitor to interface [chars].

| | |
|---------------------------|--|
| Explanation | An error occurs when attaching the flow monitor to the interface. |
| Recommended Action | Find out more about the error by using show mgmt-infra trace messages fed-fnf-config-error switch number command |

%FED_FNF_ERRMSG-3-DETACHERROR : Failed to detach flow monitor from interface [chars]

| | |
|---------------------------|--|
| Explanation | Error occurs when detaching the flow monitor from the interface. |
| Recommended Action | Find out more about the error by using show mgmt-infra trace messages fed-fnf-config-error switch number command |

FED_IPC_MSG

%FED_IPC_MSG-5-FAST_RELOAD_COMPLETE : Fast reload operation complete

| | |
|---------------------------|--|
| Explanation | This is used to indicate that the fast reload is complete. |
| Recommended Action | No action needed. This is not an error. |

FED_L2M_ERRMSG**%FED_L2M_ERRMSG-3-RSRC_ERR : Failed to allocate hardware resource for [chars]**

| | |
|---------------------------|---|
| Explanation | Hardware resource allocation has failed and the entry will not be programmed. |
| Recommended Action | Find out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

FED_L3M_ERRMSG**%FED_L3M_ERRMSG-3-RSRC_ERR : Failed to allocate hardware resource for [chars] - rc:[chars]**

| | |
|---------------------------|---|
| Explanation | Hardware resource allocation has failed and the entry will not be programmed. |
| Recommended Action | Find out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

FED_L3_ERRMSG**%FED_L3_ERRMSG-3-ecr_err : Platform unicast routing ecr module encountered [chars] error in FED**

| | |
|---------------------------|---|
| Explanation | An error occurred in platform ecr code. |
| Recommended Action | Find out more about this error by using the show platform ipunicast ecr commands. |

%FED_L3_ERRMSG-3-fib_err : Platform unicast routing fib module encountered [chars] error in FED

| | |
|---------------------------|---|
| Explanation | An error occurred in platform fib code. |
| Recommended Action | Find out more about this error by using the show platform ipunicast route commands. |

%FED_L3_ERRMSG-3-pbr_err : Platform unicast routing pbr module encountered [chars] error in FED

| | |
|---------------------------|---|
| Explanation | An error occurred in platform pbr code. |
| Recommended Action | Find out more about this error by using the show platform ipunicast policy commands |

%FED_L3_ERRMSG-3-wccp_err : Platform unicast routing wccp module encountered [chars] error in FED

| | |
|---------------------------|--|
| Explanation | An error occurred in platform wccp code. |
| Recommended Action | Find out more about this error by using the show platform ipunicast wccp commands. |

%FED_L3_ERRMSG-3-RSRC_ERR : Failed to allocate hardware resource for [chars] - rc:[dec]

| | |
|---------------------------|---|
| Explanation | Hardware resource allocation has failed and the entry will not be programmed. |
| Recommended Action | Find out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

%FED_L3_ERRMSG-3-mpls_recursive_label_err : Unsupported recursive MPLS label for local_label [int] [chars]

| | |
|---------------------------|---|
| Explanation | The specified MPLS local label is recursive and is not yet supported. |
| Recommended Action | Find out more about this error by using the show commands for the specified local_label and modify the config using LDP filters to remove recursive labels. |

%FED_L3_ERRMSG-3-UNSUPPORTED_CMD : [chars] is not supported on the interface [chars]

| | |
|---------------------------|---|
| Explanation | The specified cli is not yet supported. |
| Recommended Action | Find out more about this unsupported feature from the release documents and remove the command from the interface config mode |

%FED_L3_ERRMSG-3-MAX_TUNNEL : The maximum number of Tunnel has been reached

| | |
|---------------------------|---|
| Explanation | Hardware resource allocation has failed and the entry will not be programmed. |
| Recommended Action | New Tunnels will not be working as expected. |

%FED_L3_ERRMSG-3-mpls_ecmp_modify_err : MPLS Load Balance modify is not supported [int]

| | |
|---------------------------|--|
| Explanation | Modification of an ECMP object with MPLS Adjacencies is not supported yet. It is not an expected event |
| Recommended Action | Find out more about this error by using the show commands for the specified object and identify the possible trigger for the modify. |

%FED_L3_ERRMSG-3-mpls_pause_create : Critical limit reached for MPLS [chars] resource. Create paused

| | |
|---------------------------|---|
| Explanation | The specified MPLS local label is recursive and is not yet supported. |
| Recommended Action | Find out more about this error by using the show commands for the specified local_label and modify the config using LDP filters to remove recursive labels. |

%FED_L3_ERRMSG-3-mpls_resume_create : Resuming create for MPLS [chars] resource.

| | |
|---------------------------|---|
| Explanation | The specified MPLS local label is recursive and is not yet supported. |
| Recommended Action | Find out more about this error by using the show commands for the specified local_label and modify the config using LDP filters to remove recursive labels. |

%FED_L3_ERRMSG-3-mpls_out_of_resource : Out of resource for MPLS [chars]. Failed to program [chars] in hardware

| | |
|---------------------------|--|
| Explanation | Running out of Hardware resource to support the scale of this MPLS feature. |
| Recommended Action | Verify supported scale for the platform from sdm and reduce the scale accordingly. Capture show platform command for mpls summary, team utilization and resource utilization |

%FED_L3_ERRMSG-3-mpls_unsupported_feature : Unsupported feature. Failed to program [chars] in hardware

| | |
|---------------------------|---|
| Explanation | The feature is not yet supported. |
| Recommended Action | Find out more about this unsupported feature from the release documents and remove the command from the interface config mode |

%FED_L3_ERRMSG-3-intf_err : [chars] interface [chars]

| | |
|---------------------------|---|
| Explanation | Error in HW programming for Interface. |
| Recommended Action | Find out more about this failure from ifm show outputs and debugs for the interface |

FED_PM

%FED_PM-3-HW_ERROR : Port Manager error -[chars] hardware update failed.

| | |
|---------------------------|---|
| Explanation | An error occurred in Port Manager code. |
| Recommended Action | Find out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

%FED_PM-3-RESRC_ERROR : Port Manager error -[chars] resource access failed.

| | |
|---------------------------|---|
| Explanation | An error occurred in Port Manager code. |
| Recommended Action | Find out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

%FED_PM-3-FRU_TRANSCEIVER_TIMEOUT : Transceiver event handling for interface [chars] timed out. Remove and re-insert the FRU module containing this interface to recover.

| | |
|---------------------------|--|
| Explanation | Than handling onf a transceiver event took too long for the given interface. |
| Recommended Action | Remove and re-insert the FRU module containing this interface. The system should recover from this failure condition after that. |

%FED_PM-3-FRU_SWITCH_TIMEOUT : Transeiver update timed out. Remove and re-insert all FRUs in this switch to recover.

| | |
|---------------------------|---|
| Explanation | An FRU update event took too long to process on this switch. The FRUs on this switch may not be recognized or function properly after this. |
| Recommended Action | Remove and re-insert all FRUs on this switch. The system should recognize and process them correctly after that. |

%FED_PM-3-FRU_TIMEOUT : FRU module [dec] bringup timed out. Remove and re-insert it to recover.

| | |
|---------------------------|--|
| Explanation | The given FRU module in the switch in question could not be recognized because it took too long do so. |
| Recommended Action | Remove and re-insert the specified FRU module. The system should recognize it correctly after that. |

FED_PTP_ERRMSG

%FED_PTP_ERRMSG-6-UNSUPPORTED : [chars] is unsupported

| | |
|---------------------------|---|
| Explanation | The requested configuration is not supported. |
| Recommended Action | Please do not use the current configuration. |

%FED_PTP_ERRMSG-6-NOTALLOWED : [chars] is not allowed.

| | |
|---------------------------|---|
| Explanation | The requested configuration is not allowed. |
| Recommended Action | Please try to modify your configuration. |

%FED_PTP_ERRMSG-3-ATTACHERROR : Failed to run PTP [chars].

| | |
|---------------------------|--|
| Explanation | An error occurs when running PTP. |
| Recommended Action | Find out more about the error by using show mgmt-infra trace messages fed-ntp-config-error switch number command |

%FED_PTP_ERRMSG-3-DETACHERROR : Failed to run PTP [chars]

| | |
|---------------------------|--|
| Explanation | Error occurs when running PTP. |
| Recommended Action | Find out more about the error by using show mgmt-infra trace messages fed-ntp-config-error switch number command |

FED_PUNJECT

%FED_PUNJECT-6-PKT_CAPTURE_FULL : Punject pkt capture buffer is full. Use show command to display the punted packets.

| | |
|---------------------------|---|
| Explanation | All the available punt capture buffers have been written with punted packets. |
| Recommended Action | No action is needed. |

FED_QOS_ERRMSG

%FED_QOS_ERRMSG-3-TABLEMAP_INIT_ERROR : Failed to initialize [chars].

| | |
|---------------------------|---|
| Explanation | An error occurred during table-map initialization. |
| Recommended Action | Find out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

%FED_QOS_ERRMSG-3-TABLEMAP_INGRESS_HW_ERROR : Failed to [chars] for [chars]: code [dec].

| | |
|--------------------|---|
| Explanation | An error occurred when programming ingress table-map to hardware. |
|--------------------|---|

%FED_QOS_ERRMSG-3-TABLEMAP_INGRESS_HW_ERROR : Failed to [chars] for [chars]: code [dec].

| | |
|---------------------------|--|
| Recommended Action | failed actionFind out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |
|---------------------------|--|

%FED_QOS_ERRMSG-3-TABLEMAP_EGRESS_HW_ERROR : Failed to [chars] for [chars]: code [dec].

| | |
|---------------------------|--|
| Explanation | An error occurred when programming egress table-map to hardware. |
| Recommended Action | failed actionFind out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

%FED_QOS_ERRMSG-4-TABLEMAP_OVERFLOW : Failed to attach [chars]. No more table-maps are available.

| | |
|---------------------------|---|
| Explanation | The system supports up to 16 table-maps per direction. This limit has been reached. |
| Recommended Action | failed actionUnconfigure some of the table-maps to make the resource available. |

%FED_QOS_ERRMSG-3-LABEL_2_QUEUE_MAPPING_HW_ERROR : Failed to [chars] for [chars]: code [dec].

| | |
|---------------------------|--|
| Explanation | An error occurred in programming label to queue map. |
| Recommended Action | failed actionFind out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

%FED_QOS_ERRMSG-4-LABEL_2_QUEUE_MAPPING_OVERFLOW : Failed to [chars]. No more queue-maps are available.

| | |
|---------------------------|---|
| Explanation | The system supports up to 8 queue-maps. This limit has been reached. |
| Recommended Action | failed actionUnconfigure some of the queuing policies to make the resource available. |

%FED_QOS_ERRMSG-3-QUEUE_BUFFER_HW_ERROR : Failed to [chars] for [chars]: code [dec].

| | |
|--------------------|--|
| Explanation | An error occurred when programming the queue buffer. |
|--------------------|--|

%FED_QOS_ERRMSG-3-QUEUE_BUFFER_HW_ERROR : Failed to [chars] for [chars]: code [dec].

| | |
|---------------------------|--|
| Recommended Action | failed actionFind out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |
|---------------------------|--|

%FED_QOS_ERRMSG-3-QUEUE_SCHEDULER_HW_ERROR : Failed to [chars] for [chars]: code [dec].

| | |
|---------------------------|--|
| Explanation | An error occurred when programming the queue scheduler. |
| Recommended Action | failed actionFind out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

%FED_QOS_ERRMSG-3-AFD_QUEUE_HW_ERROR : Failed to program AFD [chars] virtual queue for [chars].

| | |
|---------------------------|---|
| Explanation | An error occurred in programming the Approximate Fair Dropping virtual queue. |
| Recommended Action | Find out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

%FED_QOS_ERRMSG-4-TCAM_OVERFLOW : Failed to program TCAM for policy-map [chars] on [chars].

| | |
|---------------------------|--|
| Explanation | The TCAM resources are exhausted. |
| Recommended Action | Unconfigure features to make TCAM resources available. |

%FED_QOS_ERRMSG-4-APPLICATION_ID_OVERFLOW : Failed to allocate application ID for policy-map [chars] on [chars].

| | |
|---------------------------|---|
| Explanation | The application IDs are exhausted. |
| Recommended Action | Reduce the number of applications to make application ID available. |

%FED_QOS_ERRMSG-4-POLICER_OVERFLOW : Failed to [chars] for [chars]. No policer resource is available.

| | |
|---------------------------|--|
| Explanation | The policer resource limit has been reached. |
| Recommended Action | failed actionUnconfigure some policers to make the resource available. |

%FED_QOS_ERRMSG-4-NETFLOW_TABLE_OVERFLOW : Failed to program netflow entries for policy-map [chars] for client mac:[chars] iifid:[hex]. No netflow resource is available.

Explanation The netflow resources are exhausted.

Recommended Action Unconfigure features to make the netflow resource available.

%FED_QOS_ERRMSG-3-NETFLOW_TABLE_HW_ERROR : Failed to program netflow entries for policy-map [chars] for client mac:[chars] iifid:[hex]. code:[dec].

Explanation An error occurred in programming netflow table.

Recommended Action Find out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems.

%FED_QOS_ERRMSG-3-AFD_POLICER_HW_ERROR : Failed to [chars] for [chars].

Explanation An error occurred in programming the Approximate Fair Dropping policer.

Recommended Action failed actionFind out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems.

%FED_QOS_ERRMSG-3-POLICER_HW_ERROR : Failed to [chars] for [chars]: code [dec].

Explanation An error occurred in programming the policer.

Recommended Action failed actionFind out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems.

%FED_QOS_ERRMSG-4-POLICER_MAP_TABLE_OVERFLOW : Failed to [chars] for [chars]. No more policer map tables are available.

Explanation The ASIC supports up to 64 policer map tables. This limit has been reached.

Recommended Action failed actionUnconfigure some policer maps to make the resource available.

%FED_QOS_ERRMSG-3-POLICER_MAP_HW_ERROR : Failed to [chars] for [chars]: code [dec].

| | |
|---------------------------|--|
| Explanation | An error occurred in programming the policer map. |
| Recommended Action | failed actionFind out more about the error by using the show tech-support privileged EXEC command and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems. |

%FED_QOS_ERRMSG-4-OUTPUT_CLIENT_POLICY_ERROR : Unsupported output client policy([chars]) - range operators.

| | |
|---------------------------|---|
| Explanation | Unsupported policy. |
| Recommended Action | Range operators are not supported in client output policy |

%FED_QOS_ERRMSG-4-OUTPUT_ACS_CLIENT_POLICY_ERROR : Unsupported output client policy([chars]).

| | |
|---------------------------|----------------------------------|
| Explanation | Unsupported policy. |
| Recommended Action | Unsupported client output policy |

%FED_QOS_ERRMSG-4-CONFIGURE_PORT_TYPE_HW_ERROR : Failed to configure port [chars] as [chars] port in hardware. rc:[dec].

| | |
|---------------------------|---|
| Explanation | The port could not be configured in hardware |
| Recommended Action | Try to shutdown the port and then unshut the port |

| Explanation | Error occurs when running SRVO. |
| Recommended Action | Find out more about the error by using show mgmt-infra trace messages fed-srvo-config-error switch number command |

FED_STP_ERRMSG

%FED_STP_ERRMSG-3-MAX_INSTANCES : The maximum number of STP instances has been reached:[dec]

| | |
|---------------------------|--|
| Explanation | The maximum number of STP instances that can be programmed has been reached. |
| Recommended Action | Delete or resolve loops manually for the vlans created further. |

FED_VLAN_TRANSLATE_ERRMSG**%FED_VLAN_TRANSLATE_ERRMSG-6-UNSUPPORTED : [chars] is unsupported**

Explanation The requested configuration is not supported.

Recommended Action Please do not use the current configuration.

%FED_VLAN_TRANSLATE_ERRMSG-6-NOTALLOWED : [chars] is not allowed.

Explanation The requested configuration is not allowed.

Recommended Action Please try to modify your configuration.

%FED_VLAN_TRANSLATE_ERRMSG-3-ATTACHERROR : Failed to run VLAN_TRANSLATE [chars].

Explanation An error occurs when running VLAN_TRANSLATE.

Recommended Action Find out more about the error by using show mgmt-infra \ trace messages fed-vlan_translate-config-error switch number \ command

%FED_VLAN_TRANSLATE_ERRMSG-3-DETACHERROR : Failed to run VLAN_TRANSLATE [chars]

Explanation Error occurs when running VLAN_TRANSLATE.

Recommended Action Find out more about the error by using show mgmt-infra \ trace messages fed-vlan_translate-config-error \ switch number command

FFP_HW_IRQ**%FFP_HW_IRQ-3-NON_FATAL_INTERRUPT : [int] errors in the last [int] seconds, MSGDEF_LIMIT_MEDIUM**

Explanation Accumulation of Cavium hardware-generated error

Recommended Action LOG_STD_ACTION

%FFP_HW_IRQ-3-TOO_MANY_NON_FATAL_INTERRUPTS :

Explanation Aborting due to too many Cavium hardware-generated errors

Recommended Action LOG_STD_ACTION

FIB**%FIB-2-IDBQINIT : Error initializing CEF IDB queue**

| | |
|---------------------------|---|
| Explanation | Initialization of the CEF IDB queue could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%FIB-2-LINECARDINIT : Error initializing CEF Linecard queue

| | |
|---------------------------|---|
| Explanation | Initialization of the CEF linecard queue could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%FIB-2-XDRINIT : Error initializing CEF xdr chunks

| | |
|---------------------------|---|
| Explanation | Initialization of the CEF xdr chunks could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%FIB-2-FIBFEATSEINIT : Error initializing CEF repop feature session queue

| | |
|---------------------------|---|
| Explanation | Initialization of a CEF feature session queue could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%FIB-2-DFIBSWITCH : Error trying to turn on Distributed CEF without CEF on

| | |
|---------------------------|---|
| Explanation | IPV4FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FIB-3-FIBXDRLEN : Invalid XDR length. Type [dec][chars]. XDR/buffer len [dec]/[dec]

| | |
|--------------------|------------------------|
| Explanation | IPV4FIB_INTERNAL_ERROR |
|--------------------|------------------------|

%FIB-3-FIBXDRLN : Invalid XDR length. Type [dec][chars]. XDR/buffer len [dec]/[dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FIB-3-FIBBADXDRSLOT : Invalid XDR slot. Type/len/slot [dec]/[dec]/[chars]. XDR at [hex]

Explanation IPV4FIB_INTERNAL_ERROR

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FIB-4-FIBSPECIALPREFIX : Invalid Special Prefix Type. Type [dec]

Explanation IPV4FIB_INTERNAL_ERROR

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FIB-4-FIBEVENT : Invalid event. Type [chars], event [dec]

Explanation IPV4FIB_INTERNAL_ERROR

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FIB-4-FIBXDRINV : Invalid format. [chars] [chars] ([dec])

Explanation IPV4FIB_INTERNAL_ERROR

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FIB-2-FIBDISABLE : Fatal error, slot [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | An internal software error has occurred because of an IPC problem between the LC and the RP. CEF switching has been disabled on the specified slot. |
| Recommended Action | Enter the <code>clear cef linecard [slot no]</code> command, then check the status of the line card by entering the <code>show cef linecard</code> command. If the status shows that the line card is still disabled, disable and re-enable DCEF and check the status of the line card again. LOG_STD_RECUR_ACTION |

%FIB-3-INVALIDSTATE : Slot [chars] in invalid transition from [chars] to [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. Linecard is in incorrect state |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FIB-4-FIBLCTUNSEQ : [chars] Error Initializing/Updating Linecard Tunnel Configuration

| | |
|---------------------------|---|
| Explanation | Configuration of a Tunnel on this linecard may not have been successful because of an internal software error. |
| Recommended Action | Reconfigure the Tunnel concerned. If problem persists copy the message exactly as it appears, and report it to your technical support representative. |

%FIB-6-FIBLCTUNDELSEQ : Update received on a linecard for a deleted tunnel([chars]) - ignored.

| | |
|---------------------------|---|
| Explanation | An update was received on a linecard for a tunnel that has already been deleted and the update was ignored. |
| Recommended Action | No action is required. |

%FIB-4-FIBCBLK : Missing cef table for tableid [dec] during [chars] event

| | |
|---------------------------|---|
| Explanation | IPV4FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FIB-2-FIBDOWN : CEF has been disabled due to a low memory condition. It can be re-enabled by configuring ip cef [distributed]

| | |
|---------------------------|--|
| Explanation | CEF was disabled because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade the RP so that it has more DRAM. |

%FIB-2-FIB_OVERLENGTH_XDR : Overlength CEF XDR message - len [dec] > [dec] from [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred preventing the sending of an CEF XDR message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FIB-3-FIBSBINIT : Error initializing [chars] subblock data structure. [chars]

| | |
|---------------------------|---|
| Explanation | Initialization of the specified CEF subblock data structure could not be accomplished. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FIB-3-FIBSBNOFN : Missing [chars] subblock [chars] function for [chars]

| | |
|---------------------------|---|
| Explanation | Functions for distributing this subblock are missing from the image. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FIB-3-FIBPENDINGLIST : Error queueing interface [chars] to CEF pending event list.

| | |
|---------------------------|---|
| Explanation | Queueing an interface to the CEF pending up event list failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FIB-3-MAC_ACCT : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | IPV4FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FIB-3-PREC_ACCT : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | IPV4FIB_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FILESYS

%FILESYS-5-DEV : PCMCIA flash card [chars] [chars]

| | |
|---------------------------|--|
| Explanation | A file system's status has changed. Follow any instructions provided with the message. |
| Recommended Action | No action is required. |

%FILESYS-5-IFLASH : Internal Flash [chars] [chars]

| | |
|---------------------------|--|
| Explanation | A file system's status has changed. Follow any instructions provided with the message. |
| Recommended Action | No action is required. |

%FILESYS-5-UNKNDEV : Unknown device [chars] [chars]

| | |
|---------------------------|--|
| Explanation | A file system's status has changed. Follow any instructions provided with the message. |
| Recommended Action | No action is required. |

%FILESYS-3-FLASH : [chars] [chars] error [dec]

| | |
|---------------------------|---|
| Explanation | A file system error has occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FILESYS-4-RCSF : [chars] ([dec]) <[chars]>

| | |
|---------------------------|---|
| Explanation | A Running config sync file error has occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FILESYS-5-MISMATCH : [chars] device programming algorithm mismatch detected, reformat is recommended

| | |
|---------------------------|--|
| Explanation | The flash device programming algorithm written to the device when the flash was formatted is different from what the current running software detected. A reformat of the flash device will solve the problem. |
| Recommended Action | No action is required. |

%FILESYS-3-IPC : [chars] [chars]: IPC error [[chars]]

| | |
|---------------------------|---|
| Explanation | RFS operation failed due to an IPC error. |
| Recommended Action | |

%FILESYS-5-CFLASH : Compact flash card [chars] [chars]

| | |
|---------------------------|--|
| Explanation | A file system's status has changed. Follow any instructions provided with the message. |
| Recommended Action | |

%FILESYS-4-CLPDINT : Management interrupts are [chars] for pcmcia device in socket [dec]. [chars]

Explanation A faulty PCMCIA flash device might be generating spurious insert or remove interrupts continuously. The pcmcia controller will be set temporarily to disable interrupt generation and will be reenabled after a few seconds. This is to avoid storming CPU with spurious interrupts. If the (alternate) pcmcia device is inserted while the interrupts are disabled, sometimes the device may not be readable. You have to remove and reinsert the pcmcia device once again.

Recommended Action Replace the pcmcia flash device with an alternate one

FILESYS_RFS

%FILESYS_RFS-3-IPC : [chars] [chars]: msg_type [[dec]] sub_type [[dec]]: IPC error [[chars]]

Explanation RFS operation failed due to an IPC error.

Recommended Action

%FILESYS_RFS-4-RFS_REQUEST_TIMEOUT : Timeout has occurred while executing the RFS request on file [chars] [[dec]].

Explanation A RFS request is sent to server from the client. While executing the request on the server side, timeout has occurred at the client side.

Recommended Action No action is required.

FILTER_BINARY_NOTIFICATION

%FILTER_BINARY_NOTIFICATION-5-MERGE_COMPLETED : Merged logs generation completed.

Explanation Notification to user that merged logs are generated

Recommended Action Go to bootflash and view the merged logs

FLASH_CHECK

%FLASH_CHECK-3-DISK_QUOTA : Flash disk quota exceeded [free space is [dec] kB] - Please clean up files on bootflash.

Explanation The remaining free space on the flash disk is below the recommended threshold of at least 30 percent of the installed RP memory. This limits the system from core files necessary to root cause critical system faults.

Recommended Action Please remove unneeded files from bootflash: device. Any core files under the bootflash:/core directory should be reported and then deleted.

FLEXDSPRM

%FLEXDSPRM-5-CB_UPDOWN : Channel Bank [chars] state is [chars]

Explanation Channel Bank status has been changed

Recommended Action See if the voice ports in the channel bank are UP

%FLEXDSPRM-5-OUT_OF_RESOURCES : [chars]

Explanation Flex DSPRM temporarily fail to allocate a DSP for this call. A oversubscription has happened and the current free DSP MIPS/Credits are not sufficient to admit a new call.

Recommended Action Check availability of router DSP resource and DSP sharing configurations

%FLEXDSPRM-6-DSP_USAGE : DSP [chars] usage has reached [dec]%%

Explanation Usage of DSP resources has reached a certain percentage.

Recommended Action Examine whether or not enough DSP resources are reserved.

%FLEXDSPRM-3-TDM_CONNECT : failed to connect voice-port ([dec]/[dec]/[dec]) to dsp_channel([dec]/[dec]/[dec])

Explanation TDM connection between Analog/VWIC and the DSP has failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FLEXDSPRM-5-TDM_SLOT : voice channel is being shared from slot [dec]. Configure network-clock-participate slot [dec]

| | |
|---------------------------|---|
| Explanation | Configure network-clock-participate slot for sharing DSPs |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FLEXDSPRM-3-UNSUPPORTED_CODEEC : codec [chars] is not supported on dsp [dec]/[dec]

| | |
|---------------------------|---|
| Explanation | Call failed due to the dsp does not support the codec. |
| Recommended Action | Check dsp capability and make the call on supported dsp |

FLEX_DNLD through FMANRP_MPLS

- [FLEX_DNLD](#)
- [FLOWSPEC](#)
- [FMANFP](#)
- [FMANRP](#)
- [FMANRP_ACL](#)
- [FMANRP_DPSS](#)
- [FMANRP_EVPN](#)
- [FMANRP_IPSEC](#)
- [FMANRP_MFR](#)
- [FMANRP_MPLS](#)

FLEX_DNLD

%FLEX_DNLD-1-NOPCIMEMORY : VPM ([dec]/[dec]), PCI memory unavailable.

| | |
|---------------------------|---|
| Explanation | The router or access server could not allocate memory for the descriptors. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%FLEX_DNLD-1-INCORRECT_DSP_ID : AIM VOICE at slot [dec] receives data from incorrect DSP-ID [dec].

Explanation The DSP ID provided by FPGA for download is not valid.

Recommended Action Call your technical support representative for assistance.

%FLEX_DNLD-3-ERROR_FIRMWARE_DNLD : DSP firmware download fails for slot [dec] dsp_id [dec]

Explanation Error initializing the DSP with the application firmware.

Recommended Action Power down, reinsert Port Module and reboot. If message recurs, call your technical support representative for assistance.

%FLEX_DNLD-3-NO_FIRMWARE_DNLD : No DSP firmware download invoked for slot [dec], no DSPs on the card

Explanation No DSP on the card.

Recommended Action Plug in DSP on the Network Module

%FLEX_DNLD-1-TOOBIG : [chars], packet(size [dec]) too big.

Explanation A packet greater than the 264 bytes received on this interface.

Recommended Action The system should recover. No action is required. If the problem recurs, it indicates an error that might be related to data traffic patterns. Copy the error message exactly as it appears, and report it to your technical support representative.

%FLEX_DNLD-3-ERROR_ANALYZE : Error analyzing the device in slot [dec].

Explanation The Port module in this slot could not be recognized.

Recommended Action Power down, reinsert Port Module and reboot. If message recurs, call your technical support representative for assistance.

%FLEX_DNLD-1-NO_RING_DESCRIPTOR : No more ring descriptors available on slot [dec] dsp [dec].

Explanation The dspfw dnld driver cannot queue messages upto the egress queue for FPGA to transmit.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative. Reset the DSP's on this port module.

FLowspec

%FLowspec-3-CLIENT_ALLOC : Failed to alloc ([int] hdr) + ([int] items)*([int] bytes) = ([int] total bytes) for '[chars]', errno [dec]:[chars].

Explanation The FlowSpec client infra has failed to allocate memory. This may be due to lowmemory conditions on this particular RP/LC, or this client may be using morememory than it is allowed.

Recommended Action Reduce system scale.

%FLowspec-3-CLIENT_ENABLE : Failed to initialize '[chars]' when enabling FlowSpec feature, [hex]:[chars].

Explanation When 'flowspec' configuration is first added, the FlowSpec client infrainitializes in client processes, namely BGP. Something has failed in thisprocess any may prevent FlowSpec from functioning.

Recommended Action Remove and re-add 'flowspec' configuration. If the problem repeats, contactCisco support.

%FLowspec-3-MGR_ALLOC : Failed to alloc ([int] hdr) + ([int] items)*([int] bytes) = ([int] total bytes) for '[chars]', errno [dec]:[chars].

Explanation The FlowSpec Manager process (flowspec_mgr) has failed to allocate memory. This may be due to low memory conditions on this particular RP/LC, or this process may be using more memory than it is allowed.

Recommended Action Reduce system scale.

%FLowspec-3-MGR_CLASS_CREATE : Failed to create inline-class for flow [chars] with actions [chars] in table [chars], overall:[hex]:[chars], [hex]:[chars].

Explanation FlowSpec failed to create the inline-class representing the flow in the table (VRF+AFI). This will prevent the flow from functioning in this table.

Recommended Action Unconfigure and reconfigure local-install for this table. FlowSpec can further be entirely unconfigured and reconfigured. If the problem persists, contact Cisco support.

%FLowspec-3-MGR_EVM : FlowSpec Manager failed to receive event from [chars] EVM, [hex]:[chars].

Explanation The event processing infra has returned a fatal error.

Recommended Action Allow FlowSpec Manager to restart. If the problem persists, contact Cisco support.

%FLOWSPEC-3-MGR_GEN_ERR : FlowSpec internal error: [chars], [hex]:[chars].

Explanation An internal software error occurred.**Recommended Action** *SUPPORT*

%FLOWSPEC-3-MGR_INIT : FlowSpec Manager failed to initialize '[chars]', [hex]:[chars].

Explanation When 'flowspec' configuration is first added, the FlowSpec Manager (flowspec_mgr) process starts and initializes. Something has failed in this procedure and may prevent FlowSpec from functioning.**Recommended Action** Allow FlowSpec Manager to restart. You can further remove and re-add 'flowspec' configuration. If the problem persists, contact Cisco support.

%FLOWSPEC-3-MGR_LOCK : FlowSpec Manager lock operation [chars] failed, error %##d.

Explanation An internal lock has failed.**Recommended Action** FlowSpec manager may be restarted, if it doesn't restart automatically. If the problem persists, contact Cisco support.

%FLOWSPEC-3-MGR_POLICY_ATTACH : Failed to attach policy-map [chars] for table [chars], [hex]:[chars].

Explanation FlowSpec failed to attach the policy-map for this table (VRF+AFI). This will prevent flows from functioning on this table.**Recommended Action** Unconfigure and reconfigure local-install for this table. FlowSpec can further be entirely unconfigured and reconfigured. If the problem persists, contact Cisco support.

%FLOWSPEC-3-MGR_POLICY_CREATE : Failed to create policy-map [chars] for table [chars], [hex]:[chars].

Explanation FlowSpec failed to create the policy-map for this table (VRF+AFI). This will prevent flows from functioning on this table.**Recommended Action** Unconfigure and reconfigure local-install for this table. FlowSpec can further be entirely unconfigured and reconfigured. If the problem persists, contact Cisco support.

%FLOWSPEC-3-MGR_POLICY_DELETE : Failed to delete policy-map [chars] handle %##lx for table [chars], [hex]:[chars].

Explanation FlowSpec failed to delete the policy-map for this table (VRF+AFI). This may leave the system in an inconsistent state for this table and prevent FlowSpec from recreating the table.

%FLOWSPEC-3-MGR_POLICY_DELETE : Failed to delete policy-map [chars] handle %#!lx for table [chars], [hex]:[chars].

Recommended Action Unconfigure and reconfigure local-install for this table. FlowSpec can further be entirely unconfigured and reconfigured. If the problem persists, contact Cisco support.

FMANFP

%FMANFP-6-IPACCESSLOGP : list [chars] [chars] [chars] [chars]([int]) [chars]-> [chars]([int]), [int] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-IPACCESSLOGNP : list [chars] [chars] [int] [chars] [chars]-> [chars], [int] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-IPACCESSLOGDP : list [chars] [chars] [chars] [chars] [chars]-> [chars] ([int]/[int]), [int] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-IPV6ACCESSLOGP : list [chars] [chars] [chars] [chars]([int]) [chars]-> [chars]([int]), [int] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-IPV6ACCESSLOGDP : list [chars] [chars] [chars] [chars] [chars]-> [chars] ([int]/[int]), [int] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-IPV6ACCESSLOGNP : list [chars] [chars] [int] [chars] [chars]-> [chars], [int] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-FMANACLLOGMISSMSG : access-list logging datapath rate-limited or missed [int] packet[chars]

Explanation Some packet matching logs were missed because the access list log messages were rate-limited or no access list log buffers were available.

Recommended Action No action is required.

%FMANFP-6-CRYPTO_DEVICE_REQUEST_COMPLETE : Crypto-device is ready to process packets

Explanation Crypto-device is load with new core based on user request. Now it is ready to process packets

Recommended Action No action is required.

%FMANFP-3-CRYPTO_DEVICE_REQUEST_FAILED : Crypto-device is busy processing last request. This request will be discarded

Explanation Crypto-device is still processing previous reload request or still processing crypto feature packets. New request will not be applied

Recommended Action No action is required.

%FMANFP-6-CRYPTO_DEVICE_NOT_PRESENT : Hardware crypto-device is not present. Request aborted

Explanation Hardware crypto-device is not present on the system. User request doesn't apply or be executed. This may not be an error.

Recommended Action No action is required.

%FMANFP-3-LICENSE_THPUT_INVALID : Invalid throughput [int]kbps

Explanation The throughput value is invalid. The forwarding engine will not operate at the throughput value.

%FMANFP-3-LICENSE_THPUT_INVALID : Invalid throughput [int]kbps

Recommended Action Report this occurrence to Engineering. Use Topic to search for a similar DDTs. If you find none, write a DDTs for this problem.

%FMANFP-3-CRYPTO_LICENSE_THPUT_THRESHOLD_EXCEED : Average crypto throughput rate exceeded [dec] percent of licensed crypto bandwidth of [int] bps during [dec] sampling periods in the last 24 hours, sampling period is [dec] seconds

Explanation To monitor crypto throughput and, to generate notification/warning if the average throughput utilization over a longer time are approaching or exceeding the cypro licensed bandwidth

Recommended Action No action is required.

%FMANFP-3-CRYPTO_LICENSE_THPUT_MAX_APPROACHED : Average crypto throughput rate approached the licensed crypto bandwidth of [int] bps during [dec] sampling periods in the last 24 hours, sampling period is [dec] seconds

Explanation To monitor crypto throughput and, to generate notification/warning if the average throughput utilization over a longer time are approaching or exceeding the cypro licensed bandwidth

Recommended Action No action is required.

%FMANFP-6-IPACCESSLOGSGP : ingress_interface='[chars]' sgacI_name='[chars]' action='[chars]' protocol='[chars]' src-ip='[chars]' src-port='[int]' dest-ip='[chars]' dest-port='[int]' sgt='[int]' dgt='[int]' logging_interval_hits='[int]'

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-IPACCESSLOGSGNP : ingress_interface='[chars]' sgacI_name='[chars]' action='[chars]' protocol='[int]' src-ip='[chars]' dest-ip='[chars]' sgt='[int]' dgt='[int]' logging_interval_hits='[int]'

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-IPACCESSLOGSGDP : ingress_interface=[chars] sgACL_name=[chars] action=[chars] protocol=[chars] src-ip=[chars] dest-ip=[chars] type=[int] code=[int] sgt=[int] dgt=[int] logging_interval_hits=[int]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-IPV6ACCESSLOGSGP : ingress_interface=[chars] sgACL_name=[chars] action=[chars] protocol=[chars] src-ip=[chars] src-port=[int] dest-ip=[chars] dest-port=[int] sgt=[int] dgt=[int] logging_interval_hits=[int]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-IPV6ACCESSLOGSGNP : ingress_interface=[chars] sgACL_name=[chars] action=[chars] protocol=[int] src-ip=[chars] dest-ip=[chars] sgt=[int] dgt=[int] logging_interval_hits=[int]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%FMANFP-6-IPV6ACCESSLOGSGDP : ingress_interface=[chars] sgACL_name=[chars] action=[chars] protocol=[chars] src-ip=[chars] dest-ip=[chars] type=[int] code=[int] sgt=[int] dgt=[int] logging_interval_hits=[int]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

FMANRP

%FMANRP-4-INVALID_CCE_POSITION : Invalid position '[dec]' prevented [chars]

Explanation A messaging error has occurred during service-policy modification and the configuration could not be downloaded properly

Recommended Action Report this occurrence to Engineering. Use Topic to search for a similar DDTS. If you find none, write a DDTS for this problem.

%FMANRP-3-OBJ_DWNLD_TO_FP_FAILED : [chars] download to FP failed

| | |
|---------------------------|--|
| Explanation | An object has failed to download to the forwarding processor (FP) |
| Recommended Action | Examine the process logs to identify the cause for object download failure |

FMANRP_ACL

%FMANRP_ACL-4-NOSWIDB : Sub-interface is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of a swidb structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_ACL-4-NOSB : Subblock on interface [chars] ([hex]) is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of a subblock structure on interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_ACL-4-NOACL : ACL is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of an ACL structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip access-list command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_ACL-4-NOV4ACE : v4 ACE is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of an v4 ACE structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip access-list command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_ACL-4-NOV6ACE : v6 ACE is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of an v6 ACE structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ipv6 access-list command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_ACL-4-NOMACACE : mac ACE is null

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of an mac ACE structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show access-list command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_ACL-4-INVALIDV4ACETYPE : v4 ACE type is invalid

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred which is due to the type of v4 ACE created |
|--------------------|---|

%FMANRP_ACL-4-INVALIDV4ACETYPE : v4 ACE type is invalid

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ip access-list** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_ACL-4-INVALIDV6OP : Operation is invalid

Explanation An unexpected condition has occurred which is due to the operation performed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ipv6 access-list** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_ACL-4-UPDV4STATSERR : Update v4 ACL statistics error

Explanation An unexpected condition has occurred when updating v4 ACL statistics

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ip access-list** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_ACL-4-UPDV6STATSERR : Update v6 ACL statistics error

Explanation An unexpected condition has occurred when updating v6 ACL statistics

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ipv6 access-list** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_ACL-4-UPDMACSTATSERR : Update mac ACL statistics error

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred when updating mac ACL statistics |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show access-list command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_ACL-4-TMPLACLINITERR : Template ACL initialization error

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred on template ACL initialization |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show memory command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_ACL-4-TMPLACLNOMEMERR : Template ACL no memory error

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred on template ACL processing |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show memory command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_ACL-4-TMPLACLDISABLEERR : Not enough resources to disable template ACL

| | |
|---------------------------|---|
| Explanation | Not enough resources to store individual ACLs |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip access-list template summary command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_ACL-3-EXPOGACLLIMITERR : Expanded OGACL ([chars]) size ([dec]) exceeded MAX ACL limit ([dec])

| | |
|---------------------------|--|
| Explanation | Expanded OGACL size exceeded the maximum ACL limit. Command rejected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the Reduce # of ACEs in the ACL command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMANRP_DPSS

%FMANRP_DPSS-3-DPSSFOIPCALLOC : Failed to alloc IPC buffer for dpss feature object [hex] config message

| | |
|---------------------------|---|
| Explanation | This operation to allocate IPC buffer for dpss feature object configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_DPSS-3-DPSSFOTDLMSGMARSHAL : Failed to copy dpss feature object config message to IPC buffer for fo_hdl [hex]

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for dpss feature object configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_DPSS-3-DPSSFOIOSDENQUEUE : Failed to enqueue dpss feature object [hex] config message for transmission

| | |
|---------------------------|---|
| Explanation | This operation to enqueue an IPC message for sending has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_DPSS-3-DPSSFOTDLCREATE : Failed to create tdl msg for dpss feature object [hex] config message

| | |
|---------------------------|---|
| Explanation | This operation to create an TDL message has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_DPSS-3-DPSSFOTDLSET : Failed to set tdl msg detail for dpss feature object [hex] config message

| | |
|---------------------------|---|
| Explanation | This operation to set an TDL message has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_DPSS-3-DPSSGLOBALDLCREATE : Failed to create tdl msg for dpss global config message

| | |
|---------------------------|---|
| Explanation | This operation to create an TDL message has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_DPSS-3-DPSSGLOBALDLSET : Failed to set tdl msg detail for dpss global config message

| | |
|---------------------------|---|
| Explanation | This operation to set an TDL message has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_DPSS-3-DPSSGLOBALIPCALLOC : Failed to alloc IPC buffer for dpss global config message

| | |
|--------------------|---|
| Explanation | This operation to allocate IPC buffer for dpss global configuration has failed. |
|--------------------|---|

%FMANRP_DPSS-3-DPSSGLOBALIPCALLOC : Failed to alloc IPC buffer for dpss global config message

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FMANRP_DPSS-3-DPSSGLOBALTDLMSGMARSHAL : Failed to copy dpss global config message to IPC buffer

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for dpss global configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_DPSS-3-DPSSGLOBALIOSDENQUEUE : Failed to enqueue dpss global config message for transmission

| | |
|---------------------------|---|
| Explanation | This operation to enqueue an IPC message for sending has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMANRP_EVPN**%FMANRP_EVPN-3-UNSPOP : Unsupport operation**

| | |
|---------------------------|---|
| Explanation | An unexpected operation is get during EVPN configuration |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMANRP_IPSEC

%FMANRP_IPSEC-6-HAPI_PCP_NACK : [chars]: PCP NACK (trans [hex], opcode [hex], errcode [hex]): crypto hardware configuration may be out of sync.

| | |
|---------------------------|---|
| Explanation | A failure has occurred during security policy downloading in crypto hardware. The command is rejected. |
| Recommended Action | The configuration may be ignorable or recovered automatically in crypto hardware. The session may still be functional but less than optimal performance. If you determine that the system is adversely affected then Embedded Services Processor (ESP) tracelog should be collected. LOG_STD_ACTION |

%FMANRP_IPSEC-3-HAPI_PCP_UNEXP_REPLY : [chars]: PCP (trans [hex], opcode [hex]): unexpected reply from crypto hardware.

| | |
|---------------------------|---|
| Explanation | An unexpected internal software error. Engineering must be reported and investigate this occurrence. |
| Recommended Action | Report this occurrence to Engineering. Use Topic to search for a similar DDTS. If you find none, write a DDTS for this problem. |

FMANRP_MFR

%FMANRP_MFR-3-TDLFAIL : Unable to send [chars] [chars] message to Forwarding Manager Process ([chars])

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which resulted in a configuration not being sent to the Forwarding Manager Process. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_MFR-3-BNDLFAIL : Unable to [chars] bundle [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred at Bundle configuration |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_MFR-3-BLFAIL : Unable to [chars] link [chars] [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred at Bundle link configuration %s |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_MFR-3-BLCFGFAIL : Unable to [chars] link [chars] [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred at Bundle link configuration %s |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMANRP_MPLS

%FMANRP_MPLS-3-NOOBJ : Object entry is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of an object entry structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show mpls</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_MPLS-3-ENQUEFAIL : Unable to send [chars] [chars] message to Forwarding Manager Process

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which resulted in a configuration not being sent to the Forwarding Manager Processes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_MPLS-3-UNSPTYPE : Not supported bundle type [dec]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to an operation request to an unsupported bundle oce type is received. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMANRP_NAT

%FMANRP_NAT-4-NOSWIDB : Sub-interface is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of a swidb structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-IFTDLMSGMARSHAL : Failed to copy interface config essage to IPC buffer for Interface [chars] ([hex]), domain [chars], operation [chars]

| | |
|--------------------|---|
| Explanation | This operation to build a TDL message for interface configuration has failed. |
|--------------------|---|

%FMANRP_NAT-3-IFTDLMSGMARSHAL : Failed to copy interface config essage to IPC buffer for Interface [chars] ([hex]), domain [chars], operation [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FMANRP_NAT-4-NONATSERVICE : Service structure is null

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of a NAT service structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-SERTDLMSGMARSHAL : Failed to copy service config message to IPC buffer for application type [dec], protocol type [dec], port [dec]

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for service configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-SERVICERM : Failed to delete NAT services for appl type [chars], protocol [chars], port [dec]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the failure to remove data structures for NAT special services. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-4-NOPOOL : Pool structure is null

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of a NAT pool structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-4-NOMAPPING : A mapping structure is null

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of a NAT mapping structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-4-BADACTION : Invalid action [dec] for NAT configuration

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is invalid action for a NAT configuration. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-POOLDLMSGMARSHAL : Failed to copy pool config message to IPC buffer for pool [chars] (id [dec])

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for pool configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-MAPPINGDLMMSGMARSHAL : Failed to copy mapping config message to IPC buffer for mapping id [dec] (vrf table id [dec])

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for mapping configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-IFADDRDLMMSGMARSHAL : Failed to copy interface address change message to IPC buffer for interface [chars], new address [IP_address]

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for NAT interface address configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-VRFDELTDLMSGMARSHAL : Failed to copy VRF delete message to IPC buffer for vrf table id [dec]

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for vrf deletion configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-TIMEOUTDLMMSGMARSHAL : Failed to copy timeout config message to IPC buffer for timeout type [dec]

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for timeout configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-4-NORANGE : Pool address range structure is null

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of a NAT pool address range structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-RANGETDLMSGMARSHAL : Failed to copy pool address range config message to IPC buffer for pool [chars], range start [IP_address], range end [IP_address]

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for address range configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-PORTLISTTDLMSGMARSHAL : Failed to copy portlist config message to IPC buffer for addr [IP_address], proto [dec], start_port [dec], end_port [dec]

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for portlist add/delete has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-4-NOACL : Access list is null

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of an access list structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show ip access-lists</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-MAXENTRYTDLMSGMARSHAL : Failed to copy max entry config message to IPC buffer for type [chars], entry data [hex], max_limit [dec]

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for max entry add/delete has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-STATSUPDTDL : Failed to update NAT [chars] statistics

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred when updating statistics |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-IPALIASTDLL : Error with ipalias message received from data path

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred with received ipalias message from data path |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-IPALIASTYPE : Received ipalias message from data path with unsupported address type [dec]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred with received ipalias message from data path with unsupported address type |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-IPSTATICROUTETDL : Error with static ip route message received from data path

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred with received static ip route message from data path |
|--------------------|---|

%FMANRP_NAT-3-IPSTATICROUTETDL : Error with static ip route message received from data path

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FMANRP_NAT-3-IPSTATICROUTETYPE : Received ip static route message from data path with unsupported address type

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred with received static ip route message from data path with unsupported address type |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-PORTLISTTDL : Error with portlist allocation request message received from data path

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred with received portlist allocation request message from data path |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-PORTLISTTYPE : Address type [dec] for global address in the portlist allocation request is not supported

| | |
|---------------------------|---|
| Explanation | An unexpected address type has occurred with received portlist allocation request message from data path |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-PORTLISTPROTO : Protocol type [dec] for global addr [IP_address] in the portlist allocation request is not supported

| | |
|---------------------------|---|
| Explanation | An unexpected protocol type has occurred with received portlist allocation request message from data path |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-DEBUGTDLMSGMARSHAL : Failed to copy debug NAT request message to IPC buffer

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for debug NAT command has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-IOSDENQUEUE : Failed to enqueue NAT [chars] message for transmission

| | |
|---------------------------|---|
| Explanation | This operation to enqueue an IPC message for sending has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-AVLTREEWALK : Failed to walk NAT [chars] database for [chars]

| | |
|---------------------------|---|
| Explanation | This operation to perform stale processing has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-AVLDELETE : Failed to delete node from NAT [chars] database for [IP_address]

| | |
|--------------------|---|
| Explanation | This operation to perform delete processing has failed. |
|--------------------|---|

%FMANRP_NAT-3-AVLDELETE : Failed to delete node from NAT [chars] database for [IP_address]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FMANRP_NAT-3-WLANSESSTDL : Error with WLAN session message received from data path

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred with received WLAN session message from data path |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-WLANSESSTYPE : Received WLAN session message from data path with unsupported address type [dec]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred with received WLAN session message from data path with unsupported address type |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-WLANSESSIDB : Received WLAN session message from data path with nil input interface for inside local host [IP_address]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred with received WLAN session message from data path with nil input interface |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-4-NOLOGGINGPARAM : Highspeed logging structure is nil

| | |
|--------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of a logging parameter structure. |
|--------------------|--|

%FMANRP_NAT-4-NOLOGGINGPARAM : Highspeed logging structure is nil

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show running** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NAT-4-LOGGING_PARAM : Highspeed logging export [chars] [int]nsupported

Explanation An unsupported exporting parameter for highspeed logging on data path is received.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show running** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NAT-4-NOREPLICATEPARAM : Session replication structure is nil

Explanation An unexpected condition has occurred which is due to the absence of a session replication parameter structure.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show running** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NAT-3-MIBEVENT : Failed to get NAT MIB response message: [chars]

Explanation An unsupported error occurred with waiting for NAT MIB response message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NAT-3-INVALID_ADDRESS : Received an invalid address [IP_address]

| | |
|---------------------------|---|
| Explanation | An unsupported address for the given config was received. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-MSGALLOCERR : Failed to allocate message

| | |
|---------------------------|---|
| Explanation | When attempting to send message to dataplane, there was not enough memory to allocate the message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NAT-3-NATSETDLMSGFAIL : When download [chars], failed to set a field in message

| | |
|---------------------------|---|
| Explanation | software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMANRP_NETFLOW

%FMANRP_NETFLOW-3-CACHETDLMSGMARSHAL : Failed to copy cache config message to IPC buffer for cache type [dec]

| | |
|---------------------------|---|
| Explanation | The operation of building a TDL message for cache configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NETFLOW-3-AGGRCACHENULL : The pointer for aggregation cache type [dec] is NULL

| | |
|--------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of an aggregation cache data structure. |
|--------------------|--|

%FMANRP_NETFLOW-3-AGGRCACHENULL : The pointer for aggregation cache type [dec] is NULL

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ip cache flow** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NETFLOW-3-UNKNOWNCACHETYPE : Unknown cache type [dec] received

Explanation The cache configuration command has failed due to unknown cache scheme type.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NETFLOW-3-UNKNOWNCACHECMD : Unknown aggregation cache command [dec] received

Explanation The aggregation cache configuration command has failed due to unknown command.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NETFLOW-4-NOSWIDB : Sub-interface is null

Explanation An unexpected condition has occurred which is due to the absence of a swidb structure.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ip interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NETFLOW-4-NOFIBIDB : fibdb for interface [chars] is null

Explanation An unexpected condition has occurred which is due to the absence of a fibidb structure.

%FMANRP_NETFLOW-4-NOFIBIDB : fibdb for interface [chars] is null

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ip interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NETFLOW-3-IFFLOWTDLMSGMARSHAL : Failed to copy interface flow config message to IPC buffer for [chars]

Explanation The operation of building a TDL message for interface flow configuration has failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NETFLOW-3-NOSAMPLERNAME : Sampler-map name is null

Explanation An unexpected condition has occurred which is due to the absence of a sampler-map name.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show sampler** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NETFLOW-3-NOSAMPLER : Sampler for sampler-map name [chars] is null

Explanation An unexpected condition has occurred which is due to the absence of a sampler-map structure

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show sampler** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_NETFLOW-3-SAMPLERTDLMSGMARSHAL : Failed to copy sampler-map config message to IPC buffer for [chars]

| | |
|---------------------------|---|
| Explanation | The operation of building a TDL message for sampler-map configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NETFLOW-3-EXPORTERTDLMSGMARSHAL : Failed to copy exporter config message to IPC buffer for cache type [dec]

| | |
|---------------------------|---|
| Explanation | The operation of building a TDL message for exporter configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NETFLOW-4-EXPORTERVERSION : Failed to change default exporter version to [dec]

| | |
|---------------------------|--|
| Explanation | The operation of changing the default exporter version has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show ip flow export</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NETFLOW-3-CLRSTATSTDLMMSGMARSHAL : Failed to copy clear statistics message to IPC buffer

| | |
|---------------------------|---|
| Explanation | The operation of building a TDL message for clearing statistics in the data path has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NETFLOW-3-STATSUPDTDL : Failed to update netflow [chars] statistics

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred when updating statistics |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NETFLOW-3-INVALIDFLOWDEF CPP : CPP Flow definition can not be created [int]

| | |
|---------------------------|---|
| Explanation | The operation of building a flow definition using flow fields received from CPP has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NETFLOW-3-EXPORTERSRCIFINVALID : Management interface ([chars]) cannot be used as source for an exporter

| | |
|---------------------------|---|
| Explanation | Exporter configuration failed because the management interface cannot be configured as source interface |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_NETFLOW-3-EXPORTERVRFINVALID : Management vrf ([chars]) cannot be used as exporter destination

| | |
|---------------------------|---|
| Explanation | Exporter configuration failed because management vrf cannot be used as exporter destination |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMANRP_PBR**%FMANRP_PBR-3-RTMAPNULL : The route-map structure for [chars] is NULL**

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred due to the absence of an internal route-map data structure. |
| Recommended Action | show route-map |

%FMANRP_PBR-3-RTMAP_NAME_NULL : The route-map name for [chars] is NULL

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred due to the absence of an internal route-map data structure. |
| Recommended Action | show route-map |

%FMANRP_PBR-3-INVALIDIF : The interface specified for '[chars]' is not valid

| | |
|---------------------------|---|
| Explanation | An non-existent interface is specified for the policy based routing route-map operation specified in the message. |
| Recommended Action | show interface |

%FMANRP_PBR-3-UNSUPPORTED_RMAP : Route-map [chars] has unsupported options for Policy-Based Routing. It has been removed from the interface, if applied.

| | |
|---------------------------|---|
| Explanation | The route-map attached to an interface for policy routing contains an action that is not supported on this platform. This is a hardware limitation. |
| Recommended Action | Reconfigure the route-map. Use only 'permit' entries and 'set ip next-hop' action in the route-map. |

%FMANRP_PBR-3-UNSUPPORTED_RMAP_COMMAND : This Policy-Based Routing command is not supported on this platform. Use the no form of this command to remove it from configurations

| | |
|---------------------------|--|
| Explanation | Policy-Based Routing is not supported on this platform |
| Recommended Action | Remove this command |

FMANRP_PFR**%FMANRP_PFR-4-NULLINPUT : NULL input, [chars]**

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the NULL value of the input parameter. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show oer border command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_PFR-4-NOINTF : Pfr Interface [chars] not exist, can't be [chars]

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of MCP Pfr interface info. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show oer border command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_PFR-4-UNSUPPORTED : Unsupported action, [chars]

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to and unsupported action being executed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show oer border command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMANRP_QOS**%FMANRP_QOS-3-ACTNOCLASSMAP : Class-map information not found**

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred when trying to determine class-map information for one of the classes in a policy-map. |
|--------------------|---|

%FMANRP_QOS-3-ACTNOCLASSMAP : Class-map information not found

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show policy-map** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-3-ACTNOPOLICYMAP : Policy-map information not found

Explanation An unexpected condition has occurred when trying to determine policy-map information for one of the service policies attached to an interface.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show policy-map** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-3-QOSTDLMARSHAL : Failed to copy more than [dec] bytes of message [chars], length [dec] into IPC buffer

Explanation An internal error occurred when trying to build an IPC message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-3-QOSAPIPARAM : Internal QOS API error.

Explanation An internal API error occurred. QOS configuration may be limited.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-3-QOSIDBSP : Service policy [[chars]] installation error: invalid interface type [dec]

Explanation An invalid interface type was encountered when trying to configure a service policy. This service policy could not be installed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show policy-map** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-3-QOSGIDBSP : Service policy [[chars]] installation error: invalid interface type [dec]

Explanation An invalid interface type was encountered when trying to configure a service policy. This service policy could not be installed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show policy-map** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-4-QOSSTACK : Failed to install all classes for policymap [chars], excessive stack usage

Explanation An operation to configure the classes within a policymap has failed due to a resource issue. QoS configuration for this policymap is unlikely to work.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show policy-map** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-3-QOSCLASSDEL : Error trying to remove class [chars] from policymap [chars]

Explanation An operation to remove a class from a policy has failed due to an internal error.

%FMANRP_QOS-3-QOSCLASSDEL : Error trying to remove class [chars] from policymap [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show policy-map** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-6-QOSCLASSEXIST : class [chars] (id [int]) in policymap [chars] (id [int]) already exists

Explanation This is an informational message and no action is required.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show policy-map** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-3-NOPOLICERSTATS : policer stats entry not found for class [int].[int], target [int]

Explanation An internal error occurred when looking up policer statistics.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show policy-map interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-3-NOACCOUNTSTATS : account stats entry not found for class [int].[int], target [int]

Explanation An internal error occurred when looking up account statistics.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show policy-map interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FMANRP_QOS-3-NOSETSTATS : set stats entry not found for class [int].[int], target [int]

| | |
|---------------------------|--|
| Explanation | An internal error occurred when looking up set statistics. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show policy-map interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-4-QIDGENFAIL : qid generation failed, reverting to default

| | |
|---------------------------|---|
| Explanation | An internal error occurred during platform qos initialization. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-4-QOSUBR : qos can not be attached to the target with UBR configured

| | |
|---------------------------|---|
| Explanation | An error occurred to attach qos to ATM VC/VP target with UBR configured |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-4-NOFAIRQONVC : fair-queue can not be configured on the parent queue of an ATM VC, use child queue instead

| | |
|---------------------------|---|
| Explanation | Configuring fair-queue on the parent queue of an ATM VC is not supported |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-4-CLMODIFYFAIL : classmap [chars] is currently used by policymap, please remove policymap from all targets before the modification

| | |
|--------------------|---|
| Explanation | An internal error occurred when classmap being modified |
|--------------------|---|

%FMANRP_QOS-4-CLMODIFYFAIL : classmap [chars] is currently used by policymap, please remove policymap from all targets before the modification

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FMANRP_QOS-3-CLPOLFAIL : No support for client policy with policing in class-default and marking in custom class

| | |
|---------------------------|---|
| Explanation | An internal error occurred during installing qos policy. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-4-MPOLDMVPNGRE : Only Shape and/or BRR is allowed on the QoS policy on GRE tunnel on MPoL hierarchy

| | |
|---------------------------|---|
| Explanation | An error occurred during MPoL check between DMVPN and GRE tunnel QoS policy |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-QOSTMPLCREATEFAIL : QoS template interface creation failed for policy [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | An error occurred during template interface creation |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-QOSTMPLDELETEFAIL : QoS template interface deletion failed for policy [chars]: [chars]

| | |
|--------------------|--|
| Explanation | An error occurred during template interface deletion |
|--------------------|--|

%FMANRP_QOS-3-QOSTMPLDELETEFAIL : QoS template interface deletion failed for policy [chars]: [chars]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%FMANRP_QOS-3-QOSTMPLNONEXIST : QoS template does not exist in [chars] for policymap [chars]

| | |
|---------------------------|--|
| Explanation | QoS template information does not exist |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-QOSTMPLDBERROR : Failed to [chars] record for policymap [chars], err [chars]

| | |
|---------------------------|--|
| Explanation | Database operation failed for record of the policymap |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-PRILEVELSUPPORT : Priority with level 3 is not supported. Service-policy : [chars]

| | |
|---------------------------|--|
| Explanation | Priority level 3 support is only for AVB policy. Hence configuration is rejected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-MARKDOWNCHECK : Only markdown with a table-map is supported.

| | |
|---------------------------|--|
| Explanation | Error occurred while performing exceed action check on the policy attached |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-CONFACTCHECK : Conform-action in a policer can only be transmit. Policy Rejected.

| | |
|---------------------------|---|
| Explanation | Error occurred while performing conform action check on the policer. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-SHAPEBWSUPPORT : Shape and bandwidth in the same class is unsupported. Policy Rejected. Service-policy : [chars]

| | |
|---------------------------|---|
| Explanation | Error occurred while performing qos policy check. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-QBUFFERSCHECK : Sum of configured qbuffer ratios should be less than 100. Configuration not accepted. Service-policy : [chars] Info : classes for which qbuffer ratio is not configured is given a buffer ratio 1

| | |
|---------------------------|---|
| Explanation | Error occurred while performing queue buffers policy install check. Wrong configuration |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-HWIDBCHECK : Configuring service-policy on interface [chars] is not allowed

| | |
|---------------------------|---|
| Explanation | Error occurred while attaching policy on gigethernet0/0. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-HIERPOLICYCHECK : Hierarchical Policy must have child under all user defined classes for wired ports. Service-policy : [chars]

| | |
|---------------------------|---|
| Explanation | Error occurred while attaching a hierarchical policy |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-3-CHILDPOLICYCHECK : Only 2 level policy is supported. Service-policy : [chars]

| | |
|---------------------------|---|
| Explanation | Error occurred while attaching a hierarchical policy |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-4-COPPMODIFY : Police rate modification for COPP system class ([chars]) is discouraged. User can go to default rate by running 'cpp system-default' CLI.

| | |
|---------------------------|---|
| Explanation | User modified police rate for COPP system classes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_QOS-4-COPPMODRANGE : Police rate modification for COPP system class ([chars]) is out-of-range. User can go to default rate by running 'cpp system-default' CLI.

| | |
|---------------------------|---|
| Explanation | User modified police rate for COPP system classes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMANRP_SC**%FMANRP_SC-3-SCTXTDLMSGMARSHAL : Failed to copy service context config message to IPC buffer for sctx_name id [dec]**

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for service context configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SC-3-DBGTDLMSGMARSHAL : Failed to copy debug SC request message to IPC buffer

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for debug SC command has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SC-3-SCIOSDENQUEUE : Failed to enqueue SC [chars] message for transmission

| | |
|---------------------------|---|
| Explanation | This operation to enqueue an IPC message for sending has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SC-3-INTFTDLMSGMARSHAL : Failed to copy interface config message to IPC buffer for Interface [chars] ([hex]), operation [chars]

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL message for interface configuration has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SC-4-SCNOSWIDB : Sub-interface is null

| | |
|--------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of a swidb structure. |
|--------------------|--|

%FMANRP_SC-4-SCNOSWIDB : Sub-interface is null

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%FMANRP_SC-4-NOSERVICECTX : A mapping structure is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of a SC mapping structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SC-4-SCBADACTION : Invalid action [dec] for SC configuration

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is invalid action for a SC configuration. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMANRP_SSLVPN

%FMANRP_SSLVPN-3-STATSCLEARERR : Unable to send clear WEB VPN context stats message. [chars] ([dec])

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL messages for WEB VPN context stats clearing has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SSLVPN-3-STATSGUPDERR : Update WEB VPN context stats error. [chars] ([dec])

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred when updating global sslvpn statistics |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SSLVPN-3-STATSWVUPDERR : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred when updating ssl web vpn context statistics |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SSLVPN-3-CFGSTATUSERR : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred when got status of configuration |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SSLVPN-3-GWERR : Failed [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred in configuration processing causing configuration failure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SSLVPN-3-VWCONFERR : Failed [chars]: [chars]

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred during WebVPN Context configuration causing failure. |
|--------------------|---|

%FMANRP_SSLVPN-3-VWCONFERR : Failed [chars]: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FMANRP_SSLVPN-3-PKIERR : Failed [chars]: [chars]

Explanation An unexpected condition has occurred in configuration processing causing configuration failure.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FMANRP_SSLVPN-3-AAATDLERR : [chars][chars]. [chars]

Explanation An unexpected condition has occurred in processing AAA request/reply message causing AAA handling failure.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FMANRP_SSLVPN-4-AAAFRIPWARN : [chars]Invalid framed ip address [IP_address] received from AAA. Not sending user config

Explanation Wrong AAA server config.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FMANRP_SSLVPN-3-RRITDLERR : [chars][chars]. [chars]

Explanation An unexpected condition has occurred in processing of SSLVPN route inject/remove message

%FMANRP_SSLVPN-3-RRITDLERR : [chars][chars]. [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FMANRP_SSLVPN-3-RRICHUNKERR : [chars]

| | |
|---------------------------|---|
| Explanation | Error has occurred when requested memory for SSLVPN route handling |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FMANRP_SSLVPN-3-CONDDEBERR : [chars]. [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred in processing conditional debug message |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FMD

%FMD-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]

| | |
|---------------------------|---|
| Explanation | For a request from upper FMD software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck binding that cannot be established etc. In rare cases this could also affect other operations such as feature activation. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%FMD-3-IPC_NORES : No space for the IPC reply, size [int]

| | |
|---------------------------|---|
| Explanation | For a request from upper FMD software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck binding that cannot be established etc. In rare cases this could also affect other operations such as feature activation. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%FMD-2-IPC_INIT : IPC message handler registration failure, rc [int]

| | |
|---------------------------|--|
| Explanation | Registering an IPC message handler for the FMD feature failed. This will cause the feature to not function. |
| Recommended Action | This is normally a software issue. The consequences are that the FMD feature will not function. LOG_STD_ACTION |

FME

%FME-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]

| | |
|---------------------------|---|
| Explanation | For a request from upper FME software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%FME-3-IPC_NORES : No space for the IPC reply, size [int]

| | |
|---------------------------|---|
| Explanation | For a request from upper FME software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%FME-2-IPC_INIT : IPC message handler registration failure, rc [int]

| | |
|---------------------------|--|
| Explanation | Registering an IPC message handler for the FME feature failed. This will cause the feature to not function. |
| Recommended Action | This is normally a software issue. The consequences are that the FME feature will not function. LOG_STD_ACTION |

FME_DP

%FME_DP-3-DEBUG_REG_FAILED : Flow Metric Engine fails to registrate with Conditional Debugging.

| | |
|---------------------------|--|
| Explanation | Flow Metric Engine fails to registrate with Conditional Debugging infra. |
| Recommended Action | LOG_STD_ACTION |

FMFP through FRAG

- FMFP
- FMFP_ACL
- FMFP_CXSC
- FMFP_QOS
- FMFP_URPF
- FNF
- FNF_PROXY
- FPD_MGMT
- FR
- FRAG

FMFP

%FMFP-3-INTERFACE_OBJECT_NOT_FOUND : Interface object lookup by [chars] not found for interface [int]

| | |
|---------------------------|--|
| Explanation | The desired interface object was not found. |
| Recommended Action | Examine the interface state in the operating system, route processor (RP) and forwarding processor (FP) forwarding manager logs. |

%FMFP-3-OBJ_DWNLD_TO_DP_FAILED : [chars] download to DP failed

| | |
|---------------------------|---|
| Explanation | An object has failed to download to the data plane |
| Recommended Action | Examine the list of error objects in the forwarding processor (FP) forwarding manager asynchronous object logs. |

%FMFP-3-OBJ_DWNLD_TO_DP_STUCK : AOM download to Data Plane is stuck for more than [int] seconds [chars]

| | |
|---------------------------|--|
| Explanation | An object download from FMAN-FP to lower layer has taken long time. It can be caused by incomplete configuration or software defects |
| Recommended Action | Run show platform software object-manager fp [active standby] [pending-issue-update pending-issue-batch] sorted <min_pending_time> to see the sorted list of update/batch/ command in pending state for more than the min_pending_time. For incomplete configuration, use show platform platform software object fp [active standby] resolve to see if there is any resolve object |

%FMFP-6-OBJ_DWNLD_TO_DP_RESUME : AOM download of objects to Data Plane is back to normal

Explanation An object download from FMAN-FP to lower layer has finished after a temporary stuck. It can be caused by incomplete configuration or software defects

Recommended Action check if there is any functional impact after recovery

%FMFP-3-OBJ_ACK_FROM_DP_STUCK : AOM ack download to Data Plane is stuck for more than [int] seconds [chars]

Explanation An object ack from lower layer to FMAN-FP has taken long time. It can be caused by incomplete configuration or software defects

Recommended Action Run show platform software object-manager fp [active|standby] [pending-ack-update|pending-ack-batch|pending-ack-commands] sorted <min_pending_time> to see the sorted list of update/ batch/command in pending state for more than the min_pending_time. For incomplete configuration, use show platform platform software object fp [active|standby] resolve to see if there is any resolve object

%FMFP-6-OBJ_ACK_FROM_DP_RESUME : AOM ack of objects to Data Plane is back to normal

Explanation An object ack from lower layer to FMAN-FP has finished after a temporary stuck. It can be caused by incomplete configuration or software defects

Recommended Action check if there is any functional impact after recovery

%FMFP-3-DP_NOMEM : DP not enough memory. [chars]

Explanation An object download to DP failed because the memory of DP is not enough.

Recommended Action Run show platform resource to see the memory usage

FMFP_ACL

%FMFP_ACL-3-ACL_OBJECT_DOWNLOAD : [chars][chars] fail to download because [chars].

Explanation The access control list (ACL) object has failed to download. This could be due to a hardware or software resource limitation or a software defect.

Recommended Action Check the logs for information on the relevant object download states. Remove the ACL attachment to the interface or delete the ACL. Reboot the forwarding processor (FP).

%FMFP_ACL-3-ACL_LIMIT_EXCEEDED : ACL [chars] exceeded limitation of [int] ACEs per ACL

| | |
|---------------------------|---|
| Explanation | A software limitation has been exceeded. |
| Recommended Action | Reduce the access control list (ACL) configuration. A reboot of the forwarding processor (FP) is recommended. |

%FMFP_ACL-3-ACL_PROTOCOL_CHECK : ACL [chars] protocol does not match what was previously configured

| | |
|---------------------------|---|
| Explanation | The error occurs for one of two reasons. An access control list (ACL) reference was made to an ACL of a different protocol or an ACL was added or edited when there were similarly named ACL references of a different protocol |
| Recommended Action | Remove the conflicting ACL or the conflicting ACL references. |

%FMFP_ACL-3-ACL_MODIFY_FAILED : ACL:[chars] modification through object group edit failed

| | |
|---------------------------|---|
| Explanation | Object-group used in the ACL was modified. Those changes could not be accommodated in the ACL |
| Recommended Action | Fix the object-group changes. Delete ACL and reconfigure it |

%FMFP_ACL-3-SGACL_OBJECT_DOWNLOAD : SGACL Cell ([dec] [dec]) policy [chars] fail to download because [chars].

| | |
|---------------------------|--|
| Explanation | The SGACL policy has failed to download. This could be due to a hardware or software resource limitation or a software defect. |
| Recommended Action | Check the logs for information on the relevant object download states. Remove the SGACL policy for that cell, correct the error and reconfigure it |

FMFP_CXSC**%FMFP_CXSC-3-CXSC_INITIALIZATION : [chars] Returned: [chars]**

| | |
|---------------------------|---|
| Explanation | The CXSC INITIALIZATION has FAILED. This could be due to a hardware or software resource limitation or a software defect. |
| Recommended Action | Check memory usage and router configuration and try to re-activate virtual service again. If it shows the same results then please contact TAC. |

%FMFP_CXSC-3-CXSC_DEINITIALIZATION : [chars] Returned: [chars]

| | |
|--------------------|---|
| Explanation | The CXSC DEINITIALIZATION has FAILED. This could be due to a hardware or software resource limitation or a software defect. |
|--------------------|---|

%FMFP_CXSC-3-CXSC_DEINITIALIZATION : [chars] Returned: [chars]

| | |
|---------------------------|---|
| Recommended Action | Check memory usage and router configuration and try to re-activate virtual service again. If it shows the same results then please contact TAC. |
|---------------------------|---|

%FMFP_CXSC-3-CXSC_DOMAIN_CONFIG : [chars] Returned: [chars]

| | |
|--------------------|---|
| Explanation | The CXSC DOMAIN CONFIG DOWNLOAD has FAILED. This could be due to a hardware or software resource limitation or a software defect. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Check memory usage and router configuration and try to re-activate virtual service again. If it shows the same results then please contact TAC. |
|---------------------------|---|

%FMFP_CXSC-3-CXSC_POLICY_DOWNLOAD : [chars] Returned: [chars]

| | |
|--------------------|--|
| Explanation | The CXSC POLICY DOWNLOAD has FAILED. This could be due to a hardware or software resource limitation or a software defect. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Check memory usage and router configuration and try to re-activate virtual service again. If it shows same results then please contact TAC. |
|---------------------------|---|

%FMFP_CXSC-6-CXSC_POLICY_DOWNLOAD_SUCCESS : New policy version: [int] has now been installed and is active

| | |
|--------------------|---|
| Explanation | The CXSC POLICY DOWNLOAD of the numbered version has succeeded. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | This an informational message only, no action is required. Note that policy version is not monotonically increasing so there is nothing to be concerned about if the current installed policy version is less than the previous installed policy version. |
|---------------------------|---|

FMFP_QOS

%FMFP_QOS-6-QOS_STATS_STALLED : statistics stalled

| | |
|--------------------|---|
| Explanation | QoS statistics are temporarily stalled. This is an informational message. |
|--------------------|---|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%FMFP_QOS-6-QOS_STATS_PROGRESS : statistics are progressing

| | |
|--------------------|--|
| Explanation | QoS statistics are now progressing normally. This is an informational message. |
|--------------------|--|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

FMFP_URPF

%FMFP_URPF-3-OBJECT_DOWNLOAD : Unicast RPF [chars] on interface [chars] fail to download because [chars].

Explanation The unicast reverse path forwarding (URPF) operation failed to download. This can be caused by a hardware or software resource limitation or a software defect.

Recommended Action Check the logs for information on the relevant download states. Remove the uRPF feature enabled on any interface. Reboot the forwarding processor (FP).

%FMFP_URPF-3-LIST_DOWNLOAD : Unicast RPF list [chars] for list [int] fail to download because [chars].

Explanation The unicast reverse path forwarding (URPF) list failed to download. This can be caused by a hardware or software resource limitation or software defect.

Recommended Action Check the logs for information on the relevant download states. Reboot the forwarding processor (FP).

FNF

%FNF-6-AGER_OVERRIDE : Flow [chars] time modified by [chars] to [dec]

Explanation The aging timer has been modified and may be different from configured value.

Recommended Action No action is required.

%FNF-6-ERROR : FNF error: [chars]

Explanation An FNF error occurred.

Recommended Action For more information, repeat the action with FNF debugging enabled.

%FNF-6-CONFIGURATION : Invalid FNF configuration: [chars]

Explanation An invalid FNF configuration was detected.

Recommended Action Review the FNF configuration before repeating the action.

%FNF-3-LC_STATUS : Flow monitor [chars] can not be added to [chars], rejected on module [chars] : [chars]

| | |
|---------------------------|---|
| Explanation | The flow monitor has been rejected on the specified module. It will have been removed from the RP configuration too. This can happen for example when a monitor is removed and added again immediately before the tidy has been completed, or in the case where a flow monitor is waiting at automore when the monitor is removed from the interface then reapplied |
| Recommended Action | Check the configuration of the Flow Monitor that was applied for errors. If the rejection was due to the LC not having finished cleaning up after a previous removal of a Flow Monitor, wait until the cleaning up has finished then reapply the config. |

%FNF-3-PROVISIONING : [chars] failed to provision '[chars] flow monitor [chars] [chars]' on [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | The attachment of the Flow Monitor to has had a problem on the device identified. It may be working on other devices, and the configuration is retained. |
| Recommended Action | Check the device identified is working as expected and that it can support the configuration of the Flow Monitor to the chosen attachment point. |

%FNF-3-KEY_SIZE_INVALID : Unexpected key fields size: [dec], MSGDEF_LIMIT_SLOW

| | |
|---------------------------|--|
| Explanation | Netflow attempted to install a flow with an invalid key fields size. |
| Recommended Action | LOG_STD_ACTION |

%FNF-4-FREE_LIST_EMPTY : Monitor: [hex], MSGDEF_LIMIT_MEDIUM

| | |
|---------------------------|--|
| Explanation | Netflow attempted to install a flow but no free flow records were available. |
| Recommended Action | LOG_STD_ACTION |

%FNF-3-FREE_LIST_ADD : Failed for record: [hex], MSGDEF_LIMIT_MEDIUM

| | |
|---------------------------|---|
| Explanation | Netflow failed to return a record to the free list. |
| Recommended Action | LOG_STD_ACTION |

%FNF-3-CLEANUP_ENTRY : Failed, MSGDEF_LIMIT_MEDIUM

| | |
|---------------------------|--|
| Explanation | Netflow failed to clean up a record for reuse. |
| Recommended Action | LOG_STD_ACTION |

%FNF-3-UNSUPPORTED_PROT : [chars], MSGDEF_LIMIT_MEDIUM

Explanation This protocol is unsupported.

Recommended Action LOG_STD_ACTION

%FNF-3-INVALID_CMD : Flow builder encountered an invalid command: [dec]., MSGDEF_LIMIT_MEDIUM

Explanation Flow builder doesn't support the command encountered in the instruction stream.

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_UNSUPPORTED_AGG_FMT : Format: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow doesn't support this aggregation type.

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_UNSUPPORTED_EXP_FMT : Format: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow doesn't support this export format.

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_UNSUPPORTED_OPTION : Option: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow doesn't support this export option.

Recommended Action LOG_STD_ACTION

%FNF-3-IPFIX_UNSUPPORTED_MON_TYPE : Monitor type: [dec], MSGDEF_LIMIT_MEDIUM

Explanation IPFIX doesn't support this monitor type.

Recommended Action LOG_STD_ACTION

%FNF-3-REFCNT_TIMEOUT : never reached 0 for entry [hex], MSGDEF_LIMIT_SLOW

Explanation Netflow timed out waiting for an flow cache entries refcnt. to hit 0. The entry was forced out

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_UNSUPPORTED_MMA_FIELD : MMA global ID [dec] (Netflow field [dec]) is not supported by MMA, MSGDEF_LIMIT_SLOW

Explanation Netflow field that is marked as MMA (Metric Mediation Agent) controlled field is not supported by MMA

Recommended Action LOG_STD_ACTION

%FNF-3-REFCNT_UNDERFLOW : refcnt underflow for entry [hex], MSGDEF_LIMIT_SLOW

Explanation Netflow error caused flow cache entry reference count to go negative. The decrement was rescinded

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_FIELD_LIST_VAR_INVALID : Unknown field variety [dec] for field_id [dec], MSGDEF_LIMIT_MEDIUM

Explanation Internal error, Netflow field list entry mapped to unknown field variety

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_FIELD_UNEXPECTED_SIZE : Unexpected size for field_id [dec], expected [dec]/got [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow specified unexpected size for field_id

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_FIELD_LIST_TS_CNT_KEY : Field_id [dec] must be non-key, MSGDEF_LIMIT_MEDIUM

Explanation Netflow Field list specified timestamp/counter field as a key field, which is not supported

%FNF-3-FNF_FIELD_LIST_TS_CNT_KEY : Field_id [dec] must be non-key, MSGDEF_LIMIT_MEDIUM

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_FIELD_LIST_TOO_LARGE : Field_list too large, max [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow field list contains too many fields. At most 32 fields are supported, including any hidden fields automatically added as necessary for record keeping

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_FREQ_LAYOUT_TOO_LARGE : Flow record layout too large, max [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow field list results in a flow record layout which is too large. At most 128 bytes of flow record data is supported, including any padding, and any hidden fields automatically added as necessary for record keeping

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_FIELD_LIST_MEM_INSUFFICIENT : Insufficient memory [dec] for field_list, MSGDEF_LIMIT_MEDIUM

Explanation Internal error, netflow client provided insufficient memory to process a field list

Recommended Action LOG_STD_ACTION

%FNF-3-INVALID_FO : FNF FO is not valid, MSGDEF_LIMIT_MEDIUM

Explanation FNF feature object is not valid.

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_CWALK_FLEXIBLE_UNEXPECTED_LAYOUT : Failed copy to CLI buffer , PI will receive zero buffer, MSGDEF_LIMIT_MEDIUM

Explanation Failed copy to CLI buffer during the walk process ,fill the buffer with 0

Recommended Action LOG_STD_ACTION

%FNF-6-DYNAMIC_MONITORS_OVER_SUBSCRIPTION : Interface [chars] (dir=[chars]): the number of monitors that should run on the packet([dec]) exceeds QFP limit([dec]), [dec] monitor[chars] won't run, MSGDEF_LIMIT_GLACIAL

Explanation QFP maximum supported number of monitors per packet was exceeded. As a result the excess number of monitors will not run on the packet. Static monitors always take priority over policy-map monitors.

Recommended Action LOG_STD_DBG_ACTION

%FNF-6-SYNC_CACHE_TOO_MANY_RECS_FOR_INTERVAL : For synchronized cache the number of records is larger than can be exported in configured interval., MSGDEF_LIMIT_MEDIUM

Explanation The number of records is too large for the configured interval. As a result some records may not be exported in a timely manner. Consider reducing cache size or increasing interval length.

Recommended Action LOG_STD_DBG_ACTION

%FNF-3-DEBUG_REG_FAILED : FNF fails to registrate with Conditional Debugging.

Explanation FNF fails to registrate with Conditional Debugging infra.

Recommended Action LOG_STD_ACTION

%FNF-3-CFT_REG_FAILED : FNF fails to connect to CFT infra.

Explanation FNF fails to connect to CFT infra.

Recommended Action LOG_STD_ACTION

%FNF-3-FNF_EXPORT_BUILD_TYPE_FAILED : Format: [dec], MSGDEF_LIMIT_MEDIUM

Explanation FNF Exporter build failed. unknown type.

Recommended Action

FNF_PROXY

%FNF_PROXY-3-IPC_UNHANDLED : type [dec]

Explanation An unknown message was received by the Netflow Client Proxy.

%FNF_PROXY-3-IPC_UNHANDLED : type [dec]

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-MON_CACHE_FREE_LIST_INIT : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to initialize the free list.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-MON_CACHE_FREE_LIST_POOL_ADD : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to populate the free list.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-MON_CACHE_AGER_INIT : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to initialize the ager.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-MON_CACHE_AGER_SHUT : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to shutdown the ager.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-MON_CACHE_FORCE_FLUSH : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to force a cache flush.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-EXPORTER_INIT : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to initialize the exporter.

%FNF_PROXY-3-EXPORTER_INIT : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-EXPORTER_SHUT : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to shutdown the exporter.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-EXPORTER_OPTION_TEMPLATE_BIND : Failed for exporter: [hex] with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to bind an option template.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-EXPORTER_OPTION_TEMPLATE_UNBIND : Failed for exporter: [hex] with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to unbind an option template.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-EXPORTER_OPTION_TIMER_START : Failed for exporter: [hex] with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to start an option timer.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-EXPORTER_OPTION_TIMER_STOP : Failed for exporter: [hex] with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to stop an option timer.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-EXPORTER_FORCE_TEMPLATE_REFRESH : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to force a template refresh for an exporter.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-FLOW_CACHE_WALK : Failed for session: [hex] with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to process a flow cache walk request.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-OBJ_MODIFY : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to process an object modify request.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-STATS : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to process a stats request.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-EVAL_FREQ_FIELD_LIST : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to process an evaluate flow record field list request.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-PROCESS_FREQ_FIELD_LIST : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to process a process flow record field list request.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-FLOW_CACHE_WALK_FLEXIBLE : Failed for session: [hex] with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to process a flow cache walk/flexible request.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-PROXY_IPC_PAK_ALLOC_FAILED :

Explanation Allocation of IPC packet failed.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-PROXY_IPC_SEND_FAILED : [dec]

Explanation Could not send IPC reply for proxy request.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-MON_CACHE_CLEAN : Failed with return code: [dec], MSGDEF_LIMIT_MEDIUM

Explanation Netflow failed to perform cache cleanup.

Recommended Action LOG_STD_ACTION

%FNF_PROXY-3-FNF_CWALK_TOP_TALKERS_INVALID_SORT : This field can't be used for sort, MSGDEF_LIMIT_MEDIUM

Explanation Show Top Talkers command contains sort field specification that is not supported.

Recommended Action LOG_STD_ACTION

FPD_MGMT

%FPD_MGMT-6-BUNDLE_DOWNLOAD : Downloading FPD image bundle for [chars] card in [chars] ...

Explanation The system is downloading the field programmable device image bundle to the system main memory.

Recommended Action No action is required.

%FPD_MGMT-6-UPGRADE_TIME : Estimated total FPD image upgrade time for [chars] card in [chars] = %TS.

Explanation The estimated total time for all FPD images to be upgraded is displayed for the indicated card.

Recommended Action No action is required.

%FPD_MGMT-6-UPGRADE_START : [chars] (FPD ID=[int]) image upgrade in progress for [chars] card in [chars]. Updating to version [int].[int]. PLEASE DO NOT INTERRUPT DURING THE UPGRADE PROCESS (estimated upgrade completion time = %TS) ... FPD upgrade in progress on hardware, reload/configuration change on those hardware is not recommended as it might cause HW programming failure and result in RMA of the hardware.

Explanation The FPD image upgrade process has started. Do not interrupt the upgrade operation as any interruption could render the target card unusable. Avoid actions like removing the target card from the system, powering off the system, or using commands that can power-cycle the target card during the upgrade process.

Recommended Action No action is required.

%FPD_MGMT-6-UPGRADE_PASSED : [chars] (FPD ID=[int]) image in the [chars] card in [chars] has been successfully updated from version [chars] to version [int].[int]. Upgrading time = %ITE

Explanation The FPD image upgrade process has completed successfully for the indicated device.

Recommended Action No action is required.

%FPD_MGMT-6-OVERALL_UPGRADE : All the attempts to upgrade the required FPD images have been completed for [chars] card in [chars]. Number of successful/failure upgrade(s): [int]/[int].

Explanation All the FPD image upgrades have completed for the indicated card.

Recommended Action No action is required.

%FPD_MGMT-6-UPGRADE_RETRY : Attempting to recover from the failed upgrades ...

Explanation Because of an image upgrade failure, the system will attempt again the upgrade operation for the same FPD image.

Recommended Action No action is required.

%FPD_MGMT-6-PENDING_UPGRADE : [int] more FPD image upgrade operation will be required on [chars] in [chars] after additional power-cycle operation on the target card.

Explanation All upgrade operations have not completed, and additional power-cycle operations are required before the upgraded or new FPD image will be applied to the system configuration. The message text indicates the number of pending upgrade operations that will be performed. More than one power-cycle operation might be required to complete the overall upgrade process.

Recommended Action No action is required.

%FPD_MGMT-5-UPGRADE_ATTEMPT : Attempting to automatically upgrade the FPD image(s) for [chars] card in [chars]. Use 'show upgrade fpd progress' command to view the upgrade progress ...

Explanation The automatic FPD image upgrade feature is enabled with the `upgrade fpd auto` global configuration command. The system is currently upgrading an incompatible image version automatically.

Recommended Action No action is required. The upgrade process can take a long time. The FPD_MGMT-6-UPGRADE_TIME message gives an estimate of the total upgrade time.

%FPD_MGMT-5-CARD_POWER_CYCLE : [chars] card in [chars] is being power cycled for the FPD image upgrade to take effect.

Explanation The indicated card is being power cycled after the FPD image upgrade. This action allows the target card to be operational with the new upgraded FPD image or images.

Recommended Action No action is required.

%FPD_MGMT-5-POST_UPGRADE_REMINDER : [chars] card in [chars] will require a [chars] for the FPD image upgrade to take effect.

Explanation The indicated card will require manual intervention after the FPD image upgrade. The specified operation is required for the upgraded FPD image to take effect.

Recommended Action No action is required.

%FPD_MGMT-4-BYPASS_AUTO_UPGRADE : The automatic FPD image upgrade feature is not enabled, bypassing the image upgrade for [chars] card in [chars].

| | |
|---------------------------|--|
| Explanation | The automatic FPD image upgrade feature is not enabled. The incompatible image will not be automatically upgraded. The card will be disabled until the image is upgraded to a compatible version. |
| Recommended Action | Enable the automatic FPD image upgrade with the upgrade fpd auto global configuration command or use the upgrade hw-module privileged EXEC command for a manual upgrade operation. For more information about these commands, refer to the FPD_DOCUMENT_NAME . |

%FPD_MGMT-4-UPGRADE_EXIT : Unexpected exit of FPD image upgrade operation for [chars] card in [chars].

| | |
|---------------------------|--|
| Explanation | The FPD image upgrade operation was interrupted by the physical removal of the card from the system or by the use of other commands that have interrupted the normal operation of the target card. The partial upgrade operation might have left the card unusable because of corrupted FPD images. |
| Recommended Action | If the card does not come up after reinserting into the system, then perform the recovery upgrade operation by using the upgrade hw-module privileged EXEC command. With this command the system will attempt the reprogramming of the image to recover from the previous partial upgrade operation. For more information about performing a recovery upgrade operation, refer to the FPD_DOCUMENT_NAME . |

%FPD_MGMT-4-VERSION_CHECK_ABORTED : FPD image version check operation has been aborted for [chars] card in [chars] because manual upgrade has already being started.

| | |
|---------------------------|--|
| Explanation | The FPD image version check operation required for the automatic upgrade feature is not being performed for the indicated card because the upgrade hw-module privileged EXEC command has already being executed. These two operations cannot be performed at the same time. |
| Recommended Action | If an automatic upgrade operation is required, do not enter the upgrade hw-module privileged EXEC command for the manual upgrade while the target card is initializing. Enter the show hw-module subslot fpd command and ensure that the target card is displayed in the command output before proceeding with the manual upgrade. |

%FPD_MGMT-4-CFG_NOT_SYNCED : Failed to sync [chars] command to standby: [chars]

| | |
|---------------------------|--|
| Explanation | A FPD configuration command failed to get synced to standby RP due to the indicated error condition. Usually this can happen if the standby RP hardware doesn't support the type of filesystem supported on the active one. |
| Recommended Action | Configure again the command with a filesystem that is supported on both standby and active RP. To find out if a specific filesystem is also supported on standby RP, the dir ? command can be used to display a list of filesystem supported on both standby and active RP. |

%FPD_MGMT-3-INVALID_IMG_VER : Invalid [chars] (FPD ID=[int]) image version detected for [chars] card in [chars].

Explanation The indicated field programmable device contains an invalid version for the FPD image, because the system was not able to extract this information from the indicated card. A failed upgrade attempt might have corrupted the FPD image identification on the device.

Recommended Action If the automatic upgrade feature is not enabled, then the affected card will be disabled. If this happens, then follow the recommended action described for the FPD_MGMT-3-CARD_DISABLED message.

%FPD_MGMT-3-IMG_VER_NOT_FOUND : FPD image version information is not available for [chars] card in [chars]. All the FPD images will be upgraded to recover from this error.

Explanation The FPD image version information for the indicated card is not available because the system was not able to extract this information for all the FPDs in the card. This could be the result of a corrupted FPD image from a power failure.

Recommended Action If the automatic upgrade feature is not enabled, then the affected card will be disabled. If this happens, then follow the recommended action described for the FPD_MGMT-3-CARD_DISABLED message.

%FPD_MGMT-3-INCOMP_IMG_VER : Incompatible [chars] (FPD ID=[int]) image version detected for [chars] card in [chars]. Detected version = [int].[int], minimum required version = [int].[int]. Current HW version = [int].[int].

Explanation An incompatible FPD image version has been detected. The FPD image needs to be upgraded either automatically, or manually, to make the card operational. If the automatic upgrade feature is not enabled, or if the system cannot find the necessary FPD image package file, then the card will be disabled.

Recommended Action If the automatic upgrade feature is not enabled, then the affected card will be disabled. If this happens, then follow the recommended action described for the FPD_MGMT-3-CARD_DISABLED message.

%FPD_MGMT-3-MAJOR_VER_MISMATCH : Major image version mismatch detected with [chars] (FPD ID=[int]) for [chars] card in [chars]. Image will need to be [chars] from version [int].[int] to at least a minimum version of [int].[int]. Current HW version = [int].[int].

Explanation A major image version mismatch has been detected. This incompatibility will need to be resolved by doing an upgrade or downgrade operation either automatically, or manually, to make the card operational. If the automatic upgrade feature is not enabled, or if the system cannot find the necessary FPD image package file, then the card will be disabled.

%FPD_MGMT-3-MAJOR_VER_MISMATCH : Major image version mismatch detected with [chars] (FPD ID=[int]) for [chars] card in [chars]. Image will need to be [chars] from version [int].[int] to at least a minimum version of [int].[int]. Current HW version = [int].[int].

Recommended Action If the automatic upgrade feature is not enabled, then the affected card will be disabled. If this happens, then follow the recommended action described for the FPD_MGMT-3-CARD_DISABLED message.

%FPD_MGMT-3-OPEN_FAILED : Failed to open [chars] ([chars]). Please make sure that the required file is in a valid path.

Explanation The system cannot access the required file from the indicated URL.

Recommended Action Make sure that the indicated URL is a valid path, and the system has access to the filesystem where the file has been placed.

%FPD_MGMT-3-OUT_OF_MEMORY : Could not allocate the required [dec] bytes of memory.

Explanation The system does not have enough free main memory to download the bundle file.

Recommended Action Make sure that the system main memory size meets the minimum requirement that is specified in the Cisco IOS software release note. If the system meets the minimum requirement for this Cisco IOS software release, make sure that the amount of free main memory in the system also meets the minimum memory required to use this software feature. Use the **show memory** command to find out this information and add more main memory if it is necessary. If the system meets all the memory requirements, copy the error message exactly as it appears on the console and gather the output of the **show tech-support** command and contact your technical support representative with this information.

%FPD_MGMT-3-READ_ERROR : Could not read the [chars] file.

Explanation The system cannot read the required file from the indicated URL.

Recommended Action Make sure that the indicated URL is a valid path, and the system has access to the filesystem where the file has been placed.

%FPD_MGMT-3-BNDL_WRONG_MAGIC_NUM : The [chars] file contains a wrong magic number for the image bundle: [hex] (expected [hex]). Please make sure that this is a valid FPD image [chars] file for card in [chars].

Explanation The indicated file might not be a valid FPD image bundle or package file for the target card or the file could be corrupted.

%FPD_MGMT-3-BNDL_WRONG_MAGIC_NUM : The [chars] file contains a wrong magic number for the image bundle: [hex] (expected [hex]). Please make sure that this is a valid FPD image [chars] file for card in [chars].

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-BNDL_WRONG_HDR_LEN : The [chars] file contains wrong header length for the image bundle: [int] bytes (expected [int] bytes). Please make sure that this is a valid FPD image [chars] file for card in [chars].

Explanation The indicated file might not be a valid FPD image bundle or package file for the target card.

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-BNDL_WRONG_SIZE : The [chars] file contains incorrect image bundle size: [int] bytes (expected [int] bytes). Please make sure that this is a valid FPD image [chars] file for card in [chars].

Explanation The indicated file might not be a valid FPD image bundle or package file for the target card.

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-BNDL_CRC_CHECK_FAIL : The [chars] file contains a corrupted image bundle - CRC mismatch: current value [hex], expected value [hex]. Please make sure that this is a valid FPD image [chars] file for card in [chars].

| | |
|---------------------------|--|
| Explanation | The file failed the CRC checking process. This failure indicates a corrupt FPD image bundle or package file. |
| Recommended Action | Try to download again the required package from the Cisco Software Center website as the indicated one might be corrupted. If the problem persists, copy the error message exactly as it appears and gather the output of the show hw-module subslot fpd , show upgrade fpd table and show upgrade fpd file fpd-pkg-url commands, then contact your technical support representative with the gathered information. |

%FPD_MGMT-3-BNDL_CARD_TYPE_MISMATCH : The [chars] file does not contain the card type ([hex]) in the image bundle to indicate the support of the target card. Please make sure that this is a valid FPD image [chars] file for card in [chars].

| | |
|---------------------------|---|
| Explanation | The image bundle in the indicated file does not contain a correct card type value for the target card. |
| Recommended Action | Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the show hw-module subslot fpd , show upgrade fpd table and show upgrade fpd file fpd-pkg-url commands, then contact your technical support representative with the gathered information. |

%FPD_MGMT-3-BNDL_NAME_PREFIX_MISMATCH : The [chars] file contains a bundle name prefix ([chars]) that does not match with the expected value of [chars] for the image bundle. Please make sure that this is a valid FPD image [chars] file for card in [chars].

| | |
|---------------------------|---|
| Explanation | The content of the selected FPD image bundle does not match its filename. |
| Recommended Action | Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the show hw-module subslot fpd , show upgrade fpd table and show upgrade fpd file fpd-pkg-url commands, then contact your technical support representative with the gathered information. |

%FPD_MGMT-3-INCOMP_BNDL_VER : The selected [chars] file contain an image bundle that has a version number that is incompatible for this IOS release - [chars]. Selected version = [int].[int], minimum compatible version = [int].[int]. Please make sure that this is a valid FPD image [chars] file for card in [chars]. The SPA type is [chars].

Explanation The version of the selected FPD image bundle does not contain a valid version number that is compatible for the IOS release. The major version number should be the same and the minor version number should be at least equal to the minimal required version.

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-MISSING_IMAGE : Could not find the required [chars] image (FPD ID=[int] and FPD version=[int].[int] compatible with HW version=[int].[int]) from the [chars]-fpd.bundle in [chars] file. Please make sure that this is a valid FPD image [chars] file for [chars] card in [chars].

Explanation The indicated FPD image bundle or package file might not be the correct one. If this is a FPD image package file, then an incompatible package file might have been renamed with a filename that matched with the one that the system is expecting for this Cisco IOS software release. You should never rename an FPD image package file name.

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-WRONG_IMG_MAJOR_VER : The selected FPD image for upgrade contains wrong FPD image major version number = '[int]' (expected number = '[int]') for [chars] (FPD ID [int]). Please make sure that the file being used for upgrade is a valid FPD image [chars] for card in [chars].

Explanation The file used for upgrade might not be a valid FPD image bundle or package file for the card.

%FPD_MGMT-3-WRONG_IMG_MAJOR_VER : The selected FPD image for upgrade contains wrong FPD image major version number = '[int]' (expected number = '[int]') for [chars] (FPD ID [int]). Please make sure that the file being used for upgrade is a valid FPD image [chars] for card in [chars].

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-WRONG_IMG_MAGIC_NUM : The FPD image for [chars] (FPD ID [int]) in [chars] file contains wrong magic number: [hex] (expected [hex]). Please make sure that this is a valid FPD image bundle or package file for card in [chars].

Explanation The indicated file might not be a valid FPD image bundle or package file for the card.

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-WRONG_IMG_HDR_LEN : The FPD image for [chars] (FPD ID [int]) in [chars] file contains wrong header length: [int] bytes (expected [int] bytes). Please make sure that this is a valid FPD image bundle or package file for card in [chars].

Explanation The indicated file might not be a valid FPD image bundle or package file for the card.

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-WRONG_IMG_DATA_LEN : The FPD image for [chars] (FPD ID [int]) in [chars] file contains wrong data length: total data length (with padding) = [int] bytes, data length = [int] bytes. Please make sure that this is a valid FPD image bundle or package file for card in [chars].

Explanation The indicated file might not be a valid FPD image bundle or package file for the card.

%FPD_MGMT-3-WRONG_IMG_DATA_LEN : The FPD image for [chars] (FPD ID [int]) in [chars] file contains wrong data length: total data length (with padding) = [int] bytes, data length = [int] bytes. Please make sure that this is a valid FPD image bundle or package file for card in [chars].

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd**, **show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-IMG_CRC_CHECK_FAILED : The FPD image for [chars] (FPD ID [int]) in [chars] file is corrupted - CRC mismatch: current value [hex], expected value [hex]. Please make sure that this is a valid FPD image bundle or package file for card in [chars].

Explanation The image failed the CRC checking process, this indicates a corrupt FPD image bundle or package file.

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd**, **show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-FPD_UPGRADE_FAILED : [chars] (FPD ID=[int]) image upgrade for [chars] card in [chars] has FAILED.

Explanation The FPD image upgrade process has failed for the indicated device.

Recommended Action Retry the upgrade operation again. If the affected card remains disabled by the system after attempts to retry the upgrade, then copy the error message exactly as it appears and gather the output of **show hw-module subslot fpd** and contact your technical support representative with the gathered information.

%FPD_MGMT-3-FPD_UPGRADE_CANCELED : Rest of the FPD upgrade sequence for [chars] card in [chars] has been canceled due to upgrade failure with [chars] (FPD ID=[int]) image.

Explanation The FPD image upgrade process for additional FPD images has been canceled due to upgrade error in the indicated device.

Recommended Action Retry the upgrade operation again. If the affected card remains disabled by the system after attempts to retry the upgrade, then copy the error message exactly as it appears and gather the output of **show hw-module subslot fpd** and contact your technical support representative with the gathered information.

%FPD_MGMT-3-SEND_IMG_FAILED : [chars] (FPD ID=[int]) image for [chars] card in [chars] has failed to be sent for upgrade operation - [chars]

| | |
|---------------------------|--|
| Explanation | The FPD image was not able to be sent for the upgrade operation. The system might be too busy to handle this operation. The affected card will be disabled by this failure. |
| Recommended Action | Wait until the system load is lower to try again with the manual upgrade procedure by using the upgrade hw-module privileged EXEC command. If the symptom persists, copy the error message exactly as it appears and gather the output of the show tech-support command and contact your technical support representative with the gathered information. |

%FPD_MGMT-3-IMG_DATA_UNCOMPRESS_ERROR : Could not uncompress [chars] FPD image for [chars] in [chars].

| | |
|---------------------------|---|
| Explanation | An error has been detected during the uncompress operation of the compressed FPD image data. |
| Recommended Action | Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the show hw-module subslot fpd, show upgrade fpd table and show upgrade fpd file fpd-pkg-url commands, then contact your technical support representative with the gathered information. |

%FPD_MGMT-3-BUNDLE_EXTRACT_ERROR : Cannot extract the [chars] bundle from [chars] - [chars]

| | |
|---------------------------|---|
| Explanation | Bundle file extraction error. The cause of the failure is indicated in the error message. The indicated file might not be a valid FPD image package file. |
| Recommended Action | Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the show hw-module subslot fpd, show upgrade fpd table and show upgrade fpd file fpd-pkg-url commands, then contact your technical support representative with the gathered information. |

%FPD_MGMT-3-PKG_VER_FILE_EXTRACT_ERROR : Cannot extract the [chars] version file from [chars] - [chars]

| | |
|--------------------|--|
| Explanation | Package version file extraction error. The cause of the failure is indicated in the error message. The indicated file might not be a valid FPD image package file. |
|--------------------|--|

%FPD_MGMT-3-PKG_VER_FILE_EXTRACT_ERROR : Cannot extract the [chars] version file from [chars] - [chars]

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-INVALID_PKG_FILE : The indicated file ([chars]) is not a valid FPD image package file - [chars]

Explanation The file format does not appear to be a valid FPD image package.

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-INVALID_PKG_FILE_SIZE : The indicated file ([chars]) does not have a valid FPD image package file size, minimum size = [dec] bytes.

Explanation The file size of the indicated FPD image package does not meet the required minimum size. The file is too small to be a valid FPD image package file.

Recommended Action Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the **show hw-module subslot fpd, show upgrade fpd table** and **show upgrade fpd file fpd-pkg-url** commands, then contact your technical support representative with the gathered information.

%FPD_MGMT-3-READ_BNDL_HDR_ERROR : Failed to read the FPD bundle header from [chars] file.

Explanation The indicated file might not be a valid FPD image bundle or package file.

%FPD_MGMT-3-READ_BNDL_HDR_ERROR : Failed to read the FPD bundle header from [chars] file.

| | |
|---------------------------|---|
| Recommended Action | Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the show hw-module subslot fpd, show upgrade fpd table and show upgrade fpd file fpd-pkg-url commands, then contact your technical support representative with the gathered information. |
|---------------------------|---|

%FPD_MGMT-3-INVALID_IMAGE_SIZE : The [chars] FPD image from [chars] file does not have a valid image size: expected size = [dec] bytes, actual size = [dec] bytes.

| | |
|---------------------------|---|
| Explanation | The size of the indicated FPD image does not have the expected size. The FPD image bundle or package might not be a valid file. |
| Recommended Action | Make sure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the right one from the Cisco Software Center website. If the problem persists, copy the error message exactly as it appears and gather the output of the show hw-module subslot fpd, show upgrade fpd table and show upgrade fpd file fpd-pkg-url commands, then contact your technical support representative with the gathered information. |

%FPD_MGMT-3-MISSING_DEV_INFO : Could not find [chars] (FPD ID=[int]) in the list of FPD IDs populated for [chars] card in [chars].

| | |
|---------------------------|---|
| Explanation | FPD_INTERNAL_SW_ERR_STD_EXPLANATION |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FPD_MGMT-3-MISSING_BUNDLE_ENTRY : Failed to find a matching entry in the programmable device bundle information table for [chars] in [chars]. Card type or HW version ([int].[int]) might not have FPD support.

| | |
|---------------------------|---|
| Explanation | FPD_INTERNAL_SW_ERR_STD_EXPLANATION |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FPD_MGMT-3-CLOSE_FAILED : Failed to close [chars] file.

Explanation FPD_INTERNAL_SW_ERR_STD_EXPLANATION**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FPD_MGMT-3-UNKNOWN_BNDL_HDR_FORMAT : Unknown header format version: [hex]

Explanation FPD_INTERNAL_SW_ERR_STD_EXPLANATION**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FPD_MGMT-3-INVALID_UPGRADE_RESULT : Invalid upgrade result '[int]' received for the FPD image upgrade of [chars] (FPD ID=[int]) for [chars] card in [chars].

Explanation FPD_INTERNAL_SW_ERR_STD_EXPLANATION**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FPD_MGMT-3-TOO_MANY_FPD_ENTRIES : Too many FPD entries for the FPD Bundle Info Table. Required number of entries = [int], maximum number of entries allowed = [int].

Explanation FPD_INTERNAL_SW_ERR_STD_EXPLANATION**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%FPD_MGMT-3-DUPLICATE_UPGRADE_RESULT : Upgrade result already received for the FPD image upgrade of FPD ID [int] for [chars] card in [chars].

Explanation FPD_INTERNAL_SW_ERR_STD_EXPLANATION

%FPD_MGMT-3-DUPLICATE_UPGRADE_RESULT : Upgrade result already received for the FPD image upgrade of FPD ID [int] for [chars] card in [chars].

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FPD_MGMT-3-UPGRADE_LIST_FULL : Could not add a new entry in the FPD Management Upgrade List. No upgrade will be performed for the [chars] card in [chars].

| | |
|---------------------------|---|
| Explanation | FPD_INTERNAL_SW_ERR_STD_EXPLANATION |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FPD_MGMT-3-SW_ERROR : NULL

| | |
|---------------------------|---|
| Explanation | FPD_INTERNAL_SW_ERR_STD_EXPLANATION |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FPD_MGMT-3-IPC_FAILED : Failed to send IPC message to [chars] in [chars] - [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to send a message via IPC to the indicated card. The cause of the specific IPC failure is indicated in the message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FPD_MGMT-3-PKG_FILE_SEARCH_FAILED : FPD image package ([chars]) cannot be found in system's flash card or disk to do FPD upgrade.

| | |
|---------------------------|---|
| Explanation | By default, if the upgrade fpd path <i>fpd-pkg-url</i> global configuration command is not configured, then the system will try to locate the required FPD image package file from removable flash cards or disks that are accessible by the system for FPD upgrade. This message indicates that the system could not find the package file. |
| Recommended Action | Make sure that the indicated FPD image package file is copied into a flash card or disk that is accessible by the system, then restart the FPD upgrade by reinsertion of the target card to the system or use of a system command to reload or power-cycle the target card. |

%FPD_MGMT-3-CARD_DISABLED : [chars] card in [chars] is being disabled because of an incompatible FPD image version. Note that the [chars] package will be required if you want to perform the upgrade operation.

| | |
|---------------------------|---|
| Explanation | The indicated card contains an incompatible FPD image version, and is being disabled to avoid operational problems with the existing Cisco IOS software. This can happen if the automatic upgrade feature has not been enabled with the upgrade fpd auto global configuration command or if the automatic upgrade operation failed to perform the required upgrade or because it could not find the necessary FPD image package file. The incompatible image will need to be upgraded in order for the system to enable the card. |
| Recommended Action | The FPD image upgrade can be performed automatically by making sure that the automatic upgrade feature is enabled with the upgrade fpd auto global configuration command and the necessary FPD image package file is located in the system's default filesystem (e.g. disk0:) or in a location indicated by the upgrade fpd path <i>directory-url</i> global configuration command. When the automatic upgrade feature is enabled, then the upgrade is triggered by the reinsertion of the card to the system or the use of a system command to reload or power-cycle the target card. Another way to perform the upgrade is through the use of the upgrade hw-module privileged EXEC command. For more information about these commands, refer to the FPD_DOCUMENT_NAME . |

%FPD_MGMT-3-PKG_VER_MISMATCH_NOTE : The FPD image package being used ([chars]) is not the right version for this IOS version (it appears that a '[chars]' package was renamed to '[chars]'). An attempt to find the required FPD image will still be performed with this package.

| | |
|---------------------------|--|
| Explanation | The indicated FPD image package that is being used in FPD automatic upgrade does not contain the correct version information for the IOS version that is running in the system. This condition can occur if a different version of the FPD image package was renamed to match the filename that the IOS image is expecting to use. The upgrade operation will still be performed by trying to find the required FPD image from the renamed package file. |
| Recommended Action | If the upgrade operation fails because the required FPD image cannot be found with the renamed FPD image package, replace the wrong package file with a valid one and perform the upgrade operation again. |

%FPD_MGMT-3-INVALID_IMG_FORMAT : Invalid image format '[chars]' detected for FPD ID=[int].

Explanation The selected FPD image to upgrade the indicated field programmable device does not have the right image format that can be used by the system to perform the upgrade operation.

Recommended Action Please check if the FPD image package used in the upgrade is for the correct platform. This can be checked by using the **show upgrade fpd package default** privileged EXEC command.

%FPD_MGMT-2-CREATE_FAIL : Couldn't create [chars].

Explanation The system does not have enough free main memory to create the specified resource.

Recommended Action Make sure that the system main memory size meets the minimum requirement that is specified in the Cisco IOS software release note. If the system meets the minimum requirement for this Cisco IOS software release, make sure that the amount of free main memory in the system also meets the minimum memory required to use this software feature. Use the **show memory** command to find out this information and add more main memory if it is necessary. If the system meets all the memory requirements, copy the error message exactly as it appears on the console and gather the output of the **show tech-support** command and contact your technical support representative with this information.

FR

%FR-5-DLCICHANGE : Interface [chars] - DLCI [dec] state changed to [chars]

Explanation The state of the Frame Relay PVC specified by the DLCI changed.

Recommended Action Notification message only. No action required.

%FR-3-BQ_ENQ_ERR : fr_oqueue: Invalid datagramstart [hex] [hex], pak dropped

Explanation A broadcast packet was detected in the Frame Relay output queue that contained an invalid datagram header. The packet has been dropped.

Recommended Action If the router or some features are not operational due to this condition, attempt to disable the Frame Relay broadcast queue by entering the **no frame-relay broadcast-queue** command in interface configuration mode for a immediate workaround. And LOG_STD_ACTION

%FR-3-BQ_DEQ_ERR : fr_bq_proc: unknown packet on broadcast queue, packet dropped!

Explanation Invalid packet on FR broadcast queue, packet dropped!

%FR-3-BQ_DEQ_ERR : fr_bq_proc: unknown packet on broadcast queue, packet dropped!

| | |
|---------------------------|---|
| Recommended Action | If the router or some features are not operational due to this condition, attempt to disable the Frame Relay broadcast queue by entering the no frame-relay broadcast-queue command in interface configuration mode for a immediate workaround. And LOG_STD_ACTION |
|---------------------------|---|

%FR-3-BQ_DEQ_PTR : fr_br_proc: hdr-[hex] size-[dec] dlci-[hex] [hex] [hex]

| | |
|--------------------|---|
| Explanation | The Frame Relay broadcast queue contains a datagram that is invalid. The packet has been dropped. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Inform Cisco technical support representative |
|---------------------------|---|

%FR-4-DLCIDELETE : Interface [chars] - DLCI [dec] - PVC use count [dec]

| | |
|--------------------|---|
| Explanation | Trying to remove PVC DLCI while it is still being used. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | If this error can be easily recreated, enter the debug frame-relay event command and recreate the condition that caused this error. Copy all the debug messages text and the system message text exactly as it appears on the console or in the system log, enter the show tech-support command, contact your Cisco technical support representative, and provide the representative with the gathered information. |
|---------------------------|--|

%FR-3-NOMEMORY : No memory for [chars]

| | |
|--------------------|--|
| Explanation | The requested operation could not be accomplished because of a low memory condition. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |
|---------------------------|---|

%FR-4-NNISUBINTF : Subinterface not supported on Frame Relay NNI

| | |
|--------------------|---|
| Explanation | Trying to change the state of a subinterface on FR NNI. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Reconfigure the Frame Relay link type or remove the subinterface. |
|---------------------------|---|

%FR-3-FRTSZEROCIR : FRTS: attempt to configure zero CIR

| | |
|--------------------|--|
| Explanation | It should not be possible to configure a zero CIR. To do so would prevent data transmission on the VC. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Inform Cisco technical support representative |
|---------------------------|---|

%FR-5-CONVERT_ROUTE : Converting route pair to connect

Explanation A pair of Frame Relay routes are being converted to connections.

Recommended Action No action is required.

%FR-3-NULL_PTR_DEREF : Dereferencing NULL pointer [chars]

Explanation Dereferencing a NULL pointer

Recommended Action Inform Cisco technical support representative

%FR-3-MLPOFR_ERROR : MLPoFR not configured properly on Link [chars] Bundle [chars] :[chars]

Explanation The configuration of MLPPP-over-Frame-Relay (MLPoFR) on the FR PVC is either incorrect or incomplete.

Recommended Action Ensure that FRTS has been configured on physical interface and that the service policy has been attached to the Virtual Template. To verify the configuration, use the **show running-config serial interface** and **show running-config virtual-template** commands.

%FR-3-SVC_SETUP : [chars]: interface [chars]: DLCI [dec]

Explanation An error occurred while attempting to setup a Frame-Relay SVC. There may have been an attempt to setup a SVC using a DLCI thats already in use

Recommended Action Check if the DLCI is already in use. For example: A PVC may be configured to use the same DLCI (use **<CmdBold>show frame-relay pvc<CmdBold>** to verify). If so, please remove the configuration

%FR-3-MFR_UNEXPECTEDEVENT : MFR Timer process error: event table is NULL for event [dec], state [dec]

Explanation The event was ignored because the state transition table is NULL. Normal processing continue.

Recommended Action Please refer to Bug Toolkit on CCO to check for existing bugs. If you need further assistance, please provide 'show version' and 'show running' and any configurations that were being done at the time the message was seen. Copy the message text exactly as it appears on the console or in the system log. Inform Cisco technical support representative, and provide the representative with the gathered information.

%FR-3-FR_PVC_STATUS_Q_CREATE_ERROR : FR PVC status event queue error: failed to create queue

Explanation Unable to create FR PVC status event queue**Recommended Action** LOG_STD_ACTION

%FR-3-MAP_DELETE_ERROR : [chars]

Explanation An error occurred while deleting a frame-relay map**Recommended Action** LOG_STD_ACTION

%FR-3-FR_INV_OUTPUT_VECTOR : An invalid output vector detected on interface [chars]

Explanation An invalid internal function vector is installed on a Frame Relay interface, which affects the ability of processing outbound traffic on the device.**Recommended Action** Remove and re-apply Frame Relay encapsulation on the interface to recover from the error.

FRAG

%FRAG-3-FRAG_STATE_MEM_REQ_FAILED :

Explanation IPC failure occurred when attempting to request more fragment state pool memory.**Recommended Action** LOG_STD_ACTION

%FRAG-3-FRAG_STATE_MEM_INIT_FAILED :

Explanation Failure occurred initializing fragment state pool.**Recommended Action** LOG_STD_ACTION

%FRAG-3-FRAG_DESC_MEM_REQ_FAILED :

Explanation IPC Failure occurred when attempting to request more fragment descriptor pool memory.**Recommended Action** LOG_STD_ACTION

%FRAG-3-FRAG_DESC_MEM_INIT_FAILED :

| | |
|---------------------------|---|
| Explanation | Failure occurred initializing fragment descriptor pool. |
| Recommended Action | LOG_STD_ACTION |

%FRAG-3-REASSEMBLY_ERR : Reassembly/VFR encountered an error: [chars]

| | |
|---------------------------|---|
| Explanation | Reassembly/VFR encountered a runtime error as indicated |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FRAG-3-REASSEMBLY_DBG : Reassembly/VFR encountered an error: [chars], [chars] [int], [chars] [int]

| | |
|---------------------------|---|
| Explanation | Reassembly/VFR encountered a runtime error as indicated in the message with parameter data for debug |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FRAG-2-UNENABLED : [chars] feature not enabled at interface [chars], packet cannot be processed, MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Explanation | Reassembly or fragmentation feature as indicated not enabled by the control plane. This is a critical problem. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%FRAG-3-INVALID_MTU : [chars] feature failed at interface [chars] due to invalid L3 MTU [int], MSGDEF_LIMIT_SLOW

| | |
|--------------------|--|
| Explanation | Fragmentation was not able to be performed due to invalid adj L3 MTU given by the control plane. |
|--------------------|--|

%FRAG-3-INVALID_MTU : [chars] feature failed at interface [chars] due to invalid L3 MTU [int], MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%FRAG-3-INVALID_QFP_NO : Invalid qfp device no.: [chars]

| | |
|---------------------------|---|
| Explanation | Invalid qfp device no. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

| | |
|---------------------------|------------------------------|
| Explanation | Invalid IPC message subtype. |
| Recommended Action | LOG_STD_ACTION |

%FRAG_DESC_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]

| | |
|---------------------------|------------------------------------|
| Explanation | IPC handler initialization failed. |
| Recommended Action | LOG_STD_ACTION |

FRR_OCE

%FRR_OCE-3-GENERAL : [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. |

%FRR_OCE-3-NULLPOINTER : [chars]

Explanation An internal software error occurred.

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release.

%FRR_OCE-3-INVALIDPAR : Parent OCE [IPV6 address][chars] is [chars]

Explanation An internal software error occurred.

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release.

%FRR_OCE-3-INVALID_ADDRTYPE : addrtype to xdr: [dec] [dec]

Explanation An internal software error occurred.

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release.

%FRR_OCE-3-INVALID_BFD_HNDL : [chars] bfd notification handle is [IPV6 address]

Explanation An internal software error occurred.

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release.

%FRR_OCE-3-INVALID_BFD_EVT : Error in BFD event retrieval bfd notification handle is [IPV6 address], session handle is [IPV6 address]

Explanation An internal software error occurred.

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release.

%FRR_OCE-3-INVALID_BFD_SESSION : BFD session db node mismatch: bfd context db node is [IPV6 address], frr db node is [IPV6 address]

Explanation An internal software error occurred.

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release.

%FRR_OCE-3-ERROR_BFD_SESSION : [chars]BFD returned [dec] node [IPV6 address] handle [IPV6 address] interface [dec]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. |

%FRR_OCE-4-INVALID_BACKUP_OCE : Invalid backup oce is found because interface [int] is removed or reloading

| | |
|---------------------------|---|
| Explanation | The interface or line card is reloading or removed. |
| Recommended Action | Check whether the line card is present and the interface is up. |

%FRR_OCE-4-NULL_PRIMARY_OCE : [chars]

| | |
|---------------------------|---|
| Explanation | The interface or line card is reloading or pulled off. |
| Recommended Action | Check whether the line card is in online and the interface is up. |

%FRR_OCE-5-ISSULOG : FRR is not ISSU compatible, notified by [chars]

| | |
|---------------------------|---|
| Explanation | ISSU negotiation results for FRR not compatible |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

FR_ELMI

%FR_ELMI-3-INCORRECT_ID : Incorrect ID

| | |
|---------------------------|--|
| Explanation | Incorrect ID in QOS parameter message. |
| Recommended Action | |

%FR_ELMI-3-INCORRECT_IE : Incorrect IE

| | |
|--------------------|---|
| Explanation | Enhanced LMI is not configured on the interface. The frame was dropped. |
|--------------------|---|

%FR_ELMI-3-INCORRECT_IE : Incorrect IE

**Recommended
Action**

FR_FRAG

%FR_FRAG-3-BADPAK : Inconsistent packet: size [dec], linktype [chars], input [chars], output [chars]

Explanation A packet being fragmented has inconsistent size and data**Recommended
Action** Inform Cisco technical support representative

FR_HA

%FR_HA-3-SYNC : [chars]: code [dec]

Explanation An error occurred when syncing Frame Relay state to the Standby Route Processor. This may affect Non-Stop Forwarding capability on Frame Relay interfaces during and after switchover until the state is recovered through normal protocol operation.**Recommended
Action** Reset the standby processor to attempt the sync again. LOG_STD_RECUR_ACTION

%FR_HA-3-ISSU : [chars]: [chars]

Explanation A Frame Relay ISSU error occurred.**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

FR_LMI

%FR_LMI-3-INCORRECT_IE : Enhanced LMI not configured, incorrect IE

Explanation An unexpected LMI information element has been received.**Recommended
Action** Verify the configuration for enhanced LMI on the switch matches the configuration on the router.

%FR_LMI-3-MSG_TOO_BIG : [chars] ([chars]) Status message too big, status of PVCs with dlcid values from [dec] will not be reported.

| | |
|---------------------------|--|
| Explanation | LMI STATUS message size is too big to fit into interface MTU. |
| Recommended Action | LMI type - cisco - does not support segmentation of STATUS message, so either increase the interface MTU or use LMI types - ansi or q933a. |

FR_VCB

%FR_VCB-3-PROCESS_SWITCHING : Switching error - vcb [chars] - [chars]

| | |
|---------------------------|--|
| Explanation | An error occurred while switching packet(s) across vc-bundle |
| Recommended Action | As a workaround, delete the vc-bundle and employ a PVC to substitute for the vc-bundle |

%FR_VCB-3-FIBSW_MISSING_TABLE_ENTRY : FIB switching error - vc-bundle [chars]

| | |
|---------------------------|--|
| Explanation | An error occurred while FIB switching packet(s) across vc-bundle |
| Recommended Action | As a workaround, delete the vc-bundle and employ a PVC to substitute for the vc-bundle |

%FR_VCB-3-CONFIG : Configuration error - vcb [chars] - [chars]

| | |
|---------------------------|--|
| Explanation | An error occurred while interpreting vc-bundle configuration |
| Recommended Action | Try reconfiguring the vc-bundle |

%FR_VCB-3-BUMPING : Bumping error - vcb [chars] - [chars]

| | |
|---------------------------|---|
| Explanation | An error occurred while bumping traffic in a vc-bundle |
| Recommended Action | As a workaround, reconfigure the vc-bundle to avoid bumping |

%FR_VCB-5-UPDOWN : FR VC-Bundle [chars] changed state to [chars]

| | |
|---------------------------|---|
| Explanation | The state of a frame-relay vc-bundle changed to up/down |
| Recommended Action | Notification message only. No action required |

%FR_VCB-3-ADJ_SRC_ERROR : Error sourcing adjacency - vc-bundle [chars] dlci [dec]

| | |
|---------------------------|---|
| Explanation | An error occurred while setting up the adj for a member pvc |
| Recommended Action | Try reconfiguring the vc-bundle |

FW

%FW-4-ALERT_ON : [chars][chars], count ([dec]/[dec]) current 1-min rate: [dec]

| | |
|---------------------------|--|
| Explanation | Either the max-incomplete high threshold of half-open connections or the new connection initiation rate has been exceeded. This error message indicates that an unusually high rate of new connections is coming through the firewall, and a DOS attack may be in progress. This message is issued only when the max-incomplete high threshold is crossed. |
| Recommended Action | This message is for informational purposed only, but may indicate a security problem. |

%FW-4-ALERT_OFF : [chars][chars], count ([dec]/[dec]) current 1-min rate: [dec]

| | |
|---------------------------|---|
| Explanation | Either the number of half-open connections or the new connection initiation rate has gone below the max-incomplete low threshold. This message indicates that the rate of incoming new connections has slowed down and is issued only when the max-incomplete low threshold is crossed. |
| Recommended Action | This message is for informational purposed only, but may indicate that an attack has stopped. |

%FW-4-HOST_TCP_ALERT_ON : [chars]Max tcp half-open connections ([dec]) exceeded for host [IP_address].

| | |
|---------------------------|--|
| Explanation | The max-incomplete host limit of half-open TCP connections has been exceeded. This message indicates that a high number of half-open connections is coming to the protected server, and may indicate that a SYN flood attack is in progress and is targeted to the specified server host. |
| Recommended Action | This message is for informational purposes only, but may indicate that a SYN flood attack was attempted. If this alert is issued frequently and identified to be mostly false alarms, then the max-incomplete host threshold value is probably set too low, and there is a lot of legitimate traffic coming in to that server. In this case, the max-incomplete host parameter should be set to a higher number to avoid false alarms. |

%FW-2-BLOCK_HOST : [chars]Blocking new TCP connections to host [IP_address] for [dec] minute[chars] (half-open count [dec] exceeded).

| | |
|---------------------------|---|
| Explanation | This message indicates that any subsequent new TCP connection attempts to the specified host will be denied because the max-incomplete host threshold of half-open TCP connections is exceeded, and the blocking option is configured to block the subsequent new connections. The blocking will be removed when the configured block-time expires. |
| Recommended Action | This message is for informational purposes only, but may indicate that a SYN flood attack was attempted. |

%FW-4-UNBLOCK_HOST : [chars]New TCP connections to host [IP_address] no longer blocked

| | |
|---------------------------|--|
| Explanation | New TCP connection attempts to the specified host are no longer blocked. This message indicates that the blocking of new TCP attempts to the specified host has been lifted. |
| Recommended Action | This message is for informational purposed only, but may indicate a SYN flood attack was attempted to the host. |

%FW-3-NOTFOUND : [chars]Session context for ([IP_address]:[dec]) => ([IP_address]:[dec]) not found.

| | |
|---------------------------|---|
| Explanation | The CBAC code was searching its database for information for a particular inspection session, but this information was not found. |
| Recommended Action | If this message recurs, copy it down exactly as it appears and contact your technical support representative for assistance. |

%FW-6-SESS_AUDIT_TRAIL_START : [chars]Start [chars] session: initiator ([IP_address]:[dec]) -- responder ([IP_address]:[dec])

| | |
|---------------------------|--|
| Explanation | This message documents the opening of an inspection session. The message is issued at the start of each inspected session and it records the source/destination addresses and ports. |
| Recommended Action | This message is for informational purposed only, and can be used to collect the basic accounting for inspected sessions. |

%FW-6-SESS_AUDIT_TRAIL : [chars]Stop [chars] session: initiator ([IP_address]:[dec]) sent [int] bytes -- responder ([IP_address]:[dec]) sent [int] bytes

| | |
|---------------------------|--|
| Explanation | This message documents the per-session transaction log of network activities. The message is issued at the end of each inspected session and it records the source/destination addresses and ports, as well as the number of bytes transmitted by the client and server. |
| Recommended Action | This message is for informational purposed only, and can be used to collect the basic accounting for the inspected sessions. |

%FW-3-FTP_SESSION_NOT_AUTHENTICATED : [chars]Command issued before the session is authenticated -- FTP client [IP_address] FTP server [IP_address]

Explanation An FTP client attempted to use the PORT command or an FTP server attempted to use the response to a PASV command to open a data channel in the firewall prior to the client's successful authentication with the server. This is a suspicious attempt by the client/server to trick the firewall into opening a hole so that outside attackers can take advantage of the firewall opening. This message indicates that a suspicious violation was detected, and the PORT or PASV command/response is rejected by the firewall. The data channel in the firewall will not be opened until the authentication is done successfully.

Recommended Action This message is for informational purposes only, but may indicate that an illegal attempt was made to modify the firewall security policy.

%FW-3-FTP_PRIV_PORT : [chars]Privileged port [dec] used in [chars] -- FTP client [IP_address] FTP server [IP_address]

Explanation An FTP client attempted to use a PORT command or the FTP server attempted to use the response to a PASV command to trick the firewall into opening access to a privileged port. This message indicates that a suspicious violation was detected from the FTP client/server attempting to modify the security policy in the firewall. The command is rejected and the connection is reset by the firewall.

Recommended Action This message is for informational purposes only, but may indicate that an attempt was made to gain access to privileged ports.

%FW-3-FTP_NON_MATCHING_IP_ADDR : [chars]Non-matching address [IP_address] used in [chars] -- FTP client [IP_address] FTP server [IP_address]

Explanation An FTP client attempted to use a PORT command or the FTP server attempted to use the response to a PASV command to trick the firewall into opening access to a third-party host that is different from the two hosts engaged in the FTP connection. This message indicates that a suspicious violation was detected while attempting to modify the security policy in the firewall. The command is rejected and the connection is reset by the firewall.

Recommended Action This message is for informational purposes only, but may indicate that an attempt was made to grant or open access to unauthorized hosts.

%FW-3-SMTP_INVALID_COMMAND : [chars]Invalid SMTP command ([chars])(total [dec] chars) from initiator ([IP_address]:[dec])

Explanation The CBAC code detected an invalid SMTP command in the inspected SMTP connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system. The command is rejected and the connection is reset by the firewall immediately.

%FW-3-SMTP_INVALID_COMMAND : [chars]Invalid SMTP command ([chars])(total [dec] chars) from initiator ([IP_address]:[dec])

Recommended Action This message is for informational purposes only, but may indicate a security problem.

%FW-3-SMTP_UNSUPPORTED_PARAMETER : [chars]Unsupported SMTP parameter ([chars]) from initiator ([IP_address]:[dec])

Explanation The CBAC code detected an invalid/unsupported parameter in an SMTP command. The parameter "data size" means that the initiator is trying to send a huge data which is more than the default or configured firewall threshold (max-data). The parameter "@ or # to ETRN" means that the initiator is trying to send an invalid ETRN command.

Recommended Action This message is for informational purposes only, but may indicate a security problem.

%FW-3-HTTP_JAVA_BLOCK : [chars]JAVA applet is blocked from ([IP_address]:[dec]) to ([IP_address]:[dec]).

Explanation A Java applet was seen in the HTTP channel, and the firewall configuration indicates that the applet from this Web site should be prohibited. The message indicates that the applet is being downloaded from one of the prohibited sites and its entrance to the protected network is not allowed. The connection is reset and the transmission of the detected applet is aborted immediately.

Recommended Action This message is for informational purposes only, but may indicate a security problem.

%FW-4-TCP_SENDMAIL_BAD_TO_SIG : [chars]Sendmail Invalid Recipient - from [IP_address] to [IP_address]

Explanation Triggers on any mail message with a 'pipe' (|) symbol in the recipient field.

Recommended Action For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

%FW-4-TCP_SENDMAIL_BAD_FROM_SIG : [chars]Sendmail Invalid Sender - from [IP_address] to [IP_address]

Explanation Triggers on any mail message with a "pipe" (|) symbol in the "From:" field.

Recommended Action For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

%FW-4-TCP_SENDMAIL_OLD_SIG : [chars]Archaic Sendmail Attacks - from [IP_address] to [IP_address]

| | |
|---------------------------|--|
| Explanation | Triggers when "wiz" or "debug" commands are sent to the SMTP port. |
| Recommended Action | For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately. |

%FW-4-TCP_SENDMAIL_DECODE : [chars]Sendmail Decode Alias - from [IP_address] to [IP_address]

| | |
|---------------------------|--|
| Explanation | Triggers on any mail message with ": decode@" in the header. The decode alias is used to udecode files and is primarily implemented as a convenience for system administration. |
| Recommended Action | For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately. |

%FW-4-TCP_MAJORDOMO_EXEC_BUG : [chars]Majordomo Execute Attack - from [IP_address] to [IP_address]

| | |
|---------------------------|--|
| Explanation | A bug in the Majordomo program will allow remote users to execute arbitrary commands at the privilege level of the server. |
| Recommended Action | For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately. |

%FW-4-TCP_SENDMAIL_INVALID_COMMAND : [chars]Invalid SMTP command - [IP_address] to [IP_address]

| | |
|---------------------------|--|
| Explanation | Triggers on an invalid SMTP command in the SMTP connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system. |
| Recommended Action | This is unusual traffic and may warrant investigation. |

%FW-6-PRE_ALLOCATED_MEDIA_CHANNEL : [chars]Pre-Allocated [chars] channel from [IP_address][[:dec]:[:dec]] to [IP_address][[:dec]:[:dec]]

| | |
|---------------------------|--|
| Explanation | CBAC inspection has pre-allocated data-structures and created ACEs to allow the data/media traffic to flow through the Firewall. |
| Recommended Action | This message is for informational purposes only. It may be used to verify whether data/media sessions are being created. |

%FW-4-SKINNY_INSPECTION_DISABLED : Skinny Inspection Disabled; Error = [chars]

| | |
|---------------------------|---|
| Explanation | Skinny inspection is disabled due to internal errors and hence firewall will not inspect any Skinny protocol traffic. This will be caused when firewall does not have enough memory to allocate initial skinny data-structures. |
| Recommended Action | Verify the memory usage to see if any process has used large amounts of memory and see if any corrective action can be taken for it. Otherwise, upgrade the memory. In any case, the firewall/router needs to be restarted to enable Skinny inspection. |

%FW-6-INIT : Firewall inspection startup completed; beginning operation.

| | |
|---------------------------|---|
| Explanation | Firewall inspection is configured on at least one interface in the startup config. |
| Recommended Action | This message is for informational purposes only. It may be used to verify whether firewall inspection is on at startup. |

%FW-6-DROP_PKT : Dropping [chars] pkt [IP_address]:[int] => [IP_address]:[int]

| | |
|---------------------------|--|
| Explanation | Packet dropped by firewall inspection. |
| Recommended Action | This message is for informational purposes only. It may be used to verify that packets were dropped by the firewall. |

%FW-5-POP3_INVALID_COMMAND : [chars]Invalid POP3 command from initiator ([IP_address]:[dec]): [chars]

| | |
|---------------------------|--|
| Explanation | The CBAC code detected an invalid POP3 command in the inspected POP3 connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system. The command is rejected and the connection is reset by the firewall immediately. |
| Recommended Action | This message is for informational purposes only, but may indicate a security problem. |

%FW-5-POP3_NON_SECURE_LOGIN : [chars]LOGON POP3 command from initiator ([IP_address]:[dec]): [chars]

| | |
|---------------------------|--|
| Explanation | The CBAC code detected a cleartext logon attempt in the inspected POP3 connection while secure-login is configured. The command is rejected and the connection is reset by the firewall immediately. |
| Recommended Action | This message is for informational purposes only, but may indicate a security problem. |

%FW-5-IMAP_INVALID_COMMAND : [chars]Invalid IMAP command from initiator ([IP_address]:[dec]): [chars]

Explanation The CBAC code detected an invalid IMAP command in the inspected IMAP connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system. The command is rejected and the connection is reset by the firewall immediately.

Recommended Action This message is for informational purposes only, but may indicate a security problem.

%FW-5-IMAP_NON_SECURE_LOGIN : [chars]LOGON IMAP command from initiator ([IP_address]:[dec]): [chars]

Explanation The CBAC code detected a cleartext logon attempt in the inspected IMAP connection while secure-login is configured. The command is rejected and the connection is reset by the firewall immediately.

Recommended Action This message is for informational purposes only, but may indicate a security problem.

%FW-4-SESSION_THRESHOLD_EXCEEDED : [chars]Number of sessions for the firewall rule '[chars]' applied on interface '[chars]' exceeds the configured threshold [dec]

Explanation This message indicates that the number of established CBAC sessions have crossed the configured threshold.

Recommended Action This message is for informational purpose only, but may indicate a security problem. This might also mean that the session threshold is set to a low value, in which case the threshold value could be increased through CLI command

%FW-5-EMAIL_DROP_FRAGMENT : [chars]Dropping [chars] command fragment from initiator ([IP_address]:[dec])

Explanation The CBAC code detected a pipelined POP3/IMAP command fragment, in the inspected POP3 connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system. The fragment is dropped by the firewall immediately.

Recommended Action This message is for informational purposes only, but may indicate a security problem.

%FW-3-INTERNAL_ERROR : IP Firewall internal failure -- [chars]

Explanation This message indicates the misc errors in the IP FW subsystem

Recommended Action This message indicates the misc errors in the IP FW subsystem

%FW-3-TIMER_WHEEL_INIT_FAILED : Timer Wheel initialization failed

| | |
|---------------------------|--|
| Explanation | This message indicates that Timer Wheel initialization is failed in the FW subsystem |
| Recommended Action | This message indicates a series problem with IOS Firewall. On seeing this error message, copy the message exactly as it appears, and report it to your technical support representative. |

%FW-3-RESPONDER_WND_SCALE_INI_NO_SCALE : Dropping packet - Invalid Window Scale option for session [IP_address]:[dec] to [IP_address]:[dec] (Initiator scale [int] Responder scale [int])

| | |
|---------------------------|---|
| Explanation | Firewall detected the packet from Responder to Initiator has windows scaling option but did not have the scaling option in the SYN packet from Initiator to responder. This is an error according to RFC 1323 |
| Recommended Action | Turn on window scaling option on both Initiator and Responder, or Turn off window scaling on the Responder |

FWALL_PROXY

%FWALL_PROXY-3-PROXY_SCB_MEM_INIT_FAILED :

| | |
|---------------------------|--|
| Explanation | Initialization of session control block pool failed. |
| Recommended Action | LOG_STD_ACTION |

%FWALL_PROXY-3-PROXY_ICMP_ERROR_MEM_INIT_FAILED :

| | |
|---------------------------|---|
| Explanation | Initialization of ICMP Error control block pool failed. |
| Recommended Action | LOG_STD_ACTION |

%FWALL_PROXY-3-PROXY_SCB_MEM_EXTEND_FAILED :

| | |
|---------------------------|--|
| Explanation | Increasing of session control block pool failed. |
| Recommended Action | LOG_STD_ACTION |

%FWALL_PROXY-3-PROXY_ICMP_ERROR_MEM_EXTEND_FAILED :

| | |
|--------------------|---------------------------------------|
| Explanation | Increasing of ICMP Error pool failed. |
|--------------------|---------------------------------------|

%FWALL_PROXY-3-PROXY_ICMP_ERROR_MEM_EXTEND_FAILED :

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HA_MEM_INIT_FAILED :

Explanation Initialization of ha retry pool failed.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HA_MEM_EXTEND_FAILED :

Explanation Increasing of ha retry pool failed.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HOSTDB_MEM_INIT_FAILED :

Explanation Initialization of host database pool failed.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HOSTDB_MEM_EXTEND_FAILED :

Explanation Increasing of host database pool failed.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_TEARDOWN_MEM_INIT_FAILED :

Explanation Initialization of teardown pool failed.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_TEARDOWN_MEM_EXTEND_FAILED :

Explanation Increasing of teardown pool failed.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_FWALL_INIT_FAILED : [dec]

Explanation Firewall initialization failed.**Recommended
Action** LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_SEND_INIT_FAILED : [chars] [dec]

Explanation IPC failed to reply for firewall initialization status.**Recommended
Action** LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_FAILED : [chars] [dec]

Explanation IPC message allocation for firewall failed.**Recommended
Action** LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_TBL_INIT_FAILED : [chars]

Explanation Failed to initialize table.**Recommended
Action** LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_SEND_STATS_FAILED : [dec]

Explanation IPC send failed to reply for firewall status.**Recommended
Action** LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_SEND_SESSION_FAILED : [dec]

Explanation IPC send failed to reply for firewall session query.**Recommended
Action** LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_SEND_CLEAR_FAILED : [dec]

Explanation IPC send failed to reply for firewall session clear.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_SEND_DEBUG_FAILED : [dec]

Explanation IPC send failed to reply for firewall session debug.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_SEND_SCB_QUERY_FAILED : [dec]

Explanation IPC send failed to reply for firewall scb query.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-4-PROXY_IPC_INVALID_MSG : [hex]

Explanation Invalid IPC message subtype.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-4-PROXY_IPC_INVALID_MSG_LEN : [dec]:[dec] len [dec] flags [hex] source [dec]

Explanation Invalid IPC message length.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]

Explanation IPC handler initialization failed.

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_ALLOC_FAILED : [int]

Explanation IPC allocation failed.

%FWALL_PROXY-3-PROXY_IPC_ALLOC_FAILED : [int]

Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_SEND_FAILED : [int]:[chars]

Explanation IPC send failed.
Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HSL_CREATE_FAILED :

Explanation HSL creation failed.
Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HSL_ADD_DEST_FAILED :

Explanation HSL add destination failed.
Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HSL_BIND_FAILED :

Explanation HSL bind failed.
Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HSL_ENABLE_FAILED :

Explanation HSL enable failed.
Recommended Action LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HSL_BIND_TEMPLATE_FAILED : [dec]

Explanation HSL bind template failed at given index.
Recommended Action LOG_STD_ACTION

%FWALL_PROXY-4-PROXY_HSL_ALREADY_INIT :

Explanation HSL logger already initialized**Recommended Action** LOG_STD_ACTION

%FWALL_PROXY-4-PROXY_HSL_NOT_INIT : [int]

Explanation HSL logger not initialized**Recommended Action** LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HSL_MODIFY_FAILED :

Explanation HSL modification failed.**Recommended Action** LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_HSL_MODIFY_DEST_FAILED :

Explanation HSL modify destination failed.**Recommended Action** LOG_STD_ACTION

%FWALL_PROXY-4-PROXY_IPC_UNINIT_POOL_FAILED : [chars]: [dec]

Explanation Could not destroy chunk pool**Recommended Action** LOG_STD_ACTION

%FWALL_PROXY-4-PROXY_UNINIT_SESSIONS : in use [int] [int]

Explanation Not all sessions freed**Recommended Action** LOG_STD_ACTION

%FWALL_PROXY-3-PROXY_IPC_ERM_CONF_CHANGE_FAILED : [dec]

| | |
|---------------------------|---|
| Explanation | FW IPC send failed to reply for event rate monitoring configuration change. |
| Recommended Action | LOG_STD_ACTION |

%FWALL_PROXY-3-PROXY_DEBUG_REG_FAILED : [dec]

| | |
|---------------------------|---|
| Explanation | FW Conditional Debugging registration failed. |
| Recommended Action | LOG_STD_ACTION |

%FWALL_PROXY-3-PROXY_FWALL_VFR_REG_FAILED : [chars] err: [dec]

| | |
|---------------------------|-----------------------------|
| Explanation | FW VFR registration failed. |
| Recommended Action | LOG_STD_ACTION |

GBIC_SECURITY

%GBIC_SECURITY-4-GBIC_INTERR : Internal error occurred in setup for GBIC interface [chars]

| | |
|---------------------------|--|
| Explanation | The system could not allocate resources, or had some other problem, in the setup for the specified GBIC interface. |
| Recommended Action | Reload the system. If the problem persists, contact TAC. |

%GBIC_SECURITY-4-EEPROM_READ_ERR : Error in reading GBIC serial ID in [chars]

| | |
|---------------------------|--|
| Explanation | Error when reading GBIC type from EEPROM |
| Recommended Action | Please remove GBIC from this Port |

%GBIC_SECURITY-4-EEPROM_CRC_ERR : EEPROM checksum error for GBIC in [chars]

| | |
|---------------------------|--|
| Explanation | The GBIC in the port specified in the error message has invalid EEPROM data. |
| Recommended Action | Remove the GBIC from the specified port. |

%GBIC_SECURITY-4-EEPROM_SECURITY_ERR : GBIC in [chars] failed security check

Explanation The GBIC in the port specified in the error message has invalid EEPROM data.

Recommended Remove the GBIC from the specified port.

Action

GBIC_SECURITY_CRYPT**%GBIC_SECURITY_CRYPT-4-UNRECOGNIZED_VENDOR : GBIC in port [dec] manufactured by an unrecognized vendor**

| | |
|---------------------------|--|
| Explanation | The GBIC was identified as a Cisco GBIC, but the system was unable to match its manufacturer with one on the known list of Cisco GBIC vendors |
| Recommended Action | Check to see if the Cisco IOS software running on the system supports the GBIC. If the GBIC is newer, a system software upgrade might be required. |

%GBIC_SECURITY_CRYPT-4-VN_DATA_CRC_ERROR : GBIC in port [dec] has bad crc

| | |
|---------------------------|---|
| Explanation | The GBIC was identified as a Cisco GBIC, but it does not have valid CRC in the EEPROM data. |
| Recommended Action | Check to see if the Cisco IOS software running on the system supports the GBIC. If the GBIC is newer, a system software upgrade might be required. Even if the GBIC is unrecognized by the system, the GBIC may still operate properly, but might have limited functionality. |

%GBIC_SECURITY_CRYPT-4-ID_MISMATCH : Identification check failed for GBIC in port [dec]

| | |
|---------------------------|--|
| Explanation | The GBIC was identified as a Cisco GBIC, but the system was unable to verify its identity |
| Recommended Action | Check to see if the Cisco IOS software running on the system supports the GBIC. If the GBIC is newer, a system software upgrade might be required. Otherwise, verify that the GBIC was obtained from Cisco or from a supported vendor. |

GBIC_SECURITY_UNIQUE**%GBIC_SECURITY_UNIQUE-4-DUPLICATE_SN : GBIC interface [dec]/[dec] has the same serial number as another GBIC interface**

| | |
|---------------------------|--|
| Explanation | The GBIC was identified as a Cisco GBIC, but its serial number matches that of another interface on the system. |
| Recommended Action | Cisco GBICs are assigned unique serial numbers. Verify that the GBIC was obtained from Cisco or a supported vendor |

%GBIC_SECURITY_UNIQUE-3-DUPLICATE_GBIC : GBIC interface [dec]/[dec] is a duplicate of GBIC interface [dec]/[dec]

| | |
|---------------------------|---|
| Explanation | The GBIC was identified as a Cisco GBIC, but its vendor ID and serial number match that of another interface on the system. |
| Recommended Action | Cisco GBICs are assigned unique serial numbers. Verify that the GBIC was obtained from Cisco or a supported vendor |

GDOI

%GDOI-1-GDOI_ACL_NUM : The ACL has too many entries. GDOI will honor only the first 100 ACL entries specified.

| | |
|---------------------------|---|
| Explanation | The ACL has too many entries. GDOI will honor only the first 100 ACL entries specified. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-3-GDOI_ACL_RANGE : The ACL [chars] contains port range which is NOT supported. WARNING: No TEK policy will be created.

| | |
|---------------------------|---|
| Explanation | GDOI does not support port range in the ACL policy. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-1-GDOI_ACE_DENY : A Group Member ACL policy containing deny was attempted. This is not supported.

| | |
|---------------------------|---|
| Explanation | A Group Member ACL policy containing deny was attempted. This is not supported. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-1-UNREGISTERED_INTERFACE : Group [chars] received registration from unregistered interface.

| | |
|---------------------------|---|
| Explanation | Receiving registration from unregistered interface. Stop processing it. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-1-UNAUTHORIZED_IDENTITY : Group [chars] received registration from unauthorized identity: [chars]

Explanation The registration request was dropped because the requesting device was not authorized to join the group.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-1-UNAUTHORIZED_IPADDR : Group [chars] received registration from unauthorized ip address: [chars]

Explanation The registration request was dropped because the requesting device was not authorized to join the group.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-4-GM_RE_REGISTER : The IPsec SA created for group [chars] may have expired/been cleared, or didn't go through. Re-register to KS.

Explanation The IPsec SA created for one group may have expired/been cleared, or didn't go through, need to re-register to KS.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-GM_REGS_COMPL : Registration to KS [chars] complete for group [chars] using address [chars] fvrf [chars] ivrf [chars]

Explanation Complete registration

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-GM_FAILED_TO_INSTALL_POLICIES : FAILED: Installation of Reg/Rekey policies from KS [chars] for group [chars] & gm identity [chars]

| | |
|---------------------------|---|
| Explanation | Failed Policy installation |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-5-GM_INSTALL_POLICIES_SUCCESS : SUCCESS: Installation of Reg/Rekey policies from KS [chars] for group [chars] & gm identity [chars] fvr [chars] ivr [chars]

| | |
|---------------------------|---|
| Explanation | Policy Installation Success |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-5-GM_RECV_REKEY : Received Rekey for group [chars] from [chars] to [chars] with seq # [dec], spi [hex][hex]

| | |
|---------------------------|---|
| Explanation | Received Rekey |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-5-KS_SEND_MCAST_REKEY : Sending Multicast Rekey [chars]for group [chars] from address [chars] to [chars] with seq # [dec] spi: [hex][hex]

| | |
|---------------------------|---|
| Explanation | Sending Multicast Rekey |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-5-KS_SEND_UNICAST_REKEY : Sending Unicast Rekey [chars]for group [chars] from address [chars] with seq # [dec] spi: [hex][hex]

| | |
|--------------------|-----------------------|
| Explanation | Sending Unicast Rekey |
|--------------------|-----------------------|

%GDOI-5-KS_SEND_UNICAST_REKEY : Sending Unicast Rekey [chars]for group [chars] from address [chars] with seq # [dec] spi: [hex][hex]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-3-KS_BAD_ID : Registration: [chars] config mismatch between KS and the GM [IP_address], in the group [chars].

Explanation During GDOI registration protocol, a configuration mismatch between local key server and group member.

Recommended Action Contact the Group member's administrator.

%GDOI-3-GDOI_REKEY_FAILURE : Processing of REKEY payloads failed on GM [chars] in the group [chars], with peer at [chars]

Explanation During GDOI rekey the payload parsing failed on this GM from the Key Server.

Recommended Action Contact the Group member's administrator.

%GDOI-3-GDOI_REKEY_SEQ_FAILURE : Failed to process rekey seq # [int] in seq payload for group [chars], last seq # [int]

Explanation During GDOI rekey the seq payload parsing failed on this GM from the Key Server.

Recommended Action Contact the Group member's administrator.

%GDOI-4-KS_GM_REJECTS_SA_PAYLOAD : Registration: GM [IP_address] rejected a policy in the SA proposal sent by KS, in the group [chars].

Explanation During GDOI registration protocol, a proposal sent by the key server was refused by the group member.

Recommended Action Contact the Group member's administrator.

%GDOI-4-GM_REJECTING_SA_PAYLOAD : Registration: Policy in SA payload sent by KS [IP_address] rejected by GM in the group [chars] reason [chars].

Explanation During GDOI registration protocol, a proposal sent by the key server was refused by the local group member.

Recommended Action Contact the Key server's administrator.

%GDOI-4-KS_HASH_FAIL : Registration: Bad(No) Hash in Message sent by the GM [IP_address] to KS in the group [chars].

Explanation During GDOI registration protocol, a message sent by the Group member has bad or no hash .

Recommended Action Contact the Group member's administrator.

%GDOI-4-GM_HASH_FAIL : Registration: Bad(No) hash in message sent by the KS [IP_address] to GM in the group [chars].

Explanation During GDOI registration protocol, a message sent by the Key server has bad or no hash .

Recommended Action Contact the Key Server's administrator.

%GDOI-3-KS_UNAUTHORIZED : Registration: Unauthorized [IP_address] tried to join the group [chars].

Explanation During GDOI registration protocol, an unauthorized member tried to join a group. Some might consider this a hostile event.

Recommended Action Contact the Key Server's administrator.

%GDOI-3-KS_GM_REVOKED : Re-Key: GM [IP_address] revoked by KS in the group [chars].

Explanation During Re-key protocol, an unauthorized member tried to join a group. Some might consider this a hostile event.

Recommended Action Contact the Key Server's administrator.

%GDOI-5-KS_GROUP_ADD : Config: KS [IP_address] added to the Group [chars].

Explanation A Config command has been executed to add a Key Server in a group

%GDOI-5-KS_GROUP_ADD : Config: KS [IP_address] added to the Group [chars].

Recommended Action Informational message.

%GDOI-5-KS_GROUP_DELETE : Config: KS [IP_address] removed from the Group [chars].

Explanation A Config command has been executed to remove a Key Server from a group

Recommended Action Informational message.

%GDOI-6-KS_FIRST_GM : Re-key: First GM [IP_address] seen by KS in the group [chars].

Explanation Local key server has received the first group member joining the group

Recommended Action Informational message.

%GDOI-6-KS_LAST_GM : Re-key: Last GM [IP_address] left the group [chars].

Explanation Last group member has left the group on the local key server

Recommended Action Informational message.

%GDOI-5-GM_CM_ATTACH : Crypto map attached for GM in group [chars].

Explanation A crypto map has been attached for the local group member.

Recommended Action Informational message.

%GDOI-5-GM_CM_DETACH : Crypto map detached for GM in group [chars].

Explanation A crypto map has been detached for the local group member.

Recommended Action Informational message.

%GDOI-5-GM_UNREGISTER : GM left the group [chars].

Explanation A Group member has left the group.

Recommended Action Informational message.

%GDOI-4-GM_RECV_POLICY_REPLACE_NOW : GM received policy replace now rekey from KS in group [chars].

Explanation A messages sent by the KS to immediately replace SAs policies on the GM has been received.

Recommended Action Informational message.

%GDOI-4-GM_RECV_DELETE_IMMEDIATE : GM receive REMOVAL-NOW in group [chars] to cleanup downloaded policy now. Re-registration will start in a randomly chosen period of [dec] sec

Explanation A messages sent by the KS to delete the GM has been received.

Recommended Action Informational message.

%GDOI-4-GM_RECV_RE_AUTH : GM received Re-auth-msg from KS in group [chars]. re-registration will start before SA expiry

Explanation A message sent by the KS to have a GM re-auth has been received.

Recommended Action Informational message.

%GDOI-4-GM_RECV_DELETE : GM received delete-msg from KS in group [chars]. TEKs lifetime are reduced and re-registration will start before SA expiry

Explanation A messages sent by the KS to delete the GM has been received.

Recommended Action Informational message.

%GDOI-5-GM_CLEAR_REGISTER : Config: GM cleared gdoi configuration for the group [chars].

Explanation clear crypto gdoi command has been executed by the local GM

Recommended Action Informational message.

%GDOI-5-KS_CLEAR_REGISTER : Config: KS cleared gdoi configuration for the group [chars].

Explanation clear crypto gdoi command has been executed by the local KS

Recommended Action Informational message.

%GDOI-3-COOP_KS_UNREACH : Cooperative KS [chars] Unreachable in group [chars]. IKE SA Status = [chars]

Explanation The reachability between the configured cooperative key servers is lost. Some might consider this a hostile event.

Recommended Action Contact the Administrator(s) of the configured key servers.

%GDOI-5-COOP_KS_REACH : Reachability restored with Cooperative KS [chars] in group [chars].

Explanation The reachability between the configured cooperative key servers is restored.

Recommended Action Informational message

%GDOI-5-COOP_KS_ADD : [chars] added as COOP Key Server in group [chars].

Explanation A key server has been added to the list of cooperative key servers in a group

Recommended Action Informational message

%GDOI-5-COOP_KS_REMOVE : [chars] removed as COOP Key Server in group [chars].

Explanation A key server has been removed from the list of cooperative key servers in a group

Recommended Action Informational message

%GDOI-4-COOP_KS_UNAUTH : Contact from unauthorized KS [chars] in group [chars] at local address [chars] (Possible MISCONFIG of peer/local address)

Explanation An unauthorized remote server tried to contact the local KS may be at different key server address in a group. Some might consider this a hostile event.

Recommended Action Informational message

%GDOI-5-COOP_KS_ELECTION : KS entering election mode in group [chars] (Previous Primary = [chars])

Explanation The local Key server has entered the election process in a group

Recommended Action Informational message

%GDOI-5-COOP_KS_TRANS_TO_PRI : KS [chars] in group [chars] transitioned to Primary (Previous Primary = [chars])

Explanation The local Key server transitioned to a primary role from being a secondary server in a group

Recommended Action Informational message

%GDOI-5-COOP_KS_ADMN_USRP_PRI : Primary role Usurped by KS [chars] in group [chars].

Explanation A network administrator has made the local KS as primary, by means of a CLI command. Currently Unimplemented.

Recommended Action Informational message

%GDOI-5-GM_REKEY_TRANS_2_MULTI : Group [chars] transitioned to multicast rekey.

Explanation GM has transitioned from using unicast rekey mechanism to multicast mechanism

Recommended Action Informational message

%GDOI-5-KS_REKEY_TRANS_2_MULTI : Group [chars] transitioned to multicast rekey.

Explanation Group has transitioned from using unicast rekey mechanism to multicast mechanism

Recommended Action Informational message

%GDOI-5-GM_REKEY_TRANS_2_UNI : Group [chars] transitioned to Unicast Rekey.

Explanation GM has transitioned from using multicast rekey mechanism to unicast mechanism

Recommended Action Informational message

%GDOI-5-KS_REKEY_TRANS_2_UNI : Group [chars] transitioned to Unicast Rekey.

Explanation Group has transitioned from using multicast rekey mechanism to unicast mechanism

Recommended Action Informational message

%GDOI-4-GM_REKEY_NOT_REC'D : GM did not receive rekey from KS [IP_address] in group [chars].

Explanation GM has not received a rekey message from a key server in a group Currently Unimplemented.

Recommended Action Informational message

%GDOI-5-KS_NACK_GM_EJECT : KS ejected GM [IP_address] in group [chars].

Explanation Key server has reached a condition of not receiving an ACK from GM and has been ejected

Recommended Action Informational message

%GDOI-3-KS_BLACKHOLE_ACK : KS blackholing GM [IP_address] in group [chars].

Explanation Key server has reached a condition of blackholing messages from GM Some might consider this a hostile event.

Recommended Action

%GDOI-4-KS_UNSOLED_ACK : KS received unsolicited ACK from GM [IP_address] in group [chars].

Explanation Key server has received an unsolicited ACK from a past GM or is under a DOS attack. Some might consider this a hostile event.

Recommended Action

%GDOI-5-KS_REGS_COMPL : KS completed successful registration in group [chars] with GM [IP_address].

Explanation Key server has successfully completed a registration in a group

Recommended Action

%GDOI-5-GM_ENABLE_GDOI_CM : GM has enabled ACL on GDOI crypto map in group [chars].

Explanation Group member has enabled ACL on a GDOI Crypto map in a group with a key server

Recommended Action

%GDOI-5-GM_ACL_MERGE : ACL between KS and GM in group [chars] merged.

Explanation The ACL differences between GM and KS are resolved and a merge took place

**Recommended
Action**

%GDOI-5-GM_SA_INGRESS : Receive only ACL received from KS [IP_address] in group [chars].

Explanation Received only acl has been received by GM from a KS in a group

**Recommended
Action**

%GDOI-5-KS_CONV_SAS_DUPLEX : IPSec SAs converted to Duplex in group [chars].

Explanation IPSec SAs have been converted to bidirectional mode in a group

**Recommended
Action**

%GDOI-5-KS_CONV_SAS_INGRESS : IPSec SAs converted to Ingress in group [chars].

Explanation IPSec SAs have been converted to receive only mode in a group

**Recommended
Action**

%GDOI-5-GM_CONV_SA_DUPLEX : IPSec SAs converted to Duplex in group [chars] on the GM.

Explanation IPSec SAs have been converted to bidirectional mode in a group on a GM

**Recommended
Action**

%GDOI-5-GM_CONV_SA_DUPLEX_LOCAL : IPSec SAs converted to Duplex in group [chars] on a GM by a local event.

Explanation IPSec SAs have been converted to bidirectional mode in a group on a GM by a CLI command

**Recommended
Action**

%GDOI-5-LKH_ENABLE : LKH enabled in group [chars].

Explanation LKH has been enabled in a group

**Recommended
Action**

%GDOI-5-LKH_DISABLE : LKH disabled in group [chars].

Explanation LKH has been disabled in a group

**Recommended
Action**

%GDOI-4-LKH_GM_DELETE : GM [IP_address] deleted from LKH in group [chars].

Explanation A Group member has been deleted in a group from LKH

**Recommended
Action**

%GDOI-4-TIMEBASED_REPLAY_FAILED : An anti replay check has failed in group [chars]: my_pseudotime = [chars], peer_pseudotime = [chars], replay_window = [dec] (sec), src_ip = [IP_address], dst_ip = [IP_address]

Explanation A Group member or Key server has failed an anti replay check.

**Recommended
Action**

%GDOI-3-PIP_PSEUDO_TIME_ERROR : An Anti-Replay check has failed for PIP in group [chars]: my_pseudotime = [chars], peer_pseudotime = [chars], replay_window = %lld (sec), src_addr = [chars], dst_addr = [chars]

Explanation A Group member has failed PIP anti replay check.

**Recommended
Action**

%GDOI-3-P2P_KGS_INFRA_ERROR : PIP session with [chars] failed because of KGS Infra failure. Reason = [chars]

Explanation A Group Member has encountered a KGS Infra failure.

%GDOI-3-P2P_KGS_INFRA_ERROR : PIP session with [chars] failed because of KGS Infra failure. Reason = [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-4-TIMEBASED_REPLAY_FAILED_IPV6 : An anti replay check has failed in group [chars]: my_pseudotime = [chars], peer_pseudotime = [chars], replay_window = [dec] (sec), src_ip = [IPV6 address], dst_ip = [IPV6 address]

Explanation A Group member or Key server has failed an anti replay check.

Recommended Action

%GDOI-3-GM_FAILED_TO_INITIALISE : GDOI GM Process has failed to initialise

Explanation GDOI Group Member process has failed to initialise on this Network Element

Recommended Action

%GDOI-3-PSEUDO_TIME_LARGE : Pseudotime difference between KS ([dec] sec) and GM ([dec] sec) is larger than expected in group [chars]. Adjust to new PST

Explanation A Group member has received pseudotime which has large difference as compared to own pseudotime

Recommended Action

%GDOI-3-PSEUDO_TIME_TOO_OLD : Rekey received in group [chars] is too old and fail PST check: my_pst is [dec] sec, peer_pst is [dec] sec, allowable_skew is [dec] sec

Explanation A Group member has received pseudotime which has large difference as compared to own pseudotime

Recommended Action

%GDOI-3-GM_INCOMPLETE_CFG : Registration: incomplete config for group [chars]

Explanation Registration can not be completed since the GDOI group configuration may be missing the group id, server id, or both

Recommended Action Contact the Group member's administrator.

%GDOI-1-KS_NO_RSA_KEYS : RSA Key - [chars] : Not found, Required for group [chars]

Explanation Rsa Keys were not found in Key Server and they are required for signing and verifying rekey messages

Recommended Action Contact the Key Server's administrator and ask him to do create the RSA Key pair

%GDOI-4-RSA_KEYS_MODIFIED : WARNING: GMs for group [chars] will re-register due to signature verification failure

Explanation Rekeys will be dropped by GM as signature verification would fail due to modification of RSA Keys

Recommended Action Informational message

%GDOI-3-KS_REKEY_AUTH_KEY_LENGTH_INSUFFICIENT : Rejected [chars] change: using sig-hash algorithm [chars] requires an authentication key length of at least [int] bits ([int] blocks in bytes) - [chars] [chars] key [chars] is only [int] blocks in bytes

Explanation Using a sig-hash algorithm for rekeys requires that the RSA key modulus length for the rekey authentication be at least the length of the hash generated by the sig-hash algorithm plus some padding bytes. If the RSA key modulus length is not large enough, the Key Server administrator needs to generate a new RSA key pair with a sufficient length.

Recommended Action Contact the Key Server's administrator to re-generate the RSA key pair with at least the modulus length given in the syslog.

%GDOI-3-COOP_CONFIG_MISMATCH : WARNING: Group [chars], [chars] configuration between Primary KS and Secondary KS are mismatched

Explanation The configuration between Primary KS and Secondary KS are mismatched

Recommended Action Contact the Key Server's administrator

%GDOI-3-GM_ACL_PERMIT : GM doesn't support permit configured under local access-list. Traffic from [chars] to [chars] will be dropped.

Explanation GM can only support ACL for deny. Any traffic matching the permit entry will be dropped.

Recommended Action Remove the permit entry from the ACL used by GDOI crypto map

%GDOI-3-GM_NO_IPSEC_FLOWS : IPSec FLOW limit possibly reached

Explanation Hardware Limitation for IPSec Flow limit Reached. Cannot create any more IPSec SAs

Recommended Action Contact the Group member's administrator.

%GDOI-3-GM_NO_CRYPT_ENGINE : No crypto engine is found due to lack of resource or unsupported feature requested

Explanation Failed to select a suitable crypto engine because requested packet path not available, or requested feature not supported

Recommended Action Check policy configured on KS

%GDOI-3-COOP_PACKET_DROPPED : Announcement message dropped due to packet size [dec] bytes.

Explanation Hard limit set on the driver buffer size prevents sending packets of this size or bigger

Recommended Action Informational message

%GDOI-3-UNEXPECTED_SIGKEY : Unexpected Signature Key detected: freeing it

Explanation Unexpected Signature Key found: freeing the signature key

Recommended Action Informational message

%GDOI-3-UNSUPPORTED_TEK_PROTO : Unexpected TEK Protocol : [dec]

Explanation Unexpected TEK PROTOCOL

Recommended Action Informational message

%GDOI-4-GM_DELETE : GM [chars] deleted from group [chars].

Explanation A group member has been deleted in a group from Key Server

Recommended Action Informational message

%GDOI-5-KS_USING_DEFAULT_TRANSFORM : GETVPN is using default transforms for profile [chars]

Explanation Using default transformset

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-GM_REKEY_CIPHER_HASH_CHECK_FAIL : Rekey cipher/hash ([chars]) used in Group [chars] is unacceptable by this client.

Explanation The key-server has chosen KEK rekey cipher/hash algorithms which are not acceptable by this group-member

Recommended Action Contact the Key server's administrator.

%GDOI-5-GM_REKEY_TRANSFORMSET_CHECK_FAIL : The transformset ([chars]) for data-protection in Group [chars] is unacceptable by this client.

Explanation The key-server has chosen a TEK transformset which is not acceptable by this group-member

Recommended Action Contact the Key server's administrator.

%GDOI-3-COOP_ANN_SEQ_FAILURE : COOP Ann msg seq check failed for group [chars], ann seq# [int], sess seq# [int]

Explanation COOP Ann msg seq check failed

Recommended Action Contact Administrator

%GDOI-4-GDOI_ANN_TIMESTAMP_TOO_OLD : COOP_KS ANN from KS [chars] in group [chars] is too old and fail PST check: my_pst is [int] sec, peer_pst is [int] sec, allowable_skew is [dec] sec

Explanation The KS has received an ANN msg from a primary KS in which the timestamp is too old

**Recommended
Action**

%GDOI-4-GDOI_ANN_TIMESTAMP_LARGE : COOP_KS ANN received from KS [chars] in group [chars] has PST bigger than myself. Adjust to new PST: my_old_pst is [int] sec, peer_pst is [int] sec

Explanation The KS receive an ANN from a KS in which the timestamp is bigger than expected; also update my PST to peer's

**Recommended
Action**

%GDOI-4-GDOI_ANN_TIMESTAMP_LARGE_NO_UPDATE : COOP_KS ANN received from KS [chars] in group [chars] has PST bigger than myself: my_pst is [int] sec, peer_pst is [int] sec

Explanation The KS receive an ANN from a KS in which the timestamp is bigger than expected; No update of my PST

**Recommended
Action**

%GDOI-4-GDOI_ANN_INCONSISTENT_TBAR : COOP_KS ANN received from [chars] in group [chars] has inconsistent TBAR setting inconsistent than mine

Explanation The KS has received an ANN msg from a secondary KS in which the timestamp is too old

**Recommended
Action**

%GDOI-5-COOP_KS_VALID_ANN_TIMER_EXPIRED : This sec-KS has NOT received an ANN with valid PST for an extended period in group [chars]. It will block new GMs registration temporarily until a valid ANN is received

Explanation No valid ANN message has been received in this secondary KS for a prolong period. Temporarily blocking new GM registrations until a valid ANN is received

**Recommended
Action** Informational message

%GDOI-5-COOP_KS_BLOCK_NEW_GM_REGISTER_ANN : This KS temporarily blocks GM with ip-addr [chars] from registering in group [chars] as it has not received an ANN with valid PST for prolonged period

Explanation No valid ANN message has been received in this secondary KS for a prolong period. Temporarily blocking new GM registrations until a valid ANN is received

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-COOP_KS_BLOCK_NEW_GM_REGISTER_ELECTION : This KS temporarily blocks GM with ip-addr [chars] from registering in group [chars] as the KS election is underway

Explanation The KS is in the process of electing a primary. Temporarily blocking new GM registrations until the election is complete

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-COOP_KS_BLOCK_NEW_GM_REGISTER_KSSID : This KS is blocking GM with ip-addr [chars] from registering in group [chars] as it has overlapping KS Sender Identifier(s) (KSSID) with another COOP-KS peer (MISCONFIG)

Explanation Another COOP-KS peer in the group has been configured with a KSSID value that is the same as one configured on this KS. GM registration is blocked as a result until the overlap is fixed.

Recommended Action Check the configured KSSID(s) for all COOP-KS peers by issuing 'show crypto gdoi ks coop ident detail' on the primary KS

%GDOI-5-COOP_KS_RESUME_NEW_GM_REGISTER : This KS will now resume new GM registration functionality in group [chars]

Explanation This KS will now resume new GM registration functionality

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-SA_KEK_UPDATED : SA KEK was updated [hex][hex][hex][hex]

| | |
|---------------------------|--|
| Explanation | KEK was updated in the Registration/Rekey and a new KEK SA was created |
| Recommended Action | Informational message. |

%GDOI-5-SA_PIP_UPDATED : SA PIP was updated 0x[chars]

| | |
|---------------------------|--|
| Explanation | PIP was updated in Registration/Rekey and a new PIP SA was created |
| Recommended Action | Informational message. |

%GDOI-3-SA_KEK_INSATALL_FAILED : Failed to install KEK SA

| | |
|---------------------------|-------------------------------|
| Explanation | KEK SA instalation has failed |
| Recommended Action | Informational message. |

%GDOI-3-P2P_PEER_MIGRATE_FAILED : Failed to install P2P rekey SA with peer [chars] in group [chars]

| | |
|---------------------------|---|
| Explanation | Installation of P2P Rekey SA with an existing peer has failed |
| Recommended Action | Check the status of all peers using the command 'show crypto gdoi gm p2p peers' and wait for PIP initiation between the failed peers. Traffic distrupction may occur. |

%GDOI-5-SA_TEK_UPDATED : SA TEK was updated

| | |
|---------------------------|--|
| Explanation | TEK was updated in the Registration/Rekey and a new TEK IPSEC SA was created |
| Recommended Action | Informational message. |

%GDOI-4-GM_MINOR_VERSION_MISMATCH : GM [IP_address] Minor Version mismatch. Use 'show crypto gdoi ks members' to see GM versions

| | |
|---------------------------|---------------------------------|
| Explanation | GM has different minor version. |
| Recommended Action | show crypto gdoi ks members |

%GDOI-3-GM_MAJOR_VERSION_MISMATCH : GM [IP_address] registration rejected due to major version mismatch. GM must be using major version [dec] in order to be compatible with this KS

Explanation GM has a non-compatible major version.

Recommended Action Check GDOI version compatibility on KS and GMs

%GDOI-4-KS_MINOR_VERSION_MISMATCH : COOP-KS Minor Version mismatch in group [chars]. My version is [dec].[dec].[dec], peer [chars] has version [dec].[dec].[dec]

Explanation Coop KS has different minor version.

Recommended Action show crypto gdoi ks coop

%GDOI-3-KS_MAJOR_VERSION_MISMATCH : COOP-KS Major Version mismatch in group [chars]. My version is [dec].[dec].[dec], peer [chars] has version [dec].[dec].[dec]

Explanation COOP-KS has a non-compatible major version.

Recommended Action Check GDOI version compatibility on KS

%GDOI-2-COOP_MINOR_VERSION_MISMATCH : COOP-KS Minor version mismatch in group [chars]. My COOP version is [dec].[dec].[dec], peer [chars] has version [dec].[dec].[dec]. Upgrade [chars] [chars] to COOP version [dec].[dec].[dec] to prevent COOP outage.

Explanation Coop KS has different minor version.

Recommended Action show crypto gdoi ks coop

%GDOI-3-COOP_MAJOR_VERSION_MISMATCH : COOP-KS Major Version mismatch in group [chars]. My version is [dec].[dec].[dec], peer [chars] has version [dec].[dec].[dec]

Explanation COOP-KS has a non-compatible major version.

Recommended Action Check COOP version compatibility on KS

%GDOI-3-COOP_LIMIT_REACHED : Peer [chars] has reached COOP limit of maximum number of gms. COOP GM database sync fails. Upgrade to COOP version [dec].[dec].[dec] and above

Explanation COOP-KS has a non-compatible peer.

%GDOI-3-COOP_LIMIT_REACHED : Peer [chars] has reached COOP limit of maximum number of gms. COOP GM database sync fails. Upgrade to COOP version [dec].[dec].[dec] and above

Recommended Action Check COOP version compatibility on peer KS

%GDOI-5-POLICY_CHANGE : GDOI group [chars] policy has changed. Use 'crypto gdoi ks rekey' to send a rekey, or the changes will be send in the next scheduled rekey

Explanation Reminder message that GDOI configuration has changed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-ESON_POLICY_CHANGE_RESTART1 : ESON group [chars] policy has changed. Must use 'clear crypto gdoi ks members now' to restart the group

Explanation Reminder message that ESON configuration has changed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-ESON_POLICY_CHANGE_RESTART2 : ESON group [chars] policy has changed. Must use 'crypto gdoi ks replace now' to restart the group

Explanation Reminder message that ESON configuration has changed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-GM_DELETE_EXPIRED_KEK : KEK expired for group [chars] and was deleted

Explanation Deleting Expired KEK

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-GM_DELETE_EXPIRED_PIP : PIP with SPI 0x[chars] expired for group [chars] and was deleted

| | |
|---------------------------|---|
| Explanation | Deleting Expired PIP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-5-GM_DELETE_EXPIRED_P2P : P2P SA with epoch hash 0x[chars] expired for group [chars] and was deleted

| | |
|---------------------------|---|
| Explanation | Deleting Expired P2P |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-5-POLICY_CHANGE_TO_SUITEB : Group [chars] changed to Suite-B policy. Use 'crypto gdoi ks rekey' to generate the new Suite-B policy and cause all GMs to re-register to download SIDs, or this will happen in the next scheduled rekey

| | |
|---------------------------|---|
| Explanation | Migrating from non-Suite-B to Suite-B policy requires that the user issues 'crypto gdoi ks rekey' like any other POLICY_CHANGE, but this will cause a re-initialization rather than just a rekey. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-5-KS_REINIT_GROUP : [chars] for group [chars] and will re-initialize the group.

| | |
|--------------------|--|
| Explanation | KS has reached one of the following conditions (indicated by the first part of the message) requiring re-initialization of the group: - Group Size configuration changed - Previously used KSSID removed from configured KSSID set - KS runs out of KSSIDs & GMSIDs - COOP SID client gets a re-initialization indication from COOP-KS - KSSID overlap detected by COOP is resolved - TEK policy is changed from non-CTR to CTR (SIDs required). |
|--------------------|--|

%GDOI-5-KS_REINIT_GROUP : [chars] for group [chars] and will re-initialize the group.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%GDOI-5-KS_REINIT_FINISH : Re-initialization of group [chars] completed.

| | |
|---------------------------|---|
| Explanation | A previously triggered re-initialization, as signified by a %GDOI-5-KS_REINIT_GROUP syslog, has completed after the expiry of the old TEK. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GDOI-3-KS_NO_SID_AVAILABLE : GMs for group [chars] need SIDs but this KS has no KS SIDs configured or no more SIDs available.

| | |
|---------------------------|---|
| Explanation | This KS has a counter-mode transform configured requiring SIDs and either has no KSSIDs configured or has run out of SIDs. Registering GMs will not be able to register successfully until more KSSIDs are configured on this KS. |
| Recommended Action | Check the configured KSSID(s) for this KS by issuing 'show crypto gdoi ks ident detail' and consider configuring more KSSIDs using the 'identifier' sub-mode under 'server local'. |

%GDOI-3-COOP_KSSID_OVERLAP : Overlapping KS Sender Identifier(s) (KSSID) {[chars]} with COOP-KS peer [chars] in group [chars] blocking GM registration (MISCONFIG)

| | |
|---------------------------|--|
| Explanation | Another COOP-KS peer in the group has been configured with a KSSID value that is the same as one configured on this KS. GM registration is blocked as a result until the overlap is fixed. |
| Recommended Action | Check the configured KSSID(s) for all COOP-KS peers by issuing 'show crypto gdoi ks coop ident detail' on the primary KS |

%GDOI-5-COOP_KSSID_OVERLAP_RESOLVED : Resolved overlapping KS Sender Identifier(s) (KSSID) with COOP-KS peer allowing GM registrations once again

| | |
|--------------------|--|
| Explanation | Another COOP-KS peer in the group had been configured with a KSSID value that was the same as one configured on this KS, but has been resolved so that GM registration is allowed again. |
|--------------------|--|

%GDOI-5-COOP_KSSID_OVERLAP_RESOLVED : Resolved overlapping KS Sender Identifier(s) (KSSID) with COOP-KS peer allowing GM registrations once again

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-GM_IV_EXHAUSTED : GM for group [chars] exhausted its IV space for interface [chars] and will re-register.

Explanation One of the interfaces where a CTR transform (e.g. GCM-AES / GMAC-AES) has been installed as TEK policy with SIDs has exhausted its IV space & must re-register to receive new SIDs.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-GM_REKEY_IPV4_POLICY_CHECK_FAIL : Non-IPv4 policies is received in IPv4 Group [chars]; rekey is rejected

Explanation This GM is registering to an IPv4 group but erroneously receiving IPv6 policies in rekey

Recommended Action Contact the Key server's administrator.

%GDOI-5-GM_REKEY_IPV6_POLICY_CHECK_FAIL : Non-IPv6 policies is received in IPv6 Group [chars]; rekey is rejected

Explanation This GM is registering to an IPv6 group but erroneously receiving IPv4 policies in rekey

Recommended Action Contact the Key server's administrator.

%GDOI-4-UNKNOWN_GM_VERSION_REGISTER : WARNING: GM [IP_address] with unknown GDOI ver registered to group [chars] (e.g old-IOS or non-Cisco GM please check 'show crypto gdoi ks members' and 'show crypto gdoi feature' to ensure all your GMs can support the GETVPN features enabled.

Explanation A GM is registered with unknown GDOI SW version; cannot determine its feature capability.

%GDOI-4-UNKNOWN_GM_VERSION_REGISTER : WARNING: GM [IP_address] with unknown GDOI ver registered to group [chars] (e.g old-IOS or non-Cisco GM please check 'show crypto gdoi ks members' and 'show crypto gdoi feature' to ensure all your GMs can support the GETVPN features enabled.

Recommended Action Check GMs can support all GETVPN features enabled in KS. Also check output of 'show crypto gdoi feature' and 'debug crypto gdoi ks infra detail' (note: high volume of debugs). msgdef_ddts_component(ipsec-getvpn)

%GDOI-4-NEWER_GM_VERSION_REGISTER : WARNING: GM [IP_address] registers to group [chars] with newer GDOI version than KS. Please check 'show crypto gdoi ks members' and 'show crypto gdoi feature' to ensure all GMs can support the GETVPN features enabled.

Explanation A GM is registered with newer GDOI SW version; cannot determine its feature capability.

Recommended Action Check GMs can support all GETVPN features enabled in KS. Also check output of 'show crypto gdoi feature' and 'debug crypto gdoi ks infra detail' (note: high volume of debugs). msgdef_ddts_component(ipsec-getvpn)

%GDOI-4-REJECT_GM_VERSION_REGISTER : Reject registration of GM [IP_address] (ver [hex]) in group [chars] as it cannot support these GETVPN features enabled: [chars]

Explanation Reject GM registration because it cannot support the GETVPN features enabled in the group.

Recommended Action Check GMs can support all GETVPN features enabled in KS. Also check output of 'show crypto gdoi feature' and 'debug crypto gdoi ks infra detail' (note: high volume of debugs). msgdef_ddts_component(ipsec-getvpn)

%GDOI-4-GM_RECOVERY_REGISTRATION : GM recovery re-registration for group [chars] will start in a randomly chosen period of [dec] sec

Explanation GM recovery feature detects dataplane error and will re-register to KS to refresh keys and policy

Recommended Action Informational message.

%GDOI-4-GM_RECOVERY_REGISTRATION_POSTPONED : Detects data error in group [chars] but the previous recovery/rekey has occurred within the last recovery-check interval. Postpone recovery registration to start in [dec] sec

Explanation GM recovery feature detects dataplane error and will re-register to KS to refresh keys and policy

Recommended Action Informational message.

%GDOI-4-GM_SA_TRACK_SET_EOT_ERROR : Group [chars] encountered error in setting EOT object ID [dec] to state [chars].

Explanation GM SA TRACK state change occur but fail to update EOT object ID accordingly

Recommended Action Informational message. Check to make sure the EOT object ID is configured properly

%GDOI-5-POLICY_CHANGE_ERROR_MULTIPLE_PORTS : Multiple ports detected for ACL [chars] which is not supported. WARNING: No TEK policy will be created.

Explanation Informs user that there is an error in the ACL with regards to the number of ports.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-6-COOP_KS_VER_TRANSIT : Coop KS [chars] protocol version transits from version 1.0.1 to 2.0.0

Explanation The KS is transitioning to a new version.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-4-COOP_KS_RBLY_FAILED : Coop KS [chars] in group [chars] session Reassembly failed in TransID [int]

Explanation The KS COOP had an error reassembling a packet from a peer KS

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-4-COOP_KS_CHECKPT_MISMATCH : Coop KS [chars] in group [chars] received Checkpoint Mismatch message.

Explanation The KS COOP had received a checkpoint mismatch from a KS COOP peer

%GDOI-4-COOP_KS_CHECKPT_MISMATCH : Coop KS [chars] in group [chars] received Checkpoint Mismatch message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-3-COOP_KS_CANNOT_FIND_PROFILE : Coop KS in group [chars] has a configured IKEv2 profile '[chars]' that doesn't exist. The COOP will not come up until this error is fixed.

Explanation The KS COOP configuration redundancy ikve2-profile specifies a profile that doesn't exist. The COOP will not come up.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-IPSEC_INITIATE_GM_REGISTER : IPSEC initiate GDOI group [chars] to register

Explanation IPSEC initiate a GM registration for the group

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-3-IPSEC_INITIATE_GM_REGISTER_POSTPONE : IPSEC triggering registration for group [chars] too frequently. Postpone the registration to occur in [dec] msec.

Explanation GM detects IPSEC triggering registration for the group too frequently. GDOI will rate-limit and postpone the registration.

Recommended Action Contact the Group member's administrator.

%GDOI-3-IPSEC_INITIATE_GM_REGISTER_IGNORE : IPSEC triggering registration for group [chars] too frequently. Ignore the request as registration has already been scheduled to occur in [dec] msec.

Explanation GM detects IPSEC triggering registration for the group too frequently. GDOI will ignore the request as registration has already been scheduled.

Recommended Action Contact the Group member's administrator.

%GDOI-3-COOP_KS_TOO_MANY_GROUPS_SHARE_IKE_SA : The COOP KS has too many groups sharing the same IKE SA for the peer addresses local [chars] remote [chars]. Connectivity could be compromised. Please reduce to [dec].

Explanation There is a limit to the number of COOP KS groups that can share the. same IKE SA. This can lead to intermittent connectivity for the COOP KS in congested networks

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-3-COOP_KS_SEND_WINDOW_LIMIT_REACHED : The COOP KS has reached its window limit for the peer addresses local [chars] remote [chars]. This is due to connectivity issues between the key servers in question.

Explanation The COOP KS running over IKEv2 has a limit to the number of pending messages that can be sent. This limit has been reached which is an indication that there is a connectivity issue between the key servers

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-4-REJECT_GM_CKM_REGISTER : Reject registration of GM [IP_address] in group [chars] as it has CKM enabled but this secondaryKS has not sync up all KGS params yet

Explanation Reject GM registration because this is a secondaryKS and it has not received KGS seed and rekey-epoch from primaryKS yet

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-4-COOP_KS_CKM_INCOMPATIBLE : Found incompatible COOP-KS that cannot support CKM in group [chars]. Please check 'show crypto gdoi feature ckm'and upgrade the incompatible KS immediately.

Explanation Found incompatible COOP-KS that cannot support CKM in the group. Network administrator should check 'show crypto gdoi feature ckm'and upgrade the incompatible KS immediately

%GDOI-4-COOP_KS_CKM_INCOMPATIBLE : Found incompatible COOP-KS that cannot support CKM in group [chars]. Please check 'show crypto gdoi feature ckm' and upgrade the incompatible KS immediately.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-5-GM_REGISTER_UPDATE_TBAR : Platform HA forwarding-plane comes online, group [chars] gm-identity [chars] fvrf [chars] ivrf [chars] re-register to refresh TBAR info.

Explanation HA forwarding-plane comes online, group %s gm-identity %s fvrf %s ivrf %s is re-registering to refresh TBAR info.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%GDOI-3-GM_IPD3P_NO_IPV6_SUPPORT : GETVPN group-member does not support IP-D3P for IPv6.

Explanation GETVPN group-member does not support IP-D3P for IPv6.

Recommended Action Contact the Administrator(s) to correct the key server policy.

%GDOI-3-GM_IPD3P_NO_TRANSPORT_SUPPORT : GETVPN group-member does not support IPD3P transport mode

Explanation GETVPN group-member does not support IPD3P transport mode

Recommended Action Contact the Administrator(s) to correct the key server policy.

%GDOI-3-GM_IPD3P_AND_CMD_CANT_COEXIST : GETVPN group-member does not support coexistence of IPD3P and Cisco-metadata features

Explanation GETVPN group-member does not support the enabling of IPD3P and Cisco-metadata features (e.g TBAR-PST, SGT) at the time

Recommended Action Contact the Administrator(s) to correct the key server policy.

GENERIC_SUBBLOCK**%GENERIC_SUBBLOCK-2-LATE_REGISTER : Late registration of GSB type [chars], with id [dec]**

| | |
|---------------------------|---|
| Explanation | An attempt to register a new generic subblock type was received after subblocks have already been allocated from the control structure with previously registered types |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GENERIC_SUBBLOCK-2-BUILDHDR : Failed to build message for GSB: [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to build a message for distribution of generic subblock failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GENERIC_SUBBLOCK-2-UNPACKHDR : Unpacked [dec] bytes and attempted to consume [dec] bytes for GSB: [chars]

| | |
|---------------------------|---|
| Explanation | A discrepancy was detected between length of message expected versus length of message received |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GENERIC_SUBBLOCK-2-GSBNOTISSU-AWARE : GSB [chars] is not ISSU aware. Cannot distribute it to ISSU-aware slots

| | |
|---------------------------|---|
| Explanation | This GSB is expected to be ISSU aware but it is not. It cannot be distributed safely to ISSU-aware slots as it may not be correctly interpreted |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

GEN_DB**%GEN_DB-3-NULL_TREE_NODE : Node is NULL [chars]**

| | |
|---------------------------|---|
| Explanation | This message indicates that the tree node being examined is NULL |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-INVALID_RECORD_KEY : [chars]: invalid record key *

| | |
|---------------------------|---|
| Explanation | This message indicates that the record key is invalid |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-NO_KEY_FUNC : [chars]: [chars][chars]

| | |
|---------------------------|---|
| Explanation | This message indicates that key functions are missing from the database handle, or key function is a NULL Pointer |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-KEY_FUNC_DOESNT_EXIST : [chars]: Key function does not exist

| | |
|---------------------------|---|
| Explanation | This message indicates that key function being considered does not exist in the database definition |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-INVALID_CLIENT_TYPE : [chars]: Invalid client type, got [dec] (must be between 0 and [dec])

| | |
|---------------------------|---|
| Explanation | This message indicates that client type is outside the expected range |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-NULL_DB_HNDL : NULL Database Handle [chars]

| | |
|---------------------------|---|
| Explanation | This message indicates the database handle was NULL |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-NULL_DB_HNDL_ELEMENT : [chars]: NULL Database Element [chars]

| | |
|---------------------------|---|
| Explanation | This message indicates the database handle element was NULL |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-LIST_FAIL : [chars]:[chars]

| | |
|---------------------------|---|
| Explanation | This message indicates that a list operations such as enqueue, dequeue failed |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-LIST_FAIL_FOR_RECORD : [chars]:[dec]:[chars]

| | |
|---------------------------|---|
| Explanation | This message indicates that a list operations such as enqueue, dequeue failed |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-WAVL_FAIL : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | This message indicates that a wavl tree operation failed |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-RECORD_DELETE_FAIL : [chars]:[chars]

| | |
|---------------------------|---|
| Explanation | This message indicates that a record could not be deleted |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-PARSER_INIT_FAIL : [chars]:[dec]: Parser Could not be initialized

| | |
|---------------------------|---|
| Explanation | This message indicates that the IOS Parser command could not be initialized |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%GEN_DB-3-UNKNOWN_PARSER_CMD : [chars]:[dec]: Unknown Parser Command

| | |
|--------------------|---|
| Explanation | This message indicates that the IOS Parser command was not recognized |
|--------------------|---|

%GEN_DB-3-UNKNOWN_PARSER_CMD : [chars]:[dec]: Unknown Parser Command

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

GEN_PROXY

%GEN_PROXY-3-IPC_UNHANDLED : failure

Explanation An unknown message type: %d was received by the Generic Client Proxy.

Recommended Action LOG_STD_ACTION

%GEN_PROXY-3-REPLY_MSG : wrong version [dec]

Explanation An incorrect SBS message was received by the Generic Client Proxy.

Recommended Action LOG_STD_ACTION

%GEN_PROXY-3-STACK_ALLOC_FAILED : Stack allocation for reply failed reply_size [hex]

Explanation Stack space could not be allocated for reply.

Recommended Action LOG_STD_ACTION

%GEN_PROXY-3-GPM_ALLOC_FAILED : GPM allocation for reply failed pak_size [hex] reply_size [hex]

Explanation GPM could not be allocated for reply.

Recommended Action LOG_STD_ACTION

%GEN_PROXY-3-IPC_SEND_FAILED : IPC send reply failed [chars]

Explanation GEN proxy failed to send of reply to IPC msg.

Recommended Action LOG_STD_ACTION

GLBP**%GLBP-4-BADAUTH : Bad authentication received from [chars], group [dec]**

| | |
|---------------------------|--|
| Explanation | Two routers participating in a Gateway Load Balancing Protocol group disagree on the valid authentication string. |
| Recommended Action | Use the glbp authentication interface command to repair the GLBP authentication discrepancy between the local system and the one whose IP address is reported. |

%GLBP-3-MISCONFIG : Cannot add MAC address [enet] to interface [chars] - not supported

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%GLBP-6-STATECHANGE : [chars] Grp [int] state [chars] -> [chars]

| | |
|---------------------------|------------------------------------|
| Explanation | The GLBP gateway has changed state |
| Recommended Action | No action is required. |

%GLBP-6-FWDSTATECHANGE : [chars] Grp [int] Fwd [int] state [chars] -> [chars]

| | |
|---------------------------|--------------------------------------|
| Explanation | The GLBP forwarder has changed state |
| Recommended Action | No action is required. |

%GLBP-4-DUPADDR : Duplicate address [chars] on [chars], sourced by [enet]

| | |
|---------------------------|---|
| Explanation | The IP address in a GLBP message received on the interface is the same as the router's own IP address. This may be because of misconfiguration, or because of a malfunctioning switch |
| Recommended Action | Check the configurations on all the GLBP routers, and make sure that any switches you have are functioning properly. |

%GLBP-4-DUPVIP1 : [chars] Grp [dec] address [chars] is already assigned to [chars] group [dec]

Explanation The GLBP virtual IP address contained in the Hello message cannot be learnt as it is already assigned to a different GLBP group.

Recommended Action Check the configuration on all GLBP routers.

%GLBP-4-DUPVIP2 : [chars] Grp [dec] address [chars] is already assigned on this interface

Explanation The GLBP virtual IP address contained in the Hello message cannot be learnt as it is already assigned to this interface.

Recommended Action Check the configuration on all GLBP routers.

%GLBP-4-DUPVIP3 : [chars] Grp [dec] address [chars] is already assigned to, or overlaps with, an address on another interface or application

Explanation The GLBP virtual IP address contained in the Hello message cannot be learnt as it is already assigned to, or overlaps with, an address on another interface or application.

Recommended Action Check the configuration on all GLBP routers.

%GLBP-4-BADVIP : [chars] Grp [dec] address [chars] is in the wrong subnet for this interface

Explanation The GLBP virtual IP address contained in the Hello message cannot be learnt as it is not within a subnet configured on the interface.

Recommended Action Check the configuration on all GLBP routers and ensure that the virtual IP address is within a configured subnet.

%GLBP-4-DIFFVIP1 : [chars] Grp [dec] active routers virtual IP address [chars] is different to the locally configured address [chars]

Explanation The GLBP virtual IP address contained in the Hello message from the Active router is different to that configured locally.

Recommended Action Check the configuration on all GLBP routers.

GRIP**%GRIP-3-BADPATHS : Invalid number of paths ([dec]) for %q**

Explanation An internal inconsistency was detected in the XNS routing table structure.

%GRIP-3-BADPATHS : Invalid number of paths ([dec]) for %q

| | |
|---------------------------|---|
| Recommended Action | Note the parameters associated with this message and call your technical support representative for assistance. |
|---------------------------|---|

%GRIP-2-BADROUTE : Error [chars] route - null table

| | |
|--------------------|--|
| Explanation | A hardware or software error occurred. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

HA

%HA-6-TOOBIG : Running config too big, config sync failed

| | |
|--------------------|---|
| Explanation | The running config was too big to be synced |
|--------------------|---|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%HA-6-SWITCHOVER : Route Processor switched from standby to being active

| | |
|--------------------|--|
| Explanation | This RP switched to become the active RP |
|--------------------|--|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

HAL_GENMEM

%HAL_GENMEM-3-HAL_MISMATCHED_GENMEM : VADDR:[int] LINE: [dec]

| | |
|--------------------|--------------------|
| Explanation | Mismatched genmem. |
|--------------------|--------------------|

| | |
|---------------------------|----------------|
| Recommended Action | LOG_STD_ACTION |
|---------------------------|----------------|

HAL_PACKET through HTSP

- [HAL_PACKET](#)
- [HA_EM](#)

- HDLC
- HFSLIB
- HMAN
- HMAN_CPU
- HPI
- HSRP
- HTSP

HAL_PACKET

%HAL_PACKET-3-HAL_GATHER_ASYNC_WAIT_TIMEOUT : seqnum=[int] pak-type=[int]

Explanation Packet Hardware Transmit Error

Recommended Action LOG_STD_ACTION

HA_EM

%HA_EM-7-FMCMN_PTHREAD_MUTEX_LOCK : [chars]: Error locking mutex [chars]; [chars]

Explanation The pthread_mutex_lock function reported an error while attempting to lock the specified mutex.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMCMN_PTHREAD_MUTEX_UNLOCK : [chars]: Error unlocking mutex [chars]; [chars]

Explanation The pthread_mutex_unlock function reported an error while attempting to unlock the specified mutex.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFDCMN_DM_CREATE : [chars]: could not create dispatch manager: [chars]

Explanation The event detector has failed to create an dispatch manager.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFDCMN_EA_ATTACH : [chars]: could not register for asynchronous message events: [chars]

Explanation The event detector has failed to attach an event handler for asynchronous messages.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFDCMN_INV_TM : [chars]: invalid timer: type=[dec], timer=[IPV6 address]

Explanation Internal error. The timer value is invalid or not as expected.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFDCMN_INV_TM_TYPE : [chars]: invalid timer type: [dec]

Explanation Internal error. The timer type is invalid or not supported.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFDCMN_MSGSEND_EVT : [chars]: error returned from event_send_pulse; [chars]

Explanation The event detector has failed to send a pulse to itself to notify of a pending message send event.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFDCMN_PUB_RBLD : [chars]: [chars]

Explanation Internal error. The event detector has failed to rebuild the publish list from the checkpointed records.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFDCMN_XDM_DISPATCH_FAIL : [chars]: XOS Dispatch Manager dispatch error: [dec]

Explanation XOS Dispatch Manager reports an error when dispatching an event.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFCMN_XDM_WAIT_FAIL : [chars]: XOS Dispatch Manager wait error: [dec]

Explanation XOS Dispatch Manager reports an error when waiting for an event.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_ADD_PARSER : [chars]: Unable to add [chars] event detector command;

Explanation The Event detector failed to add command.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_CHKPT_INIT : [chars]: [chars]

Explanation Internal error. The event detector has failed to initialize with the checkpointing server.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_CHKPT_TBL_ADD : [chars]: [chars]

Explanation Internal error. The event detector has failed to add a record to the checkpointing table.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_CHKPT_TBL_INIT : [chars]: [chars]

Explanation Internal error. The event detector has failed to initialize a table with the checkpointing server.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_CHKPT_TBL_ITERATE : [chars]: [chars]

Explanation Internal error. The event detector has failed to iterate the checkpointing table.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_CHKPT_TBL_REMOVE : [chars]: [chars]

Explanation Internal error. The event detector has failed to remove a record from the checkpointing table.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_COND_WAIT : [chars]: conditional wait error: [chars]

Explanation Internal error. The event detector has failed to do pthread conditional wait.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_CONNECTION_FAIL : Could not connect to [chars] : [chars]

Explanation Could not connect to event detector on the remote node. Node may be invalid or not available or the process may not be available to accept the connection.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_DE_FETCH : [chars]: [chars][[dec]]

Explanation Internal error. The event detector has failed to fetch a data element from the statistics data engine.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_DE_INIT : [chars]: [chars]

Explanation Internal error. The event detector has failed to initialize the statistics data engine.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_DM_CREATE : [chars]: could not create dispatch manager: [chars]

Explanation The event detector has failed to create an dispatch manager.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_EA_ATTACH : [chars]: could not register for asynchronous message events: [chars]

| | |
|---------------------------|--|
| Explanation | The event detector has failed to attach an event handler for asynchronous messages. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMFD_EMPTY_QUEUE : [chars]: The [chars] event detector I/O queue empty.

| | |
|---------------------------|--|
| Explanation | The I/O queue is empty at this point, and should not be. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_ENQUEUE_FAIL : [chars]: Unable to enqueue [chars];

| | |
|---------------------------|--|
| Explanation | The enqueue function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_EV_BLOCK : [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | The event_block function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_EVM_CREATE : Could not create event manager: [chars]

| | |
|---------------------------|--|
| Explanation | The event detector has failed to create an Event Manager. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_HIST_QERR : [chars]

| | |
|---------------------------|--|
| Explanation | Internal error. The event detector has failed to get a free history listentry. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_HIST_RBLD : [chars]: [chars]

| | |
|--------------------|--|
| Explanation | Internal error. The event detector has failed to rebuild the history list from the checkpointed records. |
|--------------------|--|

%HA_EM-7-FMFD_HIST_RBLD : [chars]: [chars]

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_INV_COMPARE_OP : [chars]: invalid comparison operator: [dec]

Explanation Internal error. The value comparison operator is invalid or not supported.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_INV_STATS_TYPE : [chars]: invalid statistics value type: [dec]

Explanation Internal error. The statistics data type is invalid or not supported.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_INV_TM : [chars]: invalid timer: type=[dec], timer=[IPV6 address]

Explanation Internal error. The timer value is invalid or not as expected.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_INV_TM_TYPE : [chars]: invalid timer type: [dec]

Explanation Internal error. The timer type is invalid or not supported.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_LOCAL_NODEID : Could not get local nodeid: [chars]

Explanation Could not get local node identifier.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_MALLOC : [chars]: Unable to allocate [chars]; [chars]

Explanation The malloc function reported an error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_MET_ENQUEUE : [chars]: could not enqueue metric data: [chars]

Explanation Internal error. The system manager event detector has failed to add a metric data entry to the list.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_MET_RBLD : [chars]: [chars]

Explanation Internal error. The event detector has failed to rebuild the metriclist from the checkpointed records.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_MISC_ERR : [chars]: [chars]

Explanation An unexpected error occurred.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_MSGSEND_EVT : [chars]: error returned from event_send_pulse; [chars]

Explanation The event detector has failed to send a pulse to itself to notify of a pending message send event.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_MSGSEND_RETRY_ERR : [chars]: [dec]

Explanation The event detector has exceeded its maximum number of retries to send a pulse to the embedded event manager to notify of an event publish.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_NO_CLOCK : [chars]: unable to read clock using clock_gettime: [chars]

Explanation The clock_gettime function reported an error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_NO_MEM : [chars]: not enough memory: [chars]

| | |
|---------------------------|--|
| Explanation | Allocating memory failed due to a low-memory condition. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_OE_CREATE : [chars]: could not create an occurrence entry

| | |
|---------------------------|--|
| Explanation | Internal error. The event detector has failed to create an entry for thematched occurrence list. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_OE_REMOVE : [chars]: could not remove an occurrence entry

| | |
|---------------------------|--|
| Explanation | Internal error. The event detector has failed to remove an entry for thematched occurrence list. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMFD_OID_UNAVAIL : [chars]: The following oid has become unavailable: [chars]

| | |
|---------------------------|--|
| Explanation | The registered oid is no longer available in the system. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_OPEN_CONF : [chars]: could not open event detector config file: [chars]

| | |
|---------------------------|--|
| Explanation | The event detector has failed to open the config file for event detector type information. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_PTHRD_CREATE : [chars]: could not create a Posix thread

| | |
|---------------------------|--|
| Explanation | The pthread_create function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_PUB_RBLD : [chars]: [chars]

Explanation Internal error. The event detector has failed to rebuild the publish list from the checkpointed records.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_PUB_TM_ALLOC : [chars]: Unable to allocate memory for event publish timer block

Explanation Internal error. The event detector has failed to allocate memoryfor the event publish timer block.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMFD_QUEUE_INIT : [chars]: Unable to initialize queue;

Explanation The queue initialization function reported an error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_RESOURCE_MONITOR_REGISTER_FAIL : [chars]: resource_monitor_register failed; return code = [dec]

Explanation The resource_monitor_register function reported an error trying toregister for RMI notifications.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_RM_ATTACH : [chars]: could not attach resource manager funtions to event manager: [chars]

Explanation The event detector has failed to attach a Resource Manager to an Event Manager.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SM_PROC_EXIT : [chars]: [chars]

Explanation The system manager failed to execute the default action of the terminated process.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SNMP_ADDR_ILLEGAL : [chars]: Illegal SNMP address type

| | |
|---------------------------|--|
| Explanation | The SNMP address is illegal. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_SNMP_ADDR_IPV6 : [chars]: SNMP IPV6 address is not supported

| | |
|---------------------------|--|
| Explanation | The IPV6 address is not supported. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_SNMP_BUILD_PDU_FAILED : [chars]: SNMP build pdu failed

| | |
|---------------------------|--|
| Explanation | The SNMP pdu build has failed. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_SNMP_COMM_FAIL : [chars]: Unable to create SNMP octet community string; string = [chars]

| | |
|---------------------------|--|
| Explanation | The community string was not able to build into a SNMP octet string |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_SNMP_COMMUNICATE_FAIL : [chars]: [chars] [chars]

| | |
|---------------------------|--|
| Explanation | Unable to communicate with SNMPD process |
| Recommended Action | Check whether SNMP is configured on this Router. |

%HA_EM-7-FMFD_SNMP_ERRCODE : [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | The SNMP error code. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_SNMP_MAKE_PDU_FAILED : [chars]: SNMP make pdu failed

| | |
|---------------------------|--|
| Explanation | The SNMP pdu make has failed. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMFD_SNMP_MIB_OBJ_REP_FAIL : [chars]: SNMP MIB object info replace failed [dec]

| | |
|---------------------------|--|
| Explanation | The SNMP MIB object info replace function has failed. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_SNMP_MSG_FAIL : [chars]: Unable to create a SNMP message; community = [chars]

| | |
|---------------------------|--|
| Explanation | The SNMP message failed to be created |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-4-FMFD_SNMP_NO_OBJECT_VALUE : [chars]: SNMP MIB object value not provided

| | |
|---------------------------|--|
| Explanation | The SNMP MIB object value is not provided for substitution. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMFD_SNMP_OBJECT_UNKNOWN_RESPONSE_CODE : [chars]: Unknown SNMP object response code [dec]

| | |
|---------------------------|--|
| Explanation | The SNMP MIB object response code is unknown. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_SNMP_OID_INVALID : [chars]: Invalid SNMP oid length [dec]

| | |
|---------------------------|--|
| Explanation | The SNMP oid has invalid length |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_SNMP_OID_MAKE_FAIL : [chars]: Unable to build an oid string into a SNMP oid; oid = [chars]

Explanation The oid string was not able to build into a SNMP oid

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SNMP_REQ_FAILED : [chars]: SNMP request failed

Explanation The SNMP request has failed.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SNMP_RESP_CANCEL : [chars]: SNMP response cancelled

Explanation The SNMP response has been cancelled.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SNMP_RESP_ERROR : [chars]: SNMP response error; error_status = [dec]

Explanation The SNMP response has error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SNMP_RESP_Q_EMPTY : [chars]: SNMP proxy exec got event, but queue is empty

Explanation The SNMP proxy got event but the queue is empty.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SNMP_RESP_TIMEOUT : [chars]: SNMP response has timed out

Explanation The SNMP response has timed out.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SNMP_UNKNOWN_TYPE : [chars]: Unknown SNMP operation or response type [dec]

Explanation The operation or response type is unknown.

%HA_EM-7-FMFD_SNMP_UNKNOWN_TYPE : [chars]: Unknown SNMP operation or response type [dec]

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SNMP_VARBIND_FAIL : [chars]: Unable to create a SNMP varbind

Explanation The oid failed to make into a SNMP varbind

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_STATS_VAL_GET_ERR : [chars]: [chars]

Explanation Internal error. The event detector has failed retrieving a valid statistics value.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SYSDB_BIND : [chars]: [chars]

Explanation Failed to bind to SysDB.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SYSDB_GET : [chars]: [chars]

Explanation Failed to retrieve an item from SysDB.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_SYSDB_REG_NOTIFY : [chars]: [chars]

Explanation Failed to register for notification of a set of items in SysDB.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_TM_CRTICK_INIT : [chars]: [chars]

Explanation Internal error. The initialization of the cron-tick function has failed.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMFD_TM_LEAF_NEW : [chars]: could not create a leaf timer

| | |
|---------------------------|--|
| Explanation | Internal error. The event detector has failed to create a managedleaf timer. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMFD_TTY_NUM : [chars]: Error occurred while fetching TTY number.

| | |
|---------------------------|--|
| Explanation | The Embedded Event Manager failed to fetch a TTY number. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_XDM_DISPATCH_FAIL : [chars]: XOS Dispatch Manager dispatch error: [dec]

| | |
|---------------------------|--|
| Explanation | XOS Dispatch Manager reports an error when dispatching an event. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMFD_XDM_WAIT_FAIL : [chars]: XOS Dispatch Manager wait error: [dec]

| | |
|---------------------------|--|
| Explanation | XOS Dispatch Manager reports an error when waiting for an event. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMC_APPL_CBH_PULSE : [chars]: Unable to locate application publish callback entry for pulse code [dec]

| | |
|---------------------------|--|
| Explanation | The application publish callback handler was unable to validate the pulse code received. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMC_APPL_CBH_SEND : [chars]: Unable to send response for FH_MSG_CALLBACK_DONE [chars]

| | |
|---------------------------|---|
| Explanation | The registration callback handler was unable to send the FH_MSG_CALLBACK_DONE message to the Embedded Event Manager Server. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMC_CB_CLOSE : [chars]: fh_close failed [chars]

Explanation The fh_close function reported an error trying to initialize the internal callback connection.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMC_CB_EV_CREATE : [chars]: event_manager_create failed [chars]

Explanation The event_manager_create function reported an error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMC_CBH_PROCESS_CREATE : [chars]: callback handler process create failed for eid: [dec]

Explanation The process_create function reported an error trying to create the callback handler process.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMC_CB_INIT : [chars]:[dec] (thread:[dec]) fh_init failed [chars]

Explanation The fh_init function reported an error trying to initialize the internal callback connection.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMC_CBS_PT_CREATE : [chars]: pthread_create failed [chars]

Explanation The pthread_create function reported an error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMC_ENQUEUE_FAIL : [chars]: Unable to enqueue [chars];

Explanation The enqueue function reported an error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMC_FH_INIT : [chars]: fh_init failed : [dec]

| | |
|---------------------------|--|
| Explanation | The fh_init function reported an error trying to initialize EEM fora callback process. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMC_INV_REPLY : [chars]: Application client library unable to handle message receive.

| | |
|---------------------------|--|
| Explanation | The API received a msg reply when it was not in a state to acceptsuch messages. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMC_MALLOC : [chars]: Unable to allocate [chars];

| | |
|---------------------------|--|
| Explanation | The malloc function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMC_REG_CBH_PULSE : [chars]: Unable to locate reg callback entry for pulse code [dec]

| | |
|---------------------------|--|
| Explanation | The registration callback handler was unable to validate the pulse codereceived. |
| Recommended Action | The pthread_create function reported an error. |

%HA_EM-7-FMC_REG_CBH_SEND : [chars]: Unable to send response for FH_MSG_CALLBACK_DONE [chars] [dec]

| | |
|---------------------------|--|
| Explanation | The registration callback handler was unable to send theFH_MSG_CALLBACK_DONE message to the Embedded Event Manager Server. |
| Recommended Action | The pthread_create function reported an error. |

%HA_EM-7-FMC_XDM_DISPATCH_FAIL : [chars]: XOS Dispatch Manager dispatch error: [dec]

| | |
|---------------------------|--|
| Explanation | XOS Dispatch Manager reports an error when dispatching an event. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMC_XDM_WAIT_FAIL : [chars]: XOS Dispatch Manager wait error: [dec]

| | |
|---------------------------|--|
| Explanation | XOS Dispatch Manager reports an error when waiting for an event. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_ACTION : [chars]: Error occurred while performing action: [chars].

| | |
|---------------------------|--|
| Explanation | The Embedded Event Manager Policy Director failed to perform an action for the registered event. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_ACTION_INFO : [chars]: Error occurred while fetching action information: [dec].

| | |
|---------------------------|--|
| Explanation | The Embedded Event Manager Policy Director failed to gather action information registered for the event. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_ACTION_NOTRACK : [chars]: unable to set state for tracking object number [int]; object does not exist or is not a stub-object.

| | |
|---------------------------|---|
| Explanation | The Embedded Event Manager applet attempted to set the state of a tracking object that does not exist. |
| Recommended Action | Only set the state of tracking objects that have already been configured in the system. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_CHECKSUM_MISMATCH : [chars]: file checksum mismatch

| | |
|---------------------------|--|
| Explanation | The checksum value of an installed policy does not match the value provided by the installation manager. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_CHKPT_INIT : [chars]: could not register the application with the checkpointing server: [chars]

| | |
|--------------------|--|
| Explanation | Failed to register an application with the checkpointing server. |
|--------------------|--|

%HA_EM-3-FMPD_CHKPT_INIT : [chars]: could not register the application with the checkpointing server: [chars]

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_CHKPT_ITERATE_END : [chars]: call to chkpt_iterate_end returned unexpected failure.

Explanation Failed to register an application with the checkpointing server.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_CHKPT_NULL_PTR : [chars]: Got a null [chars] but non-null value was expected

Explanation Failed to do further processing because we got a null data when a non-null value was expected.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_CHKPT_TBL_ADD : [chars]: could not save a record into a checkpointing table: [chars]

Explanation Failed to save a record into the given checkpointing table.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_CHKPT_TBL_INFO_READ : [chars]: could not read the existing table information: [chars]

Explanation Failed to read the existing table information using checkpointing API.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_CHKPT_TBL_INIT : [chars]: failed to initialize [chars]: [chars]

Explanation Could not initialize a table with the checkpointing server.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_CHKPT_TBL_RECOVER : [chars]: could not recover the checkpointed [chars]: [chars]

Explanation Failed to recover a checkpointed table.

%HA_EM-3-FMPD_CHKPT_TBL_RECOVER : [chars]: could not recover the checkpointed [chars]: [chars]

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_CHKPT_TBL_REMOVE : [chars]: could not delete a record from a checkpointing table: [chars]

Explanation Failed to delete a record from the given checkpointing table.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_CHKPT_TBL_RESET : [chars]: could not reset a record in a checkpointing table: [chars]

Explanation Failed to reset a record in the given checkpointing table.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_CLI_CONNECT : Unable to establish CLI session: [chars]

Explanation Unable to establish CLI session.

Recommended Action

%HA_EM-3-FMPD_CLI_DISCONNECT : Error disconnecting from CLI session: [chars]

Explanation An error occurred while disconnecting from the CLI session.

Recommended Action

%HA_EM-3-FMPD_CLI_NOTTY : Error attempting to access an unopened CLI session: [chars]

Explanation An error occurred attempting to access an unopened CLI session: %s

Recommended Action

%HA_EM-3-FMPD_CLI_READ : Unable to read CLI response: [chars]

Explanation Unable to read CLI response.

%HA_EM-3-FMPD_CLI_READ : Unable to read CLI response: [chars]

**Recommended
Action**

%HA_EM-3-FMPD_CLI_WRITE : Unable to send CLI command: [chars]

Explanation Unable to send CLI command.

**Recommended
Action**

%HA_EM-6-FMPD_CONTEXT_RETRIEVE : Failed to retrieve context for key [chars]: [chars]

Explanation Failed to context retrieve variable information for event.

**Recommended
Action** Ensure context information with the given key is saved. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-6-FMPD_CONTEXT_SAVE : Failed to save variable context for key [chars]: [chars]

Explanation Failed to context save variable information for event.

**Recommended
Action** Ensure context information with the same key is not already saved. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-4-FMPD_DIRECTORY_NOT_EXIST : User policy directory [chars] could not be found on [chars]

Explanation A policy directory could not be found. Cold start on this location may result in startup configuration failure.

**Recommended
Action** Create the directory on this location.

%HA_EM-6-FMPD_DIVIDE_ZERO : Invalid operand in arithmetic division, cannot divide by zero

Explanation Arithmetic division does not allow divide by zero.

**Recommended
Action** Ensure denominator provided to division action is non-zero.

%HA_EM-4-FMPD_DSIG_TYPE_CHANGE : Cisco Signature not found or invalid. [chars] has been registered as a user policy.

Explanation Cisco Signature not found or invalid.

Recommended Action Sign with Cisco signature.

%HA_EM-6-FMPD_EEM_CONFIG : [chars]: [chars]

Explanation The Embedded Event Manager reports an error on Event Manager configuration

Recommended Action Check the EEM applet or policy configuration

%HA_EM-6-FMPD_EEM_LOG_MSG : [chars]

Explanation The Embedded Event Manager reports errors when registering a TCL policy.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_ERROR : Error executing applet [chars] statement [chars]

Explanation The Embedded Event Manager policy director found an error when processing an applet.

Recommended Action Check syntax of applet statement. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-4-FMPD_EVENT_CREATE : [chars]: failed to create an event: [chars]

Explanation Failed to create an Embedded Event Manager event.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-4-FMPD_EVENT_REG : [chars]: failed to register an event: [chars]

Explanation Failed to register an Embedded Event Manager event.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_EVENT_TYPE : [chars]: unknown event type [dec]

| | |
|---------------------------|--|
| Explanation | An unknown Embedded Event Manager even type was detected. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_EVM_CREATE : [chars]: could not create event manager: [chars]

| | |
|---------------------------|--|
| Explanation | An internal error was detected when creating Event Manager. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_EVM_EVENT_BLOCK : [chars]: failed to block waiting for Event Manager events: [chars]

| | |
|---------------------------|--|
| Explanation | An internal error was detected when block waiting for Event Manager events. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_EXECUTE_CALLBACK : [chars]: failed to execute callback

| | |
|---------------------------|--|
| Explanation | Failed to execute callback routine. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_FH_INIT : [chars]: could not initialize Embedded Event Manager service: [chars]

| | |
|---------------------------|--|
| Explanation | An internal error was detected when initializing Embedded Event Managerservice. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMPD_FILE_CLOSE : [chars]: failed to close fd [chars] : [chars]

| | |
|---------------------------|--|
| Explanation | Failed to close the given file descriptor due to some internal error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMPD_FILE_DELETE : [chars]: failed to delete file: [chars] : [chars]

| | |
|--------------------|----------------------------------|
| Explanation | Failed to delete the given file. |
|--------------------|----------------------------------|

%HA_EM-7-FMPD_FILE_DELETE : [chars]: failed to delete file: [chars] : [chars]

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_FILE_OPEN : [chars]: failed to open file [chars] : [chars]

Explanation Failed to open the given file due to some internal error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_FILE_READ : [chars]: failed to read from fd [chars] : [chars]

Explanation Failed to read from the given file descriptor due to some internal error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_FILE_WRITE : [chars]: failed to write to fd [chars] : [chars]

Explanation Failed to write to the given file descriptor due to some internal error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_FORMAT_TIME : [chars]: error attempting to format time string

Explanation Format time failure.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_GET_PRIO : [chars]: failed to get process priority: [chars]

Explanation Internal error. A call to get process scheduling priority failed.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-4-FMPD_IPC_GET_PAK : [chars]: failed to allocate an IPC buffer

Explanation Embedded Event Manager failed to allocate a buffer from IPC.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_IPC_PORT_CREATE : [chars]: failed to create an IPC port: [chars]

| | |
|---------------------------|--|
| Explanation | Embedded Event Manager failed to create an IPC port. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_IPC_PORT_OPEN : [chars]: failed to open an IPC port: [chars]

| | |
|---------------------------|--|
| Explanation | Embedded Event Manager failed to open an IPC port. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMPD_IPC_PORT_REGISTER : [chars]: failed to register an IPC port: [chars]

| | |
|---------------------------|--|
| Explanation | Embedded Event Manager failed to register an IPC port. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-4-FMPD_IPC_SEND_MSG : [chars]: failed to send an IPC message: [chars]

| | |
|---------------------------|--|
| Explanation | Embedded Event Manager failed to send a message through IPC. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMPD_LAST_POLICY : [chars]: invalid last policy name replied [chars]

| | |
|---------------------------|--|
| Explanation | Internal error. The last policy name the script director replied to show fm policy registered command is an invalid policy name. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMPD_MEM_ALLOC : Not enough memory ([dec] bytes)

| | |
|---------------------------|--|
| Explanation | Allocating memory failed due to a low-memory condition. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-4-FMPD_NO_ACTION : No action configured for applet [chars]

Explanation No action has been configured for this applet.**Recommended Action** Configure at least one action for this applet.

%HA_EM-7-FMPD_NO_CLOCK : [chars]: unable to read clock using clock_gettime: [chars]

Explanation The clock_gettime function reported an error.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_NOEID : [chars]: No such event id found.

Explanation An internal software error occurred.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_NOESID : [chars]: No such event spec id found.

Explanation The Embedded Event Manager Policy Director could not find the event for the event spec. ID.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-4-FMPD_NO_EVENT : No event configured for applet [chars]

Explanation No event has been configured for this applet.**Recommended Action** Configure an event for this applet.

%HA_EM-7-FMPD_NO_MEM : [chars]: not enough memory: [chars]

Explanation Allocating memory failed due to a low-memory condition.**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_NO_PROC : [chars]: Failed to create process

Explanation The process create function reports an error

%HA_EM-3-FMPD_NO_PROC : [chars]: Failed to create process

| | |
|---------------------------|--|
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |
|---------------------------|--|

%HA_EM-4-FMPD_NOTAGNAME : [chars]: No tag [chars] found corresponding to this event publish.

| | |
|--------------------|--|
| Explanation | The Embedded Event Manager policy director could not associate the tagname with a published event. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Only use tagnames in the action info type event reqinfo command which correspond to the published event. |
|---------------------------|--|

%HA_EM-6-FMPD_OPERAND_INVALID : Invalid operand in action, expected value within range %ld to %ld, received: [chars]

| | |
|--------------------|---|
| Explanation | Arithmetic actions only accept valid long integer values. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Ensure value provided to action is long integer. |
|---------------------------|--|

%HA_EM-3-FMPD_OVL_NOTIF_REG : [chars]: could not register for Version Manager notification: [chars]

| | |
|--------------------|---|
| Explanation | An internal error was detected when registering for Version Manager notification. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |
|---------------------------|--|

%HA_EM-7-FMPD_OVL_SETUP_ENV : [chars]: [chars]

| | |
|--------------------|---|
| Explanation | Updating environment variables of the process according to system variables stored in sysdb failed. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |
|---------------------------|--|

%HA_EM-4-FMPD_POLICY_APPLY : Could not apply policy '[chars]': [chars]

| | |
|--------------------|---|
| Explanation | A policy could not be applied. This message signaled an unsuccessful apply of the policy. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Remove the configuration for the policy (and commit), and then attempt to configure the registration of the same policy. |
|---------------------------|--|

%HA_EM-6-FMPD_POLICY_CHANGED : [chars]: registered policy [chars] changed by the last installation update

| | |
|---------------------------|---|
| Explanation | A registered policy was changed by the last installation update. If the update used the start option, the old policy was automatically unregistered and the new policy registered. Otherwise, the old policy would remain registered and functional until the user unregisters it manually. |
| Recommended Action | None. |

%HA_EM-4-FMPD_POLICY_CONFIG_INCONSISTENT : Policy '[chars]': [chars]

| | |
|---------------------------|--|
| Explanation | Some policy configuration is potentially inconsistent, and the user should follow the guidelines in the message to amend this. |
| Recommended Action | Examine the guidelines in the message, and the event manager configuration, to determine the potential problem. Note that this is just a warning message, not an error message, as the configuration is legal - it may be the case that the user has intentionally set this configuration. |

%HA_EM-6-FMPD_POLICY_DELETED : [chars]: registered policy [chars] deleted by the last installation update

| | |
|---------------------------|---|
| Explanation | A registered policy was deleted by the last installation update. If the update used the start option, the policy was automatically unregistered. Otherwise, the policy would remain registered and functional until the user unregisters it manually. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMPD_POLICY_HASH : [chars]: The hash computation routine reported an error; [chars]

| | |
|---------------------------|--|
| Explanation | The policy dir checksum function reported the specified error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-4-FMPD_POLICY_NOT_EXIST : Policy file [chars] could not be found on [chars]

| | |
|---------------------------|---|
| Explanation | A policy file could not be found. Cold start on this location may result in startup |
| Recommended Action | Copy the policy file to this location. |

%HA_EM-6-FMPD_POLICY_REG_SUCC : [chars]: Policy '[chars]' registered successfully, by user [chars], with persist time [dec] and type [dec]

Explanation A new policy has been registered with Embedded Event Manager. This message signaled a successful registration.

Recommended Action None.

%HA_EM-7-FMPD_POLICY_TBL_REMOVE : [chars]: could not delete a record from a checkpointing table: [chars]

Explanation Failed to delete a record from the given checkpointing table.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-4-FMPD_POLICY_TUPLE_UNPACK : Failed to unpack_tuple to get username (Err: [dec]) for [chars]

Explanation Failed to unpack sysdb tuple to get the username for the scripts.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_POLICY_UNREG_ERR : [chars]: could not unregister policy [chars]: [chars]

Explanation A registered policy changed or deleted by the last installation update was detected. Since the update used the start option, the old policy was automatically unregistered. This message signaled an unsuccessful unregistration.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_POLICY_UNREGREG_ERR : [chars]: could not replace policy [chars]: [chars]

Explanation A registered policy changed by the last installation update was detected. Since the update used the start option, the old policy was automatically replaced by the new policy. This message signaled an unsuccessful replacement of the policy.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-6-FMPD_POLICY_UNREGREG_SUCC : [chars]: policy [chars] replaced successfully

Explanation A registered policy changed by the last installation update was detected. Since the update used the start option, the old policy was automatically replaced by the new policy. This message signaled a successful replacement of the policy.

%HA_EM-6-FMPD_POLICY_UNREGREG_SUCC : [chars]: policy [chars] replaced successfully

Recommended Action None.

%HA_EM-6-FMPD_POLICY_UNREG_SUCC : [chars]: policy [chars] unregistered successfully

Explanation A registered policy changed or deleted by the last installation update was detected. Since the update used the start option, the old policy was automatically unregistered. This message signaled a successful unregistration.

Recommended Action None.

%HA_EM-3-FMPD_PROCESS_XML : [chars]: error processing xml buffer

Explanation An error occurred processing the event publish information xml buffer.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_QUEUE_INIT : [chars]: could not initialize queue

Explanation An internal error was detected when initializing Embedded Event Managerqueue.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_REFRESHTIMER_INIT : Failed to initialize a refresh timer ([chars]): [chars]

Explanation Failed to initialize a Embedded Event Manager refresh timer.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-6-FMPD_REGCOMP : Error compiling regular expression: [chars]

Explanation An error was encountered when compiling the given regular expression.

Recommended Action Check syntax of regular expression pattern. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_REQINFO : [chars]: Error attempting to fetch event information: [chars].

Explanation The Embedded Event Manager Policy Director failed to receive event infofor a callback.

%HA_EM-3-FMPD_REQINFO : [chars]: Error attempting to fetch event information: [chars].

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_SET_INFO : [chars]: Error occurred while fetching variable information: [dec].

Explanation The Embedded Event Manager Policy Director was unable to set the variable with the requested information.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_SHM_OPEN : [chars]: ERROR opening shared mem IDB

Explanation An internal error was detected when attempting to open the IDB shared memory area

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_SMTP : Error occurred when sending mail to SMTP server: [chars] : [chars]

Explanation An unexpected error occurred when sending mail to SMTP server.

Recommended Action

%HA_EM-3-FMPD_SMTP_SEND : Unable to send notification using all SMTP servers

Explanation An unexpected error occurred when sending mail to all SMTP servers.

Recommended Action

%HA_EM-6-FMPD_SNMP_DUP_OID : [chars]: duplicate oid

Explanation The oid is a duplicate

Recommended Action Check the EEM applet or policy configuration

%HA_EM-6-FMPD_SNMP_NO_VAR : [chars]: No variable [chars]

Explanation The variable is not defined.

%HA_EM-6-FMPD_SNMP_NO_VAR : [chars]: No variable [chars]

Recommended Action Check the EEM applet or policy configuration

%HA_EM-6-FMPD_SNMP_TRAPVAR_ADD : [chars]: Error adding trapvar to queue [chars]

Explanation The trap variable was not added to the queue.

Recommended Action Check the EEM applet or policy configuration

%HA_EM-6-FMPD_SNMP_VARS_EXCEEDED : [chars]: number of values exceeded [dec]

Explanation The number of values per variable exceeded the maximum

Recommended Action Check the EEM applet or policy configuration

%HA_EM-7-FMPD_SWITCH_FAIL : [chars]: The system is unable to switch to standby processor. Switchover cancelled.

Explanation Switchovers must occur when STANDBY is available and ready.

Recommended Action None Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-6-FMPD_SWITCH_HARDWARE : [chars]: Policy has requested a hardware switchover

Explanation An Embedded Event Manager policy requested that a hardware switchover occur.

Recommended Action None

%HA_EM-7-FMPD_SYSDB_VERIFY_REG : Could not register for SysDB verification: [chars]

Explanation An internal error was detected when trying to register verify function and/or apply function for SysDB tuple operations upon the given item within the given namespace.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_THREAD_POOL : [chars]: [chars]

Explanation An internal error was detected while initialization of threadpool.

%HA_EM-3-FMPD_THREAD_POOL : [chars]: [chars]

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_UNKNOWN_ENV : [chars]: could not find environment variable: [chars]

Explanation The Embedded Event Manager policy director could not find the environmentvariable specified in the action message.

Recommended Action Only use well known Embedded Event Manager environment variables. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-FMPD_UNKNOWNTYPE : [chars]: Unknown event type found in applet.

Explanation The Embedded Event Manager applet had an unknown event type.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-6-FMPD_UPDATE_POLICY_COPY : Policy update has copied [dec] bytes from [chars] to [chars]

Explanation An EEM policy has been copied as a result of an event manager update command

Recommended Action

%HA_EM-6-FMPD_UPDATE_POLICY_REGISTER : Policy update has successfully re-registered policy [chars]

Explanation An EEM policy has been successfully re-registered as a result of an event manager update command

Recommended Action

%HA_EM-6-FMPD_UPDATE_POLICY_REGISTER_FAIL : Policy update has failed to register policy [chars] [chars]

Explanation An EEM policy has failed to be registered as a result of an event manager update command

Recommended Action

%HA_EM-6-FMPD_UPDATE_POLICY_UNREGISTER_FAIL : Policy update has failed to unregister policy [chars] [chars]

Explanation An EEM policy has failed to be unregistered as a result of an event manager update command

Recommended Action

%HA_EM-3-FMPD_WRONGTYPE : [chars]: Published event type does not match event spec.

Explanation The Embedded Event Manager Policy Director detected a mis-match in eventtype between the published event and the event spec.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_XDM_DISPATCH_FAIL : [chars]: XOS Dispatch Manager dispatch error: [dec]

Explanation XOS Dispatch Manager reports an error when dispatching an event.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMPD_XDM_WAIT_FAIL : [chars]: XOS Dispatch Manager wait error: [dec]

Explanation XOS Dispatch Manager reports an error when waiting for an event.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-ACTION_ADD_PARSER : [chars]: Unable to add action [chars] command;

Explanation Failed to add action command.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-ACTION_CNS_AGENT_UNAVAIL : [chars]: CNS Event Agent not available: [dec]

Explanation The CNS Event Agent is currently not available.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-ACTION_CNS_CLEAR_RESTART : [chars]: Unable to clear restart callback;

Explanation The CNS Action process failed to clear restart callback.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-3-ACTION_CNS_OPEN_FAIL : [chars]: Unable to open connection to CNS Event Agent: [dec]

Explanation The CNS Action process failed to open CNS handle to Event Agent.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-ACTION_CNS_SET_RESTART : [chars]: Unable to set restart callback;

Explanation The CNS Action process failed to set the restart callback.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-ACTION_ENQUEUE_FAIL : [chars]: Unable to enqueue [chars];

Explanation The enqueue function reported an error.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-ACTION_WB_CREATE : [chars]: create_watched_boolean failed: [chars]

Explanation The create_watched_boolean function reported an error trying to createthe watched boolean.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-ACTION_WB_DELETE : [chars]: delete_watched_boolean failed: [chars]

Explanation The delete_watched_boolean function reported an error trying to delete the watched boolean.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_ASYNC_ATTACH_CHKPT : [chars]: Failed to attach to handle chkpt asynchronous events; [chars]

Explanation The event_pulse_attach_event function reported an error trying to attach the chkpt pulse handler.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_ASYNC_ATTACH_DEFAULT : [chars]: Failed to attach to handle default asynchronous events; [chars]

Explanation The event_pulse_attach_event function reported an error trying to attach the default pulse handler.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_CHKPT_INIT : [chars]: could not register the application with the checkpointing server; [chars]

Explanation Failed to register an application with the checkpointing server.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_CHKPT_ITERATE_END : [chars]: call to chkpt_iterate_end returned unexpected failure.

Explanation Unexpected error when iterating over a checkpointing table.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_CHKPT_NULL_PTR : [chars]: Got a null [chars] when non-null value was expected

Explanation Failed to do further processing because we got a null data when a non-null value was expected.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_CHKPT_TBL_ADD : [chars]: could not add to the checkpointed [chars]: [chars]

Explanation Failed to add a record to the checkpointed table.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_CHKPT_TBL_INFO_READ : [chars]: could not read the existing table information: [chars]

| | |
|---------------------------|--|
| Explanation | Failed to read the existing table information using checkpointing API. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_CHKPT_TBL_INIT : [chars]: failed to initialize [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | Could not initialize a table with the checkpointing server. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_CHKPT_TBL_RECOVER : [chars]: could not recover for the checkpointed [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | Failed to recover a record from the checkpointed table. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_CHKPT_TBL_REMOVE : [chars]: could not remove from the checkpointed [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | Failed to remove a record from a checkpointed table. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_CHKPT_TBL_SAVE : [chars]: could not save to the checkpointed [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | Failed to save a record to a checkpointed table. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_CHKPT_TBL_UNREG : [chars]: could not unregister the checkpointed table [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | Failed to unregister a checkpointed table. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMS_CNS_FAIL : [chars]: Failed to perform CNS action: [chars]

| | |
|---------------------------|--|
| Explanation | The Embedded Event Manager failed attempting to send a CNS message. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_CREATE_THREAD_POOL : [chars]: Error reported by create_thread_pool function; [chars]

| | |
|---------------------------|---|
| Explanation | The create_thread_pool function reported an error while attempting to create the thread pool. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMS_EMPTY_QUEUE : [chars]: The I/O queue empty.

| | |
|---------------------------|--|
| Explanation | The I/O queue is empty at this point, and should not be. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMS_ENQUEUE_FAIL : [chars]: The Unable to enqueue packet onto queue.

| | |
|---------------------------|--|
| Explanation | The queue is not in a state to handle enqueues. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_EVM_CREATE : [chars]: event_manager_create failed; [chars]

| | |
|---------------------------|--|
| Explanation | The event_manager_create function reported an error trying to initialize the event manager. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_EVM_EVENT_BLOCK : An error occurred while waiting for an event: [chars]

| | |
|---------------------------|---|
| Explanation | The event infrastructure will ignore this error and continue to wait for the next event. If this error is seen repeatedly, the process may not be able to function and will need to be restarted. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_FDC_ALLOCATE : [chars]: Failed to allocate Event Detector context control block; [chars]

Explanation The get_fd function reported an error trying to allocate a Event Detector context control block.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_FDC_OPEN : [chars]: Failed to open Event Detector context control block

Explanation The open_fd function reported an error trying to open a Event Detector context control block.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_GET_NODE_NAME : [chars]: platform_get_node_name failed; [chars]

Explanation The platform_get_node_name function reported an error trying to obtain the node name.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_GET_NODE_STATE : Failed to get the current nodes state: [chars]

Explanation The call to get the nodes current state failed.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_GET_PRIO : [chars]: Failed to get process priority; [chars]

Explanation The getprio function reported an error trying to obtain the default process priority.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_GUARD_WORD_VER : [chars]: [chars] guard word corrupted; [IPV6 address]

Explanation The guard word for the specified control block does not contain what is expected.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_INV_ARG_STRING : [chars]: Invalid argument string: [chars]

| | |
|---------------------------|--|
| Explanation | An invalid argument string was passed to the specified function. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_INV_ENV_STRING : [chars]: Invalid environment string: [chars]

| | |
|---------------------------|--|
| Explanation | An invalid environment string was passed to the specified function. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_KILL : [chars]: Unable to kill process [chars]; [chars]

| | |
|---------------------------|--|
| Explanation | The kill function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_KILL_RUN : [chars]: Unable to kill run process [dec] for [chars]; [chars]

| | |
|---------------------------|--|
| Explanation | The kill function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-6-FMS_LAST_POLICY : [chars]: Cannot change a class [chars] [chars] to priority LAST. LAST is for default policies only

| | |
|---------------------------|---|
| Explanation | Embedded Event Manager Scheduler Command can only change a default policy to priority LAST. |
| Recommended Action | The command is applicable to default policies only. |

%HA_EM-7-FMS_MALLOC : [chars]: Unable to allocate [chars]; [chars]

| | |
|---------------------------|--|
| Explanation | The malloc function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_MISC_ERR : [chars] ([chars])

| | |
|---------------------------|--|
| Explanation | An unexpected error occurred. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-6-FMS_MODIFY_LAST_POLICY : [chars]: Cannot modify a LAST policy to class [chars]. LAST policies are for class default only.

| | |
|---------------------------|---|
| Explanation | Embedded Event Manager LAST policy is for default class only. |
| Recommended Action | The command is applicable to default policies only. |

%HA_EM-6-FMS_MODIFY_POLICY : [chars]: unable to modify the policy to class [chars]: scheduling rule unavailable.

| | |
|---------------------------|--|
| Explanation | There is no scheduler rule configured to service this event class. |
| Recommended Action | Please configure a scheduler rule before modifying the event. |

%HA_EM-7-FMS_NO_CLOCK : [chars]: unable to read clock using clock_gettime: [chars]

| | |
|---------------------------|--|
| Explanation | The clock_gettime function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-4-FMS_NO_SCHED_THREAD : No threads are configured to service event class [chars]

| | |
|---------------------------|--|
| Explanation | The Embedded Event Manager has no scheduler threads to service this event class. |
| Recommended Action | Track ED is not available in this image Configure threads for the event class using the 'event manager scheduler' command. |

%HA_EM-3-FMS_NO_TRACK : keyword in the correlate statement is not supported in this image.

| | |
|---------------------------|---|
| Explanation | The Embedded Event Manager Track ED is not supported in this image. |
| Recommended Action | Track ED is not available in this image |

%HA_EM-7-FMS_NULL_SCRIPT_NAME : [chars]: The script name is NULL

| | |
|---------------------------|--|
| Explanation | An invalid script name was passed as an argument into the specified function. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMS_OPEN : [chars]: Unable to open [chars]; [chars]

| | |
|---------------------------|--|
| Explanation | The open function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_OVL_NOTIFY_REG : [chars]: ovl_notification_register failed when registering to handle OVL notifications; [chars]

| | |
|---------------------------|--|
| Explanation | The ovl_register_notification function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_OVL_SETUP_ENV : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | Updating environment variables of the process according to system variables stored in sysdb failed. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMS_POLICY_CHECKSUM : [chars]: Checksum error for policy [chars] - this policy will not be run

| | |
|---------------------------|--|
| Explanation | The checksum computed for the specified policy does not match the original checksum computed when the policy was registered. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_POLICY_EXEC : [chars]: Policy execution [chars]

| | |
|---------------------------|---|
| Explanation | The Embedded Event Manager policy execution state has been changed to the state named in the message. |
| Recommended Action | |

%HA_EM-3-FMS_POLICY_HASH : [chars]: The hash computation routine reported an error; [chars]

| | |
|---------------------------|--|
| Explanation | The fh_hash_md5_fd() function reported the specified error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-3-FMS_POLICY_LOOKUP_FAIL : [chars]: Failed to look up in the table the registration specification for policy [chars].

| | |
|---------------------------|--|
| Explanation | A table lookup for the registration specification for the policy failed. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_POLICY_MAX_ENTRIES : [chars]: Class [chars]: Maximum number of [dec] [chars] publish entries exceeded; some events have been discarded

| | |
|---------------------------|---|
| Explanation | An attempt to publish an event failed because there is no more room in the publish queue |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative |

%HA_EM-6-FMS_POLICY_TIMEOUT : Policy '[chars]' has hit its maximum execution time of [dec].%9.9ld seconds, and so has been halted

| | |
|---------------------------|--|
| Explanation | The policy has exceeded its maximum execution time, and so has been halted part way through execution.If this policy is expected to take a long time to run, it may need to have 'maxrun_sec' added to the policy registration line (or its value increased if it is already specified). |
| Recommended Action | *NONE* |

%HA_EM-3-FMS_QUEUE_INIT : [chars]: The Unable to initialize queue.

| | |
|---------------------------|--|
| Explanation | The queue cannot be initialized.An attempt to publish an event failed because there is no more room in the publish queue. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative.Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_REALLOC_FAIL : [chars]: Unable to reallocate [chars]; [chars]

| | |
|---------------------------|--|
| Explanation | The realloc function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_REG_NODE_STATE_CHANGE : Failed to register for node state changes: [chars]

| | |
|---------------------------|--|
| Explanation | The call to register for node state changes failed. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-6-FMS_RELOAD_SYSTEM : [chars]: Policy has requested a system reload;

| | |
|---------------------------|---|
| Explanation | An Embedded Event Manager policy requested that the system be reloaded. |
| Recommended Action | |

%HA_EM-6-FMS_RUNNING_POLICY : [chars]: cannot [chars] a running policy with jobid [dec].

| | |
|---------------------------|--|
| Explanation | Embedded Event Manager Scheduler Command cannot change a running policy. |
| Recommended Action | The command is not applicable to a running policy. |

%HA_EM-7-FMS_SPAWN : [chars]: Unable to spawn [chars]; [chars]

| | |
|---------------------------|--|
| Explanation | The spawn function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_STRDUP : [chars]: Failed to duplicate string [chars]; [chars]

| | |
|---------------------------|--|
| Explanation | The strdup function reported an error. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%HA_EM-7-FMS_SWITCH_FAIL : [chars]: The system is unable to switch to standby processor. Switchover cancelled.

| | |
|--------------------|---|
| Explanation | Switchovers must occur when STANDBY is available and ready. |
|--------------------|---|

%HA_EM-7-FMS_SWITCH_FAIL : [chars]: The system is unable to switch to standby processor. Switchover cancelled.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-6-FMS_SWITCH_HARDWARE : [chars]: Policy has requested a hardware switchover

Explanation An Embedded Event Manager policy requested that a hardware switchover occur.

Recommended Action

%HA_EM-3-FMS_SWITCH_NOT_RF_ACTIVE : [chars]: This processor is not in ACTIVE state (state = [dec]). Switchover must be performed on ACTIVE processor.

Explanation Switchovers must occur on ACTIVE unit, not STANDBY unit.

Recommended Action

%HA_EM-7-FMS_SYSLOG_SCAN_RESIGN : [chars]: Failed to unload Syslog FD DLL [chars]; return code=[dec]

Explanation The syslog_scan_resign function reported an error trying to unload the specified Syslog Event Detector DLL library.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_SYSLOG_SCAN_SIGNUP : [chars]: Failed to load Syslog FD DLL [chars]; return code=[dec]

Explanation The syslog_scan_signup function reported an error trying to load the specified Syslog Event Detector DLL library.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_SYSMGR_RELOAD_FM : [chars]: Failed to load Sysmgr FD DLL [chars]; return code=[dec]

Explanation The sysmgr_reload_fh_detector function reported an error trying to load the specified Sysmgr Event Detector DLL library.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_THREADPOOL_MAX : Maximum number ([dec]) of callback events exceeded for [chars]; There is no available thread in the threadpool to service the event.

Explanation An attempt to schedule an event requiring a callback failed because there is no available thread in the threadpool.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_THREAD_POOL_START : [chars]: Error reported by thread_pool_start function; [chars]

Explanation The thread_pool_start function reported an error while attempting to start the thread pool.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_WB_CREATE : [chars]: create_watched_boolean failed; [chars]

Explanation The create_watched_boolean function reported an error trying to createthe watched boolean.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_WDSYSMON_RELOAD_FM : [chars]: Failed to load WDSysMon FD DLL [chars]; return code=[dec]

Explanation The wd_reload_fh_detector function reported an error trying to load the specified WDSysMon Event Detector DLL library.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_WQ_CREATE : [chars]: create_watched_queue failed; [chars]

Explanation The create_watched_queue function reported an error trying to createthe watched queue.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_XDM_DISPATCH_FAIL : [chars]: XOS Dispatch Manager dispatch error: [dec]

Explanation XOS Dispatch Manager reports an error when dispatching an event.

%HA_EM-7-FMS_XDM_DISPATCH_FAIL : [chars]: XOS Dispatch Manager dispatch error: [dec]

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_XDM_WAIT_FAIL : [chars]: XOS Dispatch Manager wait error: [dec]

Explanation XOS Dispatch Manager reports an error when waiting for an event.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

%HA_EM-7-FMS_XOS_DM_EXECUTE : [chars]: Failed to attach a handler to process child process exit; [chars]

Explanation The xos_dm_execute function reported an error trying to attach the handler to process child process exit.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative.

HA_PROXY

%HA_PROXY-3-PROXY_IPC_PAK_ALLOC_FAILED :

Explanation Allocation of IPC packet failed.

Recommended Action LOG_STD_ACTION

%HA_PROXY-2-HA_SESSION_ALLOC_FAILED : [chars]: unable to allocate entry for [chars] binding

Explanation HA could not allocate a control block to manage the service

Recommended Action LOG_STD_ACTION

%HA_PROXY-2-HA_FIND_SERVICE_FAILED : [chars]: unable to find [chars] service

Explanation HA could not find the specified service

Recommended Action LOG_STD_ACTION

%HA_PROXY-3-HA_DUP_SERVICE_NAME : [chars]: Duplicate service name: [chars] on bind

Explanation Duplicate service name on ha service bind

Recommended Action LOG_STD_ACTION

%HA_PROXY-3-HA_DUP_SERVICE_INDEX : [chars]: Duplicate service index: [dec] on bind

Explanation Duplicate service index on ha service bind

Recommended Action LOG_STD_ACTION

%HA_PROXY-3-HA_INVALID_REQUEST : [chars]: Unknown request: [dec]

Explanation HA control services received unknown request

Recommended Action LOG_STD_ACTION

%HA_PROXY-3-HA_MALFORMED_PKT : Malformed packet bad [chars] [hex], MSGDEF_LIMIT_MEDIUM

Explanation HA Sync packet was malformed, may not have been fully processed

Recommended Action LOG_STD_ACTION

%HA_PROXY-4-HA_UNKNOWN_SERVICE : Sync msg for unknown service [hex] rg [hex], MSGDEF_LIMIT_MEDIUM

Explanation HA Sync received a message for an unknown service

Recommended Action LOG_STD_ACTION

%HA_PROXY-4-HA_PKT_ERROR : Error processing HA sync pkt, rg [hex], MSGDEF_LIMIT_MEDIUM

Explanation HA Sync packet was dropped while processing

Recommended Action LOG_STD_ACTION

HDLC**%HDLC-1-ISSU_NOMEMORY : msgtxt_nomemory**

| | |
|---------------------------|---|
| Explanation | The requested operation could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%HDLC-4-ISSU_SENDFAILED : HDLC ISSU: send message failed, rc = [dec]

| | |
|---------------------------|---|
| Explanation | The sending of a message has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HDLC-4-ISSU_INCOMPATIBLE : hdlc-issu-compat: returned FALSE

| | |
|---------------------------|---|
| Explanation | The compatibility checking has failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HDLC-4-ISSU_XFORM : [chars]: failed, rc=[chars]

| | |
|---------------------------|---|
| Explanation | The transform has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

HFSLIB**%HFSLIB-3-HFSOPEN : Problem accessing the udev generated file: [chars]**

| | |
|---------------------------|------------------------|
| Explanation | No explanation. |
| Recommended Action | No action is required. |

%HFSLIB-3-HFSINOFALIED : Inotify failed to initialize : [chars]

| | |
|---------------------------|--|
| Explanation | This error occurs when the inotify sub-system is misbehaving |
| Recommended Action | No action is required. |

%HFSLIB-3-HFSINOWATCH : Inotify failed to add a watch: [chars]

| | |
|---------------------------|--|
| Explanation | This error occurs when the inotify sub-system is misbehaving |
| Recommended Action | No action is required. |

HMAN**%HMAN-3-CONSOLE_SETUP_FAILED : Failed to setup console service. It should be enabled on [chars]**

| | |
|---------------------------|---|
| Explanation | Setup of a console service failed. |
| Recommended Action | Check the host manager launch parameters and correct as required. |

%HMAN-3-HOSTNAME_SET_FAILED : Failed to set hostname: [chars]

| | |
|---------------------------|--|
| Explanation | The host manager received notification that the system hostname has been set. The host manager failed to pass this value to the ASR kernel. |
| Recommended Action | Repeat the process to configure the hostname. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HMAN-2-INITIALIZATION_FAILED : Host Manager initialization failed.

| | |
|---------------------------|---|
| Explanation | Initialization of the host manager failed. |
| Recommended Action | Review Host Manager logs taking note of the timestamp information to select specific information to review. Copy the message and other related information exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

HMAN_CPU

%HMAN_CPU-3-PAGE_FAULT_HIGH : CPU Usage due to Memory Pressure exceeds threshold on [chars]. Below are the top 5 memory consuming processes: [chars] (PID=[dec] RSS=[dec] MB),

| | |
|---------------------------|---|
| Explanation | When CPU usage due to Major Page Fault exceeds a pre-defined threshold for a CPU core, this error message is emitted. |
| Recommended Action | No action is needed if system continues to perform as expected. If system performance deteriorate (and eventually, system reloads due to unspecified reason) around the time when this message is observed, open a case with the Technical Assistance Center via the following Internet link, or contact your Cisco technical support representative: https://mycase.cloudapps.cisco.com/case |

HPI

%HPI-3-FAILED_START : channel:[chars] DSP ID:[hex], failed mode [dec] for service [dec]

| | |
|---------------------------|---|
| Explanation | Failed to start DSP services |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HPI-3-INVALID_PAYLOAD : wrong payload size, channel:[chars] DSP ID:[hex], failed mode [dec] for service [dec]

| | |
|--------------------|------------------------------|
| Explanation | Failed to start DSP services |
|--------------------|------------------------------|

%HPI-3-INVALID_PAYLOAD : wrong payload size, channel:[chars] DSP ID:[hex], failed mode [dec] for service [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%HPI-3-CODEC_NOT_LOADED : channel:[chars] DSP ID:[hex], command failed as codec not loaded [dec]

| | |
|---------------------------|---|
| Explanation | Sending messages to DSP without a loaded codec can result with the DSP failing |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HPI-4-INVALID_CODEC_LOAD : channel:[chars] DSP ID:[hex], invalid hpi mode [dec] for loading codec [dec]

| | |
|---------------------------|---|
| Explanation | Attempt to load codec when the DSP is in an invalid mode which can result with DSP failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HPI-4-NO_CLOSE : channel:[chars] DSP ID:[hex]

| | |
|---------------------------|---|
| Explanation | Attempt to release DSP without sending close message |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HPI-4-INVALID_ECAN_TYPE : [chars] ECAN is not available in voice-card [dec], [chars] ECAN will be used

| | |
|---------------------------|--|
| Explanation | All voice cards participated in DSPFarm must have the same echo canceller type |
| Recommended Action | Make sure all voice cards participated in DSPFarm have the same echo canceller type configured |

%HPI-3-GSMAMRNB_LICENSE_NOT_ACTIVATED :

***** GSM AMR-NB License is not yet activated.

Please configure 'license feature gsmamrn-codec-pack' and accept the EULA to activate the license.

| | |
|---------------------------|---|
| Explanation | Failed to start DSP services for GSM AMR-NB codec |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HPI-6-SRTP_EVAL_LIMIT : The SRTP bandwidth and tunnels usage exceed the license limits

Explanation The SRTP bandwidth and tunnels exceed the license limits

Recommended Action No action is required.

%HPI-3-SRTP_EVAL_FREE_ERROR : Error encountered on release SRTP bandwidth and tunnels reservation

Explanation Error encountered on release SRTP bandwidth and tunnels

Recommended Action No action is required.

%HPI-3-NACK_HIGH : DSP to IOS Nack message with severity [chars] [chars] [chars]

Explanation DSP to IOS Nack message with high severity

Recommended Action Check the NACKed message's parameters for configuration errors. These messages tend to affect call flow, thus they are labeled with high severity.

%HPI-4-NACK_MED : DSP to IOS Nack message with severity [chars] [chars] [chars]

Explanation DSP to IOS Nack message with medium severity

Recommended Action Check the NACKed message's parameters for minor configuration errors.

%HPI-6-NACK_LOW : DSP to IOS Nack message with severity [chars] [chars] [chars]

Explanation DSP to IOS Nack message with low severity

%HPI-6-NACK_LOW : DSP to IOS Nack message with severity [chars] [chars] [chars]

Recommended Action Information only, displaying NACKed messages that are for debugging purposes.

%HPI-6-NACK : DSP to IOS Nack message [chars] [chars]

Explanation DSP to IOS Nack message with no severity in order to work with dspware without Nack severity implementation

Recommended Action Information only, displaying NACKed messages.

HSRP

%HSRP-3-NOSOCKET : Unable to open socket

Explanation The system was unable to initialize an IP connection for the Hot Standby protocol.

Recommended Action Make sure that there is at least one interface configured to run IP.

%HSRP-4-BADAUTH : Bad authentication from [chars], group [dec], remote state [chars]

Explanation Two routers participating in HSRP disagree on the valid authentication string.

Recommended Action Use the standby authentication command to repair the HSRP authentication discrepancy between the local system and the one whose IP address is reported.

%HSRP-4-BADAUTH2 : Bad authentication from [chars]

Explanation Two routers participating in HSRP disagree on the valid authentication string.

Recommended Action Use the standby authentication command to repair the HSRP authentication discrepancy between the local system and the one whose IP address is reported.

%HSRP-3-MISCONFIG : Attempt to change [chars] MAC address to [enet] when DECNET already running

Explanation An HSRP group attempted to become active on an interface that can only support a single MAC address and which is running DECnet. If standby use-bia is not configured then HSRP would normally set the interface MAC address to the HSRP virtual MAC address, but this is not allowed if DECnet is running.

Recommended Action Enable standby use-bia on the interface.

%HSRP-5-STATECHANGE : [chars] Grp [dec] state [chars] -> [chars]

Explanation The router has changed state

Recommended Action No action is required.

%HSRP-4-DUPADDR : Duplicate address [chars] on [chars], sourced by [enet]

Explanation The IP address in an HSRP message received on the specified interface is the same as the IP address of the router. Another router might be configured with the same IP address. The most likely cause is a network loop or a misconfigured switch that is causing the router to see its own HSRP Hello messages.

Recommended Action Check the configurations on all the HSRP routers to ensure that the interface IP addresses are unique. Check that no network loops exist. If port channels are configured check that the switch is correctly configured for port-channels. Enable standby use-bia so that the error message displays the interface MAC address of the sending router. This can be used to determine if the error message is caused by a misconfigured router or a network loop.

%HSRP-4-DUPVIP1 : [chars] Grp [dec] address [chars] is already assigned to [chars] group [dec]

Explanation The HSRP virtual IP address contained in the Hello message cannot be learnt as it is already assigned to a different HSRP group.

Recommended Action Check the configuration on all HSRP routers and ensure that the virtual IP address of each HSRP group is unique.

%HSRP-4-DUPVIP2 : [chars] Grp [dec] address [chars] is already assigned on this interface

Explanation The HSRP virtual IP address contained in the Hello message cannot be learnt as it is already assigned to this interface.

Recommended Action Check the configuration on all HSRP routers and ensure that the virtual IP address of each HSRP group is unique.

%HSRP-4-DUPVIP3 : [chars] Grp [dec] address [chars] is already assigned to, or overlaps with, an address on another interface or application

Explanation The HSRP virtual IP address contained in the Hello message cannot be learnt as it is already assigned to, or overlaps with, an address on another interface or application.

Recommended Action Check the configuration on all HSRP routers and ensure that the virtual IP address of each HSRP group is unique.

%HSRP-4-BADVIP : [chars] Grp [dec] address [chars] is in the wrong subnet for this interface

| | |
|---------------------------|---|
| Explanation | The HSRP virtual IP address contained in the Hello message cannot be learnt as it is not within a subnet configured on the interface. |
| Recommended Action | Check the configuration on all HSRP routers and ensure that the virtual IP address is within a configured subnet. |

%HSRP-4-DIFFVIP1 : [chars] Grp [dec] active routers virtual IP address [chars] is different to the locally configured address [chars]

| | |
|---------------------------|--|
| Explanation | The HSRP virtual IP address contained in the Hello message from the Active router is different from the virtual IP address configured locally. |
| Recommended Action | Check the configuration on all HSRP routers in the group and ensure they are all configured with the same virtual IP address. |

HTSP**%HTSP-3-NOEVENT : no free event structure available from [chars] for DSP message**

| | |
|---------------------------|---|
| Explanation | There were no event structures remaining in the system pools to alert the router of a voice or signaling event. |
| Recommended Action | Check that the voice port for which the event was reported is still operational. If not, clear the voice port. |

%HTSP-3-CAPABILITYMISMATCH : voice port [chars]: call connection id [[hex] [hex] [hex] [hex]]

| | |
|---------------------------|---|
| Explanation | There was a capabilities mismatch between the two call legs. capabilities are negotiated between call legs for CODEC, VAD and FAX rate. |
| Recommended Action | Check that the dial peer configuration is appropriate for the interface in question. Also check that and configuration on the interface is correct. |

%HTSP-3-DSPALARM : voice port [chars]: status=[hex] message=[hex] text=[chars]

| | |
|---------------------------|--|
| Explanation | The DSP reported a fatal error. All calls on the DSP were dropped and a DSP reload was attempted. |
| Recommended Action | Verify that the DSP reloaded properly by attempting to place a call on the affected voice port. Contact your technical support representative, include the full text of the error message. |

%HTSP-3-TRUNKNOTSUPPORTED : voice port [chars]: Ground Start trunking not supported

Explanation This voice port does not support the 'connection trunk' command when ground start signaling is configured. Trunking mode on this voice is supported when using loop start signaling.

Recommended Action Shut down the voice port, remove the 'connection trunk' and/or 'signal groundStart' command from the voice port configuration, and unshut the voice port.

%HTSP-5-UPDOWN : Trunk port(channel) [[chars]] is [chars]

Explanation Trunk port:channel changed state.

Recommended Action No action is required.

%HTSP-3-CADENCENOTSUPPORTED : voice port [chars]: ring cadence not suitable for caller id. on_time_first=[dec] off_time_first=[dec] on_time_second=[dec] off_time_second=[dec]

Explanation Ring off period is not sufficient for caller id transmission. If caller id transmission during ring is configured make sure that the ring off duration is long enough.

Recommended Action If caller id transmission during ring is configured make sure that the ring off duration is long enough. Make sure that the cptone setting and caller-id alerting settings are correct.

%HTSP-5-VPM_BUSYOUT : voice port [chars]: [chars] busyout

Explanation voice port busyout status changed

Recommended Action use SHOW VOICE BUSYOUT to find out the reason why voice port busyout monitoring is triggered

%HTSP-5-VPM_PCM_CAPTURE : User trigger PCM capture is [chars] on voice port [chars]

Explanation User trigger PCM capture is enabled or disable on this voice port

Recommended Action This is just for information only

%HTSP-5-VPM_CABLE_STAT : voice port [chars]: cable [chars]

Explanation Cable for analog voice port is reconnected or removed

Recommended Action Check the cable connection for this analog voice port

HTTP

%HTTP-3-PROC_NOCREAT : Unable to create HTTP process.

| | |
|---------------------------|--|
| Explanation | An error occurred during initialization of the HTTP process. The HTTP process that processes all HTTP requests and responses could not be created. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%HTTP-4-SERVER_CONN_RATE_EXCEED : Number of connections per minute has exceeded the maximum limit([dec]) as specified by the platform.

| | |
|---------------------------|--|
| Explanation | The message indicates that the current number of connections requested per minute has exceeded the limit specified by the platform. HTTP server will resume accepting the connections 15 seconds from the time the message is issued. This restriction is done as per the HTTP throttling functionality. |
| Recommended Action | Reduce connection rate to the server. |

%HTTP-3-OUTOF_MEM : HTTP out of memory.

| | |
|--------------------|---|
| Explanation | An error occurred during initialization of the HTTP process. The HTTP process could not create crucial internal data structures that are required for operation of the HTTP subsystem. The most likely reason for this condition is an exhaustion of system memory. |
|--------------------|---|

%HTTP-3-OUTOF_MEM : HTTP out of memory.

Recommended Action Reduce other system activity to ease memory demands. if conditions warrant, upgrade to a larger memory configuration.

%HTTP-3-INIT_FAIL : HTTP Process Init failed.

Explanation Initialization of the HTTP Subsystem has failed

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%HTTP-6-SERVER_SETUP_FAILED : Server setup failed

Explanation Setup of the HTTP(S) server to listen on the specified port number has failed.

Recommended Action Disable the server, verify that port number is correct and enable the server. Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

HTTPC

%HTTPC-3-PROC_NOCREAT : Unable to create HTTP Client process.

Explanation

Recommended Action

%HTTPC-3-OUTOF_MEM : HTTP Client out of memory.

Explanation

Recommended Action

%HTTPC-3-CACHE_MEM : HTTP Client Cache Init out of memory.

Explanation

Recommended Action

%HTTTPC-3-INIT_FAIL : HTTP Client Process Init failed.

Explanation**Recommended
Action**

%HTTTPC-3-OUTOF_SYNC : HTTP Client header tables out of sync.

Explanation**Recommended
Action**

%HTTTPC-6-CONNECT_FAILED : The connection to server [IP_address] failed

Explanation**Recommended
Action**

%HTTTPC-3-RECEIVE SOCK_READ_EVENT_WHILE_DISABLED : Received socket read event while read interest is disabled callID([dec]) fd([dec]) - closing socket.

Explanation The HTTP Client is receiving the socket READ event while the READ interest is being disabled. Something has gone wrong between the http client and the socket interfaced.**Recommended
Action** Record the error and report it to the system administrator.

%HTTTPC-3-CONNECT_NULL : NULL connection structure for fd([dec]) - closing socket.

Explanation The HTTP Client is receiving the socket READ event but it fails to locate the connection structure for this file descriptor(fd). If this is seen continuously in a loop, it is an indication that something has gone wrong in the socket code. Since the socket is immediately closed after this event, the HTTP client should stop seeing READ event.**Recommended
Action** Record the error and traceback and report it to the system administrator.

%HTTTPC-6-REQUEST_FAILED : request URI [chars] failed

Explanation**Recommended
Action**

%HTTTPC-6-CLOSE_SRV_CONNECT : The connection to server [IP_address] appears to be hung and will be closed.

Explanation Messages are being backed up in the HTTP Client's write queue in the connection with the specified server. The connection is assumed to have gone bad and the HTTP Client is closing the connection.

Recommended Action Check with the specified server for possible connection error.

%HTTTPC-3-COOKIE_MEM : HTTP Client runs out of allowable memory to store cookies.

Explanation The total memory allocated for storing cookies has run out. All cookies received from the HTTP server will be dropped. Users may no longer be able to interact with a session-based origin server until memory is freed up.

Recommended Action Users may want to try their requests at a later time or contact the system administrator to increase the maximum RAM allowed for saving HTTP cookies.

HUNTGRP

%HUNTGRP-3-INVALID_URL : Could not open the file provided in URL: <[chars]>

Explanation URL path provided can't be accessed. This usually indicates that path provided is invalid but may also be because the the path doesn't allow anonymous access to create files or open it in write mode

Recommended Action Check that the url path provided is valid

%HUNTGRP-3-WRITE_FAIL : Could not write data to the URL: <[chars]>t %%bytes written=[dec] out of [dec]

Explanation Write attempt to the url path provided was unsuccessful. This usually indicates that the file was successfully opened with write and append permissions but writing all the content from buffer or may be some of it to the file failed.

Recommended Action

HW_API

%HW_API-3-RESILIENCE_NO_HANDLER : No handlers in place for [chars] sw object creation failure.

Explanation COMMON_HW_API_INTERNAL_ERROR

%HW_API-3-RESILIENCE_NO_HANDLER : No handlers in place for [chars] sw object creation failure.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%HW_API-3-INVALID_OBJ : Invalid object [hex]

| | |
|---------------------------|---|
| Explanation | HW_API_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HW_API-3-INVALID_TYPE : Invalid type [dec]

| | |
|---------------------------|---|
| Explanation | HW_API_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HW_API-3-INVALID_WALK_SPEC : Invalid walk spec [hex]

| | |
|---------------------------|---|
| Explanation | HW_API_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HW_API-3-WALK_MODE_UNSUPPORTED : Walk mode '[chars]' unsupported

| | |
|---------------------------|---|
| Explanation | HW_API_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HW_API-3-INVALID_CONTEXT : Invalid context [hex]

Explanation HW_API_INTERNAL_ERROR**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%HW_API-3-BACKWALK_REQUEST : Backwalk request failed, [chars]

Explanation A request to walk internal data structures has failed. Depending on criticality of the data, accuracy of forwarding may be impacted.**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%HW_API-3-BACKWALK_REQUEST_VALUE : Backwalk request failed, [chars] ([hex])

Explanation A request to walk internal data structures has failed. Depending on criticality of the data, accuracy of forwarding may be impacted.**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%HW_API-3-VECTOR : Failed to set [chars] vector for [chars], [chars]

Explanation HW_API_INTERNAL_ERROR**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%HW_API-3-NO_OBJ_TYPE_LIST_ENTRY : Invalid sw_obj_type ([dec]) used with obj_type_list

Explanation HW_API_INTERNAL_ERROR

%HW_API-3-NO_OBJ_TYPE_LIST_ENTRY : Invalid sw_obj_type ([dec]) used with obj_type_list

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%HW_API-3-NO_OBJ_TYPE_LIST_ENTRY2 : Invalid sw_obj_link_type ([dec]) used with obj_type_list

| | |
|---------------------------|---|
| Explanation | HW_API_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HW_API-3-INIT_FAIL : HW-API init [chars] failed[chars]

| | |
|---------------------------|---|
| Explanation | HW_API_INTERNAL_ERROR |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

HW_FLOWDB**%HW_FLOWDB-3-HW_FLOWDB_OOM : FlowDB memory usage exceeded 95[int]sage. OOM condition can occur.**

| | |
|---------------------------|---|
| Explanation | FlowDB running low on memory. Out-of-memory condition can occur |
| Recommended Action | Check sw-distrib for actual utilization of FlowDB memory |

HW_IDPROM_ENVMON**%HW_IDPROM_ENVMON-3-HW_IDPROM_FIELD_INVALID : The idprom contains an invalid environmental monitoring field.**

| | |
|--------------------|---|
| Explanation | If this error occurs then parsing of the environmental monitoring data is aborted. Environmental monitoring will be either incomplete or absent entirely. |
|--------------------|---|

%HW_IDPROM_ENVMON-3-HW_IDPROM_FIELD_INVALID : The idprom contains an invalid environmental monitoring field.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%HW_IDPROM_ENVMON-3-HW_IDPROM_CHECKSUM_INVALID : The idprom contains an invalid checksum in a sensor entry. Expected: [hex], calculated: [hex]

Explanation If this error occurs then parsing of the environmental monitoring data is aborted. Environmental monitoring will be either incomplete or absent entirely.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%HW_IDPROM_ENVMON-2-ACT2_UDI_DATA_INVALID : The act2 udi secure area format mismatch with unsecure area

Explanation This Router may not have been manufactured by Cisco or with Cisco's authorization. This product may contain software that was copied in violation of Cisco's license terms. If your use of this product is the cause of a support issue, Cisco may deny operation of the product, support under your warranty or under a Cisco technical support program such as Smartnet. Please contact Cisco's Technical Assistance Center for more information.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%HW_IDPROM_ENVMON-3-PS_IDPROM_INVALID_PID : [chars] in slot PFU[dec] has INVALID PID [chars] and it needs to be replaced immediately

Explanation The PID read from the PEM IDPROM is not supported in this hardware configuration. It will be allowed to continue but immediate replacement is required

%HW_IDPROM_ENVMON-3-PS_IDPROM_INVALID_PID : [chars] in slot PFU[dec] has INVALID PID [chars] and it needs to be replaced immediately

| | |
|---------------------------|---|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

HW_PFU

%HW_PFU-3-PFU_IDPROM_READ_ERR : Could not read the PEM/FM idprom in slot P[dec].The system will run without environmental monitoring for this component

| | |
|---------------------------|---|
| Explanation | The idprom contains information required in order to properly operate the environmental monitoring subsystems. The idprom could not be read, therefore no monitoring will take place. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HW_PFU-3-PFU_IDPROM_CORRUPT : The PEM/FM idprom could be read, but is corrupt in slot P[dec] The system will run without environmental monitoring for this component

| | |
|---------------------------|---|
| Explanation | The idprom contains information required in order to properly operate the environmental monitoring subsystems. The idprom could not be read, therefore no monitoring will take place. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%HW_PFU-3-PFU_IDPROM_INVALID_PID : The PEM/FM idprom has invalid PID in slot PFU[dec] The system will run without environmental monitoring for this component

| | |
|--------------------|--|
| Explanation | The idprom contains PID information required in order to properly operate the environmental monitoring subsystems. The idprom PID is invalid, therefore no monitoring will take place. |
|--------------------|--|

%HW_PFU-3-PFU_IDPROM_INVALID_PID : The PEM/FM idprom has invalid PID in slot PFU[dec] The system will run without environmental monitoring for this component

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

ICC

%ICC-2-NOMEM : No memory available for [chars]

Explanation The ICC subsystem could not obtain the memory it needed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ICC-4-CONSISTENCY : Internal consistency check: [chars]

Explanation An internal inconsistency was found in some ICC data structures.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ICC-4-COMM : Communication failure occurred while [chars]

Explanation

Recommended Action

%ICC-4-BAD_ACCOUNTING : ICC received a bad class [dec]

Explanation A communication failure has occurred between this card and another card in the system.

%ICC-4-BAD_ACCOUNTING : ICC received a bad class [dec]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%ICC-4-HEARTBEAT : Card [dec] failed to respond to heartbeat

| | |
|---------------------------|--|
| Explanation | A communication failure has occurred between the primary and the specified line card. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ICC-5-WATERMARK : [dec] [chars] [chars] pkts for class [chars] are waiting to be processed

| | |
|---------------------------|--|
| Explanation | Processor got packets for the class and are waiting to be processed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ICC-2-OPEN : ICC Create Session Failed for card <[hex]> Queue <[chars]>

| | |
|---------------------------|---|
| Explanation | ICC was not able to create a session for the destination seat |
| Recommended Action | collect output from 'show oir debug swover_global_mask' from SP |

%ICC-2-JOIN : ICC mcast joining failed member <[hex]> to group <[hex]> with ipc error <[chars]>

| | |
|---------------------------|---|
| Explanation | ICC was not able to join a member for the mcast group |
| Recommended Action | collect output 'show icc mcast status' from RP |

%ICC-5-HUGE_BUFFER : Class [[chars]] with Request id [dec] requested a huge buffer of Size [dec].

| | |
|---------------------------|--|
| Explanation | Huge packet requests would deplete the memory at the linecards |
| Recommended Action | ICC client is trying to request huge packet buffer Please use the command Show ice internal to get the traceback and file a DDTS against the component |

%ICC-3-MAST_BAD_FREE : ICC multicast memory already freed

| | |
|---------------------------|---|
| Explanation | One of the ICC multicast request's memory was found to be free when response arrived |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IDBMAN

%IDBMAN-3-VLANINUSE : [chars]: Vlan [dec] is in use by [chars]

| | |
|---------------------------|--|
| Explanation | Each L3 interface has a Vlan associated with it. This message indicates that the Vlan associated with the interface is being used by some other L3 Interface, which is not anticipated to happen |
| Recommended Action | No action is required. |

%IDBMAN-3-INVALIDVLAN : [chars]: trying to use invalid Vlan [dec]

| | |
|---------------------------|---|
| Explanation | There is an internal error that caused an invalid Vlan to be used by the software. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDBMAN-3-VLANNOTSET : [chars]: Vlan [dec] not set since it already has Vlan [dec]

| | |
|--------------------|---|
| Explanation | There is an internal error that caused an interface to not have its Vlan set to the requested value |
|--------------------|---|

%IDBMAN-3-VLANNOTSET : [chars]: Vlan [dec] not set since it already has Vlan [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IDBMAN-6-VLANMAPPED : Vlan [dec] is mapped to [chars]

| | |
|---------------------------|---|
| Explanation | Informational message indicating that the given Vlan is mapped to the given interface |
| Recommended Action | No action is required. |

%IDBMAN-3-AGGPORTMISMATCH : [chars]([dec] / [dec]) does match internal slot/port state [chars]([dec] / [dec])

| | |
|---------------------------|---|
| Explanation | There is an internal error that caused an invalid aggregate port to be used by the software. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDBMAN-3-INVALIDAGGPORTBANDWIDTH : [chars]([dec] / [dec]) has an invalid bandwidth value of [dec]

| | |
|---------------------------|---|
| Explanation | There is an internal error that caused an invalid bandwidth to be used for an aggregate port. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDBMAN-3-DELETEDAGGPORT : [chars]([dec] / [dec]) Group [dec] has been deleted, but is being reused.

| | |
|---------------------------|---|
| Explanation | There is an internal error that caused an interface that has been deleted to be reused for a new aggregate port. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDBMAN-3-NOTANAGGPORT : [chars]([dec] / [dec]) is not an aggregate port

| | |
|---------------------------|---|
| Explanation | There is an internal error that caused an interface that is not an aggregate port to be used for aggregate port operations |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDBMAN-3-INVALIDPORT : [chars]: trying to use invalid port number [dec] (Max [dec])

| | |
|---------------------------|---|
| Explanation | There is an internal error that caused an invalid port number to be used by the software. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDBMAN-4-ACTIVEPORTSINAGGPORT : [chars]([dec] / [dec]) has [dec] active ports, but is being removed

| | |
|---------------------------|---|
| Explanation | There is an internal error that caused an aggregate port with active ports to be removed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDBMAN-3-PORTNOTINAGGPORT : [chars]([dec] / [dec]) is not present in Aggport [chars]([dec] / [dec])

| | |
|---------------------------|---|
| Explanation | There is an internal error that caused an invalid port to be referred to be part of an aggregate port. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDBMAN-4-REMOVED_NONDEFAULT_CONFIG : Removed non default configuration for interfaces in slot [dec]

| | |
|---------------------------|--|
| Explanation | In SSO mode, the non-default configuration for any removed linecard is not synced to the standby during the bulk sync, and it is removed from the configuration to avoid a config mismatch between active and standby supervisors. |
| Recommended Action | No action is required. |

%IDBMAN-3-IIF_ID_REGISTRATION_FAILED : IIF_ID registration failed for Port [chars] due to memory allocation failure. Port has been shutdown

| | |
|---------------------------|---|
| Explanation | The system is low on memory due to which IIF-ID registration failed. This results in failure to apply polices such as QoS and Security acls on this port. |
| Recommended Action | LOG_STD_REDUCE_ACTION Once memory is available, run 'no shutdown' on the port. |

IDB_IDENTITY

%IDB_IDENTITY-3-MALLOC : Memory allocation failure for HWIDB type [dec]

| | |
|---------------------------|---|
| Explanation | A memory allocation failure occurred when trying to allocate the identity for this HWIDB. This HWIDB will not be allocated an IF Index which will prevent it from being used for forwarding data. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IDB_SGI

%IDB_SGI-2-XDRREG : [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDB_SGI-2-MEMREQ : [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDB_SGI-3-BADPTR : [chars] of interface with ifindex [int] is invalid

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDB_SGI-3-MEMFAIL : [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDB_SGI-4-MEMBERREQ : member request failure for interface with ifindex [int] returned err - [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDB_SGI-3-XDRREQ : [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDB_SGI-4-INTERR : [chars] for interface with ifindex [int]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDB_SGI-4-UNEXPINP : [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IDMGR**%IDMGR-3-MALLOC_FAILURE : [chars]**

| | |
|--------------------|--|
| Explanation | A malloc failure occurred in ID Manager. |
|--------------------|--|

%IDMGR-3-MALLOC_FAILURE : [chars]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%IDMGR-3-INTERRUPT : [chars]

| | |
|---------------------------|--|
| Explanation | An id_get attempted at interrupt level. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDMGR-3-INVALID_ID : bad id in [chars] (id: [hex])

| | |
|---------------------------|--|
| Explanation | An ID Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDMGR-3-INVALID_ID_TABLE_SIZE : bad new ID table size

| | |
|---------------------------|--|
| Explanation | A bad new table request to ID Manager occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IDMGR-3-ID_MANAGER_INTERNAL_ERROR : [chars]

| | |
|---------------------------|--|
| Explanation | Internal Error occured with ID Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IEDGE**%IEDGE-4-PBHK_DEPLETED_INDICES : No more portbundles can be allocated**

| | |
|---------------------------|--|
| Explanation | The source interfaces configured for Portbundle Hostkey feature are not sufficient and the number of portbundles available are all used up. Add more source interfaces in the configuration. |
| Recommended Action | Check configuration on the ISG |

%IEDGE-4-TC_UNDEFINED_ACL : Traffic class ACL [chars] is not defined, creating permit all ACL

| | |
|---------------------------|---|
| Explanation | The ACL specified for classification of traffic is not configured on the ISG. Creating a permit all ACL. ACL should be configured on the ISG. |
| Recommended Action | Configure the ACL on the ISG |

%IEDGE-4-CLOCK_CHANGE_TIMER_INV : A Local clock change has caused a running timer to be invalid

| | |
|---------------------------|--|
| Explanation | A change in local clock has made a currently running timer to be invalid |
| Recommended Action | Check the clock configuration |

%IEDGE-3-CH_INTERNAL_ERROR : Internal error in command processing - session handle=[hex]

| | |
|---------------------------|---|
| Explanation | There has been an internal error relating to CoA command processing. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%IEDGE-3-CH_REGISTER_ERROR : CoA registration error in command processing - type '[chars]'

| | |
|---------------------------|---|
| Explanation | There has been an internal error relating to CoA command processing. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

IF**%IF-3-IDB_LIST_BAD_REF_COUNT : A bad reference count was encountered in an idb list element.**

| | |
|--------------------|----------------------------|
| Explanation | A software error occurred. |
|--------------------|----------------------------|

%IF-3-IDB_LIST_BAD_REF_COUNT : A bad reference count was encountered in an idb list element.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%IF-2-IDB_TABLE_INIT : Malloc failed while initializing idb table

Explanation

Recommended Action

%IF-3-BAD_MTU : Internal error. MTU on [chars] too large or negative. Truncating from %ld to [int].

Explanation An internal software error occurred. The system attempted to set the MTU on an interface to an invalid value.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%IF-3-BADLOCK : Invalid lock use for [chars]: [chars][chars]

Explanation Application layer code attempted to access an unlocked interface.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IF-3-BADHWUNLOCK : ([chars]) attempted to unlock [chars] ([dec]). Locked by [chars] ([dec]).

Explanation Attempt to release semaphore held by another process.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IF-3-SEMAHOG : ([chars]) could not get [chars] semaphore. Held by ([chars]).

Explanation Unable to obtain interface semaphore.

%IF-3-SEMAHOG : ([chars]) could not get [chars] semaphore. Held by ([chars]).

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IF-4-BACKWARD_COUNTERS : Corrected for backward [chars] counters ([int] -> [int]) on [chars]

| | |
|---------------------------|--|
| Explanation | The interface specified in the message has a packet counter that has decreased in number. This condition can occur if a packet is counted and then dropped. This event was detected and corrected. |
| Recommended Action | If this condition persists, copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. If you cannot determine the nature of the error from the error message text or from the show tech-support command output, contact your Cisco technical support representative and provide the representative with the gathered information. |

%IF-3-BADMACADDRTYPE : illegal mac address type, [dec]

| | |
|---------------------------|---|
| Explanation | This is an internal error that was recovered gracefully. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IF-4-NOBGPROCESS : Network background process not running. [chars]

| | |
|---------------------------|--|
| Explanation | A process which manages network interface background processing is not yet running, but another system process has tried to send the process a message. |
| Recommended Action | An interface on the router may have missed a request to bring itself up. If that happens, it may be necessary to reset the interface using a shutdown operation and then a no shutdown . |

IFDAMP

%IFDAMP-5-UPDOWN : interface [chars] update [chars] state to [chars], interface is [chars]suppressed

| | |
|---------------------------|------------------------------------|
| Explanation | dampening interface changed state. |
| Recommended Action | No action is required. |

%IFDAMP-5-ZERODELAY : dampening reuse timer is updated with 0 delay time

Explanation Inconsistency of dampening reuse timer wheel

Recommended Action No action is required.

IFMAP

%IFMAP-3-CAUSE_CFG : hash table not initialized

Explanation PAL interface handle to uidb hash table not initialized

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

IFMGR

%IFMGR-3-IFINDEX_PERSIST_ENTRY_CORRUPT : [chars] seems to be corrupted. Trying to read [dec] size

Explanation The ifIndex-table seems to be corrupted.

Recommended Action Delete the ifindex-table.

%IFMGR-3-INVALID_PERSISTENT_DATA : Invalid persistent data

Explanation Trying to write invalid persistent data

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%IFMGR-3-NOVECTOR : Interface manager failed to allocate IF vector. size [dec]

Explanation The interface vector was not able to be allocated with the number of elements required--initially or resize (see size in the error message).

Recommended Action TBD

%IFMGR-3-VECTOREXD : IF manager attempted to use interface [dec] outside vector range.

| | |
|---------------------------|---|
| Explanation | This message indicates that an interface with too large of an ifIndex value was attempted to be added to the IF-MGR DB. |
| Recommended Action | Additional IF-MGR warning and/or error messages should accompany indication of this error. These additional messages should provide more details on the effected interface. |

%IFMGR-3-VECTORPOSUSED : IF manager attempted to add interface [dec] which was already added.

| | |
|---------------------------|--|
| Explanation | This message comes from the IF-MGR DB when it is trying to add an ifIndex value for this interface which already exists in the ifIndex DB. |
| Recommended Action | TBD |

%IFMGR-4-VECTORIFSUSPECT : IF manager added interface [dec] which is unexpectedly large.

| | |
|---------------------------|--|
| Explanation | The ifIndex allocation scheme gives out sequential ifIndex values. This message comes from the IF-MGR DB when it is trying to add an ifIndex value much larger than the former greatest ifIndex value in the DB. |
| Recommended Action | TBD |

%IFMGR-3-IFDB : IF manager interface database [chars] failure- [dec]

| | |
|---------------------------|-----|
| Explanation | |
| Recommended Action | TBD |

%IFMGR-3-IFTDB : IF manager interface table database [chars] failure- [dec]

| | |
|---------------------------|-----|
| Explanation | |
| Recommended Action | TBD |

%IFMGR-3-NOTYPEVECTOR : Interface manager failed to allocate IF type vector. size [dec]

| | |
|---------------------------|---|
| Explanation | The interface type vector was not able to be allocated with the number of elements required--initially or resize. |
| Recommended Action | TBD |

%IFMGR-3-NOIMACP : IF manager control process failed to start

Explanation**Recommended Action** TBD

%IFMGR-4-NOIFINDEX : All SNMP if indices are exhausted

Explanation All SNMP MIB indices have been exhausted. Interfaces will not be able to obtain an interface index that they can use to register with the interface MIB.**Recommended Action** Attempt a system reload. If the problem persists after the system reload, copy the message exactly as it appears on the console or in the system log, contact your Cisco technical support representative, and provide the representative with the gathered information.

%IFMGR-3-BADIFINDEXTABLE : The file nvram:ifIndex-table is corrupt.

Explanation The file is not in the expected format.**Recommended Action** If possible, please delete the file.

%IFMGR-4-NOSYNC : ifIndex not being synced between active and standby

Explanation When the standby comes up, then the tuple of ifIndex and ifDescr is synced so that when interfaces comes up they get the same ifIndex. This error happens when the interface doesn't get the ifIndex for the given ifDescr**Recommended Action** Inform the technical support to raise the ddts

%IFMGR-5-RESTART : [chars]

Explanation The IF MGR process has restarted**Recommended Action** This is an informational message. The system should recover on its own.

%IFMGR-4-STACK_RELATIONSHIP_ADD_ERROR : [chars]: Request for creating invalid stack relationship [dec], [dec]

| | |
|---------------------------|---|
| Explanation | The IF MGR received the call to add invalid stack relationship. The higher and lower ifIndex are shown in the message. The module of the IF MGR from where this message is generated is also shown in the message |
| Recommended Action | Inform the technical support to raise the ddts |

%IFMGR-3-DUP_IFINDEX : Duplicate ifIndex ([dec]) found for ifDescr [chars]; exists in ifTable for ifDescr [chars].

| | |
|---------------------------|---|
| Explanation | Interfaces have same ifIndex in IF-MGR assigned list. The 2nd interface registered with IF-MGR will be assigned with new index |
| Recommended Action | 1. No Action, if ifIndex persist is not required. 2. Reload the standby RP, if ERR msg only seen in standby RP 3. Reload the router with the proper ifindex-table and image |

%IFMGR-7-NO_IFINDEX_FILE : Unable to open [chars] [chars]

| | |
|---------------------------|--|
| Explanation | This is a informational message. This means system found no saved ifIndex information, and ifIndex is not persisted across reboots. The ifIndices will be reassigned. |
| Recommended Action | 1. No Action, if 'snmp-server ifIndex persist' is not configured. 2. If 'snmp-server ifindex persist' is configured then copy the error message exactly as it appears, and report it to your technical support representative. |

IFS

%IFS-4-FILEMAX : Failed to open [chars], maximum open files [dec]

| | |
|---------------------------|---|
| Explanation | The router has reached the maximum number of files that may be open at one time. |
| Recommended Action | Close some files and try again. If this messages recurs, contact your technical support representative. |

%IFS-3-FSMAX : Failed to add [chars], maximum filesystems [dec]

| | |
|---------------------------|--|
| Explanation | The router has reached the maximum number of file systems that can be supported at one time. |
| Recommended Action | Contact your technical support representative. |

%IFS-3-FSDUP : Failed to add [chars], filesystem prefix exists

Explanation A file system could not be added because another file system exists with the same name.

Recommended Action Contact your technical support representative.

%IFS-3-FS_CREATE_FAIL : Failed to create [chars] file system, [chars]

Explanation An internal software error occurred.

Recommended Action Call your technical support representative for assistance.

%IFS-3-FS_CREATE_FAIL2 : Failed to create [chars] simple file system, [chars]

Explanation An internal software error occurred.

Recommended Action Call your technical support representative for assistance.

%IFS-3-FS_MISSING_FUNCTIONS : '[chars]' file system missing required functions, not created

Explanation Some file systems require a certain set of function to be present in order to be usable. This file system does not support all the mandatory functionality.

Recommended Action Call your technical support representative for assistance.

%IFS-3-FS_STRUCT_ERROR : Data does not match expected internal representation

Explanation A mismatch exists between the representation of data extracted from the filesystem and the expectation of its formatting. This may occur when running in a dual-RP environment, with different IOS versions running on the two RPs.

Recommended Action Ensure both RPs are running the IOS same version, if running in a dual-RP environment. If not, call your technical support representative for assistance.

IKEV2

%IKEV2-5-OSAL_INITIATE_TUNNEL : NULL

Explanation

Recommended Action

%IKEV2-5-RCV_CONNECTION_REQUEST : NULL

Explanation

Explanation**Recommended
Action**

ILPOWER

%ILPOWER-3-ILPOWER_INTERNAL_IF_ERROR : Inline Power internal error, interface [chars]: [chars]

| | |
|-------------------------------|---|
| Explanation | A software check failed during Power over Ethernet (PoE) processing. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ILPOWER-5-ILPOWER_POWER_DENY : Interface [chars]: inline power denied. Reason: [chars]

| | |
|--------------------|--|
| Explanation | There is not enough power remaining in the switch to supply to the Power over Ethernet (PoE) port. |
|--------------------|--|

| | |
|-------------------------------|------------------------|
| Recommended Action | No action is required. |
|-------------------------------|------------------------|

%ILPOWER-5-ILPOWER_POWER_CDP_SHUT : Interface [chars]: inline power shut

| | |
|---------------------------|--|
| Explanation | Inline power is shut because cdp consumption power on this Power over Ethernet (PoE) port is greater than 1. allocation power or 2. hardware interface limit or 3. user configured max power or 4. available power on this switch. |
| Recommended Action | No action is required. |

%ILPOWER-3-CONTROLLER_ERR : Controller error, Controller number [dec]: [chars]

| | |
|---------------------------|---|
| Explanation | An error reported or caused by the Power over Ethernet (PoE) controller is detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ILPOWER-3-CONTROLLER_POST_ERR : Inline Power Feature is disabled on this switch because Power On Self Test (POST) failed on this switch. Please consult TECH support for further assistance

| | |
|---------------------------|---|
| Explanation | An error reported or caused by the Power over Ethernet (PoE) controller is detected during POST. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ILPOWER-3-CONTROLLER_IF_ERR : Controller interface error, [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | An interface error is detected between the Power over Ethernet (PoE) controller and system. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ILPOWER-3-CONTROLLER_PORT_ERR : Controller port error, Interface [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | A port error reported by the Power over Ethernet (PoE) controller is detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ILPOWER-5-POWER_GRANTED : Interface [chars]: Power granted

| | |
|---------------------------|--|
| Explanation | There is enough power available in the switch, and the switch is providing power on the interface. |
| Recommended Action | No action is required. |

%ILPOWER-5-LINKDOWN_DISCONNECT : Interface [chars]: Link down disconnect

| | |
|---------------------------|---|
| Explanation | The powered device is no longer connected to the switch, or the connected powered device is being powered by an external AC power source. The switch is no longer providing power on the interface. |
| Recommended Action | No action is required. |

%ILPOWER-5-IEEE_DISCONNECT : Interface [chars]: PD removed

| | |
|---------------------------|---|
| Explanation | The powered device is no longer connected to the switch, or the connected powered device is being powered by an external AC power source. The switch is no longer providing power on the interface. |
| Recommended Action | No action is required. |

%ILPOWER-7-DETECT : Interface [chars]: Power Device detected: [chars]

| | |
|---------------------------|--|
| Explanation | The switch has detected the attached power device. |
| Recommended Action | No action is required. |

%ILPOWER-5-INVALID_IEEE_CLASS : Interface [chars]: has detected invalid IEEE class: [dec] device. Power denied

Explanation The power device has invalid IEEE class. switch won't powerup the device

Recommended Action No action is required.

%ILPOWER-3-SHUT_OVERDRAWN : Interface [chars] is shutdown as it is consuming more than the maximum configured power ([dec]) milliwatts.

Explanation Interface is shutdown because it is consuming more than the maximum configured power

Recommended Action Make sure correct power is budgeted for this interface based on the power device electrical specifications or ratings. It is recommended to change the police cutoff power to a higher value to keep the device powered on

%ILPOWER-4-LOG_OVERDRAWN : Interface [chars] is overdrawing power. it is consuming [dec] milliwatts where as maximum configured power is ([dec]) milliwatts.

Explanation

Recommended Action Make sure correct power is budgeted for this interface based on the power device electrical specifications or ratings. Otherwise you might risk overloading the switch. It is recommended to change the police cutoffpower appropriately if needed

%ILPOWER-5-CLR_OVERDRAWN : Interface [chars] is NOT overdrawing power. it is consuming [dec] milliwatts where as maximum configured value is ([dec]) milliwatts.

Explanation

Recommended Action No action is required.

%ILPOWER-5-POLICE_POWER_INVALID : Interface [chars]: invalid power police [dec] milliwatts current [dec] mA voltage [dec] mV

Explanation power policing current or voltage value is invalid.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ILPOWER-5-SENSE_POWER_INVALID : Interface [chars]: invalid power sense [dec] milliwatts current [dec] mA voltage [dec] mV

| | |
|---------------------------|---|
| Explanation | power sensing current or voltage value is invalid. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ILPOWER-4-ILPOWER_POWER_SUPPLY : PoE Power Supply [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | The power supply for PoE is OIR |
| Recommended Action | Make sure power supply to PoE input is inserted after removal |

%ILPOWER-4-ILPOWER_PS_ABSENCE : PoE module Power Supply not present Inline Power Feature is disabled on [chars] because Power On Self Test (POST) failed : [chars]

| | |
|---------------------------|---|
| Explanation | The power supply for PoE expansion module is not present or not inserted properly or faulty |
| Recommended Action | Make sure power supply to expansion module is inserted properly and reload the switch with PoE power supply present |

%ILPOWER-5-PWRGOOD_SPARE_PAIR : Interface [chars]: spare pair power good

| | |
|---------------------------|--|
| Explanation | Spare pair power request was successful and power is available on spare pair |
| Recommended Action | No action is required. |

%ILPOWER-5-TSTART_SPARE_PAIR : Interface [chars]: spare pair power error: TSTART

| | |
|---------------------------|--|
| Explanation | spare pair tstart error has occurred, power on spare pair will not be supplied |
| Recommended Action | No action is required. |

%ILPOWER-5-PGOOD_TIMEOUT_SPARE_PAIR : Interface [chars]: spare pair power good timeout error

Explanation spare pair power good timeout error has occurred, power on spare pair will not be supplied

Recommended Action No action is required.

%ILPOWER-5-DET_SHORT_SPARE_PAIR : Interface [chars]: spare pair short detected

Explanation spare pair short detect error has occurred, power on spare pair will not be supplied

Recommended Action No action is required.

%ILPOWER-5-DET_TIMEOUT_SPARE_PAIR : Interface [chars]: spare pair detect timeout

Explanation spare pair timeout detect error has occurred, power on spare pair will not be supplied

Recommended Action No action is required.

%ILPOWER-6-SET_ILPOWER : Set power allocated to POE to [dec] for slot [dec]

Explanation The power allocated to POE has changed

Recommended Action No action is required.

%ILPOWER-5-SINGLE_PAIRSET_FAULT : Interface [chars]: shutting down [chars] pairset due to fault

Explanation The dual signature PD on this port has hit a critical fault on one pairset and hence that pairset will be shutdown

Recommended Action No action is required.

%ILPOWER-5-LLDP_SHUTDOWN : Interface [chars]: PD requested shutdown for [dec] sec via LLDP MDI TLV

Explanation Inline power is removed because PD requested shutdown via LLDP MDI TLV

Recommended Action No action is required.

IM

%IM-0-UIPEER_CREATE : Failed to create user interface peer.

| | |
|---------------------------|--|
| Explanation | The system failed to create a user interface peer. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%IM-2-INITIALIZATION_FAILED :

| | |
|---------------------------|---|
| Explanation | Initialization of IOx Manager process failed. |
| Recommended Action | Review ioxman logs taking note of the timestamp information to select specific information to review. Copy the message and other related information exactly as it appears on the console or in the system log. |

%IM-0-EVENT_LIBRARY :

| | |
|---------------------------|--|
| Explanation | An event facility initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%IM-2-INVALID_ACT_MSG : Virtualization Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtualization service activate message was received, however, the data it contained could not be interpreted |
| Recommended Action | Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause. |

%IM-2-INVALID_DEACT_MSG : Failed to process virtualization service deactivate message

| | |
|---------------------------|--|
| Explanation | The virtualization service deactivate message was received, however, the data it contained could not be interpreted |
| Recommended Action | Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause. |

%IM-2-ALLOC_VIRT_INST_RCS : Virtualization Service[chars]

| | |
|---------------------------|--|
| Explanation | A memory allocation request failed to allocate a data structure required to activate the virtualization service. |
| Recommended Action | Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause. |

%IM-2-START_FAILED : Virtualization Service[chars]

| | |
|---------------------------|--|
| Explanation | The named virtualization service failed to start. |
| Recommended Action | Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause. |

%IM-2-VIRT_INST_MEMORY : Virtualization Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtualization service requires physical memory in excess of the free memory available to virtualization services. |
| Recommended Action | Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause. |

%IM-2-VIRT_INST_DISK : Virtualization Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtualization service requires Disk Storage in excess of the Free Disk Storage available to virtualization services. |
| Recommended Action | Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause. |

%IM-2-MEMORY_LIMIT : Virtualization Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtualization service machine definition file is requesting more memory than the system has available for virtualization services. |
| Recommended Action | Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause. |

%IM-2-VCPU_LIMIT : Virtualization Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtualization service machine definition file is requesting more VCPUs than the system has reserved for virtualization services. |
| Recommended Action | Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause. |

%IM-2-DISK_IMAGE_PATH : Virtualization Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtualization service machine definition file contains an invalid disk image path for one of the disk devices. This may be a Harddisk, CDROM or USB storage device. |
| Recommended Action | Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause. |

%IM-2-VIRT_INST_LOG_UNTHROTTLE : Failed to unthrottle the log for virtualization service [chars]

| | |
|---------------------------|---|
| Explanation | The named virtualization service had sent overwhelming sys log messages and its log had been throttled as a result, but system has failed to unthrottle it for some reason. |
| Recommended Action | For debugging collect the iox-manager logs and scan them for the cause. |

%IM-2-VIRT_INST_STATE : Virtualization Service[chars]

| | |
|---------------------------|---|
| Explanation | The named virtualization service has failed. It is no longer running either because the guest OS has failed, the guest OS has shut down the machine or the emulator has failed. |
| Recommended Action | An attempt at restarting the virtualization service can be made from the IOS configuration by doing a no activate/activate. For debugging collect the IOx-manager logs and scan them for the cause. |

%IM-2-FIND_VIRT_INST_ENTRY : Failed to find virtualization service with id [int] in the IOx-manager list

| | |
|--------------------|--|
| Explanation | The virtualization service with the ID named could not be located in the IOx-manager list. |
|--------------------|--|

%IM-2-FIND_VIRT_INST_ENTRY : Failed to find virtualization service with id [int] in the IOx-manager list

| | |
|---------------------------|--|
| Recommended Action | Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause. |
|---------------------------|--|

%IM-5-AUX : Virtualization Service[chars]

Explanation The AUX login to a virtualization service may allow the user access to system functions that may not have been tested or may interact with the system in unintended ways. Use with caution.

Recommended Action No action is required

%IM-2-INVALID_UNPROV_MSG : Failed to process virtualization service unprovision message

Explanation The virtualization service unprovision message was received, however, the data it contained could not be interpreted

Recommended Action Enable the IOx-manager trace logs and repeat the activation followed by deactivation and then unprovision of the virtualization service. Collect the IOx-manager logs and scan them for the cause.

%IM-2-VCPU_INVALID : Virtualization Service[chars]

Explanation The virtualization service machine definition file is requesting invalid VCPU value.

Recommended Action Enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause.

%IM-2-CPUSHARES_LIMIT : Virtualization Service[chars]

Explanation The virtualization service machine definition file is requesting more CPU shares than the system has available for virtualization services.

Recommended Action Deactivate any other virtualization services to free up CPU share resources and activate this virtualization service. If that does not address the problem, then enable the IOx-manager trace logs and repeat the activation of the virtualization service. Collect the IOx-manager logs and scan them for the cause.

%IM-2-INSTALL_FAILURE : Virtualization Service[chars]

Explanation The installation of the virtualization service failed.

Recommended Action Enable the IOx-manager trace logs and repeat the installation of the virtualization service. Collect the IOx-manager logs and scan them for the cause.

%IM-2-INSTALL_MEDIA_RETRY : VM install media still unavailable.[chars]

Explanation The install media was not detected. Waiting for udev to complete install media(harddisk) detection.

Recommended Action After IOx-manager exceeds the maximum retry limit, verify if install media (harddisk) is accessible and retry the installation again.

%IM-2-VIRT_INST_MGMT_INTERFACE : Virtualization service [chars] has no management interface defined but it is configured in CLI.

Explanation A management interface is configured but none is defined.

Recommended Action Deactivate the virtualization service, remove the management interface configuration CLI, and reactivate the virtual-service.

%IM-2-GENERAL_FAILURE : Virtualization Service[chars]

Explanation The named virtualization service has triggered the log. Please interpret the log in the context of the virtualization services.

Recommended Action No action is required

%IM-3-SDWRAP_ERR : Description: [chars], errcode: [dec]

Explanation Debug infrastructure error

Recommended Action Collect the IOx-manager logs and scan them for the cause.

%IM-3-PSS_ERR : Purpose: [chars], URI: [chars], errcode: [dec]

Explanation Persistent Storage Service handling error

Recommended Action Collect the IOx-manager logs and scan them for the cause.

%IM-3-PSS_SNAPSHOT_ERR : Source URI: [chars], Destination URI: [chars], errcode: [dec]

Explanation Persistent Storage Service snapshot error

Recommended Action Collect the IOx-manager logs and scan them for the cause.

%IM-2-NETWORK_CONFIG_ERROR : Virtualization Service[chars]

| | |
|---------------------------|---|
| Explanation | A network configuration error has been detected for the named virtualization service. |
| Recommended Action | No action is required |

%IM-2-INSTALL_LOG : [chars] [chars] [chars] [chars]

| | |
|---------------------------|---|
| Explanation | The installation log of the named virtualization service, is to provide more information about long running operation, that could affect the control of CLI |
| Recommended Action | No action is required |

%IM-2-UPGRADE_LOG : [chars] [chars] [chars] [chars]

| | |
|---------------------------|--|
| Explanation | The upgrade log of the named virtualization service, is to provide more information about long running operation, that could affect the control of CLI |
| Recommended Action | No action is required |

%IM-2-INSTALL_STATE : [chars] '[chars] [chars] [chars]

| | |
|---------------------------|--|
| Explanation | The installation state of the named virtualization service has changed as notified by IOx-manager. |
| Recommended Action | In the failed case, check IOx-manager's logs for the cause of the failure. In the successful case, this notification can be ignored. |

%IM-2-UNINSTALL_ALL_VMS : All Virtualization Services are being uninstalled [chars][chars] [chars]

| | |
|---------------------------|---|
| Explanation | All virtualization services are being uninstalled by IOx-manager. |
| Recommended Action | Examine the reason given as to why all virtualization services are being uninstalled for more information. If the reason indicated is due to some error condition, check IOx-manager's logs for the cause of the failure. |

%IM-2-ACTIVATION_STATE : [chars] '[chars] [chars] [chars]

| | |
|---------------------------|--|
| Explanation | The activation state of the named virtualization service has changed as notified by IOx-manager. |
| Recommended Action | In the failed case, check IOx-manager's logs for the cause of the failure. In the successful case, this notification can be ignored. |

%IM-4-WATCHDOG_TIMER : [chars] '[chars]' [chars] [chars]

| | |
|---------------------------|---|
| Explanation | The watchdog timer configured for the named virtual service has expired. |
| Recommended Action | Check any logs produced by the virtualization service to determine the cause. |

%IM-2-HA_SYNC_ERR : [chars] '[chars]' [chars]

| | |
|---------------------------|--|
| Explanation | The ha-sync persistent storage disk for the virtualization service cannot be watched for sync to standby RP. |
| Recommended Action | Collect the IOx-manager logs and scan them for the cause. |

%IM-2-DEACT_FOR_ISSU : [chars] Max ([int]s)

| | |
|---------------------------|--|
| Explanation | An ISSU event is pending. Any active VMs will be automatically deactivated to allow ISSU preprocessing to validate the environment. Any ISSU-deactivated VMs will be automatically restarted if the ISSU is cancelled. |
| Recommended Action | None. Allow the ISSU to continue and the VMs will restart when the ISSU completes or cancel the ISSU and IOx-manager will automatically |

%IM-2-RESET_FORCE : Virtualization Services non-recoverable reset command processed

| | |
|---------------------------|--|
| Explanation | A 'virtualization service reset force' command has been entered and processed. This action initiates a cleanup of last resort. Occasionally a VM will get into an unrecoverable state that prevents it from activating but also from uninstalling. This is a rare event but when it happens the only resort may be to remove the .conf control file and reboot, which forces a cleanup of all previously installed VM files and artifacts. Note that once this command is used, current VMs are considered to be in an unstable or unpredictable state, and all future install, uninstall, upgrade, and activation commands will be blocked. |
| Recommended Action | Once the command is entered and accepted, there is no recourse but to restart the system. |

%IM-2-MOVE_STATE : [chars] '[chars]' [chars] [chars]

| | |
|---------------------------|--|
| Explanation | The move of the core or log file of the named virtualization service has as been successful or failed as notified by IOx-manager. |
| Recommended Action | In the failed case, check IOx-manager's logs for the cause of the failure. In the successful case, this notification can be ignored. |

%IM-2-RSYNC_STATE : [chars] [chars] [chars] [chars]

| | |
|---------------------------|--|
| Explanation | IOx-manager tries to remote sync the virtual-instance configuration file and the OVA repository to all online nodes. If rsync fails even after consecutive retries, this notification would be raised. |
| Recommended Action | In the failed case, check IOx-manager's logs for the cause of the failure. Check for the rsync error code and root cause the same. |

%IM-2-HA_SYNC_THREAD_STATE : HA remote synchronize thread has failed and exited.

| | |
|---------------------------|---|
| Explanation | IOx-manager tries to remote sync the OVA repository to all online nodes using a separate thread. If that thread fails, this notification would be raised. |
| Recommended Action | In the failed case, check IOx-manager's logs for the cause of the failure. Check for the pthread error msg and root cause the same. |

%IM-2-HA_STATE : [chars] [chars] [chars] [chars]

| | |
|---------------------------|---|
| Explanation | IOx-manager tries to detect the role/slot of various nodes on HA events from the platform. If any of those event callbacks fail, this notification would be raised. |
| Recommended Action | In the failed case, check IOx-manager's logs for the cause of the failure. Check for the HA event error msg and root cause the same. |

%IM-2-HA_SWITCHOVER_STATE : [chars] [chars] [chars] [chars]

| | |
|---------------------------|---|
| Explanation | IOx-manager HA switchover state related messages for a virtual-service whilst it is being recovered on newly active RP after a HA switchover. |
| Recommended Action | In the failed case, check IOx-manager's logs for the cause of the failure. Check for the HA event error msg and root cause the same. |

%IM-4-HA_SYNC_NEEDED : If using the guest shell, please use 'guestshell sync' if you want to preserve state on standby in case of supervisor switchover

| | |
|---------------------------|---|
| Explanation | Message notifying user that he needs to manually synchronize the Virtualization service contents to standby supervisor in order to preserve these contents in case of a supervisor switchover. Currently only applicable to the guest shell |
| Recommended Action | User can type the 'guestshell sync' command on active supervisor to synchronize it's contents to the standby supervisor if desired. |

%IM-2-RESIZE_OPER_STATE : Virtualization service '[chars]' [chars][chars] to '[int]' [chars]

Explanation IOx-manager attempts to resize various VM parameters like rootfs size, CPU share, memory if requested by user. Success/failure status messages for these resize operations are communicated by this syslog.

Recommended Action In the failed case, check IOx-manager's logs for the cause of the failure. Check for the HA event error msg and root cause the same.

%IM-2-GUESTSHELL_ENABLED : The guest shell has been enabled. The command '[chars]' may be used to access it, '[chars] destroy' to remove it.

Explanation Informs the user that the guest shell virtualization service has been enabled (which is done by default).

Recommended Action The user may use or remove the guest shell with the commands specified.

%IM-5-PERMISSION_DENIED : Virtualization Service '[chars]' is not owned by client IOSd

Explanation An attempt was made to modify a virtual-service that is not owned by the client. The request was rejected.

Recommended Action No action is required.

%IM-2-IOX_INST_CRIT : IOX SERVICE [chars] LOG: [chars]

Explanation The named virtual service has triggered the log. Please interpret the log in the context of the virtual services.

Recommended Action No action is required

%IM-3-IOX_INST_ERR : IOX SERVICE [chars] LOG: [chars]

Explanation The named IOX service has triggered the log. Please interpret the log in the context of the IOX services.

Recommended Action No action is required

%IM-4-IOX_INST_WARN : IOX SERVICE [chars] LOG: [chars]

Explanation The named IOX service has triggered the log. Please interpret the log in the context of the IOX services.

%IM-4-IOX_INST_WARN : IOX SERVICE [chars] LOG: [chars]

Recommended Action No action is required

%IM-5-IOX_INST_NOTICE : IOX SERVICE [chars] LOG: [chars]

Explanation The named IOX service has triggered the log. Please interpret the log in the context of the IOX services.

Recommended Action No action is required

%IM-6-IOX_INST_INFO : IOX SERVICE [chars] LOG: [chars]

Explanation The named IOX service has triggered the log. Please interpret the log in the context of the IOX services.

Recommended Action No action is required

%IM-7-IOX_INST_DEBUG : IOX SERVICE [chars] LOG: [chars]

Explanation The named IOX service has triggered the log. Please interpret the log in the context of the IOX services.

Recommended Action No action is required

%IM-2-IOX_INST_LOG_UNTHROTTLE : Failed to unthrottle the log for IOX service [chars]

Explanation The named IOX service had sent overwhelming sys log messages and its log had been throttled as a result, but system has failed to unthrottle it for some reason.

Recommended Action For debugging collect the ioxman logs and scan them for the cause.

%IM-6-IOX_RECONCILE_INFO : App-hosting application reconcile process [chars]

Explanation Indicates stage of reconcile (application recovery) process.

Recommended Action No action is required

%IM-6-IOX_START_INFO : [chars] cannot be started because it is not installed

Explanation Indicates starting an app before installation.**Recommended Action** No action is required

%IM-6-IOX_START_SUCCESS : [chars] is in RUNNING state

Explanation Indicates starting an app after installation.**Recommended Action** No action is required

%IM-6-IOX_START_FAIL : [chars] failed to start

Explanation Indicates starting an app after installation.**Recommended Action** No action is required

%IM-6-START_MSG : app-hosting: [chars]

Explanation Message for starting an app.**Recommended Action** In the failed case, check Ioxman's trace log for the cause of the failure. In the successful case, this notification can be ignored.

%IM-6-INSTALL_MSG : app-hosting: [chars]

Explanation Message for installing an app.**Recommended Action** In the failed case, check Ioxman's trace log for the cause of the failure. In the successful case, this notification can be ignored.

%IM-6-ACTIVATE_MSG : app-hosting: [chars]

Explanation Message for activating an app.**Recommended Action** In the failed case, check Ioxman's trace log for the cause of the failure. In the successful case, this notification can be ignored.

%IM-6-DEACTIVATE_MSG : app-hosting: [chars]

Explanation Message for deactivating an app.

%IM-6-DEACTIVATE_MSG : app-hosting: [chars]

| | |
|---------------------------|--|
| Recommended Action | In the failed case, check Ioxman's trace log for the cause of the failure. In the successful case, this notification can be ignored. |
|---------------------------|--|

%IM-2-IOX_ENABLEMENT : IOX is ready.

| | |
|--------------------|-----------------------------|
| Explanation | Message for IOX enablement. |
|--------------------|-----------------------------|

| | |
|---------------------------|-----------------------|
| Recommended Action | No action is required |
|---------------------------|-----------------------|

%IM-6-UPGRADE_MSG : app-hosting: [chars]

| | |
|--------------------|-------------------------------|
| Explanation | Message for upgrading an app. |
|--------------------|-------------------------------|

| | |
|---------------------------|--|
| Recommended Action | In the failed case, check Ioxman's trace log for the cause of the failure. In the successful case, this notification can be ignored. |
|---------------------------|--|

%IM-6-VERIFICATION_MSG : app-hosting: [chars]

| | |
|--------------------|------------------------------------|
| Explanation | Message for signature verification |
|--------------------|------------------------------------|

| | |
|---------------------------|--|
| Recommended Action | In the failed case, check Ioxman's trace log for the cause of the failure. In the successful case, this notification can be ignored. |
|---------------------------|--|

IMGR

%IMGR-0-FIPS_FMFP_BYPASS_TEST : NIST bypass test failed for [chars].

| | |
|--------------------|--|
| Explanation | Forwarding Manager IPsec component detected a discrepancy when adding or deleting a security sensitive object. This could be due to a hardware or software resource limitation or a software defect. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Check the logs for information on the relevant object download states. Remove the object or a parent object in question. If the problem persists reboot the forwarding processor (ESP). |
|---------------------------|---|

%IMGR-6-FIPS_FMFP_CRNG_TEST : continuous [chars]approved RNG test failed.

| | |
|--------------------|--|
| Explanation | Forwarding Manager IPsec component detected two identical random number sequences. This could be due to a hardware malfunction or a software defect. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | If the problem persists reboot the forwarding processor (ESP). |
|---------------------------|--|

%IMGR-6-FIPS_FMFP_OLAP_TEST : FIPS-approved RNG key seed and state overlap.

Explanation Forwarding Manager IPsec component detected an overlap in FIPS-approved RNG key seed and state. This could be due to a hardware malfunction or a software defect.

Recommended Action If the problem persists reboot the forwarding processor (ESP).

%IMGR-6-FIPS_FMFP_KAT_TEST : power up cryptographic self-test didnot run to completion: [chars].

Explanation Forwarding Manager power up known answer self-test (KAT) failed. This could be due to a hardware malfunction or a software defect.

Recommended Action If using ipsec, reboot the forwarding processor (ESP).

%IMGR-0-FIPS_CPP_CLIENT_BYPASS_TEST : CPP Client FIPS bypass test failed for [chars].

Explanation Forwarding Manager CPP client IPSEC bypass test failed. This could be due to a hardware malfunction or a software defect.

Recommended Action If the problem persists reboot the forwarding processor (ESP).

%IMGR-6-FIPS_FMFP_N2_ERR_FAIL : Cryptographic coprocessor non-critical failure: [chars].

Explanation Cryptographic coprocessor non-critical operation failed. If the problem persists reboot the forwarding processor(ESP)

Recommended Action If the problem persists reboot the forwarding processor (ESP).

%IMGR-0-FIPS_FMFP_N2_SEVERE_ERR_FAIL : Cryptographic coprocessor severe failure: [chars].

Explanation Cryptographic coprocessor critical operation failed. Further data processing on ESP is halted

Recommended Action forwarding processor (ESP) is rebooted automatically. no action needed

%IMGR-6-FMFP_KAT_TEST_RESULT : crypto self-test for algorithm: ([chars] ... passed).

Explanation Forwarding Manager power up known answer self-test (KAT) success. This is not an error message

Recommended Action No action needed.

%IMGR-6-FMFP_IPSEC_MIN_MTU_INFO : MTU smaller than minimum IPsec MTU, [chars].

| | |
|---------------------------|---|
| Explanation | Minimum MTU supported by crypto processor is 256B, MTU lower than 256B is set to 256B |
| Recommended Action | No action needed |

%IMGR-6-FMFP_IPSEC_UNSUPPORTED_CIPHER : Cipher [chars] is not supported on this ESP.

| | |
|---------------------------|---|
| Explanation | This ESP does not support this IPsec cipher |
| Recommended Action | No action needed |

%IMGR-6-FMFP_IPSEC_CRYPTO_CTRL_THROTTLED : IPsec Control Plane Overload Crypto Device: [chars].

| | |
|---------------------------|--|
| Explanation | This ESP crypto device is overloaded. |
| Recommended Action | May need to config platform ipsec control-plane medium heavy |

%IMGR-6-FMFP_CRYPTO_DEVICE_BUSY : All Crypto Device cores are busy with data packets.

| | |
|---------------------------|--|
| Explanation | All ESP crypto device are busy. |
| Recommended Action | May need to lower crypto traffic rate. |

INDXOBJ**%INDXOBJ-3-INTERRUPT : index object routine [chars] called from interrupt context**

| | |
|---------------------------|---|
| Explanation | inappropriate index object routine called from interrupt routine. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%INDXOBJ-3-ADD_ERROR : index add for [chars] failed: [chars]

| | |
|--------------------|----------------------------|
| Explanation | index object routine error |
|--------------------|----------------------------|

%INDXOBJ-3-ADD_ERROR : index add for [chars] failed: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

INFRA

%INFRA-3-INVALID_GPM_ACCESS : Invalid GPM [chars] at [hex] HAL start [hex] HAL end [hex] INFRA start [hex] INFRA [hex] NET [hex], MSGDEF_LIMIT_MEDIUM

Explanation Processing packet went beyond valid packet data, packet was possibly invalid, ppe info and encrypted pkt dump follow

Recommended Action LOG_STD_ACTION

%INFRA-3-INVALID_GPM_ACCESS_INFO : [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

Explanation Registers associated with previous exception error

Recommended Action LOG_STD_ACTION

%INFRA-3-INVALID_GPM_ACCESS_DATA :

Explanation Packet associated with previous exception error The packet data has been encrypted

Recommended Action LOG_STD_ACTION

INSTALL

%INSTALL-5-OPERATION_START_INFO : Started [chars] package [chars]

Explanation This message is used to indicate the beginning of operations.

Recommended Action No action required. This is not an error, it is an indication that the system is starting the operation.

%INSTALL-5-OPERATION_COMPLETED_INFO : Completed [chars] package [chars]

Explanation This message is used to indicate the completion of operations.

%INSTALL-5-OPERATION_COMPLETED_INFO : Completed [chars] package [chars]

| | |
|---------------------------|--|
| Recommended Action | No action required. This is not an error, it is an indication that the system completed the operation. |
|---------------------------|--|

%INSTALL-3-OPERATION_ERROR_MESSAGE : Failed to [chars] package [chars], Error: [chars]

| | |
|--------------------|--|
| Explanation | This message is used to inform the failure reason. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Please refer to the error message to analyze the cause of failure. |
|---------------------------|--|

%INSTALL-5-INSTALL_START_INFO : Started [chars] [chars] [chars]

| | |
|--------------------|---|
| Explanation | This message is used to indicate the beginning of install operations. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | No action required. This is not an error, it is an indication that the system is starting this operation. |
|---------------------------|---|

%INSTALL-5-INSTALL_COMPLETED_INFO : Completed [chars] [chars] [chars]

| | |
|--------------------|--|
| Explanation | This message is used to indicate the completion of install operations. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | No action required. This is not an error, it is an indication that the system completed this operation. |
|---------------------------|---|

%INSTALL-3-INSTANT_ERROR_MESSAGE : Error Message: [chars]

| | |
|--------------------|---|
| Explanation | This message is used to send a instant error message. |
|--------------------|---|

| | |
|---------------------------|---------------------|
| Recommended Action | No action required. |
|---------------------------|---------------------|

%INSTALL-5-INSTALL_AUTO_ABORT : Install auto abort timer expired: initiating abort

| | |
|--------------------|---|
| Explanation | An install operation has been aborted because the auto abort timer has expired. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | No user action is needed. If you want to commit the ISSU upgrade, redo the upgrade. Otherwise, this is an informational message only. |
|---------------------------|---|

%INSTALL-5-INSTALL_AUTO_ABORT_TIMER_PROGRESS : Install auto abort timer will expire in [dec] seconds

| | |
|--------------------|---|
| Explanation | An install operation will be aborted after specified seconds of time. |
|--------------------|---|

%INSTALL-5-INSTALL_AUTO_ABORT_TIMER_PROGRESS : Install auto abort timer will expire in [dec] seconds

Recommended Action No user action is needed. If you want to commit the ISSU upgrade, redo the upgrade. Otherwise, this is an informational message only.

INTERCHASSIS_REDUNDANCY

%INTERCHASSIS_REDUNDANCY-4-STDBY_PRESENT : Removal of standby RP in location [chars] is recommended for inter-chassis redundancy configuration

Explanation Removal of standby RP from the chassis is recommended for inter-chassis redundancy

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

INTERFACE_API

%INTERFACE_API-4-BADSWIDB : [chars] may not be referencing the correct swidb

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%INTERFACE_API-4-BADPAKINPUT : pak->if_input is not initialized

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%INTERFACE_API-1-NAMESTRTOOLONG : Interface name [chars].[int] exceeded maximum allowed length [dec]

Explanation An internal software error occurred.

%INTERFACE_API-1-NAMESTRTOOLONG : Interface name [chars].[int] exceeded maximum allowed length [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%INTERFACE_API-3-NOADDSUBBLOCK : The [chars] subblock named [chars] was not added to [chars]

Explanation A software error has occurred, this message is displayed when IDB subblocks cannot be added.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%INTERFACE_API-3-INVALIDSUBBLOCKPARAMETERS : Invalid subblock parameters for [chars] were supplied.

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show idb and show tech-support commands to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit BUG_TOOLKIT . If you still require assistance, open a case with the Technical Assistance Center via the Internet TAC_CASE_OPEN , or contact your Cisco technical support representative and provide the representative with the gathered information.

%INTERFACE_API-3-SUBNUMDBERR : subnum [hex] error in [chars]

Explanation A software error has occurred, this message is displayed when a problem has occurred with a sub_number db.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%INTERFACE_API-1-NOMORESUIDB : No more SWIDB can be allocated, maximum allowed [dec]

Explanation No more Interfaces can be created because the maximum number of SWIDB allowed for this platform has been reached

%INTERFACE_API-1-NOMORESWIDB : No more SWIDB can be allocated, maximum allowed [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%INTERFACE_API-1-NOMORE_HASWIDBS : No more IDBS can be created. The maximum allowed numbers, [int], has been reached on Standby Please force redundancy mode to RPR if full Active Capacity, [int], is needed

| | |
|--------------------|---|
| Explanation | No more Software IDB numbers can be Created. The maximum allowed numbers has been reached for this High Available System. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | |
|---------------------------|--|

%INTERFACE_API-1-NOMOREHWIDBNUMBERS : No more hardware IDB numbers can be issued. The maximum allowed numbers, [dec], has been reached for this platform.

| | |
|--------------------|---|
| Explanation | No more hardware IDB numbers can be issued. The maximum allowed numbers has been reached for this platform. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | In addition to the following, copy the information from <code>show idb</code> . LOG_STD_ACTION |
|---------------------------|---|

%INTERFACE_API-1-NOMORESWIDBNUMBERS : No more software IDB numbers can be issued. The maximum allowed numbers, [dec], has been reached for this platform.

| | |
|--------------------|---|
| Explanation | No more software IDB numbers can be issued. The maximum allowed numbers has been reached for this platform. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | In addition to the following, copy the information from <code>show idb</code> . LOG_STD_ACTION |
|---------------------------|---|

%INTERFACE_API-4-BADPAKOUTPUT : pak->if_output is not initialized on interface [chars]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

| | |
|---------------------------|---|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%INTERFACE_API-4-BADPOINTER : Function [chars] detected an invalid [chars] pointer of %08IX, ignoring

| | |
|---------------------------|---|
| Explanation | A software error has occurred, this message is displayed when an invalid pointer is detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%INTERFACE_API-3-NODESTROYSUBBLOCK : The [chars] subblock named [chars] was not removed

| | |
|---------------------------|---|
| Explanation | A software error has occurred, this message is displayed when IDB subblocks cannot be removed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%INTERFACE_API-3-CANNOTGETMTU : Error [dec] received while getting MTU: [chars]. Using default [int]

| | |
|---------------------------|---|
| Explanation | A software error has occurred while attempting to retrieve the MTU value from the interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%INTERFACE_API-3-NOSUBBLOCK : [chars] subblock does not exist on interface [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%INTERFACE_API-4-TBLERROR : A error occurred while using the Index Table utility for [chars].

Explanation A software error has occurred; this message is displayed when an Index table feature could not be used successfully.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%INTERFACE_API-3-BADIDBSTATUSCHANGECALL : Invalid function call at interrupt level.

Explanation An internal function was illegally called at interrupt level. This error might be caused by incorrectly coded creation or deletion of an interface, or during an OIR operation.

Recommended Action Perform a search of the Bug Toolkit, BUG_TOOLKIT . If you still require assistance, copy the error message exactly as it appears on the console or in the system log. Issue the **show tech** command and copy the output. If you performed any actions before the error message appeared, make a note of this. Open a case with the Technical Assistance Center via the Internet TAC_CASE_OPEN , or contact your Cisco technical support representative and provide the representative with the gathered information.

%INTERFACE_API-3-IFNUMTOIDBERROR : Error occurred while using the ifnum to idb table for interface [chars], if number [dec], during [chars]

Explanation A software error has occurred. This message is displayed when an operation on the if_number to idb mapping table could not be performed successfully.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%INTERFACE_API-3-HWIDBQREENTRANT : [chars] in progress of being inserted/removed, ignoring new request to [chars]

Explanation A software error has occurred while attempting to insert or remove the interface into the system as there's already another attempt in progress to insert or remove this interface. The first attempt must complete before a new attempt can be started. The user should retry this operation at a later time.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

IOMD_INFRA**%IOMD_INFRA-4-BADPOINTER : Function [chars] detected an invalid [chars] pointer of %08IX, ignoring**

| | |
|---------------------------|---|
| Explanation | A software error has occurred, this message is displayed when an invalid pointer is detected. |
| Recommended Action | Examine the logs for IOMD. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOMD_INFRA-3-IPCFSENDFAIL : IOMD failed to send a message [chars] reason: [chars]

| | |
|---------------------------|---|
| Explanation | IOMD failed to send message to the RP |
| Recommended Action | Examine the logs for IOMD. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOMD_INFRA-3-IPCALLOCFAIL : Failed to allocate IPC buffer [chars]

| | |
|---------------------------|---|
| Explanation | The IM failed to allocate a buffer for communication with RSP |
| Recommended Action | Examine the logs for IOMD. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOMD_INFRA-6-TDLMSG_INCOMPATIBLE : Failed to copy message [chars] to buffer, not allowed for current domain.

| | |
|---------------------------|---|
| Explanation | Failure to marshal a message indicates an incompatibility \ with the intended recipient. |
| Recommended Action | Examine the logs for IOMD. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOMD_INFRA-3-INVALID_SLOT_NUM : An invalid slot number is specified in one of the internal APIs. slot=[dec] max_slot=[dec]

| | |
|---------------------------|---|
| Explanation | Invalid slot number to find the TDL domain |
| Recommended Action | Examine the logs for IOMD. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOMD_INFRA-3-INVALID_BAY_NUM : An invalid bay number is specified in one of the internal APIs. bay=[dec] max_bay=[dec]

| | |
|---------------------------|---|
| Explanation | Invalid bay number to find the TDL domain |
| Recommended Action | Examine the logs for IOMD. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOMD_INFRA-4-INTR_OVER_LIMIT : IOMd main thread disabled interrupt for [int] msec.

| | |
|--------------------|--|
| Explanation | IOMd main thread process disabled interrupt too long |
|--------------------|--|

%IOMD_INFRA-4-INTR_OVER_LIMIT : IOMd main thread disabled interrupt for [int] msec.

| | |
|---------------------------|---|
| Recommended Action | Examine the logs for IOMD. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOMD_INFRA-3-INTR_EVENT : IOMd fast thread event ([dec]).

| | |
|---------------------------|---|
| Explanation | IOMd fast thread event |
| Recommended Action | Examine the logs for IOMD. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOMD_INFRA-3-I2C_WRITE : An I2C write has failed because [chars]

| | |
|---------------------------|---|
| Explanation | An I2C write has failed. This could be due to a hardware or software defect. |
| Recommended Action | Note the time of the error message and examine the logs for I2C errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%IOMD_INFRA-3-I2C_READ : An I2C read has failed because [chars]

| | |
|---------------------------|---|
| Explanation | An I2C read has failed. This could be due to a hardware or software defect. |
| Recommended Action | Note the time of the error message and examine the logs for I2C errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%IOMD_INFRA-3-LINECARDIAGSFAILED : Module [chars] in Slot [dec] failed online diagnostics. Please use 'show post' for more details

| | |
|---------------------------|---|
| Explanation | Online Diag has failed. This could be due to a hardware or software defect. |
| Recommended Action | Note the time of the error message and examine the logs for errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

IOSD

%IOSD-3-BIPC_REJECT : Could not accept ipc connection: [chars]

| | |
|---------------------------|---|
| Explanation | This error occurs if shell-manager has denied an ipc connection request from IOS. |
| Recommended Action | Check the connection request parameters. |

%IOSD-3-TDL_PROPERTIES : Could not set message properties for connection: [chars]

| | |
|---------------------------|--|
| Explanation | This error occurs if shell-manager is unable to set message properties for the IOS-smam connection |
| Recommended Action | Check the connection request parameters. |

IOSD_INFRA

%IOSD_INFRA-6-IFS_DEVICE_OIR : Device [chars] [chars]

| | |
|---------------------------|------------------------|
| Explanation | USB inserted/removed |
| Recommended Action | No action is required. |

%IOSD_INFRA-3-IFS_DEVICE_DETECT_FAIL : Device [chars] [chars]

| | |
|---------------------------|---|
| Explanation | USB detection failed |
| Recommended Action | USB Insertion could not be handled completely. Device needs to be removed and re-inserted |

IOSXE_APS

%IOSXE_APS-3-GROUP_CONFIG_FAIL : Group change for interface [chars] Group [dec] failed

| | |
|---------------------------|---|
| Explanation | Group change for interface has failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_APS-3-CONFIG_FAIL : config change for interface [chars] Group [dec] failed

| | |
|---------------------------|---|
| Explanation | config for an interface to forwarding plane has failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_APS-3-FLOWIDDELETIONFAILED : Deletion of APS flow ID with manager failed for interface [chars] group [dec]

| | |
|--------------------|--|
| Explanation | An unexpected condition has occurred that deletion of APS flow ID. |
|--------------------|--|

%IOSXE_APS-3-FLOWIDDELETIONFAILED : Deletion of APS flow ID with manager failed for interface [chars] group [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_APS-3-FLOWIDALLOCFAILED : Allocation of APS flow ID with manager failed for interface [chars] group [dec]

Explanation An unexpected condition has occurred that allocation of APS flow ID. failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_APS-3-PAIR_CONFIG_FAIL : Pair config for interface [chars] Group [dec] failed

Explanation Pair config for interface has failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_APS-3-CCCONFIGFAILED : Pair config for interface [chars] Group [dec] failed

Explanation Pair config for interface has failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_APS-3-FLOWCONFIGTOCCFAILED : Flow id to cc for interface [chars] Group [dec] failed

Explanation Flow id to cc for an interface has failed

%IOSXE_APS-3-FLOWCONFIGTOCCFAILED : Flow id to cc for interface [chars] Group [dec] failed

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_APS-3-DOWNLOADFAIL : Unable to download [chars] message to [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which resulted in a configuration not being sent to the reported process. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_CSLIFS**%IOSXE_CSLIFS-3-ERROR_SETTING : Error setting default file system ([dec])**

| | |
|---------------------------|---|
| Explanation | There is an error happened after calling function ifs_set_default_directory |
| Recommended Action | Check the csl filesystem |

IOSXE_CXSC**%IOSXE_CXSC-3-ALLOC : Failed to allocate message for proposition**

| | |
|---------------------------|---|
| Explanation | When attempting to program the dataplane with a CXSC proposition object, there was no enough memory to allocate the message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_CXSC-3-MESSAGE : Failed to send message for proposition

| | |
|--------------------|--|
| Explanation | When the proposition was being prepared for sending to the data plane, there was an error. |
|--------------------|--|

%IOSXE_CXSC-3-MESSAGE : Failed to send message for proposition

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_CXSC-3-ACTION : Unknown proposition action ([dec])

| | |
|---------------------------|---|
| Explanation | When the proposition was being sent to the data plane, the action was unknown error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_CXSC-3-BAD_PROPOSITION : Proposition obj corrupt

| | |
|---------------------------|---|
| Explanation | When the proposition was being sent to the data plane, the object itself is corrupt. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_CXSC-3-BAD_SUMMARY : Summary obj corrupt

| | |
|---------------------------|---|
| Explanation | When the proposition summary was being sent to the data plane, the object itself is corrupt. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_CXSC-4-DUAL_RP_UNSUPPORTED : Dual RPs are not supported in conjunction with CXSC

| | |
|--------------------|---|
| Explanation | CXSC is not supported in a dual RP environment. To resolve this warning, either unconfigure CXSC or remove the redundant Route Processor. |
|--------------------|---|

%IOSXE_CXSC-4-DUAL_RP_UNSUPPORTED : Dual RPs are not supported in conjunction with CXSC

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_CXSC-3-RF_INIT : Failed to initialize CXSC Redundancy Facility client

| | |
|---------------------------|---|
| Explanation | An unexpected condition occurred where the CXSC Redundancy Facility failed to initialize. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_CXSC-3-STILE_ACTIVATE : Failed to activate NBAR classification: ([dec])

| | |
|---------------------------|---|
| Explanation | An unexpected condition occurred where the CXSC NBAR protocol classification failed to activate. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_CXSC-3-STATISTICS_ALLOCATION : Unable to allocate space for statistics

| | |
|---------------------------|---|
| Explanation | During initialization, there was failure in the allocation of the memory to gather the statistics. It is non fatal, but after seeing this message, the CXSC subsystem will not be able to gather statistics. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
