%IOSXE_CXSC-3-BAD_PROTOCOLPACK : Invalid Protocol Pack object

| | |
|--------------------|--|
| Explanation | When the Protocol Pack was being sent to the data plane, the object's contents were invalid. |
|--------------------|--|

%IOSXE_CXSC-3-BAD_PROTOCOLPACK : Invalid Protocol Pack object

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_CXSC-3-FILESYSTEM_ERR : FileSystem Error ([chars]): Unable to Copy File from [chars] to [chars]

| | |
|---------------------------|---|
| Explanation | Unable to copy the NBAR Protocol Pack File to the file system for subsequent loading. The system will revert to the previously loaded Protocol Pack. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_CXSC-3-INSUFFICIENT_ALLOC_IOSXE_VER : Insufficient memory allocated for IOSXE version String

| | |
|---------------------------|---|
| Explanation | The input IOSXE Version String has insufficient memory to hold the IOSXE Version. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_CXSC-3-INSUFFICIENT_ALLOC_NBAR_VER : Insufficient memory allocated for NBAR Engine Version String

| | |
|---------------------------|---|
| Explanation | The input NBAR Engine Version string has insufficient memory to hold the NBAR Engine Version. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_CXSC-3-PLATFORM_TYPE : Unrecognised platform type. CPU ID [dec]

| | |
|--------------------|---|
| Explanation | The platform that the cxsc service is being installed on is not recognised. The most likely cause is that this platform is not supported. |
|--------------------|---|

%IOSXE_CXSC-3-PLATFORM_TYPE : Unrecognised platform type. CPU ID [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

IOSXE_DNS

%IOSXE_DNS-3-UPDATE_FAILED : Update resolv.conf, vrf [chars], rc [dec]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while updating the DNS file |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_DNS-3-VRF_FAILED : Operation ([chars]) on /etc/netns/[chars], rc [dec]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while updating the DNS directory |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_EPA

%IOSXE_EPA-3-CREATION_FAILURE : slot=[dec] subslot=[dec], spa_type=[hex], lc_type=[hex].

| | |
|---------------------------|---|
| Explanation | Failed to create a SPA object. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_EPA-3-ACT2_AUTHENTICATION_FAILURE : slot=[dec] subslot=[dec], spa_type=[hex], lc_type=[hex].

| | |
|--------------------|---------------------------------|
| Explanation | ACT2 dev authentication Failed. |
|--------------------|---------------------------------|

%IOSXE_EPA-3-ACT2_AUTHENTICATION_FAILURE : slot=[dec] subslot=[dec], spa_type=[hex], lc_type=[hex].

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_EPA-3-NULL_EPASENSOR_PTR :

Explanation Pointer to a DEVSENSOR object is NULL.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_EPA-3-NULL_PORT_PTR :

Explanation Pointer to a PORT object is NULL.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_EPA-3-NULL_DEVPSEQ_PTR :

Explanation Pointer to a DEVPSEQ object is NULL.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_EPA-3-NULL_DEVOBJ_PTR :

| | |
|---------------------------|--|
| Explanation | Pointer to a DEVOBJ object is NULL. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_EPA-3-NULL_FPGA_PTR :

| | |
|---------------------------|--|
| Explanation | Pointer to a FPGA object is NULL. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_EPA-3-NULL_EPA_PTR :

| | |
|---------------------------|--|
| Explanation | Pointer to an EPA object is NULL. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_EPA-3-NULL_VSC_PHY_INFO_PTR :

| | |
|---------------------------|--|
| Explanation | Pointer to a VSC PHY INFO object is NULL. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_EPA-3-NULL_VFT :

| | |
|---------------------------|---|
| Explanation | Pointer to a DEVSENSOR object is NULL. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_EPA-3-UNSUPPORTED_XCVR : Transceiver type [chars] is not allowed on spa [chars], port [dec],

| | |
|---------------------------|--|
| Explanation | This transceiver is not allowed on the SPA |
| Recommended Action | Consult the documentation and ensure supported transceivers are plugged into the SPA |

%IOSXE_EPA-3-AUTONEG_CFG_ERR : interface [chars] autoneg state '[chars]' is incompatible with transciever. Remove '[chars]' to allow the transceiver.

| | |
|---------------------------|---|
| Explanation | Autoneg Config is not compatible. Remove autoneg config on the interface to allow the transceiver |
| Recommended Action | Remove the negotiation auto config or reinsert the previously enabled transceiver. |

%IOSXE_EPA-3-XCVR_EC_BWMISMATCH : Trasnsceiver bandwidth is incompatible with Port-channel[dec] allowed bandwidth. Remove 'channel-group [dec]' config for interface [chars] to allow the transceiver

| | |
|---------------------------|--|
| Explanation | The interface port into which the transceiver is inserted is part of a Port-channel. The Port-channel has member links whose bandwidth doesn't match with the inserted transciever's bandwidth. Since, port-channel cannot allow heterogenous bandwidth links, this transceiver is not allowed in to the port. |
| Recommended Action | Remove the channel-group config for the port where transceiver is inserted or insert a transceiver whose bandwidth is compatible with the port-channel bandwidth |

%IOSXE_EPA-3-XCVR_PROHIBIT : Transceiver is prohibited to come online for interface [chars]

| | |
|--------------------|-------------------------------------|
| Explanation | XCVR is prohibited on the interface |
|--------------------|-------------------------------------|

%IOSXE_EPA-3-XCVR_PROHIBIT : Transceiver is prohibited to come online for interface [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

IOSXE_ETHERCHAN

%IOSXE_ETHERCHAN-6-LINK_MTU : Interface [chars] MTU set to port-channel [chars] MTU [dec]

| | |
|---------------------------|---|
| Explanation | The MTU for the interface mentioned in the message is changed to match the MTU configured on the port channel interface |
| Recommended Action | No action is required. |

%IOSXE_ETHERCHAN-3-LINK_MTU_FAIL : Failure in changing MTU of interface [chars] to port-channel [chars] MTU

| | |
|---------------------------|--|
| Explanation | The MTU for the interface mentioned in the message cannot be changed to match the MTU configured on the port channel interface |
| Recommended Action | Remove the link mentioned in the message from the port-channel group |

IOSXE_EZMENU

%IOSXE_EZMENU-3-VIRT_SRVC_REGISTER : Failed to register '[chars]' with virtual service manager

| | |
|---------------------------|---|
| Explanation | An unexpected error has occurred while trying to register this virtual service with the virtual service manager. This has prevented the virtual service from being enabled/disabled. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_FMANRP**%IOSXE_FMANRP-4-MSGDISPATCHNULL : TDL messages NULL from IOS.**

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS trying to dispatch the TDL message handler functions for received TDL messages from Forwarding Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP-4-MSGDISPATCH : Unable to dispatch received TDL message '[chars]' from Forwarding Manager. LUID: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS trying to dispatch the TDL message handler functions for received TDL messages from Forwarding Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP-4-MSGIPCERR : Unable to process received IPC messages from Forwarding Manager, error: [chars].

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS trying to process received IPC message from Forwarding Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP-3-EPOCHTDLMSGMARSHAL : Failed to copy epoch TDL message to IPC buffer, epoch number [dec]

| | |
|---------------------------|---|
| Explanation | This operation to build a TDL messages for epoch message has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP-3-MSGMARSHALERR : Unable to copy IPC messages into transport buffer. Message: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS trying to copy IPC message to transport buffer in order to send the message from IOSd to Forwarding Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP-3-MSGENQERR : Unable to enqueue IPC messages to IOS IPC queue. Message: [chars].

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS trying to enqueue IPC message to IOS IPC queue in order to send the message to Forwarding Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP-4-MSGNONDLSTATSERR : Unable to process received non-TDL stats message from Forwarding Manager, error: [chars] ([dec]).

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS trying to process received non-TDL stats message from Forwarding Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_FMANRP_ADJ

%IOSXE_FMANRP_ADJ-3-NOADJ : Adjacency entry is null

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of an adjacency entry structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show adjacency command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_ADJ-3-NOFIBHWIDB : FIB Interface [chars] is null

Explanation An unexpected condition has occurred which is due to the absence of a FIB interface structure.

Recommended Action LOG_STD_SH_CMD_ACTION(show adj)

%IOSXE_FMANRP_ADJ-3-ENQUEFAIL : Unable to send [chars] [chars] message to Forwarding Manager Process

Explanation An unexpected condition has occurred which resulted in a configuration not being sent to the Forwarding Manager Process.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_FMANRP_ADJ-3-ENCSIZE : Invalid encap length [dec] which is larger than max allowed [dec] bytes

Explanation An unexpected condition has occurred which is due to invalid adjacency encapsulation size being larger than the maximum value allowed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

IOSXE_FMANRP_CCE

%IOSXE_FMANRP_CCE-4-CCE_STACK_LIMIT : Failed to create class [dec] filter list

Explanation An operation to send a filter list to the forwarding processor for a particular class has failed due to a resource issue. This may imply that the notification was dropped.

Recommended Action LOG_STD_SH_CMD_ACTION(show class-map [type <class type> <name>])

%IOSXE_FMANRP_CCE-3-CCE_INVALID_FILTER_RELN : Invalid filter relation [int]

Explanation An internal error occurred when trying to build class-map information for one of the classes in a policy-map.

%IOSXE_FMANRP_CCE-3-CCE_INVALID_FILTER_RELN : Invalid filter relation [int]

Recommended Action LOG_STD_SH_CMD_ACTION(show policy-map [type <policy type> <name>])

%IOSXE_FMANRP_CCE-3-CCE_FILTER_OVERFLOW : Filter list overflow at type [chars]

Explanation An internal error occurred when trying to build class-map information for one of the classes in a policy-map.

Recommended Action LOG_STD_SH_CMD_ACTION(show class-map [type <class type> <name>])

%IOSXE_FMANRP_CCE-3-CCE_CLASS_CREATE : Unable to create class [int].[int]

Explanation An error occurred when trying to create a class-map.

Recommended Action LOG_STD_SH_CMD_ACTION(show policy-map [type <policy type> <name>])

%IOSXE_FMANRP_CCE-4-CCE_NESTED_CLASS_LIMIT : Nested class [dec] layers cannot exceed 4

Explanation When configure nested classes as match statements, the total levels of nested classes cannot exceed 4 layers

Recommended Action LOG_STD_SH_CMD_ACTION(show class-map [type <class type> <name>])

IOSXE_FMANRP_CEF through IOSXE_MEMPOOL_MIB

IOSXE_FMANRP_CEF**%IOSXE_FMANRP_CEF-3-NOFIB : FIB entry is null**

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of a FIB entry structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip cef command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_CEF-3-NOFIBSB : FIB SB entry is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of a FIB SB entry structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip cef command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_CEF-3-NOFIBTABLE : FIB table is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of a FIB table structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip cef command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_CEF-3-NOFIBIDB : FIB interface is null

| | |
|--------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of a FIB interface structure. |
|--------------------|--|

%IOSXE_FMANRP_CEF-3-NOFIBIDB : FIB interface is null

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip cef command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%IOSXE_FMANRP_CEF-3-ENQUEFAIL : Unable to send [chars] [chars] message to Forwarding Manager Process

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which resulted in a configuration not being sent to the Forwarding Manager Processes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_CEF-4-UPDFRAGSTATSERR : Update IP Fragmentation statistics error

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred when updating fragmentation statistics |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_CEF-4-UPDREASSSTATSERR : Update IP Reassembly statistics error

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred when updating reassembly statistics |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_CEF-4-UPDSTATSERR : Update CEF statistics error

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred when updating cef statistics |
|--------------------|---|

%IOSXE_FMANRP_CEF-4-UPDSTATSERR : Update CEF statistics error

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_FMANRP_CEF-3-ROUTEMSGMARSHAL : Failed to copy route message to IPC buffer for prefix [chars]/[dec] - [chars]

Explanation This operation to build a TDL messages for route download has failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_FMANRP_CEF-3-NOFIBPUSHCNT : FIB push counter is null

Explanation An unexpected condition has occurred which is due to the absence of a FIB push counter structure.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the `show ip cef` command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_FMANRP_CEF-3-NOFIBSIGNAL : FIB signal is null

Explanation An unexpected condition has occurred which is due to the absence of a FIB signal structure.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the `show ip cef` command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_FMANRP_CEF-3-NONATADDR : NAT address is null

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of an NAT address. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip alias command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_FMANRP_FPM

%IOSXE_FMANRP_FPM-4-INVALIDLENTYPE : Field length type in PHDF file is invalid

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the invalid field length type in PHDF file. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip alias command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_FPM-4-INVALIDMATCHTYPE : FPM match type is invalid [dec]

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the invalid FPM match type in one of FPM class-map filter match entry |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip alias command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_FPM-4-INVALIDACTION : FPM feature action is invalid [dec]

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the invalid action type when trying to bind FPM action with target class group. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip alias command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_FPM-3-NOSTATUPDATE : Failed to update class-map statistics during periodic update

| | |
|---------------------------|---|
| Explanation | A statistics update for a class-map has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_FMANRP_OBJID

%IOSXE_FMANRP_OBJID-5-DUPCREATE : Duplicate forwarding object creation obj_handle [hex], type [int], existing obj_id [hex], type [int]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which results in duplicate forwarding object creation. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_FMANRP_OBJID2

%IOSXE_FMANRP_OBJID2-3-DUPCREATE : Duplicate forwarding object creation obj_handle [hex], type [int], existing obj_id [hex], type [int]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which results in duplicate forwarding object creation with different object types. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_FMANRP_RTMAP

%IOSXE_FMANRP_RTMAP-3-RTMAPNULL : The route-map structure for [chars] is null

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of a route-map data structure. |
| Recommended Action | show route-map |

%IOSXE_FMANRP_RTMAP-4-UNKOWNCLIANT : Unknown client type [dec] received

| | |
|---------------------------|---|
| Explanation | An unexpected known client type is received for route-map download. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_RTMAP-3-INVALID_LIST : NULL

| | |
|---------------------------|---|
| Explanation | An internal list structure has been detected as invalid. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_FMANRP_RTMAP-3-RTMAP_UNSUPPORTED : Routemap ([chars]) contain unsupported match/set clause, ignored

| | |
|---------------------------|---|
| Explanation | A map contains unsupported match or set clause |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_FMANRP_URPF**%IOSXE_FMANRP_URPF-4-NOV4SWIDB : v4 sub-interface is null**

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of a v4 swidb structure. |
|--------------------|---|

%IOSXE_FMANRP_URPF-4-NOV4SWIDB : v4 sub-interface is null

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ip interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_FMANRP_URPF-4-NOV6SWIDB : v6 sub-interface is null

Explanation An unexpected condition has occurred which is due to the absence of a v6 swidb structure.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ipv6 interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_FMANRP_URPF-3-INVALIDIFHDL : Invalid interface handle [int] for interface (number= [int], swidb= [hex], name= [chars])

Explanation An unexpected condition has occurred which is due to an invalid interface handle

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_FMANRP_URPF-4-UPDV4STATSERR : Update v4 URPF statistics error

Explanation An unexpected condition has occurred when updating v4 URPF statistics

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ip interface <name>** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_FMANRP_URPF-4-UPDV6STATSERR : Update v6 URPF statistics error

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred when updating v6 URPF statistics |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ipv6 interface <name> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_FMANRP_ZONES

%IOSXE_FMANRP_ZONES-3-NOSTATUPDATE : Failed to update zone-pair statistics during periodic update (zone [chars], class [int])

| | |
|---------------------------|---|
| Explanation | A statistics update for a zone-pair has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_INFRA

%IOSXE_INFRA-3-INVALID_ERRMSG : Error message type [dec] not defined

| | |
|---------------------------|---|
| Explanation | Error message type used is not defined in IOSXE infrastructure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SHIM_INIT_WQ_FAIL : IOSXE shim layer initialization failed: Can not create receiving queues

| | |
|---------------------------|---|
| Explanation | IOSXE IOS shim layer initialization of watched queue failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SHIM_INIT_WQ_CHASFS_FAIL : IOSXE shim layer initialization failed: Can not create receiving chasfs watched queue

| | |
|---------------------------|---|
| Explanation | IOSXE IOS shim layer initialization of watched queue failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SHIM_INIT_PROC_FAIL : IOSXE shim layer initialization failed: Dispatch process creation failed

| | |
|---------------------------|---|
| Explanation | IOSXE IOS shim layer initialization creating dispatch process failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SHIM_INIT_MEM_FAIL : IOSXE shim layer initialization failed: Memory initialization failed.

| | |
|---------------------------|---|
| Explanation | IOSXE IOS shim layer initialization of memory failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SHIM_NO_IPC_DISPATCH_HDL : IOSXE shim layer [chars] process message without IPC dispatch handler.

| | |
|---------------------------|---|
| Explanation | IOSXE IOS shim layer has no ipc dispatch handler set |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SHIM_RXMSG_NO_IPC_HDL : IOSXE shim layer without IPC handler for fd [dec], seqnum [dec].

| | |
|--------------------|--|
| Explanation | IOSXE IOS shim layer cannot find ipc handler |
|--------------------|--|

%IOSXE_INFRA-3-SHIM_RXMSG_NO_IPC_HDL : IOSXE shim layer without IPC handler for fd [dec], seqnum [dec].

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-SHIM_INIT_TDL_FAIL : IOSXE shim layer initialization TDL Lib [chars] failed.

Explanation IOSXE IOS shim layer initialization of TDL library

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-SHIM_INIT_DISPATCH_INIT_FAIL : IOSXE shim layer initialization, dispatch path init failed.

Explanation IOSXE IOS shim layer initialization of TDL dispatch path

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-INVALID_RUNTIME_IDX : Thread runtime index [dec] is not valid

Explanation Export the thread's running time failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-6-THREAD_SELECT_ERR : Inbound message or packet select error, [chars].

Explanation Socket select operation error in threads

%IOSXE_INFRA-6-THEAD_SELECT_ERR : Inbound message or packet select error, [chars].

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_INFRA-3-INJECT_HDR_LENGTH_ERR : Inject hdr size [int] exceeds limit

| | |
|---------------------------|---|
| Explanation | Inject header length exceeds pak header space |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-INJECT_EMBEDDED_HDR_LENGTH_ERR : Can't allot space needed for embedded inject hdr size [int] exceeds limit

| | |
|---------------------------|---|
| Explanation | Can't allot space needed for embedded inject header, exceeds pak header space |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-INJECT_NO_IF_OUTPUT_ERR : Output intf is NULL, [chars]

| | |
|---------------------------|---|
| Explanation | Output intf is required to proceed, else skip the feautre |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-4-PUNT_KEEPALIVE_LOG_ERR_INV_PARAM : Invalid parameter: [chars]

| | |
|---------------------------|---|
| Explanation | Invalid parameter was passed when generating punt err log |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-4-PUNT_KEEPALIVE_LOG_ERR_GET_FILE_NAME : Failed to get file name: [chars]

| | |
|---------------------------|---|
| Explanation | Could not form a file name when generating punt err logPunt keepalive log error seen |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-4-PUNT_KEEPALIVE_LOG_ERR_INV_FILE_ID : Invalid file descriptor: [dec]

| | |
|---------------------------|---|
| Explanation | Invalid file descriptor was found when generating punt err log |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-PUNT_KEEPALIVE_LOG_ERR_OPEN_FILE : Failed to open file: [chars]

| | |
|---------------------------|---|
| Explanation | Failed to open file when generating punt err log |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-4-PUNT_KEEPALIVE_LOG_ERR_CLOSE_FILE : Failed to close file with descriptor: [dec]

| | |
|---------------------------|---|
| Explanation | Closing of file failed when generating punt err log |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-PUNT_KEEPALIVE_LOG_ERR_WRITE_TO_FILE : Write to file Id [dec] failed [dec] bytes, expected [dec] bytes

| | |
|--------------------|---|
| Explanation | Write to file failed when generating punt err log |
|--------------------|---|

%IOSXE_INFRA-3-PUNT_KEEPALIVE_LOG_ERR_WRITE_TO_FILE : Write to file Id [dec] failed [dec] bytes, expected [dec] bytes

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-PUNT_KEEPALIVE_LOG_ERR_ALLOC_TTY : Failed to allocate a tty

Explanation Can't allocate a TTY when generating punt err log

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-PUNT_KEEPALIVE_LOG_ERR_ALLOC_CSB : Failed to allocate a csb

Explanation Can't allocate a csb when generating punt err log

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-PUNT_KEEPALIVE_LOG_ERR_PARSE_CMD : Failed to parse command: [chars]

Explanation Failed to parse a command when generating punt err log

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-4-PUNT_KEEPALIVE_LOG_ERR_GET_PROCID : Failed to get process id

Explanation Can't get identifier of the process generating punt err log

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-4-PUNT_KEEPALIVE_LOG_ERR_INV_PROCID : Invalid proc id [dec], expected [dec]

| | |
|---------------------------|---|
| Explanation | Invalid process trying to generate punt err log |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-4-NO_PUNT_KEEPALIVE : Keepalive not received for [int] seconds

| | |
|---------------------------|---|
| Explanation | Punt Inject keepalive message was not received |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-2-FATAL_NO_PUNT_KEEPALIVE : Keepalive not received for [int] seconds resetting

| | |
|---------------------------|---|
| Explanation | Punt Inject keepalive message was not received |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-2-FATAL_PUNT_LINK_DOWN : Punt Inject link went down resetting

| | |
|---------------------------|---|
| Explanation | Punt Inject link went down |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-INJECT_GSB_CTL_INIT_FAIL : Inject adjacency subblock init failed

| | |
|--------------------|---|
| Explanation | Adj subblock control or register failed |
|--------------------|---|

%IOSXE_INFRA-3-INJECT_GSB_CTL_INIT_FAIL : Inject adjacency subblock init failed

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_INFRA-3-PUNT_ADDR_RES_ENCAP_ERR : Punted address resolution packet with unknown encap [chars]

| | |
|---------------------------|---|
| Explanation | Punted packet for ARP/ND with encap not supported |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-PUNT_SVC_PROC_ERR : Punt service [chars] create failed

| | |
|---------------------------|---|
| Explanation | Punt service process can not be created |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-VM_PAGE_TABLE_ERR : VM guarded page operation failed, address [hex], [chars]

| | |
|---------------------------|---|
| Explanation | VM guarded page avl tree operation error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-PUNT_SVC_TYPE_UNKNOWN : Punted packet with unknown service type [int]

| | |
|---------------------------|---|
| Explanation | Punted pak with an unsupported service type |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-5-PUNT_SVC_CANT_ENQUEUE : Punted pak can't be enqueued for service

| | |
|---------------------------|---|
| Explanation | Punted pak enqueue failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-5-PUNT_SVC_INVALID_OPT_PKT : Invalid IPv4 options packet punted to RP

| | |
|---------------------------|---|
| Explanation | Invalid IPv4 options packet dropped in RP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-4-INJECT_TUN_NONIP_WARN : pak with linktype [chars] gets into non-ip tunnel

| | |
|---------------------------|---|
| Explanation | IP/IPv6/MPLS packet should to go through GRE tunnel for non-IP payload |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-INJECT_FEATURE_ESS_ERR : ESS segment not found, type [dec] hdl [hex]

| | |
|---------------------------|---|
| Explanation | Packets to be injected to an unsupported ESS segment |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-6-PROCPATH_CLIENT_HOG : IOS shim client '[chars]' has taken %ld msec (runtime: %ld msec) to process a '[chars]' message

| | |
|--------------------|--|
| Explanation | The specified IOSXE IOS shim client has taken too long to process a received IPC or chasfs message |
|--------------------|--|

%IOSXE_INFRA-6-PROCPATH_CLIENT_HOG : IOS shim client '[chars]' has taken %ld msec (runtime: %ld msec) to process a '[chars]' message

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-6-AUXTHD_REQUEST : Too many outstanding requests for file system access

Explanation Resource temporarily unavailable

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-APP_SESS_OPEN_FAILED : An attempt to open [chars] with handle number [dec] has failed ([dec])

Explanation Application session between processes failed to establish.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-CONSOLE_DEBUG_DROP : System dropped [dec] bytes of console debug messages.

Explanation Debugging messages are being generated faster than they can be displayed on the console. The messages can not be guaranteed to be seen so this message replaces the lost messages.

Recommended Action Consider using conditional debugging or turning off console logging.

%IOSXE_INFRA-3-PUNT_INCOMP_WRONG_ADJID : Punted address resolution packet linktype [chars], adj-id [dec] is with linktype [chars]

Explanation CPP needs to punt incomplete adjacency for resolution by specifying the adjacency-id, but the included adjacency-id does not match the incomplete adjacency this packet triggered.

%IOSXE_INFRA-3-PUNT_INCOMP_WRONG_ADJID : Punted address resolution packet linktype [chars], adj-id [dec] is with linktype [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_INFRA-3-IFS_EXTLINK_ADD_FAIL : Could not add filesystem [chars] to IFS links

| | |
|---------------------------|---|
| Explanation | Attempt to add filesystem root to allow for links failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-IFS_UDEV_REMOVE_FAIL : Could not remove udev device [chars]

| | |
|---------------------------|---|
| Explanation | Attempt to remove udev device failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-IFS_DFLT_FS_REG_FAIL : Unable to set [chars] as a default file system.

| | |
|---------------------------|---|
| Explanation | IOSXE's platform dependent code failed to register the default file system. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-IFS_INIT_HIDDEN_FAIL : IOSXE shim layer initialization failed: Can not create receiving queues

| | |
|--------------------|---|
| Explanation | IOSXE IOS shim layer initialization of hidden path watch failed |
|--------------------|---|

%IOSXE_INFRA-3-IFS_INIT_HIDDEN_FAIL : IOSXE shim layer initialization failed: Can not create receiving queues

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-BSO_MSG_HDR_LENGTH_ERR : BSO message header length [int] is incorrect

Explanation BSO message header length is incorrect

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-BSO_MSG_HDR_MSGTYPE_ERR : BSO message header msgtype [int] is incorrect

Explanation BSO message header msgtype is incorrect

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-BSO_MSG_UNMARSHAL_ERR : BSO message unmarshalling has failed

Explanation BSO message unmarshalling has failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-3-BSO_MSG_CACHE_ERR : BSO message query cache update error - [chars]

Explanation BSO message query cache update error

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_INFRA-4-BSO_MSG_RIB_WATCH_WARN : BSO message RIB watch start error

| | |
|---------------------------|---|
| Explanation | BSO message RIB watch start error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-RELOAD_INFO_SAVE_FAIL : Unable to save reload information: [dec]: [chars].

| | |
|---------------------------|---|
| Explanation | IOSXE's platform dependent code failed to save the reload information. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SN_IPFRR_PROC_ERR : Static Nexthop IPFRR [chars] create failed

| | |
|---------------------------|---|
| Explanation | SN IPFRR process can not be created |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-6-CONSOLE_ACTIVE : [chars]

| | |
|---------------------------|--|
| Explanation | Indicates that the current instance of IOS is assuming active control of the console. This is informational. |
| Recommended Action | No action is required. |

%IOSXE_INFRA-6-PLATFORM_RELOAD : [chars]

| | |
|---------------------------|---|
| Explanation | Indicates that the current instance of IOS is being reset by the platform code. This is part of a normal reset sequence and the message is informational. |
| Recommended Action | No action is required. |

%IOSXE_INFRA-6-CHASFS_CLOCK_SET_FAIL : Failed to set Chasfs property on system time change

| | |
|---------------------------|---|
| Explanation | Unable to set chasfs property on system time change |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-CYAN_API_ERROR : Failed to retrieve platform dependent value of [chars] (err=[dec])

| | |
|---------------------------|---|
| Explanation | CYAN API function failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-6-SHIM_RXMSG_IPC_INFO : IOS shim layer process IPC msg for fd [dec], seq_num [dec], ipc_status [dec]

| | |
|---------------------------|---|
| Explanation | |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SHIM_IPC_NOT_PROCESSED : msg handler returned FALSE for IPC msg for fd [dec], seq_num [dec], service [chars]

| | |
|---------------------------|---|
| Explanation | |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SWIFT_ORCH_PROC_FAIL : IOSXE SWIFT Orchestrator process creation failed

| | |
|--------------------|---|
| Explanation | The SWIFT Orchestrator process could not be created |
|--------------------|---|

%IOSXE_INFRA-3-SWIFT_ORCH_PROC_FAIL : IOSXE SWIFT Orchestrator process creation failed

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_INFRA-3-BAD_GLIBC_BUF_FREE : An IOS buffer is freed into GLIBC buffer pool, buffer blockmagic [hex], flags [hex]

| | |
|---------------------------|---|
| Explanation | An IOS buffer is freed into GLIBC buffer pool. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-BIPC_MGS_ALLOC_FAIL : Allocating [dec] byte for IPC [chars] msg failed: out of memory

| | |
|---------------------------|---|
| Explanation | system is out of memory |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SOCKET_PEEK_ERR : Interrupt processing of Punt received packets over socket failed as peek of packet returned error: [chars]

| | |
|---------------------------|---|
| Explanation | Peek at incoming message hit error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-GET_BUFFER_ERR : Interrupt processing of Punt received packets over socket failed to get a packet buffer for len [dec]

| | |
|--------------------|--|
| Explanation | Failed to get a packet buffer from the specified pool. |
|--------------------|--|

%IOSXE_INFRA-3-GET_BUFFER_ERR : Interrupt processing of Punt received packets over socket failed to get a packet buffer for len [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_INFRA-3-SOCKET_RECV_ERR : Interrupt processing of Punt received packets over socket failed as receive packet hit error: [chars]

| | |
|---------------------------|---|
| Explanation | Hit error when receives packet from a socket. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-SOCKET_SEND_ERR : Transmit packet to the socket hit error: [chars]

| | |
|---------------------------|---|
| Explanation | Transmit a packet to another socket hit error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-INJECT_HEADER_ERR : Transmit packet to the socket failed as packet header length is greater than datagram size. It's an incorrect packet and cannot proceed sending. header length is [dec], datagram size is [dec].

| | |
|---------------------------|---|
| Explanation | Packet header length is wrong. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-IDB_CREATE_ERR : Failed to create IDB(Interface Descriptor Block) for Punt/Inject socket interface

| | |
|--------------------|---|
| Explanation | Creating an idb corresponding to an interface failed. |
|--------------------|---|

%IOSXE_INFRA-3-IDB_CREATE_ERR : Failed to create IDB(Interface Descriptor Block) for Punt/Inject socket interface

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_INFRA-3-MALLOC_FAST_ERR : Failed to allocate memory for Punt/Inject socket instance

| | |
|---------------------------|---|
| Explanation | malloc_fast failed to allocate memory. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-IDB_INIT_ERR : Failed to initialize IDB(Interface Descriptor Block) for Punt/Inject socket interface

| | |
|---------------------------|---|
| Explanation | Hit error when we initialize idb. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-PI_SOCKET_RAW_PRE_INIT_ERR : Punt/Inject socket pre-initialization(IDB creation) failed

| | |
|---------------------------|---|
| Explanation | PI Socket Raw pre-initialization failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-PI_SOCKET_RAW_INIT_ERR : Punt/Inject socket initialization failed

| | |
|--------------------|--------------------------------------|
| Explanation | PI Socket Raw initialization failed. |
|--------------------|--------------------------------------|

%IOSXE_INFRA-3-PI_SOCKET_RAW_INIT_ERR : Punt/Inject socket initialization failed

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_INFRA-3-MCPRP_INIT_PUNTPATH_FD_ERR : Initializing the ipc control for the puntpath fd failed

| | |
|---------------------------|---|
| Explanation | Initializing the ipc control for the puntpath fd failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_INFRA-3-LIIN_TUN_MSG_ERR : LIIN error - [chars] [chars] [dec]

| | |
|---------------------------|---|
| Explanation | LIIN in Tunnel mode experiencing error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_LICENSE_POLICY_MANAGER

%IOSXE_LICENSE_POLICY_MANAGER-2-CONFIG_NULL : [chars]: Configuration is unavailable

| | |
|---------------------------|---|
| Explanation | License Configuration is undefined for this platform. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_LICENSE_POLICY_MANAGER-2-FEATURE_CONFIG_NULL : [chars]: Feature Configuration is unavailable

| | |
|--------------------|---|
| Explanation | Feature Configuration is undefined for this platform. |
|--------------------|---|

%IOSXE_LICENSE_POLICY_MANAGER-2-FEATURE_CONFIG_NULL : [chars]: Feature Configuration is unavailable

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_LICENSE_POLICY_MANAGER-2-FEATURE_MALLOC_FAILED : [chars]: Policy Mgr Feature Registration struct malloc failed

| | |
|---------------------------|---|
| Explanation | Memory allocation for Feature Registration Struct failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_LICENSE_POLICY_MANAGER-2-FEATURE_NAME_NULL : [chars]: Feature name is NULL

| | |
|---------------------------|---|
| Explanation | License feature name string is NULL |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_LICENSE_POLICY_MANAGER-2-LIC_REG_FAILED : [chars]: Failed to register [chars] license feature, result = [hex]

| | |
|---------------------------|---|
| Explanation | License Registration failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_LICENSE_POLICY_MANAGER-2-LIC_REQ_FAILED : [chars]: [dec]/[dec]: Lic request failed (idx:[dec], feature=[chars], lic_cnt=[dec], err=[dec])

| | |
|--------------------|------------------------|
| Explanation | License Request failed |
|--------------------|------------------------|

%IOSXE_LICENSE_POLICY_MANAGER-2-LIC_REQ_FAILED : [chars]: [dec]/[dec]: Lic request failed (idx:[dec], feature=[chars], lic_cnt=[dec], err=[dec])

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_LICENSE_POLICY_MANAGER-2-LIC_REL_FAILED : [chars]: [dec]/[dec]: Lic release failed (idx:[dec], feature=[chars], lic_cnt=[dec], err=[dec])

Explanation License Release failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_LICENSE_POLICY_MANAGER-2-LIC_REQ_GEN_FAIL : [chars]: [dec]/[dec]: Lic request failed

Explanation License Request failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_LICENSE_POLICY_MANAGER-2-LIC_REL_GEN_FAIL : [chars]: [dec]/[dec]: Lic request failed

Explanation License Release failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_LICENSE_POLICY_MANAGER-2-BAY_MALLOC_FAILED : [chars]: Policy Mgr Bay DB malloc failed for [dec]/[dec]

Explanation Memory allocation for SPA/EPA failed

%IOSXE_LICENSE_POLICY_MANAGER-2-BAY_MALLOC_FAILED : [chars]: Policy Mgr Bay DB malloc failed for [dec]/[dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_LICENSE_POLICY_MANAGER-2-IF_MALLOC_FAILED : [chars]: Policy Mgr IF DB malloc failed for [dec]/[dec]

Explanation Memory allocation for SPA/EPA interfaces failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_LICENSE_POLICY_MANAGER-6-LIC_REQ_SUC : [int]/[int]/[int]: License request is successful for [chars] feature

Explanation License release is successful, port allowed to go down

Recommended Action Nothing the system is working properly

%IOSXE_LICENSE_POLICY_MANAGER-6-LIC_REL_SUC : [int]/[int]/[int]: License release is successful for [chars] feature

Explanation License release is successful, port allowed to go down

Recommended Action Nothing the system is working properly

%IOSXE_LICENSE_POLICY_MANAGER-4-INSUF_LIC : [int]/[int]/[int]: Insufficient [chars] license, skipping license request assuming customer has honor license

Explanation Permanent/Evaluation licenses have exhausted, skipping license request assuming customer has purchased license

Recommended Action Nothing the system is working properly

%IOSXE_LICENSE_POLICY_MANAGER-4-DISABLE_MACSEC : [chars]: Disabling MACsec configuration due to insufficient license

Explanation Disabling MACsec configuration from port due to insufficient MACsec license

Recommended Action Purchase/Install MACsec license

IOSXE_MEMPOOL_MIB

%IOSXE_MEMPOOL_MIB-3-BUFFPOOL_REG_ERROR : Bufferpool register data exceeds allocated memory; Retrieved only [dec] entries.

Explanation Memory allocated is not enough

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

IOSXE_MGMTVRF

%IOSXE_MGMTVRF-3-PROCESS_CREATE_FAIL : Management VRF process creation failed, [chars]

Explanation Can not create IOS process for mgmt port init

%IOSXE_MGMTVRF-3-PROCESS_CREATE_FAIL : Management VRF process creation failed, [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_MGMTVRF-3-VRF_CREATE_FAIL : Management VRF creation failed [chars]

| | |
|---------------------------|---|
| Explanation | Can not create mgmt vrf during system init |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_MGMTVRF-3-AFI_ATTACH_FAIL : Management VRF AFI [chars] attach failed

| | |
|---------------------------|---|
| Explanation | Can not create afi subblock for mgmt vrf |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_MGMTVRF-3-INTF_ATTACH_FAIL : Management VRF attach to mgmt [chars] failed

| | |
|---------------------------|---|
| Explanation | Can not associate mgmt port to mgmt vrf |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_MGMTVRF-3-SET_TABLEID_FAIL : Installing [chars] Management interface tableid [hex] failed

| | |
|---------------------------|---|
| Explanation | Fail to set mgmt port tableid into Linux kernel |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_MGMTVRF-6-CREATE_SUCCESS_INFO : Management vrf [chars] created with ID [dec], ipv4 table-id [hex], ipv6 table-id [hex]

Explanation mgmt vrf and ipv4, ipv6 tables created for mgmt port

Recommended Action

IOSXE_MLP

%IOSXE_MLP-3-ENQUEFAIL : Unable to send [chars] [chars] message to Forwarding Manager Process

Explanation An unexpected condition has occurred which resulted in a configuration not being sent to the Forwarding Manager Process.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_MLP-4-UPDSTATSERR : Update MLP statistics error

Explanation An unexpected condition has occurred when updating mlp statistics

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_MLP-2-DB_ENTRY_ALLOC_FAIL : MLP link db entry allocation for link [chars] failed

Explanation MLP link database error. Memory chunk allocation for MLP link database entry has failed.

Recommended Action Check for accurate memory management. Perform memory leak checks and look for memory corruption causes. Execute 'show proc memory' command.

%IOSXE_MLP-2-DB_INSERT_FAIL : MLP link db entry add for interface [chars] failed

Explanation MLP link database error. Insertion of a new entry into MLP link database has failed.

Recommended Action Check for accurate memory management. Perform memory leak checks, look for memory corruption causes, verify correct database management. Execute 'show proc memory' command.

%IOSXE_MLP-2-DB_DELETE_FAIL : MLP link db entry delete for link [chars] failed

| | |
|---------------------------|--|
| Explanation | MLP link database error. Removal of entry from MLP link database has failed. |
| Recommended Action | Check for accurate memory management. Perform memory leak checks, look for mamory corruption causes and check for correct database management. Execute 'show proc memory' command. |

%IOSXE_MLP-2-DB_ENTRY_FREE_FAIL : MLP link entry free failed

| | |
|---------------------------|---|
| Explanation | MLP link database error. Memory chunk free of MLP link database entry has failed. |
| Recommended Action | Check for accurate memory management. Perform memory leak checks and look for memory corruption causes. Execute 'show proc memory' command. |

%IOSXE_MLP-2-DB_ALLOC_FAIL : MLP link db allocation failed

| | |
|---------------------------|---|
| Explanation | MLP link database error. Memory chunk creation for MLP link database has failed. |
| Recommended Action | Check for accurate memory management. Perform memory leak checks and look for memory corruption causes. Execute 'show proc memory' command. |

%IOSXE_MLP-2-DB_DESTROY_FAIL : MLP link database destroy failed

| | |
|---------------------------|---|
| Explanation | MLP link database error. Memory chunk destroy has failed for MLP link database. |
| Recommended Action | Check for accurate memory management. Perform memory leak checks and look for memory corruption causes. Execute show proc memory command. |

IOSXE_OIR**%IOSXE_OIR-6-INSCARD : Card ([chars]) inserted in [chars]slot [chars]**

| | |
|---------------------------|--|
| Explanation | The OIR facility detected the insertion of a card in the slot number specified in the message. |
| Recommended Action | No action is required. |

%IOSXE_OIR-6-REMCARD : Card ([chars]) removed from [chars]slot [chars]

| | |
|---------------------------|--|
| Explanation | The OIR facility detected the removal of a card from the slot number specified in the message. |
| Recommended Action | No action is required. |

%IOSXE_OIR-6-ONLINECARD : Card ([chars]) online in [chars]slot [chars]

Explanation The OIR facility detected the state change to online for the card in the slot number specified in the message.

Recommended Action No action is required.

%IOSXE_OIR-6-OFFLINECARD : Card ([chars]) offline in [chars]slot [chars]

Explanation The OIR facility detected the state change to offline for the card in the slot number specified in the message.

Recommended Action No action is required.

%IOSXE_OIR-3-CARDERR : Could not read state property for [chars] slot [dec]

Explanation The OIR facility detected a failure for exceeding the number of retries to find state chasfs property.

Recommended Action No action is required.

%IOSXE_OIR-6-SOFT_STARTSPA : SPA([chars]) restarted in [chars]

Explanation The SPA in the specified subslot is restarted by the command `hw-module subslot slot#/subslot# start`

Recommended Action No action is required.

%IOSXE_OIR-3-SPA_INTF_ID_ALLOC_FAILED : Failed to allocate interface identifiers for SPA([chars]) in slot/bay: [int]/[int]

Explanation Failed to get CC buffer and flow control identifiers for the SPA in the specified subslot. Traffic cannot flow through the SPA under this failure condition. This can happen if the system runs out of available identifiers.

Recommended Action Try to reduce the number of interfaces configured in the system either by physically removing the SPAs or by changing the system configuration

%IOSXE_OIR-6-SOFT_STOPSPA : SPA([chars]) stopped in [chars], interfaces disabled

Explanation The SPA in the specified subslot is stopped by the command **hw-module subslot slot#/subslot# stop**. The interfaces on that processor will be administratively shut down and marked as removed. The routing table will be flushed of any routes through the removed interfaces.

Recommended Action No action is required.

%IOSXE_OIR-6-SOFT_RELOADSPA : SPA([chars]) reloaded on [chars]

Explanation The SPA in the specified subslot is reloaded by the command **hw-module subslot slot#/subslot# reload**.

Recommended Action No action is required.

%IOSXE_OIR-6-SYNCSPA : SPA ([chars]) reloading to come up in [chars] mode

Explanation The SPA in the specified subslot is reloaded by the command **hw-module subslot slot#/subslot# reload**.

Recommended Action No action is required.

%IOSXE_OIR-6-INSSPA : SPA inserted in [chars]/[int]

Explanation The OIR facility detected the insertion of a SPA in the subslot number specified in the message.

Recommended Action No action is required.

%IOSXE_OIR-6-REMSPA : SPA removed from [chars]/[int], interfaces disabled

Explanation The OIR facility detected the removal of a SPA from the subslot number specified in the message. The interfaces on that processor will be administratively shut down and marked as removed. The routing table will be flushed of any routes through the removed interfaces.

Recommended Action No action is required.

%IOSXE_OIR-6-INSSSFP : Smart SFP inserted in port [chars]

Explanation The OIR facility detected the insertion of TSoP/VCoP SFP in the port number specified in the message.

Recommended Action No action is required.

%IOSXE_OIR-6-REMSSFP : Smart SFP removed from port [chars]

Explanation The OIR facility detected the removal of TSoP/VCoP SFP in the port number specified in the message.

Recommended Action No action is required.

%IOSXE_OIR-6-SPARELOAD : SPA reloaded on subslot [int]/[int]

Explanation The SPA in the specified subslot is reloaded.

Recommended Action No action is required.

%IOSXE_OIR-6-CARDRECONCILE : SPA type changed on subslot [int]/[int] from [int] to [int]

Explanation The SPA in the specified subslot has been initialized, and it has been detected that it is of a different type to the SPA that was previously in this subslot.

Recommended Action No action is required.

%IOSXE_OIR-3-OIRTWICE : Subslot [int]/[int] OIR insertion/removal not paired up: [chars]

Explanation An internal OIR-related error occurred for the specified SPA.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_OIR-3-QUIESCE_FAIL : Quiesce failed for subslot [int]/[int] (error = [dec])

Explanation The RP failed to contact the SPA during failover. The SPA will be reset.

Recommended Action No action is required.

%IOSXE_OIR-3-UNQUIESCE_FAIL : Unquiesce failed for subslot [int]/[int] (error = [dec])

Explanation The RP failed to unquiesce the SPA in the specified subslot. The SPA will be reset.

Recommended Action No action is required.

%IOSXE_OIR-3-POWER_CYCLE_IMMINENT : The SPA in subslot [int]/[int] will be power cycled in [dec] seconds.

Explanation The SPA in the specified subslot will be power cycled in the amount of time specified in the error message.

Recommended Action No action is required.

%IOSXE_OIR-3-PROCMSG : Process msg send failed for process[dec]

Explanation Process message send failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_OIR-3-MODULE : Missing [chars] for [chars]

Explanation A hardware or software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_OIR-3-SPA_MDR_FAIL : Minimal Disruptive Restart process failed for SPA in subslot [int]/[int], reason [chars].

Explanation The SPA in the subslot failed Minimal Disruptive Restart. Minimal Disruptive Restart process is aborted and an attempt will be made to recover the SPA by resetting the SPA hardware.

Recommended Action No action is required.

IOSXE_PEM**%IOSXE_PEM-6-INSPEM_FM : PEM/FM [chars] inserted**

| | |
|---------------------------|--|
| Explanation | The platform detected the insertion of a power/fan module in the slot number specified in the message. |
| Recommended Action | No action is required. |

%IOSXE_PEM-6-REMPER_FM : PEM/FM [chars] removed

| | |
|---------------------------|--|
| Explanation | The platform detected the removal of a power/fan module in the slot number specified in the message. |
| Recommended Action | No action is required. |

%IOSXE_PEM-6-PEMOK : The PEM in [chars] is functioning properly

| | |
|---------------------------|---|
| Explanation | The PEM hardware may have been either switched off, or reporting a failure condition. This message indicates that the PEM is no longer either switched off, or reporting a failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_PEM-3-PEMFAIL : The PEM in [chars] is switched off or encountering a failure condition.

| | |
|---------------------------|---|
| Explanation | The PEM hardware has been either switched off, or is reporting a failure condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_PEM-6-FANOK : The fan in [chars]/[dec] is functioning properly

| | |
|--------------------|---|
| Explanation | The fan was reporting a failure condition. This message indicates that the fan is no longer reporting a failure |
|--------------------|---|

%IOSXE_PEM-6-FANOK : The fan in [chars]/[dec] is functioning properly

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_PEM-3-FANFAIL : The fan in [chars]/[dec] is encountering a failure condition

| | |
|---------------------------|---|
| Explanation | The fan's hardware is reporting that the fan is failing. This is most likely because the hardware detects the fan as spinning below the minimum speed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_PEM-3-PEMCHASFSERR : The PEM in [chars] has encountered a system software error.

| | |
|---------------------------|---|
| Explanation | The PEM's underlying software for storing PEM state is not working properly. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_PEM-3-TEMPERATURE_RAISE : Sensor [chars] has reached maximum temperature value, Leads to shutdown the system

| | |
|---------------------------|---|
| Explanation | The Temperature sensor reaching maximum threshold value working properly. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_PEM-3-FAN_FAIL_SHUTDOWN : More than one [chars] has failed, Leads to shutdown the system

| | |
|--------------------|---|
| Explanation | The Temperature sensor reaching maximum threshold value working properly. |
|--------------------|---|

%IOSXE_PEM-3-FAN_FAIL_SHUTDOWN : More than one [chars] has failed, Leads to shutdown the system

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_PEM-3-SSFP_TEMPERATURE_RAISE : [chars] transceiver temperature reached threshold value, Leads to shutdown the system

| | |
|---------------------------|---|
| Explanation | The Temperature sensor reaching maximum threshold value working properly. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_PEM-3-PEMREDLOWSTANDBY : Cannot activate [chars] configuration. Total power budget of standby power supplies is [dec]W. Standby power must be greater than or equal to the largest power supply capacity ([dec]W).

| | |
|---------------------------|---|
| Explanation | Operating in unprotected mode Should insert at least one ps in standby slots with a capacity greater than or equal to the largest capacity power supply in the system. The configuration will be applied automatically once requirements are met. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_PEM-3-PEMREDNOPWR : Cannot enable power redundancy mode [chars] because config would create mode with insufficient [chars] power

| | |
|---------------------------|---|
| Explanation | Configuration set by user is not valid as power supplies in the active slots do not contain enough power to meet the power requirements |
| Recommended Action | Insert additional power supplies and configure them to be active or configure current standby power supplies to active such that power requirements are met |

IOSXE_PLATFORM**%IOSXE_PLATFORM-3-WDC_INVALID_LENGTH : WDC length can not be determined: [dec]**

| | |
|--------------------|---------------------------------------|
| Explanation | WDC length was not retrieved properly |
|--------------------|---------------------------------------|

%IOSXE_PLATFORM-3-WDC_INVALID_LENGTH : WDC length can not be determined: [dec]

Recommended Action Check if WDC is programmed on this device

%IOSXE_PLATFORM-3-WDC_NOT_FOUND : WDC returned length: [dec]

Explanation WDC length was set to 0, which specifies probably WDC does not exist
Recommended Action Check if WDC is programmed on this device

%IOSXE_PLATFORM-3-WDC_TLV_NOT_FOUND : WDC TLV could not be read from the Quack device

Explanation WDC TLV couldn't be read from the Quack device
Recommended Action Check if WDC is programmed on this device

IOSXE_QFP

%IOSXE_QFP-2-LOAD_EXCEED : Slot: [int], QFP:[int], Load [int]#[hex]ceeds the setting threshold.

Explanation QFP Load exceeds setting threshold.
Recommended Action Monitor the traffic load.

%IOSXE_QFP-2-LOAD_RECOVER : Slot: [int], QFP:[int], Load [int]%% recovered.

Explanation QFP Load recovered.
Recommended Action No action required (normal operation).

IOSXE_RP_ALARM

%IOSXE_RP_ALARM-6-INFO : [chars] [chars] [chars]: [chars] [chars]

Explanation
Recommended Action

%IOSXE_RP_ALARM-6-INFO : [chars] [chars] [chars] [chars] [chars]

Explanation Alarm assertion or deassertion information.

Recommended Action No action is required.

%IOSXE_RP_ALARM-2-PEM : [chars] [chars] [chars]: [chars] [chars]

Explanation

Recommended Action

%IOSXE_RP_ALARM-2-PEM : [chars] [chars] [chars] [chars] [chars]

Explanation Power Entity Module missing information

Recommended Action No action is required.

%IOSXE_RP_ALARM-2-ESP : [chars] [chars] [chars]: [chars] [chars]

Explanation

Recommended Action

%IOSXE_RP_ALARM-2-ESP : [chars] [chars] [chars] [chars] [chars]

Explanation No ESP running alarm information

Recommended Action No action is required.

IOSXE_RP_CFG_NOT

%IOSXE_RP_CFG_NOT-3-MSGNOCAND : Can not construct a candidate entry for configuration export

Explanation This error usually indicates either an out of memory condition or a TDL error. If ample memory is available, then the the TDL error may indicate a version conflict with respect to configuration.

%IOSXE_RP_CFG_NOT-3-MSGNOCAND : Can not construct a candidate entry for configuration export

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_RP_CFG_NOT-3-MSGNOPWARR : Can not construct an array for configuration export

| | |
|---------------------------|---|
| Explanation | This error usually indicates either an out of memory condition or a TDL error. If ample memory is available, then the the TDL error may indicate a version conflict with respect to configuration. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-3-MSGNOUPDATEMSG : Can not construct an update message for configuration export

| | |
|---------------------------|---|
| Explanation | This error usually indicates either an out of memory condition or a TDL error. If ample memory is available, then the the TDL error may indicate a version conflict with respect to configuration. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-3-MSGNOREPLMSG : Can not construct a replace message for configuration export

| | |
|---------------------------|---|
| Explanation | This error usually indicates either an out of memory condition or a TDL error. If ample memory is available, then the the TDL error may indicate a version conflict with respect to configuration. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-2-MSGNOEXP : Can not construct a '[chars]' message for configuration export: [chars]

Explanation This error usually indicates either an out of memory condition or a TDL error. If ample memory is available, then the the TDL error may indicate a version conflict with respect to configuration.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_CFG_NOT-2-MSGTDLINITERORR : Configuration Notification messaging module initialization failed: Unable to initialize messaging: [chars]

Explanation The Configuration Notification subsystem has failed to initialize the infrastructure for messaging with the Pluggable Services Daemon. Notification of configuration to critical modules cannot proceed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_CFG_NOT-2-MSGTDLERROR : Error processing TDL message. [dec]

Explanation An unexpected condition in which IOS has received a TDL message which it can not process.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_CFG_NOT-2-MSGIPCINITERORR : Error initializing IPC queue

Explanation An unexpected condition in which IOS could not initialize a message queue to the PSD.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_CFG_NOT-3-MSGIPCTXERROR : IPC transmit error. [dec]

| | |
|---------------------------|---|
| Explanation | An unexpected condition in which IOS encountered an error trying to send a message to another process. %d |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-3-MSGOBNNULL : An unexpected condition in which IOS has received a null pointer that it expects to be non-null.

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS is trying to process a username command. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-3-MSGENCRYPTINVALID : The mcprp_cfg_notify subsystem has seen an encryption type it does not recognize. [dec]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS is trying to process a username command. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-3-NVWRITE_EXPORT : Failed to export [chars] notification: [dec]

| | |
|---------------------------|---|
| Explanation | When a 'write memory' or 'write erase' operation occurs, the Configuration Notification subsystem exports this event into the chassis file system. This message indicates that the export failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-3-MCP_DBPERSIST_STAT : Failed to read [chars] property: [dec]

| | |
|---------------------------|---|
| Explanation | When a 'reload' operation occurs, this chasfs property is read to determine the status of the DB persist/restore/delete operation. This message indicates that the read failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-3-MCP_DBPERSIST_ERROR : System configuration update could not complete

| | |
|---------------------------|---|
| Explanation | When a 'reload' operation occurs, this chasfs property is read to determine the status of the DB persist/restore/delete operation. This message indicates that the operation failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-3-MCP_FRU_LOCATION : Failed to get local FRU location: [dec]

| | |
|---------------------------|---|
| Explanation | Unable to get local FRU location |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-3-MCP_FRU_INVALID : Unknow FRU location: [chars]

| | |
|---------------------------|---|
| Explanation | Unknown FRU location |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-3-BOOT_VAR_NOT_SET : Boot variable either does not exist or buffer is too small. Keeping it blank.

| | |
|--------------------|---|
| Explanation | Boot variable either does not exist or buffer is too small. Not able to set boot variable. Ignoring it.Aborting reload. |
|--------------------|---|

%IOSXE_RP_CFG_NOT-3-BOOT_VAR_NOT_SET : Boot variable either does not exist or buffer is too small. Keeping it blank.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_RP_CFG_NOT-3-BOOT_IMAGE_NOT_FOUND : Primary image is not found, the system is going to reload as per user request.

| | |
|---------------------------|---|
| Explanation | Primary image which is set in boot statement either does not exist or not found. Primary image is not found, it should prompt the user to see if they wish to proceed. Aborting reload. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_CFG_NOT-6-IOX_SERVICE_NOTSUPPORTED : IOx service not supported.

| | |
|---------------------------|--|
| Explanation | IOx service is not supported in this platform currently. This may be either due to the feature unavailability or due the current inadequate license level of the system. |
| Recommended Action | |

IOSXE_RP_DPIDB

%IOSXE_RP_DPIDB-3-IDXBADRANGE : Datapath IDB index [dec] is not in a valid range

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred as the index of a datapath IDB is not valid. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-IDXALLOCFAILED : Datapath IDB index allocation failed: [chars]

Explanation An unexpected condition has occurred as all the available of datapath IDB indices are used.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-IDXINSERTFAILED : Insertion of datapath IDB index [dec] into database failed

Explanation An unexpected condition has occurred that insertion of datapath IDB indices failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-IDXLOOKUPFAILED : Lookup of datapath IDB index from the database failed ([chars])

Explanation An unexpected condition has occurred that lookup of datapath IDB indices failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-IDXDELETIONFAILED : Deletion of datapath IDB index from the database failed ([chars] - [hex]) rc [dec]

Explanation An unexpected condition has occurred that deletion of datapath IDB indices failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-NOHWSUBBLOCK : HWIDB [chars] does not have a hardware subblock

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred that no hardware subblock was previously allocated for a HWIDB. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-NOSWSUBBLOCK : SWIDB [chars] does not have a software subblock

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred that no software subblock was previously allocated for a SWIDB. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-IDBBADTYPE : Datapath IDB type [dec] is not valid

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred as the type of a datapath IDB is not valid. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-IDBEXIST : Datapath IDB already exists in this mapping entry: [chars]-[dec]

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred that an attempt is made to save datapath IDB in a mapping entry filled by another. |
|--------------------|---|

%IOSXE_RP_DPIDB-3-IDBEXIST : Datapath IDB already exists in this mapping entry: [chars]-[dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-IDBNONEXIST : Datapath IDB does not exist in this mapping entry: [chars]-[dec]

Explanation Datapath IDB lookup points to empty mapping entry.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-RF : Datapath IDB RF operation failed - [chars]

Explanation Failure in some datapath ID RF activity.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-CF : Datapath IDB CF operation failed - [chars]

Explanation Failure in some datapath ID CF activity.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-RPC : Datapath IDB RPC operation failed - [chars]

| | |
|---------------------------|---|
| Explanation | Failure in some datapath ID RPC activity. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-REGISTRATION : ISSU [chars] failed for [chars]; [chars]

| | |
|---------------------------|---|
| Explanation | An ISSU registration for the set of initial capabilities and sessions failed due to the reason specified. This will have the effect of the DPIDX ISSU support being unavailable between peers. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-ISSU : [chars] [chars] failed; [chars]

| | |
|---------------------------|---|
| Explanation | An operation pertaining to the ISSU support for DPIDX failed to complete using either the CF or IPC transport context with the reason specified |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-TRANSFORM : [chars] of [chars] via [chars] failed for dpidx [int]

| | |
|---------------------------|---|
| Explanation | An attempt to either encode or decode a versioned synchronization message has failed due to an internal error encountered by the ISSU component. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-RECEIVE : Message via [chars] is [chars]

Explanation An attempt to receive and process a versioned negotiation or synchronization message has failed due to an internal error being detected by the information received from the IPC or CF components.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-TRANSMIT : Unable to send via [chars] [chars] [chars] [chars]; [chars]

Explanation An attempt to send a versioned negotiation or synchronization message has failed due to an internal error encountered by the IPC or CF components.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-NEGOTIATION : Failed to start ISSU [chars] session negotiation; [chars]

Explanation The ISSU negotiation with the peer failed to start for either the CF or IPC transport with the reason specified.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-6-READY : [chars] peer not ready, discarding [chars]

Explanation The synchronization attempt for the message has determined that the transport has lost communication with its peer. This is a normal situation which indicates that the standby route-processor is currently out of service implying a simplex redundancy mode.

Recommended Action

%IOSXE_RP_DPIDB-6-RELOAD : [chars], reloading [chars]

Explanation A synchronization attempt between the active and standby RP peers has failed with the reason indicated. The standby peer is reloaded in an attempt to resynchronize when operating in a stateful redundant mode.

%IOSXE_RP_DPIDB-6-RELOAD : [chars], reloading [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_RP_DPIDB-3-DECODE : Decode via [chars] of [chars] failed

| | |
|---------------------------|---|
| Explanation | A message of the transport and type described failed in its attempt to be decoded on the standby. The resultant action taken by the standby route processor is an attempt to resynchronize. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-PROGRESSION : Unable to inform RF of bulk sync completion; [chars]

| | |
|---------------------------|---|
| Explanation | The active route processor has sent a notification to the standby to inform of the completion of the bulk synchronization of the DPIDB configuration. The standby has failed to respond to the active informing that it received the notification noting the reason for the failure. The resultant action taken by the standby route processor is an attempt to resynchronize. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-BULK_SYNC : Failed to send [chars] information to peer

| | |
|---------------------------|---|
| Explanation | The bulk synchronization of the DPIDB configuration to the standby RP has failed to complete successfully; DPIDB has therefore taken the action which will result in a reload of the peer in order to once more attempt to successfully synchronize the configuration state which may have failed initially to a transient condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-DYN_SYNC : Failed to process [chars] dynamic state

| | |
|---------------------------|--|
| Explanation | The incremental synchronization of the DPIDX configuration to the standby RP has failed to complete successfully. This implies that the configuration state between the active and standby RP is inconsistent. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show interfaces command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-6-TIMEOUT : Bulk sync is flow controlled by [chars]

| | |
|---------------------------|---|
| Explanation | The bulk synchronization of the DPIDX configuration to the standby RP has encountered a flow control condition which has effected a timeout awaiting the condition to clear. This will result in a reload of the standby RP to allow the bulk synchronization to restart. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-IDBNOTVAI : Invalid API call for [chars]

| | |
|---------------------------|---|
| Explanation | Failure in an internal API |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-NULLTIMER : NULL timer

| | |
|--------------------|-----------------|
| Explanation | A timer is NULL |
|--------------------|-----------------|

%IOSXE_RP_DPIDB-3-NULLTIMER : NULL timer

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-LIST : List [chars] failed for [chars]

Explanation List enqueue or removal failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-FASTNOTIFY : Fast notify failed for [chars]

Explanation A fast notify message failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show interface** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-DOWNLOADFAIL : Unable to download [chars] message to [chars]

Explanation An unexpected condition has occurred which resulted in a configuration not being sent to the reported process.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_DPIDB-3-FRRDLFLOWIDDELETIONFAILED : Deletion of fast-reroute flow ID with manager failed

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred that deletion of fast-reroute flow ID. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show interface command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-EFPSTATSFAILED : EFP stats message data get error: ([dec]) for EFP [int] on [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected error occurred extracting fields from an EFP stats message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_DPIDB-3-MTU_ALLOC_FAIL : No hardware resources for [int] byte MTU on [chars]

| | |
|---------------------------|---|
| Explanation | We reached to the threshold of maximum supported unique MTU on this platform. |
| Recommended Action | No action is required. |

%IOSXE_RP_DPIDB-3-IP_MTU_ALLOC_FAIL : No hardware resources for [int] byte IP MTU on [chars]

| | |
|---------------------------|--|
| Explanation | We reached to the threshold of maximum supported unique IP MTU on this platform. |
| Recommended Action | No action is required. |

IOSXE_RP_IF_FLOW_IDS

%IOSXE_RP_IF_FLOW_IDS-3-NO_BUFF_FOR_SYNC : The Checkpoint Facility reported the error [chars] during a request for a buffer length of [dec]. This [chars] CF client has failed to synchronize a transaction to the Standby RP.

| | |
|--------------------|--|
| Explanation | This error indicates that the buffer management within the Checkpoint Facility has either run out of buffers, or has some other problem. If this occurs during Bulk Sync then Bulk Sync will terminate without completing. Otherwise the incremental Sync will fail. |
|--------------------|--|

%IOSXE_RP_IF_FLOW_IDS-3-NO_BUFF_FOR_SYNC : The Checkpoint Facility reported the error [chars] during a request for a buffer length of [dec]. This [chars] CF client has failed to synchronize a transaction to the Standby RP.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-BUFF_OFFSET_NULL : Unable to utilize the memory buffer provided by the Checkpoint Facility. This [chars] CF client has failed to Bulk Sync.

Explanation This error indicates the Checkpoint Facility is having problems recognizing its own buffer layout. If this occurs during Bulk Sync then Bulk Sync will terminate without completing. Otherwise the incremental Sync will fail.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-CF_SEND_BULK_NONBLOCKED : The Checkpoint Facility reported the error [chars] while attempting to send a message. Bulk Sync of this [chars] CF client is terminating.

Explanation This error indicates the Checkpoint Facility has internal problems related to IPC, and cannot perform a non-blocked send operation.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-DEFERRED_DURING_BULK_SYNC : Encountered error [chars] while trying to place an [chars] transaction on the Deferred list during Bulk Sync for the [chars] CF client.

Explanation Unable to cache a deferred transaction while Bulk Sync is underway. This can adversely impact SSO state on the Standby RP.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-CF_SEND_INCR_NONBLOCKED : The Checkpoint Facility reported the error [chars] while attempting to send a non-blocked message. The Incremental Sync transaction for this [chars] CF client cannot be sent to the Standby RP.

Explanation This error indicates the Checkpoint Facility has internal problems related to IPC.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-6-CFPEER_CANNOT_RECV : The Checkpoint Peer is not ready to receive messages. The Incremental Sync transaction for this [chars] CF client will not occur.

Explanation This error indicates the Checkpoint Facility has signalled the peer has gone away.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-SEND_FAIL_RELOAD : Checkpoint Facility Failed to send a [chars] transaction for this [chars] CF client. Reloading the Standby RP.

Explanation This indicates the underlying Checkpoint Facility could not deliver a message sent from the active RP to the standby RP. The process will automatically reload the standby RP.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-4-DEF_LIST_REMOVE : Failed to remove one entry from the Deferred Sync list, for the [chars] CF client.

Explanation An unexpected condition occurred during list maintenance.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-CF_CANNOT_REGISTER : The call to add this [chars] CF client to the Checkpoint Facility failed with the error [chars]. This client is unable to proceed and will not be registered.

| | |
|---------------------------|---|
| Explanation | For some reason the Checkpoint Facility will not register this client. As a result the Standby will never receive synchronized state from this CF client on the Active RP, The system is not capable of SSO and HA switchover. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_IF_FLOW_IDS-3-RF_PEER_EVENT_BUFFER : This [chars] RF client is unable to acquire an event buffer to send an RF peer message, the error [chars] was returned.

| | |
|---------------------------|---|
| Explanation | This indicates the RF facility is unable to provide a message buffer needed to communicate with the RF peer. As a consequence the RF progression may be compromised. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_IF_FLOW_IDS-3-RF_SEND_PEER : This [chars] RF client encountered error [chars], when attempting to send a peer message.

| | |
|---------------------------|---|
| Explanation | This indicates the RF facility could not send a message to the RF peer. As a consequence the RF progression may be compromised. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_IF_FLOW_IDS-3-RF_PROCESS_FAILED : This [chars] RF client Failed to create the Bulk Sync Process.

| | |
|--------------------|---|
| Explanation | The background process which performs the RF Bulk Sync failed to be created. As a consequence the Standby will never obtain the relevent SSO state to enable HA switchover. |
|--------------------|---|

%IOSXE_RP_IF_FLOW_IDS-3-RF_PROCESS_FAILED : This [chars] RF client Failed to create the Bulk Sync Process.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-RF_POOL_REGEN_PROCESS_FAILED : The [chars] RF client Failed to create the Id Pool Regeneration process.

Explanation The background process which performs Flow Control Id Pool regeneration failed to start. As a consequence the Standby will never obtain the relevant SSO state to enable HA switchover.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-RF_POOL_REGEN_ERROR : Id Pool Regeneration encountered error code [dec], cannot switchover.

Explanation The background process which performs Flow Control Id Pool regeneration encountered an error. As a consequence the Standby does not have valid Flow Id pools and cannot progress to Active state.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-RF_SPA_ID_REGEN_ERROR : Error code [dec] encountered trying to regenerate spa [chars] identifier in slot/subslot ([int]/[int])

Explanation The background process which performs Flow Control Id Pool regeneration encountered an error. As a consequence the Standby does not have valid Id pools and cannot progress to Active state.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-RF_IF_ID_REGEN_ERROR : Error code [dec] encountered trying to regenerate interface flow-control identifier. If id [int] resides in slot/subslot/port ([int]/[int]/[int]).

Explanation The background process which performs Flow Control Id Pool regeneration encountered an error. As a consequence the Standby does not have valid Id pools and cannot progress to Active state.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-RF_ADD_CLIENT_FAILED : The RF facility failed to add this [chars] client, reason given is [chars].

Explanation This indicates the RF facility could not add the client.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-REGISTRATION : ISSU [chars] failed for [chars]; [chars]

Explanation An ISSU registration for the set of initial capabilities and sessions failed due to the reason specified. This will have the effect of the SPA MARMOT ID ISSU support being unavailable between peers.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-ISSU_OP : [chars] [chars] failed; [chars]

Explanation An operation pertaining to the ISSU support for SPA MARMOT IDs failed to complete using the CF transport context with the reason specified

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-TRANSFORM : [chars] of [chars] via CF failed

Explanation An attempt to either encode or decode a versioned synchronization message has failed due to an internal error encountered by the ISSU component.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-TRANSMIT : Unable to send via [chars] [chars] [chars] [chars]; [chars]

Explanation An attempt to send a versioned negotiation or synchronization message has failed due to an internal error encountered by the CF component.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-3-NEGOTIATION : Failed to start ISSU [chars] session negotiation; [chars]

Explanation The ISSU negotiation with the peer failed to start for either the CF or IPC transport with the reason specified.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_IF_FLOW_IDS-6-READY : [chars] peer not ready, discarding [chars]

Explanation The synchronization attempt for the message has determined that the transport has lost communication with its peer. This is a normal situation which indicates that the standby route-processor is currently out of service implying a simplex redundancy mode.

Recommended Action

%IOSXE_RP_IF_FLOW_IDS-3-DECODE : Decode via CF of [chars] failed

Explanation A message sent via the CF transport failed in its attempt to be decoded on the standby. The resultant action taken by the standby route processor is an attempt to resynchronize.

%IOSXE_RP_IF_FLOW_IDS-3-DECODE : Decode via CF of [chars] failed

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_RP_IF_FLOW_IDS-3-RECEIVE : Client reports message CF is [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to receive and process a versioned negotiation or synchronization message has failed due to an internal error being detected by the information received from the CF component. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_RP_MGMTE through IOSXE_TIMESTAMP_ENGINE

- [IOSXE_TIMESTAMP_ENGINE](#)

IOSXE_RP_MGMTE

%IOSXE_RP_MGMTE-3-MSGCREATENULL : Cannot allocate [chars] TDL message

| | |
|--------------------|---|
| Explanation | An unexpected condition in which IOS cannot allocate TDL message for Management ethernet. |
|--------------------|---|

%IOSXE_RP_MGMTE-3-MSGCREATENULL : Cannot allocate [chars] TDL message

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_RP_MGMTE-3-MSGDLINITERORR : Management ethernet interface messaging module initialization failed: Unable to initialize messaging: [chars]

| | |
|---------------------------|---|
| Explanation | The Management ethernet interface subsystem has failed to initialize the infrastructure for messaging with the Pluggable Services Daemon. Configuration of management ethernet modules cannot proceed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_MGMTE-3-PROCESS_CREATE_FAIL : Management ethernet statistics process creation failed

| | |
|---------------------------|---|
| Explanation | Can not create IOS process for RP management ethernet port statistics collection |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_MGMTE-3-MGMT_MAC_MODIFY_FAIL : Management ethernet interface mac address modification failed

| | |
|---------------------------|---|
| Explanation | Can not override mac-address for management ethernet interface |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_RP_NV**%IOSXE_RP_NV-3-NV_ACCESS_FAIL : Initial read of NVRAM contents failed**

| | |
|---------------------------|--|
| Explanation | This error happens when the contents of the NVRAM cannot be read during system initialization. The failure may be due to data corruption of the NVRAM contents. The initial configuration dialog will be entered and the configuration must be restored. |
| Recommended Action | LOG_STD_ACTION |

%IOSXE_RP_NV-3-BACKUP_NV_ACCESS_FAIL : Initial read of backup NVRAM contents failed

| | |
|---------------------------|--|
| Explanation | This error happens when the contents of the backup NVRAM cannot be read during system initialization. The failure may be due to data corruption of the backup NVRAM contents. The primary nvram contents will be backed up here again. |
| Recommended Action | LOG_STD_ACTION |

IOSXE_RP_SPA**%IOSXE_RP_SPA-3-SEND_NGIO_MSG_FAIL : NGIO Module message send failed for slot [dec] subslot [dec]**

| | |
|---------------------------|---|
| Explanation | Failed to send ngio msg to iomd. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_SPA-3-MAC_FILTER_ADD_FAIL : All the available [dec] mac filters for [chars] have been consumed. Failed to add [enet] for interface [chars]

| | |
|---------------------------|---|
| Explanation | The hardware cannot support any more filters. |
| Recommended Action | The interface configuration should be reworked to not cross the limit set by the hardware. If the error is still seen please LOG_STD_SH_TECH_ACTION |

%IOSXE_RP_SPA-3-SEND_L2_HDR_MSG_FAIL : slot [dec] subslot [dec]

| | |
|--------------------|--|
| Explanation | Failed to send ngio L2 header to iomd. |
|--------------------|--|

%IOSXE_RP_SPA-3-SEND_L2_HDR_MSG_FAIL : slot [dec] subslot [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-3-NO_HOST_INFO : slot [dec] subSlot [dec], spaType [hex]

Explanation Failed to get information about the host linecard.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-3-MAX_SPA : Power to IPSEC-SPA-2G in [chars] is denied because it has exceeded the number allowed([dec])

Explanation The number of IPSEC-SPA-2G in a chassis is limited. This message is displayed when the number of IPSEC-SPA-2G in the chassis has exceeded this limit.

Recommended Action Use only the number of supported IPSEC-SPA-2G

%IOSXE_RP_SPA-3-SPA_NO_HOST_INFO : slot [dec] subSlot [dec], PID [chars]

Explanation Failed to get information about the host linecard.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-3-HWIDB_FAILURE : Creation: slot [dec] subSlot [dec] port [dec] vc [dec]

Explanation Failed to create an interface hwidb.

%IOSXE_RP_SPA-3-HWIDB_FAILURE : Creation: slot [dec] subSlot [dec] port [dec] vc [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_RP_SPA-3-INVALID_PORT_NUM : slot=[dec] port=[dec], hwidbType=[hex], max_port_num=[dec], LcType=[hex]

| | |
|---------------------------|---|
| Explanation | The port number is out of range. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_SPA-4-SPA_RESP_CMD_MISMATCH : [chars]: Expecting response to interface configuration command [int] but received response to command [int].

| | |
|---------------------------|---|
| Explanation | An internal synchronization error occurred while configuring the interface. The configuration may not have succeeded. |
| Recommended Action | Check that the running configuration for the interface is correct. If this message occurred on the standby, try reloading the standby to ensure that its configuration is in sync. If this message is repeatable, please LOG_STD_SH_TECH_ACTION |

%IOSXE_RP_SPA-6-CARDRELOAD : Module [int] reload due to SPA insert in [int]/[int].

| | |
|---------------------------|---|
| Explanation | When inserting a SPA on this carrier card, the card is reset. |
| Recommended Action | No action is required. |

%IOSXE_RP_SPA-6-CTRLRSWITCH : switching controller type from [chars]([dec]) to [chars]([dec]) for subslot [int]/[int].

| | |
|---------------------------|--|
| Explanation | When IOSXE-SIP40 is inserted in the slot previously occupied by IOSXE-SIP10 or vice-versa the controller type of the card is overwritten to reflect the current SIP. |
| Recommended Action | No action is required. |

%IOSXE_RP_SPA-4-SPA_CMD_NO_RESP : [chars]: No response for interface configuration command [int]

Explanation A timeout occurred while RP was waiting for a response from line card. This may happen due to line card CPU being too busy to respond to the command.

Recommended Action No action is required.

%IOSXE_RP_SPA-3-IPCALLOCFAIL : Failed to allocate IPC buffer [chars]

Explanation The RP failed to allocate a buffer for communication with a SPA

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-3-DPIDX_LKUP_FAIL : Failed to retrieve datapath identifier for interface [chars]

Explanation The SPA driver is not able to retrieve the datapath identifier for the interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%IOSXE_RP_SPA-3-FLOWID_ALLOC_FAIL : Failed to allocate a flow control identifier for interface [chars]

Explanation The SPA driver is not able to allocate the datapath flow control identifier for the interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%IOSXE_RP_SPA-3-FLOWID_RELEASE_FAIL : Failed to release a flow control identifier for interface [chars] (status = [dec])

Explanation The SPA driver is not able to release the datapath flow control identifier for the interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%IOSXE_RP_SPA-3-VC_PROV_FAIL : Failed to provision interface [chars]

Explanation The SPA driver is not able to provision the interface specified in the message. Verify that the SPA hardware is not provisioned above the supported limit. Otherwise, this indicates a hardware error.

Recommended Action No action is required.

%IOSXE_RP_SPA-3-CI_UPDATE_FAIL : Failed to update connection identifier for interface [chars]

Explanation The SPA driver is not able to update the datapath connection identifier for the interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%IOSXE_RP_SPA-3-NULL_DATA_STRUCTURE : common_str_empty_str

Explanation A SPA driver is not able to retrieve the data structure mentioned in the message. This indicates a software error.

Recommended Action No action is required.

%IOSXE_RP_SPA-3-HWIDB_INIT_FAIL : Failed to initialize data structure for SPA port [dec]/[dec]/[dec]

Explanation A SPA driver was not able to properly initialize a data structure mentioned in the message. This indicates a software error.

Recommended Action No action is required.

%IOSXE_RP_SPA-3-ERROR : common_str_empty_str

Explanation This message can take many forms. It provides information about a software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-4-LCLOG_TOOLONG : Message too long from slot [int]/[int]: [int] bytes

Explanation The SPA module passed down a logger message that is too long for the RP to handle.

%IOSXE_RP_SPA-4-LCLOG_TOOLONG : Message too long from slot [int]/[int]: [int] bytes

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_RP_SPA-4-LCLOG_PARSE_ERR : Error parsing logger message: [chars] from subslot [int]/[int]

| | |
|---------------------------|---|
| Explanation | The SPA module passed down a logger message that could not be parsed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_SPA-3-BAD_IFCOMTYPE : Bad ifcom message type=[int]

| | |
|---------------------------|---|
| Explanation | A SPA module passed down a message that the RP software was not prepared to handle. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_SPA-4-IPCFAILED : IPC failed to send RPC message to SPA module

| | |
|---------------------------|---|
| Explanation | The RP failed to send an RPC message via IPC to a SPA module. |
| Recommended Action | No action is required. |

%IOSXE_RP_SPA-3-FOREVER : cmd [int] to [chars] (slot [int]/[int]) took [int]secs, done [hex]

| | |
|---------------------------|---|
| Explanation | A CCB command from the RP to a SPA module took longer than expected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_SPA-4-SEMAHOG : Process [dec] ([chars]) hogging [chars]! calling proc [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The RP waited too long for a reply to a command sent to a SPA module. |
| Recommended Action | No action is required. |

%IOSXE_RP_SPA-3-IPCPORTFAIL : Failed to open IPC port '[chars]' with error [chars]

| | |
|---------------------------|---|
| Explanation | The RP failed to open a port for communication with a SPA module. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_SPA-4-CCB_PLAYBACK_ERROR : CCB playback failed for slot [dec].

| | |
|---------------------------|--|
| Explanation | The High Availability component for SPA modules failed to synchronize some new state information for the specified slot. |
| Recommended Action | Reload the standby supervisor module to force a fresh bulk synchronization. If this error recurs, LOG_STD_ACTION |

%IOSXE_RP_SPA-4-CCB_RECORD_ERROR : CCB record failed for slot [dec].

| | |
|---------------------------|---|
| Explanation | The High Availability component for SPA modules failed to record some new state information for the specified slot. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_SPA-3-IPCSENDFAIL : Failed to send IPC message [chars]

| | |
|---------------------------|---|
| Explanation | The RP failed to send a message to a SPA module. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_SPA-3-IFCFG_NO_UNIQUE_KEY : No unique-key generator registered for interface configuration command [int].

Explanation The High Availability component for SPA modules is unable to properly synchronize state information for the current configuration.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-3-IFCFG_FOREVER : to [chars] (slot [int]/[int]) took [int]secs, ret_val [int]

Explanation A interface config command from the RP to a SPA module took longer than expected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-4-IFCFG_CMD_TIMEOUT : Interface configuration command ([hex]) to slot [int]/[int] timed out

Explanation The RP sent an configuration command to the slot specified in the error message and received no confirmation for the command.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-3-IFCFG_CMD_NOT_OWNER : Process '[chars]' waiting for interface configuration command ([hex]) to slot [int]/[int] without acquiring lock owned by process '[chars]'

Explanation A process on the RP sent an configuration command to the slot specified in the error message and a different process waited for the result. This could cause incorrect line card configuration states.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-4-IFCFG_DFLT_LIST_ERROR : For Interface Configuration command [int], default retval list search resulted [hex] for slot [int]/[int]

| | |
|---------------------------|--|
| Explanation | The High Availability component for SPA modules failed to synchronize some new state information for the specified slot. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show platform redundancy if-config default-retvals) |

%IOSXE_RP_SPA-4-IFCFG_PLAYBACK_ERROR : Interface Configuration command [int] playback failed for slot [int]/[int].

| | |
|---------------------------|---|
| Explanation | The High Availability component for SPA modules failed to synchronize some new state information for the specified slot. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_SPA-4-IFCFG_RECORD_ERROR : Interface Configuration command [int] record failed for slot [int]/[int].

| | |
|---------------------------|---|
| Explanation | The High Availability component for SPA modules failed to record some new state information for the specified slot. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_SPA-4-INCR_CFG_SYNC_FAIL : [chars] incremental running-config sync for [[dec]/[dec]] failed - [chars]([dec]) , Reload Standby

| | |
|---------------------------|--|
| Explanation | The specified IOSXE incremental running-config sync failed |
| Recommended Action | Power cycle the redundant supervisor |

%IOSXE_RP_SPA-3-IPCPORT : Failed to [chars] IPC port '[chars]', error [chars]

| | |
|---------------------------|---|
| Explanation | The Linecard failed to create a port for communication with the Route Processor (IOSXE-RP). |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%IOSXE_RP_SPA-3-PROGRESSION : Unable to inform RF of bulk sync completion; [chars]

Explanation The standby has failed to notify the active that its bulks synchronization of the SPA TSM has completed. The resultant action taken by the standby route processor is an attempt to resynchronize.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-3-VC_FLOWID_ALLOC_FAIL : Failed to allocate a flow control identifier for VC [dec] under interface [chars]

Explanation The SPA driver is not able to allocate the datapath flow control identifier for the VC/interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%IOSXE_RP_SPA-3-VC_INGID_ALLOC_FAIL : Failed to allocate a ingress identifier for VC [dec] interface [chars]

Explanation The SPA driver is not able to allocate the datapath ingress identifier for the VC/interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%IOSXE_RP_SPA-4-SPA_RESP_CMD_ERR : [chars]: Received response to interface configuration command [chars] with wrong return value [int].

Explanation An internal error occurred while configuring the interface. The configuration may not have succeeded.

Recommended Action Check that the running configuration for the interface is correct. If this message is repeatable, please LOG_STD_SH_TECH_ACTION

%IOSXE_RP_SPA-3-FRR_CFG_REC_FAIL : Failed to record fast reroute configuration on [chars]: [chars]

Explanation This message is displayed when a fast reroute configuration is not properly recorded.

%IOSXE_RP_SPA-3-FRR_CFG_REC_FAIL : Failed to record fast reroute configuration on [chars]: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_RP_SPA-3-MISSING_SPA_PKG_ERR : sipspa[chars] package is not installed for slot = [dec] and subslot = [dec], SPA bootup failed.

| | |
|---------------------------|---|
| Explanation | This message is displayed when attempting to bootup a SPA without installing a subpackage required for the same. |
| Recommended Action | Download the sub-package required for the affected SPA from the Cisco CCO software download site and install the same. This SPA can be booted in sub-package mode only. Please refer to the Cisco ASR platform documentation for obtaining and installing sub-packages. |

%IOSXE_RP_SPA-3-UNSUPPORTED_SRVCS_SPA : Service SPA ([hex]) in [dec]/[dec] is not supported. SPA bootup failed.

| | |
|---------------------------|---|
| Explanation | This message is displayed when attempting to bootup any service SPA in router running non K9 image, i.e., non-crypto image. |
| Recommended Action | Download the K9 IOS XE sub-packages and the required sub-package for the given service SPA from the Cisco CCO software download site and install the same. This SPA can be booted in sub-package mode only. Please refer to the Cisco ASR platform documentation for obtaining and installing sub-packages. |

%IOSXE_RP_SPA-3-MISSING_SPA_PKG_WARN : sipspa[chars] package is not installed in standby for slot = [dec] and subslot = [dec].

| | |
|---------------------------|---|
| Explanation | This message is displayed in standby console when attempting to bootup or restart or reload a WMA SPA without installing a subpackage in the standby RP, although the SPA is or will be operational due to prior wma spa package installation in active RP. If switchover takes place the WMA SPA will still be operational. But any subsequent soft or hard oir of the SPA will fail due to missing sub package required to boot up the SPA. Hence it is recommended to complete the wma spa package installation in standby also before switchover or immediately after switchover. |
| Recommended Action | Download the sub-package required for the affected SPA from the Cisco CCO software download site and install the same for the standby RP as is done on active RP. Please refer to the Cisco ASR platform documentation for obtaining and installing sub-packages. |

%IOSXE_RP_SPA-3-SPA_WRONGTYPE : Mismatched SPA type ([dec]) in slot [dec]/[dec]. Expected type [dec]. Use 'no card [dec]/[dec]' command to override preprovisioning and update card type.

Explanation The SPA inserted does not match the currently provisioned SPA type.

Recommended Action Replace wrong SPA with currently provisioned SPA type, or type 'no card' to allow new card type to be discovered.

%IOSXE_RP_SPA-6-MEDIA_AUTOFAILOVER : Media Fail over from ([chars]) to ([chars])

Explanation Gige Media Failover.

Recommended Action This is informational message, Not an error message. Use 'show interface gig' to see the current active media type.

%IOSXE_RP_SPA-3-SONET_ALARM_PROC_ERR : [chars] Error has occurred while processing in the sonet alarm-proc

Explanation Either free/create of the memory failed in SONET alarm proc

Recommended Action

%IOSXE_RP_SPA-3-LIC_REQ_FAILED : [int]/[int]/[int]: Interface enable not allowed - license request failed , err=[hex]

Explanation A 10 Gig License is required to enable this port. License request has been denied by license manager

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-3-LIC_REL_FAILED : [int]/[int]/[int]: Failed to release license feature [chars], handle=[hex], err=[hex]

Explanation License release has been denied by license manager

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_SPA-3-LIC_REG_FAILED : [int]/[int]/[int]: Failed to register license feature [chars], err=[hex]

| | |
|---------------------------|---|
| Explanation | License registration has been denied by license manager |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_RP_VTYMGT**%IOSXE_RP_VTYMGT-3-MSGDISPATCHNULL : Received NULL TDL message**

| | |
|---------------------------|---|
| Explanation | An unexpected condition in which IOS has received a NULL TDL message for Vty Management. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_VTYMGT-3-MSGDISPATCH : Unable to dispatch received TDL messages for Vty Management

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS is trying to dispatch to the TDL message handler functions for received TDL messages for Vty Management. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_VTYMGT-3-MSGMISSINGFIELD : Missing field '[chars]' in TDL Vty Management message '[chars]' received

| | |
|---------------------------|---|
| Explanation | A message missing a required field was received for Vty Management |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_VTYMGT-3-MSGINVALIDFIELDINT : Invalid field '[chars]' in TDL message '[chars]' received: value '[int]' for Vty Management

| | |
|---------------------------|---|
| Explanation | A message with an invalid field value was received for Vty Management |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_VTYMGT-3-MSGINVALIDFIELDSTR : Invalid field '[chars]' value '[chars]' in TDL message '[chars]' received for Vty Management

| | |
|---------------------------|---|
| Explanation | A message with an invalid field value was received for Vty Management |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_VTYMGT-3-MSGERROR : Error '[dec]' handling a received TDL message '[chars]' for Vty Management: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS is processing a received Vty Management TDL message |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_VTYMGT-3-MSGBUILDERROR : Error '[dec]' building TDL Vty Management message '[chars]': [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS is building a TDL response message for Vty Management |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_RP_VTYMGT-3-MSGMARSHALERROR : Error '[dec]' marshaling TDL Vty Management message '[chars]': [chars]

Explanation An unexpected condition has occurred while IOS is marshaling TDL response message for Vty Management

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_VTYMGT-3-MSGENQUEUEERROR : Error queueing TDL Vty Management message '[chars]'

Explanation An unexpected condition has occurred when IOS attempted to queue a TDL response message for Vty Management

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_VTYMGT-3-MSGBIPCERR : Unable to process received BIPC messages for Vty Management, error: [chars]

Explanation An unexpected condition has occurred while IOS was trying to process a received BIPC message for Vty Management.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_VTYMGT-3-MSGBIPCBUFFER : Unable to acquire a BIPC buffer of length [dec] for sending messages.

Explanation A message was to be sent by IOS, but no BIPC buffer was available. The message to be sent has been discarded and the associated operation failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_VTYMGT-3-MSGEXTAPPUPDATE : Unable to update external application data for line '[dec]'

Explanation An attempt to update the external application for a line failed unexpectedly. The line update failed and if the line number specified is valid, the line was released.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_VTYMGT-3-MSGVTYSVCINIT : Unable to initialize the Vty Management service listen port

Explanation The platform IPC services failed to register the Vty Management service's need for a listen port. The Vty Management service will be unable to process requests. IOS services will be unavailable to external access methods.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_VTYMGT-3-MSGVTYCOUNT : Invalid vty count [dec] detected on initialization

Explanation Upon initialization, the Vty Management subsystem checks that the number of available vtys for the platform is valid.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_RP_VTYMGT-3-SET_ACCESS_FAIL : Installing LIIN interface access control failed

Explanation This error happens when the Vty Management subsystem failed to set the access control function for the LIIN, possibly due to IOS out of memory or corruption. Persistent access features into IOS will not work.

Recommended Action LOG_STD_ACTION

IOSXE_SERVICE_ENGINE**%IOSXE_SERVICE_ENGINE-3-MSGOPENFAIL : Cannot open interface [chars] ([dec])**

| | |
|---------------------------|---|
| Explanation | During the creation of a Service-Engine interface, it is necessary to program the system parameters in the driver. The driver cannot be opened. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SERVICE_ENGINE-3-MSGSETFAIL : Set id on interface [chars] ([dec])

| | |
|---------------------------|---|
| Explanation | During the creation of a Service-Engine interface, it is necessary to program the system parameters in the driver. The failed to accept the programming. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SERVICE_ENGINE-3-MSGINITFAIL : Initialization of interface [chars] failed

| | |
|---------------------------|---|
| Explanation | The initialization of the interface mentioned in the error message has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_SIP_SPA**%IOSXE_SIP_SPA-3-HWIDB_FAILURE : Creation: port [dec] vc [dec]**

| | |
|---------------------------|---|
| Explanation | Failed to create a hwidb. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-3-DEVICE_ERROR : subSlot [dec], spatype [hex]. Device error: [chars]

| | |
|---------------------------|---|
| Explanation | An error related to a device on the SPA is detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-3-ISR_RC_ERROR : ISR return code out of range. rc=[dec]

| | |
|---------------------------|---|
| Explanation | The ISR error return code is out of range. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-3-SPA_INTF_ID_CC_ALLOC_FAILED : Failed to allocate interface identifiers for SPA ([chars]) in slot/bay: [int]/[int]

| | |
|---------------------------|---|
| Explanation | Failed to get CC buffer and flow control identifiers for the SPA in the specified subslot. Traffic cannot flow through the SPA under this failure condition. This can happen if the system runs out of available identifiers. |
| Recommended Action | Try to reduce the number of interfaces configured in the system either by physically removing the SPAs or by changing the system configuration. |

%IOSXE_SIP_SPA-4-SPABUS : Subslot [dec], [chars] SPA BUS access failed. timeout=[int] err=[int] par=[int] err_c=[hex] addr=[hex] data =[hex]

| | |
|---------------------------|---|
| Explanation | SPABUS has reported an error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-4-SPABUS2 : Subslot [dec] SPA BUS access failed. No SPA present error

| | |
|--------------------|-------------------------------|
| Explanation | SPABUS has reported an error. |
|--------------------|-------------------------------|

%IOSXE_SIP_SPA-4-SPABUS2 : Subslot [dec] SPA BUS access failed. No SPA present error

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_SIP_SPA-6-OIR : Bay [dec] [chars] changed to [chars]

| | |
|---------------------------|------------------------|
| Explanation | SPA OIR Sequence |
| Recommended Action | No action is required. |

%IOSXE_SIP_SPA-4-MAX_BANDWIDTH : Total SPA bandwidth exceeds line card capacity of [int] Mbps

| | |
|---------------------------|--|
| Explanation | The total bandwidth of SPAs exceeds the rated capacity of this line card. |
| Recommended Action | Refer to the line card guidelines for the maximum allowed aggregated SPA bandwidth for the line card |

%IOSXE_SIP_SPA-4-MAX_BANDWIDTH_NS : Total SPA bandwidth exceeds line card capacity, full utilization of installed SPA interfaces is not supported

| | |
|---------------------------|--|
| Explanation | The total bandwidth of SPAs exceeds the rated capacity of this line card. |
| Recommended Action | Refer to the line card guidelines for the maximum allowed aggregated SPA bandwidth for the line card |

%IOSXE_SIP_SPA-3-POWER : Bay [dec] 12V power is [chars]

| | |
|---------------------------|---|
| Explanation | SPA 12V power fault indicator |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-3-SPI4_INIT_FAILURE : Bay [dec] initialization failure

| | |
|---------------------------|--|
| Explanation | Failed to create SPI4 subblock |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, LOG_STD_ACTION |

%IOSXE_SIP_SPA-3-MESSAGE_ERROR : Bay [dec]: [chars]

Explanation An unexpected error has occurred.**Recommended Action** Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, LOG_STD_ACTION

%IOSXE_SIP_SPA-3-SPI4_CONFIG_FAILURE : Bay [dec], spi4 configuration failure, error [dec]

Explanation Failed to configure SPI4 interface**Recommended Action** Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, LOG_STD_ACTION

%IOSXE_SIP_SPA-3-SPI4_NOTSYNC : [chars]: Can not synchronize SPI4 bus (host: src [chars]in sync, sink [chars]in sync, spa: src [chars]in sync, sink [chars]in sync).

Explanation SPI4 bus between modular services card and SPA is not synchronized. It indicates either a not properly seated SPA, a hardware failure or an outdated ROMMON/FPGA image.**Recommended Action** Ensure that the SPA is properly seated in its subslot and reseal it if required.

%IOSXE_SIP_SPA-3-SPA_CTRL_INIT_FAILURE : Subslot [dec], spa controller initialisation failure, error [dec]

Explanation Failed to initialise SPA controller**Recommended Action** Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, LOG_STD_ACTION

%IOSXE_SIP_SPA-3-SPA_CTRL_EFC_CONFIG_FAILURE : Subslot, spa controller EFC configuration failure, error [dec]

Explanation Failed to configure SPA controller EFC**Recommended Action** Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, LOG_STD_ACTION

%IOSXE_SIP_SPA-3-FCI_NOT_SET : Bay [dec] - FCI type not set

| | |
|---------------------------|---|
| Explanation | An FCI type of zero was detected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-3-EFC_CHAN_ERR : EFC error - interface [chars], vc [dec], anyphy [dec], err_code [dec] : [chars]

| | |
|---------------------------|--|
| Explanation | Failed to configure efc channel/parameters |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, LOG_STD_ACTION |

%IOSXE_SIP_SPA-3-INVALID_ANYPHY : Bay [dec] - Invalid anyphy number [int] for vc [dec]

| | |
|---------------------------|--|
| Explanation | Interface has invalid anyphy number |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%IOSXE_SIP_SPA-3-LINKREC_ERROR : Link record error - Bay [dec] vc [dec], error code [dec]

| | |
|---------------------------|--|
| Explanation | Error processing link record structure |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%IOSXE_SIP_SPA-3-SONET_CLOCK_FAILED : SPA Sonet clock has failed (status = [hex])

| | |
|--------------------|---|
| Explanation | The SPA SONET clock has failed. SPAs that rely on the SPA SONET clock for proper operation, such as POS and ATM will be affected. |
|--------------------|---|

%IOSXE_SIP_SPA-3-SONET_CLOCK_FAILED : SPA Sonet clock has failed (status = [hex])

| | |
|---------------------------|--|
| Recommended Action | If the SPA Sonet clock does not recover, perform an OIR. LOG_STD_RECUR_ACTION |
|---------------------------|--|

%IOSXE_SIP_SPA-3-SONET_CLOCK_RECOVERED : SPA Sonet clock has recovered (status = [hex])

| | |
|--------------------|-------------------------------|
| Explanation | SPA Sonet clock has recovered |
|--------------------|-------------------------------|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%IOSXE_SIP_SPA-3-INVALID_IF : Attempted to access HWIDB for port [int] on slot [dec] subSlot [dec]

| | |
|--------------------|--|
| Explanation | The ASR1000 attempted to access the HWIDB associated with a non-existent port. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%IOSXE_SIP_SPA-3-ASR1000IPCALLOCFAIL : Failed to allocate Common IPC buffer [chars]

| | |
|--------------------|--|
| Explanation | The Carrier Card failed to allocate a buffer for communication with the Route Processor. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%IOSXE_SIP_SPA-3-CMDNOINT : HWIDB Null for command [dec], port [hex]

| | |
|--------------------|--|
| Explanation | The Route Processor passed down a port number that is unknown on the carrier card. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%IOSXE_SIP_SPA-3-EFC_FC_MAP_FAIL : Failed to update EFC flow control identifier for interface [chars] (status = [dec])

| | |
|--------------------|--|
| Explanation | The SPA driver is not able to update the datapath EFC flow control identifier for the interface specified in the message. This indicates a hardware error. |
|--------------------|--|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%IOSXE_SIP_SPA-3-EFC_PROV_FAIL : Failed to provision EFC for interface [chars] (status = [dec])

Explanation The SPA driver is not able to provision EFC for the interface specified in the message. This indicates a hardware error.

Recommended Action No action is required.

%IOSXE_SIP_SPA-3-EFC_UNPROV_FAIL : Failed to unprovision EFC for VC [chars] (status = [dec])

Explanation The SPA driver is not able to unprovision EFC for the interface specified in the message. This indicates a hardware error.

Recommended Action No action is required.

%IOSXE_SIP_SPA-3-C2W_MAIN_INIT_FAIL : Failed to initialize SPA main c2w bus for subslot [dec] (status = [dec])

Explanation The SPA driver is not able to initialize SPA main c2w. This indicates a hardware error.

Recommended Action No action is required.

%IOSXE_SIP_SPA-3-NETCLK_FAIL : Failed to [chars] SPA reference clock on [chars]

Explanation The SPA driver is not able to correctly configure the SPA reference clock on the specified interface. This indicates a hardware error.

Recommended Action No action is required.

%IOSXE_SIP_SPA-3-LVLTRTOOBIG : Loveletter length exceeds max, [int] bytes

Explanation The ASR1000-SIP line card attempted to send a large message to the Route Processor (ASR1000-RP).

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%IOSXE_SIP_SPA-3-NODISPATCH : Dispatch vector Null, cmd=[dec], dintf=[dec]

Explanation No command dispatch vector was found for the specified interface.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%IOSXE_SIP_SPA-3-BADMALUCMD2 : Unsupported MALU cmd/arg0=[hex][hex], arg1arg2=[hex][hex], hwidb=[chars]

Explanation The Route Processor (ASR1000-RP) passed down a command that the software was not prepared to handle.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%IOSXE_SIP_SPA-3-BADMALUCMD : Unsupported MALU command [dec], arg=[hex], pascb=[hex]

Explanation The Route Processor (ASR1000-RP) passed down a command that the software was not prepared to handle.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%IOSXE_SIP_SPA-3-BAD_IFCOMTYPE : Bad ifcom message type=[int]

Explanation The Route Processor (ASR1000-RP) passed down a message that the software was not prepared to handle.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%IOSXE_SIP_SPA-3-IPCSENDFAIL : Failed to send IPC message [chars]

Explanation The Linecard failed to send a message to the Route Processor (ASR1000-RP).

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%IOSXE_SIP_SPA-3-IPCALLOCFAIL : Failed to allocate IPC buffer [chars]

Explanation The SPA failed to allocate a buffer for communication with the Route Processor (ASR1000-RP).

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%IOSXE_SIP_SPA-3-IPCPORTFAIL : Failed to open IPC port '[chars]' [chars] with error [chars]

Explanation The RP failed to open a port for communication with a SPA module.

%IOSXE_SIP_SPA-3-IPCPORTFAIL : Failed to open IPC port '[chars]' [chars] with error [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_SIP_SPA-3-IPCPORT : Failed to [chars] IPC port '[chars]', error [chars]

| | |
|---------------------------|---|
| Explanation | The Linecard failed to create a port for communication with the Route Processor (ASR1000-RP). |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%IOSXE_SIP_SPA-3-FAST_NOTIFY_ERROR : Failed to send fast notification to [chars] for [chars] [chars].

| | |
|---------------------------|---|
| Explanation | The SPA driver failed to deliver a fast notification. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-6-LOGGERMSGTOOBIG : Logger message length ([int] bytes) exceeds the maximum allowed size

| | |
|---------------------------|---|
| Explanation | The carrier card attempted to send a large message to the Route Processor |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-3-FRR_CFG_FAIL : Failed to configure fast reroute on [chars]: [chars].

| | |
|---------------------------|---|
| Explanation | The SPA driver failed to configure fast rerouting on an interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-3-APS_CFG_FAIL : Failed to configure APS on [chars]: [chars].

| | |
|---------------------------|---|
| Explanation | The SPA driver failed to configure APS on an interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-3-APS_PGP_FAIL : APS PGP Message send failed toslot/tobay [dec]: [dec].

| | |
|---------------------------|---|
| Explanation | APS PGP between working and protect has failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SIP_SPA-3-MDR_BACKUP_FAIL : Minimal Disruptive Restart backup failed for slot [int], bay [int]; reason ([chars])

| | |
|---------------------------|---|
| Explanation | The SPA driver could not backup data required for Minimal Disruptive Restart process. The Minimal Disruptive Restart process for the SPA may be terminated as a consequence. |
| Recommended Action | The Minimal Disruptive Restart backup is stored in RP harddisk or Bootflash. If sufficient space is available on these devices, copy the error message exactly as it appears, and report it to your technical support representative. |

%IOSXE_SIP_SPA-3-MDR_BACKUP_OPEN_FAIL : Failed to open Minimal Disruptive Restart backup for slot [int], bay [int], type [dec]; reason ([chars])

| | |
|---------------------------|---|
| Explanation | The SPA driver could not open Minimal Disruptive Restart backup file. The Minimal Disruptive Restart process may be terminated as a consequence. |
| Recommended Action | The Minimal Disruptive Restart backup is stored in RP harddisk or Bootflash. If sufficient space is available on these devices, copy the error message exactly as it appears, and report it to your technical support representative. |

%IOSXE_SIP_SPA-3-MDR_BACKUP_WRITE_FAIL : Failed to write [dec] bytes to Minimal Disruptive Restart backup[chars] for slot [int], bay [int], type [dec]; reason ([chars])

| | |
|--------------------|--|
| Explanation | The SPA driver could not write to Minimal Disruptive Restart backup file. The Minimal Disruptive Restart process may be terminated as a consequence. |
|--------------------|--|

%IOSXE_SIP_SPA-3-MDR_BACKUP_WRITE_FAIL : Failed to write [dec] bytes to Minimal Disruptive Restart backup[chars] for slot [int], bay [int], type [dec]; reason ([chars])

Recommended Action The Minimal Disruptive Restart backup is stored in RP harddisk or Bootflash. If sufficient space is available on these devices, copy the error message exactly as it appears, and report it to your technical support representative.

%IOSXE_SIP_SPA-3-MDR_BACKUP_READ_FAIL : Failed to read [dec] from Minimal Disruptive Restart backup for slot [int], bay [int], type [dec]; reason ([chars])

Explanation The SPA driver could not read from Minimal Disruptive Restart backup file. The Minimal Disruptive Restart process may be terminated as a consequence.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SIP_SPA-3-MDR_CONFIG_REPLAY : Configuration replay failed during Minimal Disruptive Restart for slot [int], bay [int]; reason ([chars])

Explanation The SPA driver failed to process config replay during Minimal Disruptive Restart. The Minimal Disruptive Restart process may be terminated as a consequence.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SIP_SPA-3-SPA_ETHER_SUSPEND_ERROR : SPA ETHER process suspended too long; totally for [dec] milliseconds

Explanation The SPA ETHER process is not able to write to ezman as ezman is blocked for writes. Copy the error message exactly as it appears and report it to your technical support representative.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

IOSXE_SPA

%IOSXE_SPA-3-CREATION_FAILURE : slot=[dec] subslot=[dec], spa_type=[hex], lc_type=[hex].

Explanation Failed to create a SPA object.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SPA-3-SPA_CREATION_FAILURE : slot=[dec] subslot=[dec], PID=[chars] lc_type=[hex].

Explanation Failed to create a SPA object.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SPA-3-NULL_VFT : [chars] virtual function table is not initialized. spaType=[hex]

Explanation A required function table is not initialized

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SPA-3-NULL_VFUNC : [chars] vector is not initialized. spaType=[hex]

Explanation A required function vector is not initialized

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SPA-3-MEM_ALLOC_ERROR : [chars]

| | |
|---------------------------|---|
| Explanation | Memory allocation error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-NULL_SPA_PTR :

| | |
|---------------------------|---|
| Explanation | Pointer to a SPA object is NULL. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-NULL_BAY_PTR :

| | |
|---------------------------|---|
| Explanation | Pointer to SPA bay is NULL. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-INVALID_SLOT_NUM : slot= [dec], max slot = [dec]

| | |
|---------------------------|---|
| Explanation | An invalid slot number is specified in one of the internal APIs. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-INVALID_SUBSLOT_NUM : subslot= [dec], max subslot = [dec]

| | |
|---------------------------|---|
| Explanation | An invalid subslot number is specified in one of the internal APIs. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-INVALID_DB_NUM : db = [dec], max db = [dec], db intf = [dec], max db intf = [dec]

| | |
|---------------------------|---|
| Explanation | An invalid daughter board number is specified in one of the internal APIs. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-INVALID_RP_SLOT_NUM : slot= [dec], max slot = [dec]

| | |
|---------------------------|---|
| Explanation | An invalid RP slot number is specified in one of the internal APIs. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-INVALID_CPU_NUM : cpu= [dec], max cpu = [dec]

| | |
|---------------------------|---|
| Explanation | An invalid CPU number is specified in one of the internal APIs. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-INVALID_SLOTUNIT_NUM : cardwide-port = [dec], max cardwide-port = [dec]

| | |
|---------------------------|---|
| Explanation | An invalid cardwide-port number is specified in one of the internal APIs. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-INVALID_INDX_RANGE : index1= [dec], index2= [dec], maxIndex= [dec]

| | |
|---------------------------|---|
| Explanation | An invalid index range is specified in one of the internal APIs. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-INVALID_IF_INDEX : index= [dec], spaType=[hex], slot [dec] subSlot [dec] slotunit [dec] vc [dec]

| | |
|---------------------------|---|
| Explanation | Index for the interface is not valid. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-INVALID_DATA_INSTANCE : interface type [chars], slot [dec] port [dec] vc [dec] : [chars]

| | |
|---------------------------|---|
| Explanation | Data required to support the interface is not available. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-POWER_CYCLE : [chars] occurred on Shared Port Adapter [int]/[int]

| | |
|---------------------------|---|
| Explanation | An error has occurred which will cause the Shared Port Adapter to be power cycled |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-DIAG_CONFIG : [chars] did not complete [dec]/[dec]

| | |
|---------------------------|---|
| Explanation | An error has occurred during diagnostic test. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-UNSUPPORTED_DATA : Data conversion error ([chars], [hex])

| | |
|---------------------------|---|
| Explanation | An internal software error has occurred when converting the data specified in the message from one representation to another. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-IPC_FAILURE : IPC failure while [chars]

| | |
|---------------------------|---|
| Explanation | An error has occurred while preparing or sending an IPC message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-SENDCFGFAIL : Failed to send configuration for [chars] to carrier-card for subslot=[dec]/[dec]

| | |
|---------------------------|---|
| Explanation | Sending configuration failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-CREATE_TDLH_FAILURE : Failed to create SPA [dec]/[dec] handle

| | |
|---------------------------|---|
| Explanation | Failed to create message handle for SPA communication. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-DOMAIN_TDLH_FAILURE : [chars], rc = [dec]

| | |
|---------------------------|---|
| Explanation | Failed to bind message handle for SPA communication. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-SETUP_TDLH_FAILURE : Failed to set the alloc/free handler for SPA [dec]/[dec] handle

| | |
|---------------------------|---|
| Explanation | Failed to set the alloc/free handler for SPA communication. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-DISPATCH_INIT_TDLH_FAILURE : Failed to initialize dispatch path for SPA [dec]/[dec] handle

| | |
|---------------------------|---|
| Explanation | Failed to initialize dispatch path handle for SPA communication. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-INVALID_SPA_TDL_CCAPI_USAGE :

| | |
|---------------------------|---|
| Explanation | Incorrect usage of an internal API that should only be used on CC. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-6-TDLMSG_INCOMPATIBLE : Failed to copy message [chars] to buffer, not allowed for current domain.

| | |
|---------------------------|---|
| Explanation | Failure to marshal a message indicates an incompatibility with the intended recipient. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SPA-3-CREATE_TDLMSG_FAILURE : Failed to create [chars] message for [chars].

| | |
|--------------------|--|
| Explanation | Failed to create/allocate necessary TDL message for SPA communication. |
|--------------------|--|

%IOSXE_SPA-3-CREATE_TDLMSG_FAILURE : Failed to create [chars] message for [chars].

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SPA-3-INVALID_HANDLE : Failed to get a valid IPC handle for type [int], slot [dec], subslot [dec].

Explanation The client handle was found to be NULL for the given type/slot/subslot.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SPA-6-UPDOWN : Interface [chars], link down due to [chars]

Explanation Ethernet link is down due to remote/local fault.

Recommended Action Replace the faulty cable.

%IOSXE_SPA-6-DUAL_RATE_CHANGE : [chars]: [chars]

Explanation Change in rate of the link.

Recommended Action No action is required.

%IOSXE_SPA-3-SPA_SETUP_FAILURE : Failed to properly setup for SPA communication on slot [dec], subslot [dec].

Explanation Discovery of the linux interface used to communicate with a SPA failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SPA-3-ABANDON_SPA_CONFIGURATION : Abandon configuration for subplot [dec]/[dec], the SPA type([dec]) is NOT match with SUP card.

| | |
|---------------------------|--|
| Explanation | Abandon SPA configuration. |
| Recommended Action | Please check the startup configuration, use no card command to override wrong card configuration and update card type. |

IOSXE_SYS_INFRA

%IOSXE_SYS_INFRA-6-BIPC_READ_ERR : connection read error from [chars], rc [dec], bring down IPC id [dec] for fd [dec] seq [dec]

| | |
|---------------------------|---|
| Explanation | BIPC error during IPC read |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SYS_INFRA-6-BIPC_READBUF_ERR : process receive buffer error from [chars], rc [dec], bring down IPC

| | |
|---------------------------|---|
| Explanation | BIPC error during IPC read from buffer |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SYS_INFRA-6-BIPC_DISCONNECT : disconnect by application for [chars], bring down IPC

| | |
|---------------------------|---|
| Explanation | BIPC disconnect requested by an application |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SYS_INFRA-6-BIPC_WRITE_ERR : write bipc error for [chars], rc [dec], bring down IPC

| | |
|--------------------|----------------------------|
| Explanation | BIPC error during IPC read |
|--------------------|----------------------------|

%IOSXE_SYS_INFRA-6-BIPC_WRITE_ERR : write bipc error for [chars], rc [dec], bring down IPC

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_SYS_INFRA-6-BIPC_CREATE : bipc connect succeeded for [chars], ipc_ctl_id [dec], ipc_fd [dec], seq [dec]

| | |
|---------------------------|---|
| Explanation | BIPC connect succeeded |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SYS_INFRA-3-BIPC_CREATE_FAIL : Failed to open IPC port '[chars]' for service '[chars]' with error [chars].

| | |
|---------------------------|---|
| Explanation | BIPC connect failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SYS_INFRA-3-BIPC_DISCONNECT_FAIL : Failed to disconnect IPC port '[chars]' for service '[chars]' with error [chars].

| | |
|---------------------------|---|
| Explanation | BIPC disconnect failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SYS_INFRA-4-BIPC_TX_Q_THRESHOLD : BIPC transmit queue threshold reached for the channel '[chars]': ipc_ctl_id [dec] (ipc_fd [dec], seq_num [dec]), Tx Q size [dec]

| | |
|--------------------|--|
| Explanation | Large number of unsent IPC messages are queued in a BIPC send buffer |
|--------------------|--|

%IOSXE_SYS_INFRA-4-BIPC_TX_Q_THRESHOLD : BIPC transmit queue threshold reached for the channel '[chars]': ipc_ctl_id [dec] (ipc_fd [dec], seq_num [dec]), Tx Q size [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-4-BIPC_RX_IN_APPL_THRESHOLD : Number of IPC messages held in the application reached the maximum channel threshold. IPC channel '[chars]': ipc_ctl_id [dec] (ipc_fd [dec], seq_num [dec]), curr IPC msg hel in appl [dec]

Explanation Application is holding large number of received IPC messages

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-3-EVLIB_EPOLL_ARGS : evGetEpollArgs returned fd [dec]

Explanation Evlib returned a huge FD value that IOS can not handle.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-6-EOBC_ADDR_CACHE : EOBC ip-table cache: [chars]

Explanation Unable to setup internal address for eobc communication

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-3-EOBC SOCK : Socket event for [chars]

Explanation An internal socket level event has returned an error which is indicated. This may have been the result of a bind, peek, receive or send operation with respect to the EOBC interface listed.

%IOSXE_SYS_INFRA-3-EOBC SOCK : Socket event for [chars]

| | |
|---------------------------|--|
| Recommended Action | LOG_STD_SH_CMD_ACTION(show eobc, show platform software infrastructure bipc) |
|---------------------------|--|

%IOSXE_SYS_INFRA-3-EWRITE_EVENT_FD : Write to [chars] wakeup fd failed, errno [dec], current signal/wakeup cnt: [int]/[int]

Explanation Trigring a thread by writing to its wakeup fd failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-3-EREAD_EVENT_FD : [chars] read from wakeup fd failed, errno [dec]

Explanation A thread reading from its wakeup fd failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-3-EIOS_POLL : IOS thread poll on event lib and wakeup fds failed, errno [dec]

Explanation IOS thread poll on event lib and wakeup fds failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-3-EIOS_EVDISPATCH : IOS scheduler event dispatch failed, ev_ret [dec], errno [dec]

Explanation IOS scheduler event dispatch failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-3-EIOS_EVGETNEXT : IOS scheduler get next event failed, ev_ret [dec], errno [dec]

| | |
|---------------------------|---|
| Explanation | IOS scheduler get next event failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SYS_INFRA-3-EFP_EVDISPATCH : Fastpath thread event dispatch failed, ev_ret [dec], errno [dec]

| | |
|---------------------------|---|
| Explanation | fastpath thread event dispatch failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SYS_INFRA-3-EFP_EVGETNEXT : Fastpath thread get next event failed, ev_ret [dec], errno [dec]

| | |
|---------------------------|---|
| Explanation | Fastpath thread get next event failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SYS_INFRA-3-EFP_EPOLL_WAIT : Fastpath thread epoll wait failed, errno [dec]

| | |
|---------------------------|---|
| Explanation | Fastpath epoll wait failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_SYS_INFRA-3-EFP_TOP_EPOLL_CTL_FAILED : Fastpath thread top level efd epoll [chars] failed, fd [dec], errno [dec]

| | |
|--------------------|---|
| Explanation | Fastpath top level efd epoll_ctl operation failed |
|--------------------|---|

%IOSXE_SYS_INFRA-3-EFP_TOP_EPOLL_CTL_FAILED : Fastpath thread top level efd epoll [chars] failed, fd [dec], errno [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-3-EFP_IPC_EPOLL_CTL_FAILED : Fastpath thread [chars][chars] for IPC channel [chars] (ipc id [dec], ipc fd [dec], seqnum [dec]) failed, efd [dec], errno [dec]

Explanation Fastpath epoll_ctl operation for an IPC channel failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-3-EFP_IPC_EPOLL_NO_IPC_ENTRY : IPC entry not found for ipc fd [dec], seq [dec], events [hex] while processing [chars] from epoll fd [dec]

Explanation Fastpath failed to find IPC entry after epoll_wait

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-6-FP_IPC_DISCONNECT : IPC channel disconnect for [chars], ipc_ctl_id [dec], fd [dec], seq_num [dec], loc [chars], err [dec] ([chars])

Explanation An IPC channel in fastpath is terminated

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-6-IOS_IPC_CTL_DESTROY : IPC control blk destroy: name [chars], ipc_ctl_id [dec], refcout [dec], need_free [dec]

Explanation An IPC control block is requested to be destroyed

%IOSXE_SYS_INFRA-6-IOS_IPC_CTL_DESTROY : IPC control blk destroy: name [chars], ipc_ctl_id [dec], refcount [dec], need_free [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-6-IOS_FREE_IPC_CTL : IPC control blk free: name [chars], ipc_ctl_id [dec], refcount [dec]

Explanation An IPC control block is freed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_SYS_INFRA-4-BIPC_CLEAR_CONN : IPC channel (fd [dec], seq_num [dec]) for service '[chars]' cleared by user

Explanation BIPC disconnect requested by an user with clear command

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

IOSXE_THROUGHPUT

%IOSXE_THROUGHPUT-3-INVALID_CONFIG : No valid license found for the configured throughput level: [chars] kbps

Explanation Users has the boot up throughput set to non-default level without having the valid license.

Recommended Action Install valid throughput license

%IOSXE_THROUGHPUT-3-EULA_NOT_ACCEPTED : The EULA has to be accepted prior to throughput configuration.

Explanation Users need to accept EULA to activate the license

%IOSXE_THROUGHPUT-3-EULA_NOT_ACCEPTED : The EULA has to be accepted prior to throughput configuration.

Recommended Action Accept EULA for throughput license

%IOSXE_THROUGHPUT-3-CONF_FAILED : Configuration failed. Installed license does not support the throughput level. Please install the valid license

Explanation An error occurred when the throughput configuration was attempted.

Recommended Action

%IOSXE_THROUGHPUT-3-INVALID_LEVEL : An invalid throughput level: [chars] kbps was selected.

Explanation The configured throughput level is unknown

Recommended Action

%IOSXE_THROUGHPUT-6-LEVEL : Throughput level has been set to [dec]00000 kbps

Explanation Throughput level has been set to a number

Recommended Action

%IOSXE_THROUGHPUT-3-SETUP_FAILED : Throughput level setup failed. Boot up will be at the default throughput

Explanation An error occurred when licensing tried to setup the throughput

Recommended Action

IOSXE_TIMESTAMP_ENGINE

%IOSXE_TIMESTAMP_ENGINE-4-ERROR : NULL

Explanation An unexpected condition has occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_TIMESTAMP_ENGINE-3-TSU_ERR : An unexpected condition has occurred at module ([chars])

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred at the Interface Module TSU. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_UPGRADE_ROMMON

%IOSXE_UPGRADE_ROMMON-0-ROMMON_UPGRADE_FAIL : ROMMON upgrade failed: partition [chars]

| | |
|---------------------------|--|
| Explanation | An attempt to upgrade the ROMmon failed. |
| Recommended Action | Check the system messages to see if any messages appeared that might indicate the source of the ROMmon problem. If you do not find any additional information indicating a correctable problem, collect all output on the screen, in particular the console port output after the upgrade rom-monitor command was entered and the output of show rom-monitor, and provide the collected information to a Cisco technical support representative. |

%IOSXE_UPGRADE_ROMMON-0-ROMMON_LOADTEST_FAIL : ROMMON FIPS_140-3 Load test *FAILED*: file [chars]

| | |
|--------------------|---|
| Explanation | FIPS 140-3 Related Load test failed for the ROMmon. |
|--------------------|---|

**%IOSXE_UPGRADE_ROMMON-0-ROMMON_LOADTEST_FAIL : ROMMON FIPS_140-3 Load test *FAILED*:
file [chars]**

| | |
|---------------------------|--|
| Recommended Action | Check the system messages to see if any messages appeared that might indicate the source of the ROMmon Load test problem. If you do not find any additional information indicating a correctable problem, collect all output on the screen, in particular the console port output after the upgrade rom-monitor command was entered and the output of show rom-monitor, and provide the collected information to a Cisco technical support representative. |
|---------------------------|--|

IOSXE_USB

%IOSXE_USB-3-ESHOW_USB : Internal Error locating database for USB Devices.

| | |
|---------------------------|---|
| Explanation | The mcp_usb_devices is incorrect and needs to be changed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_UTD

%IOSXE_UTD-3-ALLOC : Failed to allocate message

| | |
|---------------------------|---|
| Explanation | When attempting to program the dataplane there was not enough memory to allocate the message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_UTD-3-MESSAGE : Failed to send message

| | |
|---------------------------|---|
| Explanation | When the message was being prepared for sending to the data plane, there was an error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_UTD-4-VERSION_INCOMPATIBILITY : UTD package version [chars] does not match recommended UTD package version [chars]

Explanation The UTD package version does not match the recommended UTD package version embedded in this IOS-XE version.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_UTD-2-VERSION_UNSUPPORTED : UTD package version [chars] is not supported, recommended version is [chars]

Explanation The UTD package version does not match the required UTD version embedded in this IOS-XE version. This is an unsupported configuration and may behave unexpectedly.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_UTD-4-SIG_UPDATE_CFG : UTD signature updates have been configured - A brief service interruption at the time of update is expected

Explanation The UTD service will be restarted if a new signature package is found. During this time, if fail-close has been configured (recommended), traffic that would be inspected by UTD will be dropped. Otherwise (default), traffic that would be inspected by UTD will be allowed to pass uninspected. To minimize this service interruption, it is recommended to schedule this operation outside of normal business hours.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_UTD-4-SIG_UPDATE_EXEC : UTD signature update has been executed - A brief service interruption is expected

Explanation The UTD service will be restarted if a new signature package is found. During this time, if fail-close has been configured (recommended), traffic that would be inspected by UTD will be dropped. Otherwise (default), traffic that would be inspected by UTD will be allowed to pass uninspected. To minimize this service interruption, it is recommended to execute this operation outside of normal business hours.

%IOSXE_UTD-4-SIG_UPDATE_EXEC : UTD signature update has been executed - A brief service interruption is expected

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_UTD-4-MT_CONFIG_DOWNLOAD : UTD MT configuration download has [chars]

| | |
|---------------------------|---|
| Explanation | In UTD multitenancy mode, the configuration download to the container can take a while. Please be patient. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_UTD-4-MT_CONTAINER_MESSAGE_TIMEOUT : UTD message sent to the container has timed out

| | |
|---------------------------|---|
| Explanation | The UTD message sent to the container has timed out. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_UTD-4-MT_CONTAINER_MESSAGE_NAK : Container responded to UTD message with an error: [dec]

| | |
|---------------------------|---|
| Explanation | The container rejected the UTD message |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_UTD-4-MT_CONTAINER_SESSION_TIMEOUT : UTD container download has timed out

| | |
|--------------------|--|
| Explanation | The container did not respond with an up/down status before the session timed out. |
|--------------------|--|

%IOSXE_UTD-4-MT_CONTAINER_SESSION_TIMEOUT : UTD container download has timed out

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOSXE_UTD-4-MT_CONTAINER_STATUS_DOWN : UTD poll: container status is DOWN

| | |
|---------------------------|---|
| Explanation | The container sent a down status to the poll message |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IOSXE_VMAN

%IOSXE_VMAN-3-MSGINITFAIL : Failed to initialize required Virt-manager resource: [chars]

| | |
|---------------------------|---|
| Explanation | During the initialization of the resources required by Virt-manager, a failure occurred. This has prevented virtual services from being activated. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_VMAN-3-MSGDISPATCH : Unable to dispatch received TDL message from Virt-manager

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS was trying to dispatch a TDL message received from Virt-manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_VMAN-3-RSPMSGHDLR : Failed to deliver response message: [chars]

| | |
|--------------------|--|
| Explanation | An unexpected condition has occurred while IOS was trying to deliver a response message to a virtual service received from Virt-manager. |
|--------------------|--|

%IOSXE_VMAN-3-RSPMSGHDLR : Failed to deliver response message: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

IOSXE_WCCP

%IOSXE_WCCP-4-NOINPUT : NULL input, [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the NULL value of the input parameter. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip wccp command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_WCCP-4-NOSVGRP : [chars] Service Group ([dec], [dec], [int]) NOT exist

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of the service group structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip wccp command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_WCCP-4-NOACL : Access list is null

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to the absence of an access list structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip access-lists command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_WCCP-4-ACELIMIT : Too many ACEs in MASK ACL, please switch to Hash mode

| | |
|---------------------------|---|
| Explanation | Mask merged ACL generate too many ACEs. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip access-lists command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_WCCP-4-BADACE : Access list contains invalid ace

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which is due to an invalid statement in the access list structure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show ip access-lists command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_WCCP-4-NOINTF : No [chars] interface info for Service Group ([dec], [dec], [int])

| | |
|---------------------------|--|
| Explanation | An unexpected condition has occurred which is due to the absence of MCP WCCP interface info for the specific service group. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show platform software wccp command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOSXE_WCCP-4-UNKNOWNDIR : Unknown [chars] interface direction [hex] for Service Group ([dec], [dec], [int])

| | |
|--------------------|---|
| Explanation | An unexpected condition has occurred which is due to the unknown direction has been applied to the interface for the service group. |
|--------------------|---|

%IOSXE_WCCP-4-UNKNOWNDIR : Unknown [chars] interface direction [hex] for Service Group ([dec], [dec], [int])

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show platform software wccp** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_WCCP-4-NOSTATS : WCCP [chars] message error

Explanation An unexpected condition has occurred which is due to the error in receiving WCCP stats update message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show platform software wccp <id> counters** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_WCCP-4-NOSTATSSVC : Service Group ([dec], [dec], [int]) not exist for the stats message

Explanation An unexpected condition has occurred which can't find the service group for the service group stats message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show platform software wccp** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOSXE_WCCP-4-NOSTATSINTF : Interface handle [int] not exist for the stats message

Explanation An unexpected condition has occurred which can't find the interface handle for the interface stats message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show platform software wccp <id> int counters** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

IOSXE_WD**%IOSXE_WD-2-HEARTBEAT_FAIL : Heartbeat is not emitted. Heartbeat count:[dec]**

| | |
|---------------------------|--|
| Explanation | Failure in IOS to generate a heartbeat is an abnormal condition |
| Recommended Action | This message may be related to an abnormal configuration and system load, or transient high processing demand. When reporting this message, copy the message text exactly as it appears, include the stack trace and report to your technical support representative |

%IOSXE_WD-2-HOG_DETECT_FAIL : CPUHOG detection failed to start.

| | |
|---------------------------|--|
| Explanation | Failure in setting up CPUHOG detection mechanism is an abnormal condition |
| Recommended Action | This message may be related to an abnormal configuration and system load, or transient high processing demand. When reporting this message, copy the message text exactly as it appears, include the stack trace and report to your technical support representative |

IOS_LICENSE_IMAGE_APPLICATION**%IOS_LICENSE_IMAGE_APPLICATION-3-FAILED : [chars]**

| | |
|---------------------------|--|
| Explanation | The ios licensing subsystem failed to create a process/watched boolean etc to watch request from the remote show subsys license commands |
| Recommended Action | please capture the error msg and forward it to the appropriate licensing component |

%IOS_LICENSE_IMAGE_APPLICATION-3-UNKNOWN_EVENT : [chars]

| | |
|---------------------------|--|
| Explanation | The ios image licensing subsystem received an event which it does not understand or recognizes |
| Recommended Action | please capture the error msg and forward it to the appropriate licensing component |

%IOS_LICENSE_IMAGE_APPLICATION-3-UNKNOWN_VERSION : [chars]

| | |
|---------------------------|--|
| Explanation | |
| Recommended Action | |

%IOS_LICENSE_IMAGE_APPLICATION-6-NO_LICENSE : No valid license available: [chars] = [chars]; [chars] = [dec]; [chars] = [chars]:[chars]

Explanation The ios image licensing subsystem received an event for an unknown version of a feature There is no valid license available on the box and we are running on a default feature

Recommended Action please capture the error msg and forward it to the appropriate licensing component
please purchase a license to activate required features

%IOS_LICENSE_IMAGE_APPLICATION-6-LICENSE_LEVEL : Module name = [chars] Next reboot level = [chars] and License = [chars]

Explanation This is an informational message to display the change in the next reboot license level

Recommended Action This is an informational message, no action is required

%IOS_LICENSE_IMAGE_APPLICATION-6-LICENSE_LEVEL_CONFIG : Please issue 'license boot' config command to make extension license ([chars]) available for use.

Explanation This is an informational message to info user that to make extension license available to support image level, licensing image level needs to be configured

Recommended Action This is an informational message, no action is required

%IOS_LICENSE_IMAGE_APPLICATION-6-LICENSE_CONFIG : EULA must be accepted for license level = [chars]

Explanation This is an informational message to inform user that the user needs to reissue the command from an interactive terminal

Recommended Action This is an informational message, no action is required

IOXN_APP

%IOXN_APP-3-INITFAIL : Failed to create chasfs property ioxman (rc =[chars]) or caf (rc = [chars]) is not up

Explanation An unexpected condition resulted into failure to start an application.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IOXN_APP-3-CLEANUPFAIL : Failed to create chasfs property to indicate cleanup of previous app installation (rc = [chars])

| | |
|---------------------------|---|
| Explanation | An unexpected condition resulted in failure to setup the start of an application. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOXN_APP-3-GSFAIL : [chars] [int]

| | |
|---------------------------|---|
| Explanation | An unexpected condition resulted into failure to start an application. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOXN_APP-3-CFGFAIL : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition resulted into failure to apply auto config |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOXN_APP-3-PREVOPFAIL : Overriding previous operation ([chars] iox) that is taking longer than [int] secs to complete

| | |
|---------------------------|---|
| Explanation | An unexpected condition resulted in failure to apply iox config |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOXN_APP-3-MSGFAIL : Message dispatch failure ([chars]).

| | |
|--------------------|--|
| Explanation | Message could not be dispatched to an application. |
|--------------------|--|

%IOXN_APP-3-MSGFAIL : Message dispatch failure ([chars]).

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IOXN_APP-6-STARTUP_CONFIG_INFO : [chars]

| | |
|---------------------------|---|
| Explanation | Informational logs for startup config injection. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOXN_APP-6-STARTUP_CONFIG_CHASSIS_INFO : [chars] [dec]/[chars]/[dec]/[dec]

| | |
|---------------------------|--|
| Explanation | Chassis information at startup config injection. |
| Recommended Action | No action is required. |

%IOXN_APP-3-STARTUP_CONFIG_FAIL : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | Error while creating startup config |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOXN_APP-3-IPCINITFAIL : [chars]

| | |
|---------------------------|---|
| Explanation | A critical IPC initialization error occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IOXN_APP-6-SLOT_NOTIFICATION : [chars] [dec]

| | |
|---------------------------|--------------------------------------|
| Explanation | Slot addition or removal information |
| Recommended Action | No action is required. |

IP

%IP-4-CLASS : Bad IP address and mask [IP_address]%m in class_resolve()

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-4-DUPADDR : Duplicate address [IP_address] on [chars], sourced by [enet]

| | |
|---------------------------|--|
| Explanation | Another system is using your IP address. |
| Recommended Action | Change the IP address of one of the two systems. |

%IP-4-ZERO_ADDR : Zero MAC address for [IP_address] in ARP cache

| | |
|---------------------------|--|
| Explanation | An entry in the ARP cache have a NULL MAC address |
| Recommended Action | If this message recurs, call your technical support representative for assistance. |

%IP-3-DESTHOST : src=[IP_address], dst=[IP_address], NULL desthost

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-3-BADIPALIGN : Invalid alignment in packet for IP. [chars]=[hex]

| | |
|---------------------------|---|
| Explanation | The packet data structure is misaligned. This condition may result in a small amount of overhead in processing IP traffic. |
| Recommended Action | Enter a show hardware command and report the output, along with this error message, to your technical support representative. |

%IP-3-BADSROUTE : Improper source route. Length [dec] Ptr [dec]

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-6-PHYBCASTDROP : Physical broadcast packet detected and dropped, src=[IP_address], dst=[IP_address]

| | |
|---------------------------|--|
| Explanation | Physical broadcast packet was dropped. |
| Recommended Action | No action is required. |

%IP-6-L2MCASTDROP : Layer 2 Multicast packet detected and dropped, src=[IP_address], dst=[IP_address]

| | |
|---------------------------|---|
| Explanation | Layer 2 Multicast packet with Layer3 Unicast Destination was dropped. |
| Recommended Action | No action is required. |

%IP-3-LOPPAK : Looping packet detected and dropped - src=[IP_address], dst=[IP_address], hl=[int], tl=[int], prot=[int], sport=[int], dport=[int] in=[chars], nexthop=[IP_address], out=[chars]options=[chars]

| | |
|---------------------------|---|
| Explanation | A software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-5-WEBINST_START : Attempting web install from host [IP_address]

| | |
|--------------------|--|
| Explanation | A hardware or software error occurred. |
|--------------------|--|

%IP-5-WEBINST_START : Attempting web install from host [IP_address]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%IP-5-WEBINST_KILL : Terminating DNS process

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-5-WEBINST_COMP : Selected IP address [IP_address]

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-5-WEBINST_RESP : Sending DNS response to [IP_address] (request was for [IP_address])

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-3-CNTRFULL : IP counter block is full (setting protocol [dec])

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-5-TURBOACL : [chars]

| | |
|---------------------------|---|
| Explanation | Error occurred in initialisation of TURBOACL. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show process command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-5-ACL : [chars]

| | |
|---------------------------|---|
| Explanation | Error occurred in IP access checks. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-4-UNICASTRPF : IP unicast reverse-path check disabled on [chars]

| | |
|---------------------------|---|
| Explanation | The IP verify unicast reverse-path feature was disabled because CEF was disabled (either through configuration or due to an internal error). |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-3-LOOPOUTIF : Output interface for packet has been changed for [dec] times and dropped - src=[IP_address], dst=[IP_address], hl=[int], tl=[int], prot=[int], in=[chars], nexthop=[IP_address], out=[chars]

| | |
|---------------------------|---|
| Explanation | A software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-3-MAXIRDP : Attempt to send IRDP to proxies exceeding configurable limit: [dec], interface: [chars], secondary = [dec], proxy = [dec]

Explanation The sum of configured secondary addresses and configured proxy addresses exceeds the number of total addresses that the IRDP can support in its implementation.

Recommended Action Reduce the number of either the secondary IP addresses or proxy addresses configured for the interface.

%IP-4-IPPOOLS : Detected a local pool and a DHCP pool with the same name: [chars]

Explanation A local pool and a DHCP pool have been configured with the same name. This may cause conflict during address allocations.

Recommended Action Change the name of one of the two pools

%IP-3-ICMPRATELIMIT : [int]nreachables rate-limited within [int] milliseconds on [chars]. [int] log messages suppressed since last log message displayed on [chars]

Explanation An excessive number of packets are triggering log messages on this interface

Recommended Action change the log threshold with the icmp rate-limit command or find the source of the packets and block the packets from this router

%IP-3-ICMPRATELIMITDF : [int] DF unreachable rate-limited within [int] milliseconds on [chars]. [int] DF log messages suppressed since last log message displayed on [chars]

Explanation An excessive number of packets are triggering log messages on this interface

Recommended Action change the log threshold with the icmp rate-limit command or find the source of the packets and block the packets from this router

%IP-3-NOOUTINTF : Output interface not available. source address: [IP_address], destination address: [IP_address], routing type: [int]

Explanation The output interface for this packet is not set

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IP-3-NONALIAS : non-alias address [IP_address] in table [chars] found in IP alias list

Explanation The IP alias list holds IP aliases only but non-alias entries are found.

%IP-3-NONALIAS : non-alias address [IP_address] in table [chars] found in IP alias list

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IP-3-IPTOPOID : Topology ID [hex] is invalid, can't get the base topology ID.

| | |
|---------------------------|---|
| Explanation | An internal software error occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IP-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

| | |
|---------------------------|---|
| Explanation | Initialization of the specified subblock data structure could not be accomplished. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IPA**%IPA-3-PORTCONN : bay [[int]] failed to establish [chars] connection ([hex])**

| | |
|---------------------------|---|
| Explanation | An attempt to establish the console or debugger connection with the channel port adapter failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPA-3-PORTIOKILL : Port IO [chars] process terminating.

| | |
|--------------------|--|
| Explanation | Unexpected termination of a port io process. |
|--------------------|--|

%IPA-3-PORTIOKILL : Port IO [chars] process terminating.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPA-3-NEVER : bay [[chars]] mailbox response timed out after ([int] + [int]) usecs, mbx=[hex]

Explanation A mailbox command sent from driver to the channel port adapter never completed within the expected time limit. As a result of this error, the channel port adapter driver will reset the port adapter and reload microcode to it.

Recommended Action The reset and reload rectified the problem. If that did not occur, then try the **microcode reload** operation again. <Body><par>If the error still occurs, record the output from the following commands: <Bullet><par>**show tech**
<Bullet><par>**dir slot0:** <Bullet><par>**dir slot1:** <Bullet><par>**show log** <Body><par>Provide this information to your technical support representative.

%IPA-3-UKNMBXCMD : [chars]: unknown mailbox command: [hex] [hex] [hex] [hex]

Explanation The channel port adapter sent a mailbox command that the driver did not expect. This may occur if there is a version mismatch between the system image and the microcode.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPA-3-INVMBXCMD : [chars]: invalid mailbox command: [hex]

Explanation A subsystem attempted to register a mailbox command that is out of range.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

CHAPTER 5

IPACCESS through MPLS_TP_LINK

- [IPACCESS through IPSEC](#), on page 1057
- [IPV4_FORWARDING through IP_SNMP](#), on page 1083
- [IP_TUNNEL through IVR_NOSIGNALING](#), on page 1094
- [KERBEROS through LANMGR](#), on page 1119
- [LAPB through LINEPROTO](#), on page 1128
- [LINK through LSD](#), on page 1152
- [LSD_CLIENT through MCPRP_DAI](#), on page 1184

- [MFIB_PLTF through MPLSMFISTATIC](#), on page 1217
- [MPLS_FORWARDING through MPLS_TP_LINK](#), on page 1241

IPACCESS through IPSEC

- [IPACCESS](#)
- [IPC](#)
- [IPC_LOG](#)
- [IPC_TEST](#)
- [IPFAST](#)
- [IPFLOW](#)
- [IPMOBILE](#)
- [IPNAT](#)
- [IPNAT_HA](#)
- [IPSEC](#)

IPACCESS

%IPACCESS-2-NOMEMORY : Alloc fail for acl-config buffer. Disabling distributed mode on Ic

Explanation Unable to malloc a buffer to send access-list configuration down to linecards.

%IPACCESS-2-NOMEMORY : Alloc fail for acl-config buffer. Disabling distributed mode on lc

Recommended Action Enter a show chunks command and report the output, along with this error message, to your technical support representative.

%IPACCESS-2-WRONGREQUEST : Invalid request to allocate chunk of size [dec]

Explanation We only allow acl chunks of max size IPACCESS_LARGE_CHUNK_SZ

Recommended Action

%IPACCESS-2-WRONGSIZE : Incorrect length acl ipc xdr of type=[chars] len=[dec] received

Explanation Received an acl message of the wrong size for that type

Recommended Action Report this error message, to your tech support representative.

%IPACCESS-4-INVALIDACL : Invalid ACL field: [chars] is [dec]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears, and report it to your technical support representative.

%IPACCESS-3-SANITY_ERROR : [chars]

Explanation A sanity error occurred while the ACL was being configured on the RP, or while the ACL configuration was being downloaded to the line card.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPACCESS-3-XDRREGISTRATION : Failed to register [chars] XDR client due to [chars]

Explanation Failure to register the said XDR client.

Recommended Action Copy the message exactly as it appears, and report it to your technical support representative.

IPC**%IPC-3-LOG_ERR : [chars] CPP QoS Client Proxy failure**

| | |
|---------------------------|---|
| Explanation | QoS proxy failed because of receiving invalid sub-type or failed to allocate ipc response buffer. |
| Recommended Action | LOG_STD_ACTION |

IPC_LOG**%IPC_LOG-3-IPC_LOGWRITE_FAILED : ipc log write [int] bytes failed because [chars]**

| | |
|---------------------------|---|
| Explanation | An internal logging mechanism failed to write a message. |
| Recommended Action | No action is required. However, if router performance is noticeably degraded, contact Cisco Technical Assistance. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac . With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

IPC_TEST**%IPC_TEST-3-INVALID_SUBTYPE : CPP IPC TEST Proxy subtype [int]**

| | |
|---------------------------|--|
| Explanation | IPC test proxy failed because of receiving invalid sub-type. |
| Recommended Action | LOG_STD_ACTION |

%IPC_TEST-3-REPLY_FAILED : CPP IPC TEST Proxy send reply

| | |
|---------------------------|---|
| Explanation | IPC test proxy failed because the reply failed to send. |
| Recommended Action | |

%IPC_TEST-3-MEM_ALLOC_FAILED : CPP IPC TEST Proxy mem alloc

| | |
|---------------------------|--|
| Explanation | IPC test proxy failed because the GPM allocation failed. |
| Recommended Action | |

IPFAST**%IPFAST-2-RADIXINIT : Error initializing IP fast cache structures**

| | |
|---------------------------|---|
| Explanation | A programming error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPFAST-2-IPCACHEINIT : Error initializing IP fast cache structures

| | |
|---------------------------|---|
| Explanation | A programming error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%IPFAST-2-MSGDROP : IPC queue limit is reached and message is dropped. queue limit = [dec] cumulative drops = [dec]

| | |
|---------------------------|---|
| Explanation | IPC raw queue limit for IP fast path is reached. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPFAST-6-PAKSHORT : Packet too short from [IP_address], datagram size [dec], tl [dec]

| | |
|---------------------------|--|
| Explanation | An IP packet which is too short was received |
| Recommended Action | No action is required. |

%IPFAST-2-INVALSIZE : The IP fast path received an IPC message with an invalid size(size/type - [dec]/[dec])

| | |
|--------------------|---|
| Explanation | The IP fast path switching module has received an IPC message with an invalid size. |
|--------------------|---|

%IPFAST-2-INVALSIZE : The IP fast path received an IPC message with an invalid size(size/type - [dec]/[dec])

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%IPFAST-2-FAILOPENIPCPORT : Could not open the IPC ports. [chars]

| | |
|---------------------------|--|
| Explanation | ipfast could not open the ipc port to communicate to the LC/RRP/SP. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

IPFLOW**%IPFLOW-2-QUEUEINIT : Error initializing Flow feature queue**

| | |
|---------------------------|---|
| Explanation | Initialization of the Flow feature queue could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%IPFLOW-3-DISABLEFLOWEXPORT : NULL

| | |
|---------------------------|---|
| Explanation | Flow export is disabled because export destination address matches with one of the interface's IP addresses |
| Recommended Action | IP addresses of all the interfaces must be checked to make sure none of them matches with flow export destination IP address. |

%IPFLOW-2-PROCESSINIT : Error initializing Flow background process

| | |
|---------------------------|---|
| Explanation | Initialization of the Flow background process could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%IPFLOW-2-CACHEINIT : Error initializing IP flow cache

Explanation Initialization of the Flow cache could not be accomplished because of a low memory condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPFLOW-2-EXPORTINIT : Error initializing Flow Export queue

Explanation Initialization of the Flow export queue could not be accomplished because of a low memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%IPFLOW-2-TEMPLATETBL_INIT : Error initializing Flow Export Template Table

Explanation Initialization of the Flow export template table could not be accomplished because of a low memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%IPFLOW-4-V9_TEMPLATE_EXPORT : Error creating [chars]

Explanation Version 9 export template length is zero

Recommended Action This is a debug message only. No action is required.

%IPFLOW-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

Explanation Initialization of the specified subblock data structure could not be accomplished.

Recommended Action

IPMOBILE**%IPMOBILE-6-REDUPDATEFAIL : Too many redundancy update failures ([dec]) in the last minute.**

| | |
|---------------------------|---|
| Explanation | The standby HA attempts to update its binding table by contacting the active HA several times each minute. Some or all of these attempts failed and the number of failures exceeded a threshold number. |
| Recommended Action | Ensure connectivity between the active HA and the standby HA. Also make sure the clocks are in sync between the two and that the security associations are properly set between the two. If the preemption delay is set, try setting it to a shorter time period. |

%IPMOBILE-6-DUPMOBNET : Unable to [chars] dynamic mobile network [IP_address] [IP_address] for MR [chars]; already [chars] MR [chars]

| | |
|---------------------------|---|
| Explanation | A mobile router's attempt to dynamically add or delete a mobile network failed because that mobile network was already statically configured for or dynamically registered by another mobile router. A mobile network may be configured or registered for only one mobile router. |
| Recommended Action | To avoid duplication errors, check the static mobile network configuration on the HA or the dynamic mobile network configuration on the mobile router(s). |

%IPMOBILE-6-DUPVIRTNET : Unable to [chars] dynamic mobile network [IP_address] [IP_address] for MR [chars]; already configured as a virtual network

| | |
|---------------------------|--|
| Explanation | A mobile router's attempt to dynamically add or delete a mobile network failed because that mobile network was already configured as a virtual network in the home agent. |
| Recommended Action | To avoid duplication errors, make sure that the virtual networks configuration on the home agent and the dynamic mobile network configuration on the mobile router do not have any overlapping network prefixes. |

%IPMOBILE-3-NOSOCKET : Unable to open socket

| | |
|---------------------------|---|
| Explanation | The requested operation could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%IPMOBILE-6-SECURE : Security violation on [chars] from [chars] [chars] - errcode [chars] ([dec]), reason [chars] ([dec])

| | |
|---------------------------|--|
| Explanation | A security violation occurred during registration attempt. |
| Recommended Action | This is for informational purpose only. |

%IPMOBILE-2-ASSERTFAILED : IPMOBILE assertion failed: [chars]

Explanation The software detected an inconsistency. This is considered a serious error. The router attempts to continue, but IP Mobility processing may be impaired.

Recommended Action Copy the error message exactly as it appears, noting any IP Mobility problems that you are experiencing, and report it to your technical support representative.

%IPMOBILE-3-CONFIGERROR : Standby FA configuration is not in sync with the active

Explanation The software detected an inconsistency in configuration between the standby and the active. Standby FA may not proceed with the sync for this visitor.

Recommended Action Re-configure standby FA and make sure the configuration between the standby and the active is in sync.

%IPMOBILE-3-NOTUNNEL : Maximum number of tunnels [dec] reached

Explanation The number of Mobile IP tunnels allowed on the box is reached.

Recommended Action This occurs if the HA/FA is overloaded. If you suspect this condition contact technical support representative with the output of show tech

%IPMOBILE-5-MIP_TUNNELDELETE : Mobile IP tunnel [chars] deleting

Explanation The Mobile IP tunnel is going to be deleted.

Recommended Action This occurs if the active mobile ip binding is deleted. If you suspect this condition contact technical support representative with the output of show tech

%IPMOBILE-0-NOPROCESS : [chars]

Explanation A Process could not be started

Recommended Action Please contact your technical support representative with the error message you got and with the output of 'show process '.

%IPMOBILE-0-IPMOBILE_DHCP : [chars]

Explanation Two reasons for this error message, 1. DHCP Client failed to get started, this could be because of malloc failures. 2. IPMOBILE DHCP Process failed to start

Recommended Action If this error message is seen it is recommended not to use this HA for binding creation with DHCP Address Allocation. Check the available memory in the box and for the first reason try to get 'debug dhcp detail' before the failure. Contact your technical support representative with the error message you got.

%IPMOBILE-3-SA_PARSE_FAILED : Error in parsing the security association for [chars]

| | |
|---------------------------|--|
| Explanation | The Mobile IP Home Agent encountered an error while processing the Security Association in the RADIUS Access-Accept message. |
| Recommended Action | Check the Radius profile config for the Mobile Node for which the processing of the Security Association failed. |

IPNAT**%IPNAT-4-ADDR_ALLOC_FAILURE : Address allocation failed for [IP_address], pool [chars] might be exhausted**

| | |
|---------------------------|---|
| Explanation | An address could not be allocated from the IP NAT pool. This condition can cause a translation failure and might result in packets being dropped. The counter for misses will be incremented for these packets. |
| Recommended Action | Check to see if the NAT pool has been exhausted. To reuse any existing addresses in the NAT pool for new packet flows, clear the current NAT entries using clear ip nat translation * |

%IPNAT-3-SYSSTATSNUL : NAT global/system statistics structure from platform is nul

| | |
|---------------------------|---|
| Explanation | The structure for passing global/systems statistics from platform is nul which is invalid. This condition can cause the NAT global statistic counters in inaccurate on the RP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT-3-POOLSTATSNUL : NAT pool statistics structure from platform is nul

| | |
|---------------------------|---|
| Explanation | The structure for passing global/systems stats from platform is nul which is invalid. This condition can cause the statistic counters for NAT pool to be inaccurate on the RP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT-3-BADMAPPINGTYPE : NAT mapping type [dec] for mapping statistics from platform is invalid

Explanation The mapping type for passing mapping statistics from platform is not for static nor dynamic mapping type which is invalid. This condition can cause the statistic counters for NAT mapping to be inaccurate on the RP

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT-3-MAPPINGSTATSNUL : NAT mapping statistics structure from platform is nul

Explanation The structure for passing mapping statistics from platform is nul which is invalid. This condition can cause the statistic counters for NAT mapping to be inaccurate on the RP

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT-3-LIMITSTATSNUL : NAT maxentry statistics structure from platform is nul

Explanation The structure for passing maxentry limit statistics from platform is nul which is invalid. This condition can cause the statistic counters for NAT maxentry limit to be inaccurate on the RP

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT-3-PORTNULL : Start port or end port for port block allocation request is nul

Explanation Start port or end port for port block allocation request is nul, This condition can cause the new translations to fail in the data path

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT-3-PORTLISTNULL : Portlist for address [IP_address] proto [dec] is nul

| | |
|---------------------------|---|
| Explanation | The portlist for the address which requests more port blocks is nul which is invalid. This condition can cause the new translations to fail in the data path |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT-3-WLANSESSNULL : NAT WLAN session structure for session [chars] from platform is nul

| | |
|---------------------------|---|
| Explanation | The structure for passing WLAN session from platform is nul which is invalid. This condition can cause the NAT WLAN session to fail in the data path |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT-6-ID : [chars] identifier has wrapped

| | |
|---------------------------|--|
| Explanation | The identifier which is assigned to that which is resultant from the configuration in question has cycled through the available number space and is now allocating from its initial value again. |
| Recommended Action | No action is required. |

%IPNAT-3-RTMAPNULL : route-map for configuration download is nul

| | |
|---------------------------|---|
| Explanation | The route-map structure is nul which is invalid. This condition can cause the new translations to fail in the data path |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT-3-CSBNULL : Parser structure for route-map [chars] configuration is nul

| | |
|--------------------|---|
| Explanation | The parser structure for route-map configuraion is nul which is invalid. This condition can cause the new translations to fail in the data path |
|--------------------|---|

%IPNAT-3-CSBNUL : Parser structure for route-map [chars] configuration is nul

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IPNAT-3-RTMAPNAMENUL : Route-map name for [chars] configuration is nul

| | |
|---------------------------|---|
| Explanation | The route-map name is nul which is invalid. This condition can cause the new translations to fail in the data path |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT-6-ENTRIES : Static translation count reset, inside/outside source/destination [int]/[int] [int]/[int]

| | |
|---------------------------|---|
| Explanation | Upon the removal of the last remaining static translation from the configuration it has been determined that there is a discrepancy with the internal accounting as regards the previous provisioning of inside source/destination versus outside source entries. The internal accounting has been reset to indicate that there are no translations of any type currently. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT-3-CONFIG : Unable to [chars] the configuration of dynamic mappings

| | |
|---------------------------|---|
| Explanation | An internal operation relating to the configuration of the dynamic mappings has failed. This may imply that the mapping has not been installed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT-6-PORT_ALLOC : Port allocation via [chars] for [int] [chars] [chars] ports, min [int] max [int]

Explanation A port allocation request for the specified range of ports has been attempted from the named party on the standby RP. This is an informational message which tracks the request source.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

Explanation Initialization of the specified subblock data structure could not be accomplished.

Recommended Action

%IPNAT-3-IF_UP : Error in sending interface UP event for [chars] to the ager process

Explanation An internal operation relating to the interface UP event has failed which is unexpected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT-3-UNEXPECTED_MAPPING_FLAG : Unexpected mapping flag %#04x received

Explanation An internal operation relating to notifying the platform about a mapping has provided an unexpected input.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT-3-MAPPING_NULL : Unexpected NULL pointer received as input.

Explanation An internal operation relating to notifying the platform about a mapping has provided an unexpected input.

%IPNAT-3-MAPPING_NULL : Unexpected NULL pointer received as input.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IPNAT-3-UNEXPECTED_ADDRESS : NULL

| | |
|---------------------------|---|
| Explanation | An address contained an unexpected value. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IPNAT_HA

%IPNAT_HA-3-MISMATCH : [chars] [chars] mismatch with id [int]

| | |
|---------------------------|---|
| Explanation | The specified synchronization operation has failed to complete on the standby route processor due to an inconsistency in the internal id which would have resulted in an inconsistent configuration between active and standby. The resultant action taken by the standby route processor is an attempt to resynchronize. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-6-MAPPING_EXISTS : [chars] [chars] [chars] mapping id [int]

| | |
|---------------------------|---|
| Explanation | The specified synchronization operation on the standby route processor has detected the presence of an existing matching mapping. This may be associated with any observed PRC failures on the standby. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-6-MAPPING_COMPARE : [chars] [chars] [chars] mapping id [int] comparing [chars] [chars] [chars] mapping id [int]

| | |
|---------------------------|---|
| Explanation | The specified synchronization operation on the standby route processor has detected an internal condition with respect to the properties of dynamic mappings. This is informational. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-TRANSFORM : [chars] of [chars] via [chars] failed [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to either encode or decode a versioned synchronization message has failed due to an internal error encountered by the ISSU component. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-RECEIVE : Message via [chars] is [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to receive and process a versioned negotiation or synchronization message has failed due to an internal error being detected by the information received from the IPC or CF components. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-TRANSMIT : Unable to send via [chars] [chars] [chars] [chars]; [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to send a versioned negotiation or synchronization message has failed due to an internal error encountered by the IPC or CF components. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-PROGRESSION : Unable to inform RF of bulk sync completion; [chars]

| | |
|---------------------------|---|
| Explanation | The active route processor has sent a notification to the standby to inform of the completion of the bulk synchronization of the NAT configuration. The standby has failed to respond to the active informing that it received the notification noting the reason for the failure. The resultant action taken by the standby route processor is an attempt to resynchronize. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-ISSU : [chars] [chars] failed; [chars]

| | |
|---------------------------|---|
| Explanation | An operation pertaining to the ISSU support for NAT failed to complete using either the CF or IPC transport context with the reason specified |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-NEGOTIATION : Failed to start ISSU [chars] session negotiation; [chars]

| | |
|---------------------------|---|
| Explanation | The ISSU negotiation with the peer failed to start for either the CF or IPC transport with the reason specified. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-REGISTRATION : ISSU [chars] failed for [chars]; [chars]

| | |
|---------------------------|---|
| Explanation | An ISSU registration for the set of initial capabilities and sessions failed due to the reason specified. This will have the effect of the NAT ISSU support being unavailable between peers. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-DECODE : Decode via [chars] of [chars] failed

| | |
|---------------------------|---|
| Explanation | A message of the transport and type described failed in its attempt to be decoded on the standby. The resultant action taken by the standby route processor is an attempt to resynchronize. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-BULK_SYNC : Failed to send [chars] information to peer

| | |
|---------------------------|---|
| Explanation | The bulk synchronization of the NAT configuration to the standby RP has failed to complete successfully; NAT has therefore taken the action which will result in a reload of the peer in order to once more attempt to successfully synchronize the configuration state which may have failed initially to a transient condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-DYN_SYNC : Failed to process [chars] dynamic state

| | |
|---------------------------|---|
| Explanation | The incremental synchronization of the NAT configuration to the standby RP has failed to complete successfully. This implies that the configuration state between the active and standby RP is inconsistent. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the <code>show ip nat ha</code> command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-DYN_DEFERQ : [chars] failed to defer[chars]

| | |
|--------------------|--|
| Explanation | The incremental synchronization of the NAT dynamic state to the standby RP has failed to add the information to the deferral queue for later processing during the time where the standby RP is progressing to its hot standby redundant state. This implies that the runtime state between the active and standby RP would be inconsistent once the standby has been fully initialized. |
|--------------------|--|

%IPNAT_HA-3-DYN_DEFERQ : [chars] failed to defer[chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show ip nat ha** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT_HA-6-TIMEOUT : Bulk sync is flow controlled by [chars]

Explanation The bulk synchronization of the NAT configuration to the standby RP has encountered a flow control condition which has effected a timeout awaiting the condition to clear. This will result in a reload of the standby RP to allow the bulk synchronization to restart.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT_HA-3-CLIENT : Failed to register with [chars], [chars]

Explanation The NAT High Availability has failed to register with the specified component during initialization. This is an internal error which indicates that the NAT HA services will be unavailable.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT_HA-6-READY : [chars] peer not ready, discarding [chars]

Explanation The synchronization attempt for the message has determined that the transport has lost communication with its peer. This is a normal situation which indicates that the standby route-processor is currently out of service implying a simplex redundancy mode.

Recommended Action

%IPNAT_HA-6-RELOAD : [chars], reloading [chars]

| | |
|---------------------------|---|
| Explanation | A synchronization attempt between the active and standby RP peers has failed with the reason indicated. The standby peer is reloaded in an attempt to resynchronize when operating in a stateful redundant mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-6-RELOAD_DISABLED : Standby reload has been disabled, NAT RP state is out of sync and the standby should be reloaded manually

| | |
|---------------------------|---|
| Explanation | The active and standby RPs are out of sync and the standby RP would have been reloaded, but this reload was suppressed based on the configured environment. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-ATTRIBUTE : Bulk sync of [chars] via [chars], [chars] is invalid for [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to bulk sync an address pool or a dynamic/static translation has detected that the entity which is to be sent to the standby RP when acting in a stateful redundant mode contains an invalid owner property and hence cannot be synchronized. The detection of this case will result in a failure of the bulk sync. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPNAT_HA-3-PURGE : Failed to purge [chars] information

| | |
|--------------------|---|
| Explanation | The synchronization of the NAT configuration state to the standby RP has failed to purge an entry which has been deemed to be stale; NAT has therefore taken the action which will result in a reload of the peer in order to once more attempt to successfully synchronize the configuration state which may have failed initially to a transient condition. |
|--------------------|---|

%IPNAT_HA-3-PURGE : Failed to purge [chars] information

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT_HA-6-INTERFACE : [chars] type/slot [hex] uint [int] num [int] channel [int]

Explanation An attempt to sync a dynamic translation or address change has detected that the interface which was encoded on the active RP is not present on the standby RP. The detection of this case may result in a failure of the bulk or LBL sync.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT_HA-3-INTERFACE_TYPE : [chars] type/slot [hex] unit [int] num [int] channel [int] value [int]

Explanation An attempt to sync a dynamic translation or address change has detected that the interface which was encoded on the active RP has a different type the standby RP. The detection of this case will result in a failure of the bulk or LBL sync.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPNAT_HA-6-ADDR_CHANGE : [chars] unable to encode data descriptor for interface [chars]

Explanation An attempt to sync an address change to the standby RP has detected that the interface which was to be encoded on the active RP is no longer present or does not support encoding. The interface may have been removed from the configuration or may not support encoding.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPSEC-3-IPC_INVALID_MSG_LEN : [dec]:[dec] len [dec] flags [hex] source [dec]

Recommended Action LOG_STD_ACTION

%IPSEC-3-MEM_ALLOC_REACHED_LIMIT : IPC type [hex]

Explanation Cannot allocate more memory to store state for IPsec Traffic, reached upper limit.

Recommended Action LOG_STD_ACTION

%IPSEC-3-PKT_TOO_BIG : IPsec Packet size [dec] larger than maximum supported size [dec] hence dropping it, MSGDEF_LIMIT_GLACIAL

Explanation Maximum size for packet with IPSEC encapsulation is 9K, This packet exceeded the size limit hence dropping it.

Recommended Action LOG_STD_ACTION

%IPSEC-3-REPLAY_ERROR : IPsec SA receives anti-replay error, DP Handle [dec], src_addr %Ci, dest_addr %Ci, SPI [hex], MSGDEF_LIMIT_GLACIAL

Explanation Anti-replay error is encountered for this IPsec session.

Recommended Action LOG_STD_ACTION

%IPSEC-3-REPLAY_ERROR_IPV6 : IPsec SA receives anti-replay error, DP Handle [dec], ipv6 src_addr %Ci, ipv6 dest_addr %Ci, SPI [hex], MSGDEF_LIMIT_GLACIAL

Explanation Anti-replay error is encountered for this IPsec session.

Recommended Action LOG_STD_ACTION

%IPSEC-3-RECVD_PKT_NOT_IPSEC : Rec'd packet not an IPSEC packet, dest_addr= %Ci, src_addr= %Ci, prot= [dec], MSGDEF_LIMIT_GLACIAL

Explanation Rec'd packet matched crypto map ACL, but is not IPSEC-encapsulated.

Recommended Action LOG_STD_ACTION

%IPSEC-3-RECVD_PKT_NOT_IPSECV6 : Rec'd packet not an IPSEC packet, dest_addr= %Ci, src_addr= %Ci, prot= [dec], MSGDEF_LIMIT_GLACIAL

Explanation Rec'd packet matched crypto map ACL, but is not IPSEC-encapsulated.

Recommended Action LOG_STD_ACTION

%IPSEC-3-HMAC_ERROR : IPsec SA receives HMAC error, DP Handle [dec], src_addr %Ci, dest_addr %Ci, SPI [hex], MSGDEF_LIMIT_GLACIAL

Explanation HMAC calculation error is encountered for this IPsec session.

Recommended Action LOG_STD_ACTION

%IPSEC-3-HMAC_ERROR_V6 : IPsec SA receives HMAC error, DP Handle [dec], ipv6 src_addr %Ci, ipv6 dest_addr %Ci, SPI [hex], MSGDEF_LIMIT_GLACIAL

Explanation HMAC calculation error is encountered for this IPsec session.

Recommended Action LOG_STD_ACTION

%IPSEC-3-FRAG_ERROR : IPsec SA received fragmented ESP packet, DP Handle [dec], src_addr %Ci, dest_addr %Ci, SPI ([hex]), MSGDEF_LIMIT_GLACIAL

Explanation Fragmented ESP packet is received for this IPsec session.

Recommended Action LOG_STD_ACTION

%IPSEC-3-FRAG_ERROR_IPV6 : IPsec SA received fragmented ESP packet, DP Handle [dec], ipv6 src_addr %Ci, ipv6 dest_addr %Ci, SPI ([hex]), MSGDEF_LIMIT_GLACIAL

Explanation Fragmented ESP packet is received for this IPsec session.

Recommended Action LOG_STD_ACTION

IPV4_FORWARDING through IP_SNMP

- [IPV4_FORWARDING](#)
- [IPV4_REASS_PROXY](#)

- [IPV6_ACL](#)
- [IPV6_ADDRESS](#)
- [IPV6_ADDRMGR](#)
- [IPV6_FORWARDING](#)
- [IPV6_POLICY_API](#)
- [IPV6_REASS_PROXY](#)
- [IPV6_RIP](#)
- [IP_SNMP](#)

IPV4_FORWARDING

%IPV4_FORWARDING-2-CAUSE_THROTTLE_ERR : Allocation of ipv4 throttle [chars] memory failed

| | |
|---------------------------|---|
| Explanation | Allocation of memory resource use by ipv4 throttle fail |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV4_FORWARDING-3-CAUSE_LINKTYPE_ERR : Unsupported link type - linktype = [dec], dropping packet

| | |
|---------------------------|---|
| Explanation | Link type is unsupported at the current time. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV4_FORWARDING-4-CHECKSUM_ERR : Checksum buffer walk failed

| | |
|---------------------------|---|
| Explanation | Internal problem occurred during calculating segmented packet checksum. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV4_FORWARDING-3-TABLE_ID_SZ_ERR : Table ID size configured incorrectly: [dec]

| | |
|--------------------|--|
| Explanation | Table ID size must be less than or equal to 16 or 32 bits. |
|--------------------|--|

%IPV4_FORWARDING-3-TABLE_ID_SZ_ERR : Table ID size configured incorrectly: [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IPV4_FORWARDING-3-TRAFFIC_IDX_ERR : Traffic index invalid value: [dec] Buckets allocated: [dec]

| | |
|---------------------------|---|
| Explanation | Traffic index is greater than or equal to the buckets allocated |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IPV4_REASS_PROXY**%IPV4_REASS_PROXY-3-PROXY_IPC_FRAG_INFO_MEM_INIT_FAILED :**

| | |
|---------------------------|---|
| Explanation | Initialization of fragment information pool failed. |
| Recommended Action | LOG_STD_ACTION |

%IPV4_REASS_PROXY-3-PROXY_IPC_FRAG_INFO_MEM_EXTEND_FAILED :

| | |
|---------------------------|---|
| Explanation | Increasing of fragment information pool failed. |
| Recommended Action | LOG_STD_ACTION |

%IPV4_REASS_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]

| | |
|---------------------------|------------------------------------|
| Explanation | IPC handler initialization failed. |
| Recommended Action | LOG_STD_ACTION |

%IPV4_REASS_PROXY-4-PROXY_IPC_INVALID_MSG : [hex]

| | |
|---------------------------|---|
| Explanation | Received an invalid IPC messages subtype. |
| Recommended Action | LOG_STD_ACTION |

IPV6_ACL

%IPV6_ACL-6-ACCESSLOGNP : list [chars]/[dec] [chars] [dec] [IPv6 address] [chars]-> [IPv6 address], [dec] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%IPV6_ACL-6-ACCESSLOGDP : list [chars]/[dec] [chars] [chars] [IPv6 address] [chars]-> [IPv6 address] ([dec]/[dec]), [dec] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%IPV6_ACL-6-ACCESSLOGSP : list [chars]/[dec] [chars] [chars] [IPv6 address] [chars]-> [IPv6 address], [dec] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%IPV6_ACL-6-ACCESSLOGP : list [chars]/[dec] [chars] [chars] [IPv6 address]([dec]) [chars]-> [IPv6 address]([dec]), [dec] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

IPV6_ADDRESS

%IPV6_ADDRESS-3-INTERNAL : Internal error, [chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%IPV6_ADDRESS-3-NO_UNIQUE_IDENTIFIER : Cannot determine an unique IPv6 identifier for the system. IPv6 will not be started.

| | |
|---------------------------|--|
| Explanation | An unique IPv6 Identifier could not be determined for the system. Therefore the IPv6 process will not be started. This machine will not be able to process any IPv6 packets. |
| Recommended Action | Verify that there is at least one interface in this machine that supports IEEE-style addresses. |

%IPV6_ADDRESS-3-NO_PROCESS : Cannot start an IPv6 process; router will not process IPv6 packets.

| | |
|---------------------------|---|
| Explanation | An IPv6 process could not be started. This machine will not be able to process any IPv6 packets. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%IPV6_ADDRESS-3-ADDRESS_CFG : [IPv6 address]/[dec] can not be configured on [chars], [chars]

| | |
|---------------------------|---|
| Explanation | An error was encountered while configuring an IPv6 address |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_ADDRESS-3-NULLIDB : Uninitialized interface pointer - [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_ADDRESS-3-OPINPROGRESS : Operation in progress - [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_ADDRESS-3-RESERVED_INTFID : Removing [IPV6 address] from [chars] - contains reserved interface identifier. [chars]

| | |
|---------------------------|---|
| Explanation | Removing IPv6 global address contains the reserved interface identifier |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IPV6_ADDRMGR

%IPV6_ADDRMGR-3-INTERNAL : Internal error, [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IPV6_FORWARDING

%IPV6_FORWARDING-2-CAUSE_THROTTLE_ERR : Allocation of ipv6 throttle [chars] memory failed

| | |
|---------------------------|---|
| Explanation | Allocation of memory resource use by ipv6 throttle fail |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_FORWARDING-3-CAUSE_LINKTYPE_ERR : Unsupported link type [chars], dropping packet

| | |
|---------------------------|---|
| Explanation | Link type is unsupported at the current time. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_FORWARDING-4-CHECKSUM_ERR : Checksum buffer walk failed

| | |
|--------------------|---|
| Explanation | Internal problem occurred during calculating segmented packet checksum. |
|--------------------|---|

%IPV6_FORWARDING-4-CHECKSUM_ERR : Checksum buffer walk failed

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IPV6_FORWARDING-3-TABLE_ID_SZ_ERR : Table ID size configured incorrectly: [dec]

| | |
|---------------------------|---|
| Explanation | Table ID size must be less than or equal to 16 or 32 bits. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IPV6_POLICY_API**%IPV6_POLICY_API-4-IPV6_POLICY_OVERRIDE : Dynamic policy overriding static on intf:[chars]**

| | |
|---------------------------|---|
| Explanation | Static policy and dynamic policy are configured on the interface. The dynamic policy will override the static policy. |
| Recommended Action | Remove the static policy config if desired. |

%IPV6_POLICY_API-4-IPV6_LOCALPOLICY_OVERRIDE : Local dynamic policy overriding static local policy

| | |
|---------------------------|--|
| Explanation | Static policy and dynamic local policy are configured. The dynamic local policy will override the static local policy. |
| Recommended Action | Remove the static local policy config if desired. |

IPV6_REASS_PROXY**%IPV6_REASS_PROXY-3-PROXY_IPC_FRAG_INFO_MEM_INIT_FAILED :**

| | |
|---------------------------|---|
| Explanation | Initialization of fragment information pool failed. |
| Recommended Action | LOG_STD_ACTION |

%IPV6_REASS_PROXY-3-PROXY_IPC_FRAG_INFO_MEM_EXTEND_FAILED :

| | |
|---------------------------|---|
| Explanation | Increasing of fragment information pool failed. |
| Recommended Action | LOG_STD_ACTION |

%IPV6_REASS_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]

| | |
|---------------------------|------------------------------------|
| Explanation | IPC handler initialization failed. |
| Recommended Action | LOG_STD_ACTION |

%IPV6_REASS_PROXY-4-PROXY_IPC_INVALID_MSG : [hex]

| | |
|---------------------------|---|
| Explanation | Received an invalid IPC messages subtype. |
| Recommended Action | LOG_STD_ACTION |

IPV6_RIP

%IPV6_RIP-3-NULLIDB : Uninitialized interface pointer - RIPv6

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_RIP-3-NULLPAK : Uninitialized packet pointer - RIPv6

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_RIP-3-NULLPDB : Uninitialized PDB pointer - RIPv6

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%IPV6_RIP-3-NULLPDB : Uninitialized PDB pointer - RIPv6

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%IPV6_RIP-3-NULLIPDB : Uninitialized iPDB pointer - RIPv6

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_RIP-3-NULLPROTO : Uninitialized protocol pointer - RIPv6

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_RIP-3-NULLSOC : Uninitialized socket pointer - RIPv6

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_RIP-3-ALLOC_PDB : Can't alloc PDB structure - RIPv6

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_RIP-3-ALLOC_IPDB : Can't alloc iPDB structure - RIPv6

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_RIP-3-PROCESS_CREATE : Can't create process - RIPv6

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_RIP-3-ALLOC_ERR : Memory allocation problem - RIPv6

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%IPV6_RIP-3-PROCESS_MSG_SEND : Can't send message to process - RIPv6

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

IP_SNMP**%IP_SNMP-3-SOCKET : can't open UDP socket**

| | |
|---------------------------|--|
| Explanation | The SNMP server was unable to open a port for receiving or transmitting SNMP requests. This usually happens when the SNMP server is started using the snmp-server community configuration command on a router or communication server with an interface that has no IP address configured. Another possible cause is low memory. |
| Recommended Action | Configure at least one interface with an IP address or specify the no snmp-server command to remove the SNMP server process. Call your technical support representative if problems persist or if it becomes necessary to add memory. |

%IP_SNMP-4-NOTRAPIP : SNMP trap source [chars] has no ip address

| | |
|---------------------------|---|
| Explanation | The user entered an snmp-server trap-source command. The interface requested for use as the source address has no ipv4 address associated with it. The SNMP trap is being sent anyway, but without the source address that the user intended. |
| Recommended Action | There are two possible solutions. Either enter a no snmp-server trap-source command to disable the request for a specific source IP address, or add an IP address to the interface referenced in the snmp-server trap-source configuration command. |

%IP_SNMP-4-NOTRAIPV6 : SNMP trap source [chars] has no ipv6 address

| | |
|---------------------------|---|
| Explanation | The user entered an snmp-server trap-source command. The interface requested for use as the source address has no ipv6 address associated with it. The SNMP trap is being sent anyway, but without the source address that the user intended. |
| Recommended Action | There are two possible solutions. Either enter a no snmp-server trap-source command to disable the request for a specific source IP address, or add an IPV6 address to the interface referenced in the snmp-server trap-source configuration command. |

%IP_SNMP-4-TOOBIG : Oversize message from [IP_address], datagram size [int], udp length [int]

| | |
|---------------------------|---|
| Explanation | An incoming SNMP packet had a length field so large that the system had to assume it was in error. This system made a correct reaction to bad external data. Since SNMP packets should originate from systems under the same administration, this may indicate that the network host used to originate the SNMP request had a problem in its networking layer. Alternatively, if the SNMP packet originated from outside the local administrative domain, it could indicate an failed attempt at security penetration and that site should be watched more closely. |
| Recommended Action | If the origin is local, no action is required. If the origin is determined to be malicious, either contact the administrator of the originating site or install filters to prevent access by that site, as circumstances warrant. |

IP_TUNNEL through IVR_NOSIGNALING

- [IP_TUNNEL](#)
- [IP_VFR](#)
- [IRECAGENTSERVER](#)
- [ISDN](#)
- [ISR4000_RP_NGIO_ATM](#)
- [ISR_THROUGHPUT](#)
- [ISSU](#)
- [IVR](#)
- [IVR_MSB](#)
- [IVR_NOSIGNALING](#)

IP_TUNNEL

%IP_TUNNEL-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]

Explanation For a request from upper TUNNEL software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%IP_TUNNEL-3-IPC_NORES : No space for the IPC reply, size [int]

Explanation For a request from upper TUNNEL software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%IP_TUNNEL-2-IPC_INIT : IPC message handler registration failure, rc [int]

Explanation Registering an IPC message handler for the Tunnel feature failed. This may cause the feature to not function.

Recommended Action This is normally a software issue. The consequences are that the tunnel feature may not function. LOG_STD_ACTION

IP_VFR

%IP_VFR-4-TINY_FRAGMENTS : [chars]: from the host [IP_address] destined to [IP_address]

Explanation This message indicates that the router is receiving tiny fragments - meaning the initial fragment does not have complete layer 4 header

Recommended Action This is an informational message

%IP_VFR-3-OVERLAP_FRAGMENTS : [chars]: from the host [IP_address] destined to [IP_address]

Explanation This message is logged whenever the router encounters overlap fragments. Overlap fragment means, offset of one fragment overlaps the offset of another fragment. For example, if first fragment's offset is 0 and length is 800, then the second fragments offset must be 800. If second fragment's offset is less than 800, that means the second fragment overlaps the first fragment.

Recommended Action This could possibly be an attack, configure a static ACL to prevent further overlap fragments from the sender

%IP_VFR-4-FRAG_TABLE_OVERFLOW : [chars]: the fragment table has reached its maximum threshold [dec]

Explanation This means the number of datagrams reassembled at a time reached its maximum limit, increase the value of max-reassemblies using ip virtual-reassembly max-reassemblies <number>

Recommended Action

%IP_VFR-4-TOO_MANY_FRAGMENTS : [chars]: Too many fragments per datagram (more than [dec]) - sent by [IP_address], destined to [IP_address]

Explanation This message indicates the datagram being reassembled has received more fragments than its threshold value

Recommended Action Check if the fragments received are from a genuine source, if so increase the value of max-fragments using the CLI ip virtual-reassembly max-fragments <number>

%IP_VFR-3-INVALID_FRAG_LENGTH : [chars]: fragment length invalid - received from [IP_address], destined to [IP_address]

Explanation This message indicates that the router has encountered a ping-of-death sort of an attack

Recommended Action To prevent further attacks, its highly recommended that an ACL be configured to drop any traffic from the sender

%IP_VFR-3-SYSTEM_ERROR : [chars]: IP VFR System failure - [chars]

Explanation This message indicates the misc errors in the VFR subsystem**Recommended
Action**

IRECAGENTSERVER

%IRECAGENTSERVER-3-NOINIT : Can't initialize iREC agent server

Explanation Internal problems with initializing ports for the iREC agentserver**Recommended
Action** Make sure the iREC agent server port is available on the localmachine.

%IRECAGENTSERVER-3-NOMEM : Can't initialize memory for iREC agent server

Explanation Insufficient Memory for iREC agent server**Recommended
Action** Increase amount of available memory

%IRECAGENTSERVER-3-NOSOCKETS : Max Number of iREC agent Server sockets exceeded

Explanation There are too many iREC agent clients requesting service**Recommended
Action** Reduce number of iREC agent requesting service

%IRECAGENTSERVER-3-NOPROC : Could not start iREC agent Server

Explanation Internal Problem in process creation**Recommended
Action** None

ISDN

%ISDN-6-CONNECT : Interface [chars] is now connected to [chars] [chars]

Explanation This is an informational message sent when a call is connected. The message displays the remote name and number, which it receives from the Point-to-Point Protocol (PPP) authentication or from where the dialer placed the call to.

%ISDN-6-CONNECT : Interface [chars] is now connected to [chars] [chars]

Recommended Action No action is required.

%ISDN-6-DISCONNECT : Interface [chars] disconnected from [chars] [chars], call lasted [int] seconds

Explanation This is an informational message sent when a call is disconnected. The message displays the remote name and number, which it receives from the Point-to-Point Protocol (PPP) authentication or from where the dialer placed the call to. It also shows how long the call lasted.

Recommended Action No action is required.

%ISDN-1-NOMEMORY : no memory for [chars]

Explanation The requested operation could not be accomplished because of a low memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%ISDN-4-INVALID_SPID : Interface [chars], Spid[dec] was rejected

Explanation The SPID configured in the router has been rejected by the switch.

Recommended Action Determine the correct SPID, reenter the SPID and clear the BRI interface.

%ISDN-4-INVALID_CALLEDNUMBER : Interface [chars], Ignoring call, LDN and Called Party Number mismatch

Explanation The incoming ISDN call is ignored because the Called Party Number does not match the LDN numbers configured in the router.

Recommended Action Correct the LDN in the router to match the Called Party Number delivered in the incoming setup message.

%ISDN-4-INVALID_EID : Interface [chars], Ignoring call, EndPoint Identifier (EID) mismatch

Explanation The incoming ISDN call is ignored because the EID delivered in the incoming setup message cannot be matched.

Recommended Action If EID is delivered in the setup message, use the `isdn debugs` and `show isdn status` commands to determine the current EID values. You may need to contact the service provider.

%ISDN-6-LAYER2UP : Layer 2 for Interface [chars], TEI [int] changed to up

Explanation This is an informational message. It is sent when an ISDN Layer2 logical link is up. It also shows the TEI associated with this logical link.

Recommended Action No action is required.

%ISDN-3-LAYER2_UP : Layer 2 for Interface [chars], TEI [int] changed to up

Explanation This is an informational message but being logged as an ERR at request from some customers. It is sent when an ISDN Layer2 logical link is up. It also shows the TEI associated with this logical link.

Recommended Action No action is required.

%ISDN-6-LAYER2DOWN : Layer 2 for Interface [chars], TEI [int] changed to down

Explanation This is an informational message. It is sent when an ISDN Layer2 logical link is down. It also shows the TEI associated with this logical link.

Recommended Action No action is required.

%ISDN-3-LAYER2_DOWN : Layer 2 for Interface [chars], TEI [int] changed to down

Explanation This is an informational message but being logged as ERR at request from some customers. It is sent when an ISDN Layer2 logical link is down. It also shows the TEI associated with this logical link.

Recommended Action No action is required.

%ISDN-6-CHAN_UNAVAILABLE : Interface [chars] Requested Channel [dec] is not available

Explanation This is an informational message. It is sent when the requested channel is not available.

Recommended Action No action is required.

%ISDN-6-CALL_COLLISION : Interface [chars] Call Cid [hex] Cref [hex] collision on Channel [dec] in_use_cid [hex] cref [hex], Channel awarded to the received call

Explanation This is an informational message. It is sent when a Call is received that collides with an existing call on the same channel.

%ISDN-6-CALL_COLLISION : Interface [chars] Call Cid [hex] Cref [hex] collision on Channel [dec] in_use_cid [hex] cref [hex], Channel awarded to the received call

Recommended Action No action is required.

%ISDN-6-NO_TIMER : No Free Timer Entry, caller [hex], timers used [dec]

Explanation This could be an indication of low memory. It is sent when the ISDN protocol cannot start new timers for it's operation.

Recommended Action capture the show isdn mem, show isdn status output for possible debugging information. Reduce other system activity to ease the memory demands in the system.

%ISDN-6-INVALID_TIMER : [chars]: Invalid Timer Handle, caller [hex] handle %3d

Explanation This could be an indication of low memory. It is sent when an invalid ISDN timer handle is passed on for timer operations

Recommended Action capture the show isdn mem, show isdn status output for possible debugging information. Reduce other system activity to ease the memory demands in the system.

%ISDN-4-INVALID_EVENT : [chars]: Bad Event Received For Current State

Explanation The State Transition for the ISDN L2 Socket Process failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ISDN-4-SPURIOUS_CONNECT : [chars]: Spurious Connection Accepted and Closed on port [int]

Explanation An unknown TCP connection was accepted and refused.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ISDN-4-GET_STATUS_STATE_FAIL : [chars]: isdn_get_status_state: Unknown DSL [int]

| | |
|---------------------------|---|
| Explanation | An attempt to retrieve the status of a DSL that is not currently configured. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ISDN-4-ISDN_L2_INTERFACE_NOT_REGISTERED : [chars]: isdn_to_L2: Unknown DSL [int] for command [chars]

| | |
|---------------------------|---|
| Explanation | The ISDN Stack has not registered its L2 Message Handler |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ISDN-4-BAD_DSL_FOR_CREATE_DELETE_L2 : [chars]: isdn_create_delete_signalling_channel: Unknown DSL [int] for [chars]

| | |
|---------------------------|---|
| Explanation | The Creation/Deletion service for the L2 Signalling handler for the given DSL is missing |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ISDN-4-OPEN_TEMP_SOCKET_FAIL : [chars]: Failed to Open Required Temporary Socket[chars]

| | |
|--------------------|--|
| Explanation | The (Re)Open attempt for a required temporary socket failed, without this socket the L2 socket process will fail |
|--------------------|--|

%ISDN-4-OPEN_TEMP_SOCKET_FAIL : [chars]: Failed to Open Required Temporary Socket[chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ISDN-4-ISDN_UNEXPECTED_EVENT : [chars]: Occurred at [chars]:[dec]

Explanation An unexpected event of significance has occurred

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ISDN-4-RLM_STATUS_CHANGE : ISDN SC [chars]: Status Changed to: [chars].

Explanation ISDN has been notified by the RLM component of a status change in the RLM link

Recommended Action No action is required.

%ISDN-2-ISDN_GENERAL_TRACEBACK : [chars]:[dec]

Explanation A debug - traceback condition has occurred

Recommended Action No action is required.

%ISDN-3-ISDN_RESOURCE_UNAVAILABLE : [chars]: Resource not available, at [chars]:[dec]

Explanation Hardware resource could not be allocated

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ISDN-2-ISDN_FATAL : ISDN FATAL ERROR: file [chars], function [chars], message: [chars]

| | |
|---------------------------|---|
| Explanation | ISDN has detected a fatal system error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ISDN-3-ISDN_CCB_FREE : [chars]: CCB with call id [hex] on b channel [dec] was leaked, but has been freed by ISDN Housekeeping. Reason: [chars]

| | |
|---------------------------|---|
| Explanation | A data structure internal to ISDN has leaked. |
| Recommended Action | No action is required. |

%ISDN-3-ISDN_CCB_FREE_FAILS : [chars]: CCB with call id [hex] on b channel [dec] was leaked (reason: [chars]), and can't be free'd by ISDN Housekeeping.

| | |
|---------------------------|---|
| Explanation | A data structure internal to ISDN has leaked and we can't fix it for some reason. |
| Recommended Action | No action is required. |

%ISDN-4-ISDN_CCB_LEAK : [chars]: CCB with callid [hex] on b channel [dec] has been leaked. Reason: [chars]

| | |
|---------------------------|---|
| Explanation | A data structure internal to ISDN has been leaked |
| Recommended Action | No action is required. |

%ISDN-4-SERVICE : Interface [chars] [chars] [chars] message for chan [dec] state [chars]

| | |
|---------------------------|--|
| Explanation | This is an informational message but will be logged as a warning message if so configured. |
| Recommended Action | No action is required. |

%ISDN-4-RESTART : Interface [chars] [chars] [chars] message with restart class of [chars] chan [dec]

| | |
|--------------------|--|
| Explanation | This is an informational message but will be logged as a warning message if so configured. |
|--------------------|--|

%ISDN-4-RESTART : Interface [chars] [chars] [chars] message with restart class of [chars] chan [dec]

Recommended Action No action is required.

%ISDN-4-STATUS : Interface [chars] [chars] [chars] st [hex] ev [hex] cid [hex] cref [hex]

Explanation This is an informational message but being logged as a warning message if so configured.

Recommended Action No action is required.

%ISDN-4-SERV_AUDIT_C1 : Interface [chars] service audit trigger condition [dec] on channel [dec]

Explanation This is an informational message but will be logged as a warning message if so configured.

Recommended Action No action is required.

%ISDN-5-SERV_AUDIT_C2 : Interface [chars] service audit trigger condition [dec] on channel [dec]

Explanation This is an informational message but will be logged as a warning message if so configured.

Recommended Action No action is required.

%ISDN-6-SERV_AUDIT_C3 : Interface [chars] service audit trigger condition [dec] on channel [dec]

Explanation This is an informational message but will be logged as a warning message if so configured.

Recommended Action No action is required.

%ISDN-4-ISDN_NLCB_LEAK : [chars]: NLCB leak detected. nlcb [hex] call id [hex] reason: [chars]

Explanation A data structure internal to ISDN has not been freed

Recommended Action No action is required.

%ISDN-3-ISDN_NLCB_FREE : [chars]: NLCB with call id [hex] was leaked, but has been freed by ISDN Housekeeping. Reason: [chars]

Explanation A data structure internal to ISDN has leaked.

Recommended Action No action is required.

%ISDN-6-REPEATED_SETUP : Interface [chars] Call Cid [hex] Cref [hex] received a retransmitted setup on channel [dec] in_use_cid [hex] cref [hex].

Explanation This is an informational message sent when a duplicate SETUP message is received on a B-channel. This indicates that the rate of calls being received is momentarily greater than the rate calls can be processed. No action is required.

Recommended Action No action is required.

%ISDN-6-NFAS_STATUS_CHANGE : [chars] [chars] [chars] [chars]

Explanation The NFAS D-channel status has changed.

Recommended Action No action is required.

%ISDN-2-ISDN_EXIT : [chars]

Explanation The ISDN task has terminated execution for the specified reason, and may cause CISCO IOS to terminate.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

ISR4000_RP_NGIO_ATM

%ISR4000_RP_NGIO_ATM-4-SETUPVC : Interface [chars], VC ([dec]) setup failed, reason = [dec]

Explanation A command to setup a VC has failed on RP.

%ISR4000_RP_NGIO_ATM-4-SETUPVC : Interface [chars], VC ([dec]) setup failed, reason = [dec]

Recommended Action The SPA ATM driver has detected a problem creating the internal OAM VC. Reload the indicated SPA card to reconfigure the internal OAM VC. If the error messages persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at <http://www.cisco.com/public/support/tac/tools.shtml>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case> or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt).

%ISR4000_RP_NGIO_ATM-4-TEARDOWNVC : Interface [chars], VC ([dec]) teardown failed, (vc state = [dec])/[dec]

Explanation A command to remove a VC config has failed on RP.

Recommended Action The SPA ATM driver has detected a problem tearing down the internal OAM VC. Reload the indicated SPA card to do a clean tear down of the internal OAM VC. If the error messages persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at <http://www.cisco.com/public/support/tac/tools.shtml>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case> or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt).

%ISR4000_RP_NGIO_ATM-5-MPVCVPSETUP : Interface [chars] has a VC/VP ([dec]) configured already, VC/VP ([dec]) cannot be configured.

Explanation The SPA ATM driver supports configuring only one VC/VP under a point to multi point sub-interface. The sub-interface specified in the message already has VP/VC configured.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_FLOWID_GET_FAIL : Failed to get a flow control identifier for interface [chars] for index [dec]

Explanation The SPA driver is not able to obtain the datapath flow control identifier for the data path identifier under the interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_DPIDB_ALLOC_FAIL : Failed to allocate a data plane identifier for interface [chars] for VCD [dec]

Explanation The SPA driver is not able to allocate the datapath identifier for the VCD under the interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_VC_INGRESS_ID_ALLOC_FAIL : Failed to allocate VC ingress identifier on interface [chars] for VCD [dec] ebfc_id [dec] when [chars]

Explanation The ATM SHIM is not able to allocate the ingress identifier for the VCD under the interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_DPIDB_GET_FAIL : Failed to get a data plane identifier for interface [chars] for VCD [dec]

Explanation The SPA driver is not able to obtain the datapath identifier for the VCD under the interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_TXCHANL_GET_FAIL : Failed to get a valid tx_chan id for interface [chars] for VCD [dec]

Explanation The SPA driver is not able to obtain the datapath tx channel identifier for the VCD under the interface specified in the message. This indicates a SPA occur error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_VC_SPA_SETUP_FAIL : SPA Error response on interface [chars] when [chars] for VCD [dec] ebfc_id [dec] ret_val [dec]

Explanation The SPA give a error response for ATM setup or response timeout in atm vc setup message. This indicates a SPA occur error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_VC_CFG_SEND_FAIL : Error in sending message to SPA on interface [chars] when [chars] for VCD [dec] ebfc_id [dec]

Explanation The SPA give a error response for ATM setup or response timeout in atm vc setup message. This indicates a SPA occur error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_VC_CORE_GET_FAIL : Failed to get a ATM VC core info for interface [chars] VCD [dec]

Explanation Could not get VC core information when get SPA VCOPEN or VCMODIRY response. This indicates a ATM information error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_VC_ENCAP_GET_FAIL : Failed to get ATM encapsulation for interface [chars] ([dec]/[dec]) VCD [dec]

Explanation Could not get VC encapsulation information when get SPA VCOPEN or VCMODIFY response This indicates ATM occur error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_VC_ERROR_ENCAP_TYPE : Get ATM ERROR encapsulation for interface [chars] ([dec]/[dec]) VCD [dec]

Explanation Get a ERROR VC encapsulation information when get SPA VCOPEN or VCMODIFY response This indicates ATM occur error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_VC_CON_SET_FAIL : Failed set ATM con for interface [chars] ([dec]/[dec]) VCD [dec]

Explanation Could not get VC encapsulation information when get SPA VCOPEN or VCMODIFY response This indicates ATM occur error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_VC_EGRESSID_UPDATE_FAIL : Failed to update ATM egress id for interface [chars] VCD [dec] egress_id [dec]

Explanation Could not update VC egress id when get SPA VCOPEN or VCMODIFY response This indicates ATM occur error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-ATM_VC_DPIDX_GET_FAIL : Failed to get ATM dpidx for interface [chars] VCD [dec]

Explanation Could not get VC dpidx information when get SPA VCOPEN or VCMODIFY response This indicates ATM occur error.

Recommended Action No action is required.

%ISR4000_RP_NGIO_ATM-3-PROCESS_FAIL : process creation failed for [chars]

Explanation The Periodic one second process creation failed. This indicates a software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ISR4000_RP_NGIO_ATM-3-ATM_SPA_AUTOVC_FAIL : [chars]: atm autovc discovery configuration failed, reason: [chars]

Explanation A command to configure the atm autovc discovery on an atm interface has failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ISR4000_RP_NGIO_ATM-3-ATM_SPA_VC_MAX_LIMIT_REACHED : total active atm vc reached system limitation of [dec]

Explanation total number of active atm vc has reached max limit allowed on the system

%ISR4000_RP_NGIO_ATM-3-ATM_SPA_VC_MAX_LIMIT_REACHED : total active atm vc reached system limitation of [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%ISR4000_RP_NGIO_ATM-4-ATM_SPA_VC_ABOVE_WM_WARNING : total active atm vc approaching [int] percent of system limitation of [dec]

| | |
|---------------------------|---|
| Explanation | total number of active atm vc is approaching the high water mark of sysyem limitation |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ISR4000_RP_NGIO_ATM-5-ATM_SPA_VC_BELOW_WM_NOTICE : total active atm vc below [int] percent of system limitation of [dec]

| | |
|---------------------------|---|
| Explanation | total number of active atm vc below the high water mark of sysyem limitation |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ISR4000_RP_NGIO_ATM-3-ATM_PER_SPA_MAX_VC_LIMIT_REACHED : total active atm vc per ATM SPA reached limitation of [dec]

| | |
|---------------------------|---|
| Explanation | total number of active atm vc per ATM SPA has reached max limit |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ISR4000_RP_NGIO_ATM-3-ATM_FLOWID_OUT_OF_RANGE : Flow control identifiers for interface [chars] (chan lo [hex] chan hi [hex]) are out of range, Index [hex]

| | |
|--------------------|---|
| Explanation | The flow control identifier received for the interface is out of range. This indicates SPA driver is responding with out of range flow control identifier |
|--------------------|---|

%ISR4000_RP_NGIO_ATM-3-ATM_FLOWID_OUT_OF_RANGE : Flow control identifiers for interface [chars] (chan lo [hex] chan hi [hex]) are out of range, Index [hex]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

ISR_THROUGHPUT

%ISR_THROUGHPUT-3-SETUP_FAILED : Throughput upgrade license set up failed

Explanation An error occurred when setting up the throughput upgrade licenses.

Recommended Action

%ISR_THROUGHPUT-6-LEVEL : Throughput level has been set to [dec]00 kbps

Explanation Throughput level has been set to a number

Recommended Action

%ISR_THROUGHPUT-6-CRYPTO : Crypto level has been set to [dec]00 kbps

Explanation Crypto level has been set to a number

Recommended Action

%ISR_THROUGHPUT-6-UNTHROTTLED : Crypto level is unthrottled

Explanation Crypto level has been unthrottled

Recommended Action

%ISR_THROUGHPUT-3-CONF_FAILED : Configuration failed

Explanation An error occurred when the throughput configuration was attempted.

Recommended Action

%ISR_THROUGHPUT-3-EULA_NOT_ACCEPTED : The EULA has to be accepted prior to throughput configuration.

Explanation Users need to accept EULA to activate the license

Recommended Action Accept EULA for throughput license

%ISR_THROUGHPUT-3-INVALID_CONFIG : An invalid throughput config: [chars] kbps was selected.

Explanation The configured throughput is unknown

Recommended Action

ISSU

%ISSU-3-BOOT_SYNC : Problem with sync of ISSU boot state - [chars]

Explanation The ISSU state between two FRUs is not properly synchronized as a result of a boot error.

Recommended Action This message will automatically appear during certain events, such as during a FRU removal or if the FRU loses connectivity. In most cases, the router will resynchronize the ISSU state between the FRUs without any user intervention. If the ISSU state is not resynchronized after multiple attempts, the problem is likely a result of another problem. Monitor the other system messages to see if a more serious issue has occurred on your router. If you are unable to resolve this other issue and this message persists, gather the output of show tech-support and provide it to a Cisco technical support representative.

%ISSU-0-BOOT_SYNC_FAIL : Problem with sync of ISSU boot state - [chars]

Explanation The ISSU state between two FRUs is not properly synchronized as a result of a boot error.

Recommended Action This message will automatically appear during certain events, such as during a FRU removal or if the FRU loses connectivity. In most cases, the router will resynchronize the ISSU state between the FRUs without any user intervention. If the ISSU state is not resynchronized after multiple attempts, the problem is likely a result of another problem. Monitor the other system messages to see if a more serious issue has occurred on your router. If you are unable to resolve this other issue and this message persists, gather the output of show tech-support and provide it to a Cisco technical support representative.

%ISSU-0-PKG_INCONSIST : Reason: [chars]

| | |
|---------------------------|--|
| Explanation | A software consolidated package or sub-package has an error that indicates the sub-package should not be installed or used. |
| Recommended Action | If this message is received, the desired consolidated package or sub-package should not be used. Upgrade using a different consolidated package or sub-package, and report the problem consolidated package or sub-package to Cisco technical support. |

%ISSU-3-INCOMPAT : The packages in [chars] are not consistent

| | |
|---------------------------|---|
| Explanation | The sub-packages specified for running on the chassis are not compatible with one other. |
| Recommended Action | Install a compatible set of packages to allow normal operation. This will require booting a known-good package set. |

%ISSU-3-BOOT_UNCLEAN : Found reload log file, moved to [chars]

| | |
|---------------------------|---|
| Explanation | A log file was found at bootup indicating that all shutdown tasks were not performed on a previous reload. |
| Recommended Action | No user action is necessary. The system will automatically resolve most issues related to the shutdown task as part of the bootup procedure. If a problem related to the tasks that did not shutdown occurs, another error message will occur providing information about that problem. |

%ISSU-5-ISSU_STATE_INVALID : ISSU stored state found invalid and cleaned up: [chars]

| | |
|---------------------------|---|
| Explanation | The RP has corrected a failed ISSU install state that was detected at bootup. |
| Recommended Action | No user action is necessary. This is an informative message indicating that the failed ISSU state has been corrected. |

%ISSU-0-PKG_MNT_SCRIPT_FAIL : Package: [chars]

| | |
|---------------------------|---|
| Explanation | A consolidated package or sub-package has encountered an error indicating it is not usable. |
| Recommended Action | Upgrade your software using a different consolidated package or sub-package. |

%ISSU-5-ISSU_AUTO_ROLLBACK : ISSU rollback timer expired: initiating rollback

| | |
|--------------------|--|
| Explanation | An ISSU upgrade has been rolled back because the rollback timer has expired. |
|--------------------|--|

%ISSU-5-ISSU_AUTO_ROLLBACK : ISSU rollback timer expired: initiating rollback

| | |
|---------------------------|---|
| Recommended Action | No user action is needed. If you want to commit the ISSU upgrade, redo the upgrade. Otherwise, this is an informational message only. |
|---------------------------|---|

%ISSU-0-SOFTWARE_INVALID : Package for location [chars]: [chars]

| | |
|--------------------|---|
| Explanation | The sub-packages have encountered an error related to the structure of the loaded software. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | This error is likely caused by a failure of the boot or installation process or a corrupted provisioning file. If the system displays error messages related to the boot that can be addressed, address those messages. Downloading new software, if possible, may also help with the problem. If the problem persists, gather the output of show tech-support and provide it to a Cisco technical support representative. |
|---------------------------|--|

%ISSU-0-RESET_FRU_FAIL : Problem with ISSU reset of remote FRU - [chars]

| | |
|--------------------|---|
| Explanation | After a sub-package installation, one or more FRUs that were upgraded failed to initialize within the timeout period. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | This problem is more likely to occur in routers with larger configurations, so if your router has a large configuration, you may want to wait a few more minutes to see if your hardware initializes. If the hardware continues to not initialize, reset the FRUs which failed to initialize. If resetting the FRUs fails to resolve the issue, gather the output of show tech-support and contact a Cisco technical support representative. |
|---------------------------|--|

%ISSU-3-UCODE_INCOMPAT : Found mismatch for ucode feature - [chars]

| | |
|--------------------|---|
| Explanation | During boottime microcode feature version check, a version mismatch was found for this feature. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Please ensure that versions of features in microcode are compatible by provisioning a different set of microcode files. |
|---------------------------|---|

%ISSU-3-SYNC_ERR : Problem with sync of state - [chars]

| | |
|--------------------|---|
| Explanation | The software state between two FRUs or switches is not properly synchronized as a result of a boot error. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | This message may appear during certain events, such as during a FRU or switch removal or if the FRU or switch loses connectivity. In most cases, the router will resynchronize the software state between the FRUs or switches without any user intervention. If the software state is not resynchronized after multiple attempts, the problem is likely a result of another problem. Monitor the other system messages to see if a more serious issue has occurred on your router. If you are unable to resolve this other issue and this message persists, gather the output of show tech-support and provide it to a Cisco technical support representative. |
|---------------------------|---|

IVR

%IVR-3-BAD_IVR_VERSION : Script requires version [dec].[dec], image supports [dec].[dec]

| | |
|---------------------------|---|
| Explanation | IVR Script requires a higher IVR infrastructure version |
| Recommended Action | Upgrade IOS, or use a different script |

%IVR-3-NOSCRIPT : Could not load IVR script [chars] errno=[dec]=[chars]

| | |
|---------------------------|--|
| Explanation | Could not read in the IVR script |
| Recommended Action | Check that script exists on the server, and is readable. |

%IVR-3-BADSCRIPT : Could not parse malformed IVR script: [chars]

| | |
|---------------------------|--|
| Explanation | Could not parse malformed IVR script |
| Recommended Action | Check the script and fix the syntax error. |

%IVR-3-ABNORMAL_EXIT : TCL IVR Process for this call with CallID [dec] exits , bad event: [chars] received

| | |
|---------------------------|---|
| Explanation | The TCL IVR call process exited for the specified call. The call process did not clear a prior call properly, so other events could not be handled. Only the specified call is affected |
| Recommended Action | If problem persists for subsequent calls,copy the message exactly as it appears on the console or in the system log, contact your Cisco technical support representative, and provide the representative with the gathered information. |

%IVR-3-LOW_MEMORY : IVR: Sytem running on low memory. Free memory: %l bytes. Call is rejected.

| | |
|---------------------------|--|
| Explanation | System does not have enough memory to accept calls |
| Recommended Action | Check to see what is causing low system memory. |

%IVR-3-LOW_MEMORY_RESOURCE : IVR: System running low on memory ([dec]/100 in use). Call (callID=[dec]) is rejected.

| | |
|--------------------|--|
| Explanation | System does not have enough free memory to accept a new call |
|--------------------|--|

%IVR-3-LOW_MEMORY_RESOURCE : IVR: System running low on memory ([dec]/100 in use). Call (callID=[dec]) is rejected.

Recommended Action Ensure that the gateway has the recommended amount of memory for this IOS feature set and version.

%IVR-3-LOW_CPU_RESOURCE : IVR: System experiencing high cpu utilization ([dec]/100). Call (callID=[dec]) is rejected.

Explanation System does not have enough CPU resources available to accept a new call

Recommended Action Ensure that the call setup rate is within the supported capacity of this gateway.

%IVR-2-APP_CRIT_R : [chars]

Explanation A critical message was reported by an IVR Tcl application.

Recommended Action The remedy of the problem is application specific.

%IVR-3-APP_ERR_R : [chars]

Explanation An error message was reported by an IVR Tcl application.

Recommended Action The remedy of the problem is application specific.

%IVR-4-APP_WARN_R : [chars]

Explanation A warning message was reported by an IVR Tcl application.

Recommended Action The remedy of the problem is application specific.

%IVR-6-APP_INFO_R : [chars]

Explanation An informational message was reported by an IVR Tcl application.

Recommended Action The remedy of the problem is application specific.

%IVR-6-APP_PARALLEL : Cannot use dial-peer [dec] (parallel hunt-group) for a rotary or in a hunt-group call.

Explanation The dial-peer for parallel hunt-groups must have a unique pilot number.

Recommended Action Create a unique dial-peer destination-number for the parallel hunt-group.

%IVR-6-APP_SEQ_HUNT : Pilot hunt-group '[chars]' found in hunt-group list. Nested hunt-groups are allowed only as the hunt-group's final number.

Explanation Nested sequential hunt-group detected in dial-peer rotary. Nested hunt-groups is unsupported.

Recommended Action Do not create hunt-group lists that contain hunt-group pilot numbers.

%IVR-1-APP_PARALLEL_INVALID_LIST : Call terminated. Huntgroup '[dec]' does not contain enough valid SIP end-points to proceed with a parallel call.

Explanation The call to a parallel hunt-group was denied because less than two valid SIP end-points were found in the huntgroup list.

Recommended Action Check the hunt-group list's numbers. Remove any incorrect numbers or numbers that have a non-SIP dial-peer. If the numbers are from SIP phones, then verify whether the phones have registered to the system yet.

%IVR-2-INVALID_DSAPP_DIALPEER : Service dsapp contains an invalid dial peer tag: [chars]

Explanation An invalid dial peer tag has been configured for the dsapp service. The tag either is not in the range from 1 to 2147483647, or it belongs to a non-existent dial-peer.

Recommended Action Enter the **show running-config** or the **show dial-peer voice** command to find a valid dial peer tag. Reconfigure the dial peer with a valid tag or remove the dial peer tag completely to allow the system to match from the system dial peers.

%IVR-4-INVALID_DSAPP_BLINDTIME : Blind-xfer-wait-time [dec] is invalid. Resetting to [dec] seconds.

Explanation The configured value for blind-xfer-wait-time was outside of the acceptable range (0-10) and has been reset to the indicated value.

Recommended Action If the new value for blind-xfer-wait-time is unacceptable, you can change it from the command line interface.

%IVR-4-INVALID_DSAPP_TOGGLE_TIME : Disc-toggle-time [dec] is invalid. Resetting to [dec] seconds.

| | |
|---------------------------|--|
| Explanation | The configured value for disc-toggle-time was outside of the acceptable range (10-30) and has been reset to the indicated value. |
| Recommended Action | If the new value for disc-toggle-time is unacceptable, you can change it from the command line interface. |

%IVR-5-APP_CALL_PREEMPTION : CallID [dec] is being preempted

| | |
|---------------------------|---|
| Explanation | A notification message was reported by an IVR application on detecting callID %d being preempted. |
| Recommended Action | This is not a problem but notifying syslog about preempted call. |

%IVR-2-APP_CRIT : [chars]

| | |
|---------------------------|--|
| Explanation | A critical message was reported by an IVR Tcl application. |
| Recommended Action | The remedy of the problem is application specific. |

%IVR-3-APP_ERR : [chars]

| | |
|---------------------------|--|
| Explanation | An error message was reported by an IVR Tcl application. |
| Recommended Action | The remedy of the problem is application specific. |

%IVR-4-APP_WARN : [chars]

| | |
|---------------------------|---|
| Explanation | A warning message was reported by an IVR Tcl application. |
| Recommended Action | The remedy of the problem is application specific. |

%IVR-6-APP_INFO : [chars]

| | |
|---------------------------|--|
| Explanation | An informational message was reported by an IVR Tcl application. |
| Recommended Action | The remedy of the problem is application specific. |

%IVR-5-APP_MED_INACT_DETECTED : [chars]

Explanation A notification message was reported by an IVR application on detecting media inactivity.

Recommended Action This is not a problem but notifying syslog about media inactivity.

%IVR-5-APP_MED_REACT_DETECTED : [chars]

Explanation A notification message was reported by an IVR application on detecting media activity.

Recommended Action This is not a problem but notifying syslog about media activity.

%IVR-5-APP_LOG_DUR_CALL_DETECTED : [chars]

Explanation A notification message was reported by an IVR application on detecting long duration call.

Recommended Action This is not a problem but notifying syslog about long duration call.

IVR_MSB

%IVR_MSB-3-NOPROMPT : Could not create IVR prompt [chars] errno=[dec]=[chars]

Explanation Could not read in the IVR prompt

Recommended Action Check that prompt exists on the server, and is readable.

%IVR_MSB-3-NO_IO_MEMORY : [chars]: Failed to create pool_group [hex] buffer_pool [hex] platform_mc_buf_pool_count [dec]

Explanation No IO memory to create IVR private pak pool

Recommended Action Check to see if there is enough IO memory.

%IVR_MSB-3-INVALID_MAX_PROMPTS : [chars]: This version of IOS does not support prompt playout for IVR applications.

Explanation This error will be displayed if an IVR application is used on a gateway that does not support IVR prompt playout.

%IVR_MSB-3-INVALID_MAX_PROMPTS : [chars]: This version of IOS does not support prompt playout for IVR applications.

Recommended Action Ensure that this platform and IOS version support the IVR feature set.

%IVR_MSB-3-INVALID_PROMPT_SIZE : [chars]: Bad size for the prompt file [chars]. Read size [dec]. Expected size [dec].

Explanation Prompt file size error. File may be corrupted.

Recommended Action Replace the bad prompt file.

IVR_NOSIGNALING

%IVR_NOSIGNALING-3-LOW_MEMORY_RESOURCE : IVR: System running low on memory ([dec]/100 in use). Application cannot be instantiated.

Explanation System does not have enough free memory to spawn a new instance of IVR application

Recommended Action Ensure that the gateway has the recommended amount of memory for this IOS feature set and version.

%IVR_NOSIGNALING-3-LOW_CPU_RESOURCE : IVR: System experiencing high cpu utilization ([dec]/100). Application cannot be instantiated.

Explanation System does not have enough CPU capacity to spawn a new instance of IVR application

Recommended Action Ensure that the call setup rate is within the supported capacity of this gateway.

KERBEROS through LANMGR

- [KERBEROS](#)
- [KEYMAN](#)
- [KEYSTORE](#)
- [L2BD_PROXY](#)
- [L2CTRL](#)
- [L2FIB](#)
- [L2TP](#)

- L2TP_HA
- L4_INSPECT
- LANMGR

KERBEROS

%KERBEROS-3-FORKFAIL : Failed to fork process for [chars].

| | |
|---------------------------|--|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible. |
| Recommended Action | If this message recurs, call your technical support representative for assistance. |

KEYMAN

%KEYMAN-4-KEYSTR_CRYPTO_TYPE : Type [dec] encryption unknown. Interpreting keystring as literal

| | |
|---------------------------|--|
| Explanation | The format type was not recognized by the system. A keystring format type value of 0 (unencrypted keystring) or 7 (hidden keystring), followed by a space, can precede the actual keystring to indicate its format. An unknown type value will be accepted, but the system will consider the keystring as being unencrypted. |
| Recommended Action | Use the correct format for the value type or remove the space following the value type |

%KEYMAN-4-KEYSTR_BAD_CRYPTO : Bad encrypted keystring for key id [dec].

| | |
|---------------------------|--|
| Explanation | The system could not successfully decrypt an encrypted keystring. The keystring may have been corrupted during system configuration. |
| Recommended Action | Re-enter the key-string command, and reconfigure the key string. |

KEYSTORE

%KEYSTORE-3-IFS_OPEN_W : Failed to open file [chars] for writing software keystore. ([chars])

| | |
|---------------------------|---|
| Explanation | An error occurred while opening a file for persistent storage. CTS keys could not be saved to persistent storage. |
| Recommended Action | |

%KEYSTORE-3-IFS_WRITE : An error occurred while writing to the software keystore file.

| | |
|--------------------|--|
| Explanation | CTS keys could not be saved to persistent storage. |
|--------------------|--|

%KEystore-3-IFS_WRITE : An error occurred while writing to the software keystore file.

**Recommended
Action**

%KEystore-3-IFS_OPEN_R : Failed to open file [chars] for reading software keystore. ([chars])

Explanation An error occurred while opening the keystore file for reading. CTS keys could not be retrieved.

**Recommended
Action**

%KEystore-3-IFS_READ : An error ([chars]) occurred while reading from the software keystore file.

Explanation CTS keys could not be retrieved from persistent storage.

**Recommended
Action**

%KEystore-3-BAD_MAGIC : Bad magic number [hex] in software keystore file [chars].

Explanation Keystore data file appears to have been corrupted. Keys can not be retrieved from persistent memory.

**Recommended
Action**

%KEystore-3-UNEXPECTED_EOF : Unexpected end of file while reading software keystore [chars].

Explanation Keystore data file appears to have been truncated. One or more keys can not be retrieved from persistent memory.

**Recommended
Action**

%KEystore-3-IPCPORT : Failed to create IPC port ([chars]) for keystore redundancy. [chars].

Explanation An error was encountered when trying to create an IPC port. This means that any updates made to the ACTIVE keystore cannot be pushed to the STANDBY keystore.

**Recommended
Action**

%KEystore-3-IPCOPEN : Failed to open IPC port to peer for keystore redundancy: [chars]

Explanation An error was encountered when trying to open an IPC port for keystore redundancy messages. This means that any updates made to the ACTIVE keystore cannot be pushed to the STANDBY keystore.

Recommended Action

%KEystore-3-IPNOCONN : No IPC communication path to peer available for keystore [chars].

Explanation No IPC connection to the peer was available for keystore redundancy messages. This means that any updates made to the ACTIVE keystore cannot be pushed to the STANDBY keystore.

Recommended Action

%KEystore-3-IPCSEND : IPC send error ([chars]) while sending [chars].

Explanation An error occurred while sending an IPC message to the peer during a keystore redundancy operation. This means that any updates made to the ACTIVE keystore cannot be pushed to the STANDBY keystore.

Recommended Action

%KEystore-3-ISSU_INCOMPAT : Standby incompatible for SSO.

Explanation The image on the standby failed ISSU message version negotiation. As a result, we will not be able to sync keystore updates to it and so it is disallowed from reaching hot standby status in SSO mode.

Recommended Action

%KEystore-3-IPC_NO_PROC : Could not create a process to receive keystore redundancy messages.

Explanation An error was encountered when trying to create a process to handle incoming keystore redundancy messages. This means that any updates made to the ACTIVE keystore cannot be pushed to the STANDBY keystore.

Recommended Action

%KEYSTORE-3-NO_KEYSTORE : CTS hardware keystore is not responsive and software emulation is not enabled.

Explanation The CTS hardware keystore on the switch has failed and needs to be inspected. Since CTS credentials are stored in the keystore, this means that CTS authentication and authorization operations will fail. The following action is recommended: If the defect is shown on the Active Supervisor, try to switchover to Standby Supervisor. If the defect is shown on Standby Supervisor, try to reset the Standby. If the defect persists, there may be damage to the hardware keystore chip, please take appropriate action. In the meantime, you can configure the switch to use software keystore emulation. After you have enabled software keystore emulation, please re-configure CTS credentials to populate the software keystore.

Recommended Action

L2BD_PROXY

%L2BD_PROXY-3-L2BD_MEM_REQ_FAILED : L2BD IPC subtype: [dec]

Explanation Requesting more memory failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%L2BD_PROXY-3-L2BD_MEM_EXTEND_FAILED : L2BD IPC subtype: [dec]

Explanation Extending memory failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%L2BD_PROXY-4-PROXY_INVALID_MSG_LEN : QFP L2BD Proxy IPC invalid length, [dec]:[dec] len [dec] flags [hex] source [dec]

Explanation Cisco internal software error. QFP L2BD Proxy received invalid IPC message length from control plane. This message will be ignored.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%L2BD_PROXY-4-PROXY_INVALID_MSG : QFP L2BD Proxy received invalid message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP L2BD Proxy received an invalid message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%L2BD_PROXY-2-PROXY_IPC_INIT_FAILED : QFP L2BD Proxy IPC interface initialization failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP L2BD Proxy initialization detected that the IPC interface initialization failed. QFP L2BD proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%L2BD_PROXY-3-PROXY_BAD_MSG : QFP L2BD Proxy received bad length message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP L2BD Proxy received a corrupted message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%L2BD_PROXY-3-PROXY_IPC_ALLOC_FAILED : QFP L2BD Proxy [chars] message lost due to message buffer allocation failure.

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP L2BD Proxy message processing detected a message buffer allocation failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%L2BD_PROXY-3-PROXY_IPC_SEND_FAILED : QFP L2BD Proxy [chars] message lost due to message sent failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP L2BD Proxy message processing detected a message sent failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

L2CTRL

%L2CTRL-3-ADD_REGISTRY_FAILED : Subsystem [chars] fails to add callback function [chars]

| | |
|---------------------------|--|
| Explanation | Other subsystem must have mistakenly add its own callback functions. This syslog is for debugging purpose. |
| Recommended Action | No action is required. |

L2FIB

%L2FIB-3-BAD_PARAM : [chars]

| | |
|---------------------------|---|
| Explanation | Invalid parameter |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%L2FIB-3-EVPN_ERROR : [chars]

| | |
|---------------------------|---|
| Explanation | EVPN encap error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

L2TP**%L2TP-3-ILLEGAL : [chars]: [chars]**

Explanation An illegal event has been processed by the L2TP subsystem.

Recommended Action No action is required.

%L2TP-3-CRITICAL : [chars]

Explanation An critical event has been processed by the L2TP subsystem.

Recommended Action No action is required.

%L2TP-5-IGNOREICMPMTU : Ignoring received ICMP Type 3 Code 4, due to pmtu min or max setting

Explanation An ICMP Type 3 Code 4 (fragmentation needed and DF set) packet has been received. This packet has specified a Next-Hop MTU that is smaller or greater than the current minimum or maximum path MTU discovery mtu value. The ICMP packet has been ignored and the MTU has not been changed.

Recommended Action If you want the ICMP packet to be accepted and used to decrease or increase the MTU then use the `vpdn pmtu min` command to decrease the minimum MTU allowed and enter the `vpdn pmtu max` command to increase the maximum MTU that is allowed. The minimum value specified is the minimum MTU that is allowed, and the maximum value specified is the maximum MTU that is allowed.

L2TP_HA**%L2TP_HA-3-SYNC : [chars]: code [dec]**

Explanation An error occurred when syncing L2TP state to the Standby Route Processor. This may affect Non-Stop Forwarding capability on L2TP-based interfaces during and after switchover until the state is recovered through normal protocol operation.

Recommended Action Reset the standby processor to attempt the sync again. LOG_STD_RECUR_ACTION

%L2TP_HA-3-ISSU : [chars]: [chars]

Explanation A L2TP ISSU error occurred.

%L2TP_HA-3-ISSU : [chars]: [chars]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

L4_INSPECT

%L4_INSPECT-3-INVALID_CHUNK_ID : Invalid chunk ID for protocol ([int])

| | |
|---------------------------|---|
| Explanation | Failed to determine chunk ID for specified protocol. Unable to free CFT feature object. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

LANMGR

%LANMGR-4-OLDTRAMON : Cannot run RPS on [chars], Old TRAMON code.

| | |
|---------------------------|--|
| Explanation | The software on this interface cannot support the functions required for LAN Network Manager. |
| Recommended Action | Call your Cisco technical support representative about a firmware upgrade for this interface card. |

%LANMGR-4-BADRNGNUM : Ring number mismatch on [chars], shutting down the interface

| | |
|---------------------------|---|
| Explanation | The router detected a conflict in assigned ring numbers for the specified Token Ring. The Ring Parameter Server (RPS) function was shut down to prevent potentially incorrect information from being sourced onto the ring. |
| Recommended Action | Check all bridges connected to this Token Ring and ensure that they are using the same assigned ring number. |

%LANMGR-4-BADUPCALL : Unexpected call ([chars]) from LLC2 for Bridge [hex]-[hex]-[hex]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%LANMGR-4-BADUPCALL : Unexpected call ([chars]) from LLC2 for Bridge [hex]-[hex]-[hex]

| | |
|---------------------------|---|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LANMGR-4-NORING : No ring info for [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LANMGR-2-NOMEMORY : No memory available: [chars]

| | |
|---------------------------|---|
| Explanation | The requested operation failed because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

LAPB through LINEPROTO

- [LAPB](#)
- [LAT](#)
- [LAYER2_BRIDGE](#)
- [LAYER2_SVI](#)
- [LED](#)
- [LFD](#)
- [LI](#)
- [LICENSING](#)
- [LIIN](#)
- [LINEPROTO](#)

LAPB**%LAPB-3-NULLPAK : Interface [chars], NULL packet ptr, rvr [dec], vs [dec], vr [dec]**

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If either of these messages recur, call your technical support representative for assistance. |

%LAPB-3-NOINPIDB : Input idb not set

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If either of these messages recur, call your technical support representative for assistance. |

%LAPB-4-FRAMEERR : Interface [chars], Frame error: CF [hex], VS [dec] %c VR [dec], Reason [hex]

| | |
|---------------------------|---|
| Explanation | A FRMR frame was received, indicating that a protocol violation was detected. The Reason field will be interpreted by generating INFOBAD, CTRLBAD, N1TOOBIG, or INVNR messages immediately after this message; refer to the explanations for these messages for more information. |
| Recommended Action | The protocol will recover by resetting the service. This will disrupt any network service on top of LAPB (for example, X.25 virtual circuits will be cleared). Follow the recommended action for any error message following the FRMR reports; if service becomes unacceptable, check the serial line and its attached devices. |

%LAPB-4-INFOBAD : Interface [chars], Info field not permitted

| | |
|---------------------------|--|
| Explanation | A received FRMR frame reported that an information field was present in a frame where no information field is allowed. |
| Recommended Action | Check the serial line and the device attached to the line. |

%LAPB-4-CTRLBAD : Interface [chars], Invalid control field

| | |
|---------------------------|--|
| Explanation | A received FRMR reported a frame with an invalid control code. |
| Recommended Action | Check the serial line and the devices attached to the line. |

%LAPB-4-N1TOOBIG : Interface [chars], N1 too large

| | |
|--------------------|--|
| Explanation | A received FRMR reported an information frame that was too long. |
|--------------------|--|

%LAPB-4-N1TOOBIG : Interface [chars], N1 too large

| | |
|---------------------------|--|
| Recommended Action | Verify that the equipment attached to the serial line is configured with the same N1 value. N1 is in bits and includes the entire frame plus 16 bits of CRC. However, some equipment may require configuration in octets, the omission of the two CRC octets, or the omission of the three octets of LAPB control information. |
|---------------------------|--|

%LAPB-4-INVNR : Interface [chars], Invalid NR value

| | |
|---------------------------|---|
| Explanation | A received FRMR reported a frame with an invalid N(R) value. |
| Recommended Action | Verify that the equipment attached to the serial line is configured with the same K value (maximum number of outstanding I frames). |

%LAPB-2-NOBUF : Interface [chars], no buffer available to [chars]

| | |
|---------------------------|---|
| Explanation | There was insufficient memory for the LAPB protocol engine to send a message. |
| Recommended Action | This message is acceptable if it occurs infrequently, because the LAPB protocol is designed to handle loss of frames. Frequent occurrences can cause disruption of service. The system can be configured to ease memory demands or, if conditions warrant, the system can be upgraded to a larger memory configuration. |

%LAPB-3-BADPAYLOAD : Interface [chars], Invalid payload value: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If either of these messages recur, call your technical support representative for assistance. |

%LAPB-3-CONTEXTERR : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If either of these messages recur, call your technical support representative for assistance. |

%LAPB-3-TIMERERR : LAPB timer task cannot be created

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If either of these messages recur, call your technical support representative for assistance. |

LAT**%LAT-3-NOSYNC : Tty%t, Output data ptrs out of sync with byte count**

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, contact your technical support representative. |

%LAT-3-BADDATA : Tty%t, Data pointer does not correspond to current packet

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, contact your technical support representative. |

%LAT-3-REUSE : Tty%t, Attempt to re-use slot array, empty = [dec], fill = [dec]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, contact your technical support representative. |

%LAT-3-QBSPACED : Queue block at [hex] not found for HI connection

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, contact your technical support representative. |

%LAT-3-BUFFULL : Tty%t, data buffer full with count [dec]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, contact your technical support representative. |

%LAT-3-NULLIDB : Null IDB pointer with destination [enet]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, contact your technical support representative. |

LAYER2_BRIDGE**%LAYER2_BRIDGE-3-INIT_FAILED : Initialization of the layer 2 bridging feature in QFP failed**

| | |
|---------------------------|---|
| Explanation | Initialization of the layer 2 bridging feature in the QFP failed. This indicates a software failure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LAYER2_BRIDGE-3-ALLOC_FAILED : Allocation of [chars] memory failed for layer 2 bridging feature in QFP

| | |
|---------------------------|---|
| Explanation | Allocation of memory by the QFP layer 2 bridging feature microcode failed. The name of the memory chunk is specified in the message. This indicates a software failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LAYER2_BRIDGE-3-PKT_REPLICA_INIT_FAILED : Failed to register with generic packet replication for layer 2 bridging feature in QFP

| | |
|---------------------------|---|
| Explanation | Layer 2 bridging initialization of packet replication registration failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LAYER2_BRIDGE-3-HA_INVALID_STATE : state [dec], MSGDEF_LIMIT_MEDIUM

| | |
|---------------------------|---|
| Explanation | An invalid HA state was received from the HA infrastructure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LAYER2_BRIDGE-3-HA_BULK_SYNC_FAIL : rg [dec], MSGDEF_LIMIT_MEDIUM

| | |
|---------------------------|---|
| Explanation | There was a failure such that Layer 2 bridge domain bulk sync did not occur |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

LAYER2_SVI**%LAYER2_SVI-3-INIT_FAILED : Initialization of the SVI feature in QFP failed**

| | |
|---------------------------|---|
| Explanation | Initialization of the SVI feature in the QFP failed. This indicates a software failure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LAYER2_SVI-3-ALLOC_FAILED : Allocation of [chars] memory failed for SVI feature in QFP

| | |
|---------------------------|---|
| Explanation | Allocation of memory by the QFP SVI feature microcode failed. The name of the memory chunk is specified in the message. This indicates a software failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LAYER2_SVI-3-PKT_REPLICA_INIT_FAILED : Failed to register with generic packet replication for SVI feature in QFP

| | |
|---------------------------|---|
| Explanation | SVI initialization of packet replication registration failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

LED

%LED-3-VIDEO_SOURCE_CHANGE_FAILED : Video Multicast Source Switch Failed. Error [dec], Source ([hex], [hex]), LED [dec]

Explanation Video Input Source failed to switch to the next sourcee.

Recommended Action Check the failed input source, and check for service impact

%LED-3-CONSOLE_SETUP_FAILED : Failed to setup console service. It should be enabled on [chars]

Explanation Setup of a console service failed. This is a possible cBR8 provisioning error.

Recommended Action Check the host manager launch parameters and correct as required.

%LED-2-INIT_FAILED : Video LED process initialization failed id [int]

Explanation Initialization of the Video LED process failed. This is an internal software error.

Recommended Action Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit at: http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information.

%LED-2-VIPC_INIT_FAILED : VIPC initialization failed id [int]

Explanation Initialization of the Video LED process failed. This is an internal software error.

Recommended Action Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit at: http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information.

%LED-2-VDMAN_IPC_INIT_FAILED : Vidman IPC initialization failed id [int]

Explanation Initialization of the Video LED process failed. This is an internal software error.

%LED-2-VDMAN_IPC_INIT_FAILED : Vidman IPC initialization failed id [int]

Recommended Action Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit
at:http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information.

%LED-2-ID_MISMATCH : LED ID mismatch Led id - [int], Instance - [int]

Explanation This is an internal software error.

Recommended Action Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit
at:http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information.

%LED-2-RESOURCE_ALLOCATION : Failed to Allocate memory, Led id [int]

Explanation This is an internal software error.

Recommended Action Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit
at:http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information.

%LED-2-INVALID_PSI_TYPE : Invalid PSI type, Led id [int]

Explanation This is an internal software error.

Recommended Action Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit
at:http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case>, or contact your Cisco technical support representative and provide the representative with the gathered information.

%LED-2-DB_HA_ERROR : Database HA Error, Led id [int]

| | |
|---------------------------|--|
| Explanation | This is an internal software error. |
| Recommended Action | Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit at: http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LED-2-OUT_OF_CONTEXT_ERROR : LED Fell out of context loop, Led id [int]

| | |
|---------------------------|--|
| Explanation | This is an internal software error. |
| Recommended Action | Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit at: http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LED-2-GQILIB_INIT_FAILED : Failed to init GQI Lib, Led id [int]

| | |
|---------------------------|--|
| Explanation | This is an internal software error. |
| Recommended Action | Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit at: http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LED-2-TBLLIB_INIT_FAILED : Failed to init Table-based Lib, Led id [int]

| | |
|---------------------------|--|
| Explanation | This is an internal software error. |
| Recommended Action | Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit at: http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LED-2-VIPC_SEND_FAILURE : VIPC send failed, Led id [int]

| | |
|---------------------------|--|
| Explanation | This is an internal software error. |
| Recommended Action | Retrieve and record the error message and other related information exactly as it appears on the console and/or the system log and IOS log. Search for resolved software issues using the Bug Toolkit at: http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LED-3-LED_IPC_FLOW_CONTROL : Flow control turned [chars] for VIPC port [int], remote port [int], remote slot [int]

| | |
|---------------------------|---|
| Explanation | Flow control triggered on IPC link between LED and VDMAN. |
| Recommended Action | Check the LED btrace logs |

LFD

%LFD-3-CHUNKMGRALLOC : failed chunk alloc: [chars]

| | |
|---------------------------|---|
| Explanation | Chunk alloc() failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-CHUNKMGRDEALLOC : failed chunk dealloc: [chars]

| | |
|---------------------------|---|
| Explanation | Chunk free() failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-UPDATEHANDLERFPI : No handler installed: fpi=[dec] handler type=[chars]

| | |
|--------------------|----------------------|
| Explanation | No handler installed |
|--------------------|----------------------|

%LFD-3-UPDATEHANDLERFPI : No handler installed: fpi=[dec] handler type=[chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LFD-3-UPDATEHANDLER2 : [chars] [hex] [hex]

| | |
|---------------------------|---|
| Explanation | Error in update handler |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-UPDATEHANDLER3 : [chars] [hex] [hex] [hex]

| | |
|---------------------------|---|
| Explanation | Error in update handler |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-4-NOFIBIDB : [chars] - ifnum [dec]

| | |
|---------------------------|---|
| Explanation | fibidb missing on linecard |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-REWMGR : Rewrite Manager: [chars] [hex]

| | |
|---------------------------|---|
| Explanation | Rewrite Manager error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-REWMGR2 : [chars] [hex] [hex]

Explanation Rewrite lookup failed due to FPI inconsistency**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-FPIHANDLER : LFD SSS Handler: [chars]

Explanation Error in fpi handler**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-2-FPIHANDLER3 : [chars] [hex] [hex] [hex]

Explanation FPI Handler error**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-NULLFIBIDB : NULL FIB IDB: [chars] [dec]

Explanation NULL FIB IDB encountered**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-NULLADJACENCY : NULL Adjacency

Explanation NULL adjacency encountered

%LFD-3-NULLADJACENCY : NULL Adjacency

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LFD-3-FPITYPEWRONG : Require fpi type [chars], get fpi type [chars]

| | |
|---------------------------|---|
| Explanation | Unmatched FPI type |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-4-UNSUPPORTEDRW : Unexpected rewrites seen where MPLS is not supported by platform for this slot

| | |
|---------------------------|---|
| Explanation | MPLS is either not needed or not handled by the platform for this card and should not handle rewrites |
| Recommended Action | No action is required. |

%LFD-3-NORESOURCE : [chars] [dec]

| | |
|---------------------------|---|
| Explanation | Resource Failure: %s %d |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-6-RESOURCE : [chars]

| | |
|---------------------------|---------------------------------|
| Explanation | MPLS software is disabled on LC |
| Recommended Action | No action is required. |

%LFD-3-LTABLEMEM : Cannot allocate new mpls table [dec] of size [dec] needed for entry [dec]

| | |
|---------------------------|---|
| Explanation | Not enough contiguous memory for mpls forwarding table |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%LFD-3-SM : [chars] [dec]

| | |
|---------------------------|---|
| Explanation | State Machine error: %s %d |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-SMBADEVENT : Unexpected event [chars] for state [chars]

| | |
|---------------------------|---|
| Explanation | The LFD received an unexpected event for its state. The state of the LFD, and the unexpected event, are specified in the message text. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-BADEXEC : Unexpected Code Execution: [chars] [dec]

| | |
|---------------------------|---|
| Explanation | Unexpected Code Execution |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-EVTLOGBADSOURCE : Illegal log event source: [dec]

| | |
|---------------------------|---|
| Explanation | Illegal event found in log buffer |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-2-AVL : [chars] [hex]

Explanation AVL tree operation error**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-CHUNKMGR : chunk mgr: [chars] [hex]

Explanation Chunk manager error**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-INTFDB : intf db: [chars] [hex]

Explanation Interface db error**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-INTFDB2 : intf db: [chars] [hex] [hex]

Explanation Interface db error**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-BADFRRTYPE : illegal frr type: [dec]

Explanation FRR request type error

%LFD-3-BADFRRTYPE : illegal fr type: [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LFD-4-OWNCHANGED : Owner changed for [chars] [dec]/[dec] from [dec] to [dec]

| | |
|---------------------------|---|
| Explanation | Label was previously installed by different installer |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-INVPLISTTYPE : Wrong plist_type expected [dec] for [dec]/[dec] update (was [dec])

| | |
|---------------------------|---|
| Explanation | Rewrite PLISTTYPE invalid for non-ip label table entry |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-INVRWID : Wrong rwid [dec] for non-ip LTE [dec]/[dec]

| | |
|---------------------------|---|
| Explanation | Rewrite ID invalid for non-ip label table entry |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-INVLABELTYPE : Wrong label type [dec] for non-ip LTE [dec]/[dec]

| | |
|---------------------------|---|
| Explanation | Label type invalid for non-ip label table entry |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-INVPLABELTYPE : Wrong label type [dec] for IP Label [dec], table [dec] prefix [chars], vrf [chars]

| | |
|---------------------------|--|
| Explanation | Label type is invalid for the indicated label table entry |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%LFD-3-INVPLIST : Wrong path list type [dec] for label [dec]/[dec] [chars]

| | |
|---------------------------|---|
| Explanation | The path list type is set incorrectly for the label in question |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-BADSHORTLABELADD : Cannot add short label: path_idx [dec], moi_type [dec]

| | |
|---------------------------|---|
| Explanation | Unable to create MFI feature space in FIB entry, so unable to store short path extension information there. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-BADLABELADD : Cannot add label - [chars].

| | |
|---------------------------|---|
| Explanation | Unable to create label due to reason given. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-INVPATHLBL : [chars] [chars]

| | |
|--------------------|---|
| Explanation | An invalid outgoing label is attached to the prefix |
|--------------------|---|

%LFD-3-INVPATHLBL : [chars] [chars]

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of **show version** and **show running-config** and contact your Cisco technical support representative.

%LFD-3-NOOCE : Attempt to get labels from OCE failed - [chars].

Explanation Calling function has provided insufficient information to get labels.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-XDRBADMAGIC : xdr message for [chars] spilled out of allocated static storage

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-UNSUPPORTED_XDR : [chars]

Explanation Decoding of an XDR message revealed data or format that is unsupported in the current release.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-BROKERINITFAIL : Failed to initialise lte RP broker facility

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LFD-3-LCXDRCLIENT : LTE distribution client: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-NONIPINFO : Non-ip info: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-RPXDRCLIENT : Invalid XDR Client: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-ORPHANLTE : Label [dec]/[dec], plist [dec], LDM: [hex]

| | |
|---------------------------|--|
| Explanation | The LTE for the label was supposed to be deleted, but is still present |
| Recommended Action | Collect the running configuration and output of <code>show mpls forwarding-table labels label-num</code> command and contact cisco technical service representative. |

%LFD-3-RUNNING_TIMER : [chars] [dec] [chars] [dec]

| | |
|---------------------------|--|
| Explanation | The MPLS forwarding entry for the specified label was deleted prior to the expiry of its associated timer |
| Recommended Action | If there is no matching bug for this problem, please collect the output of <code>show mpls forwarding-table label <label> internal</code> and the error message traceback and file a bug report. |

%LFD-3-INVLABELUPDTYPE : Wrong label type [dec] for label [dec] table [dec] [chars] [chars]

| | |
|---------------------------|--|
| Explanation | An invalid Label type was encountered during the specified operation |
| Recommended Action | If there is no matching bug for this problem, please collect the output of show mpls forwarding-table label <label> internal and the error message traceback and file a bug report. |

%LFD-3-KEY_DB_INSERTFAIL : [chars], entry [hex], existing [hex]

| | |
|---------------------------|--|
| Explanation | The element could not be inserted into the LFD's key database. |
| Recommended Action | If there is no matching bug for this problem, please collect the output of show mpls forwarding-table internal and the error message traceback and file a bug report. |

%LFD-3-FIB_SRC : Label [[dec]/[dec]] [chars] [chars] [chars]

| | |
|---------------------------|---|
| Explanation | The fib entry could not be sourced for label in question. |
| Recommended Action | If there is no matching bug for this problem, please collect the output of show mpls forwarding-table internal and show ip route [vrf <name>] <prefix> and the error message traceback and file a bug report. |

%LFD-4-FIB_SRC1 : Label [[dec]/[dec]] [chars] [chars] [chars]

| | |
|---------------------------|---|
| Explanation | The fib entry could not be sourced for label in question. |
| Recommended Action | If there is no matching bug for this problem, please collect the output of show mpls forwarding-table internal and show ip route [vrf <name>] <prefix> and the error message traceback and file a bug report. |

%LFD-3-OCE_CHAIN : [chars]

| | |
|---------------------------|---|
| Explanation | NULL OCE in chain |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-UNSUPPORT_OCE : Not support - [chars] [dec]

| | |
|--------------------|-----------------|
| Explanation | Unsupported OCE |
|--------------------|-----------------|

%LFD-3-UNSUPPORT_OCE : Not support - [chars] [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LFD-3-CORRUPTED_PKT : [chars]

| | |
|---------------------------|---|
| Explanation | lfd received corrupted packet |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-4-RE_ENTRANT : Re-entrancy detected: [chars]

| | |
|---------------------------|---|
| Explanation | lfd non ip recalculation has re-entrancy |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-LABEL_BLOCK_CHUNK : [chars]

| | |
|---------------------------|---|
| Explanation | lfd label block chunk entry corrupted |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-INVPEXTLEN : [chars] path ext : attempt to decode beyond XDR buffer, cp [hex], cp_end [hex], msg_type [dec], msg_size [dec], padding [dec]

| | |
|---------------------------|---|
| Explanation | Accessing memory beyond XDR buffer length while decoding path extensions |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-FIBIPINVALID : [chars], table: [dec] label: [dec]

| | |
|---------------------------|---|
| Explanation | IP path information is invalid for the indicated label table entry |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-FIBIPINVALIDAF : AF: [dec] [chars], table: [dec] label: [dec]

| | |
|---------------------------|---|
| Explanation | IP path information AF is invalid for the indicated label table entry |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-FIBNONIPINVALID : [chars], table: [dec] label: [dec]

| | |
|---------------------------|---|
| Explanation | Non IP path information is invalid for the indicated label table entry |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LFD-3-PATHEXTENCODE : [chars] [chars], path list: [IPV6 address], path ext: [IPV6 address]

| | |
|---------------------------|---|
| Explanation | MPLS path extensions could not be encoded for distribution |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

LI**%LI-3-MEM_INIT_FAILED : Allocation of [chars] memory failed for LI**

Explanation LI Initialization of channel pool failed.

Recommended Action LOG_STD_ACTION

%LI-3-PKT_REPLICA_INIT_FAILED : Register to Generic Packet Replication failed for LI

Explanation LI Initialization of packet replication registration failed.

Recommended Action LOG_STD_ACTION

LICENSING**%LICENSING-6-LIC_MISMATCH : Configured license image level [chars] does not match the current level [chars]. Reload is required to bring the system up in [chars]**

Explanation During boot-up of system, the configured license image level might mismatch with the current level. This could happen when customer copy a different startup-config to the system.

Recommended Action Reload is required to bring the system up in the configured license image level.

LIIN**%LIIN-3-VRFADD_FAIL : Problem creating vrf**

Explanation The LIIN config process failed to allocate a mandatory iVRF. The LIIN interface will not operate properly and cannot be recovered. Persistent access features and interactive commands will not work.

Recommended Action LOG_STD_ACTION

%LIIN-3-VRFMODIFY_FAIL : Problem adding LIIN interface to vrf table

Explanation The LIIN config process failed to assign the LIIN interface to its mandatory iVRF. The LIIN interface will not operate properly and cannot be recovered. Persistent access features and interactive commands will not work.

%LIIN-3-VRFMODIFY_FAIL : Problem adding LIIN interface to vrf table

Recommended Action LOG_STD_ACTION

%LIIN-3-SET_TABLEID_FAIL : Installing [chars] LIIN interface tableid failed

Explanation This error happens when IOS failed to set tableid into linux kernel, possibly due to either IOSd or kernel out of memory or corruption. In this case, LIIN interface will not have VRF installed for the associated address family. The LIIN interface will not operate properly and cannot be recovered. Persistent access features and interactive commands will not work.

Recommended Action LOG_STD_ACTION

%LIIN-3-SET_ACCESS_FAIL : Installing LIIN interface access control failed

Explanation This error happens when IOS failed to set the access control function for the LIIN, possibly due to IOSd out of memory or corruption. In this case, LIIN interface setup will not proceed, will not operate properly and cannot be recovered. Persistent access features and interactive commands will not work.

Recommended Action LOG_STD_ACTION

%LIIN-6-TELNET_ALLOWED : Telnet access allowed due to romvar: SR_INIT_SHELL

Explanation Telnet from shell to IOS allowed because rommon variable SR_INIT_SHELL is set with value aux_do_system_shell. Remove this value from SR_INIT_SHELL or unset SR_INIT_SHELL to disable the telnet access

Recommended Action No action is required.

LINEPROTO

%LINEPROTO-5-UPDOWN : Line protocol on Interface [chars], changed state to [chars]

Explanation The data link level line protocol changed state.

Recommended Action No action is required.

LINK through LSD

- [LISP_PROXY](#)
- [LLC](#)
- [LLDP](#)
- [LLIST](#)
- [LMLIB_RTU_LICENSE](#)
- [LMRP](#)
- [LNMC](#)
- [LOGGER](#)
- [LSD](#)

LINK

%LINK-4-NOMAC : A random default MAC address of [enet] has been chosen. Ensure that this address is unique, or specify MAC addresses for commands (such as 'novell routing') that allow the use of this address as a default.

| | |
|---------------------------|--|
| Explanation | An addressing inconsistency occurred. |
| Recommended Action | Make sure that this address is unique, or specify MAC addresses for commands such as novell routing that allow the use of this address as a default. |

%LINK-4-NOSSB : SSB deleted with timer running

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. Problem has been corrected, and router operation has not been impaired. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-2-NOSOURCE : Source idb not set

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%LINK-2-NOSOURCE : Source idb not set

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LINK-2-LINEST : No linestate vector for [chars]

Explanation An internal software inconsistency occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LINK-5-CHANGED : Interface [chars], changed state to [chars]

Explanation The interface hardware changed state.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LINK-3-UPDOWN : Interface [chars], changed state to [chars]

Explanation The interface hardware went either up or down.

Recommended Action If the state change was unexpected, confirm the configuration settings for the interface.

%LINK-4-TOOBIG : Interface [chars], Output packet size of [dec] bytes too big

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LINK-3-TOOSMALL : Interface [chars], Output runt packet of [dec] bytes

Explanation An output packet was detected that was smaller than the minimum allowable datagram size. An error in another driver or an error in the system software probably triggered this error message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LINK-3-BADMACREG : Interface [chars], non-existent MACADDR registry for link [dec]

Explanation An attempt to map a network level address to a MAC level address failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LINK-3-BADENCAP : Interface [chars], Bad encapsulation code ([dec])

Explanation The lower level software was unable to write a MAC header for a datagram. A probable cause is configuration error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LINK-2-BADVCALL : Interface [chars], undefined entry point

Explanation An internal software error occurred. The high-level system code tried to use an unimplemented entry point with the virtual interface descriptor block (IDB) driver.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LINK-2-INTVULN : In critical region with interrupt level=[dec], intfc=[chars]

Explanation An internal software error occurred. The high-level system code tried to call this routine with interrupts enabled.

%LINK-2-INTVULN : In critical region with interrupt level=[dec], intfc=[chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LINK-0-REENTER : Fatal reentrancy, level=[dec], intfc=[chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. The system code tried to access a critical data structure which was already in use. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-5-BOOTP : [chars] address [IP_address], resolved by [IP_address]

| | |
|---------------------------|---|
| Explanation | An interface's IP address was successfully learned dynamically through BootP. The first address is the learned IP address. The second IP address is the IP address of the BootP server that provided the information. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-5-RARP : [chars] address [IP_address], resolved by [IP_address]

| | |
|---------------------------|---|
| Explanation | The Reverse Address Resolution Protocol (RARP) resolved an IP address. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-5-SLARP : [chars] address [IP_address], resolved by [IP_address]

| | |
|--------------------|---|
| Explanation | The Serial Line Address Resolution Protocol (SLARP) resolved an IP address. |
|--------------------|---|

%LINK-5-SLARP : [chars] address [IP_address], resolved by [IP_address]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LINK-4-FDDISTAT : Interface [chars], FDDI state [chars] detected

| | |
|---------------------------|---|
| Explanation | There was a state change on the FDDI ring. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-4-BRIDGECONFLICT : Interface [chars], encapsulated BPDU recvd from [enet]

| | |
|---------------------------|---|
| Explanation | An FCIT running in nonencapsulating transparent mode detected an FDDI bridge running in encapsulation mode on the same fiber. This is an unstable situation and should be corrected. The incoming interface is displayed, along with the FDDI MAC address in standard form. |
| Recommended Action | Upgrade the errant interface to full transparent mode. Copy the error message exactly as it appears, and report it to your Cisco technical support representative. |

%LINK-5-REMLOOP : Interface [chars], remote loop [chars] [chars]

| | |
|---------------------------|---|
| Explanation | The interface entered or exited a remote loopback. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-5-LOOPSTATUS : Interface [chars], [chars]

| | |
|---------------------------|---|
| Explanation | The interface entered or exited loopback. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-6-BERTSTATUS : Interface [chars], [chars]

| | |
|---------------------------|---|
| Explanation | BERT is completed for this interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-6-BERTMSGs : [chars]

| | |
|---------------------------|---|
| Explanation | BERT related information messages. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-3-COMPREG : Interface [chars], non-existent (de)compression registry. Packet dropped

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-3-BOGUSENCAP : msgtxt_badencap

| | |
|---------------------------|---|
| Explanation | A serial interface has been configured with an unknown encapsulation. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-4-BADQID : Interface [chars], bad output queue ID specified ([dec]). Packet dropped

| | |
|--------------------|--|
| Explanation | This message indicates an internal software error. |
|--------------------|--|

%LINK-4-BADQID : Interface [chars], bad output queue ID specified ([dec]). Packet dropped

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LINK-3-EMPTYPAK : Interface [chars], empty packet dequeued; linktype [dec], queue [dec].

| | |
|---------------------------|---|
| Explanation | This message indicates an internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-3-IDBLISINS : Not able to insert interface [chars] into [chars] list

| | |
|---------------------------|---|
| Explanation | This message indicates an internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-3-IDBLISCRE : Unable to create [chars] interface list

| | |
|---------------------------|---|
| Explanation | This message indicates an internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-3-LINK_FAULT : [chars] [chars] [chars] [chars]

| | |
|---------------------------|---|
| Explanation | The link state for the port is down |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LINK-3-FCS_ERROR : [chars] [chars] [chars] [chars]

| | |
|---------------------------|---|
| Explanation | The FCS Error rate exceeds the configured threshold |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

LISP_PROXY

%LISP_PROXY-3-PROXY_IPC_INIT_FAILED : lisp proxy init failed, rc = [dec]

| | |
|---------------------------|------------------------------------|
| Explanation | IPC handler initialization failed. |
| Recommended Action | LOG_STD_ACTION |

%LISP_PROXY-4-PROXY_IPC_INVALID_MSG : invalid lisp proxy msg [dec]

| | |
|---------------------------|---|
| Explanation | Received an invalid IPC messages subtype. |
| Recommended Action | LOG_STD_ACTION |

%LISP_PROXY-3-PROXY_IPC_PACKET_ALLOCATION_FAILED : lisp proxy alloc reply pak failed

| | |
|---------------------------|--|
| Explanation | Failed to allocate packet buffer for IPC |
| Recommended Action | LOG_STD_ACTION |

%LISP_PROXY-3-PROXY_IPC_PACKET_SEND_FAILED : lisp proxy send failed, rc = [dec]

| | |
|---------------------------|----------------------------|
| Explanation | Failed to send IPC packet. |
| Recommended Action | LOG_STD_ACTION |

%LISP_PROXY-3-PROXY_IPC_REQUEST_MSG_INVALID : lisp proxy request msg invalid.

| | |
|---------------------------|---|
| Explanation | Failed to get lisp default entry stats req from IPC packet. |
| Recommended Action | LOG_STD_ACTION |

%LISP_PROXY-3-PROXY_IPC_GET_STATS_FAILED : lisp proxy get stats failed for type[[chars]] idx = [dec], ppe_addr[[hex]].

Explanation Getting lisp default entry stats failed.

Recommended Action LOG_STD_ACTION

LLC

%LLC-2-UNEXPECT : LLC2: [chars] UNEXPECTED EVENT

Explanation An internal software error was found. A software component is trying to use LLC2 structures that do not exist.

Recommended Action Record the configuration and any information that would be useful in recreating the error and call your technical support representative.

LLDP

%LLDP-4-LLDP_NEW_ENTRY : Neighbor record not committed - malloc failure

Explanation LLDP entry creation failed

Recommended Action Run memory diagnostics

LLIST

%LLIST-3-ONLIST : [chars] to [hex], [hex] on list

Explanation An internal inconsistency was detected when an attempt was made to add an item to a list already on the list.

Recommended Action Copy the message exactly as it appears and report it to your technical service representative.

%LLIST-3-OFFLIST : [chars] from [hex], [hex] not on list

Explanation An internal inconsistency was detected when an attempt was made to remove an item from a list not on the list.

Recommended Action Copy the message exactly as it appears and report it to your technical service representative.

LMLIB_RTU_LICENSE

%LMLIB_RTU_LICENSE-4-EVAL_WARN : Evaluation period of [chars] license is about to expire in [dec] days. Purchase a permanent license.

Explanation The evaluation license is about to expire.

Recommended Action Purchase a permanent license.

%LMLIB_RTU_LICENSE-4-TERM_WARN : Subscription term period of [chars] license is about to expire in [dec] days. Please renew your license.

Explanation The subscription license is about to expire.

Recommended Action Renew your subscription license.

%LMLIB_RTU_LICENSE-1-EVAL_EXP : Evaluation period of [chars] license expired [dec] days ago. Purchase a permanent license.

Explanation The evaluation license has expired.

Recommended Action Purchase a permanent license.

%LMLIB_RTU_LICENSE-1-TERM_EXP : Subscription term period of [chars] license expired [dec] days ago. Please renew your license.

Explanation The subscription license has expired.

Recommended Action Renew your subscription license.

%LMLIB_RTU_LICENSE-6-AP_ADD : [dec] adder AP-count licenses are added

Explanation AP-count licenses have been added.

Recommended Action More APs can be supported.

%LMLIB_RTU_LICENSE-1-EXCESS_AP_LIC : Total AP-count licenses available have exceeded the maximum supported AP-count by [dec].

Explanation The number of AP-count licenses available is greater than the maximum number of supported AP-count.

%LMLIB_RTU_LICENSE-1-EXCESS_AP_LIC : Total AP-count licenses available have exceeded the maximum supported AP-count by [dec].

Recommended Action The extra AP-count licenses can be moved to another controller.

%LMLIB_RTU_LICENSE-1-AP_USAGE_EXCEEDED : AP-count license usage has exceeded the available AP-count by [dec].

Explanation AP-count license usage has exceeded the available AP-count.

Recommended Action Remove the excess APs from the controller.

%LMLIB_RTU_LICENSE-1-AP_INSUFFICIENT_PERM_APCOUNT : APs connected exceed the permanent licenses available by [dec].

Explanation The number of APs connected is greater than the number of permanent licenses.

Recommended Action Purchase adder licenses to add to your existing permanent licenses.

%LMLIB_RTU_LICENSE-6-AP_DEL : [dec] adder AP-count licenses are removed.

Explanation AP-count licenses have been removed.

Recommended Action Fewer APs are supported.

%LMLIB_RTU_LICENSE-6-LIC_INVALID_DEACT : [chars] license is not active on [chars] therefore, it cannot be

Explanation The license level is not activated.

Recommended Action No need to deactivate this license.

%LMLIB_RTU_LICENSE-6-LIC_ACT : [chars] license is activated successfully on [chars].

Explanation The license level is activated.

Recommended Action Reboot the switch to invoke the activated license.

%LMLIB_RTU_LICENSE-6-LIC_ACTVED : [chars] license was already activated.

| | |
|---------------------------|--|
| Explanation | The license level was already activated. |
| Recommended Action | Reboot the switch to invoke the activated license. |

%LMLIB_RTU_LICENSE-6-LIC_EXPED : [chars] evaluation license has expired you cannot activate it again.

| | |
|---------------------------|---|
| Explanation | You cannot use an expired evaluatoin license. |
| Recommended Action | Purchase a permanent license level or activate another license level. |

%LMLIB_RTU_LICENSE-6-LIC_EVAL_TO_PERM : License level upgraded from [chars] [chars] to [chars] [chars]

| | |
|---------------------------|---|
| Explanation | A license has been upgraded to a permanent or subscription license. A reboot is NOT required for the new license level to be effective. |
| Recommended Action | No action is required |

%LMLIB_RTU_LICENSE-6-LIC_CHANGE : [chars] reboot license level changed from [chars] to [chars]. Reboot the switch to invoke the new license level.

| | |
|---------------------------|--|
| Explanation | Reboot license level has been changed. |
| Recommended Action | Reboot the switch to invoke the activated license level. |

%LMLIB_RTU_LICENSE-6-LIC_EULA_CLEAR : EULA for [chars] license has been cleared on [chars].

| | |
|---------------------------|---|
| Explanation | License level has been deactivated. |
| Recommended Action | The end user license agreement (EULA) needs to be accepted while activating this license level. |

%LMLIB_RTU_LICENSE-3-FILE_ERR : [chars]: License file update failed. Reapply the configuration.

| | |
|---------------------------|------------------------------------|
| Explanation | Failed to update the license file. |
| Recommended Action | Reapply the configuration. |

%LMLIB_RTU_LICENSE-3-FILE_READ_ERR : [chars]: License file read failed.

Explanation Failed to read the license file.

Recommended Action Reapply the configuration.

%LMLIB_RTU_LICENSE-6-LIC_INCOMPAT : Switch [dec] has an incompatible license level. Activate a compatible license on the switch so that the switch can join the stack.

Explanation The added switch has an incompatible license level.

Recommended Action Activate a new license and reboot the switch.

%LMLIB_RTU_LICENSE-6-PLAT_INCOMPAT : Switch [dec] has an incompatible platform level. Activate a compatible platform on the switch so that the switch can join the stack.

Explanation The added switch has an incompatible platform level.

Recommended Action Run in compatible scaled mode and reboot the switch.

%LMLIB_RTU_LICENSE-1-SKU_INCOMPAT : Both the switches in the stack are AIR-CT5760-HA-K9 SKUs. Replace one of the switches with another Catalyst 5760 SKU running valid AP License Count

Explanation Two AIR-CT5760-HA-K9 SKUs are not supposed to stack.

Recommended Action Replace the license mismatch switch with a Catalyst 5760 SKU running valid AP License Count.

%LMLIB_RTU_LICENSE-1-PRIMARY_REMOVED : The current stack does not support the applied AP License Count. Reconnect a Catalyst 5760 SKU running valid AP License Count within 90 days.

Explanation AIR-CT5760-HA-K9 does not support the same licensing as AIR-CT5760-HA-K9. So an AIR-CT5760-HA-K9 SKU is needed in the stack to support this licensing.

Recommended Action Reconnect a Catalyst 5760 SKU running valid AP License Count within 90 days.

%LMLIB_RTU_LICENSE-1-RTU_DISABLED : Cannot proceed. Right-to-use Licensing is disabled. Switch is in Smart Licensing mode.

Explanation RTU functionality is disabled when switch in SL mode.

Recommended Action Enable RTU licensing with CLI: no license smart enable.

%LMLIB_RTU_LICENSE-6-ENABLE_RTU : [chars]: Right-to-use Licensing is enabled. Switch is in RTU mode.

Explanation User configures RTU licensing by disabling Smart Licensing.

Recommended Action Configure image license and ap count license if needed.

%LMLIB_RTU_LICENSE-6-DISABLE_RTU : [chars]: Right-to-use Licensing is disabled. Switch is in Smart Licensing mode.

Explanation User enables Smart Licensing.

Recommended Action Request image license license if needed.

%LMLIB_RTU_LICENSE-6-IOSD_LIC_MISMATCH : Switch#[dec]: Current IOSd runs on [chars] license while RTU active license is [chars]. Please configure RTU license to current IOSd license.

Explanation When customer switches license mode from Smart Licensing to RTU Licensing, current IOSd license might mismatch with RTU active license.

Recommended Action Configure RTU license level to current IOSd license.

%LMLIB_RTU_LICENSE-6-LIC_IMAGE_INVALID : Switch#[dec]: The license boot level string is invalid. Boot up with the highest activated license.

Explanation The license boot level string is invalid. The RTU highest activated license is used.

Recommended Action Use 'license boot level' to configure a valid license level

%LMLIB_RTU_LICENSE-6-FACTORY_DEFAULT_ERROR : Factory Default License File [chars] on [chars].

Explanation An error occurred when trying to create the factory default file.

Recommended Action Fix the issue and try again.

LMRP

%LMRP-0-CHASFS_LOCATION_TRANSLATE : Failed to translate a location to a chasfs object name because [chars]

Explanation The license manager failed to translate a location to a chasfs object name.

%LMRP-0-CHASFS_LOCATION_TRANSLATE : Failed to translate a location to a chasfs object name because [chars]

| | |
|---------------------------|--|
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%LMRP-0-CHASFS_OBJECT_CREATE : Failed to create chassis filesystem object [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | The hardware failed to create a chassis filesystem object. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-CHASFS_PROPERTY_CREATE : Failed to create chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem property was not properly created. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-CHASFS_PROPERTY_GET : Failed to read chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem property was not properly read by the system. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-CHASFS_PROPERTY_SET : Failed to write chassis filesystem object [chars] property [chars] because [chars]

| | |
|--------------------|--|
| Explanation | A chassis filesystem property failed to write. |
|--------------------|--|

%LMRP-0-CHASFS_PROPERTY_SET : Failed to write chassis filesystem object [chars] property [chars] because [chars]

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-0-RESOLVE_FRU : Failed to determine [chars] card because [chars]

Explanation The router failed to determine a FRU state.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-0-EVENT_LIBRARY : An event facility initialization or maintenance function failed because [chars]

Explanation An event facility initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-0-PEER_TABLE : A peer table initialization or maintenance function failed because [chars]

Explanation A peer table initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-3-PEER_INVALID : A peer table entry has invalid state.

Explanation A peer table entry has an invalid state. This could be due to a software defect or system resource exhaustion.

%LMRP-3-PEER_INVALID : A peer table entry has invalid state.

| | |
|---------------------------|--|
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%LMRP-0-UIPEER_CREATE : Failed to create user interface peer.

| | |
|---------------------------|--|
| Explanation | The system failed to create a user interface peer. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-SLOTS_INITIALIZATION : Failed to initialize chassis slot information because [chars]

| | |
|---------------------------|--|
| Explanation | The system failed to initialize the chassis slot information. |
| Recommended Action | Note the time of the error message and examine the logs for IDPROM or software errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-SIGNAL_INITIALIZATION : Failed to initialize signals because [chars]

| | |
|---------------------------|--|
| Explanation | The system failed to initialize signals. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-SERVICES_INITIALIZATION : Failed to initialize general application services because [chars]

| | |
|---------------------------|--|
| Explanation | The system failed to initialize application services. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-MESSAGE_REGISTER : Failed to register with active RP because [chars]

| | |
|---------------------------|--|
| Explanation | The active RP failed to register. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-MESSAGE_RESPONSE : An invalid message response was received because [chars]

| | |
|---------------------------|--|
| Explanation | An invalid message response was received. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-CHASSIS_TYPE : The chassis type [chars] is invalid.

| | |
|---------------------------|---|
| Explanation | The chassis type is invalid. This could be due to a hardware defect, software defect or incorrect IDPROM content. |
| Recommended Action | Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-PLATFORM_FAMILY_TYPE : The platform family type [chars] is invalid.

| | |
|---------------------------|---|
| Explanation | The platform family type is invalid. This could be due to a hardware defect, software defect or incorrect IDPROM content. |
| Recommended Action | Note the time of the error message and examine the logs for IDPROM and hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-0-CHASSIS_STATUS : Failed to get chassis hardware status because [chars]

| | |
|--------------------|---|
| Explanation | The system failed to get the chassis hardware status. |
|--------------------|---|

%LMRP-0-CHASSIS_STATUS : Failed to get chassis hardware status because [chars]

Recommended Action Note the time of the error message and examine the logs for CPLD driver or hardware errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-3-CHASFS_OBJECT_DESTROY : Failed to destroy chassis filesystem object [chars] because [chars]

Explanation A chassis filesystem object that should have been destroyed was not destroyed.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-3-CHASFS_PROPERTY_DESTROY : Failed to destroy chassis filesystem property [chars]/[chars] because [chars]

Explanation A chassis filesystem property that should have been destroyed was not destroyed.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-0-CHASFS_OBJECT_WATCH : Failed to watch chassis filesystem object [chars] because [chars]

Explanation A chassis filesystem object was not watched because of the reason stated in the error message.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-0-CHASFS_OBJECT_NOT_PRESENT : Expected chassis filesystem object [chars] not present.

Explanation A chassis filesystem object expected to be present is not. This could be due to a software defect or filesystem failure.

%LMRP-0-CHASFS_OBJECT_NOT_PRESENT : Expected chassis filesystem object [chars] not present.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-0-CHASFS_PROPERTY_NOT_PRESENT : Expected chassis filesystem object [chars] property [chars] not present.

Explanation A chassis filesystem object property expected to be present is not. This could be due to a software defect or filesystem failure.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-0-INVALID_ARGUMENT : A system function was given an invalid argument.

Explanation A system function was given an invalid argument. This is due to a software defect.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-0-SLOT_INVALID : A card absolute slot number cannot be determined for this chassis type

Explanation An absolute slot number is invalid. This could be due to a software defect or incorrect IDPROM content.

Recommended Action Note the time of the error message and examine the logs for IDPROM or software errors. If the logs provide information about a correctable problem, correct the problem. If the problem is not correctable or the logs are not helpful, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%LMRP-0-IPC_INITIALIZATION : IPC initialization failed because [chars]

Explanation IPC initialization failed. This could be due to a software defect or system resource exhaustion.

%LMRP-0-IPC_INITIALIZATION : IPC initialization failed because [chars]

| | |
|---------------------------|--|
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%LMRP-0-IPC_CONNECT_MASTER : IPC connection to the active RP failed because [chars]

| | |
|--------------------|---|
| Explanation | IPC connection to the active RP failed. This could be due to a software defect or system resource exhaustion. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%LMRP-0-IPC_CONNECTION_INVALID : An IPC connection has invalid state.

| | |
|--------------------|---|
| Explanation | An IPC connection has an invalid state. This could be due to a software defect or system resource exhaustion. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%LMRP-0-MQIPC_INITIALIZATION : MQIPC initialization failed because [chars]

| | |
|--------------------|--|
| Explanation | MQIPC initialization failed. This could be due to a software defect or system resource exhaustion. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%LMRP-0-MQIPC_ADVANCE : Failed to advance MQIPC queue because [chars]

| | |
|--------------------|----------------------------------|
| Explanation | The MQIPC initialization failed. |
|--------------------|----------------------------------|

%LMRP-0-MQIPC_ADVANCE : Failed to advance MQIPC queue because [chars]

| | |
|---------------------------|--|
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%LMRP-0-MESSAGE_RELAY : Failed to relay a message because [chars]

| | |
|---------------------------|--|
| Explanation | Failed to relay a message. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-3-LICENSE_SERVICE_SETUP : Failed to setup the licensing proxy service

| | |
|---------------------------|--|
| Explanation | License Manager failed to set itself up as a proxy for licensable features. |
| Recommended Action | Collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%LMRP-6-THROUGHPUT_LICENSE : Throughput license [chars], throughput set to [chars]

| | |
|---------------------------|---|
| Explanation | Status indicating whether throughput license is found and the corresponding throughput the CPP hardware is configured to provide. |
| Recommended Action | No user action is necessary. This is an informational message indicating throughput configured. |

%LMRP-3-THROUGHPUT_LICENSE_APPLY_FAILED : Throughput license look-up failed due to '[chars]'

| | |
|---------------------------|--|
| Explanation | This message is to notify the user that a license look-up did not succeed because license manager process could not be contacted. This is a rare case but is due to either a crashed license daemon(licensed) or it encountered an internal error. |
| Recommended Action | No user action is necessary. However, it is possible that a re-boot of the box may correct this behavior. |

%LMRP-3-UDI_AUTH : Quack Unique Device Identifier authentication failed

| | |
|---------------------------|--|
| Explanation | This chassis seems to be compromised or tampered with. UDI burned on to the Quack chip and the one read from chassis EEPROM do not match. It can also be a case of either EEPROM or Quack device failure. More details about which specific field failed to match are logged in license daemon log file (licensed_R0.log). |
| Recommended Action | User immediately needs to contact Cisco support. This device appears to be tampered with or is a counterfeit device or had a system failure. |

%LMRP-3-RTU_UNINITIALIZED : RTU not yet initialized: stack enabled [dec]

| | |
|---------------------------|---|
| Explanation | License manager has not initialized RTU, but manager got RTU enable/disable request |
| Recommended Action | No user action is necessary. Reloading might work |

LNMC

%LNMC-3-BADCLSIIND : [chars] Invalid indication [chars], [chars]

| | |
|---------------------------|---|
| Explanation | A LAN network manager system error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LNMC-3-BADCLSIRET : [chars] Invalid ret code ([hex]) [chars], [chars]

| | |
|---------------------------|---|
| Explanation | A LAN network manager system error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LNMC-3-BADCLSI CNF : [chars] Invalid confirm [chars] [chars]

| | |
|---------------------------|---|
| Explanation | A LAN network manager system error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LNMC-3-BADCLSI : [chars] primitive not valid for Inm [chars] [chars]

| | |
|---------------------------|---|
| Explanation | A LAN network manager system error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LNMC-3-BADCLSIIDTYPE : [chars] Invalid ID type = [hex] [chars]

| | |
|---------------------------|---|
| Explanation | A LAN network manager system error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LNMC-3-BADCLSI PRIMTYPE : [chars] Invalid primitive type = [hex] [chars]

| | |
|---------------------------|---|
| Explanation | A LAN network manager system error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LNMC-3-BADCLSIHDRLEN : [chars] Bad header len = [hex] [chars]

| | |
|---------------------------|---|
| Explanation | A LAN network manager system error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LNMC-3-BADCLSIDATALEN : [chars] Bad data len = [dec] [chars]

| | |
|--------------------|--|
| Explanation | A LAN network manager system error occurred. |
|--------------------|--|

%LNMC-3-BADCLSIDATALEN : [chars] Bad data len = [dec] [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LNMC-3-BADCLSI SAP : [chars] Bad clsi SAP id = [hex] [chars]

Explanation A LAN network manager system error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

LOGGER

%LOGGER-3-TEST1 : Non rate limited message test

Explanation**Recommended Action**

%LOGGER-3-TEST2 : Rate limited message test

Explanation**Recommended Action**

%LOGGER-6-DROPPED : [int] messages, MSGDEF_LIMIT_GLACIAL

Explanation Due to a lack of available buffers, one or more log messages were dropped.**Recommended Action** LOG_STD_ACTION

%LOGGER-3-ASSERT : failure at [hex]:[chars]:[int] ([chars]), MSGDEF_LIMIT_FAST

Explanation Software detected a fatal data inconsistency.**Recommended Action** LOG_STD_ACTION

%LOGGER-6-IPC_ALLOC : failure, MSGDEF_LIMIT_GLACIAL

Explanation Logger client IPC alloc failed, messages were dropped.**Recommended Action** LOG_STD_ACTION

%LOGGER-6-IPC_SEND : failure: [chars], MSGDEF_LIMIT_GLACIAL

Explanation Logger client IPC send failed, messages were dropped.**Recommended Action** LOG_STD_ACTION

%LOGGER-3-IPC_INIT : failure

Explanation Logger client proxy IPC registration failed.**Recommended Action** LOG_STD_ACTION

%LOGGER-3-IPC_UNHANDLED : failure, MSGDEF_LIMIT_GLACIAL

Explanation An unknown message was received by the logger client proxy.**Recommended Action** LOG_STD_ACTION

LSD

%LSD-2-RESOURCE : [chars]

Explanation System resource error occurred**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%LSD-2-INVALID_VAR : [chars]

Explanation Function received invalid parameters**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LSD-4-INVALID_VAR_WARN : [chars]

| | |
|---------------------------|---|
| Explanation | Function received invalid parameters |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-4-BADAPI : [chars] from [chars]

| | |
|---------------------------|---|
| Explanation | LSD recieved message with invalid parameters |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-2-TESTAPP2 : Test app error: [chars]: [hex] [hex]

| | |
|---------------------------|---|
| Explanation | Test application error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-2-INVALID_VAR2 : [chars] [hex] [hex]

| | |
|---------------------------|---|
| Explanation | Function received invalid parameters |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-2-APP_NOTSUPP : [chars] interface does not support app [chars]

| | |
|--------------------|--------------------------------|
| Explanation | Interface does not support app |
|--------------------|--------------------------------|

%LSD-2-APP_NOTSUPP : [chars] interface does not support app [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LSD-2-AVL : [chars] [hex]

| | |
|---------------------------|---|
| Explanation | AVL tree operation error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-2-FPIHANDLER : [chars] [hex]

| | |
|---------------------------|---|
| Explanation | FPI Handler error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-CHUNKMGR : chunk mgr: [chars] [hex]

| | |
|---------------------------|---|
| Explanation | Chunk manager error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-REWMGR : Rewrite Manager: [chars] [hex]

| | |
|---------------------------|---|
| Explanation | Rewrite Manager error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-REWMGR2 : [chars] [hex] [hex]

Explanation Rewrite lookup failed due to FPI inconsistency**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LSD-3-EVTLOGBADSOURCE : Illegal log event source: [dec]

Explanation Illegal event found in log buffer**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LSD-3-UPDATEREGREXEC : Illegal exec: [chars] [hex]

Explanation Illegal code execution**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LSD-3-UPDATEREGMGR2 : [chars] [dec] [dec]

Explanation General error**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%LSD-3-APPMGR : [chars] [hex]

Explanation App Manager error

%LSD-3-APPMGR : [chars] [hex]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LSD-3-CLIENT_CONN : [chars]

| | |
|---------------------------|---|
| Explanation | Client connection error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-CLIENT_CONN2 : [chars] [hex] [hex]

| | |
|---------------------------|---|
| Explanation | Client connection error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-INTF_DB : [chars]

| | |
|---------------------------|---|
| Explanation | interface db error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-INTF_DB2 : [chars] [hex] [hex]

| | |
|---------------------------|---|
| Explanation | interface db error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-LABEL : [chars][dec]

| | |
|---------------------------|---|
| Explanation | label operation error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-LABEL2 : [chars] [hex] [hex]

| | |
|---------------------------|---|
| Explanation | label error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-4-LABEL_RESOURCE : label range [dec]-[dec] exhausted

| | |
|---------------------------|---|
| Explanation | MPLS application is trying to allocate more labels than configuration will allow |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-4-LABELFREETO : requested free timeout ([int] ms) by [chars] limited to: [int] ms

| | |
|---------------------------|---|
| Explanation | MPLS application label free timeout exceed max allowed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-MULTISERVICEREQ : Multiple outstanding service requests: [dec] [dec]

| | |
|--------------------|---|
| Explanation | Server request attempted with one already outstanding |
|--------------------|---|

%LSD-3-MULTISERVICEREQ : Multiple outstanding service requests: [dec] [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%LSD-3-BADEXEC : Unexpected Code Execution: [chars] [dec]

| | |
|---------------------------|---|
| Explanation | Unexpected Code Execution |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-INVALID_PROC_EVT : Unexpected process event [dec] for pid [dec]

| | |
|---------------------------|---|
| Explanation | The LSD component received an unexpected process event notification for the process with the specified ID |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD-3-OS_NOTIFY : Process id [dec] [chars], error code [dec]

| | |
|---------------------------|---|
| Explanation | LSD was unable to notify the operating system about (un)registration of the specified process. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version <NoCmd Bold>, <CmdBold> show running-config , show mpls infrastructure lsd apps and contact your Cisco technical support representative. |

%LSD-4-HW_RESOURCE_EXHAUSTED : Hardware resource exhausted on [chars] of type [dec]

| | |
|---------------------------|---|
| Explanation | The platform has run out of hardware resources. |
| Recommended Action | Reduce the mpls configuration. |

%LSD-3-LABEL_TBL_ERR : Failed to create new label table due to [chars]

| | |
|---------------------------|--|
| Explanation | Label space is not carved properly. This is likely due to platform capabilities. |
| Recommended Action | Check platform capabilities to make sure max label values are set correctly. |

%LSD-3-OUTLABEL_RESV_ERROR : [chars]

| | |
|---------------------------|---|
| Explanation | outlabel reservation error - allocated cli-app outlabels are more than the platform supported outlabels |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

LSD_CLIENT

%LSD_CLIENT-3-UTIL2 : [chars]: [hex] [hex]

| | |
|---------------------------|--|
| Explanation | MFI Utilities error occurred |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%LSD_CLIENT-3-PCHUNK2 : [chars]: [chars] [hex] [hex]

| | |
|---------------------------|---|
| Explanation | Parameterized Chunk Manager error occurred |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version , show running-config and show process memory and contact your Cisco technical support representative. |

%LSD_CLIENT-2-MSGHANDLERERR : Client=[dec] Msg type=[dec] Error=[chars]

| | |
|---------------------------|--|
| Explanation | LSD Client API message handler error encountered |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%LSD_CLIENT-3-CLIENTAPI : Client API error: [chars] [dec]

| | |
|---------------------------|--|
| Explanation | Unexpected Client API error |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%LSD_CLIENT-3-INVALID_VAR : [chars]

| | |
|---------------------------|--|
| Explanation | Function received invalid parameters |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%LSD_CLIENT-2-XDREXEC : [chars] [dec]

| | |
|---------------------------|--|
| Explanation | Illegal code execution in XDR path |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%LSD_CLIENT-2-XDREXEC2 : [chars] [hex] [hex]

| | |
|---------------------------|--|
| Explanation | Illegal code execution in XDR path |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%LSD_CLIENT-3-ISSU_MSG_CONV : [chars] [dec] [dec]

| | |
|---------------------------|--|
| Explanation | Could not convert received message type to known message |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%LSD_CLIENT-3-ISSU_REG : ISSU client [chars] ([dec]), entity [dec], failed ISSU registration: [chars]

| | |
|---------------------------|---|
| Explanation | ISSU negotiation failed for this XDR client. |
| Recommended Action | This error indicates a coding problem. It is an error that will occur every time this image is run, and requires a code change to fix it. |

%LSD_CLIENT-3-ISSU_ENUM_ERROR : Enum for [chars] is not ISSU-compliant: [chars]

| | |
|---------------------------|--|
| Explanation | The given enumeration is not ISSU-compliant for the reason given. Unpredictable behaviour will result when interoperating with different IOS versions. |
| Recommended Action | This requires a code fix before the image can be shipped or ISSU will be broken. |

LSD_HA

%LSD_HA-2-RESOURCE : [chars]

| | |
|---------------------------|---|
| Explanation | System resource error occurred |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%LSD_HA-4-CF : [chars][dec]

| | |
|--------------------|------------------|
| Explanation | CF related error |
|--------------------|------------------|

%LSD_HA-4-CF : [chars][dec]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%LSD_HA-2-RF : [chars][dec]

| | |
|---------------------------|--|
| Explanation | RF related error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD_HA-3-INVALID_VAR : [chars]

| | |
|---------------------------|--|
| Explanation | Function received invalid parameters |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD_HA-3-GENERAL : [chars]

| | |
|---------------------------|--|
| Explanation | Function received invalid parameters |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD_HA-3-UNSENT_MSG_DB : [chars]

| | |
|---------------------------|--|
| Explanation | Error happen in unsent msg db |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%LSD_HA-3-LABEL_RANGE_DB : [chars]

| | |
|---------------------------|---|
| Explanation | Error happen in label range db |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

LSMPI

%LSMPI-4-INJECT_FEATURE_ESCAPE : Egress [chars] packet delivered via legacy inject path

| | |
|---------------------------|---|
| Explanation | A packet with a CPP supported L3 encapsulation (such as IP) was produced by IOS but delivered to CPP via the L2/legacy inject path instead of the proper L3 inject path. For this packet, outbound features will not be applied and packet accounting will likely be incorrect. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

LUA_VM

%LUA_VM-2-INITIALIZATION : Cannot initialize the Lua Virtual Machine

| | |
|---------------------------|--|
| Explanation | The Lua Virtual Machine is a critical component of the shell-manager process. It is used to render responses to user commands. If this component cannot be initialized then the shell-manager will be unable to process any commands directed at the IOS-XE daemons. |
| Recommended Action | The shell-manager process could not be started. Check the trace log files for more details as to why the virtual machine failed to initialize correctly. This may be an out of memory condition so rebooting the chassis may resolve the problem. |

MAB

%MAB-5-SUCCESS :

| | |
|---------------------------|------------------------------------|
| Explanation | MAB Authentication was successful. |
| Recommended Action | No action is required. |

%MAB-5-FAIL :

| | |
|---------------------------|--------------------------------------|
| Explanation | MAB Authentication was unsuccessful. |
| Recommended Action | No action is required. |

MACSEC

%MACSEC-4-RX_SC_EXCEED : (RX SCI [hex] : TX SCI [hex] : vport [dec] : secy vport [dec])

| | |
|---------------------------|--|
| Explanation | RX SC exceeds hardware limit. |
| Recommended Action | No action required (normal operation). |

%MACSEC-5-REPLAY_WINDOW_BREACHED : (RxSCI %19s) Replay Window Breached on interface [chars].

| | |
|---------------------------|--|
| Explanation | Multiple In Late Packets Received. |
| Recommended Action | No action required (normal operation). |

%MACSEC-4-TX_SC_EXCEED : (TX SCI [hex] : vport [dec])

| | |
|---------------------------|--|
| Explanation | TX SC exceeds hardware limit. |
| Recommended Action | No action required (normal operation). |

%MACSEC-4-IPMTU_OVERSIZE : MACsec enabled interface [chars] IP MTU can't be more than [dec]

| | |
|---------------------------|---|
| Explanation | User config IP MTU size over MACsec enabled interface allows. |
| Recommended Action | Reconfigure IP MTU base on the suggested range. |

%MACSEC-5-TX_SA_PN_EXPIRE : (TX SCI [hex] : AN [dec]) TX SA PN about to expire.

| | |
|---------------------------|---|
| Explanation | TX SA PN about to expire. Send a request to MKA to perform a SAK Rekey for the given TX SCI and AN. |
| Recommended Action | No action required (normal operation). |

%MACSEC-6-CREATE_TX_SC : ([chars] TX SCI [hex] : vport [dec])

Explanation MKA request MACsec PD to create a TX SC on the given TX SCI and vport.
Recommended Action No action required (normal operation).

%MACSEC-6-DEL_TX_SC : ([chars] TX SCI [hex] : vport [dec])

Explanation MKA request MACsec PD to delete a TX SC on the given TX SCI and vport.
Recommended Action No action required (normal operation).

%MACSEC-6-CREATE_RX_SC : ([chars] RX SCI [hex] : TX SCI [hex] : vport [dec] : secy vport [dec])

Explanation MKA request MACsec PD to create a RX SC on the given RX SCI and vport.
Recommended Action No action required (normal operation).

%MACSEC-6-DEL_RX_SC : ([chars] RX SCI [hex] : vport [dec])

Explanation MKA request MACsec PD to delete a RX SC on the given RX SCI and vport.
Recommended Action No action required (normal operation).No action required (normal operation).

%MACSEC-6-INSTALL_TX_SA : ([chars] TX SCI [hex] : vport [dec] : an [dec] : next_pn [hex])

Explanation MKA request MACsec PD to install a TX SA on the given TX SCI, vport and an.
Recommended Action No action required (normal operation).

%MACSEC-6-INSTALL_RX_SA : ([chars] RX SCI [hex] : vport [dec] : an [dec] : secy_vport [dec])

Explanation MKA request MACsec PD to install a RX SA on the given RX SCI, vport and an.
Recommended Action No action required (normal operation).

%MACSEC-6-DEL_RX_SA : ([chars] RX SCI [hex] : vport [dec] : an [dec])

Explanation MKA request MACsec PD to delete a RX SA on the given RX SCI, vport and an.

%MACSEC-6-DEL_RX_SA : ([chars] RX SCI [hex] : vport [dec] : an [dec])

Recommended Action No action required (normal operation).

%MACSEC-6-POST_SUCC : ([chars] Power-On-System-Test success in Trial No.[dec])

Explanation MACSEC power-on-system-test successful
Recommended Action No action required (normal operation).

%MACSEC-6-POST_FAIL : ([chars] Power-On-System-Test failure in Trial No.[dec])

Explanation MACSEC power-on-system-test failed
Recommended Action No action required (normal operation).

MATM

%MATM-3-MAX_ENTRIES : The maximum number of MAC addresses has been reached:[dec]

Explanation The maximum number of MAC entries that can be programmed has been reached.
Recommended Action New MAC addresses will not be learned. Stop any redundant MAC incrementing traffic for extra streams.

%MATM-3-RECONCILIATION : Reconciliation post switchover failed : [chars]

Explanation Consistency check across modules shows inconsistency in data.
Recommended Action Find out more about the error by using the commands show platform matm recon_state and show tech-support and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems.

%MATM-3-HWERROR : Hardware [chars] failed

Explanation A hardware API access error message occurred.
Recommended Action Find out more about the error by using the commands show platform matm recon_state and show tech-support and by copying the error message exactly as it appears on the console or system log and entering it in the Output Interpreter tool. Use the Bug Toolkit to look for similar reported problems.

%MATM-3-INVALID_EVENT : An invalid event :[dec] received in [chars], expected event:[dec]

Explanation MATM feature received invalid event on it's event handler**Recommended Action** The condition is being recovered, no action is required

MBOX

%MBOX-3-REG_FAIL_BAD_PARM : event [hex], handler [hex]

Explanation Registration of handler function for a mailbox event failed due to a bad parameter.**Recommended Action** LOG_STD_ACTION

%MBOX-3-REG_FAIL_HANDLER_EXISTS : event [hex], handler [hex]

Explanation Registration of handler function for a mailbox event failed because a handler is already registered for the event.**Recommended Action** LOG_STD_ACTION

%MBOX-3-DEREG_FAIL_BAD_PARM : event [hex]

Explanation Deregistration of handler function for a mailbox event failed due to a bad parameter.**Recommended Action** LOG_STD_ACTION

%MBOX-3-DEREG_FAIL_NO_HANDLER : event [hex], handler [hex]

Explanation Deregistration of handler function for a mailbox event failed because no handler was registered for the event.**Recommended Action** LOG_STD_ACTION

%MBOX-3-NO_HANDLER_FOR_EVENT : events [hex] bad bit number [int]

Explanation Mailbox event is pending but no handler is registered for event.**Recommended Action** LOG_STD_ACTION

MCPRP_CLI**%MCPRP_CLI-6-LICENSE_EXPIRED : Shell access disabled due to license expiration**

| | |
|---------------------------|---|
| Explanation | Shell license is expired. Thus the shell access is disabled |
| Recommended Action | Get and install another shell license |

MCPRP_DAI**%MCPRP_DAI-4-ERR_DISABLE : DAI detected error on [chars], putting [chars] to err-disable**

| | |
|---------------------------|---|
| Explanation | Dynamic ARP inspection has detected an error condition because ARP packets have exceeded the configured rate or burst |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MCP_SYS through MFIB

- [MCP_SYS](#)
- [MCTIE1](#)
- [MDNSPROXY](#)
- [MDR](#)
- [MDT_SUBSCRIPTION](#)

- [MFIB](#)

MCP_SYS**%MCP_SYS-0-ASSERTION_FAILED : Assertion failed: [chars]**

| | |
|--------------------|---|
| Explanation | An internal state consistency check failed. Correct operation cannot be guaranteed, and the system has been halted. |
|--------------------|---|

%MCP_SYS-0-ASSERTION_FAILED : Assertion failed: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

MCT1E1

%MCT1E1-3-INITFAIL : MCT1E1 (bay [dec]), Init Failed at [chars] - line [dec] arg [hex]

| | |
|---------------------------|---|
| Explanation | The SPA failed to complete hardware initialization. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%MCT1E1-3-UNCOR_MEM_ERR : [chars]: [dec] uncorrectable [chars] memory error(s) encountered. The memory address of the most recent error is: [hex]. The SPA is being restarted.

| | |
|---------------------------|--|
| Explanation | The SPA driver detected an uncorrectable memory error condition on the SPA card. Packet corruption may result. |
| Recommended Action | The SPA driver has encountered an uncorrectable memory error on the SPA card. The hexadecimal memory address of the most recent error is specified in the message text on the console or in the system log. Please power down and reseal the indicated SPA card. CTE1_STD_ACTION |

%MCT1E1-3-BAD_SIZE_ERR : [chars]: [dec] [chars] events on HDLC Controller were encountered. The SPA is being Restarted.

| | |
|---------------------------|--|
| Explanation | The SPA driver detected an error event on the HDLC controller. |
| Recommended Action | CTE1_STD_ACTION |

%MCT1E1-3-HDLC_CTRL_ERR : [chars]: [dec] [chars] events on HDLC Controller were encountered.

| | |
|---------------------------|--|
| Explanation | The SPA driver detected an error event on the HDLC Controller. |
| Recommended Action | The SPA driver has encountered an error event on the SPA card. CTE1_STD_ACTION |

%MCT1E1-3-COR_MEM_ERR : [chars]: [dec] correctable [chars] memory error(s) encountered. The error has been corrected and normal processing should continue. The memory address of most the recent error is: [hex]

Explanation The SPA driver detected a correctable memory error on the SPA card.

Recommended Action The SPA has encountered a correctable memory error on the SPA card. The error has been corrected and normal processing should continue. The hexadecimal memory address of the most recent error is specified in the message text on the console or in the system log. CTE1_STD_ACTION

%MCT1E1-3-UNCOR_PARITY_ERR : [chars]: [dec] [chars] parity error(s) encountered. The address of the most recent error is: [hex]

Explanation The SPA driver detected an uncorrectable parity error condition on the SPA card. Packet corruption may result.

Recommended Action Please power down and reseal the indicated SPA card. CTE1_STD_ACTION

%MCT1E1-2-CMD_DROP : [chars], cmd: [dec], arg0: [dec], arg1: [dec] arg2: [dec], arg3: [dec], vc: [dec] reason: [chars]

Explanation The SPA driver dropped a configuration command. One or more interfaces or controllers associated with the SPA may not be configured correctly.

Recommended Action Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the condition persists, copy the error message exactly as it appears, and report it to your technical support representative. Please also supply a **show tech-support** at that time.

%MCT1E1-2-EV_DROP : [chars], cmd: [dec], arg0: [dec], arg1: [dec] arg2: [dec] arg3: [dec] reason [chars]

Explanation The SPA driver dropped an event notification command. Counters or line protocols for one or more interfaces or controllers may be incorrect.

Recommended Action Please restart any interfaces or controllers that are down. If the condition persists, copy the error message exactly as it appears, and report it to your technical support representative. Please also supply a **show tech-support** at that time.

%MCT1E1-3-FRMR_CLKFAIL : [chars]: Framer input clock failure detected, CTCLK = [chars]CTIVE, LREFCLK = [chars]CTIVE, SREFCLK = [chars]CTIVE, ctclk count [int] lrefclk count [int] srefclk count [int]

Explanation The SPA driver detected failure of one or more input clocks to the framer chip. The T1/E1 Ports may not operate as expected.

%MCT1E1-3-FRMR_CLKFAIL : [chars]: Framer input clock failure detected, CTCLK = [chars]CTIVE, LREFCLK = [chars]CTIVE, SREFCLK = [chars]CTIVE, ctclk count [int] lrefclk count [int] srefclk count [int]

Recommended Action The SPA driver has detected input clock failures on the framer chip. If the ports on the SPA are not operating as expected, power down and reseal the indicated SPA card.
CTE1_STD_ACTION

%MCT1E1-3-BATCH_CMD_INVALID_TAG : [chars]: Invalid tag value [dec] at index [dec].

Explanation The SPA driver detected invalid tag value in a batch command.

Recommended Action The SPA driver has detected invalid command format from RP. If the ports on the SPA are not operating as expected, power down and reseal the indicated SPA card.
CTE1_STD_ACTION

%MCT1E1-3-PERIODIC_PROCESS : [chars]: periodic process error [chars].

Explanation The SPA driver detected an error with periodic processing routine.

Recommended Action The SPA driver has detected problem with periodic routine. If the ports on the SPA are not operating as expected, power down and reseal the indicated SPA card.
CTE1_STD_ACTION

%MCT1E1-3-CMD_FAILED : [chars]: Failed to send command '[chars]' to SPA - [chars].

Explanation The SPA driver could not successfully send a cmd to firmware.

Recommended Action The SPA driver has detected a command failure. If the ports on the SPA are not operating as expected, power down and reseal the indicated SPA card.
CTE1_STD_ACTION

%MCT1E1-3-AUTODNR : [chars] failed for slot [dec] bay [dec] err [dec]

Explanation AUTODNR/USNDNR process has failed. The SPA and SIP are out of synchronization. This condition indicates a software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MCT1E1-3-TIMEOUT : [chars]: [chars] failed: [dec], state: [dec], ml_id: [dec] progress: [dec]

Explanation Linkrec is stuck at non ready. This condition indicates a software error.

%MCT1E1-3-TIMEOUT : [chars]: [chars] failed: [dec], state: [dec], ml_id: [dec] progress: [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%MCT1E1-3-QUEUE_HALT_FAIL : [chars]: Could not suspend message ([dec]) or command ([dec]) queue

| | |
|---------------------------|--|
| Explanation | The Message/Command queue could not be stopped prior to the OIR removal of the SPA. |
| Recommended Action | If the ports on the SPA are not operating as expected, power down and reseal the indicated SPA card. CTE1_STD_ACTION |

%MCT1E1-3-SPI4_HW_ERR : [chars]: [chars] Hardware error was encountered.

| | |
|---------------------------|---|
| Explanation | The SPA driver detected a Hardware error condition on the SPA card. This might result in improper operation. |
| Recommended Action | The SPA driver has encountered a Hardware error on the SPA's SPI4 bus. Please power down and reseal the indicated SPA card. CTE1_STD_ACTION |

%MCT1E1-3-FPGA_CNTR_ERR : [chars]: [dec] [chars] error(s) encountered.

| | |
|---------------------------|---|
| Explanation | The SPA driver detected an FPGA error condition on the SPA card. Interface packet error counter corruption may result. |
| Recommended Action | The SPA driver has encountered a parity error on the SPA card. The SPA should continue to function normally. If the error condition recurs, please reset the SPA by doing a physical OIR. CTE1_STD_ACTION |

%MCT1E1-3-BERT_STOP_ERR : [chars]: Failed to stop BERT operation on interface [chars] - [chars].

| | |
|---------------------------|---|
| Explanation | The SPA failed to stop the BERT operation on the indicated interface. The interface might not be functional after this event, if that is the case, try to 'shutdown' and then 'no shutdown' the interface to recover from this failure. |
| Recommended Action | If manual 'shutdown' and then 'no shutdown' of the interface does not restore the operation, then SPA will need to be reloaded to recover from this failure state. |

%MCT1E1-3-BERT_OPERATION_ERR : [chars]: BERT operation error on interface [chars] - [chars].

Explanation The SPA reported failure during BERT operation. The current BERT operation will be terminated, but the affected interface might not be operational, if that is the case, try to 'shutdown' and then 'no shutdown' the interface to recover from this failure.

Recommended Action If manual 'shutdown' and then 'no shutdown' of the interface does not restore the operation, then SPA will need to be reloaded to recover from this failure state.

%MCT1E1-3-LOOP_UNSUPPORTED : [chars]: [chars] on port [dec]/[dec]/[dec] and it is not supported on SPA.

Explanation The SPA driver received 'loopback payload' request from the remote device on the SPA card. SPA does not support loopback payload.

Recommended Action The SPA driver has received 'loopback payload' request from the remote device on the SPA card. SPA does not support loopback payload. The remote request is ignored. Please unconfigure the command on the remote device.

%MCT1E1-3-LOOPBACK_CFG_ERR : [chars]: Loop [chars] configuration error on controller [chars] - [chars][chars].

Explanation The SPA reported failure during setting of loop up/down operation. The current loopback will be terminated, but the affected controller might not be operational, if that is the case, try to 'shutdown' and then 'no shutdown' the controller to recover from this failure.

Recommended Action If manual 'shutdown' and then 'no shutdown' of the controller does not restore the operation, then SPA will need to be reloaded to recover from this failure state.

MDNSPROXY

%MDNSPROXY-4-INIT_MDNS_FAIL : [chars] Initialisation failure.

Explanation An internal error occurred during mDNS initialisation.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MDNSPROXY-3-PORT_RESERVED_MDNS : [chars] Initialisation failure.

Explanation UDP Port 5353 Already reserved. Please disable the feature which uses 5353 and And Try Again.

%MDNSPROXY-3-PORT_RESERVED_MDNS : [chars] Initialisation failure.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%MDNSPROXY-3-CHUNK_MEMORY_FAIL : Chunk memory allocation failed

| | |
|---------------------------|---|
| Explanation | Chunk memory allocation failed for Cache element |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MDNSPROXY-3-API_FAIL_MDNS : [chars] API failed

| | |
|---------------------------|---|
| Explanation | An error occurred while calling the APIs. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MDNSPROXY-3-NULL_CONTEXT_ID_MDNS : Encountered a NULL context for the ID [int]

| | |
|---------------------------|---|
| Explanation | NULL context for the ID passed in id_to_ptr. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MDNSPROXY-3-OS_API_FAIL_MDNS : IOS API [chars] failed

| | |
|---------------------------|---|
| Explanation | Encountered an error while calling the API. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MDNSPROXY-3-STATIC_SERVICE_FAIL_MDNS : Static Service: [chars]

| | |
|---------------------------|---|
| Explanation | Encountered an error while processing Static Service. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MDR

%MDR-5-CARD_RESTART : Minimal Disruptive Restart [chars] to acquire provisioned software

| | |
|---------------------------|---|
| Explanation | The FRU specified was not running the currently provisioned software, which it will acquire on Minimal Disruptive Restart. |
| Recommended Action | No user action is necessary. This message indicates the system is functioning normally and is provided for informational purposes only. |

%MDR-3-NO_ACTIVE_ESP : No active ESP was found when initiating Minimal Disruptive Restart

| | |
|---------------------------|---|
| Explanation | An unexpected error has occurred where no active ESP was found to continue forwarding traffic during the Minimal Disruptive Restart. All requested linecards and/or modules were reset as normal. |
| Recommended Action | Review the IOSd, RP and CC chassis manager logs for errors or linecard OIR. |

%MDR-5-SIP_UNSUPPORTED : [chars] does not support Minimal Disruptive Restart

| | |
|---------------------------|---|
| Explanation | The linecard specified was restarted during an Minimal Disruptive Restart, however it does not support this feature either because of its type or there are no SPA's that support Minimal Disruptive Restart inserted. This linecard was reset as normal. |
| Recommended Action | No user action is necessary. |

%MDR-5-SPA_UNSUPPORTED : [chars] does not support Minimal Disruptive Restart

| | |
|---------------------------|--|
| Explanation | The module specified was restarted during an Minimal Disruptive Restart, however it does not support this feature either because of its type or software version. This module was reset as normal. |
| Recommended Action | No user action is necessary. |

%MDR-3-SIP_OFFLINE : [chars] is not online to perform Minimal Disruptive Restart

Explanation An unexpected error has occurred where the specified linecard was to undergo Minimal Disruptive Restart however the linecard was not found to be online. The linecard was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors or linecard OIR.

%MDR-3-SPA_OFFLINE : [chars] in [chars] is not online to perform Minimal Disruptive Restart

Explanation An unexpected error has occurred where the specified module was to undergo Minimal Disruptive Restart however the module was not found to be online. The module was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors or module OIR.

%MDR-3-SPA_IS_NOT_READY : [chars] in [chars] is not ready to perform Minimal Disruptive Restart

Explanation An unexpected error has occurred where the specified module was to undergo Minimal Disruptive Restart however the module was not found to be ready. The module was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors or module OIR.

%MDR-3-SPA_WAS_NOT_READY : [chars] in [chars] was not ready to perform Minimal Disruptive Restart

Explanation An unexpected error has occurred where the specified module was to undergo Minimal Disruptive Restart however the module was not found to be ready at the time it was checked. The module was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors or module OIR.

%MDR-3-NO_SPAS_IN_SIP : No Minimal Disruptive Restart compatible SPAs found in [chars]

Explanation An unexpected error has occurred where the specified linecard that was to undergo Minimal Disruptive Restart did not contain any compatible SPAs. This linecard was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors or module OIR.

%MDR-3-RESTART_FAILED : Failed to perform Minimal Disruptive Restart on [chars]

Explanation An unexpected error has occurred where the specified linecard or module failed to undergo a Minimal Disruptive Restart. This linecard or module was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors.

%MDR-3-READ_SIP_RESET : Failed to read a valid Minimal Disruptive Restart reset value for [chars]

Explanation An unexpected error has occurred where either modules in or the specified linecard itself, was to undergo Minimal Disruptive Restart however a valid SIP reset value could not be read. This linecard was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors.

%MDR-3-READ_COMPAT_INFO : Failed to read valid Minimal Disruptive Restart compatibility information for [chars]

Explanation An unexpected error has occurred where either modules in or the specified linecard itself, was to undergo Minimal Disruptive Restart however valid compatibility information could not be read prior to commencing Minimal Disruptive Restart. If the linecard itself was to go through Minimal Disruptive Restart, it and the modules within it were reset as normal. If only modules were going through Minimal Disruptive Restart, all modules were reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors.

%MDR-3-SOFTWARE_TRANSFER : Failed to receive upgrade software for [chars]

Explanation An unexpected error has occurred where the specified linecard was to undergo Minimal Disruptive Restart however the linecard was not able to receive the upgrade software prior to commencing Minimal Disruptive Restart. The linecard was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors.

%MDR-3-SPA_BAY_INVALID : Could not perform Minimal Disruptive Restart on invalid [chars] in [chars]

Explanation An unexpected error has occurred where the specified module was to undergo Minimal Disruptive Restart however the module was invalid.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors or module OIR.

%MDR-3-SPA_NOT_FOUND : [chars] in [chars] could not be found to perform Minimal Disruptive Restart

Explanation An unexpected error has occurred where the specified module was to undergo Minimal Disruptive Restart however the module was not found. The module was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors or module OIR.

%MDR-3-SPA_TYPE_MISMATCH : Could not perform Minimal Disruptive Restart on [chars] in [chars] due to a SPA type mismatch

Explanation An unexpected error has occurred where the specified module was to undergo Minimal Disruptive Restart however the module's SPA type was found to be different to what was expected. The module was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors or module OIR.

%MDR-3-NODE_ISSU_SIP_WAIT : Could not wait for [chars] to complete Minimal Disruptive Restart

Explanation An unexpected error has occurred where the specified linecard was performing a Minimal Disruptive Restart using node ISSU, however Minimal Disruptive Restart did not complete before the next operation needed to commence. This linecard was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors or module OIR.

%MDR-3-NODE_ISSU_SPA_WAIT : Could not wait for [chars] in [chars] to complete Minimal Disruptive Restart

Explanation An unexpected error has occurred where the specified module was performing a Minimal Disruptive Restart using node ISSU, however Minimal Disruptive Restart did not complete before the next operation needed to commence. This module was reset as normal.

Recommended Action Review the IOSd, RP and CC chassis manager logs for errors or module OIR.

MDT_SUBSCRIPTION**%MDT_SUBSCRIPTION-4-INVALID_ARGUMENTS :**

Explanation Detailed explanation of why the subscription failed The value of the given parameter is invalid or not specified.

Recommended Action Correct the invalid parameter and try the subscription again.

%MDT_SUBSCRIPTION-4-NOT_SUPPORTED :

Explanation Detailed explanation of why the subscription failed The value of the given parameter is not supported.

Recommended Action Try the subscription again with a supported value.

%MDT_SUBSCRIPTION-4-XPATH_INVALID :

Explanation Detailed explanation of why the subscription failed The specified XPath filter is invalid.

Recommended Action Correct the XPath filter and try the subscription again.

%MDT_SUBSCRIPTION-4-OUTSIDE_LIMIT :

Explanation Detailed explanation of why the subscription failed The value of the parameter is outside of the allowable range.

Recommended Action Try the subscription again with a value within the allowable range.

MEM_MGR

%MEM_MGR-3-MEM_MGR_NOMEM : Out of memory

Explanation System out of memory.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MEM_MGR-3-MEM_MGR_EXCEED_MAX : memory pool exceeds maximum ([dec] bytes) allowed.

Explanation An attempt was made to allocate a buffer from the specified memory pool which has reached its maximum limit

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MEM_MGR-3-MEM_MGR_INVALID : The Memory Management code encounters an invalid parameter.

| | |
|---------------------------|---|
| Explanation | It appears that the Memory Management code has received an invalid parameter from its caller. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%MEM_MGR-2-DRAM_POOL_CREATE_ERR : return code [dec]

| | |
|---------------------------|---|
| Explanation | Creation of public DRAM memory pool failed. |
| Recommended Action | LOG_STD_ACTION |

%MEM_MGR-2-SRAM_POOL_CREATE_ERR : return code [dec]

| | |
|---------------------------|---|
| Explanation | Creation of public SRAM memory pool failed. |
| Recommended Action | LOG_STD_ACTION |

%MEM_MGR-2-DUP_DRAM_POOL_CREATE : pool exists

| | |
|---------------------------|---|
| Explanation | Request to create public DRAM memory pool failed because pool already exists. |
| Recommended Action | LOG_STD_ACTION |

%MEM_MGR-2-DUP_SRAM_POOL_CREATE : pool exists

| | |
|---------------------------|---|
| Explanation | Request to create public SRAM memory pool failed because pool already exists. |
| Recommended Action | LOG_STD_ACTION |

%MEM_MGR-3-POOL_CREATE_PARM_ERR : addr [hex], size [int]

| | |
|---------------------------|--|
| Explanation | Creation of memory pool failed due to bad parameter value. |
| Recommended Action | LOG_STD_ACTION |

%MEM_MGR-3-POOL_APPEND_PARM_ERR : pool handle [hex], addr [hex], size [int]

| | |
|--------------------|--|
| Explanation | Append of additional memory to pool failed due to bad parameter value. |
|--------------------|--|

%MEM_MGR-3-POOL_APPEND_PARM_ERR : pool handle [hex], addr [hex], size [int]

Recommended Action LOG_STD_ACTION

%MEM_MGR-3-POOL_STATS_PARM_ERR : pool handle [hex], stats addr [hex]

Explanation Read of memory pool statistics failed due to bad parameter value.

Recommended Action LOG_STD_ACTION

%MEM_MGR-3-MALLOC_PARM_ERR : pool handle [hex], size [int]

Explanation Memory allocation request failed due to bad parameter value.

Recommended Action LOG_STD_ACTION

%MEM_MGR-3-LOCK_PARM_ERR : pool handle [hex], addr [hex]

Explanation Request to lock memory pool element failed due to bad parameter value.

Recommended Action LOG_STD_ACTION

%MEM_MGR-3-FREE_PARM_ERR : pool handle [hex], addr [hex]

Explanation Memory deallocation request failed due to bad parameter value.

Recommended Action LOG_STD_ACTION

%MEM_MGR-3-DESTROY_PARM_ERR : pool handle [hex]

Explanation Request to delete memory pool failed due to bad parameter value.

Recommended Action LOG_STD_ACTION

%MEM_MGR-2-POOL_CORRUPT : pool handle [hex], magic value [hex], MSGDEF_LIMIT_MEDIUM

Explanation Memory pool data structure has been corrupted.

Recommended Action LOG_STD_ACTION

%MEM_MGR-2-ELEMENT_CORRUPT : pool handle [hex], addr 0x5x, magic value [hex], ref cnt [int], MSGDEF_LIMIT_MEDIUM

Explanation Memory element has been corrupted.

Recommended Action LOG_STD_ACTION

%MEM_MGR-3-MALLOC_NO_MEM : pool handle [hex], size [int], MSGDEF_LIMIT_MEDIUM

Explanation Memory pool allocation request failed due to insufficient memory being available.

Recommended Action LOG_STD_ACTION

%MEM_MGR-3-LOCK_MAX_REF_CNT : pool handle [hex], addr [hex], MSGDEF_LIMIT_MEDIUM

Explanation Request to lock memory pool element failed due to reference count for element already being at the maximum value.

Recommended Action LOG_STD_ACTION

MEM_PROXY

%MEM_PROXY-3-PROXY_IPC_PAK_ALLOC_FAILED :

Explanation Allocation of IPC packet failed.

Recommended Action LOG_STD_ACTION

%MEM_PROXY-3-PROXY_IPC_SEND_FAILED : [chars]

Explanation Could not send IPC request for more memory.

Recommended Action LOG_STD_ACTION

METS

%METS-3-BADMETHOD : Cannot process [chars] method [int]

Explanation A method list function encountered a method list that was unknown, or could not be handled.

%METS-3-BADMETHOD : Cannot process [chars] method [int]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%METS-3-NOREGION : No region found: [chars]

| | |
|---------------------------|---|
| Explanation | Resource failure: No region found. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%METS-3-NULLPOOL : Can't process null pool: [chars]

| | |
|---------------------------|---|
| Explanation | Resource failure: Null pool in the region |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%METS-2-INITFAIL : Can't start analysis

| | |
|---------------------------|---|
| Explanation | The requested operation failed due to lack of resource, maybe temporarily |
| Recommended Action | Reduce system resource/memory usage, and retry for the commands. |

MFIB

%MFI-3-REDISTMGR : Redistribution Manager: [chars] [hex]

| | |
|---------------------------|---|
| Explanation | Redistribution Manager error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-3-REDISTMGR2 : Redistribution Manager: [chars] [hex] [hex]

| | |
|---------------------------|---|
| Explanation | Redistribution Manager error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-4-REDISTMGR3 : Redistribution Manager: [chars] [hex]

| | |
|---------------------------|---|
| Explanation | Redistribution Manager error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-3-EVTLOGCLIENT : Invalid client [dec]

| | |
|---------------------------|---|
| Explanation | Invalid client accessed the Event Logger |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-3-EVTLOGCAPTURE : Event Logger Capture Error [dec] [dec]

| | |
|---------------------------|---|
| Explanation | Failure during Event Logger capture |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-3-EVTLOGREGISTER : Event Logger Registration Error [dec] [dec] [dec]

| | |
|--------------------|---|
| Explanation | Failure during Event Logger client registration |
|--------------------|---|

%MFI-3-EVTLOGREGISTER : Event Logger Registration Error [dec] [dec] [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%MFI-3-REPLYMSGSIZE : Reply message is too large: [chars]: [dec]

| | |
|---------------------------|---|
| Explanation | read update message won't fit into xdr buffer |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-3-EVTLOGCONTROL : [chars]: [dec]

| | |
|---------------------------|---|
| Explanation | General Event Logger Controller error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-3-BADREADUPDATESIZE : Read update reply message from RP has bad size: [dec]

| | |
|---------------------------|---|
| Explanation | read update message does not match the read message parse result |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-3-PNDMSGMGR : [chars] [chars] [dec] [dec] [dec]

| | |
|---------------------------|---|
| Explanation | Only one outstanding request is allowed from same process |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-4-NOCLIENTREQ : [chars] [chars]: [dec] [dec] [dec]

Explanation Client reply could not find an outstanding request

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFI-3-LCPULSE : LC pulse failed: [chars] [dec]

Explanation LC pulse request operation failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFI-3-MFICOMM : [chars]

Explanation MFI General Communication Module

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFI-3-MFICOMM2 : [chars]: [hex] [hex]

Explanation MFI General Communication Module

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFI-3-MFICOMM3 : [chars]: [hex] [hex] [hex]

Explanation MFI General Communication Module

%MFI-3-MFICOMM3 : [chars]: [hex] [hex] [hex]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%MFI-4-MFICOMM_WARN_1 : [chars]: [hex]

| | |
|---------------------------|---|
| Explanation | MFI General Communication Module |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-3-CLIENT_INTF : [chars]: [hex] [hex]

| | |
|---------------------------|---|
| Explanation | Client Interface |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFI-3-MPLS_MTU_SET : [chars] [dec] [chars] [chars] [chars] [dec][chars]

| | |
|---------------------------|---|
| Explanation | Most drivers will be able to support baby giants and will gracefully drop packets that are too large. Certain drivers will have packet forwarding problems including data corruption. |
| Recommended Action | Please increase the interface mtu on all routers connected to this interface to the needed mtu size using <code>mtu bytes</code> command. |

MFIB

%MFIB-6-PAK_TTL_ONE_V4 : IPV4 Multicast Packet received with ttl <= 1

| | |
|---------------------------|--|
| Explanation | An IP non-linklocal multicast packet received with ttl 1 |
| Recommended Action | No action is required. |

%MFIB-6-PAK_TTL_ONE_V6 : IPv6 Multicast Packet received with ttl <= 1

| | |
|---------------------------|--|
| Explanation | An IPv6 non-linklocal multicast packet received with ttl 1 |
| Recommended Action | No action is required. |

%MFIB-6-PAK_TOO_SHORT : Packet too short from [chars], datagram size [dec], tl [dec]

| | |
|---------------------------|---|
| Explanation | An IP/IPv6 packet which is too short was received |
| Recommended Action | No action is required. |

%MFIB-3-NETWORK_GET_FAIL : MFIB can not get network offset: datagram [hex]; network [hex]

| | |
|---------------------------|---|
| Explanation | The MFIB failed to find a suitable packet network offset |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB-3-NETWORK_SET_FAIL : MFIB can not set network offset: datagram [hex]; length [dec]; offset [dec]

| | |
|---------------------------|---|
| Explanation | The MFIB failed to set offset within packet |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB-3-MFIB_CTXT_DEPTH_EXCEEDED :

| | |
|--------------------|--|
| Explanation | MFIB has exceeded maximum number of switching contexts |
|--------------------|--|

%MFIB-3-MFIB_CTXT_DEPTH_EXCEEDED :

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB-3-ADJ_GSB_REGISTER :

Explanation Could not register an adjacency GSB identifier

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB-3-ADJ_GSB_INIT :

Explanation Could not initialise the adjacency GSB memory pool

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB-3-SR_ADJ_GSB_REGISTER :

Explanation Could not register an SR adjacency GSB identifier

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB-3-SR_ADJ_INCORRECT_ADD : A different MFIB Service Reflect adj is being added

| | |
|---------------------------|---|
| Explanation | A different SR adjacency subblock is being added to the adjacency without first removing the existing one. This indicates that SR forwarding may no longer work correctly |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB-3-SR_ADJ_GSB_INIT :

| | |
|---------------------------|---|
| Explanation | Could not initialise the SR adjacency GSB memory pool |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB-3-MRIB_PROCESS : [chars][chars]

| | |
|---------------------------|---|
| Explanation | The MFIB process which interfaces with the MRIB failed to start. The MFIB will be unusable. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB-6-MFIB_HEADER_LIMIT_EXCEEDED : [dec] at [chars]

| | |
|--------------------|---|
| Explanation | MFIB attempted to exceed maximum number of replicated packet header buffers |
|--------------------|---|

%MFIB-6-MFIB_HEADER_LIMIT_EXCEEDED : [dec] at [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB-6-MFIB_POOL_GETBUFFER_FAILURE :

Explanation MFIB has failed in an attempt to retrieve a particular type of memory. The MFIB will continue using another memory area

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB-3-ILLEGALARGS : Illegal arguments - [chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB-3-DECAP_OCE_CREATION_FAILED : Decap OCE creation failed for [chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB-3-WIRE_LOOKUP_OR_ALLOC_FAILED : Lookup or allocation of MFIB wire failed

Explanation Lookup or allocation of MFIB wire failed

%MFIB-3-WIRE_LOOKUP_OR_ALLOC_FAILED : Lookup or allocation of MFIB wire failed

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%MFIB-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

| | |
|---------------------------|---|
| Explanation | Initialization of the specified subblock data structure could not be accomplished. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MFIB_PLTF through MPLSMFISTATIC

- [MFIB_PLTF](#)
- [MFI_LABEL_BROKER](#)
- [MGCP_APP](#)
- [MLDP](#)
- [MMA](#)
- [MN_SPA_PTP](#)

MFIB_PLTF

%MFIB_PLTF-3-UPDATE_SET_MEMORY : [chars] [IPv6 address] -> [chars] [[IPv6 address] ([IPv6 address]/[chars])]

| | |
|---------------------------|---|
| Explanation | Failed to allocate memory for platform transaction. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%MFIB_PLTF-3-TRANSACTION_MEMORY : [dec] [dec]

| | |
|---------------------------|---|
| Explanation | Failed to allocate memory for platform transaction. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%MFIB_PLTF-3-HANDLE_CONSTRAINT : [chars] [IPV6 address]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB_PLTF-3-TABLE_HANDLE_BAD : [chars]. [IPV6 address]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB_PLTF-3-ENTRY_HANDLE_BAD : [chars]. [IPV6 address]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB_PLTF-3-IOITEM_HANDLE_BAD : [chars]. [IPV6 address]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB_PLTF-3-TABLE_LOCK_FAIL : [chars]. [chars] table [IPv6 address] [IPv6 address] ([IPv6 address])/[chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB_PLTF-3-TABLE_UNLOCK_FAIL : [chars]. [chars] table [IPv6 address] [IPv6 address] ([IPv6 address])/[chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB_PLTF-3-ENTRY_LOCK_FAIL : [chars]. [chars] entry [IPv6 address] [chars] [[IPv6 address] ([IPv6 address])/[chars]]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB_PLTF-3-ENTRY_UNLOCK_FAIL : [chars]. [chars] entry [IPv6 address] [chars] [[IPv6 address] ([IPv6 address])/[chars]]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB_PLTF-3-IOITEM_LOCK_FAIL : [chars]. [chars] ioitem [IPv6 address] [chars] [chars] [[IPv6 address] ([IPv6 address])/[chars]]

Explanation An internal software error occurred.

%MFIB_PLTF-3-IOITEM_LOCK_FAIL : [chars]. [chars] ioitem [IPv6 address] [chars] [chars] [[IPv6 address] ([IPv6 address])/[chars]]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB_PLTF-3-IOITEM_UNLOCK_FAIL : [chars]. [chars] ioitem [IPv6 address] [chars] [chars] [[IPv6 address] ([IPv6 address])/[chars]]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB_PLTF-7-ENTRY_DUPLICATE_ADD : [chars] entry [chars] [[IPv6 address] ([IPv6 address])/[chars]]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB_PLTF-3-IOITEM_DUPLICATE_ADD : [chars] ioitem [chars] [chars] [[IPv6 address] ([hex])/[chars]]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MFIB_PLTF-3-ANNOT_TOO_LONG : [chars] [IPv6 address] [dec]

Explanation An internal software error occurred.

%MFIB_PLTF-3-ANNOT_TOO_LONG : [chars] [IPv6 address] [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%MFIB_PLTF-3-CALLBACK_RETURN_INVALID : [chars]. [IPv6 address] [IPv6 address] [IPv6 address]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB_PLTF-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

| | |
|---------------------------|---|
| Explanation | Initialization of the specified subblock data structure could not be accomplished. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MFIB_PLTF-3-XDRISSUREGERROR : ISSU client [chars] [(dec)], entity [dec], failed ISSU registration: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MFI_LABEL_BROKER**%MFI_LABEL_BROKER-3-UNREG_LDM : [chars]**

| | |
|---------------------------|--|
| Explanation | An MPLS application requested label broker services without registering first. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%MFI_LABEL_BROKER-3-DUPREG_LDM : [chars]

| | |
|---------------------------|--|
| Explanation | An MPLS application is registering multiple times with the label broker. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%MFI_LABEL_BROKER-3-INVALID_PROC_EVT : [chars][dec][chars][dec]

| | |
|---------------------------|--|
| Explanation | The MFI Label Broker received an invalid process event from the IOS-on-Neutrino infrastructure. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%MFI_LABEL_BROKER-3-INVALID_LDM : [dec]

| | |
|---------------------------|--|
| Explanation | The MFI Label Broker received a (un)registration request from an invalid MPLS application. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%MFI_LABEL_BROKER-3-NULL_KEY :

| | |
|---------------------------|--|
| Explanation | The MFI Label Broker received a null key pointer |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%MFI_LABEL_BROKER-3-INVALID_PID : LDM([dec]), PID([dec])

| | |
|---------------------------|--|
| Explanation | The MFI Label Broker received a registration request with invalid PID. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version and show running-config and contact your Cisco technical support representative. |

%MFI_LABEL_BROKER-3-INVALID_LABEL : [dec]

| | |
|---------------------------|---|
| Explanation | The MFI Label Broker received a request to allocate an invalid label. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version <NoCmd Bold> and <CmdBold> show running-config and contact your Cisco technical support representative. |

%MFI_LABEL_BROKER-3-INVALID_PARAM : [chars]

| | |
|---------------------------|---|
| Explanation | The MFI Label Broker received an invalid parameter in a request to allocate or free a local label. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version <NoCmd Bold> and <CmdBold> show running-config and contact your Cisco technical support representative. |

%MFI_LABEL_BROKER-3-MULTIPLE_BIND : Label [dec] in table [dec], [chars], [chars] [p/bm [dec]/[hex]], ldm request info: [chars]

| | |
|---------------------------|--|
| Explanation | The MFI Label Broker received a request to bind the label to a prefix, but the label is already bound to another prefix. |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version <NoCmd Bold>, <CmdBold> show running-config and show mpls forwarding-table and contact your Cisco technical support representative. |

%MFI_LABEL_BROKER-3-DELETE_MOI_FAIL : Label [dec] in table [dec], [chars], [chars]

| | |
|---------------------------|---|
| Explanation | The MFI Label Broker could not honor a request to immediately handle the process restart of the application indicated. It will try to handle it in the background |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version <NoCmd Bold>, <CmdBold> show running-config and show mpls infrastructure label-broker ldm (this latter command is present only when service internal is enabled) and contact your Cisco technical support representative. |

%MFI_LABEL_BROKER-3-IMMEDIATE_LDM_RESTART : application [chars]

Explanation

%MFI_LABEL_BROKER-3-IMMEDIATE_LDM_RESTART : application [chars]

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of **show version**<NoCmd Bold> and <CmdBold>**show running-config** and contact your Cisco technical support representative.

%MFI_LABEL_BROKER-3-NO_ACTIVE_LABEL : [chars] Label [dec] in table [dec], [chars] [hex]

Explanation The MFI Label Broker encountered a situation where there is no currently active label for applications to use for the FEC indicated.

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of **show version**<NoCmd Bold>, <CmdBold>**show running-config**, **show mpls forwarding-table internal** and contact your Cisco technical support representative.

%MFI_LABEL_BROKER-3-LABEL_PROGRAM_FAIL : Label [dec] in table [dec], for [chars]

Explanation The MFI Label Broker was unable to program the label in question for the mentioned FEC.

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of **show version**<NoCmd Bold>, <CmdBold>**show running-config**, **show mpls forwarding-table internal** and contact your Cisco technical support representative.

%MFI_LABEL_BROKER-3-OS_NOTIFY : Process id [dec] [chars], error code [dec]

Explanation The MFI Label Broker was unable to notify the operating system about (un)registration of the specified process.

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of **show version**<NoCmd Bold>, <CmdBold>**show running-config**, **show mpls infrastructure label-broker ldm** and contact your Cisco technical support representative.

MGCP_APP

%MGCP_APP-6-PROCESS_CREATION_FAILED : Cannot create MGCP application process

Explanation Failed to create the MGCP application process.

Recommended Action Check the size of free memory to make sure there is enough memory.

%MGCP_APP-6-SOCKET_OPEN_FAILED : Failed to open UDP port for MGCP

| | |
|---------------------------|---|
| Explanation | Failed to open UDP port for the MGCP process. |
| Recommended Action | Check if any other application use the same UDP port number (2427). |

%MGCP_APP-6-CALL_REC_DATABASE_FAILED : Failed to create call record database

| | |
|---------------------------|--|
| Explanation | Failed to create call record database. |
| Recommended Action | |

%MGCP_APP-6-DIGIT_MAP_DATABASE_FAILED : Failed to create digit map database

| | |
|---------------------------|--|
| Explanation | |
| Recommended Action | Check the size of free memory to make sure there is enough memory. |

%MGCP_APP-6-TRANS_ID_DATABASE_FAILED : Failed to Trans Id database

| | |
|---------------------------|--|
| Explanation | Failed to create transaction id database. |
| Recommended Action | Check the size of free memory to make sure there is enough memory. |

%MGCP_APP-6-TIMER_QUEUE_FAILED : Failed to create Timer watched queue

| | |
|---------------------------|--|
| Explanation | Failed to create Timer watched queue. |
| Recommended Action | Check the size of free memory to make sure there is enough memory. |

%MGCP_APP-6-DNS_QUEUE_FAILED : Failed to create DNS message watched queue

| | |
|---------------------------|--|
| Explanation | Failed to create DNS message watched queue. |
| Recommended Action | Check the size of free memory to make sure there is enough memory. |

%MGCP_APP-6-TFTP_QUEUE_FAILED : Failed to create TFTP message watched queue

Explanation Failed to create TFTP message watched queue.

Recommended Action Check the size of free memory to make sure there is enough memory.

%MGCP_APP-6-SYS_QUEUE_FAILED : Failed to create MGCP system message watched queue

Explanation Failed to create MGCP system message watched queue.

Recommended Action Check the size of free memory to make sure there is enough memory.

%MGCP_APP-6-GEN_INIT_FAILED : Failed to initialize MGCP services

Explanation Failed to initialize MGCP services.

Recommended Action Check the size of free memory to make sure there is enough memory.

%MGCP_APP-6-GEN_INIT_NO_IP_INTF_FAILED : Suspended initialization of MGCP services. No IP interface up yet

Explanation Suspended initialization of MGCP services. No IP interface up yet

Recommended Action Make sure there is atleast one interface configured with an IP Address

%MGCP_APP-6-RTP_SERVICES_INIT_FAILED : Failed to start VOIP call leg

Explanation Failed to start VOIP call leg.

Recommended Action Check the size of free memory to make sure there is enough memory.

%MGCP_APP-6-NEDB_SETUP_FAILED : Failed to Initialize MGCP Notified Entity Database

Explanation Failed to Create Initialize MGCP Notified Entity Database Resources.

Recommended Action Check the size of free memory to make sure there is enough memory.

%MGCP_APP-6-CCAPI_APP_REGISTER_FAILED : Failed to register MGCP Application with CCAPI

Explanation Failed to register MGCP Application with CCAPI.

%MGCP_APP-6-CCAPI_APP_REGISTER_FAILED : Failed to register MGCP Application with CCAPI

Recommended Action Check the size of free memory to make sure there is enough memory.

%MGCP_APP-6-EVT_NODE_ALLOC_FAILED : Failed to allocate memory for event node

Explanation Failed to allocate memory for event node.

Recommended Action Check the size of free memory to make sure there is enough memory.

%MGCP_APP-6-MGCP_SHUTDOWN_COMPLETE : MGCP Shutdown has completed

Explanation MGCP will complete shutdown after all voice interfaces go back onhook

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MGCP_APP-6-MGCP_SHUTDOWN_FAILED : MGCP services initialization in progress. Shutdown request failed.

Explanation Unable to shutdown MGCP services while initialization is in progress.

Recommended Action Wait for MGCP services initialization to complete,. Retry shutdown.

%MGCP_APP-6-MGCP_CONTROL_BIND_REMOVED : MGCP control bind command is being removed, interface not found

Explanation Unable to find bound interface

Recommended Action Reconfigure control bind command for MGCP.

%MGCP_APP-6-MGCP_MEDIA_BIND_REMOVED : MGCP media bind command is being removed, interface not found.

Explanation Unable to find bound interface

Recommended Action Reconfigure media bind command for MGCP.

%MGCP_APP-6-MGCP_BIND_REMOVED : Bind command removed from this interface because of active SGCP/MGCP calls.

Explanation There are active calls because of this Bind command for control and media will be removed

Recommended Action Configure bind command when there are no active SGCP/MGCP calls.

%MGCP_APP-6-MGCPAPP_FALLBACK_DEACTIVATED : The gateway is out of fallback mode

Explanation Communication with call agent is reestablished

Recommended Action No action needed

%MGCP_APP-6-MGCPAPP_FALLBACK_ACTIVATED : The gateway is in fallback mode

Explanation Communication with call agent is disrupted

Recommended Action The connectivity between gateway and CA must be reestablished

%MGCP_APP-6-MGCPAPP_FALLBACK_TIMER_FAIL : Unable to start fallback timer

Explanation Failed to start the keepalive message timer

Recommended Action Check the size of free memory to make sure there is enough memory.

%MGCP_APP-6-MGCP_CHUNK_DESTROY_FAILED : Chunk pool [chars] ([IPv6 address]) could not be destroyed. Possible memory leak.

Explanation Chunks within the pool are probably still allocated.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

MLDP

%MLDP-2-PROCESS_ERR : Error initializing MLDP process

Explanation Can't start the MLDP process

%MLDP-2-PROCESS_ERR : Error initializing MLDP process

Recommended Action No action is required.

%MLDP-2-MRIB_PROCESS_ERR : Error initializing MLDP MRIB process

Explanation Can't start the MLDP MRIB process

Recommended Action No action is required.

%MLDP-2-CHUNK_ERR : Error initializing MLDP db chunks

Explanation Error initializing MLDP db chunks

Recommended Action No action is required.

%MLDP-2-RADIX_DB_ERR : Error initializing MLDP DB radix tree

Explanation Error initializing MLDP_DB radix tree

Recommended Action No action is required.

%MLDP-2-FEC_ERR : Error, the FEC size is too large

Explanation The FEC size is too large

Recommended Action No action is required.

%MLDP-2-PEER_ERR : Received attached address [IP_address], but there is no LDP peer

Explanation Internal error

Recommended Action No action is required.

%MLDP-2-RADIX_BRANCH_ERR : Error initializing MLDP BRANCH radix tree

Explanation Internal error

Recommended Action No action is required.

%MLDP-5-ADD_BRANCH : [chars] Root: [IP_address], Add [chars] branch [chars] [chars]

Explanation Logging of changes to mLDP branch**Recommended Action** No action is required.

%MLDP-5-MODIFY_BRANCH : [chars] Root: [IP_address], Modify [chars] branch [chars] [chars]

Explanation Logging of changes to mLDP branch**Recommended Action** No action is required.

%MLDP-5-DELETE_BRANCH : [chars] Root: [IP_address], Delete [chars] branch [chars] [chars]

Explanation Logging of changes to mLDP branch**Recommended Action** No action is required.

%MLDP-5-MODIFY_NBR : [chars] Root: [IP_address], Modify [chars] entry peer [chars] [chars]

Explanation Logging of changes to mLDP entry peer**Recommended Action** No action is required.

%MLDP-4-DB_BRANCH_DEL_PENDING : [chars] tree, with LSM ID: [hex] has both IPv4 and IPv6 del_pending set

Explanation An mLDP database entry has both the IPv4 and IPv6 del_pending flags set to TRUE -- This is an inconsistent state**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MLDP-2-INTERNAL_ERR : Internal mLDP error

Explanation Internal error**Recommended Action** No action is required.

%MLDP-5-ROUTING_LOOP : There is a routing loop for this root.

Explanation There is a routing loop for this root

**Recommended
Action** No action is required.

%MLDP-2-FEC_CHUNK_ERR : Error initializing MLDP FEC chunks

Explanation Error initializing MLDP FEC chunks

**Recommended
Action** No action is required.

%MLDP-2-FEC_TBL_ERR : Error initializing MLDP FEC tbl

Explanation Error initializing MLDP FEC tbl

**Recommended
Action** No action is required.

%MLDP-2-FEC_NTF_ERR : Error initializing MLDP FEC notifier

Explanation Error initializing MLDP FEC notifier

**Recommended
Action** No action is required.

%MLDP-2-FILTER_CHUNK_ERR : Error initializing MLDP filter chunks

Explanation Error initializing MLDP filter chunks

**Recommended
Action** No action is required.

%MLDP-2-FILTER_TBL_ERR : Error initializing MLDP filter tbl

Explanation Error initializing MLDP filter tbl

**Recommended
Action** No action is required.

%MLDP-2-FILTER_NTF_ERR : Error registering MLDP filter FEC notifier

| | |
|---------------------------|--|
| Explanation | Error registering MLDP filter FEC notifier |
| Recommended Action | No action is required. |

%MLDP-2-HA_INSERT_ERR : Error inserting node into MLDP HA radix tree

| | |
|---------------------------|--|
| Explanation | Error inserting node into MLDP HA radix tree |
| Recommended Action | No action is required. |

%MLDP-2-ID_RESERVE_ERR : Error reserving id for mldp database

| | |
|---------------------------|--------------------------------------|
| Explanation | Error reserving id for mldp database |
| Recommended Action | No action is required. |

%MLDP-2-PEER_NOT_FOUND : Peer doesn't exist while syncing to standby

| | |
|---------------------------|---|
| Explanation | Peer doesn't exist while syncing to standby |
| Recommended Action | No action is required. |

%MLDP-2-ROOT_NOT_FOUND : Root doesn't exist while syncing to standby.

| | |
|---------------------------|---|
| Explanation | Root doesn't exist while syncing to standby |
| Recommended Action | No action is required. |

MMA

%MMA-3-MEM : Memory [chars] failed - [chars]

| | |
|---------------------------|---|
| Explanation | Memory creation failed during the initialization |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-LIST : Failed to [chars] list [chars]

| | |
|---------------------------|---|
| Explanation | A list operation failed. This could be caused by memory corruption |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-PROV : [chars]

| | |
|---------------------------|---|
| Explanation | A fatal error happened during provision |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-PARSER : [chars]

| | |
|---------------------------|---|
| Explanation | Error during register parser or parsing CLI |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-INV_MONITOR : The flow monitor pointer is invalid

| | |
|---------------------------|---|
| Explanation | An internal error occurred. The performance-monitor monitor pointer saved in the common monitor is NULL |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-INV_COMMON_MONITOR : The common monitor pointer is invalid

| | |
|--------------------|---|
| Explanation | An internal error occurred. The common monitor pointer saved in the performance-monitor monitor is NULL |
|--------------------|---|

%MMA-3-INV_COMMON_MONITOR : The common monitor pointer is invalid

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%MMA-3-INV_MONITOR_TYPE : The monitor type [dec] is invalid

| | |
|---------------------------|---|
| Explanation | An internal error occurred. The monitor type is out of the range |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-INV_DB_OBJ : Internal error, mma db pointer invalid

| | |
|---------------------------|---|
| Explanation | No valid pointer to mma db |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-DB : [chars]

| | |
|---------------------------|---|
| Explanation | Error during managing MMA database |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-MCOL : [chars]

| | |
|---------------------------|---|
| Explanation | Error during collecting metrics in MMA PI |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-FIELD : [chars]

| | |
|---------------------------|---|
| Explanation | Error during initializing a field |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-CHUNKCREATE : Failed to chunk create memory for [chars]

| | |
|---------------------------|---|
| Explanation | Unable to chunk create memory chunk |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-CHUNKDESTROY : Failed to chunk destroy memory for [chars]

| | |
|---------------------------|---|
| Explanation | Unable to chunk destroy memory chunk |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-CHUNKMALLOC : Failed to malloc chunk memory for [chars]

| | |
|---------------------------|---|
| Explanation | Unable to malloc memory chunk, malloc failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-FLOW_EXCEED : The number of flows has exceeded 95%% of the configured maximum flow. [chars]

| | |
|--------------------|--|
| Explanation | This is warning message if the flow size exceeds the maximum value |
|--------------------|--|

%MMA-3-FLOW_EXCEED : The number of flows has exceeded 95%% of the configured maximum flow. [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MMA-3-FLOW_NONEXCEED : The number of flows is below 85%% of the configured maximum flow. [chars]

Explanation This is info message if the flow size falls below the maximum value

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MMA-3-CACHE_OVERFLOW : The number of flows has exceeded 95%% of the configured size, monitor [chars], please increase cache size

Explanation This is warning message if the flow size exceeds the maximum value

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MMA-3-INV_REACT : react is not valid - [chars]

Explanation This is an internal error, the saved react info is corrupted

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MMA-3-INV_ACTION_OBJ : action object is not valid - [chars]

Explanation This is an internal error, the saved action object info is corrupted

%MMA-3-INV_ACTION_OBJ : action object is not valid - [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%MMA-3-NULLHIST : A history bucket does not exist

| | |
|---------------------------|---|
| Explanation | An internal error occurred. Try to access a null history |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-NULLFLOW : A flow does not exist

| | |
|---------------------------|---|
| Explanation | An internal error occurred. Try to access a null flow |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-INV_ARG : The argument is not valid - [chars]

| | |
|---------------------------|---|
| Explanation | An internal error occurred. The argument for an internal API is not valid |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-RM_SET : [chars]

| | |
|---------------------------|---|
| Explanation | An error happened during setting of Resource Manager event |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MMA-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]

Explanation For a request from upper MMA software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck binding that cannot be established etc. In rare cases this could also affect other operations such as feature activation.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%MMA-3-IPC_NORES : No space for the IPC reply, size [int]

Explanation For a request from upper MMA software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck binding that cannot be established etc. In rare cases this could also affect other operations such as feature activation.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%MMA-2-IPC_INIT : IPC message handler registration failure, rc [int]

Explanation Registering an IPC message handler for the MMA feature failed. This will cause the feature to not function.

Recommended Action This is normally a software issue. The consequences are that the MMA feature will not function. LOG_STD_ACTION

MN_SPA_PTP

%MN_SPA_PTP-6-CONFIG_CHANGE : Change in ToP configuration on [dec]/[dec]. This will result into Termination of all existing PTP sessions on [dec]/[dec].

Explanation To take effect of new/changed configuration require restart of PTP session

Recommended Action No further action required. (This is an INFORMATION message, not an error Message.)

%MN_SPA_PTP-3-SEMAHOG : SEMAHOG by SPA [chars] Process holding Sema is [chars]

Explanation SEMAPHORE LOCK ERROR

Recommended Action Remove the config which caused this

%MN_SPA_PTP-4-PTP_CLOCK_MODE : SPA [dec]/[dec] is working in PTP SLAVE or Boundary mode external clock on BITS port would be PTP recovered clock

Explanation Info regarding external clock in PTP slave mode

Recommended Action No further action required. (This is an INFORMATION message, not an error Message.)

%MN_SPA_PTP-6-SPLL_STATE_CHANGE : Recovered clock in [dec]/[dec] status changed to [chars]

Explanation Recovered clock status change info

Recommended Action No further action required. (This is an INFORMATION message, not an error Message.)

%MN_SPA_PTP-3-GMII_LINKUP_DOWN : GMII Links are [chars] and [chars] for ports 1 and 2 respectively on the SPA.

Explanation Error Message: GMII link status has changed on the SPA.

Recommended Action OIR the SPA to recover from the error.

%MN_SPA_PTP-3-BITS_CLOCK : [chars] : SPA bits transmit clock has encountered error : [hex] .

Explanation Error message regarding BITS transmit clock failure

Recommended Action OIR the SPA if the error is consistent

MODULE_STATE

%MODULE_STATE-3-MOD_TIMEOUT : Timeout waiting for modules to come on-line.

Explanation One or more modules can not come on-line.

Recommended Action

%MODULE_STATE-6-ALL_MODULES_UP : All modules are now on-line.

Explanation All modules are now on-line.

Recommended Action

MONITOR**%MONITOR-3-VPN_EVENT : ipsec : [chars] : [dec] events, MSGDEF_LIMIT_FAST**

Explanation Crypto failure count hits limit. This message is just a warning, not an error.

Recommended Action LOG_STD_ACTION

%MONITOR-3-VARSETFAIL : ROM monitor variable set of [chars] failed.

Explanation The system could not set a ROM Monitor variable. This condition typically occurs when no ROM monitor memory is available to save the variable. The ROM monitor memory is most likely already filled with configuration **boot** commands.

Recommended Action Enter the **show bootvar** command and check the output to see if there is anything unusual with the system. Try to reduce the number of configuration boot commands.

%MONITOR-3-VARRESTFAIL : ROM monitor variable restoration of [chars], failed.

Explanation The new ROM monitor variable could not be written to memory, and the ROM monitor variable could not be restored to its original value.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show tech-support** and **show bootvar** commands to gather data that may help identify the nature of the error. If you cannot determine the nature of the error from the error message text or from the **show tech-support** and **show bootvar** command output, contact your Cisco technical support representative and provide the representative with the gathered information.

MPLSIFMIB**%MPLSIFMIB-3-GENERAL : [chars]**

Explanation Probable memory corruption of mpls layer subblock -- cause unknown.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

MPLSMFISTATIC**%MPLSMFISTATIC-3-FCALLFAILED : [chars]**

Explanation MPLS MFI Static Application function call return error

%MPLSMFISTATIC-3-FCALLFAILED : [chars]

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of **show version** and **show running-config** and contact your Cisco technical support representative.

%MPLSMFISTATIC-3-INVALIDPRAMS : [chars] [dec]

Explanation Unexpected MPLS MFI Static Application parameter error

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of **show version** and **show running-config** and contact your Cisco technical support representative.

%MPLSMFISTATIC-3-WRONGCODEPATH : [chars]

Explanation Unexpected MPLS MFI Static Application code path error

Recommended Action Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of **show version** and **show running-config** and contact your Cisco technical support representative.

%MPLSMFISTATIC-3-CHUNKMGR : [chars] [hex]

Explanation MPLS MFI Static Application chunk manager error has occurred.

Recommended Action Problem may be due to a low memory condition on the device. Check system memory and minimum memory requirements for this release and configuration, and add memory if required. If memory appears to be sufficient and problem persists, refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of **show process memory**, **show version** and **show running-config** and contact your Cisco technical support representative.

MPLS_FORWARDING through MPLS_TP_LINK

- [MPLS_FORWARDING](#)
- [MPLS_IPRM](#)
- [MPLS_LABEL](#)
- [MPLS_PACKET](#)

- [MPLS_PSC](#)
- [MPLS_TE_HA](#)
- [MPLS_TE_NSR](#)
- [MPLS_TP](#)
- [MPLS_TP_BWPOOL](#)
- [MPLS_TP_LINK](#)

MPLS_FORWARDING

%MPLS_FORWARDING-2-CAUSE_THROTTLE_ERR : Allocation of mpls throttle [chars] memory failed

| | |
|---------------------------|---|
| Explanation | Allocation of memory resource use by mpls throttle fail |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MPLS_IPRM

%MPLS_IPRM-3-PATH_LABEL_GET : [chars]

Explanation

Recommended Action

%MPLS_IPRM-3-PATH_LABEL_GET : [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to access MPLS forwarding information for the specified prefix has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MPLS_IPRM-3-PATH_LABEL_UPD : [chars]

Explanation

Recommended Action

%MPLS_IPRM-3-PATH_LABEL_UPD : [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to update MPLS forwarding information for the specified prefix has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MPLS_IPRM-3-PATH_LABEL_DEL : [chars]

Explanation

Recommended Action

%MPLS_IPRM-3-PATH_LABEL_DEL : [chars]

| | |
|---------------------------|---|
| Explanation | An attempt to delete MPLS forwarding information for the specified prefix has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MPLS_IPRM-3-DB : [chars]

Explanation

Recommended Action

%MPLS_IPRM-3-DB : [chars]

| | |
|---------------------------|---|
| Explanation | There is an inconsistency in the information required to request labels from or to process labels received from an IP label distribution module |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MPLS_IPRM-3-DB_TABLE : [chars]

Explanation**Recommended
Action**

%MPLS_IPRM-3-DB_TABLE : [chars]

Explanation There is an inconsistency in the information about a (vrf) tableid required to request labels from or to process labels received from an IP label distribution module

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MPLS_IPRM-3-DB_PATH : [chars]

Explanation**Recommended
Action**

%MPLS_IPRM-3-DB_PATH : [chars]

Explanation There is an inconsistency in the information about a prefix path required to request labels from or to process labels received from an IP label distribution module

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MPLS_IPRM-3-DB_TRANS : [chars]

Explanation**Recommended
Action**

%MPLS_IPRM-3-DB_TRANS : [chars]

Explanation There is an inconsistency in the information about an ongoing transaction required to populate MPLS forwarding data structures for a prefix

%MPLS_IPRM-3-DB_TRANS : [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MPLS_IPRM-3-DB_PNDG_DISC : [chars]**Explanation**

Recommended Action

%MPLS_IPRM-3-DB_PNDG_DISC : [chars]

Explanation There is an inconsistency in the information about a temporarily deferred action required to populate MPLS forwarding data structures for a prefix

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MPLS_IPRM-3-WALK : [chars]**Explanation**

Recommended Action

%MPLS_IPRM-3-WALK : [chars]

Explanation A request by an IP label distribution module (e.g., LDP, BGP) to walk a CEF table cannot be handled.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%MPLS_IPRM-3-INTERNAL : [chars]

Explanation**Recommended
Action**

%MPLS_IPRM-3-INTERNAL : [chars]

Explanation An operation required for proper operation of the IP rewrite manager has failed.**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

MPLS_LABEL

%MPLS_LABEL-5-CHANGED : [chars] min/max label: [int]/[int]

Explanation The MPLS label range has changed. This message is to notify the NMS of changes.**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

MPLS_PACKET

%MPLS_PACKET-3-FWDDISABLE : MPLS [chars] forwarding path disabled

Explanation MPLS forwarding plane disabled**Recommended
Action** This log entry is informational only.

%MPLS_PACKET-3-FWDREENABLE : MPLS [chars] forwarding path reenabled

Explanation MPLS forwarding plane reenabled**Recommended
Action** This log entry is informational only.

%MPLS_PACKET-4-NOLFDSB : MPLS packet received on non MPLS enabled interface [chars] L3 type [hex] label {[dec] [dec] [dec] [dec]}

| | |
|---------------------------|--|
| Explanation | MPLS packets received on an interface are being dropped as the interface is not setup to handle MPLS. This message may be seen when a mpls application is disabled on a interface and should go away when the upstream neighbor has reprogrammed its cef/mpls entries. |
| Recommended Action | If a MPLS application has just be disabled and traffic is flowing, then the message is expected and should be ignored. If the message recurs in steady state, the operator should monitor the network for attacks and report the occurrence to Cisco. |

%MPLS_PACKET-3-LABELCACHE : [chars] [dec]/[dec]

| | |
|---------------------------|---|
| Explanation | label cache error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MPLS_PACKET-3-WRONGIDB : MPLS packet input sub interface (hwidb [chars]) does not match with main interface (hwidb [chars])

| | |
|---------------------------|---|
| Explanation | Internal software error occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MPLS_PSC

%MPLS_PSC-5-TYPE_MISMATCH : Tunnel-tp[int], type mismatch local-type: [chars], remote-type: [chars]

| | |
|---------------------------|---|
| Explanation | The local protection type on the indicated MPLS-TP tunnel interface mismatches with the remote protection type. Local and remote protection types are provided. |
| Recommended Action | Examine the local and remote protection types and configure the remote protection type to the local protection type. |

%MPLS_PSC-5-REVERT_MISMATCH : Tunnel-tp[int], revertive behaviour mismatch: local is [chars] but remote is [chars]

| | |
|--------------------|---|
| Explanation | The local revertive mode for the indicated MPLS-TP tunnel interface mismatches with the remote revertive mode. Local and remote revertive modes are provided. |
|--------------------|---|

%MPLS_PSC-5-REVERT_MISMATCH : Tunnel-tp[int], revertive behaviour mismatch: local is [chars] but remote is [chars]

Recommended Action Examine the local and remote revertive modes and configure the remote revertive mode to the local revertive mode.

MPLS_TE_HA

%MPLS_TE_HA-3-PROCESS_CREATE_FAILED : Failed to create RSVP HA process

Explanation system may be low on memory

Recommended Action Verify system memory availability. Then deconfigure graceful restart full-mode and configure it again. This will attempt to re-start the RSVP HA process

%MPLS_TE_HA-3-PROCESS_KILL : Killing RSVP HA process

Explanation system may be low on memory. Failed to create RSVP HA services

Recommended Action No action is required.

%MPLS_TE_HA-3-CF_REGISTER_FAILED : Failed to register with CF

Explanation system may be low on memory

Recommended Action Verify system memory availability. Then deconfigure graceful restart full-mode and configure it again. This will attempt to re-start the RSVP HA process and re-register with CF

%MPLS_TE_HA-3-RF_REGISTER_FAILED : Failed to register with RF

Explanation system may be low on memory

Recommended Action Verify system memory availability. Then deconfigure graceful restart full-mode and configure it again. This will attempt to re-start the RSVP HA process and re-register with CF

%MPLS_TE_HA-3-RF_UNREGISTER_FAILED : Failed to unregister with RF

Explanation RSVP HA client may not have registered with RF

Recommended Action No action is required.

%MPLS_TE_HA-3-CLI_ADD_FAILED : Failed to add RSVP HA to CLI

| | |
|---------------------------|--|
| Explanation | system may be low on memory |
| Recommended Action | Verify system memory availability. Then deconfigure graceful restart full-mode and configure it again. This will attempt to re-start the RSVP HA process and re-register with CF |

%MPLS_TE_HA-3-DB_INIT_FAILED : Database init failed

| | |
|---------------------------|--|
| Explanation | system may be low on memory |
| Recommended Action | Verify system memory availability. Then deconfigure graceful restart full-mode and configure it again. This will attempt to re-start the RSVP HA process and re-register with CF |

%MPLS_TE_HA-3-MSG_MGR_INIT_FAILED : Message Manager init failed

| | |
|---------------------------|--|
| Explanation | system may be low on memory |
| Recommended Action | Verify system memory availability. Then deconfigure graceful restart full-mode and configure it again. This will attempt to re-start the RSVP HA process and re-register with CF |

%MPLS_TE_HA-3-ISSU_INIT_FAILED : In Service Software Upgrade (ISSU) Init failed

| | |
|---------------------------|--|
| Explanation | system may be low on memory |
| Recommended Action | Verify system memory availability. Then deconfigure graceful restart full-mode and configure it again. This will attempt to re-start the RSVP HA process and re-register with CF |

%MPLS_TE_HA-3-MAIN_INIT_FAILED : Main init failed

| | |
|---------------------------|--|
| Explanation | system may be low on memory |
| Recommended Action | Verify system memory availability. Then deconfigure graceful restart full-mode and configure it again. This will attempt to re-start the RSVP HA process and re-register with CF |

%MPLS_TE_HA-3-ENTRY_MOVE_FAILED : Failed to move a database entry to [chars] tree

| | |
|---------------------------|--|
| Explanation | An attempt to move a data entry from one wavl tree to another wavl tree failed |
| Recommended Action | This error should never happen under normal operation and indicates an internal error. Open a ddtS |

%MPLS_TE_HA-3-ITEM_SIZE_TOO_BIG : Item size ([int]) bigger than default CF buffer ([int]) supported by the platform

| | |
|---------------------------|--|
| Explanation | A database entry cannot be sent to the standby because the database entry doesn't fit in a CF maximum size buffer allowed by the platform. |
| Recommended Action | This error indicates a problem with design in handling platform dependent restrictions. Open a ddtS |

%MPLS_TE_HA-3-SSO_UNSUPPORTED : Attempt to init RSVP HA subsystem when TE SSO not supported

| | |
|---------------------------|--|
| Explanation | RSVP TE SSO is included in image that doesn't support SSO |
| Recommended Action | This error indicates a problem with design in. Open a ddtS |

MPLS_TE_NSR

%MPLS_TE_NSR-3-RESEQUENCE_ERROR : Error occurred during TE NSR resequence

| | |
|---------------------------|---|
| Explanation | An unrecoverable error occurred during TE NSR resequence of state |
| Recommended Action | Disable and then reenable TE NSR functionality and open a DDTS |

MPLS_TP

%MPLS_TP-3-UPDOWN : Tunnel-tp[int], changed state to [chars]

| | |
|---------------------------|---|
| Explanation | The MPLS-TP tunnel-tp interface changed state. |
| Recommended Action | If the state change was unexpected, confirm the configuration settings and those of other LSRs along the tunnel LSPs. |

%MPLS_TP-5-REDUNDANCY : Tunnel-tp[int], switched to [chars] LSP as active

| | |
|---------------------------|---|
| Explanation | The MPLS-TP tunnel-tp interface has changed the LSP over which it data traffic is carried, possibly due to a fault or administrative action, or to restore traffic to the working-LSP after LSP recovery. |
| Recommended Action | If this change is unexpected, examine LSP messages to determine if a fault or other failure has occurred, or is this is due to a lockout condition or configuration change. |

%MPLS_TP-5-CONFIG_CHANGED : Tunnel-tp[int] is [chars]

| | |
|---------------------------|---|
| Explanation | The configuration of the tunnel-tp interface has changed. This message is to notify the NMS of changes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MPLS_TP-5-PSCPREEMPTION : Tunnel-tp[int], PSC Event: [chars] preempted PSC State: [chars], new PSC State: [chars]

| | |
|---------------------------|---|
| Explanation | The indicated PSC event on the tunnel interface has preempted the indicated psc event which is of lower priority. This message is to notify the NMS of changes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MPLS_TP_BWPOOL**%MPLS_TP_BWPOOL-3-BW_POOL_CHANGED : Bandwidth pool available to MPLS-TP has changed**

| | |
|---------------------------|---|
| Explanation | Bandwidth pool available to MPLS-TP has changed. This is either due to the removal of a link or changing to the pool through CLI configuration |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MPLS_TP_LINK**%MPLS_TP_LINK-5-CONFIG_CHANGED : Link [int], interface [chars], next-hop [chars] [chars]**

| | |
|---------------------------|---|
| Explanation | The configuration of the MPLS-TP link has changed. This message is to notify the NMS of changes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

CHAPTER 6

MPLS_TP_LSP through RPL

- [NAT](#)

MPLS_TP_LSP**%MPLS_TP_LSP-3-UPDOWN : [chars] LSP [chars] is [chars][chars][chars]**

| | |
|---------------------------|---|
| Explanation | The indicated MPLS-TP LSP has gone up or down. If the LSP went down, the failure condition, and the fault source information is provided. |
| Recommended Action | Examine the failure condition and source information to determine why the LSP went down. |

%MPLS_TP_LSP-5-LOCKOUT : [chars] LSP [chars] [chars] lockout state

| | |
|---------------------------|---|
| Explanation | The indicated LSP has entered or exited lockout state due to administrative action at one endpoint |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MPLS_TP_LSP-5-CONFIG_CHANGED : LSP [chars] is [chars]

| | |
|---------------------------|---|
| Explanation | The configuration of the MPLS-TP midpoint LSP has changed. This message is to notify the NMS of changes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MPLS_TP_LSP_FSM**%MPLS_TP_LSP_FSM-3-LSP_FSM_ERROR : LSP FSM Error occurred. Received event:[chars] in state:[chars]**

| | |
|---------------------------|---|
| Explanation | An erroneous event was received by the TP LSP. This is an error internal to MPLS-TP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MPLS_TP_MEM**%MPLS_TP_MEM-3-NO_MEM : Could not allocate memory for MPLS-TP context**

| | |
|---------------------------|---|
| Explanation | Could not allocate memory for MPLS-TP context. This is an internal issue to MPLS-TP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MPLS_TP_PROC**%MPLS_TP_PROC-3-PROC_CREATE_FAIL : [chars] [chars] [dec]**

| | |
|---------------------------|---|
| Explanation | Could not create MPLS-TP process. This is an internal issue to MPLS-TP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MPLS_TP_PROC-3-UNKNOWN_MESSAGE : Received unknown message:[dec]

| | |
|---------------------------|---|
| Explanation | An unknown message was posted to the MPLS-TP process. This is an internal issue to MPLS-TP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MPLS_TP_PROC-3-UNKNOWN_EVENT : Received unknown event: Major:[dec] Minor:[dec]

| | |
|---------------------------|---|
| Explanation | An unknown event was posted to the MPLS-TP queue. This is an internal issue to MPLS-TP. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MPLS_TP_TIMER

%MPLS_TP_TIMER-3-UNKNOWN_TIMER_TYPE_EXPIRY : Unknown timer type expired:[dec]

| | |
|---------------------------|---|
| Explanation | An unknown MPLS-TP timer type expired. This is an issue internal to MPLS-TP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MSG_FIFO

%MSG_FIFO-2-MSG_FIFO_CREATE : [chars]: Bad parameter to message fifo create [chars] = [hex]

| | |
|---------------------------|--|
| Explanation | Failed to create message fifo, invalid memory size or other parameter. |
| Recommended Action | LOG_STD_ACTION |

MSG_POS_OC3_OC12_SPA

%MSG_POS_OC3_OC12_SPA-3-IOFPGA_INIT : [chars] (slot [dec]; bay [dec]) Device IOFPGA initialization failed.

| | |
|---------------------------|--|
| Explanation | IOFPGA Device initialization failed. It indicates FPGA associated PLL lock or interrupt issues. It may also indicate a hardware failure. |
| Recommended Action | Change the hardware or copy the error message exactly as it appears, and report it to your technical support representative. |

%MSG_POS_OC3_OC12_SPA-3-FRAMER_INIT : [chars] (slot [dec]; bay [dec]) Device Framer initialization failed.

| | |
|---------------------------|--|
| Explanation | Framer device initialization failed. It indicates a hardware failure. |
| Recommended Action | Change the hardware or copy the error message exactly as it appears, and report it to your technical support representative. |

%MSG_POS_OC3_OC12_SPA-3-SPI42_INIT : [chars] (slot [dec]; bay [dec]) Device SPi42 initialization failed.

| | |
|---------------------------|--|
| Explanation | SPi42 Device initialization failed. It indicates a hardware failure. |
| Recommended Action | Change the hardware or copy the error message exactly as it appears, and report it to your technical support representative. |

%MSG_POS_OC3_OC12_SPA-3-AUXC2W_INIT : [chars] (slot [dec]; bay [dec]) Device Auxiliary C2W initialization failed.

| | |
|---------------------------|--|
| Explanation | Auxiliary C2W bus initialization failed. It indicates a hardware failure. |
| Recommended Action | Change the hardware or copy the error message exactly as it appears, and report it to your technical support representative. |

%MSG_POS_OC3_OC12_SPA-3-SMM665_INIT : [chars] (slot [dec]; bay [dec]) Device SMM665 initialization failed.

| | |
|---------------------------|--|
| Explanation | SMM665 Summit Controller initialization failed. It indicates a hardware failure. |
| Recommended Action | Change the hardware or copy the error message exactly as it appears, and report it to your technical support representative. |

%MSG_POS_OC3_OC12_SPA-3-MAX1668_INIT : [chars] (slot [dec]; bay [dec]) Device MAX1668 initialization failed.

| | |
|---------------------------|--|
| Explanation | MAX1668 temperature sensor initialization failed. It indicates a hardware failure. |
| Recommended Action | Change the hardware or copy the error message exactly as it appears, and report it to your technical support representative. |

%MSG_POS_OC3_OC12_SPA-3-DS1844_INIT : [chars] (slot [dec]; bay [dec]) Device DS1844 initialization failed.

| | |
|---------------------------|--|
| Explanation | DS1844 potentiometer initialization failed. It indicates a hardware failure |
| Recommended Action | Change the hardware or copy the error message exactly as it appears, and report it to your technical support representative. |

%MSG_POS_OC3_OC12_SPA-3-RESOURCE_ERROR : [chars] ([hex], [hex], [hex]) [chars]

| | |
|---------------------------|---|
| Explanation | Failed to get required interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MSG_POS_OC3_OC12_SPA-3-IOFPGA_CREATE : [chars] (slot [dec]; bay [dec]) Device IOFPGA creation failed.

| | |
|---------------------------|--|
| Explanation | IOFPGA Device creation failed. |
| Recommended Action | Change the hardware or copy the error message exactly as it appears, and report it to your technical support representative. |

%MSG_POS_OC3_OC12_SPA-3-FRAMER_CREATE : [chars] (slot [dec]; bay [dec]) Device Framer creation failed.

| | |
|---------------------------|--|
| Explanation | Framer device creation failed. |
| Recommended Action | Change the hardware or copy the error message exactly as it appears, and report it to your technical support representative. |

%MSG_POS_OC3_OC12_SPA-3-SPI42_CREATE : [chars] (slot [dec]; bay [dec]) Device SPi42 creation failed.

| | |
|---------------------------|--|
| Explanation | SPi4.2 Device creation failed |
| Recommended Action | Change the hardware or copy the error message exactly as it appears, and report it to your technical support representative. |

%MSG_POS_OC3_OC12_SPA-3-XCVR_RATE_NOTSUPPORTED : [chars] (slot [dec]; bay [dec]) Tranceiver rate not supported on the SPA.

| | |
|---------------------------|--|
| Explanation | Tranceiver rate not supported on the SPA. |
| Recommended Action | Remove the tranceiver module and insert a valid module with rate that is supported on the SPA. |

%MSG_POS_OC3_OC12_SPA-3-XCVR_ANALYZE : [chars] (slot [dec]; bay [dec]; port [dec]) Tranceiver analyze failed.

| | |
|---------------------------|---------------------------|
| Explanation | Tranceiver analyze failed |
| Recommended Action | |

MTRIE

%MTRIE-4-MTRIECORRUPTLEAF : [IP_address]/[dec] - [chars]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%MTRIE-4-MTRIECORRUPTLEAF : [IP_address]/[dec] - [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%MTRIE-4-MTRIELEAFOPFAIL : [IP_address]/[dec] - [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MTRIE-4-PLACEALLOC : Failed to allocate place holder

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%MTRIE-4-MTRIEMISALIGNEDNODEPTR : [hex] - [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

MX**%MX-6-NOMEM : [chars] bufhdr allocation failure, MSGDEF_LIMIT_MEDIUM**

| | |
|---------------------------|---|
| Explanation | An attempt to allocate memory failed. This could cause features that manage packets in multiple pieces, or that directly export data, not to work properly in some cases. |
| Recommended Action | LOG_STD_ACTION |

%MX-3-CARVE : [chars]: size [int] too small

Explanation A software error resulted in an attempt to create buffers in an area of memory that was too small.

Recommended Action LOG_STD_ACTION

%MX-3-RESIZE : [chars]: non-contiguous resize: orig [hex]/[hex], new [hex]/[hex], MSGDEF_LIMIT_MEDIUM

Explanation A software error was detected during a resize operation on the specified memory region.

Recommended Action LOG_STD_ACTION

%MX-6-NOBUFHDR : [chars]

Explanation An attempt to add buffers within a memory region failed.

Recommended Action LOG_STD_ACTION

%MX-3-MAXPOOLS : too low

Explanation A source code inconsistency was detected.

Recommended Action Increase the number of pools allowed.

%MX-3-INITBUFHDR : [chars]: mgmt memory allocation failure (size [int])

Explanation insufficient mgmt memory provided for initialization of the external memory manager, which will cause features that manage packets in multiple pieces, or that directly export data, not to work properly.

Recommended Action LOG_STD_ACTION

%MX-3-BADSTART : [chars]: [hex] (current [hex], size [int])

Explanation A software error was detected during an attempt to increase the size of an external memory region.

Recommended Action LOG_STD_ACTION

%MX-3-BADPOOL : [chars]: [int]

Explanation Software detected the use of an invalid pool index, which may be the result of incompatible software versions on different system components.

Recommended Action LOG_STD_ACTION

%MX-3-BADFEAT : [chars]: [dec]

Explanation Software detected the use of an invalid feature enumeration, which may be the result of incompatible software versions on different system components.

Recommended Action LOG_STD_ACTION

%MX-3-BADMAGIC : [chars]: [hex] in [hex], MSGDEF_LIMIT_MEDIUM

Explanation A data structure inconsistency was detected in a buffer header, perhaps as the result of memory corruption. A buffer has been dropped because of this, resulting in a memory leak and potential system unreliability.

Recommended Action Please report the problem Cisco technical support, along with the text of the error message. If the system becomes unstable, restarting or reloading the affected component should correct the instability.

%MX-3-SUBRGNINDX : [chars]: Subregion Index allocation failure

Explanation Unable to obtain a sub region index so unable add sw managed memory

Recommended Action LOG_STD_ACTION

NAT

%NAT-3-ALLOC_FAIL : data [hex], MSGDEF_LIMIT_GLACIAL

Explanation A request exceeded for memory allocation failed

Recommended Action LOG_STD_ACTION

%NAT-3-RMAP_OP_FAIL : Routemap hash table not set up (attempted [chars]), MSGDEF_LIMIT_MEDIUM

Explanation An operation was attempted on the route map hash table, but the hash table has not yet been initialized.

Recommended Action LOG_STD_ACTION

%NAT-3-MAPPING_REFCNT_FAIL : refcount [dec], MSGDEF_LIMIT_MEDIUM

Explanation The mapping reference count is below zero. This indicates that the reference count incrementing and decrementing operations are out of sync.

Recommended Action LOG_STD_ACTION

%NAT-3-DYN_PAT_MAP_UPD_OR_ADD_FAIL : rc [dec], MSGDEF_LIMIT_MEDIUM

Explanation The add or update of a dynamic pat mapping failed with the associated return code. This will generally mean that the IOS configuration is now out of sync with the data plane. The mapping should be removed from the configuration to try to get things back in sync.

Recommended Action LOG_STD_ACTION

%NAT-3-EMPTY_CHUNK : id [int], MSGDEF_LIMIT_MEDIUM

Explanation The memory provided by the client to the datapath initialization is NULL.

Recommended Action LOG_STD_ACTION

%NAT-3-CHUNK_ID_MISMATCH : id [int] not found, MSGDEF_LIMIT_MEDIUM

Explanation The chunk ID provided by the client doesn't match any of the available chunk IDs. Hence a valid chunk could not be found for the given chunk ID.

Recommended Action LOG_STD_ACTION

%NAT-3-HA_NO_BUF : , MSGDEF_LIMIT_MEDIUM

Explanation There was not enough memory to send the HA record.

Recommended Action LOG_STD_ACTION

%NAT-3-HA_BULK_SYNC_FAIL : flags [hex] rg [dec], MSGDEF_LIMIT_MEDIUM

Explanation There was a failure such that NAT Bulk Sync did not occur**Recommended Action** LOG_STD_ACTION

%NAT-3-HA_COULD_NOT_FIND_SESS : in_orig adr [hex] port [hex] out_trans adr [hex] port [hex] vrf [hex] prot [hex] cook [hex] [hex], MSGDEF_LIMIT_MEDIUM

Explanation Standby could not find the session indicated by the HA message**Recommended Action** LOG_STD_ACTION

%NAT-3-HA_COULD_NOT_FIND_MATCHING_SESS : values (msg/sess): in_orig adr ([hex]/[hex]) port ([hex]/[hex]) out_trans adr ([hex]/[hex]) port ([hex].[hex]), MSGDEF_LIMIT_MEDIUM

Explanation Standby could not find the matching session indicated by the HA message**Recommended Action** LOG_STD_ACTION

%NAT-3-HA_STANDBY_CLR_DB_FAILED : rc=[dec], MSGDEF_LIMIT_MEDIUM

Explanation Standby failed trying to clear databased with indicated return code**Recommended Action** LOG_STD_ACTION

%NAT-3-HA_COULD_NOT_CREATE_SESS : in_orig adr [hex] port [hex] out_trans adr [hex] port [hex] vrf [hex] prot [hex] cook [int] rg [dec], MSGDEF_LIMIT_MEDIUM

Explanation Standby could not create the session indicated by the HA message**Recommended Action** LOG_STD_ACTION

%NAT-3-HA_COULD_NOT_LOCK_PARENT : in_orig adr [hex] port [hex] out_trans adr [hex] port [hex] vrf [hex] prot [hex] cook [int], MSGDEF_LIMIT_MEDIUM

Explanation Standby could not lock parent of the session; thus session not created**Recommended Action** LOG_STD_ACTION

%NAT-3-HA_COULD_NOT_CREATE_BIND : idomain [dec] orig adr [hex] port [hex] trans adr [hex] port [hex] vrf [hex] prot [hex] rg [dec], MSGDEF_LIMIT_MEDIUM

Explanation Standby could not create the bind indicated by the HA message

Recommended Action LOG_STD_ACTION

%NAT-3-HA_INVALID_MSG_RCVD : invalid value [dec] opcode [hex] version [hex], MSGDEF_LIMIT_MEDIUM

Explanation Standby received an invalid NAT HA message

Recommended Action LOG_STD_ACTION

%NAT-4-HA_INVALID_MSGVER_RCVD : invalid version [dec], MSGDEF_LIMIT_GLACIAL

Explanation Standby received an invalid NAT HA message

Recommended Action LOG_STD_ACTION

%NAT-3-HA_INVALID_STATE : state [dec], MSGDEF_LIMIT_MEDIUM

Explanation An invalid HA state was received from the HA infrastructure.

Recommended Action LOG_STD_ACTION

%NAT-3-HA_COULD_NOT_ALLOC_ADDR : addr %Ci port [hex], MSGDEF_LIMIT_MEDIUM

Explanation The standby NAT could not allocate the address requested by the active

Recommended Action LOG_STD_ACTION

%NAT-3-HA_COULD_NOT_FIND_POOL : pool_id [dec], MSGDEF_LIMIT_MEDIUM

Explanation The standby NAT could not find the pool indicated by the active

Recommended Action LOG_STD_ACTION

%NAT-3-HSL_ALLOC_FAIL : [chars], MSGDEF_LIMIT_MEDIUM

Explanation High Speed logging memory allocation failed. When this happens the event will not be exported to the collector. This indicates a temporary condition when the system runs low on memory. The failure does not have any effects on the operation of NAT

Recommended Action LOG_STD_ACTION

%NAT-6-LOG_TRANSLATION : [chars] Translation [chars] %Ci:[dec] %Ci:[dec] %Ci:[dec] %Ci:[dec] [dec]

Explanation A translation was created as a result of either a configuration or traffic flowing through the NAT subsystem

Recommended Action This message is for debugging purposes only and gets logged only when logging is turned on

%NAT-3-STATIC_MAP_ADD_FAIL : local addr %Ci global addr %Ci [chars], MSGDEF_LIMIT_MEDIUM

Explanation An add of a static NAT mapping failed due to listed reason. This mapping will be in the IOS configuration, but is not active in the data plane. It is recommended to remove the mapping from the configuration

Recommended Action LOG_STD_ACTION

%NAT-4-DEFAULT_MAX_ENTRIES : default maximum entries value [dec] exceeded; frame dropped, MSGDEF_LIMIT_MEDIUM

Explanation This is an information message which occurs when NAT is configured and a frame is dropped due to the default maximum entries limit. Starting with release 5, XNE, NAT will use a default max-entries in the data plane based on the ESP type. This will not show in the configuration and is overridden by any user configuration of 'ip nat trans max-entries <value>'. The purpose of the default data plane limit is to protect the box from memory exhaustion which could occur if no limit is enforced.

Recommended Action

%NAT-6-ADDR_ALLOC_FAILURE : Address allocation failed; pool [dec] may be exhausted [[dec]], MSGDEF_LIMIT_MEDIUM

Explanation This message indicates that an address could not be allocated from a pool because there were no free addresses in the pool at that time.

Recommended Action

**%NAT-6-POOL_WATERMARK_HIGH : [chars] High watermark reached for pool [dec],
MSGDEF_LIMIT_FAST/100**

Explanation This message indicates that pool usage has crossed its high watermark. Pool may exhaust soon.

**Recommended
Action**

%NAT-6-CLEAR_FAIL_TRANS_IN_USE : , MSGDEF_LIMIT_MEDIUM

Explanation The requested clear failed because the transaction was in use. Some clear commands support a 'forced' keyword which allows you to override this.

**Recommended
Action** LOG_STD_ACTION

%NAT-3-PER_VFR_HSL_ADD_FAILED : , MSGDEF_LIMIT_MEDIUM

Explanation The attempt to turn on NAT HSL for a vrfid %d failed. Please remove configuration and try again.

**Recommended
Action** LOG_STD_ACTION

%NAT-3-POOL_ADD_FAIL : pool-id [dec] rc [dec], MSGDEF_LIMIT_MEDIUM

Explanation A request to the data plane to add or update a pool has failed To clean up remove pool configuration and try re-adding it

**Recommended
Action** LOG_STD_ACTION

**%NAT-3-HA_COULD_NOT_CLR : Standby temporarily unable to process clear; please retry,
MSGDEF_LIMIT_MEDIUM**

Explanation A request from the active to process a clear translation failed. Please retry.

**Recommended
Action** LOG_STD_ACTION

%NAT-3-SHOW_TRANS_FAIL : unable to show [dec] entries from bucket [int], MSGDEF_LIMIT_MEDIUM

Explanation Unable to show some entries from session database. If using verbose, try using non-verbose. Otherwise situation is likely to be temporary. Or it may be wise to do 'clear ip nat trans *' as a very odd session distribution has occurred.

Recommended Action LOG_STD_ACTION

%NAT-3-SHOW_LIMIT_FAIL : unable to show [int] entries from bucket [int], MSGDEF_LIMIT_MEDIUM

Explanation Unable to show some entries from limit database. The situation is likely to be temporary. Or it may be wise to do 'clear ip nat trans *' as a very odd limit entry distribution has occurred.

Recommended Action LOG_STD_ACTION

%NAT-4-SHOW_BIND_NOT_COMPLETE : Unable to show all of NAT binds due to internal error; try again, MSGDEF_LIMIT_MEDIUM

Explanation This is an information message which occurs when NAT is unable to show all address binds due to an internal error. Please try operation again.

Recommended Action

%NAT-3-STATIC_MAP_ADD_FAILED : local addr %Ci global addr %Ci [chars], MSGDEF_LIMIT_MEDIUM

Explanation An add of a static NAT mapping failed due to listed reason. This mapping will be in the IOS configuration, but is not active in the data plane. It is recommended to remove the mapping from the configuration

Recommended Action LOG_STD_ACTION

%NAT-3-DYN_MAP_ADD_FAIL : [chars], MSGDEF_LIMIT_MEDIUM

Explanation The add of a dynamic mapping failed. This will generally mean that the IOS configuration is now out of sync with the data plane. The mapping should be removed and then re-added to try to get things back in sync.

Recommended Action LOG_STD_ACTION

%NAT-4-FORCED_DEL_BIND_FAILED : Unable to find bind to forcibly delete, MSGDEF_LIMIT_MEDIUM

Explanation This is an information message which occurs when NAT is unable to find a bind even though IOS thinks the bind exists. Please try other methods of clearing transaction.

Recommended Action

%NAT-3-DP_REL_FAIL : DP REL FAIL, retry count [dec] exceeded max, MSGDEF_LIMIT_MEDIUM

Explanation The dp release fail due to too many retry on freeing session chunk

Recommended Action LOG_STD_ACTION

%NAT-4-SEQ_DELTA_LIST_CORRUPT : Sequence Delta list tail pointer null in error, MSGDEF_LIMIT_MEDIUM

Explanation For unknown reasons, sequence delta list tail pointer is null

Recommended Action LOG_STD_ACTION

NAT64

%NAT64-3-EINVAL : NULL

Explanation An unexpected input value to a function was incorrect

%NAT64-3-EINVAL : NULL

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%NAT64-3-UNINITIALIZED : NAT64 feature is not properly initialized

| | |
|---------------------------|---|
| Explanation | A function call was made when the system was not properly initialized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-3-INIT_FAILED : An initialization failed, rc[chars]

| | |
|---------------------------|---|
| Explanation | An initialization in the system has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-3-ENOENT : NULL

| | |
|---------------------------|---|
| Explanation | A lookup failed unexpectedly. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-3-EEXIST : NULL

| | |
|---------------------------|---|
| Explanation | An item unexpectedly exists already. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-3-ENOMEM : Memory allocation failed

| | |
|---------------------------|---|
| Explanation | A attempt to allocae memory has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-3-NAT64_REGISTRY_RC : A NAT64 registry call failed with rc([chars])

| | |
|---------------------------|---|
| Explanation | The return code from a NAT64 registry call indicates an error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-3-BAD_MAGIC : Invalid magic number(%#10x)

| | |
|---------------------------|---|
| Explanation | An internal data structure is corrupt. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-3-API_FAILED : NULL

| | |
|---------------------------|---|
| Explanation | A call to the API of another component has indicated an error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-3-RUNAWAY_LOOP : NULL

| | |
|--------------------|--|
| Explanation | A loop has exceeded the expected number of iterations. |
|--------------------|--|

%NAT64-3-RUNAWAY_LOOP : NULL

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%NAT64-5-ALIAS_NOT_FOUND : Unable to find alias, address([IP_address]) table_id([int])

| | |
|---------------------------|---|
| Explanation | An attempt was made to remove an IP alias for a NAT64 address and the alias does not exist. This is a notification that such an event happened and should not have any functional impact. This could happen under heavy load if, for example, a previous best effort message to add the alias was dropped. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-6-HA_RELOAD : Reloading [chars], reason([chars])

| | |
|---------------------------|---|
| Explanation | A synchronization attempt between the active and standby RP peers has failed with the reason indicated. The standby peer is reloaded in an attempt to resynchronize when operating in a stateful redundant mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-6-HA_RELOAD_DISABLED : Standby reload has been disabled, NAT64 RP state is out of sync and the standby should be reloaded manually

| | |
|---------------------------|---|
| Explanation | The active and standby RPs are out of sync and the standby RP would have been reloaded, but this reload was suppressed based on the configured environment. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NAT64-6-HA_PEER_READY : NULL

Explanation The synchronization attempt for the message has determined that the transport has lost communication with its peer. This is a normal situation which indicates that the standby route-processor is currently out of service implying a simplex redundancy mode.

Recommended Action

%NAT64-6-HA_FLOW_CTRL_TIMEOUT : Bulk sync is flow controlled by [chars]

Explanation The bulk synchronization of the NAT64 configuration to the standby RP has encountered a flow control condition which has effected a timeout awaiting the condition to clear. This will result in a reload of the standby RP to allow the bulk synchronization to restart.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

NATMIB_HELPER

%NATMIB_HELPER-3-NOCREAT : NATMIB Helper Process not created - NAT MIB will not work properly

Explanation Attempt to start NATMIB Helper Process failed when the natmib subsystem was initialised.

Recommended Action The NATMIB Helper process was not created, possibly due to lack of memory. If you want to use the NATMIB, reconfigure the box so that less memory is used by other features, or add more memory to the system. Reload the box after reconfiguring.

NCS4200IM

%NCS4200IM-3-INCOMPATIBLE : [chars]-[dec]

Explanation PID and onwards, Cu IM... is not backward compatible with P1A/P1B/P1C Cu IM, use the same build of Cu IM or reload the router to use the new build.

Recommended Action

%NCS4200IM-3-UNSUPPORTED : This Interface Module is not supported in subslot [dec]

Explanation The inserted IM is not supported in the specified subslot. Kindly check the supported slots for the IM type.

%NCS4200IM-3-UNSUPPORTED : This Interface Module is not supported in subslot [dec]

**Recommended
Action**

%NCS4200IM-3-UNSUPPORTED_PLATFORM : This Interface Module is not supported in [chars] platform

Explanation The inserted IM is not supported in the specified platform

**Recommended
Action**

%NCS4200IM-3-DIFF_IM_INSERTED : [chars] - [chars] in bay [dec]

Explanation A different IM type has been inserted in the bay which previously had another IM type. If the interfaces were set to default before swap, the IM will boot up fine. If not, IM will goto Out-of-service state. Kindly insert the previous IM type, use hw-module subslot 0/x default and then proceed with the IM swap. If not, might need to reload the box for recovery

**Recommended
Action**

%NCS4200IM-3-INVALID_COMBINATION : [chars] is not allowed in bay [dec], can be supported only in bay(s) [chars]

Explanation The inserted IM is not supported in the specified subslot given the combination of existing IMs in the chassis.

**Recommended
Action**

%NCS4200IM-3-INVALID_MODE : [chars] with mode [chars] is not allowed in bay [dec], can be supported only in bay(s) [chars]

Explanation The inserted IM is not supported in the specified subslot given the combination of existing IMs in the chassis.

**Recommended
Action**

NCS4200INTF

%NCS4200INTF-3-UNSUPPORTED : Interface [chars] is not supported in subslot [dec] by the [chars] module

Explanation The Interface specified in the error message is not supported in the specified Subslot by the version of the operating system currently running on the system.

**Recommended
Action**

NCS4200_RP_ATM_SPA

%NCS4200_RP_ATM_SPA-3-ATM_PER_SPA_MAX_VC_LIMIT_REACHED : total active atm vc per ATM SPA reached limitation of [dec]

Explanation total number of active atm vc per ATM SPA has reached max limit

**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

NDBMAN

%NDBMAN-5-ACTIVE :

Explanation All data providers active.

**Recommended
Action** Informational only. No action required.

%NDBMAN-5-RESET :

Explanation At least one data provider has stopped.

**Recommended
Action** Informational only. No action required.

NDBUTIL

%NDBUTIL-4-OUT_OF_RANGE_FOR_DECIMAL64_AND_FD : Double (%1\$s) with value (%2\$lf) is out-of-range (-%3\$d to %3\$d, exclusive) for a Decimal64 with fraction-digits = %4\$d.

Explanation The value of the EI double cannot be reliably converted to Yang Decimal64 with the specified fraction-digits with the proper precision, so the EI to Yang conversion is intentionally failing. The EI value should not be this big, so there's an error with the module setting the attribute's value.

%NDBUTIL-4-OUT_OF_RANGE_FOR_DECIMAL64_AND_FD : Double (%1\$s) with value (%2\$lf) is out-of-range (-%3\$d to %3\$d, exclusive) for a Decimal64 with fraction-digits = %4\$d.

Recommended Action Report an error to the Cisco engineering team responsible for the module that's setting the attribute.

NETCLK

%NETCLK-5-NETCLK_CHANGE : Network clock source transitioned from priority [dec] [chars] to priority [dec] [chars]

Explanation This notice indicates a change in the clock source.

Recommended Action No action required.

%NETCLK-5-NETCLK_MODE_CHANGE : Network clock source not available. The network clock has changed to [chars]

Explanation

Recommended Action No action required

%NETCLK-5-NETCLK_PHASE_LOST : Network clock source not available. Phase-lost on clock priority [dec] [chars]

Explanation

Recommended Action No action required

%NETCLK-4-NETCLK_CMD_FAIL : NULL

Explanation This message indicates that a network clock command from RP to IOS-SR or SPAs has failed

Recommended Action The message can be ignored if the carrier card was reloaded or powered down. Otherwise, LOG_STD_SH_CMD_ACTION(show logging and show network-clocks)

%NETCLK-6-SRC_REM : Synchronization source [chars] is removed from [chars] selection process.

Explanation Synchronization source is removed from synchronization source selection process(es), i.e. T0 or selection process per T4. Source Removal is always through configuration.

Recommended Action No action is required.

%NETCLK-6-ALL_SRC_REM : All synchronization sources have been removed from [chars] selection process.

Explanation All synchronization sources are removed from synchronization source selection process(es), i.e. T0 or selection process per T4. Source Removal is always through configuration.

Recommended Action No action is required.

%NETCLK-6-SRC_ADD : Synchronization source [chars] is added to [chars] selection process.

Explanation Synchronization source is added to synchronization source selection process(es), i.e. T0 or selection process per T4. Source Addition is always through configuration.

Recommended Action No action is required.

%NETCLK-6-SRC_UPD : Synchronization source [chars] status [chars] is posted to all selection process.

Explanation Synchronization source status (event) is updated to synchronization source selection process(es), i.e. T0 or selection process per T4. Status update is in the message.

Recommended Action No action is required.

%NETCLK-6-SEL_CLOCK_SRC : Synchronization source [chars][chars] is selected by selection process(T0) to synchronize the system and generate [chars] output[chars]

Explanation Synchronization source selection process has selected source q receive clock to synchronize the system and generate T0(transmit SEC clock). T0 clock is used as TX clock on all participating slots.

Recommended Action No action is required.

%NETCLK-6-SEL_T4_CLOCK_SRC : Synchronization source [chars] is selected by selection process to synchronize the system and generate T4([chars]) output[chars]

Explanation Synchronization source selection process for T4(external interface) has selected source q receive clock to synchronize external interface transmit clock.

Recommended Action No action is required.

%NETCLK-6-ENTER_HOLDOVER : System Internal synchronization source is selected.

Explanation System Internal synchronization source Internal is selected as all other nominated synchronization source are not valid for Synchronization selection process.

Recommended Action No action is required.

%NETCLK-6-INV_QL : invalid QL [chars] received for [chars] on network option [chars].

Explanation The platform has notify RP the clock quality of an input source. But the value appears to be invalid based on the current configured network option.

Recommended Action No action is required.

%NETCLK-4-FAIL : The Network Clock protocol has encountered the error: [chars].

Explanation The protocol has run into a failure condition. The reason should be given in the parenthesis.

Recommended Action LOG_STD_SH_CMD_ACTION(show network-clock synchronization and show network-clock synchronization detail and show module)

%NETCLK-4-PD_REG : [chars] [dec]

Explanation The platform has failed to provide the protocol one of the mandatory functions.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%NETCLK-6-QL_CHANGE : Input QL for [chars] is [chars]

Explanation The input QL used for a network-clock input changed

Recommended Action No action is required.

%NETCLK-3-ESMC_EVENT_CREATE_FAIL : Failed to create ESMC event.

Explanation Failed to create an ESMC event to be queued.

Recommended Action No action is required.

%NETCLK-3-ESMC_EVENT_ENQUEUE_FAIL : Failed to enqueue ESMC event.

Explanation Failed to add an ESMC event to the event queue.**Recommended Action** No action is required.

%NETCLK-3-ESMC_EVENT_QUEUE_INIT_FAIL : Failed to initialize ESMC event queue.

Explanation Failed to initialize the ESMC event queue.**Recommended Action** No action is required.

%NETCLK-3-ESMC_EVENT_QUEUE_ALLOC_FAIL : Failed to allocate memory for ESMC event queue.

Explanation Failed to allocate memory for the ESMC event queue.**Recommended Action** No action is required.

NETWORK_CLOCK_SYNCHRONIZATION

%NETWORK_CLOCK_SYNCHRONIZATION-4-NETCLK_FAIL : Active network clock source [chars], priority [dec] failure

Explanation This warning message indicates that there has been a failure of active clock source**Recommended Action** No action required

%NETWORK_CLOCK_SYNCHRONIZATION-6-NETCLK_ACTIVE : Active network clock source is [chars], priority [dec]

Explanation This indicates the presence of an active network clock along with its priority**Recommended Action** This is an informational message only, no action required.

NETWORK_RF_API**%NETWORK_RF_API-6-IDB_TRANSITIONS_PENDING : Switchover terminated with [dec] transitions pending after there was no transition activity for [dec] seconds**

Explanation The system terminated the switchover idb transitioning phase with a number of idb transitions still pending because no switchover related IDB transitions were logged during the specified time interval. Some connected routes may experience a temporary loss of traffic.

Recommended Action No action is required.

%NETWORK_RF_API-3-FAILSENDMSGTOSTDBY : Failed to send [chars] message to standby for [chars], rc=[dec]

Explanation The specified synchronization message, which is an internal IPC message, could not be sent to the standby unit in the specified run-time module. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the type of failure. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%NETWORK_RF_API-3-FAILSENDMSGTOACTIVE : Failed to send [chars] message to active for [chars], [chars]

Explanation The specified synchronization message, which is an internal IPC message, could not be sent to the active unit in the specified run-time module. The failure most likely occurred because of a software error. Additional details on the nature of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%NETWORK_RF_API-3-FAILDECODEDATADESC : Cannot decode data descriptor for [chars], descriptor type=[chars]

| | |
|---------------------------|--|
| Explanation | An internal data descriptor could not be decoded for synchronization for the interface or controller in the run-time module specified in the message output. The failure most likely occurred because of a software error. The descriptor type specified in the message output, identifies the type of descriptor the failure occurred with. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | Gather system logs and error messages at both the active and the standby units. Issue the recommended show commands at both the active and the standby units. LOG_STD_SH_CMD_ACTION(show redundancy idb-sync-history) |

%NETWORK_RF_API-3-NO_MSG_BUFFER : No message buffer for [chars]

| | |
|---------------------------|--|
| Explanation | A message data buffer that is used for state synchronization could not be obtained. An internal data structure could not be allocated for synchronization in the run-time module specified in the message output. The failure most likely occurred because of a software error or a lack of system memory. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | If you determine that this condition was caused by a lack of system memory, reduce system activity to ease memory demands, or if conditions warrant, upgrade to a larger memory configuration. Otherwise, LOG_STD_SH_TECH_ACTION |

%NETWORK_RF_API-3-NO_CHKPT_BUFFER : No checkpointing buffer for [chars], rc=[dec]

| | |
|---------------------------|--|
| Explanation | A message data buffer that is used for state synchronization could not be obtained. An internal data structure could not be allocated for synchronization in the run-time module specified in the message output. The return code that is specified in the message output identifies the type of failure. The failure most likely occurred because of a software error or a lack of system memory. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | If you determine that this condition was caused by a lack of system memory, reduce system activity to ease memory demands, or if conditions warrant, upgrade to a larger memory configuration. Otherwise, LOG_STD_SH_TECH_ACTION |

%NETWORK_RF_API-3-INVALID_MSG_RECEIVED : Invalid [chars] message received

| | |
|--------------------|---|
| Explanation | A message that is used for state synchronization was not received correctly. An internal data structure for a message could not be retrieved. The failure most likely occurred because of a software error. The system state between the active and standby units might not be properly synchronized. |
|--------------------|---|

%NETWORK_RF_API-3-INVALID_MSG_RECEIVED : Invalid [chars] message received

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%NETWORK_RF_API-3-INVALID_CHKPT_STATUS_CODE : Invalid checkpointing status code received, rc=[dec]

Explanation An invalid checkpoint status code has been detected. An internal status code that is associated with checkpointing was found to be invalid. The return code that is specified in the message output identifies the invalid code that was detected. The failure most likely occurred because of a software error. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%NETWORK_RF_API-3-CLIENT_REGISTER_FAIL : Failed to register with [chars], rc =[dec]

Explanation A redundancy client could not be registered. An internal failure associated with client registration occurred in the run-time module specified in the message output. The return code that is specified in the message output identifies the type of failure that was detected. The failure most likely occurred because of a software error. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%NETWORK_RF_API-3-NO_RESOURCES : [chars]

| | |
|---------------------------|--|
| Explanation | A run-time module could not obtain the resources that are required to complete a task. The failure most likely occurred because of a software error or a lack of system memory. Additional details on the nature of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | If you determine that this condition was caused by a lack of system memory, reduce system activity to ease memory demands, or if conditions warrant, upgrade to a larger memory configuration. Otherwise, LOG_STD_SH_TECH_ACTION |

%NETWORK_RF_API-3-ISSU_REG_SES_INFO : Failed to register ISSU session information: [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to register the ISSU session information required to complete version exchange between the active and standby units. The failure most likely occurred because of a software error. Additional details on the nature of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NETWORK_RF_API-3-ISSU_UNREG_SES_INFO : Failed to register ISSU session information: [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to unregister the ISSU session information required to complete version exchange between the active and standby units. The failure most likely occurred because of a software error. Additional details on the nature of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NETWORK_RF_API-3-ISSU_START_NEGO_SES : Failed to start ISSU session: [chars]

| | |
|---------------------------|---|
| Explanation | The system failed to start the ISSU negotiation session required to complete version exchange between the active and standby units. The failure most likely occurred because of a software error. Additional details on the nature of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NETWORK_RF_API-3-ISSU_MSG_TYPE_INCOMPAT : The active and standby ISSU message types are incompatible

| | |
|---------------------------|---|
| Explanation | A message that is used for state synchronization is deemed to be incompatible. An internal data structure for a message could not be retrieved. The failure most likely occurred because of a software error. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NETWORK_RF_API-3-ISSU_TRANSFORM_FAIL : The ISSU message [chars] transformation failed: [chars]

| | |
|---------------------------|---|
| Explanation | A message that is used for state synchronization could not be transformed correctly. An internal data structure for a message could not be retrieved. The failure most likely occurred because of a software error. Additional details on the nature of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NETWORK_RF_API-3-ISSU_MSG_MTU_INVALID : The ISSU message MTU is invalid: [chars]

| | |
|---------------------------|---|
| Explanation | A message buffer size that is used for state synchronization was found to be invalid. An internal data structure for a message could not be retrieved. The failure most likely occurred because of a software error. Additional details on the nature of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%NETWORK_RF_API-3-CHKPT_ENTITY_FAIL : A checkpointing entity [chars] operation failed, rc=[dec]

| | |
|---------------------------|---|
| Explanation | An internal operation that is associated with checkpointing failed. The return code that is specified in the message output identifies the type of failure. The failure most likely occurred because of a software error. The system state between the active and standby units might not be properly synchronized. |
| Recommended Action | Issue 'show checkpoint entities' and 'show checkpoint clients' to determine the problem |

NIF_MGR through ONEP_LISP

- [NIF_MGR](#)

NIF_MGR

%NIF_MGR-6-PORT_CONN_READY : [chars] on front side stack link [dec] connection is READY.

Explanation A port associated with a front side stack link has a ready connection.

Recommended Action No action is required

%NIF_MGR-6-PORT_CONN_PENDING : [chars] on front side stack link [dec] connection is PENDING.

Explanation A port associated with a front side stack link has a pending connection.

Recommended Action No action is required

%NIF_MGR-6-PORT_CONN_ERR : [chars] on front side stack link [dec] connection is in ERR-DISABLE: [chars]

Explanation A port associated with a front side stack link has reached err-disable state.

Recommended Action No action is required

%NIF_MGR-6-PORT_CONN_TIMEOUT : [chars] on front side stack link [dec] connection has TIMEOUT: [chars]

Explanation A port associated with a front side stack link has disconnected connection.

Recommended Action No action is required

%NIF_MGR-6-PORT_CONN_DISCONNECTED : [chars] on front side stack link [dec] connection has DISCONNECTED: [chars]

Explanation A port associated with a front side stack link has disconnected connection.

Recommended Action No action is required

%NIF_MGR-6-PORT_LINK_UP : [chars] on front side stack link [dec] is UP.

Explanation A port associated with a front side stack link has come up.

Recommended Action No action is required

%NIF_MGR-6-PORT_LINK_DOWN : [chars] on front side stack link [dec] is DOWN.

| | |
|---------------------------|---|
| Explanation | A port associated with a front side stack link has come up. |
| Recommended Action | No action is required |

%NIF_MGR-6-STACK_LINK_UP : Front side stack link [dec] is UP.

| | |
|---------------------------|---|
| Explanation | A port associated with a front side stack link has come up. |
| Recommended Action | No action is required |

%NIF_MGR-6-STACK_LINK_DOWN : Front side stack link [dec] is DOWN.

| | |
|---------------------------|---|
| Explanation | A port associated with a front side stack link has come up. |
| Recommended Action | No action is required |

%NIF_MGR-6-PORT_CONNECTION_STATUS_CHANGE : PORT:[chars] changed state from [chars] to [chars].

| | |
|---------------------------|---------------------------------------|
| Explanation | FSS Stack Port status change message. |
| Recommended Action | No action is required |

%NIF_MGR-6-DAD_RECOVERY_MODE : Dual Active detected: Switch going into recovery mode. [chars].

| | |
|---------------------------|--|
| Explanation | Dual Active detected print on console. |
| Recommended Action | This switch need to be reloaded once user finishes debugging |

%NIF_MGR-6-DAD : Dual Active detected: [chars]

| | |
|---------------------------|---|
| Explanation | Dual Active detected print on console. |
| Recommended Action | No action. Action is only after recovery mode |

%NIF_MGR-6-DAD_RECOVERY_RELOAD_ALERT : Switch is in recovery mode, needs Reload now. [chars].

| | |
|--------------------|--|
| Explanation | Switch is in recovery mode, needs Reload now |
|--------------------|--|

%NIF_MGR-6-DAD_RECOVERY_RELOAD_ALERT : Switch is in recovery mode, needs Reload now. [chars].

Recommended Action This switch need to be reloaded since some correction is noticed

%NIF_MGR-6-DOMAIN_NUMBER_MISMATCH : Stackwise virtual domain number mismatch on stackwise virtual link [dec]

Explanation A port associated with a stackwise virtual link is connected to a peer with a different domain number than the local switch

Recommended Action For the switch to form a stack please configure same domain numbers on both the switches

NIM_XXD

%NIM_XXD-3-DISK_REMOVAL : One or more disks in SPA ([chars]) in subslot [dec]/[dec] can not be detected. Please power down this SPA and insert disk(s).

Explanation Disks have been removed from SPA

Recommended Action Power down the SPA, insert disks and power up the SPA.

%NIM_XXD-3-DISK_ERROR : Error detected on disk [dec] in module [chars] in subslot [dec]/[dec]. [chars].

Explanation Disk error detected in the SPA (NIM-SSD/NIM-HDD). Refer to comment for details.

Recommended Action Back-up any data and replace the disk.

%NIM_XXD-5-DISK_MONITOR : Disk [dec] in module [chars] in subslot [dec]/[dec] is detected but monitoring is not available.

Explanation Monitoring of disk in SPA (NIM-SSD/NIM-HDD) is unavailable.

Recommended Action Add a database file with monitoring information for this disk model and manufacturer.

NTP

%NTP-6-RESTART : NTP process starts

Explanation NTP process has just started or re-started.

Recommended Action No action is required.

%NTP-6-STOP : NTP process stops

| | |
|---------------------------|--|
| Explanation | NTP is disabled. |
| Recommended Action | Check if NTP is disabled by administrator purposely. |

%NTP-4-UNSYNC : NTP sync is lost

| | |
|---------------------------|--|
| Explanation | NTP synchronization to its peer is lost. |
| Recommended Action | Check network connection to the peer, if NTP is running on the peer, if the peer itself is synchronized to a stable time source, and if NTP packets from the peer have passed validity tests specified in the RFC1305 etc. |

%NTP-4-PEERUNREACH : Peer [IP_address] is unreachable

| | |
|---------------------------|---|
| Explanation | The NTP peer is unreachable. |
| Recommended Action | Check network connection to the peer and if NTP is running on the peer. |

%NTP-6-PEERREACH : Peer [IP_address] is reachable

| | |
|---------------------------|----------------------------|
| Explanation | The NTP peer is reachable. |
| Recommended Action | No action is required. |

%NTP-5-PEERSYNC : NTP synced to peer [IP_address]

| | |
|---------------------------|---|
| Explanation | NTP has synchronized the local clock to a new peer. |
| Recommended Action | No action is required. |

%NTP-4-V6DISABLED : IPv6 is not running on interface [chars]. Cannot send NTP message.

| | |
|---------------------------|---|
| Explanation | Some NTP IPv6 specific commands are configured on an interface on which IPv6 is not running |
| Recommended Action | Enable IPv6 on the interface |

OBJGROUP**%OBJGROUP-3-QFAIL : Failed to perform queue operation '[chars]'**

| | |
|---------------------------|---|
| Explanation | Operation to perform processing on internal queue has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OBJGROUP-3-CREATEFAIL : Failed to create/initialize internal data structures

| | |
|---------------------------|---|
| Explanation | Operation to create/initialize internal data structures has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OBJGROUP-3-CLASSMAP : Failed to perform classmap filter [chars] operation

| | |
|---------------------------|---|
| Explanation | Operation to modify classmap filter has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OBJGROUP-4-BADREFCNT : Bad reference counter classmap '[chars]' sgtid [int] filter [int]

| | |
|---------------------------|---|
| Explanation | Reference counter value indicates database inconsistency. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OBJGROUP-4-INVALIDFILTER : Invalid filter type [int] for classmap '[chars]'

| | |
|--------------------|--|
| Explanation | Filter type for match statement was unknown/invalid. |
|--------------------|--|

%OBJGROUP-4-INVALIDFILTER : Invalid filter type [int] for classmap '[chars]'

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%OBJGROUP-4-EINVAL : Unexpected input value

| | |
|---------------------------|---|
| Explanation | An unexpected input value to a function was incorrect |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OBJGROUP-4-BADCHILD : Object-group '[chars]' has bad child '[chars]'

| | |
|---------------------------|---|
| Explanation | Object-group has reference to invalid child object-group |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OBJGROUP-4-BADCLASSMAP : Internal match structure points to invalid class-map '[chars]'

| | |
|---------------------------|---|
| Explanation | Object-group has reference to invalid child object-group |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OBJGROUP-4-BADMATCH : Invalid internal match structure in class-map '[chars]' type [int]

| | |
|---------------------------|---|
| Explanation | Object-group has reference to invalid match |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OBJGROUP-4-BADOG : Reference to non-existent object-group '[chars]'

| | |
|---------------------------|---|
| Explanation | Internal structure references non-existent object-group |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OBJGROUP-4-INVALIDCMD : Invalid subcommand [int]

| | |
|---------------------------|---|
| Explanation | Attempt to configure invalid subcommand |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OBJGROUP-4-TOOMANYSGT : Exceeded maximum allowed SGT's ([int]) in a class-map group-object match statement

| | |
|---------------------------|--|
| Explanation | The cumulative number of SGTs in a class-map match statement has exceeded the maximum allowed. The number of SGTs includes those in object-groups as well as child object-groups within the heirarchy. |
| Recommended Action | Limit the number of SGTs in the object-group heirarchy referenced by the class-map match statement |

OCE**%OCE-3-OCE_SET_WRONG_PATH : Attempting to add an oce to the set contributed by path/list [IPV6 address]/[IPV6 address] while set set belongs to [IPV6 address]**

| | |
|---------------------------|---|
| Explanation | Failed to enqueue a unlock for an oce, this may lead to a memory leak |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-QUEUE_UNLOCK : Failed to [chars] unlock[chars] for [chars] oce [IPV6 address]

| | |
|--------------------|---|
| Explanation | Failed to enqueue a unlock for an oce, this may lead to a memory leak |
|--------------------|---|

%OCE-3-QUEUE_UNLOCK : Failed to [chars] unlock[chars] for [chars] oce [IPv6 address]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%OCE-3-OCEDEPDUMP : [chars]

| | |
|---------------------------|---|
| Explanation | An error condition triggered display of oce dependents |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-UNINITIALIZED_VECTOR : Improperly initialized [chars] vector in [chars] OCE bundle [IPv6 address], packet dropped

| | |
|---------------------------|---|
| Explanation | An OCE bundle vector was improperly initialized |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-MISSING_HANDLER_FOR_SW_OBJ : Missing handler for '[chars]' function

| | |
|---------------------------|---|
| Explanation | An internal API request has been ignored because it was unexpected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-MISSING_HANDLER_FOR_SW_OBJ_TYPE : Missing handler for '[chars]' function for type [chars]

| | |
|---------------------------|---|
| Explanation | An internal API request has been ignored because it was unexpected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-OCE_CHANGED_BY_APPLY_FUNCTION : Target OCE [IPv6 address] changed to [IPv6 address] by apply function [IPv6 address]

| | |
|---------------------------|---|
| Explanation | An internal API request has been ignored because it was unexpected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-UNEXPECTED_SW_OBJ_TYPE : SW_OBJ handle/type mismatch; expecting oce type [chars], found [dec]

| | |
|---------------------------|---|
| Explanation | An internal API request has been ignored because it was unexpected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-OCE_FWD_STATE_HANDLE : Limit of oce forward state handle allocation reached; maximum allowable number is [int]

| | |
|---------------------------|---|
| Explanation | Did not store the reinject forwarding state handle, as the maximum number of handles are already in use |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-OCE_FWD_STATE_HANDLE_INIT : Failed to initialize a stack of reusable forward state handles; at element [int], initial stack size is [int] elements

| | |
|---------------------------|---|
| Explanation | Could not allocate enough forwarding state handles for initial handle reuse |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-UNEXPECTED_DISP_TYPE : Unexpected disposition type is encountered; expecting disposition types are [chars], found [chars]

| | |
|---------------------------|---|
| Explanation | An internal disposition counter measure request has been ignored because it was unexpected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-DECREASE_ZERO_REFCOUNT : Try to decrease zero refcount for [chars] oce [IPV6 address]

| | |
|---------------------------|---|
| Explanation | Attempt to decrease the refcount of oce when it is already zero |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-INTERRUPT_LEVEL_LAST_LOCK : Try to remove last lock for [chars] oce [IPV6 address] at interrupt

| | |
|---------------------------|---|
| Explanation | Attempt to delete oce while not at process level |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-GENERAL : [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE-3-LOOP : A loop in the OCE chain has been detected at: [chars][[IPV6 address]]

| | |
|--------------------|---|
| Explanation | A loop in the OCE chain has been detected |
|--------------------|---|

%OCE-3-LOOP : A loop in the OCE chain has been detected at: [chars][IPV6 address]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%OCE-3-EXCEED_OCE_COUNTER_LIMIT : Exceeded OCE push counter limit (funcs:[IPV6 address] counter:[IPV6 address])

| | |
|---------------------------|---|
| Explanation | At most OCE_MAX_COUNTERS oce counters can be added because of design restrictions. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

OCE_PUNT_PROCESS**%OCE_PUNT_PROCESS-3-NORESOURCE : [chars] [dec]**

| | |
|---------------------------|---|
| Explanation | Resource Failure: %s %d |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OCE_PUNT_PROCESS-3-LABEL_CACHE_INVALID : [chars]

| | |
|---------------------------|---|
| Explanation | MPLS label cache was invalid, failed to handle exception |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

OIR**%OIR-6-REMCARD : Card removed from slot [dec], interfaces disabled**

| | |
|---------------------------|--|
| Explanation | The OIR facility detected the removal of a processor from the slot number specified in the error message. The interfaces on that processor will be administratively shut down and marked as removed. The routing table will be flushed of any routes through the removed interfaces. |
| Recommended Action | No action is required. |

%OIR-6-INSCARD : Card inserted in slot [dec], interfaces administratively shut down

| | |
|---------------------------|---|
| Explanation | The OIR facility detected a newly inserted processor. The interfaces associated with that processor are operational, but will be shut down until they are configured by the user. If any interfaces of that type were previously configured, they will be restored to their previous state. |
| Recommended Action | No action is required. |

%OIR-3-LONGSTALL : Long bus stall ([int] ms), check for improperly seated cards

| | |
|---------------------------|--|
| Explanation | An online insertion or removal of an interface processor card has stalled the backplane bus for longer duration than expected. |
| Recommended Action | Make sure all interface processor cards are inserted or removed. LOG_STD_ACTION_ERR |

%OIR-4-NOEOIR : [chars] [chars] version [int].[int] not capable of EOIR

| | |
|---------------------------|--|
| Explanation | This message indicates that this card is capable of Online Insertion and Removal (OIR) hot-swapping but is not capable of Extended Online Insertion and Removal (EOIR). Though no damage would occur to the hardware, insertion or removal of the card will cause a CBUS complex restart, which would be disruptive to traffic on other cards in the system. |
| Recommended Action | Try to restrict insertion or removal of this card to times when a CBUS complex restart will be least disruptive. Or upgrade the card to the latest revision which supports EOIR. |

%OIR-3-SEATED : Insert/removal failed for slot [dec], check card seating

| | |
|---------------------------|--|
| Explanation | The OIR facility detected an incorrectly seated card, causing the insertion or removal of this card to fail. |
| Recommended Action | Reseat the card in the indicated slot. |

%OIR-3-CRASH : The module in slot [dec] has crashed

| | |
|---------------------------|--|
| Explanation | The module in the slot indicated has crashed and will be rebooted by the supervisor. |
| Recommended Action | Collect the crashinfo file from the crashed module and contact support. |

OLM

%OLM-3-ILLEVT : State [chars]; Event [chars]

| | |
|---------------------------|--|
| Explanation | An LMP state machine has encountered an event that is not legal or allowed in the current state. |
| Recommended Action | Write down the state and the event and call your Cisco technical support representative for assistance |

%OLM-5-LSUMBADTEL : Invalid TE Link ID [int] in Link Summary message

| | |
|---------------------------|---|
| Explanation | A Link Summary or Link Summary Ack or Link Summary Nack message has been received with bad TE Link ID. The sending node probably doesn't have LMP configured correctly. |
| Recommended Action | Locate the neighbor from which the LMP message with invalid TE Link ID was received and enter show ip olm command and make sure that the port ID mappings between the two nodes are correct |

%OLM-5-LMPNOIPCC : Internal error: Couldn't find IPCC to send LMP msg; msg type : [int]

| | |
|---------------------------|---|
| Explanation | This is generally caused by race conditions wherein an LMP message is received from a neighbor before the first control channel goes UP [locally]. This conditions usually happens when a node reboots. |
| Recommended Action | If the problem persists even after the node has completed initialization, enter sho ip olm command to find the LMP configuration and use the debug ip lmp packets and debug ip lmp generic command to gather additional context type information and call Cisco technical assistance. |

%OLM-3-LMPNONBR : Internal error: Couldn't find neighbor while [chars]

| | |
|---------------------------|---|
| Explanation | An LMP processing that requires to access information about the neighbor has found that no such neighbor exists. This could be due to internal error. |
| Recommended Action | Turn on generic and packet level debugging using the command, debug ip lmp and gather LMP configuration using the command, show ip olm and gather the displayed information and contact Cisco technical assistance. |

%OLM-5-LMPUNKSRC : LMP rcvd msg from unknown src ip 0x[IP_address], link %

| | |
|---------------------------|--|
| Explanation | An LMP message has been received from a neighbor that we don't know about. This could be due to the fact that the neighbor in question has not yet been configured on this node. |
| Recommended Action | Locate the problem neighbor using the IP address and enter a show ip olm command; gather the displayed info and contact Cisco technical assistance. |

%OLM-4-LMPINVTLV : Invalid TLV Length [int] in LMP msg; remaining size [int]

| | |
|---------------------------|---|
| Explanation | An LMP message has been received with invalid TLV length. This suggests that we have a broken LMP implementation on the sending neighbor. |
| Recommended Action | Locate the sending neighbor and turn on packet level debugging using the debug ip lmp packets command. On seeing an ill-formed LMP packet, gather displayed information and contact the Cisco technical assistance. |

%OLM-3-LMPNDFAIL : Failed to send LMP msg to [chars]

| | |
|---------------------------|---|
| Explanation | Attempt to send LMP control message has failed; this could be due to an internal error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OLM-5-LSUMMISMATCH : Link Summary parameter([chars]) mismatch

| | |
|---------------------------|---|
| Explanation | Port ID and other link summary parameters do not match with those on the neighbor in question. The neighbor and/or the local node is not properly configured. |
| Recommended Action | Enter the show ip olm command on the local as well as the neighbor node and make sure that the port IDs match. |

%OLM-4-LMPBADTLV : Bad TLV; type [int]

| | |
|---------------------------|---|
| Explanation | An LMP message has been received with invalid TLV type. This suggests that we have a broken LMP implementation on the sending neighbor |
| Recommended Action | Locate the sending neighbor and turn on packet level debugging using the debug ip lmp packets command. On seeing an ill-formed LMP packet, gather displayed information and contact the Cisco technical assistance. |

%OLM-4-LMPBADMSG : Bad LMP Msg; type [int]

| | |
|---------------------------|---|
| Explanation | An LMP message has been received with invalid message type. This suggests that we have a broken LMP implementation on the sending neighbor |
| Recommended Action | Locate the sending neighbor and turn on packet level debugging using the debug ip lmp packets command. On seeing an ill-formed LMP packet, gather displayed information and contact the Cisco technical assistance. |

%OLM-5-LMPNONBR1 : No such neighbor to assign

| | |
|---------------------------|--|
| Explanation | User attempted to assign interface to invalid neighbor |
| Recommended Action | Use show olm to find the correct neighbor name |

%OLM-2-LMPCONSIST : Internal consistency error; [chars]

| | |
|---------------------------|---|
| Explanation | An internal consistency error has been encountered during the said processing. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OLM-5-LMPMSGSEQ : LMP [chars] msg id [int] not 1+[int]

| | |
|---------------------------|---|
| Explanation | An LMP message has been received with message id that is not sequential within the Control channel or TE Link. This situation is not caused by the known cases that cause message id sequence to be broken, including local node reboot, neighbor node reboot and neighbor retransmission |
| Recommended Action | Enter the show ip olm stat command when this problem occurs and gather the information displayed and call the Cisco technical assistance. |

%OLM-3-LMPSDMISMATCH : Service Discovery: Attribute [chars] incompatible with neighbor [chars]

| | |
|---------------------------|---|
| Explanation | Specified service attribute does not match with neighbor. The neighbor and/or the local node may not be properly configured. |
| Recommended Action | Use the <code>show mpls uni lmp neighbor</code> command on the local as well as the neighbor node (where applicable), to determine the service attributes and modify the configuration, where feasible, to ensure that the attributes match |

%OLM-3-LMPSPORTFAILED : Service Discovery: Attributes for port [chars] incompatible with nbr [chars]

| | |
|---------------------------|--|
| Explanation | Port-level service attribute does not match with those of the neighbor. The neighbor and/or the local node may not be properly configured. |
| Recommended Action | Use the show mpls uni lmp neighbor command on the local as well as the neighbor node (where applicable), to determine the service attributes and modify the configuration, where feasible, to ensure that the port-level service attributes match |

ONEP_BASE**%ONEP_BASE-3-VERSION_ERR : [[chars]]: ONE-P version incompatible between client and network element. [chars]**

| | |
|---------------------------|---|
| Explanation | The ONE-P client service set version is incompatible with the one installed on the network element |
| Recommended Action | LOG_STD_SH_CMD_ACTION(Make sure the version running on the client side is compatible with the one installed on the network element) |

%ONEP_BASE-3-DISABLED_ERR : [[chars]]: [chars] is disabled.

| | |
|---------------------------|---|
| Explanation | The requested service set is in disabled state. All the service requests for that service set will be rejected. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(Make sure the service set is enabled. onep service set <name>) |

%ONEP_BASE-6-SS_ENABLED : ONEP: [chars]

| | |
|---------------------------|--|
| Explanation | The service set has been set to an enabled state. The features of the service set will be available for use. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(If the enablement was intentional, no action is required.) |

%ONEP_BASE-6-SS_DISABLED : ONEP: [chars]

| | |
|---------------------------|---|
| Explanation | The service set has been set to a disabled state. All service requests for that service set will be rejected. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(If the disablement was intentional, no action is required. If not, then enable the service set: onep service set <name>) |

%ONEP_BASE-3-DUPLICATE_ERR : [[chars]]: Requested entity [chars] already exists.

| | |
|--------------------|--|
| Explanation | The connection request to the network element already exists |
|--------------------|--|

%ONEP_BASE-3-DUPLICATE_ERR : [[chars]]: Requested entity [chars] already exists.

| | |
|---------------------------|--|
| Recommended Action | LOG_STD_SH_CMD_ACTION(Make sure the uniqueness of the application name. One session per application is allowed on a network element.) |
|---------------------------|--|

%ONEP_BASE-3-AUTHEN_ERR : [[chars]]: Authentication/authorization failed. [chars]

| | |
|---------------------------|---|
| Explanation | The session authentication has failed |
| Recommended Action | LOG_STD_SH_CMD_ACTION(Check user's credentials are matched against the AAA/local users configured on the Netwk Element.) |

%ONEP_BASE-3-BUSY_ERR : [[chars]]: The requested resource is currently busy. [chars].

| | |
|---------------------------|---|
| Explanation | The usage of the resource has exceeded the configured threshold value |
| Recommended Action | LOG_STD_SH_CMD_ACTION(Check the current resource usage and configured resource threshold. cpu threshold rising <value> falling <value> interval <seconds> Retry the operation if resource usage is below the threshold.) |

%ONEP_BASE-3-SESSION_ERR : [[chars]]: ONEP session maximum is exceeded. [chars].

| | |
|---------------------------|--|
| Explanation | The application session has exceeded the configured maximum |
| Recommended Action | LOG_STD_SH_CMD_ACTION(Check the configured session maximum value, and adjust accordingly. >session max <value> Retry the session establishment or adjust the configured session maximum.) |

%ONEP_BASE-3-STARTUP_ERR : [[chars]]: Start up ONEP failed. [chars].

| | |
|---------------------------|--|
| Explanation | Fail to start ONEP due to error |
| Recommended Action | LOG_STD_SH_CMD_ACTION(Check transport is configured correctly or reboot the device) |

%ONEP_BASE-4-CLEAR_TEXT_TRANSPORT_WARN : [[chars]]: Clear text transport being enabled. This is not recommended for production environment. [chars]

| | |
|---------------------------|---|
| Explanation | Clear text transport being enabled. This is not recommended for production environment. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(Please configure secure transport, such as TLS.) |

%ONEP_BASE-6-HISTORY : [chars]

| | |
|---------------------------|--|
| Explanation | This syslog message is used to display onePK history messages when the 'history syslog' onep command is enabled. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(No action is required. Use 'no history syslog' at the onep configuration prompt to turn off this logging if desired.) |

%ONEP_BASE-6-CONNECT : [[chars]]: ONEP session [chars] has connected.

| | |
|---------------------------|---|
| Explanation | A new ONEP session has been established with network element. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(No action is required if this is an authorized session.) |

%ONEP_BASE-6-RECONNECT : [[chars]]: ONEP session [chars] has reconnected.

| | |
|---------------------------|---|
| Explanation | ONEP session has been reconnected after being disconnected temporarily. This disconnect can happen due to intermittent network connectivity issues. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(No action is required if this is an authorized session.) |

%ONEP_BASE-6-DISCONNECT : [[chars]]: ONEP session [chars]

| | |
|---------------------------|---|
| Explanation | ONEP session has been disconnected. A disconnect can happen when application has finished execution or there was a problem during execution including issue with network transport. If reconnect timer is configured, Network Element will wait for application to reconnect within configured time before cleaning up session resources. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(No action is required if it is a expected disconnected. If reconnect timer is configured, session will wait for application to attempt reconnect request Use show tech-support onep to collect logs from Network Element) |

ONEP_LISP

%ONEP_LISP-3-DISABLED_ERR : [[chars]]: [chars] is disabled.

| | |
|---------------------------|---|
| Explanation | The requested service set is in disabled state. All the service requests for that service set will be rejected. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(Make sure the service set is enabled. onep service set lisp) |

OOM through PBUF

- OOM
- OPENDNS_PROXY
- OSC
- OTNMGR
- PAD
- PAM_UPDB
- PATHMGR
- PA_PKT
- PA_PKT_PROXY
- PBUF

OOM

%OOM-3-NO_MEMORY_AVAIL : The system is very low on available memory. Operations will begin to fail.

| | |
|---------------------------|---|
| Explanation | The system has exhausted all available memory. It is not possible to continue stable operation. |
| Recommended Action | The system has exhausted all available memory and stable operation is no longer possible. |

%OOM-0-NO_MEMORY_RESET : The system is completely out of available memory. The board will be reset.

| | |
|---------------------------|--|
| Explanation | The system has exhausted all available memory and the hardware component will be reset. |
| Recommended Action | Review other messages related to low memory states and see if those messages contain any information about an issue that can be addressed. If this problem persists, copy all the output from the console as well as the output of show tech-support, and provide the gathered information to your Cisco technical support representative. |

OPENDNS_PROXY

%OPENDNS_PROXY-2-OPENDNS_MSG_PROXYINIT_FAILURE : UMBRELLA - Failed to register IPC message handler, result code [int]

| | |
|--------------------|---|
| Explanation | QFP Umbrella feature failed to register an IPC message handler for communication with control plane. This will cause the feature not to function. |
|--------------------|---|

%OPENDNS_PROXY-2-OPENDNS_MSG_PROXYINIT_FAILURE : UMBRELLA - Failed to register IPC message handler, result code [int]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%OPENDNS_PROXY-3-OPENDNS_MSG_PROXY_UNKNOWN_IPCMMSG : UMBRELLA - Received an unknown type (code [int]), IPC message

Explanation QFP Umbrella feature received an unknown message from another layer of Umbrella feature's software stack.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%OPENDNS_PROXY-3-OPENDNS_MSG_PROXY_INVALID_MSGLEN : UMBRELLA - Received an invalid length IPC message

Explanation QFP Umbrella feature received an incorrect length of IPC message from another layer of Umbrella feature's software stack, m_enum %d, m_subtype %d, m_len %d, m_flags 0x%x, m_source %d.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%OPENDNS_PROXY-3-OPENDNS_MSG_PROXY_ALLOC_FAILURE : UMBRELLA - Failed to get [int] bytes space for IPC reply message

Explanation QFP Umbrella feature detected buffer allocation failure while sending reply to a message from another layer of Umbrella feature's software stack.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%OPENDNS_PROXY-3-OPENDNS_MSG_PROXY_OPENREPLY_FAIL : UMBRELLA - Failed to open reply message part of IPC packet

| | |
|---------------------------|---|
| Explanation | QFP Umbrella feature failed to open message part of IPC packet while sending a reply to another layer of Umbrella feature's software stack. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OPENDNS_PROXY-3-OPENDNS_MSG_PROXY_IPCSEND_FAIL : UMBRELLA - Failed to send IPC message, result code [dec]

| | |
|---------------------------|---|
| Explanation | QFP Umbrella feature failed to send IPC message to another layer of Umbrella feature's software stack. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%OPENDNS_PROXY-3-OPENDNS_MSG_PROXY_DEBUG_REG_FAILED :

| | |
|---------------------------|---|
| Explanation | Umbrella Conditional Debugging Registration failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

OSC

%OSC-3-DCDI : DATACORRUPTION-DATAINCONSISTENCY: [chars]

| | |
|---------------------------|---|
| Explanation | Software has detected that some internal data structures may be corrupt. This may lead to unpredictable device operation |
| Recommended Action | Copy the error message exactly as it appears on the console or in the in the system log, and report it your technical support representative. |

OTNMGR

%OTNMGR-3-OTN_STATS_CREATE_IF_FAILED_TO_ALLOCATE : stats for interface index [dec] could not be created with status [dec]

Explanation

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%OTNMGR-3-OTN_STATS_CREATE_IF_FAIL : stats for interface index [dec] could not be created with status [dec]

Explanation

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%OTNMGR-3-OTN_STATS_DELETE_IF_FAIL : stats for interface index [dec] could not be deleted with status [dec]

Explanation

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

PAD

%PAD-3-GETLINE : Tty%t, bad return code [dec] from x3_getline()

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears and report it to your technical support representative.

%PAD-2-PUTSETUP : Tty%t, buffer already setup

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears and report it to your technical support representative.

%PAD-2-INTR : [chars] called at interrupt level [hex]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears and report it to your technical support representative.

PAM_UPDB**%PAM_UPDB-3-NOPROMPT_READ : Error reading [chars] prompt: [chars]**

| | |
|---------------------------|---|
| Explanation | The authentication module was unable to read the specified prompt file. The default prompt will be used. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PAM_UPDB-3-NOENVIRONMENT_SET : Error setting user in application environment: [chars]

| | |
|---------------------------|---|
| Explanation | The user has successfully authenticated, but the user information could not be saved to the application environment. The user session will not proceed. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

PATHMGR**%PATHMGR-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]**

| | |
|---------------------------|---|
| Explanation | For a request from upper PATHMGR software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%PATHMGR-3-IPC_NORES : No space for the IPC reply, size [int]

| | |
|---------------------------|---|
| Explanation | For a request from upper PATHMGR software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck monitor that cannot be established etc. In rare cases this could also affect other operations such as feature activation. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%PATHMGR-2-IPC_INIT : IPC message handler registration failure, rc [int]

Explanation Registering an IPC message handler for the PATHMGR feature failed. This will cause the feature to not function.

Recommended Action This is normally a software issue. The consequences are that the PATHMGR feature will not function. LOG_STD_ACTION

PA_PKT

%PA_PKT-5-PA_DLIST_ALLOC_FAILED :

Explanation Could not allocate segmented packet list header.

Recommended Action LOG_STD_ACTION

%PA_PKT-3-PA_VFR_CALLBACK_ARGS_ERROR : [chars] [hex]

Explanation PA vFR callback input args error.

Recommended Action LOG_STD_ACTION

%PA_PKT-3-PA_DLIST_MEM_REQ_FAILED :

Explanation Failure occurred when attempting to request segmented packet memory.

Recommended Action LOG_STD_ACTION

%PA_PKT-3-PA_MCST_REPL_DESC_OVERFL : [chars], MSGDEF_LIMIT_MEDIUM

Explanation PA M-Cast Gather descriptor list exceeded limit of 255 entries.

Recommended Action LOG_STD_ACTION

%PA_PKT-3-PA_MCST_GPM_ALLOC_FAILURE : [chars], MSGDEF_LIMIT_MEDIUM

Explanation PA M-Cast replication failed to allocate required GPM.

Recommended Action LOG_STD_ACTION

%PA_PKT-3-PA_MCST_DUP_FAILURE : [chars], MSGDEF_LIMIT_MEDIUM

Explanation PA M-Cast replication failed to allocate duplicate the requisite PA structures.

Recommended Action LOG_STD_ACTION

%PA_PKT-3-PA_PUT_FAILURE : [chars], MSGDEF_LIMIT_MEDIUM

Explanation The PA API layer failed to complete a requested WRITE into pkt memory.

Recommended Action LOG_STD_ACTION

%PA_PKT-3-PA_ADJUST_FIRST_FRAG_FAILURE : [chars], MSGDEF_LIMIT_MEDIUM

Explanation PA unaware feature doing pkt_head_clip more than first pbuf on PA pkt.

Recommended Action LOG_STD_ACTION

PA_PKT_PROXY

%PA_PKT_PROXY-3-PROXY_IPC_EXTENDED_PKT_MEM_INIT_FAILED : [dec]

Explanation Initialization of extended packet memory failed.

Recommended Action LOG_STD_ACTION

%PA_PKT_PROXY-3-PROXY_IPC_SEG_DLIST_MEM_INIT_FAILED : [dec]

Explanation Initialization of segmented packet dlist memory failed.

Recommended Action LOG_STD_ACTION

%PA_PKT_PROXY-3-PROXY_IPC_PBUF_MEM_INIT_FAILED : [dec]

Explanation Initialization of packet buffer header memory failed.

Recommended Action LOG_STD_ACTION

%PA_PKT_PROXY-3-PROXY_IPC_SEG_DLIST_EXTEND_FAILED : [dec]

Explanation Extending of segmented packet dlist memory failed.

Recommended Action LOG_STD_ACTION

%PA_PKT_PROXY-3-PROXY_IPC_PBUF_EXTEND_FAILED : [dec]

Explanation Extending of packet buffer header memory failed.

Recommended Action LOG_STD_ACTION

%PA_PKT_PROXY-3-PROXY_IPC_PKT_DRAM_EXTEND_FAILED : [dec]

Explanation Extending of extended packet memory failed.

Recommended Action LOG_STD_ACTION

%PA_PKT_PROXY-4-PROXY_IPC_UNKNOWN_SUBTYPE : [dec]

Explanation Unknown IPC message detected.

Recommended Action LOG_STD_ACTION

%PA_PKT_PROXY-2-PROXY_IPC_INIT_FAILED : [dec]

Explanation Could not initialize IPC handler.

Recommended Action LOG_STD_ACTION

%PA_PKT_PROXY-3-PROXY_IPC_INVALID_MSG : [dec]:[dec] len [dec] flags [hex] source [dec]

Explanation Invalid length for IPC message.

Recommended Action LOG_STD_ACTION

PBUF**%PBUF-3-PBUF_MEM_REQ_FAILED :**

| | |
|---------------------------|---|
| Explanation | Failure occurred when attempting to request extended packet memory. |
| Recommended Action | LOG_STD_ACTION |

%PBUF-3-PBUF_MEM_INIT_FAILED : [chars]

| | |
|---------------------------|--|
| Explanation | Failure occurred when attempting to create memory resource |
| Recommended Action | LOG_STD_ACTION |

%PBUF-3-PBUF_PKT_MEM_CORRUPT : [hex] [hex]

| | |
|---------------------------|---|
| Explanation | Memory corruption detected while freeing extended packet memory |
| Recommended Action | LOG_STD_ACTION |

%PBUF-3-PBUF_SH_DRAM_CVT_FAIL : [chars]

| | |
|---------------------------|--|
| Explanation | An attempt to convert a shared DRAM buffer to non-shared failed. |
| Recommended Action | LOG_STD_ACTION |

PCE through PKTLOG

- [PCE](#)
- [PCMCIAFS](#)
- [PCM_TRACER](#)
- [PERF_MEASURE](#)
- [PERF_MON](#)
- [PERF_MON_REACT](#)
- [PERF_TRAFFIC_INFRA](#)
- [PERF_TRAFFIC_REACT](#)
- [PKI](#)

- PKTLOG

PCE

%PCE-5-PCE_STATE : Connection to PCE server:[chars] [chars]

Explanation The connection to PCE server changed state.

Recommended Action If the state change was unexpected check connectivity and state of the PCE server

%PCE-5-PCE_ERR_RX : PCEP peer [chars] sent PCErr message - type: [int], value: [int]

Explanation PCErr message was received from peer

Recommended Action Verify PCEP protocol operation

PCMCIAFS

%PCMCIAFS-5-DIBERR : [dec] [chars]

Explanation The system cannot boot a image from the PCMCIA Flash disk because the Device Information Block is different. The Flash disk can be read by the router, but will require formatting by the router before an image can be booted from it.

Recommended Action Follow any instructions provided in the error message. Before storing a image in the Flash disk and trying to boot from this device, enter the format command to format the flash disk from the router. Then copy the desired image to the Flash disk and then boot from this device.

%PCMCIAFS-3-RESETERR : PCMCIA disk [dec] [chars]

Explanation PCMCIA disk could not be reset while the system is initiated reload. This will cause a transient disk error, disk timeout error, when the ROMMON initialization code tries to reads the DIB. This is a transient error and the system will be able to access the disk and continue normal operation.

Recommended Action No action is required.

%PCMCIAFS-5-DFS_CLOSE_ERR : Error during close of the file [chars]. [chars]

Explanation An error occurred during a file close operation.

Recommended Action Enter the **fsck filesystem prefix:** command to check and attempt to repair the disk. If this does not fix the problem, format the disk.

%PCMCIAFS-4-DFS_FSCK_ERR : Error while running fsck on the file [chars].

Explanation Fsck is running in a loop while walking through the cluster chain of a file and has aborted.

Recommended Action Report this occurrence to Engineering. Use Topic to search for a similar DDTs. If you find none, write a DDTs for this problem.

PCM_TRACER

%PCM_TRACER-3-PCMT_NO_DEST : No PCM Tracer capture destination configured.

Explanation Capture destination is required for starting the PCM Tracer.

Recommended Action Configure capture destination before starting the PCM Tracer.

%PCM_TRACER-3-PCMT_NO_PROFILE : No PCM Tracer profile configured.

Explanation Capture profile is required for starting the PCM Tracer.

Recommended Action Configure capture profile before starting the PCM Tracer.

%PCM_TRACER-3-PCMT_NO_CAPTURE_TDM : No capture-tdm configured under profile [int].

Explanation Capture-tdm is required for starting the PCM Tracer.

Recommended Action Configure capture-tdm before starting the PCM Tracer.

%PCM_TRACER-3-PCMT_NO_CAPTURE_DURATION : No capture duration configured.

Explanation Capture duration is required for starting the PCM Tracer.

Recommended Action Configure capture duration before starting the PCM Tracer.

%PCM_TRACER-3-PCMT_NO_ACTIVE_CALL : No active calls to trace.

Explanation PCM Tracer can be applied only on active calls.

Recommended Action Make sure there is an active call before starting the PCM Tracer.

%PCM_TRACER-3-PCMT_RUNNING : A PCM Tracer session is currently running.

Explanation Can't execute this command since there is a PCM Tracer running now.**Recommended Action** Make sure there is no PCM Tracer session running before execute this command.

%PCM_TRACER-3-PCMT_NOT_SUPPORTED : PCM Tracer is not supported on slot [int].

Explanation Can't execute this command on the slot number specified.**Recommended Action** Refer to the user guide for which slot PCM Tracer is supported on.

%PCM_TRACER-3-PCMT_CHANNEL_TYPE_NOT_SUPPORTED : The channel/group type of ds0 [int] is not supported by PCM Tracer.

Explanation Can't execute this command on the ds0 number specified.**Recommended Action** Refer to the user guide for the channel/group type PCM Tracer supports.

%PCM_TRACER-6-PCMT_START : Starting PCM Trace on channel under profile [dec]

Explanation**Recommended Action**

%PCM_TRACER-6-PCMT_STOP : Stopping PCM Trace on channel under profile [dec]

Explanation**Recommended Action**

%PCM_TRACER-6-PCMT_STOP_FAIL : Fail to Stop PCM Trace on channel under profile [dec]

Explanation**Recommended Action**

%PCM_TRACER-6-PCMT_STOP_RUNNING : Stop PCM capture

Explanation

%PCM_TRACER-6-PCMT_STOP_RUNNING : Stop PCM capture**Recommended
Action**

PERF_MEASURE

%PERF_MEASURE-2-CRIT_ERR : The Perf Measure protocol has encountered the critical error: [chars].

| | |
|-------------------------------|---|
| Explanation | The protocol has run into a critical error. The reason should be given in the brackets. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_MEASURE-4-ISSU_INCOMPATIBLE : perf-measure-issu-compat: returned FALSE

| | |
|-------------------------------|---|
| Explanation | The compatibility checking has failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_MEASURE-3-TRANSFORM_FAIL : PERF MEASURE ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

| | |
|-------------------------------|---|
| Explanation | The PERF MEASURE ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the PERF MEASURE state between the active device and the standby device is not identical. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>) |

%PERF_MEASURE-2-GET_BUFFER : PERF MEASURE ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The PERF MEASURE ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%PERF_MEASURE-3-SESSION_UNREGISTRY : PERF MEASURE ISSU client failed to unregister session information. Error: [dec] ([chars])

Explanation The PERF MEASURE ISSU client failed to unregister session information.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%PERF_MEASURE-2-INIT : PERF MEASURE ISSU client initialization failed to [chars]. Error: [dec] ([chars])

Explanation The PERF MEASURE ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_MEASURE-2-SEND_NEGO_FAILED : PERF MEASURE ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The PERF MEASURE ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%PERF_MEASURE-2-SESSION_REGISTRY : PERF MEASURE ISSU client failed to register session information. Error: [dec] ([chars])

Explanation The PERF MEASURE ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

%PERF_MEASURE-2-SESSION_REGISTRY : PERF MEASURE ISSU client failed to register session information. Error: [dec] ([chars])

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%PERF_MEASURE-3-INVALID_SESSION : PERF MEASURE ISSU client does not have a valid registered session.

Explanation The PERF MEASURE ISSU client does not have a valid registered session.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%PERF_MEASURE-3-MSG_SIZE : PERF MEASURE ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

Explanation The PERF MEASURE ISSU client failed to calculate the MTU for the specified message. The PERF MEASURE ISSU client is not able to send the message to the standby device.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>)

%PERF_MEASURE-2-SESSION_NEGO : PERF MEASURE ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

Explanation An ISSU-compliant client transitions through a series of internal states. The PERF MEASURE ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

PERF_MON

%PERF_MON-3-LIST : Failed to [chars] list [chars]

Explanation A list operation failed. This could be caused by memory corruption

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_MON-3-MEM : Memory [chars] failed - [chars]

| | |
|---------------------------|---|
| Explanation | Memory creation failed during the initialization |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_MON-3-PARSER : [chars]

| | |
|---------------------------|---|
| Explanation | Parser failure. This could due to invalid command or corrupted csb |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_MON-3-CHUNKCREATE : Failed to chunk create memory for [chars]

| | |
|---------------------------|---|
| Explanation | Unable to chunk create memory chunk |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_MON-3-CHUNKDESTROY : Failed to chunk destroy memory for [chars]

| | |
|---------------------------|---|
| Explanation | Unable to chunk destroy memory chunk |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_MON-3-CHUNKMALLOC : Failed to malloc chunk memory for [chars]

| | |
|--------------------|--|
| Explanation | Unable to malloc memory chunk, malloc failed |
|--------------------|--|

%PERF_MON-3-CHUNKMALLOC : Failed to malloc chunk memory for [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%PERF_MON-3-DEFRECCREATE : Creation of default-record [chars] failed - reason [chars]

| | |
|---------------------------|---|
| Explanation | Failed to create system defined default flow-records |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_MON-3-RECSETPROP : Setting property for [chars] default-record failed - reason [chars]

| | |
|---------------------------|---|
| Explanation | Failed to set properties for system defined default flow-records |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_MON-3-RECSETKEY : Adding key fields for default-record [chars] failed - reason [chars]

| | |
|---------------------------|---|
| Explanation | Failed to add key fields for defined default flow-records |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_MON-3-RECSETNONKEY : Adding non-key fields for [chars] default-record failed - reason [chars]

| | |
|---------------------------|---|
| Explanation | Failed to add non-key fields for defined default flow-records |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

PERF_MON_REACT

%PERF_MON_REACT-0-EMERGSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is raised. The alarm severity is EMERGENT. system is unusable.

Recommended Action No action is required.

%PERF_MON_REACT-0-EMERGCLEAR : TCA CLEAR. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is cleared. The alarm severity is EMERGENT.

Recommended Action No action is required.

%PERF_MON_REACT-1-ALERTSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is raised. The alarm severity is ALERT.

Recommended Action No action is required.

%PERF_MON_REACT-1-ALERTCLEAR : TCA CLEAR. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is cleared. The alarm severity is ALERT.

Recommended Action No action is required.

%PERF_MON_REACT-2-CRITSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is raised. The alarm severity is CRITICAL.

Recommended Action No action is required.

%PERF_MON_REACT-2-CRITCLEAR : TCA CLEAR. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is cleared. The alarm severity is CRITICAL.

Recommended Action No action is required.

%PERF_MON_REACT-3-ERRSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

| | |
|---------------------------|---|
| Explanation | A threshold crossing alarm is raised. The alarm severity is ERROR |
| Recommended Action | No action is required. |

%PERF_MON_REACT-3-ERRCLEAR : TCA CLEAR. Detailed info: [chars][chars][chars][chars][chars]

| | |
|---------------------------|--|
| Explanation | A threshold crossing alarm is cleared. The alarm severity is ERROR |
| Recommended Action | No action is required. |

%PERF_MON_REACT-2-INFOSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

| | |
|---------------------------|---|
| Explanation | A threshold crossing alarm is raised. The alarm severity is INFO. |
| Recommended Action | No action is required. |

%PERF_MON_REACT-2-INFOCLEAR : TCA CLEAR. Detailed info: [chars][chars][chars][chars][chars]

| | |
|---------------------------|--|
| Explanation | A threshold crossing alarm is cleared. The alarm severity is INFO. |
| Recommended Action | No action is required. |

PERF_TRAFFIC_INFRA

%PERF_TRAFFIC_INFRA-3-MMONOBJINV : A mmon_obj does not exist for policy [chars] class [chars]

| | |
|---------------------------|---|
| Explanation | Unable to find an existing mmon obj for event CLASS_REMOVE and CLASS_MODIFY |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-MMONOBJDUP : A mmon_obj already exists for policy [chars] class [chars]

| | |
|--------------------|--|
| Explanation | A mmon obj already exists in the MMON DB under the same policy and class for CLASS_ADD |
|--------------------|--|

%PERF_TRAFFIC_INFRA-3-MMONOBJDUP : A mmon_obj already exists for policy [chars] class [chars]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%PERF_TRAFFIC_INFRA-3-NOPARENTMMONOBJ : Internal error, target has no parent mmon object

| | |
|---------------------------|--|
| Explanation | None valid pointer to mmon obj found in tgt obj for CLASS_REMOVE |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-INV_REACT : react is not valid - [chars]

| | |
|---------------------------|--|
| Explanation | This is an internal error, the saved react info is corrupted |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-FIELDENA : Enable fnf field [chars] failed - [chars]

| | |
|---------------------------|--|
| Explanation | Failed to enable a field for use with a config |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-FNFPARSERENA : Enable flow monitor parser failed - [chars]

| | |
|---------------------------|--|
| Explanation | Failed to enable performance monitor typed monitor |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-CHUNKCREATE : Failed to chunk create memory for [chars]

| | |
|---------------------------|---|
| Explanation | Unable to chunk create memory chunk |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-CHUNKDESTROY : Failed to chunk destroy memory for [chars]

| | |
|---------------------------|---|
| Explanation | Unable to chunk destroy memory chunk |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-CHUNKMALLOC : Failed to malloc chunk memory for [chars]

| | |
|---------------------------|---|
| Explanation | Unable to malloc memory chunk, malloc failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-INV_TARGET : A target object does not exist - [chars]

| | |
|---------------------------|---|
| Explanation | An internal error occurred. Try to access a null target obj |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-NULLHIST : A history bucket does not exist

| | |
|--------------------|--|
| Explanation | An internal error occurred. Try to access a null history |
|--------------------|--|

%PERF_TRAFFIC_INFRA-3-NULLHIST : A history bucket does not exist

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%PERF_TRAFFIC_INFRA-3-NULLFLOW : A flow does not exist

| | |
|---------------------------|---|
| Explanation | An internal error occurred. Try to access a null flow |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-INVCMDB : Invalid cmd type [dec] to [chars]

| | |
|---------------------------|---|
| Explanation | This is an internal error, the command type is invalid |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-INVMODE : Invalid performance-monitor configuration mode

| | |
|---------------------------|---|
| Explanation | This is an internal error, the configuration sub mode is invalid |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-INVCRIT : Invalid react criteria [dec] to [chars]

| | |
|---------------------------|---|
| Explanation | This is an internal error, the saved react criteria is corrupted |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-RESETMODE : Failed to reset csb vars

| | |
|---------------------------|---|
| Explanation | Reset of the csb vars failed due to lack of memory |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-DEFRECCREATE : Creation of default-record [chars] failed - reason [chars]

| | |
|---------------------------|---|
| Explanation | Failed to create system defined default flow-records |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-RECSETPROP : Setting property for [chars] default-record failed - reason [chars]

| | |
|---------------------------|---|
| Explanation | Failed to set properties for system defined default flow-records |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-RECSETKEY : Adding key fields for default-record [chars] failed - reason [chars]

| | |
|---------------------------|---|
| Explanation | Failed to add key fields for defined default flow-records |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-RECSETNONKEY : Adding non-key fields for [chars] default-record failed - reason [chars]

| | |
|--------------------|---|
| Explanation | Failed to add non-key fields for defined default flow-records |
|--------------------|---|

%PERF_TRAFFIC_INFRA-3-RECSETNONKEY : Adding non-key fields for [chars] default-record failed - reason [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-MONITOR_CREATE : Failed to create Monitor at Metering layer. Error - [chars]

Explanation Failed to create monitor at Metering layer for this policy. The error code provides the reason for failure. No statistics will be collected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-MONITOR_DELETE : Failed to delete Monitor at Metering layer. Error - [chars]

Explanation Failed to delete monitor at Metering layer for this policy. The error code provides the reason for failure.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-MONITOR_SYNC : Out of sync - [chars]

Explanation This is an internal error, the reference count in flow monitor reached negative

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-INVFIELDTYPE : Enable fnf field [dec] failed - invalid field type

Explanation Failed to enable a field for use with a config

%PERF_TRAFFIC_INFRA-3-INVFIELDTYPE : Enable fnf field [dec] failed - invalid field type

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-INVMONITOR : The flow monitor pointer is invalid

Explanation An internal error occurred. The performance-monitor monitor pointer saved in the common monitor is NULL

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-INV_COMMON_MONITOR : The common monitor ptr is invalid

Explanation An internal error occurred. The common monitor ptr saved in the performance-monitor monitor is NULL

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-INV_MONITOR_TYPE : The monitor type [dec] is invalid

Explanation An internal error occurred. The monitor type is out of the range

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-INV_POLICY_MAP : The retrieved policy map is invalide - [chars]

Explanation An internal error occurred. The policy map saved in csb is invalid

%PERF_TRAFFIC_INFRA-3-INV_POLICY_MAP : The retrieved policy map is invalide - [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%PERF_TRAFFIC_INFRA-3-INV_ARG : The argument is not valid - [chars]

| | |
|---------------------------|---|
| Explanation | An internal error occurred. The argument for an internal API is not valid |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-CONV_FAILURE : Conversion failed - [chars]

| | |
|---------------------------|---|
| Explanation | Conversion from one format to another has failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-CHUNK_INIT : Chunk is not initialized - [chars]

| | |
|---------------------------|---|
| Explanation | Chunk memory is not created or failed to be created |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-PROC_MSG : Failed to process received record - [chars]

| | |
|---------------------------|---|
| Explanation | Failure during the process of handling the received fnf record |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-MEMLEAK : Memory leak detected - [chars]

| | |
|---------------------------|---|
| Explanation | A memory leak is detected during media-mon memory handling |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-FDEF_NOTIFY : Failed to register PD flow definition [chars]

| | |
|---------------------------|---|
| Explanation | The flow def received from ME or PD is NULL |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-EXP_ATTR : Failed to set flow attribute for exporter - [chars]

| | |
|---------------------------|---|
| Explanation | An error occurred when setting flow attribute use to transform match and collect metrics to export message |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-FDEF_TEMP : Invalid flow definition template - [chars]

| | |
|---------------------------|---|
| Explanation | The template was not initialized during system initialization |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PERF_TRAFFIC_INFRA-3-FLOW_EXCEED : The number of flows has exceeded 95%% of the configured maximum flow. [chars]

| | |
|--------------------|--|
| Explanation | This is warning message if the flow size exceeds the maximum value |
|--------------------|--|

%PERF_TRAFFIC_INFRA-3-FLOW_EXCEED : The number of flows has exceeded 95%% of the configured maximum flow. [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-FLOW_NONEXCEED : The number of flows is below 85%% of the configured maximum flow. [chars]

Explanation This is info message if the flow size falls below the maximum value

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-SIB_LINK : sib member [int] with [int], error [chars]

Explanation Failed to link two sibling members in the MMON PD

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PERF_TRAFFIC_INFRA-3-SIB_UNLINK : sib member [int] from [int], error [chars]

Explanation Failed to unlink two sibling members in the MMON PD

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

PERF_TRAFFIC_REACT

%PERF_TRAFFIC_REACT-0-EMERGSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is raised. The alarm severity is EMERGENT. system is unusable.

%PERF_TRAFFIC_REACT-0-EMERGSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

Recommended Action No action is required.

%PERF_TRAFFIC_REACT-0-EMERGCLEAR : TCA CLEAR. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is cleared. The alarm severity is EMERGENT.
Recommended Action No action is required.

%PERF_TRAFFIC_REACT-1-ALERTSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is raised. The alarm severity is ALERT.
Recommended Action No action is required.

%PERF_TRAFFIC_REACT-1-ALERTCLEAR : TCA CLEAR. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is cleared. The alarm severity is ALERT.
Recommended Action No action is required.

%PERF_TRAFFIC_REACT-2-CRITSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is raised. The alarm severity is CRITICAL.
Recommended Action No action is required.

%PERF_TRAFFIC_REACT-2-CRITCLEAR : TCA CLEAR. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is cleared. The alarm severity is CRITICAL.
Recommended Action No action is required.

%PERF_TRAFFIC_REACT-3-ERRSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is raised. The alarm severity is ERROR
Recommended Action No action is required.

%PERF_TRAFFIC_REACT-3-ERRCLEAR : TCA CLEAR. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is cleared. The alarm severity is ERROR**Recommended Action** No action is required.

%PERF_TRAFFIC_REACT-2-INFOSET : TCA RAISE. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is raised. The alarm severity is INFO.**Recommended Action** No action is required.

%PERF_TRAFFIC_REACT-2-INFOCLEAR : TCA CLEAR. Detailed info: [chars][chars][chars][chars][chars]

Explanation A threshold crossing alarm is cleared. The alarm severity is INFO.**Recommended Action** No action is required.

PKI

%PKI-3-KEY_CMP_MISMATCH : Key in the certificate and stored key does not match for Trustpoint-[chars].

Explanation Public key in the certificate is not the same as the stored key.**Recommended Action** Make sure that the certificate public key and stored public key are the same.

%PKI-3-QUERY_KEY : Querying key pair failed.

Explanation Querying public key/private key using subject name failed**Recommended Action** Resubmit enrollment request. Check the subject name.

%PKI-3-CERTRETFAIL : Certificate enrollment failed.

Explanation Certificate enrollment transaction failed due to internal error.**Recommended Action** Contact CE.

**%PKI-6-CERT_INSTALL : [chars] Trustpoint : [chars] Issuer-name : [chars] Subject-name : [chars]
Serial-number: [chars] End-date : [chars]**

Explanation A previous certificate enrollment request was received by the Certificate Authority. It has issued the certificate, and sent back a copy

Recommended Action Informational message only. No action required.

%PKI-6-CERTPENDING : Enter manual authentication ...

Explanation CA server want to manually authenticate the router.

Recommended Action Follow a manual authentication procedure.

%PKI-6-CERTREJECT : [chars]

Explanation A previous certificate enrollment request was received by the Certificate Authority. It has rejected the enrollment request.

Recommended Action Contact the Certificate Authority administrator.

%PKI-6-PKCS12_EXPORT_SUCCESS : PKCS #12 Export from trustpoint [chars] was successfully Exported.

Explanation A PKCS #12 has been generated and successfully exported.

Recommended Action No action required. Informational message

%PKI-6-PKCS12_IMPORT_SUCCESS : PKCS #12 import in to trustpoint [chars] successfully imported.

Explanation A PKCS #12 has been successfully imported.

Recommended Action No action required. Informational message

%PKI-3-POLLACERT : Polling CA certificate

Explanation Polling ca certificate.

Recommended Action Check if CA or ldap server is online.

%PKI-3-QUERYCACERT : Failed to query CA certificate.

| | |
|---------------------------|--|
| Explanation | Failed to query ca certificate from ca server. |
| Recommended Action | Use parser command cr ca auth and try again. |

%PKI-3-INVALIDCACERT : Failed to process CA certificate.

| | |
|---------------------------|---|
| Explanation | Failed to process the ca certificate received from ca server. |
| Recommended Action | Use parser command cr ca auth and try again. |

%PKI-3-POLLRACERT : Polling RA certificate

| | |
|---------------------------|---------------------------------------|
| Explanation | Polling ra certificate. |
| Recommended Action | Check if CA or ldap server is online. |

%PKI-3-POLLROUTERCERT : Polling Router certificate for [chars]

| | |
|---------------------------|---------------------------------------|
| Explanation | Polling router certificate. |
| Recommended Action | Check if CA or ldap server is online. |

%PKI-4-NOAUTOSAVE : Configuration was modified. Issue write memory to save new certificate

| | |
|---------------------------|---|
| Explanation | Auto-Enroll has obtained a new router key pair and certificate. However, the running configuration was previously modified. |
| Recommended Action | Issue the write memory command to save the new certificate(s) and key(s). |

%PKI-6-AUTOSAVE : Running configuration saved to NVRAM

| | |
|---------------------------|--|
| Explanation | Auto-Enroll has obtained a new router key pair and certificate, and has done an automatic write memory to save them. |
| Recommended Action | No action required. Informational message |

%PKI-4-NOSHADOWAUTOSAVE : Configuration was modified. Issue write memory to save new IOS CA certificate

Explanation IOS CA Rollover has generated a shadow CA key pair and certificate. However, the running configuration was previously modified.

Recommended Action Issue the write memory command to save the new certificate(s) and key(s).

%PKI-6-CERTRENEWMANUAL : Please renew the router certificate for trustpoint [chars]

Explanation Trustpoint certificate will expire soon, and should be renewed

Recommended Action Obtain a new certificate from the Certificate Authority

%PKI-6-CERT_RENEW_AUTO : Auto renewing router certificate of trustpoint [chars]

Explanation Trustpoint certificate will expire soon, and is being automatically renewed

Recommended Action No action required. Informational message

%PKI-6-SHADOWAUTOSAVE : Running configuration saved to NVRAM

Explanation IOS CA Rollover has generated a shadow CA key pair and certificate, and has done an automatic write memory to save them.

Recommended Action No action required. Informational message

%PKI-4-NOCONFIGAUTOSAVE : Configuration was modified. Issue write memory to save new IOS PKI configuration

Explanation IOS PKI APIs have generated new PKI configuration. However, the running configuration was previously modified.

Recommended Action Issue the write memory command to save the new PKI configuration.

%PKI-6-CONFIGAUTOSAVE : Running configuration saved to NVRAM

Explanation IOS PKI APIs have generated new PKI configuration, and has done an automatic write memory to save them.

Recommended Action No action required. Informational message

%PKI-6-CERTIFSEND : Could not send Certificate enrollment request to file system.

| | |
|---------------------------|--|
| Explanation | The certificate enrollment request could not be sent to file system. |
| Recommended Action | Verify the enrollment URL and that the router is able to write to the file system. |

%PKI-6-CERTIFSRECV : Could not receive router's Certificate from file system.

| | |
|---------------------------|---|
| Explanation | The router's certificate could not be received from file system. |
| Recommended Action | Verify the enrollment URL and that the router is able to read from the file system. |

%PKI-2-CERT_ENROLL_FAIL : Certificate enrollment failed for trustpoint [chars]. Reason : [chars]

| | |
|---------------------------|--|
| Explanation | Certificate enroll encounter fatal error |
| Recommended Action | Contact the CA administrator. |

%PKI-2-CERT_RENEW_FAIL : Certificate renewal failed for trustpoint [chars] Reason : [chars]

| | |
|---------------------------|--|
| Explanation | Certificate enroll encounter fatal error |
| Recommended Action | Contact the CA administrator. |

%PKI-4-CERT_ENROLL_CANCEL : Enrollment cancelled for trustpoint : [chars]

| | |
|---------------------------|--------------------------------------|
| Explanation | Certificate enroll cancelled by user |
| Recommended Action | Contact the CA administrator. |

%PKI-3-SOCKETSEND : Failed to send out message to CA server.

| | |
|---------------------------|--|
| Explanation | The failure is caused by http transaction. |
| Recommended Action | Check http connection to the CA server |

%PKI-3-INVALID_INPUT : The input to the parser command is not correct

| | |
|---------------------------|--|
| Explanation | The input to the parser command is not correct |
| Recommended Action | Repeat the command. |

%PKI-3-GETCARACERT : Failed to receive RA/CA certificates.

| | |
|---------------------------|--|
| Explanation | Encountered failure when parsing and processing CA/RA certificates |
| Recommended Action | Check the status, contact the CA administrator |

%PKI-6-CS_DELETE_TP_KEY : Trustpoint and key deleted.

| | |
|---------------------------|--|
| Explanation | Trustpoint and key used by the Certificate Server are deleted. |
| Recommended Action | No action required. Informational message. |

%PKI-6-CS_DELETE : Certificate Server is deleted.

| | |
|---------------------------|--|
| Explanation | Certificate Server is deleted. |
| Recommended Action | No action required. Informational message. |

%PKI-6-CS_GRANT_AUTO_RA : Enrollment requests coming from known RAs will be automatically granted.

| | |
|---------------------------|--|
| Explanation | Enrollment requests coming from known RAs will be automatically granted. |
| Recommended Action | No action required. Informational message. |

%PKI-6-CS_GRANT_AUTO : All enrollment requests will be automatically granted.

| | |
|---------------------------|--|
| Explanation | All enrollment requests will be automatically granted. |
| Recommended Action | No action required. Informational message. |

%PKI-6-CS_GRANT_AUTO_CACERT : All rollover subordinate CA cert requests will be automatically granted.

| | |
|--------------------|--|
| Explanation | All rollover subordinate CA cert requests will be automatically granted. |
|--------------------|--|

%PKI-6-CS_GRANT_AUTO_CACERT : All rollover subordinate CA cert requests will be automatically granted.

Recommended Action No action required. Informational message.

%PKI-4-CS_GRANT_AUTO_CACERT_FAILURE : A rollover request for a subordinate CA certificate cannot be auto granted.

Explanation A rollover request for a subordinate CA certificate cannot be authorized and the configured auto grant policy will be ignored. This request will be added to the CS server request queue but will need to be manually granted

Recommended Action Insure that the peer's current sub CA cert is valid.

%PKI-6-CS_GRANT_AUTO_RACERT : All rollover RA cert requests will be automatically granted.

Explanation All rollover RA cert requests will be automatically granted.

Recommended Action No action required. Informational message.

%PKI-6-CS_REJECT_AUTO : All enrollment requests will be automatically rejected.

Explanation All enrollment requests will be automatically rejected.

Recommended Action No action required. Informational message.

%PKI-3-CS_CRIT_STORAGE : Critical certificate server storage, [chars], is inaccessible, server disabled.

Explanation Critical certificate server storage is inaccessible, server disabled.

Recommended Action Make storage accessible, or re-configure the storage location

%PKI-4-CS_PUBLISH_STORAGE : Publish certificate server storage, [chars], is inaccessible.

Explanation Publish certificate server storage is inaccessible.

Recommended Action Make storage accessible, or re-configure the storage location

%PKI-6-AUTOENROLL_KEY_LOCKED : Auto-enroll failed - RSA keypair is locked

| | |
|---------------------------|---|
| Explanation | Auto-enroll attempted to generate a new RSA keypair. However the existing RSA keypair is locked so auto-enroll cannot proceed |
| Recommended Action | Auto-enroll will retry the enrollment request Make sure the existing RSA keypair is unlocked before the next retry |

%PKI-6-CS_ENABLED : Certificate server now enabled.

| | |
|---------------------------|--|
| Explanation | Certificate server now enabled. |
| Recommended Action | No action required. Informational message. |

%PKI-6-CS_DISABLED : Certificate server now disabled. Reason : [chars]

| | |
|---------------------------|--|
| Explanation | Certificate server now disabled. |
| Recommended Action | No action required. Informational message. |

%PKI-3-UNUSABLE_KEY_USAGE : Key-usage type '[chars]' for cert with serial number [chars] is not usable.

| | |
|---------------------------|---|
| Explanation | The given key-usage type is not usable by IOS. If seen during an import operation, this will likely cause the import to fail. Acceptable key-usage types should include Key-encipherment and/or digital-signature. Other key-usage types may be present, but will be ignored. |
| Recommended Action | Recreate the certificate with Key-encipherment, digital-signature, or both. |

%PKI-6-AUTOCERTFAIL : Certificate (re)enrollment failed. Delaying before retry

| | |
|---------------------------|---|
| Explanation | Automatic certificate enrollment or re-enrollment failed The router will retry in 6 hours or less depending on the expiration time of the router's certificate. |
| Recommended Action | Contact the CA administrator. |

%PKI-4-AUTOCERTFAILWARN : Certificate (re)enrollment failed. Delaying before retry

| | |
|--------------------|--|
| Explanation | Automatic certificate re-enrollment failed. The router will retry in 6 hours or less depending on the expiration time of the router's certificate. Caution - Router's Certificate may expire soon. |
|--------------------|--|

%PKI-4-AUTOCERTFAILWARN : Certificate (re)enrollment failed. Delaying before retry

Recommended Action Contact the CA administrator. The router will retry.

%PKI-3-AUTOCERTERR : Auto Certificate (re)enrollment failed. Cannot retry

Explanation Automatic certificate re-enrollment failed. The router clock may not be set correctly. If the router has a certificate it may be expired.

Recommended Action Check router clock is set correctly. Make sure the router's cert has not expired.

%PKI-3-CERTPENDERR : Failed to receive pending certificate during enrollment

Explanation The router's cert remains in a pending state after the maximum number of retries to enroll.

Recommended Action Contact the CA administrator. Then retry the enrollment.

%PKI-4-CERTIFICATE_INVALID_SUBJECT : Certificate has a missing or invalid subject name.

Explanation The certificate subject name attribute must be present and not empty OR The certificate subject alt name extension must be present and include at least one entry.

Recommended Action Examine the offending certificate and re-issue it with a proper subject name.

%PKI-3-CERTIFICATE_INVALID_EXPIRED : Certificate chain validation has failed. The certificate (SN: [chars]) has expired. Validity period ended on [chars]

Explanation The certificate validity period indicates that this certificate has expired.

Recommended Action Check the system clock to see if its set correctly.

%PKI-3-CERTIFICATE_INVALID_NOT_YET_VALID : Certificate chain validation has failed. The certificate (SN: [chars]) is not yet valid. Validity period starts on [chars]

Explanation The certificate validity period indicates that this certificate is not yet valid.

Recommended Action Check the system clock to see if its set correctly.

%PKI-3-CERTIFICATE_INVALID : Certificate chain validation has failed.

| | |
|---------------------------|--|
| Explanation | The certificate is not valid |
| Recommended Action | Check the system clock to see if its set correctly |

%PKI-3-CERTIFICATE_REVOKED : Certificate chain validation has failed. The certificate (SN: [chars]) is revoked

| | |
|---------------------------|---|
| Explanation | The certificate has been revoked by the CA administrator. |
| Recommended Action | Check the status, contact the CA administrator |

%PKI-3-CERTIFICATE_INVALID_UNAUTHORIZED : Certificate chain validation has failed. Unauthorized

| | |
|---------------------------|--|
| Explanation | The certificate is valid but not authorized |
| Recommended Action | Check the system clock to see if its set correctly |

%PKI-4-CRLHTTPFETCHFAIL : CRL Request for trustpoint [chars] returned [dec] [chars]

| | |
|---------------------------|--|
| Explanation | The CRL fetch returned something other than success. If the trustpoint revocation-check includes the keyword 'none', the transaction will succeed. If revocation- checking is not optional, the transaction will fail. |
| Recommended Action | Verify that the CRL is at the location specified in the Certificate, and that the server is operational. To see interaction between IOS and the CRL-server, please turn on debug crypto pki transactions |

%PKI-6-CRLHTTPFETCHREDIR : CRL Request for trustpoint [chars] returned [dec] [chars] -> [chars]

| | |
|---------------------------|---|
| Explanation | The CRL fetch returned a redirect directive. This need not be an error, if the file exists at the redirected location. |
| Recommended Action | If no other errors are seen, then the CRL was fetched from the new location, and no action is necessary. To see interaction between IOS and the CRL-server, please turn on debug crypto pki transactions |

%PKI-3-CRL_FETCH_FAIL : CRL fetch for trustpoint [chars] failed Reason : [chars]

| | |
|---------------------------|---|
| Explanation | The CRL fetch returned something other than success. |
| Recommended Action | Check the CRL manually to see it is correct. To see interaction between IOS and the CRL-server, please turn on debug crypto pki transactions |

%PKI-3-CRL_INSERT_FAIL : CRL download for trustpoint [chars] has been discarded. Reason : [chars] Status : [dec] Status String : [chars]

| | |
|---------------------------|--|
| Explanation | Inserting and/or verifying the CRL failed. If the trustpoint revocation-check includes the keyword 'none', the transaction will succeed. If revocation- checking is not optional, the transaction will fail. |
| Recommended Action | Check the CRL manually to see it is correct. To see interaction between IOS and the CRL-server, please turn on debug crypto pki transactions |

%PKI-4-HTTPREDIRECT : Maximum Redirection limit of [dec] exceeded, trying to retrieve URL [chars]

| | |
|---------------------------|--|
| Explanation | While fetching a document via http, there were too many redirections, and the operation has aborted. If the trustpoint revocation-check includes the keyword 'none', the transaction will succeed. If revocation- checking is not optional, the transaction will fail. |
| Recommended Action | Verify that the CRL is at the location specified in the Certificate, and that the server is operational. To see interaction between IOS and the CRL-server, please turn on debug crypto pki transactions |

%PKI-4-CRL_LDAP_QUERY : An attempt to retrieve the CRL from [chars] using LDAP has failed

| | |
|---------------------------|--|
| Explanation | An LDAP query was made to acquire the certificate revocation list, but the LDAP server did not respond with the requested information. This is a warning that only applies to the Distribution Point listed. It does not necessarily reflect the overall success or failure of CRL aquisition since a prior or subsequent retrieval of the CRL may have succeeded. |
| Recommended Action | Check that the LDAP server is reachable and online. Verify that the CRL is at the requested location |

%PKI-6-TRUSTPOOL_AUTO_UPDATE : Auto-trustpool update in progress from [chars].

| | |
|---------------------------|--|
| Explanation | One of the certificates in the trustpool will expire soon. An atmpmt to download a new trustpool bundle is in progress |
| Recommended Action | Since an url has been configured that identifies the location to acquire the trustpool bundle, then no action is required. |

%PKI-4-TRUSTPOOL_AUTO_UPDATE_DISABLED : Auto-trustpool update is disabled.

| | |
|---------------------------|---|
| Explanation | One of the certificates in the trustpool will expire soon. An atmpmt to download a new trustpool bundle cannot be attempted since a bundle location is not configured |
| Recommended Action | Either configure the bundle location in the trustpool policy or manually update the trustpool bundle. |

%PKI-4-TRUSTPOOL_EXPIRATION_WARNING : The Trustpool will expire in [chars].

| | |
|---------------------------|--|
| Explanation | One of the certificates in the trustpool will expire soon. If a bundle location is configured an auto update will be attempted at predetermined intervals. |
| Recommended Action | If a bundle location is configured in the trustpool policy no further action is required. Otherwise manual update of trustpool bundle may be needed. |

%PKI-6-ECDSA_CERT_WITH_SHA1 : User has accepted the security implication of using lesser hash strength(SHA1) for the Elliptic Curve Key present in the certificate

| | |
|---------------------------|---|
| Explanation | The SHA1 hash algorithm is not recommended for use with the elliptic curve key in this certificate. It is recommended that SHA2 or stronger hash algorithm be used. |
| Recommended Action | Informational message only. No action required. |

%PKI-6-PKI_CRL_DOWNLOADED : CRL download successful. Trustpoint : [chars] CDP-URL : [chars] Issuer : [chars]

| | |
|---------------------------|--|
| Explanation | CRL is downloaded and successfully inserted in the database. Notification for the same is sent to applications registered. |
| Recommended Action | Informational message only. No action required. |

%PKI-4-CERT_EXPIRY_WARNING : [chars] Certificate belonging to trustpoint [chars] will expire in [int] Days [int] hours [int] mins [int] secs at [chars]. Issuer-name : [chars] Subject-name : [chars] Serial-number: [chars] Auto-Renewal : [chars]

| | |
|---------------------------|--|
| Explanation | Warning to indicate that certificate is expiring soon. |
| Recommended Action | If auto-enrol feature is not configured, re-enrol the certificate manually. Else, check if any issues with auto-enrol. |

%PKI-1-CERT_EXPIRY_ALERT : [chars] Certificate belonging to trustpoint [chars] will expire in [int] Days [int] hours [int] mins [int] secs at [chars]. Issuer-name : [chars] Subject-name : [chars] Serial-number: [chars] Auto-Renewal : [chars]

| | |
|---------------------------|--|
| Explanation | Alert to indicate that certificate will expire in less than one week. |
| Recommended Action | If auto-enrol feature is not configured, re-enrol the certificate manually. Else, check if any issues with auto-enrol. |

%PKI-4-OCSP_SERVER_NO_RESP : The OCSP Server URL [chars] is not reachable or not responding

Explanation The OCSP server is not reachable or is not responding to the OCSP request

Recommended Action Check if the OCSP server is reachable and is receiving the OCSP request

%PKI-4-OCSP_SERVER_RESP_COMP : The OCSP Server [chars]: error:responder certificate is peer certificate

Explanation The OCSP responder certificate is peer certificate

Recommended Action Check if the configured OCSP server and responder OCSP server is same or not

%PKI-3-OCSP_RESPONSE_STATUS : OCSP response status failed Reason : [chars]

Explanation OCSP response status failed

Recommended Action Check the ocsip request or ocsip server configurations

%PKI-4-OCSP_SERVER_RESP_SIGN : The OCSP Server [chars]: error:responder invalid signature algorithm

Explanation The OCSP responder has differnt signature algorithm

Recommended Action Check if the configured and responder OCSP server same signature algorithm or not

%PKI-4-OCSP_SERVER_RESP_DECODE_FAIL : The OCSP Server [chars]: failed to decode OCSP response basic data

Explanation The OCSP response data decoding is failing

Recommended Action Check if the configured OCSP server response data

%PKI-4-OCSP_SERVER_CERT_VALIDATE : The OCSP Server [chars]: responder certificate validation failed

Explanation The OCSP server responder certificate validation failed

Recommended Action Check if the configured OCSP server responder certificate

%PKI-4-OCSP_SERVER_RESP_VARIFY : The OCSP Server [chars]: failed to verify OCSP response

Explanation The OCSP response verification failed

%PKI-4-OCSP_SERVER_RESP_VERIFY : The OCSP Server [chars]: failed to verify OCSP response

Recommended Action Check if the configured OCSP server response

%PKI-4-OCSP_SERVER_RESP_DECODE : The OCSP Server [chars]: failed to decode OCSP response data

Explanation The OCSP response data decoding is failing

Recommended Action Check if the configured OCSP server response data

%PKI-5-CERT_ENROLL_RETRY : Certificate (re)enrollment has failed and retry will happen for [dec] attempts

Explanation Automatic certificate re-enrollment failed. We are printing a consolidated message for the maximum number of retry attempts. The router will continue to retry depending on the expiration time of the router's certificate. The retry attempts will be either 999 (default) or as specified Caution - Router's Certificate may expire soon.

Recommended Action Contact the CA administrator. The router will retry.

%PKI-4-CERT_ENROLL_RETRY_FAIL : Certificate (re)enrollment has failed after [dec] attempts

Explanation Automatic certificate re-enrollment failed. Caution - Router's Certificate may expire soon.

Recommended Action Contact the CA administrator. Enrollment failed.

%PKI-4-ROUTER_CERT_EXPIRED : Router certificate expired, cannot re-enroll/retry for enrollment/re-enroll

Explanation Cannot re-enroll/retry for enroll/re-enroll. Caution - Router's Certificate has expired.

Recommended Action Enroll the router manually.

%PKI-4-TRUSTPOOL_DOWNLOAD_FAIL : Trustpool download requires [int] bytes, available free storage [int] bytes is insufficient

Explanation Trustpool download failed Free space in nvram is not sufficient to store Trustpool Certificates. Change the Trustpool policy for its storage

Recommended Action Change the storage policy for Trustpool

%PKI-6-TRUSTPOOL_DOWNLOAD_SUCCESS : Trustpool Download is successful

| | |
|---------------------------|---|
| Explanation | Trustpool Download is successful |
| Recommended Action | No action required. Informational message |

%PKI-4-TRUSTPOOL_DOWNLOAD_FAILURE : Trustpool Download failed

| | |
|---------------------------|---|
| Explanation | Failed to download the trustpool bundle |
| Recommended Action | Enable debugs and obtain the reason for failure |

%PKI-4-TRUSTPOOL_CERTIFICATE_SAVE_CHANGE : Downloaded Trustpool certificates present prior to image upgrade should be re-downloaded. Issue 'crypto pki trustpool import url <url>' to re-download the certificates.

| | |
|---------------------------|---|
| Explanation | Downloaded Trustpool certificates present prior to image upgrade should be re-downlaoded |
| Recommended Action | Before image upgrade, clean all the downloaded trustpool certificates. Import them again after image upgrade. |

%PKI-2-NON_AUTHORITATIVE_CLOCK : PKI functions can not be initialized until an authoritative time source, like NTP, can be obtained.

| | |
|---------------------------|---|
| Explanation | System clock is not valid. Update the system clock to start with PKI timers |
| Recommended Action | System clock must be configured/Updated. |

%PKI-6-AUTHORITATIVE_CLOCK : The system clock has been set.

| | |
|---------------------------|-----------------------------------|
| Explanation | System clock is valid. |
| Recommended Action | No action. Informational message. |

%PKI-6-CSR_FINGERPRINT : CSR Fingerprint MD5 : [chars] CSR Fingerprint SHA1: [chars]

| | |
|---------------------------|---------------------|
| Explanation | Fingerprint display |
| Recommended Action | Information message |

%PKI-6-CERT_ENROLL_AUTO : Auto initial enrollment for trustpoint [chars]

| | |
|---------------------------|--|
| Explanation | Trustpoint enrollment happening automatically. |
| Recommended Action | No action required. Informational message |

%PKI-6-CERT_ENROLL_MANUAL : Manual enrollment for trustpoint [chars]

| | |
|---------------------------|---|
| Explanation | Trustpoint enrollment triggered manually |
| Recommended Action | No action required. Informational message |

%PKI-6-CERT_REENROLL : Re-enrollment for trustpoint [chars]

| | |
|---------------------------|---|
| Explanation | Trustpoint re-enrollment triggered manually |
| Recommended Action | No action required. Informational message |

%PKI-3-HOSTNAME_RESOLVE_ERR : Failed to resolve HOSTNAME/IPADDRESS : [chars]

| | |
|---------------------------|---------------------------------------|
| Explanation | Unable to resolve hostname/ip-address |
| Recommended Action | Check network connectivity |

%PKI-3-OCSP_CONTENT_MISMATCH : ocsip content mismatch

| | |
|---------------------------|--|
| Explanation | Expected content not matched with formed content |
| Recommended Action | Check ocsip request |

%PKI-2-MEM_ALLOC_FAIL : Memory allocation failure. Number of bytes requested : [dec]

| | |
|---------------------------|---------------------------------|
| Explanation | Memory allocation failed |
| Recommended Action | Check memory left on the device |

%PKI-3-SOCKET_OPEN : Failed to open socket.

| | |
|--------------------|--------------------------------------|
| Explanation | The failure is caused by socket open |
|--------------------|--------------------------------------|

%PKI-3-SOCKET_OPEN : Failed to open socket.

Recommended Action Check tcp/socket debugging message

%PKI-3-SET_SOURCE_INTERFACE_FAIL : Failed to set source interface for [chars] ip address

Explanation Failed to set source interface

Recommended Action Check configured source interface for trustpoint

%PKI-3-SOCKET_BIND_FAIL_SOURCE_INTERFACE : Failed to bind the socket due to source interface ip : [chars]

Explanation Failed to bind socket with source interface

Recommended Action Check configured source interface for trustpoint

%PKI-3-SET_VRF_FAIL : Failed to set VRF : [chars]. VRF not configured

Explanation Failed to set VRF

Recommended Action Check configured VRF for trustpoint and set VRF

%PKI-3-SET SOCK_VRF_INTERFACE_FAIL : Failed to set VRF : [chars] to socket interface

Explanation Failed to set VRF to socket

Recommended Action Check configured VRF for trustpoint and set VRF

%PKI-3-SET_SOCKET_OPTION_FAIL : Failed to set socket option. Option : [chars]

Explanation Failed to set socket option

Recommended Action Enable socket debugs

%PKI-3-SOCKET_CONNECT_FAIL : Failed to connect to socket

Explanation Failed to connect socket

%PKI-3-SOCKET_CONNECT_FAIL : Failed to connect to socket

Recommended Action Enable socket debugs

%PKI-2-CA_SERVER_CERT_EXPIRED : [chars] server certificate expired. Cannot enable [chars] server

Explanation CA server certificate expired.

Recommended Action Reconfigure CA server

%PKI-2-CA_SERVER_LABEL_TOO_LONG : [chars] server name too long. Reconfigure server with name less than 13 characters.

Explanation CA server name too long.

Recommended Action Reconfigure CA server with less than 13 characters

%PKI-2-CA_SERVER_TP_NOT_PRESENT : [chars] server's Trustpoint not available. Check for the trustpoint config.

Explanation CA server's Trustpoint not available.

Recommended Action Check for CA server and Trustpoint configuration presence

%PKI-2-SERVER_TP_CREATE_FAIL : Not able to create [chars] server's Trustpoint. Check for CA server config's.

Explanation CA server's Trustpoint not created.

Recommended Action Check for CA server and Trustpoint configuration presence

%PKI-2-SERVER_KEY_NOT_PRESENT : Not able to find CS [chars]'s keypair label [chars]. Check whether keypair [chars] is available on device

Explanation CA server's key-pair not available.

Recommended Action Check for key-pair presence

%PKI-2-NON_AUTHORITATIVE_CLOCK_CA : CA server cannot be enabled due to non-authoritative system clock. Configure clock/Sync with NTP server.

Explanation System clock is not valid. Update the system clock to start CA server

Recommended Action System clock must be configured/Updated.

%PKI-2-CS_CERT_EXPIRED : Certificate server [chars] CA certificate expired. Regenerate CA certificate manually.

Explanation CS certificate expired.

Recommended Action Regenerate CS certificate.

%PKI-2-CS_CERT_GEN_FAIL : Certificate server [chars] CA certificate generation failed. Regenerate CA certificate manually.

Explanation Certificate Server disabled.

Recommended Action Regenerate CS certificate.

%PKI-2-CS_CERT_INVALID : Certificate server [chars] CA certificate invalid. Regenerate CA certificate manually.

Explanation CS certificate invalid.

Recommended Action Regenerate CS certificate.

%PKI-2-CS_SUBJECT_NAME_FAIL : Extracting subject name from Server certificate failed

Explanation Extraction of subject failed

Recommended Action Regenerate CS certificate.

%PKI-2-CS_ISSUER_NAME_INVALID : Invalid issuer_name in CS [chars] configuration

Explanation Invalid issuer-name in Certificate Server

Recommended Action Check certificate server configuration and re-configure.

%PKI-2-CS_CERT_NOT_PRESENT : Certificate server [chars]'s certificate not present.

| | |
|---------------------------|--|
| Explanation | Certificate server certificate not present |
| Recommended Action | Regenerate CS certificate. |

%PKI-3-ISSUER_NAME_NOT_BER : Issuer name is not BER

| | |
|---------------------------|---|
| Explanation | Issuer name is not BER. Check issuer-name |
| Recommended Action | Check issuer-name present/configured |

%PKI-3-SUBJECT_NAME_NOT_BER : Subject name is not BER

| | |
|---------------------------|---|
| Explanation | Subject name is not BER. Check subject-name |
| Recommended Action | Check subject-name present/configured |

%PKI-3-CRL_HTTP_FAIL : CRL Request over http for trustpoint [chars] failed. Reason : [chars]

| | |
|---------------------------|-----------------------------------|
| Explanation | Receival of CA certificate failed |
| Recommended Action | CA cert download failed |

%PKI-6-CERT_ROLLOVER_ACTIVE : A rollover ID certificate has been activated under trustpoint [chars] replacing the previous ID certificate. Issuer-name : [chars] Subject-name : [chars] Serial-number: [chars] End-date : [chars]

| | |
|---------------------------|--|
| Explanation | Rollover ID certificate active |
| Recommended Action | No action needed. Informational message only |

%PKI-2-CERT_SHADOW_INSTALL_FAIL : [chars].

| | |
|---------------------------|--|
| Explanation | Shadow CA/ID certificate installation failed. |
| Recommended Action | Check for the reason for failure and perform necessary steps |

%PKI-6-CERT_SHADOW_INSTALL : [chars] Issuer-name : [chars] Subject-name : [chars] Serial-number: [chars] End-date : [chars]

Explanation Shadow CA/ID certificate has been installed.

Recommended Action No action needed. Informational message only

%PKI-6-CERT_SHADOW_ACTIVE : [chars] Issuer-name : [chars] Subject-name : [chars] Serial-number: [chars] End-date : [chars]

Explanation Shadow CA/ID certificate has been activated.

Recommended Action No action needed. Informational message only

%PKI-3-CERT_ROLLOVER : Renew/Shadow event has failed for trustpoint : [chars] Reason : [chars]

Explanation Renew/Shadow event failed.

Recommended Action Perform manual renewal of certificate to avoid certificate expiry.

%PKI-3-CS_ROLLOVER_TRIGGER : CS Rollover event has been triggered for server [chars]

Explanation Rollover triggered for certificate server

Recommended Action Informational message only. No action needed.

%PKI-2-CS_ROLLOVER_FAIL : CS Rollover failed. Reason : [chars]

Explanation Rollover failed for certificate server

Recommended Action Critical error on rollover. Certificate Server has to be re-enabled.

%PKI-6-CS_ROLLOVER_AVAILABLE : [Sub/RA]CS Rollover certificate has been generated for [chars], and it will be activated at [chars] Issuer-name : [chars] Subject-name : [chars] Serial-number: [chars] End-date : [chars]

Explanation Rollover certificate generated

Recommended Action Informational message only. No action needed.

%PKI-6-CS_ROLLOVER_ACTIVE : [chars] Rollover certificate has been activated for [chars], replacing the previous [Sub/RA]CA certificate Issuer-name : [chars] Subject-name : [chars] Serial-number: [chars] End-date : [chars]

Explanation Rollover certificate activated

Recommended Action Informational message only. No action needed.

%PKI-3-OCSP_FETCH_FAIL : OCSP fetch failed. Reason : [chars]

Explanation OCSP Fetch failed

Recommended Action Enable socket/tcp debugs to check connectivity with ocsf server

%PKI-3-OCSP_RESPONSE_FAIL : OCSP response from [chars] has been discarded. Reason : [chars]

Explanation OCSP response parse failed

Recommended Action Check OCSP response

%PKI-6-OCSP_SUCCESS : OCSP response from [chars] has been successfully processed for certificate : [chars] Serial-number: [chars] Result : [chars]

Explanation OCSP response successfully processed.

Recommended Action Informational message only. No action needed.

%PKI-2-PKI_EVENT_LOG : PKI Event : [chars]

Explanation PKI Event for both success/failure.

Recommended Action Informational message only. No action needed.

%PKI-3-ENROLL_PKCS12 : Trustpoint [chars] configured as pkcs12 enrollment. SCEP enrollment not supported

Explanation Change the trustpoint configuration to point to enrollment-url

Recommended Action TP configuraiton need to be verified.

%PKI-3-GET_CERT_INITIAL : Failed with GetCertInitial for trustpoint [chars] Reason : [chars]

Explanation GetCertInitial encounter fatal error**Recommended Action** Contact the CA administrator.

%PKI-6-SLA_TRUSTPOINT_CHANGE : Attempting to override SLA Trustpoint. The current running SLA trustpoint config will be retained Config-Replace errors corresponding to SLA TrustPoint may be ingored.

Explanation PKI Event for both success/failure.**Recommended Action** Informational message only. No action needed.

PKTLOG

%PKTLOG-3-PROXY_IPC_SEND_FAILED : [chars][chars]

Explanation Transmission of an IPC message by the packet logger proxy failed.**Recommended Action** LOG_STD_ACTION

%PKTLOG-3-PROXY_IPC_ALLOC_FAILED : [chars]

Explanation Allocation of an IPC packet buffer by the packet logger proxy failed.**Recommended Action** LOG_STD_ACTION

%PKTLOG-3-PROXY_BAD_SUBTYPE : [dec]

Explanation Invalid subtype was passed to packet logger proxy IPC handler.**Recommended Action** LOG_STD_ACTION

%PKTLOG-2-PROXY_IPC_SET_FAILED : [chars]

Explanation Packet logger proxy IPC handler could not be initialized.**Recommended Action** LOG_STD_ACTION

%PKTLOG-4-PROXY_DUP_INIT : [chars]

Explanation Duplicate initialization IPC message received for user %d client id %d.
Recommended Action LOG_STD_ACTION

%PKTLOG-3-PKTLOG_IPC_SEND_FAILED : [chars] [chars]

Explanation Transmission of an IPC message by the packet logger failed. ACL and stats lost.
Recommended Action LOG_STD_ACTION

%PKTLOG-4-PKTLOG_IPC_ALLOC_FAILED : [chars]

Explanation Allocation of an IPC packet buffer by the packet logger failed.
Recommended Action LOG_STD_ACTION

%PKTLOG-4-PROXY_IPC_INVALID_MSG_LEN : [dec]:[dec] len [dec] flags [hex] source [dec]

Explanation Invalid IPC message length.
Recommended Action LOG_STD_ACTION

%PKTLOG-4-PROXY_INVALID_USER_IDX : [int] [int]

Explanation IPC message contained invalid user index for client id.
Recommended Action LOG_STD_ACTION

%PKTLOG-1-PROXY_MEM_RET_ERR : [chars] [int] [int] [int]

Explanation IPC failed and could not return memory
Recommended Action LOG_STD_ACTION

%PKTLOG-1-PROXY_MEM_APPEND_ERR : [int] [int] [int]

Explanation Could not add memory to memory pool

%PKTLOG-1-PROXY_MEM_APPEND_ERR : [int] [int] [int]

Recommended Action LOG_STD_ACTION

PLATFORM

%PLATFORM-3-NOMAC : Can't allocate MAC address for interface [int]/[int]

Explanation MAC address allocation failed because of an incorrect slot and port combination, which exceeds the maximum available hardware.

Recommended Action LOG_STD_ACTION

%PLATFORM-3-NOMAC_INTF : Failed to allocate MAC address for interface [chars]

Explanation MAC address allocation failed for logical interface specified in the message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PLATFORM-3-GEC_NOMAC : Can't allocate MAC address for port-channel interface [int]

| | |
|---------------------------|---|
| Explanation | MAC address allocation failed for the port-channel interface specified in the message. This may happen if the port-channel interface exceeds the maximum number of supported port-channel interfaces. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM-3-NO_BASEMAC : Can't retrieve base MAC address

| | |
|---------------------------|--|
| Explanation | Base MAC address determination failed at system start. |
| Recommended Action | LOG_STD_ACTION |

%PLATFORM-6-HASTATUS : RP switchover, [chars]

| | |
|---------------------------|---|
| Explanation | RP switchover events received by platform code. |
| Recommended Action | No action is required. |

%PLATFORM-6-HASTATUS_DETAIL : RP switchover, [chars] (count [int])

| | |
|---------------------------|---|
| Explanation | RP switchover events received by platform code. |
| Recommended Action | No action is required. |

%PLATFORM-4-HASTATUS_WARN : RP HA status warning, [chars]

| | |
|---------------------------|---|
| Explanation | Standby RP reports peer not present event. This is indicative of a IPC problem between IOSd and CMRP |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM-3-HAKPA_FAIL : RP HA Keepalive failure, [chars]

| | |
|---------------------------|---|
| Explanation | Standby RP reports missing keepalives from Active. This is indicative of an IPC problem between peer IOSd processes |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM-3-HASTATUS_FAIL : RP switchover, [chars] (count [int])

| | |
|---------------------------|---|
| Explanation | RP switchover failed to reach active state. The RP will be reset. This is indicative of a IPC problem between IOSd and CMRP |
| Recommended Action | Make sure system achieves full redundant state after the RP reset. If not, reload entire system |

%PLATFORM-3-RF_PROG_FAIL : Progression completion notification to chassis management failed, [chars]

| | |
|---------------------------|---|
| Explanation | Could not notify the completion of the RF progression to the chassis management process. The system will potentially not be in a fully redundant state. |
| Recommended Action | LOG_STD_ACTION |

%PLATFORM-6-RF_PROG_SUCCESS : RF state [chars]

| | |
|---------------------------|---|
| Explanation | A marker to illuminate when the standby reaches a terminal state. |
| Recommended Action | No action is required. |

%PLATFORM-4-RELOAD_STANDBY : [chars] reload requested by [chars]. Reason [chars]

| | |
|---------------------------|---|
| Explanation | Unexpected configuration or states mismatch between Active and Standby RPs. Reloading Standby to synchronize the configuration or states. |
| Recommended Action | None. This is expected behavior. |

%PLATFORM-3-RF_RELOAD_PEER : Reload peer notification to chassis management failed, [chars]

| | |
|--------------------|--|
| Explanation | Could not notify Reload Peer to the chassis management process. The Standby peer could not be reloaded by the Active. The system will potentially not be in a fully redundant state. |
|--------------------|--|

%PLATFORM-3-RF_RELOAD_PEER : Reload peer notification to chassis management failed, [chars]

| | |
|---------------------------|---|
| Recommended Action | Reload peer instance using the available CLI commands. If system does not achieve full Standby status after that, the system must be reloaded |
|---------------------------|---|

%PLATFORM-6-EVENT_LOG : [chars]

| | |
|---------------------------|--|
| Explanation | An entry from the internal event log at reload on the standby RP. This is informational. |
| Recommended Action | No action is required. |

%PLATFORM-4-BOOTVAR_NOT_SET : Boot variable is not set. Boot variable either does not exist or buffer is too small. Keeping it blank

| | |
|---------------------------|---|
| Explanation | Boot variable either does not exist or buffer is too small. Not able to set boot variable. Ignoring it. |
| Recommended Action | No action is required. |

%PLATFORM-3-NVRAM_OPEN_FAIL : Failed to open nvram - [chars].

| | |
|---------------------------|---|
| Explanation | The nvram device could not be opened. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM-3-NVRAM_READ_FAIL : Failed to read nvram - [chars].

| | |
|---------------------------|---|
| Explanation | The nvram contents could not be read. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM-3-NVRAM_WRITE_FAIL : Failed to write nvram - [chars].

| | |
|--------------------|---------------------------------------|
| Explanation | Couldn't write into the nvram device. |
|--------------------|---------------------------------------|

%PLATFORM-3-NVRAM_WRITE_FAIL : Failed to write nvram - [chars].

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%PLATFORM-3-BACKUP_NVRAM_OPEN_FAIL : Failed to open backup nvram - [chars].

| | |
|---------------------------|---|
| Explanation | The backup nvram device could not be opened. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM-3-BACKUP_NVRAM_READ_FAIL : Failed to read backup nvram - [chars].

| | |
|---------------------------|---|
| Explanation | The backup nvram contents could not be read. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM-3-BACKUP_NVRAM_WRITE_FAIL : Failed to write backup nvram - [chars].

| | |
|---------------------------|---|
| Explanation | Couldn't write into the backup nvram device. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM-6-SB_INIT_DELAY : RF progression will be suspended due to standby initialization delay configuration setting. Standby initialization will resume after [int] seconds

| | |
|---------------------------|---|
| Explanation | An informational message about the standby initialization delay configuration. RF progression will be delayed for the configured value. Bulk-sync and other progression events will not happen until after the configured delay value |
| Recommended Action | No action is required. |

%PLATFORM-6-SB_INIT_DELAY_END : RF progression delay timer expired. Standby initialization will now continue

Explanation An informational message about the standby initialization delay configuration. RF progression will now continue since configured delay has expired

Recommended Action No action is required.

%PLATFORM-4-STATS_COLLECTION : Reducing statistics collection interval for SPA ([chars]) will impact the RP control plane activity

Explanation MIB statistics for HW counters are sent from CC to RP every 10 seconds by default, changing the timer through CLI to send more often will increase RP CPU utilization and result in sending more IPC messages between CC and RP

Recommended Action No action is required.

%PLATFORM-1-NOSPACE : [chars] : no space alarm assert

Explanation bootflash memory exhausted Delete the old file from boot flash to create space

Recommended Action No action is required.

%PLATFORM-4-LOWSPACE : [chars] : low space alarm assert

Explanation bootflash memory is very low Delete the old file from boot flash to create space

Recommended Action No action is required.

%PLATFORM-5-LOWSPACERECOVER : [chars] : low space alarm deassert

Explanation bootflash memory

Recommended Action No action is required.

%PLATFORM-4-MEMORYSIZE : Active and Standby memory configuration differ by more than 1 GB. Active = %lldKB, Standby = %lldKB

| | |
|---------------------------|--|
| Explanation | The memory configuration on both the Supervisor is different by more than 1GB. Some of the functionality which is high availability aware and dependent on the memory (like IOX) will be impacted. |
| Recommended Action | Please upgrade/downgrade memory configuration on both the Supervisor to match the size |

%PLATFORM-4-SDM_TEMPLATE : Mismatch in SDM templates configured on Active ([chars]) and Standby ([chars]) supervisors

| | |
|---------------------------|--|
| Explanation | The SDM template configured on the two Supervisors are different. Different SDM template would enable different sets of features on the active and standby supervisors. Table sizes configured for the common features may be different. These features will not function properly on switchover from one supervisor to another. |
| Recommended Action | Please configure the same SDM template on both Supervisors using 'sdm prefer <template>' configuration command, followed by a reload. Supervisors should be brought to hot-standby state and the SDM template configured such that the template gets applied to both the supervisors. Supervisors can also be brought up as standalone and SDM template configured on them one at a time followed by a reload. |

%PLATFORM-3-REDMODE_FAIL : Redundancy mode: [chars] (rc [dec])

| | |
|---------------------------|--|
| Explanation | Redundancy mode change could not be processed. This is indicative of a IPC problem between IOSd and the peer platform process. |
| Recommended Action | Make sure system achieves full redundant state. If not, reload entire system |

%PLATFORM-5-RESETCARD : [chars] reset to acquire provisioned software

| | |
|---------------------------|---|
| Explanation | The linecard specified was not running the currently provisioned software, which it will acquire on restart. |
| Recommended Action | No user action is necessary. This message indicates the system is functioning normally and is provided for informational purposes only. |

PLATFORM_ACT2

%PLATFORM_ACT2-2-SUDI_VALIDATION_FAILED : Secure UDI validation failed. [chars]

| | |
|--------------------|--|
| Explanation | Secure UDI validation for the chassis failed. The router failed to authenticate itself |
|--------------------|--|

%PLATFORM_ACT2-2-SUDI_VALIDATION_FAILED : Secure UDI validation failed. [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

PLATFORM_BRKOUT

%PLATFORM_BRKOUT-3-BRKOUTCMD_SYNCFAILED : Failed to send Breakout command to hardware.

| | |
|---------------------------|---|
| Explanation | A messages that was sent to the hardware module, was not delivered correctly. The failure most likely occurred because of incorrect switch number or non-existing breakout port number specified, or a software communication error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

PLATFORM_CAPABILITY

%PLATFORM_CAPABILITY-4-INIT : Fatal Initialization Error - [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM_CAPABILITY-4-CALL : Fatal Initialization Error - [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

PLATFORM_ENVIRONMENT

%PLATFORM_ENVIRONMENT-1-NIM_OVER_CURRENT : NIM module in [chars] is in an over current condition [dec] [chars]. System will reset.

Explanation An over current condition has been detected in the indicated module. Remove the module causing the issue. User has ~30 seconds to remove module before the router will be shut down

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PLATFORM_ENVIRONMENT-1-NIM_OVER_CURRENT_GEN : NIM module(s) in an over current condition. System will reset.

Explanation An over current condition has been detected in the indicated module. Remove the module causing the issue. User has ~30 seconds to remove module before the router will be shut down

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

PLATFORM_INFRA

%PLATFORM_INFRA-5-IOS_INTR_OVER_LIMIT : IOS thread disabled interrupt for [int] msec

Explanation IOS thread process disabled interrupt too long

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PLATFORM_INFRA-5-IOS_INTR_LIMIT_NOT_SET : IOS thread interrupt limit not set

Explanation IOS failed to retrieve interrupt limit

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PLATFORM_INFRA-5-IOS_INTR_EVENT : IOS thread interrupt event ([dec]).

| | |
|---------------------------|---|
| Explanation | IOS thread process interrupt event |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM_INFRA-5-IOS_INTR_HISTORY : [[dec]][dec] [[dec]:[dec]] [[dec]->[dec]] ra[!* [hex] !* [hex]]

| | |
|---------------------------|---|
| Explanation | IOS thread process interrupt history |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PLATFORM_INFRA-5-IOS_INTR_INVALID_LEVEL : IOS thread interrupt level [dec] replaced by [dec]

| | |
|---------------------------|---|
| Explanation | An invalid IOS thread interrupt level was used |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

PLATFORM_MATM**%PLATFORM_MATM-3-INVALID_MSG_RECEIVED : MATM received invalid SPI message.**

| | |
|---------------------------|---|
| Explanation | A messages that was to be received from the hardware module, was not received correctly. Mac address learning/ageing might be impacted as a result. The failure most likely occurred because of a software communication error. |
| Recommended Action | LOG_STD_SH_TECH_ACTION |

%PLATFORM_MATM-4-QUEUE_OVERLIMIT : MATM dropped [chars] messages as queue limit has reached.

| | |
|--------------------|---|
| Explanation | Messages received from the hardware module were not processed because an internal queue was full. Mac address learning/aging might be impacted as a result. |
|--------------------|---|

%PLATFORM_MATM-4-QUEUE_OVERLIMIT : MATM dropped [chars] messages as queue limit has reached.

Recommended Action LOG_STD_SH_TECH_ACTION

PLATFORM_POWER

%PLATFORM_POWER-6-MODEMISMATCH : [chars] power not in [chars] mode

Explanation The mode of indicated power type is not available. This may be due to the fact that only one power supply or module of that type is present or functional in the system

Recommended Action Please verify the appropriate power supply or module is plugged in the system. 'show power', 'show platform' CLI will provide more information.

%PLATFORM_POWER-6-MODEMATCH : [chars] power is in [chars] mode

Explanation The mode of indicated power type is available.

Recommended Action No action is required.

%PLATFORM_POWER-1-UNAVAILABLE : Not enough [chars] power available for the system.

Explanation Sufficient indicated type of power is not available for the system to function properly. This is a critical issue, and system may need to be reset. Please verify that the power source is fine. Check 'show power', and 'show platform' CLI output for further information. LOG_STD_ACTION

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

PLATFORM_SCC

%PLATFORM_SCC-1-AUTHENTICATION_FAIL : Chassis authentication failed

Explanation This Router may not have been manufactured by Cisco or with Cisco's authorization. This product may contain software that was copied in violation of Cisco's license terms. If your use of this product is the cause of a support issue, Cisco may deny operation of the product, support under your warranty or under a Cisco technical support program such as Smartnet. Please contact Cisco's Technical Assistance Center for more information.

%PLATFORM_SCC-1-AUTHENTICATION_FAIL : Chassis authentication failed

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

PLATFORM_TAM**%PLATFORM_TAM-2-SUDI_VALIDATION_FAILED : Secure UDI validation failed. [chars]**

| | |
|---------------------------|---|
| Explanation | Secure UDI validation for the module failed. The module failed to authenticate itself |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

PLIM_QOS**%PLIM_QOS-3-IOSXE_RP_PLIM_QOS_FAIL : A software error while configuring the [chars] on slot [dec]**

| | |
|--------------------|---|
| Explanation | This error happens when IOS fails to send messages to configure the per slot qos parameters in forwarding plane |
|--------------------|---|

%PLIM_QOS-3-IOSXE_RP_PLIM_QOS_FAIL : A software error while configuring the [chars] on slot [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

PM

%PM-1-INCONSISTENT_PORT_STATE : Inconsistent HW/SW port state for [chars]. Please shut/no shut the interface

| | |
|---------------------------|---|
| Explanation | The hardware and software port state has become inconsistent. |
| Recommended Action | Enter the <CmdBold>shutdown<CmdBold> command followed by the <CmdBold>no shutdown<CmdBold> command on the interface specified in the message. |

%PM-2-NOMEM : Not enough memory available for [chars]

| | |
|---------------------------|---|
| Explanation | The Port Manager subsystem could not obtain the memory it needed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-BAD_COOKIE : [chars] was detected

| | |
|---------------------------|---|
| Explanation | An invalid request was detected by the Port Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-BAD_CARD_COOKIE : an invalid card cookie was detected

| | |
|--------------------|--|
| Explanation | An invalid request was detected by the Port Manager. |
|--------------------|--|

%PM-4-BAD_CARD_COOKIE : an invalid card cookie was detected

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PM-4-BAD_PORT_COOKIE : an invalid port cookie was detected

Explanation An invalid request was detected by the Port Manager.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PM-4-BAD_VLAN_COOKIE : an invalid vlan cookie was detected

Explanation An invalid request was detected by the Port Manager.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PM-4-BAD_CARD_SLOT : an invalid card slot ([dec]) was detected

Explanation An invalid request was detected by the Port Manager.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%PM-4-BAD_PORT_NUMBER : an invalid port number ([dec]) was detected

| | |
|---------------------------|---|
| Explanation | An invalid request was detected by the Port Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-BAD_VLAN_ID : an invalid vlan id ([dec]) was detected

| | |
|---------------------------|---|
| Explanation | An invalid request was detected by the Port Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-BAD_APP_ID : an invalid application id ([dec]) was detected

| | |
|---------------------------|---|
| Explanation | An invalid request was detected by the Port Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-BAD_APP_REQ : an invalid [chars] request by the '[chars]' application was detected

| | |
|---------------------------|---|
| Explanation | An invalid request was detected by the Port Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-TOO_MANY_APP : application '[chars]' exceeded registration limit

| | |
|---------------------------|--|
| Explanation | An invalid request was detected by the Port Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-ERR_DISABLE : [chars] error detected on [chars], putting [chars] in err-disable state

| | |
|---------------------------|--|
| Explanation | This is a defensive measure that will put the interface in err-disable state when it detects a mis-configuration or mis-behavior . A recovery will be attempted after the configured retry time (default 5 minutes). |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-ERR_RECOVER : Attempting to recover from [chars] err-disable state on [chars]

| | |
|---------------------------|--|
| Explanation | This is an attempt to bring the interface back after taking it down to err-disable state |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-ERR_DISABLE_VP : [chars] error detected on [chars], vlan [dec]. Putting in err-disable state.

| | |
|--------------------|---|
| Explanation | This is a defensive measure that will put the virtual port (i.e., the port-vlan pair) in err-disable state when it detects a mis-configuration or mis-behavior. If so configured, a recovery will be attempted after the configured retry time (default 5 minutes). |
|--------------------|---|

%PM-4-ERR_DISABLE_VP : [chars] error detected on [chars], vlan [dec]. Putting in err-disable state.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%PM-4-ERR_RECOVER_VP : Attempting to recover from [chars] err-disable state on [chars], vlan [dec].

| | |
|---------------------------|---|
| Explanation | This is an attempt to bring the virtual port back after taking it down to err-disable state |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-UNKNOWN_HOST_ACCESS : Invalid Host access value ([dec]) is received

| | |
|---------------------------|---|
| Explanation | Host access table is being accesses with an invalalid host access value |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-INVALID_HOST_ACCESS_ENTRY : Invalid Host access entry type ([dec]) is received

| | |
|---------------------------|---|
| Explanation | Host access entry should be one of configured/dynamic type |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-BAD_HA_ENTRY_EVENT : Invalid Host access entry event ([dec]) is received

| | |
|---------------------------|---|
| Explanation | Host access table is entry event is not any of add/delete/update event |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-LIMITS : The number of vlan-port instances on [chars] exceeded the recommended limit of [dec]

| | |
|---------------------------|---|
| Explanation | The total number of individual VLAN ports, counted over the module or switch specified in the error message, has exceeded the module or switch limit specified in the error message. VLANs can be counted more than once; if VLAN 1 is carried on 10 interfaces, it will count as 10 VLAN ports. For some platforms, e.g. Catalyst 6000, bundling is also ignored for purposes of this count; if 8 interfaces on the same module are in one bundle, and the port channel is carrying VLAN 1, it will count as 8 VLAN ports. |
| Recommended Action | Reduce the number of trunks and VLANs configured in the module or switch specified in the error message. Keep the virtual port, VLAN port, count below the recommended limit specified in the configuration documentation. Enter the show interface trunk command to see the total number of trunks and VLANs. |

%PM-3-ERR_INCOMP_PORT : [dec]/[dec] is set to inactive because [dec]/[dec] is a [chars] port

| | |
|---------------------------|--|
| Explanation | Private host port can't be configured with trunk, private promiscuous, and span destination port on the same coil. |
| Recommended Action | Try to configure the incompatible ports on different coils. |

%PM-4-EXT_VLAN_NOTAVAIL : VLAN [dec] not available in Port Manager

| | |
|---------------------------|---|
| Explanation | Port Manager failed to allocate the requested VLAN. The VLAN is either used as an internal VLAN by other features or the maximum allowed extended VLANs are already configured. |
| Recommended Action | Try a different VLAN on the device if the limit on maximum allowed extended VLANs is not yet reached. |

%PM-4-INT_VLAN_NOTAVAIL : Failed to allocate internal VLAN in Port Manager

| | |
|--------------------|---|
| Explanation | Port Manager failed to find any available internal VLAN |
|--------------------|---|

%PM-4-INT_VLAN_NOTAVAIL : Failed to allocate internal VLAN in Port Manager

| | |
|---------------------------|---|
| Recommended Action | Delete some extended range VLANs created by users or remove some features that require internal VLAN allocation, e.g. routed port |
|---------------------------|---|

%PM-2-LOW_SP_MEM : Switch process available memory is less than [dec] bytes

| | |
|--------------------|---|
| Explanation | Switch Processor available memory dropped to a low level. Possibly too many Layer 2 VLANs are configured in the system. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Removed features from the system to reduce memory usage. |
|---------------------------|--|

%PM-4-EXT_VLAN_INUSE : VLAN [dec] currently in use by [chars]

| | |
|--------------------|--|
| Explanation | Port Manager failed to allocate the VLAN for external use as the VLAN is currently occupied by another feature |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Reconfigure the feature, e.g. routed port, to use another internal VLAN; Or request another available VLANs. |
|---------------------------|--|

%PM-2-VLAN_ADD : Failed to add VLAN [dec] - [chars].

| | |
|--------------------|---|
| Explanation | Failed in adding VLAN to VTP. The reason is stated in the string. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%PM-6-EXT_VLAN_ADDITION : Extended VLAN is not allowed to be configured in VTP CLIENT mode.

| | |
|--------------------|--|
| Explanation | This message will only be seen if you try to configure an extended VLAN while the switch is in VTP client mode. The configuration will fail and will not be written to the running configuration file, but otherwise switch performance and features will be unaffected. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | This is an informational message only, no further action is required. If you need to configure an extended VLAN, you must configure the switch to leave VTP client mode. |
|---------------------------|--|

%PM-4-NO_SUBBLOCK : No PM subblock found for [chars]

| | |
|---------------------------|---|
| Explanation | Failed to find PM subblock for this interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-INT_FAILUP : [chars] failed to come up. No internal VLAN available

| | |
|---------------------------|--|
| Explanation | Port Manager failed to allocate internal VLAN and thus the interface cannot come up. |
| Recommended Action | Remove extended range VLAN to free up resources. |

%PM-4-VMPS_CFG : Dynamic access VLAN [dec] same as voice vlan on [chars].

| | |
|---------------------------|--|
| Explanation | Access VLAN on VMPS server is set to same VLAN as voice VLAN on the port. |
| Recommended Action | Access VLAN assignment on VMPS server should be different from voice VLAN. |

%PM-4-INACTIVE : putting [chars] in inactive state because [chars]

| | |
|---------------------------|---|
| Explanation | The Port Manager has been blocked from creating a virtual port for the switch port and VLAN, causing the port to be in an inactive state. The reason for this condition is specified in the error message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-3-INTERNALERROR : Port Manager Internal Software Error ([chars]: [chars]: [dec]: [chars])

| | |
|--------------------|--|
| Explanation | There is an internal software error encountered in the IOS Port Manager. |
|--------------------|--|

%PM-3-INTERNALERROR : Port Manager Internal Software Error ([chars]: [chars]: [dec]: [chars])

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%PM-4-PVLAN_TYPE_CFG_ERR : Failed to set VLAN [dec] to a [chars] VLAN

| | |
|---------------------------|---|
| Explanation | Platform failed to set private vlan type. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PM-4-PORT_BOUNCED : Port [chars] was bounced by [chars].

| | |
|---------------------------|---|
| Explanation | The Port Manager needed to perform a reactivation of a port in the link down state during a switchover. A port is only reactivated when the port data structures lack consistency between the active and standby supervisors. Active ports in the link down state were returned to the link up state by the reactivation event. |
| Recommended Action | No action is required. |

%PM-4-MPLS_MTU_PORT_CFG : MPLS MTU size [dec] is not supported by port [chars].

| | |
|---------------------------|---|
| Explanation | The MPLS MTU size configured on the port is larger than the maximum MTU size that can be supported by this port. As a result, large packets can be dropped. |
| Recommended Action | Reduce the MPLS MTU size. |

%PM-4-MPLS_MTU_EC_CFG : MPLS MTU size [dec] is not supported by one or more ports in channel [chars].

| | |
|---------------------------|---|
| Explanation | The MPLS MTU size configured on the ethernet channel is larger than the maximum MTU size that can be supported by one or more ports in this channel. As a result, large packets can be dropped. |
| Recommended Action | Reduce the MPLS MTU size, or remove these ports from the channel before increasing the MPLS MTU size. |

%PM-4-PORT_INCONSISTENT : Port [chars] is inconsistent: IDB state [chars] (set %TE ago), link: [chars] (%TE ago), admin: [chars] (%TE ago).

Explanation Port Manager on Standby discovered that the port state has been inconsistent for more than 1 second. Inconsistent ports are reactivated on switchover (you will see PORT_BOUNCED message).

Recommended Action No action is required.

%PM-4-PORT_CONSISTENT : Port [chars] consistency has been restored, IDB state: [chars].

Explanation Port Manager on Standby discovered that port state became consistent again.

Recommended Action No action is required.

PMAN

%PMAN-0-PROCESS_NOTIFICATION : The process lifecycle notification component failed because [chars]

Explanation The process lifecycle notification component failed, preventing proper detection of a process start and stop. This problem is likely the result of a software defect in the software sub-package.

Recommended Action Note the time of the message and investigate the kernel error message logs to learn more about the problem and see if it is correctable. If the problem cannot be corrected or the logs are not helpful, copy the error message exactly as it appears on the console along with the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PMAN-3-PROCFAILOPT : An optional process [chars] has failed (rc [dec])

Explanation A process that does not affect the forwarding of traffic has failed.

Recommended Action Note the time of the message and investigate the kernel error message logs to learn more about the problem. Although traffic will still be forwarded after receiving this message, certain functions on the router may be disabled as a result of this message and the error should be investigated. If the logs are not helpful or indicate a problem you cannot correct, copy the error message as it appears on the console and the output of show tech-support and provide the information to a Cisco technical support representative.

%PMAN-0-PROCFAILCRIT : A critical process [chars] has failed (rc [dec])

Explanation A process important to the functioning of the router has failed.

%PMAN-0-PROCFAILCRIT : A critical process [chars] has failed (rc [dec])

| | |
|---------------------------|---|
| Recommended Action | Note the time of the message and investigate the error message logs to learn more about the problem. If the problem persists, copy the error message and the output of show platform software tech-support into a plaintext file and contact Cisco technical support with the gathered information. |
|---------------------------|---|

%PMAN-6-PROCSTART : The process [chars] has started

| | |
|---------------------------|--|
| Explanation | The process has launched and is operating properly. |
| Recommended Action | No user action is necessary. This message is provided for informational purposes only. |

%PMAN-6-PROCSHUT : The process [chars] has shutdown

| | |
|---------------------------|--|
| Explanation | The process has gracefully shutdown. |
| Recommended Action | No user action is necessary. This message is provided for informational purposes only. |

%PMAN-3-PROCHOLDDOWN : The process [chars] has been helldown (rc [dec])

| | |
|---------------------------|---|
| Explanation | The process was restarted too many times with repeated failures and has been placed in the holddown state. |
| Recommended Action | This message will appear with other messages related to the process. Check the other messages to determine the reason for the failures and see if corrective action can be taken. If the problem persists, copy the error messages and the output of show platform software tech-support into a plaintext file and contact Cisco technical support. |

%PMAN-3-PROCFAIL : The process [chars] has failed (rc [dec])

| | |
|---------------------------|---|
| Explanation | The process has failed as the result of an error. |
| Recommended Action | This message will appear with other messages related to the process. Check the other messages to determine the reason for the failures and see if corrective action can be taken. If the problem persists, copy the error messages and the output of show platform software tech-support into a plaintext file and contact Cisco technical support. |

%PMAN-3-PROCFAIL_IGNORE : [chars] process exits and failures are being ignored due to debug settings. Normal router functionality will be affected. Critical router functions like RP switchover, router reload, FRU resets, etc. may not function properly.

| | |
|--------------------|---|
| Explanation | A process exit or failure is being ignored due to the user-configured debug settings. |
|--------------------|---|

%PMAN-3-PROCFAIL_IGNORE : [chars] process exits and failures are being ignored due to debug settings. Normal router functionality will be affected. Critical router functions like RP switchover, router reload, FRU resets, etc. may not function properly.

Recommended Action If this behavior is desired and the debug settings are set according to the user's preference, no action is needed. If the appearance of this message is viewed as a problem, change the debug settings. The router is not expected to behave normally with this debug setting. Functionality like SSO switchover, router reloads, FRU resets, etc. will be affected. This setting should only be used in a debug scenario. It is not normal to run the router with this setting

%PMAN-3-RELOAD_RP_SB_NOT_READY : Reloading: [chars]

Explanation The RP is being reloaded since there is no ready standby instance

Recommended Action Make sure this is not due to an error condition

%PMAN-3-RELOAD_RP : Reloading: [chars]

Explanation The RP is being reloaded

Recommended Action Make sure this is not due to an error condition. If it is due to an error condition, collect information requested by the other log messages

%PMAN-3-RELOAD_SYSTEM : Reloading: [chars]

Explanation The system is being reloaded

Recommended Action Make sure this is not due to an error condition. If it is due to an error condition, collect information requested by the other log messages

%PMAN-3-RPSWITCH : RP switch initiated. Critical process [chars] has failed (rc [dec])

Explanation A RP switchover has been initiated due to a critical fault

Recommended Action Make sure this is not due to an error condition. If it is due to an error condition, collect debug information like all console output and log files

%PMAN-3-PROC_BAD_EXECUTABLE : Bad executable or permission problem with process [chars]

Explanation The executable file used for the process is bad or has permission problem

Recommended Action Make sure that the named executable is replaced with correct executable

%PMAN-3-PROC_BAD_COMMAND : Non-existent executable or bad library used for process [chars]

| | |
|---------------------------|---|
| Explanation | The executable file used for the process is missing or a dependent library is bad |
| Recommended Action | Make sure that the named executable is present and dependent libraries are good |

%PMAN-3-PROC_EMPTY_EXEC_FILE : Empty executable used for process [chars]

| | |
|---------------------------|---|
| Explanation | The executable file used for the process is empty |
| Recommended Action | Make sure that the named executable is of non-zero size |

%PMAN-5-EXITACTION : Process manager is exiting: [chars]

| | |
|---------------------------|--|
| Explanation | The process manager is exiting |
| Recommended Action | Make sure this is not due to an error condition. If it is due to an error condition, collect information requested by the other log messages |

%PMAN-6-PROCSTATELESS : The process [chars] is restarting stateless

| | |
|---------------------------|--|
| Explanation | The process has requested a stateless restart. |
| Recommended Action | No user action is necessary. This message is provided for informational purposes only. |

%PMAN-3-RELOAD_FRU_IGNORED : All [chars]/[dec] reloads are being ignored. This is being done for debugging purposes and will be changed at a later time to allow the reload. Critical router functions like RP switchover, router reload, FRU resets, etc. may not function properly.

| | |
|---------------------------|--|
| Explanation | A supervisor failure is being ignored due to debugging purposes. |
| Recommended Action | This will be removed at a later point in time |

%PMAN-3-PROC_RESTART_CNT_EXCEEDED : The process [chars] restart count ([dec]) has exceeded the configured limit ([dec])

| | |
|---------------------------|---|
| Explanation | The process was restarted many times and has exceeded the configured limit. |
| Recommended Action | This message will appear with other messages related to the process. Check the other messages to determine the reason for the failures and see if corrective action can be taken. If the problem persists, copy the error messages and the output of show platform software tech-support into a plaintext file and contact Cisco technical support. |

PMDWDM

%PMDWDM-4-TCA : [chars]: [chars] [chars] [chars] value (%lld) threshold (%lld) [chars]

Explanation The specified PM FEC TCA has been declared or released

Recommended Action Recommended action is to repair the source of the alarm.

PMIPv6

%PMIPv6-5-TUNNELDELETE : Deleting the Proxy Mobile IPv6 tunnel [chars]

Explanation The PMIPv6 tunnel is being deleted.

Recommended Action If you suspect this condition contact technical support representative with the output of show tech

%PMIPv6-5-TUNNELUP : Bringing up the Proxy Mobile IPv6 tunnel [chars]

Explanation The PMIPv6 tunnel is being deleted.

Recommended Action If you suspect this condition contact technical support representative with the output of show tech

POLICY_API

%POLICY_API-4-POLICYOVERRIDE : Dynamic policy overriding static on intf:[chars]

Explanation Static policy and dynamic policy are configured on the interface. The dynamic policy will override the static policy.

Recommended Action Remove the static policy config if desired.

%POLICY_API-4-POLICYSTATICCLR : Static policy on intf:[chars] cleared. Dynamic policy in use.

Explanation A dynamic policy was overriding the static policy. Static policy has been cleared.

Recommended Action No action required.

%POLICY_API-4-POLICYDYNCLR : Dynamic policy on intf:[chars] cleared. Static policy in use.

Explanation A dynamic policy was overriding the static policy. The dynamic policy has been cleared, the static policy is now in effect.

Recommended Action No action required.

%POLICY_API-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

Explanation Initialization of the specified subblock data structure could not be accomplished.

Recommended Action

POLICY_MANAGER

%POLICY_MANAGER-2-INIT_FAILURE : Init failure: [chars]

Explanation A problem occurred in the Policy Manager during initialization

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%POLICY_MANAGER-3-PRE_INIT_CALL : Policy Manager routine called prior to initialization

Explanation The Policy Manager component was called prior to initialization. This could result in vital information being lost.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%POLICY_MANAGER-2-NO_FREE_EVENT_BUFFERS : Event pool depleted: [chars]

Explanation The event pool has been depleted. There are no free buffers to process event

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%POLICY_MANAGER-3-INVALID_SEVERITY : Invalid event severity [hex]

Explanation The event that was received by the Policy Manager contained an invalid severity and was therefore not processed.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%POLICY_MANAGER-3-NULL_ACTION_ROUTINE : NULL action routine invoked

| | |
|---------------------------|---|
| Explanation | The Policy Manager attempted to invoke an action which was NULL |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%POLICY_MANAGER-3-INVALID_ACTION : Invalid action

| | |
|---------------------------|---|
| Explanation | An invalid Policy Manager action was detected. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%POLICY_MANAGER-3-INVALID_PARAMETERS : A call to Policy Manager is made with invalid parameters

| | |
|---------------------------|---|
| Explanation | A call to Policy Manager was made with one or more invalid parameters |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%POLICY_MANAGER-3-NO_FREE_POLICY_IDS : No more Policy IDs available

| | |
|---------------------------|--|
| Explanation | There are no more Policy IDs that can be allocated. The effect of this is that Policy Manager policies can no longer be created. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

PORT_SECURITY**%PORT_SECURITY-2-PSECURE_VIOLATION : Security violation occurred, caused by MAC address [enet] on port [chars].**

| | |
|---------------------------|--|
| Explanation | An unauthorized device attempted to connect on a secure port. The MAC address of the unauthorized device and the secure port are specified in the error message. |
| Recommended Action | Determine the device that attempted to connect on the secure port. Notify your network system administrator of this condition. |

%PORT_SECURITY-2-PSECURE_VIOLATION_VLAN : Security violation on port [chars] due to MAC address [enet] on VLAN [dec]

Explanation An unauthorized device attempted to connect on a secure trunk port. The MAC address of the unauthorized device and the secure trunk and VLAN are specified in the error message.

Recommended Action Determine the device that attempted to connect via the secure trunk port. Notify your network system administrator of this condition.

%PORT_SECURITY-6-VLAN_REMOVED : VLAN [int] is no longer allowed on port [chars]. Its port security configuration has been removed.

Explanation A configured VLAN has been excluded either due to port mode change or allowed VLAN list change and is removed from the configuration.

Recommended Action No action is required.

%PORT_SECURITY-6-ADDR_REMOVED : Address <[int]:[enet]> exists on port [chars]. It has been removed from port [chars].

Explanation A routed port has changed to a switched port. An address stored in the previous switched port configuration is now in conflict and has been deleted.

Recommended Action No action is required.

%PORT_SECURITY-6-VLAN_FULL : Vlan [int] on port [chars] has reached its limit. Address [enet] has been removed.

Explanation The voice VLAN has become the same as the access VLAN, but the number of addresses allowed on the access VLAN has been reached, so the address has been deleted.

Recommended Action No action is required.

%PORT_SECURITY-6-ADDRESSES_REMOVED : Maximum system secure address count reached. Some secure addresses configured on port [chars] removed.

Explanation Some configured and sticky MAC addresses on the specified port were removed from the configuration. The number of secure addresses that the system supports was exceeded. This condition occurs only during hot swapping or port-mode changes (for example, when the port is converted from a L3 to a L2 port).

Recommended Action

%PORT_SECURITY-6-ADDR_ADDFAIL : Address <[int]:[enet]> could not be added to [chars] due to [chars].

Explanation In some rare cases MAC addresses are learnt before all software modules finished initialization and fully functional. In such cases this address may not be known to all modules in the system.

Recommended Action No action is required.

POS_SPA_FRMR

%POS_SPA_FRMR-3-RESTART_FAILURE : Framer restart failed for SPA in [int]/[int] with error [dec] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, framer restart error has occurred. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-RECONFIG_FAILURE : Framer reconfiguration failed for SPA in [int]/[int], with error [dec] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the framer reconfig error has occurred. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-RECONCILE_FAILURE : Framer reconciliation failure for SPA in [int]/[int] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the framer reconciliation error has occurred. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-TRANSMIT_DELAY_MISMATCH : The software ([int]) and hardware ([int]) copy of transmit-delay is detected to be different during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the software and hardware copy of the transmit delay parameter is found to be different. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-CRC_MISMATCH : The software ([dec]) and hardware ([dec]) copy of crc is detected to be different during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the software and hardware copy of the crc parameter is found to be different. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-MTU_MISMATCH : The software ([dec]) and hardware ([dec]) copy of mtu is detected to be different during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the software and hardware copy of the mtu is found to be different. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-FRAMING_MISMATCH : The software ([dec]) and hardware ([dec]) copy of framing is detected to be different during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the software and hardware copy of the framing parameter is found to be different. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-C2_MISMATCH : The software ([int]) and hardware ([int]) copy of sonet c2 is detected to be different during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the software and hardware copy of the sonet C2 parameter is found to be different. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-S1S0_MISMATCH : The software ([int]) and hardware ([int]) copy of sonet S1S0 is detected to be different during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the software and hardware copy of the sonet S1S0 parameter is found to be different. This indicates an error and the SPA will be reset as normal and will impact traffic.

%POS_SPA_FRMR-3-S1S0_MISMATCH : The software ([int]) and hardware ([int]) copy of sonet S1S0 is detected to be different during Minimal Disruptive Restart.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-LOOPBACK_MISMATCH : The software ([dec]) and hardware ([dec]) copy of loopback is detected to be different during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the software and hardware copy of the loopback parameter is found to be different. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-SCRAMBLE_MISMATCH : The software ([dec]) and hardware ([dec]) copy of scrambling is detected to be different during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the software and hardware copy of the scrambling parameter is found to be different. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_FRMR-3-NULL_DEV_OBJ :

Explanation Pointer to framer device object is NULL.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

POS_SPA_SPI4

%POS_SPA_SPI4-3-RESTART_FAILURE : SPI4 restart failed for SPA in [int]/[int] with error [dec] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, spi4 restart error has occurred. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

%POS_SPA_SPI4-3-RECONFIG_FAILURE : SPI4 reconfiguration failed for SPA in [int]/[int], with error [dec] during Minimal Disruptive Restart.

Explanation During Minimal Disruptive Restart, the spi4 reconfig error has occurred. This indicates an error and the SPA will be reset as normal and will impact traffic.

Recommended Action Open a case with Cisco Technical Assistance Center for further assistance.

PRELIB_DL through QOS

- [PRELIB_DL](#)
- [PRST_IFS](#)
- [PSM](#)
- [PT](#)
- [PTPD](#)
- [PUNT_INJECT](#)
- [PW](#)
- [QFP_MLP](#)
- [QLLC](#)
- [QOS](#)

PRELIB_DL

%PRELIB_DL-3-UNREGISTERED_DLOPEN : Unregistered request to dlopen library [chars]

Explanation The program is attempting to dynamically open a library that has not been explicitly listed on its list of dynamically opened libraries. This represents a potential security threat as well as creates potential run-time instabilities

Recommended Action File a DDTS against the listed program to register the library in question. If this was an unexpected call to dlopen then the source of the call should be root-caused and closed

PRST_IFS

%PRST_IFS-3-GENERAL : persistent media IFS general error: [chars]

Explanation Persistent media module (file system) general error

%PRST_IFS-3-GENERAL : persistent media IFS general error: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%PRST_IFS-3-FILE : persistent media IFS file error: [chars]

| | |
|---------------------------|---|
| Explanation | Persistent media module (file system) file error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PRST_IFS-3-FILEMEM : No memory to update [chars]. Please free some space

| | |
|---------------------------|--|
| Explanation | There is no filesystem memory for the system to write an updated version of the persistent variable file. |
| Recommended Action | Please free space on the filesystem shown in the error message as soon as possible. This will involve deleting existing files, and/or squeezing the filesystem if the filesystem requires it (bootflash for example may require it). |

PSM**%PSM-3-BADLABELADD : Cannot add label - [chars].**

| | |
|---------------------------|---|
| Explanation | Unable to create label due to reason given. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PSM-3-NOOCE : Attempt to get labels from OCE failed - [chars].

| | |
|---------------------------|---|
| Explanation | Calling function has provided insufficient information to get labels. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PSM-3-NONIPINFO : Non-ip info: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PSM-3-CHUNK : [chars]: [chars] [hex] [hex]

| | |
|---------------------------|---|
| Explanation | Parameterized Chunk Manager error occurred |
| Recommended Action | Refer to the Bug Navigator at www.cisco.com to see if this condition has been previously reported and resolved in a later release. If not, gather the output of show version , show running-config and show process memory and contact your Cisco technical support representative. |

%PSM-3-INVALIDPARAM : Invalid parameter - [chars]

| | |
|---------------------------|---|
| Explanation | Calling function has passed an invalid parameter. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PSM-3-NORESOURCE : [chars] [dec]

| | |
|---------------------------|---|
| Explanation | Resource Failure: %s %d |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PSM-3-ISSU_REG : ISSU client [chars] ([dec]), entity [dec], failed ISSU registration: [chars]

| | |
|---------------------------|---|
| Explanation | ISSU negotiation failed for this XDR client. |
| Recommended Action | This error indicates a coding problem. It is an error that will occur every time this image is run, and requires a code change to fix it. |

%PSM-3-L2_PATH : [chars] - path set [hex]([IPv6 address]), path [chars]

| | |
|---------------------------|---|
| Explanation | Internal error while processing layer 2 path. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

PT

%PT-3-BADSCOPERATION : Invalid [chars] of subcommand [dec] on ruleset %S.

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%PT-3-BADRULEUNLOCK : Invalid unlock on ruleset %S, [chars].

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%PT-3-BADRULEDELETE : Error deleting ruleset %S, [chars].

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%PT-3-NOOPERATION : No [chars] operation defined for [chars] parameter [chars].

| | |
|---------------------------|--|
| Explanation | An internal data consistency error has been detected. |
| Recommended Action | Call your technical support representative for assistance. |

%PT-6-INVOPERATION : An invalid [chars] operation defined for [chars] parameter [chars].

| | |
|---------------------------|--|
| Explanation | An internal data consistency error has been detected. |
| Recommended Action | This is an internal verification message, and doesn't affect operation, but notify your technical support representative that this image has this problem. |

%PT-4-RULESETWRITER : PT ruleset %S evaluation skipped; ruleset is being modified.

Explanation An incoming connection attempt was not evaluated by the identified PT ruleset because that ruleset is in the process of being modified.

Recommended Action The editing of the ruleset must be completed before it's eligible to process an incoming connection attempt.

%PT-3-PARAMEVALERR : PT ruleset %S parameter error in [chars] line [dec]; [chars] [dec].

Explanation A parameter evaluation error was detected for the specified ruleset, operation and line.

Recommended Action Call your technical support representative for assistance.

%PT-3-PARAMRESULTERR : PT ruleset %S protocol [chars] parameter [chars] parse error: [chars].

Explanation The final value of a ruleset's protocol/parameter string could not be decoded.

Recommended Action Review the ruleset elements that set the parameter value to determine if they need to be modified to generate a valid result.

%PT-3-PARAMRESULTINVALID : PT ruleset %S protocol [chars] parameter [chars] invalid: [chars].

Explanation The value of a ruleset's protocol/parameter is not valid.

Recommended Action Review the ruleset elements that set the parameter value to determine if they need to be modified to generate a valid result.

%PT-4-PARAMCHANGED : PT ruleset %S: [chars] parameter [chars] changed; [chars].

Explanation A protocol parameter value, generated by a ruleset, was modified to be valid for protocol translation operation.

Recommended Action Review the ruleset processing for the identified parameter to determine if it needs to be modified to generate a value that is, for example, within the range of values supported for PT.

%PT-6-RULESETLIMIT : Ruleset [chars] refused an incoming connection due to the max-user limit.

Explanation An incoming connection attempt that would normally be processed by a Protocol Translation ruleset has been refused because of the ruleset's configured max-user limit.

Recommended Action The network administrator may need to verify that the ruleset max-user limit is appropriate.

%PT-6-RULESETACCESS : Ruleset [chars] refused an incoming connection due to the access-class.

| | |
|---------------------------|--|
| Explanation | An incoming connection attempt that was matched by a Protocol Translation ruleset has been refused because the source address failed the ruleset's configured access-class test. |
| Recommended Action | The network administrator may need to verify that the ruleset access-class configuration is appropriate. |

PTPD**%PTPD-0-CHASFS_OBJECT_CREATE : Failed to create chassis filesystem object [chars] because [chars]**

| | |
|---------------------------|--|
| Explanation | The hardware failed to create a chassis filesystem object. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%PTPD-3-CHASFS_OBJECT_DESTROY : Failed to destroy chassis filesystem object [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem object that should have been destroyed was not destroyed. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%PTPD-0-CHASFS_PROPERTY_CREATE : Failed to create chassis filesystem object [chars] property [chars] because [chars]

| | |
|---------------------------|--|
| Explanation | A chassis filesystem property was not properly created. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%PTPD-3-CHASFS_PROPERTY_DESTROY : Failed to destroy chassis filesystem property [chars]/[chars] because [chars]

| | |
|--------------------|--|
| Explanation | A chassis filesystem property that should have been destroyed was not destroyed. |
|--------------------|--|

%PTPD-3-CHASFS_PROPERTY_DESTROY : Failed to destroy chassis filesystem property [chars]/[chars] because [chars]

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-CHASFS_PROPERTY_GET : Failed to read chassis filesystem object [chars] property [chars] because [chars]

Explanation A chassis filesystem property was not properly read by the system.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-CHASFS_PROPERTY_SET : Failed to write chassis filesystem object [chars] property [chars] because [chars]

Explanation A chassis filesystem property failed to write.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-CHASFS_OBJECT_WATCH : Failed to watch chassis filesystem object [chars] because [chars]

Explanation A chassis filesystem object was not watched because of the reason stated in the error message.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-CHASFS_OBJECT_NOT_PRESENT : Expected chassis filesystem object [chars] not present.

Explanation A chassis filesystem object expected to be present is not. This could be due to a software defect or filesystem failure.

%PTPD-0-CHASFS_OBJECT_NOT_PRESENT : Expected chassis filesystem object [chars] not present.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-CHASFS_PROPERTY_NOT_PRESENT : Expected chassis filesystem object [chars] property [chars] not present.

Explanation A chassis filesystem object property expected to be present is not. This could be due to a software defect or filesystem failure.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-IPC_INITIALIZATION : IPC initialization failed because [chars]

Explanation IPC initialization failed. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-IPC_CONNECT_MASTER : IPC connection to the active RSP failed because [chars]

Explanation IPC connection to the active RSP failed. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-IPC_CONNECTION_INVALID : An IPC connection has invalid state.

Explanation An IPC connection has an invalid state. This could be due to a software defect or system resource exhaustion.

%PTPD-0-IPC_CONNECTION_INVALID : An IPC connection has invalid state.

| | |
|---------------------------|--|
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |
|---------------------------|--|

%PTPD-0-MQIPC_INITIALIZATION : MQIPC initialization failed because [chars]

| | |
|---------------------------|--|
| Explanation | MQIPC initialization failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%PTPD-0-MQIPC_ADVANCE : Failed to advance MQIPC queue because [chars]

| | |
|---------------------------|--|
| Explanation | The MQIPC initialization failed. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%PTPD-0-MESSAGE_REGISTER : Failed to register with active RSP because [chars]

| | |
|---------------------------|--|
| Explanation | The active RSP failed to register. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%PTPD-0-MESSAGE_RESPONSE : An invalid message response was received because [chars]

| | |
|--------------------|---|
| Explanation | An invalid message response was received. This could be due to a software defect or system resource exhaustion. |
|--------------------|---|

%PTPD-0-MESSAGE_RESPONSE : An invalid message response was received because [chars]

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-MESSAGE_RELAY : Failed to relay a message because [chars]

Explanation Failed to relay a message. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-RESOURCE : Resource allocation failed in [chars] because [chars]

Explanation The system is unable to allocate the requested resource.

Recommended Action In most cases, this message is seen as a result of a temporary resource issue. Retry the request for the resource when the system is experiencing lower traffic volumes. If the message persists, reload the router using the reload command.

%PTPD-0-EVENT_LIBRARY : An event facility initialization or maintenance function failed because [chars]

Explanation An event facility initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

%PTPD-0-PEER_TABLE : A peer table initialization or maintenance function failed because [chars]

Explanation A peer table initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion.

Recommended Action In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot | subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative.

PUNT_INJECT**%PUNT_INJECT-2-CAUSE_CFG_ERR : [chars] [chars] initialization failed**

| | |
|---------------------------|---|
| Explanation | Initialization of Punt/Inject cause failed due to invalid configuration parameters |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PUNT_INJECT-3-DROP_POLICY_SKIPPED : [chars] cause=[dec] output drop policy skipped

| | |
|---------------------------|---|
| Explanation | Output drop policy unexpected skipped on punt packet |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PUNT_INJECT-5-DROP_PUNT_INTF : punt interface policer drop packet from [chars], MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Explanation | drop punt packet from source interface |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%PUNT_INJECT-5-DROP_PUNT_CAUSE : punt cause policer drop packet cause [dec], MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Explanation | drop punt packet by punt cause policer |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

PW**%PW-3-IPC_ALLOC_FAILED : [chars]**

Explanation Allocation of an IPC packet buffer by the pseudo wired feature failed.

Recommended Action LOG_STD_ACTION

%PW-3-IPC_SEND_FAILED : [chars]

Explanation Transmission of an IPC message by the pseudo wire feature failed.

Recommended Action LOG_STD_ACTION

QFP_MLP**%QFP_MLP-2-BQS_SCRATCH_TOOSMALL : QFP BQS Scratch area too small for MLP feature usage (size: [dec], need: [dec]).**

Explanation Cisco internal software error. QFP MLP initialization detected that the BQS scratch memory area is insufficient for MLP usage. The MLP Bundle interfaces will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-2-PROXY_IPC_INIT_FAILED : QFP MLP Proxy IPC interface initialization failure (result: [dec]).

Explanation Cisco internal software error. QFP MLP initialization detected that the Proxy IPC interface initialization failed. The MLP Bundle interfaces will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-INV_PROXY_MSG : QFP MLP Proxy received invalid Message ID [dec]

Explanation Cisco internal software error. QFP MLP Proxy received an invalid Message ID. This message will be ignored.

%QFP_MLP-3-INV_PROXY_MSG : QFP MLP Proxy received invalid Message ID [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%QFP_MLP-3-PROXY_INV_RX_TX_INTF_VALUE : QFP MLP Proxy ([chars] [chars]) invalid Rx/Tx interface value [dec] for interface [dec] (handle)

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP MLP Proxy was unable to complete the requested MLP Bundle state change or configuration update due to an invalid interface Rx/Tx designation in the proxy request. The associated MLP Bundle interface may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-3-PROXY_NULL_BUNDLE : QFP MLP Proxy ([chars] [chars]) NULL Bundle sub-block for interface [dec] (handle)

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP MLP Proxy was unable to complete the requested MLP Bundle state change or configuration update due to an invalid or uninitialized Bundle sub-block. The associated MLP Bundle interface may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-3-PROXY_NULL_LINK : QFP MLP Proxy ([chars] [chars]) NULL Member Link sub-block for interface [dec] (handle)

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP MLP Proxy was unable to complete the requested MLP Member Link state change or configuration update due to an invalid or uninitialized Member Link sub-block. The associated MLP Member Link interface may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-3-PROXY_INV_BUNDLE_STATE : QFP MLP Proxy ([chars] [chars]) invalid Bundle state [chars] ([dec]) for interface [chars]

Explanation Cisco internal software error. QFP MLP Proxy message could not be processed due to the MLP Bundle being in an incorrect state to accept the message. The associated MLP Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_INV_LINK_STATE : QFP MLP Proxy ([chars] [chars]) invalid Link state [chars] ([dec]) for interface [chars]

Explanation Cisco internal software error. QFP MLP Proxy message could not be processed due to the MLP Link being in an incorrect state to accept the message. The associated MLP Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_INV_SUB_DEV_ID : QFP MLP Proxy ([chars] [chars]) invalid Sub-Device ID [dec] for interface [chars]

Explanation Cisco internal software error. QFP MLP Proxy message Bundle Add could not be processed for the indicated interface due to an invalid Sub-Device ID. The associated MLP Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_INV_LINK_ID : QFP MLP Proxy ([chars] [chars]) invalid Link ID [dec] for interface [chars]

Explanation Cisco internal software error. QFP MLP Proxy message Link Add could not be processed for the indicated interface due to an invalid Link ID. The associated MLP Bundle interface may not be fully functional as a result of this condition.

%QFP_MLP-3-PROXY_INV_LINK_ID : QFP MLP Proxy ([chars] [chars]) invalid Link ID [dec] for interface [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_DUP_LINK_ID : QFP MLP Proxy ([chars] [chars]) duplicate Link ID [dec] for interface [chars] and [chars]

Explanation Cisco internal software error. QFP MLP Proxy message Link Add could not be processed for the indicated interface due use of a given Link ID on multiple member links within the same MLP Bundle. The associated MLP Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_INV_CLASS_INFO : QFP MLP Proxy ([chars] [chars]) invalid Class Info (Base: [hex], Num: [dec]) for interface [chars]

Explanation Cisco internal software error. QFP MLP Proxy message contained invalid MLP Class information. The associated MLP Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_INV_MRRU : QFP MLP Proxy ([chars] [chars]) invalid MRRU [dec] for interface [chars]

Explanation Cisco internal software error. QFP MLP Proxy message contained an invalid MLP Bundle MRRU. The associated MLP Bundle interface may not be fully functional as a result of this condition. Possible workaround is to reduce the interface mtu on the Multilink bundle interface on both ends of the connection to 9216 or less and then shut/no shut the Multilink bundle interface to force renegotiation of the MLP MRRU.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_INV_LOST_FRAG_TO : QFP MLP Proxy ([chars] [chars]) indicated an invalid lost fragment timeout ([dec]) for interface [chars]

Explanation Cisco internal software error. QFP MLP was provided a invalid lost fragment timeout value. The associated MLP Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_INV_BUFFER_LIMIT : QFP MLP Proxy ([chars] [chars]) indicated an invalid Rx buffer limit ([dec]) for interface [chars]

Explanation Cisco internal software error. QFP MLP was provided a invalid Rx buffer limit value. The associated MLP Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_INV_TX_LINK_WEIGHT : QFP MLP Proxy ([chars] [chars]) indicated an invalid Tx Link weight ([dec]) for interface [chars]

Explanation Cisco internal software error. QFP MLP Proxy message contained invalid Tx Link weight information. The associated MLP Member Link and/or Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_INV_TX_LINK_FRAG_SIZE : QFP MLP Proxy ([chars] [chars]) indicated an invalid Tx Link optimal fragment size ([dec]) for interface [chars]

Explanation Cisco internal software error. QFP MLP Proxy message contained invalid Tx Link optimal fragment size information. The associated MLP Member Link and/or Bundle interface may not be fully functional as a result of this condition.

%QFP_MLP-3-PROXY_INV_TX_LINK_FRAG_SIZE : QFP MLP Proxy ([chars] [chars]) indicated an invalid Tx Link optimal fragment size ([dec]) for interface [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_B_TX_IDLE_LINK_TRANSITION : QFP MLP Proxy ([chars] [chars]) invalid Bundle state [chars] ([dec]) for interface [chars]/[chars]

Explanation Cisco internal software error. Multilink Idle-Link transition could not be made due invalid Bundle state at the time of the request. The associated MLP Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_LAI_TX_IDLE_LINK_TRANSITION : QFP MLP Proxy ([chars] [chars]) invalid Link state [chars] ([dec]) for interface [chars]/[chars]

Explanation Cisco internal software error. Multilink Idle-Link transition could not be made due invalid Link state at the time of the request to convert the link to an Idle-Link. The associated MLP Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-3-PROXY_LIA_TX_IDLE_LINK_TRANSITION : QFP MLP Proxy ([chars] [chars]) invalid Link state [chars] ([dec]) for interface [chars]/[chars]

Explanation Cisco internal software error. Multilink Idle-Link transition could not be made due invalid Link state at the time of the request to convert the Idle-Link to an active link. The associated MLP Bundle interface may not be fully functional as a result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QFP_MLP-4-PROXY_SYNC : QFP MLP Proxy ([chars] [chars]) Bundle/Link sync issue with interface [chars]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP MLP Proxy message processing detected a Bundle-Link state synchronization abnormality. This condition should be cosmetic. Full context of the message will aid in problem isolation. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-3-PROXY_IPC_ALLOC_FAIL : QFP MLP Proxy ([chars]) response lost due to buffer allocation failure (Interface [chars])

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP MLP Proxy message processing detected a IPC buffer allocation failure during response processing. The associated MLP interface may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-4-PROXY_IPC_ALLOC_FAIL2 : QFP MLP Proxy ([chars]) response lost due to buffer allocation failure (Interface [chars])

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP MLP Proxy message processing detected a IPC buffer allocation failure during proxy response processing. The associated MLP functionality may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-3-PROXY_SID_UPDATE_LOCK_ERROR : QFP MLP Proxy ([chars]) Multiple SID Update Locks to same interface (Interface [chars], SID: [hex])

| | |
|--------------------|---|
| Explanation | Cisco internal software error. QFP MLP Proxy message processing detected a Bundle Schedule SID update sequence error. One or more interface schedules could have been affected. |
|--------------------|---|

%QFP_MLP-3-PROXY_SID_UPDATE_LOCK_ERROR : QFP MLP Proxy ([chars]) Multiple SID Update Locks to same interface (Interface [chars], SID: [hex])

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%QFP_MLP-3-PROXY_SID_UPDATE_COMPLETE_ERROR : QFP MLP Proxy ([chars]) SID Update Complete w/o Preceding Lock (Interface [chars], SID: [hex])

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP MLP Proxy message processing detected a Bundle Schedule SID update sequence error. One or more interface schedules could have been affected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-3-EARLY_RX_INIT : QFP MLP Early Receive initialization error ([chars])

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. Multilink Early Receive initialization could not be performed due to indicated error. This could cause possible lost MLP encapsulated packets during member link/bundle bringup and possibly cause the failure to complete member link/bundle initialization. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-3-EARLY_RX_CLEANUP : QFP MLP Early Receive cleanup error ([chars])

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. Multilink Early Receive cleanup could not be performed due to indicated error. This could cause possible QFP memory leak. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-3-MCMP_TX_ENCAP_SEQ_CFG_ERROR : MLP QoS encap-sequence ([dec]) must be less than the number of MCMP suspension classes ([dec]) for output interface [chars], MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Explanation | User software configuration mismatch with PPP Multilink Multiclass (MCMP). User needs to either reduce the highest encap-sequence in the policy-map to be less than the number of negotiated MCMP suspension classes or increase the number of suspension classes negotiated with the peer. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-3-MCMP_INVALID_RX_CLASS : MLP MCMP suspension class ID ([dec]) received from the peer must be less than the number of negotiated classes ([dec]) for interface [chars] (Peer error), MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Explanation | Possible error on the peer device with PPP Multilink Multiclass (MCMP). Received MLP packet contained a MCMP suspension class ID greater than the number of negotiated suspension classes. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-4-TX_BUNDLE_FLOWED_OFF : QFP MLP Tx Bundle [chars] flowed OFF for an abnormal duration due to one or more congested member link(s) (Ticks: [dec])

| | |
|---------------------------|---|
| Explanation | Possible Cisco internal software or hardware error. QFP MLP Tx processing detected that a MLP Bundle interface was flowed off for an extended period of time due to a congested member link queue. The associated MLP Bundle interface may not be fully functional as a result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-4-TX_BUNDLE_FLOWED_ON : QFP MLP Tx Bundle [chars] flowed ON after being flowed OFF for an abnormal duration (Ticks: [dec])

| | |
|--------------------|---|
| Explanation | Possible Cisco internal software or hardware error. QFP MLP Tx processing detected that a MLP Bundle interface was flowed off for an extended period of time due to a congested member link queue. The associated MLP Bundle interface may not be fully functional as a result of this condition. |
|--------------------|---|

%QFP_MLP-4-TX_BUNDLE_FLOUED_ON : QFP MLP Tx Bundle [chars] flowed ON after being flowed OFF for an abnormal duration (Ticks: [dec])

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%QFP_MLP-3-MLP_INVALID_EVSI_INTF_STATE : MLP Link Add/Update received with invalid EVSI indication for Member Link: [chars], Bundle: [chars]

| | |
|---------------------------|---|
| Explanation | Either the user attempted to mix broadband and non-broadband member links on the same bundle or an internal error has occurred processing a configuration update. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QFP_MLP-4-TX_BUNDLE_LOOP : QFP detected re-entry into MLP Tx Bundle [chars]),. MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Explanation | Possible software configuration error in the network that causes re-entry of packets into the MLP Tx bundle. Packets are being discarded and the bundle will not be fully operational until the loop is terminated |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

QLLC

%QLLC-3-NOMEM : Not enough memory available

| | |
|---------------------------|---|
| Explanation | There is not enough memory in the system to complete this request. |
| Recommended Action | Add more memory to the router. Otherwise, reduce the configuration or the load on the router. |

%QLLC-3-NOLLC2 : Unable to open an llc2 session

| | |
|---------------------------|---|
| Explanation | An LLC2 session could not be established with the destination MAC address. |
| Recommended Action | Verify that the qlc partner statement in the configuration file is correct, and that the partner is on the desired LAN. |

%QLLC-3-NULLPTR : [chars] ptr is null

| | |
|---------------------------|---|
| Explanation | The specified structure was not configured. |
| Recommended Action | Confirm the configuration commands for the structure. |

%QLLC-4-NOQLLC : Unable to open qlc session, current state is [chars]

| | |
|---------------------------|---|
| Explanation | A QLLC session could not be established. |
| Recommended Action | Verify that the qlc partner and the qlc xid commands are correct. |

%QLLC-3-DIFFPRTR : [enet] - Different partner - originally [enet] - now [enet]

| | |
|---------------------------|---|
| Explanation | The partner for this QLLC virtual MAC address does not match the MAC address that was defined with the qlc partner command. |
| Recommended Action | Verify that the qlc partner statement in the configuration file is correct. |

%QLLC-3-NONULLXID : Couldn't make null xid - [enet] -[enet]

| | |
|---------------------------|---|
| Explanation | An attempt to create an IEEE XID failed. |
| Recommended Action | Verify that the qlc partner statement in the configuration file is correct, and that the partner is on the desired LAN. |

%QLLC-3-NOXID2 : Couldn't make xid - [enet] -[enet]

| | |
|---------------------------|---|
| Explanation | The QLLC XID could not be forwarded to the LAN. |
| Recommended Action | Verify that the qlc partner and the qlc xid commands are correct. |

%QLLC-3-BADSTATE : Bad qlc state - [chars] - [enet]

| | |
|---------------------------|--|
| Explanation | An invalid LLC primitive was detected. |
| Recommended Action | Verify that the Token Ring ports and any participating LAN devices are configured correctly. |

%QLLC-3-NOMACADDR : No Inx entry for macaddr [enet]

| | |
|---------------------------|--|
| Explanation | No virtual MAC address was defined for this interface. |
| Recommended Action | Define the virtual MAC address, using either the x25 map qllc or the x25 pvc qllc command. |

%QLLC-3-BADOPCODE : Opcode [chars] is invalid

| | |
|---------------------------|---|
| Explanation | Either remote source-route bridging or local acknowledgment is configured incorrectly. |
| Recommended Action | Verify that remote source-route bridging and local acknowledgment are configured correctly. |

%QLLC-3-IFRAME : [chars]

| | |
|---------------------------|---|
| Explanation | An I-Frame was discarded due to network congestion. |
| Recommended Action | Verify that the LAN is not beaconing and that it is not in a congested state. Copy the error message exactly as it appears, and report it to your technical support representative. |

%QLLC-3-BADSTATEEVENT : Bad qllc state - [chars] event - [chars] macaddr - [enet]

| | |
|---------------------------|--|
| Explanation | The LLC primitive specified placed the router in an invalid state. |
| Recommended Action | Verify that the Token Ring ports and any participating LAN devices are configured correctly. |

%QLLC-3-NOPAKENQ : Pak enqueue failed

| | |
|---------------------------|--|
| Explanation | A packet was not sent to the LAN. |
| Recommended Action | Verify that the LAN partner is configured correctly, and that the partner is on the desired LAN. |

%QLLC-3-BADRSRBOPCODE : Bad opcode [hex] from [enet] to [enet]

| | |
|---------------------------|--|
| Explanation | Either remote source-route bridging is incorrectly configured, or the other RSRB device is down. |
| Recommended Action | Verify that remote source-route bridging is configured correctly with the right version of the IOS software. |

%QLLC-3-LNXNOTFOUND : Inx_remove_macaddr_hash did not find target Inx

| | |
|--------------------|--|
| Explanation | The qllc srb command was not defined for this interface. |
|--------------------|--|

%QLLC-3-LNXNOTFOUND : Inx_remove_macaddr_hash did not find target Inx

Recommended Action Add a valid qlhc srb statement for this serial interface.

%QLLC-3-BADQLLCSTATE : Bad qlhc state - [chars]

Explanation An invalid QLLC primitive was detected.

Recommended Action Verify that the partner QLLC device is configured correctly.

%QLLC-3-GENERRMSG : [chars]

Explanation The text string provided with this error message describes the specific QLLC problem.

Recommended Action Follow the instructions that appear with the error message. Copy the error message exactly as it appears, and report it to your technical support representative.

%QLLC-3-BAD_XID : Sna configuration error for [enet]: Lan device is PU2.1, X.25 device is PU2.0 (XID Format 1)

Explanation The IBM Gateway (3172) or front-end processor on the LAN is sending XID Format 3 which is used to communicate with PU2.1 devices. The X.25 device is a PU2.0 (3174) that is configured to send XID Format 1 messages. This is a very rare situation - for example, Revision A5.6 on, and C5.1 on the 3172. A likely cause is that the revision levels on the IBM equipment are incompatible.

Recommended Action Check the revision levels on the external equipment, and upgrade them if necessary.

%QLLC-3-NO_QLLCBUFFER : M bit Reassembly failed - couldn't allocate a packet

Explanation The router ran out of memory to allocate buffers.

Recommended Action Make sure that the router configuration is adequate for the service expected of it. You might want to tune the buffer pools, or upgrade to a larger router. At the very least, you will need more memory.

%QLLC-3-INCALL_CFG : Incoming call: No QLLC Service Access Point Configured for x.25 subaddress [chars]

Explanation A remote X.25 device is calling the router for QLLC service using a subaddress that was not configured by the X.25 routing facility. The subaddress was not configured for QLLC service.

Recommended Action Correct the QLLC configuration. Configure only the subaddress on the QLLC service, not the complete X.121 address that the remote X.25 device uses.

%QLLC-3-INCALL_NO_PARTNER : Incoming call: No partner Mac Address configured - X.25 subaddress [chars]

Explanation There is an incoming call, but a connection cannot be initiated to a partner since no partner is configured in a qllc dlsw command (for QLLC/DLSw+ only).

Recommended Action Configure a partner for the incoming calling (such as using the qllc dlsw partner command).

%QLLC-3-PARTNER_MISMATCH : Outgoing call: Partner Mac Address [enet] doesn't match configured partner [enet]

Explanation A device tried to connect to a QLLC VMAC (from Token Ring, for instance), but the MAC address of that device does not match the partner in the qllc dlsw command.

Recommended Action Correct the QLLC configuration to match the right partner.

%QLLC-3-QLLCMAP_ERR : Incoming call: QLLC map entry not found

Explanation A software error in the router code occurred.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%QLLC-3-NO_QSR : No QLLC Service Access Points defined

Explanation No QLLC services have been configured, even though the router will accept incoming calls for QLLC.

Recommended Action Configure the QLLC service required.

%QLLC-3-NO_RESOURCE : Incoming Call: Insufficient resources available

Explanation This message is reporting insufficient system memory.

Recommended Action Upgrade the memory.

QOS

%QOS-3-DETACH : Failed to detach [chars] [chars] service policy

| | |
|---------------------------|--|
| Explanation | The specified type of service policy has failed to detach itself from the attachment point indicated. The service policy will remain attached although repeated attempts to remove such should fail in a similar manner. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show policy-map [type] <attachment point>) |

%QOS-4-SERV_FRAG_POLICY : service-policy [chars] can't be attached without corresponding service-fragment policy on appropriate target first

| | |
|---------------------------|--|
| Explanation | For a fragment policy that is being installed check if parent targets have relevant service-fragment class installed. If not then we can not allow fragment policy installation. |
| Recommended Action | Check the parent target to add relevant service-fragment class. |

%QOS-6-SUSPEND : Suspending service policy [chars] on [chars] in [chars] direction

| | |
|---------------------------|---|
| Explanation | The interface bandwidth is less than the total bandwidth that is required for QoS policy on this interface. |
| Recommended Action | There is no user action required. |

%QOS-3-TARGET_INDEX : [chars] [chars] service policy attachment failed to assign index

| | |
|---------------------------|---|
| Explanation | The configuration of a service policy has resulted in the failure to generate an internal unique identifier which represents the attachment point (target) of the associated policy map. This is an internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-3-UNASSIGNED : A [chars] event resulted in an (un)assigned index for [chars] [chars]

| | |
|--------------------|--|
| Explanation | The configuration of either the addition or removal of the specified entity has resulted in the failure to either assign or remove a previously assigned index from such. This is an internal software error and indicates an out of sync condition if operating in a redundant manner |
|--------------------|--|

%QOS-3-UNASSIGNED : A [chars] event resulted in an (un)assigned index for [chars] [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QOS-3-ISSU_GTP_CFG_ENHANCE : GTP-AIC configuration has been detected, which is totally different with peer. Delete all GTP-AIC related config to proceed with ISSU/ISSD. After ISSU/ISSD done, config GTP-AIC again.

Explanation PEER GTP-AIC configuration would be messed up.

Recommended Action Manually remove all GTP-AIC configuration and reinitiate ISSU/ISSD.

%QOS-6-POLICY_INST_FAILED : Service policy installation failed on [chars]. [chars]. policy:[chars], dir:[chars], ptype:[chars], ctype:[chars]

Explanation Service policy could not be installed

Recommended Action This is an informational message only. No action is required.

%QOS-6-POLICY_REM_FAILED : Service policy remove failed on [chars] policy:[chars], dir:[chars], ptype:[chars], ctype:[chars]

Explanation Service policy could not be removed

Recommended Action This is an informational message only. No action is required.

%QOS-3-INVALID_PLTYPE : No entry found for pltype : [int] in global service_policy_queue during service-policy deletion.

Explanation No entry was found for a pltype when un-queue of a service-policy from global service_policy_queue was undergoing. This will result in freeing a service-policy without un-queuing it from global service_policy_queue.

Recommended Action Need to figure out why there was no entry found for a pltype in the global service_policy_queue when passed with a service-policy while deletion. check the traceback for details

%QOS-3-HA_COLLISION_INVALID : Received collision table of type [int]

| | |
|---------------------------|---|
| Explanation | The specified type of collision is an invalid value which indicates that the message received on the standby RP contains erroneous data. This is an internal software error which should result in a reload of the standby RP so that the bulk sync of configuration can be sent once more by the active RP. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-3-HA_COLLISION_SIZE : Received [chars] message, total/unit [int]/[int] [chars]

| | |
|---------------------------|---|
| Explanation | The specified type of collision table has been determined to contain a discrepancy between the total message size and the individual table unit that is being decoded on the standby RP. This is an internal software error which should result in a reload of the standby RP so that the bulk sync of configuration can be sent once more by the active RP. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-3-HA_COLLISION_STRING : Received [chars] message, length [int] for string [chars]

| | |
|---------------------------|---|
| Explanation | The specified type of collision table contains an individual unit within the message which has an incorrectly encoded string which is used to represent the collision which is being synced from the active RP. This is an internal software error which should result in a reload of the standby RP so that the bulk sync of configuration can be sent once more by the active RP. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-3-COLLISION_TYPE : Type [int] is invalid for collision [chars]

| | |
|--------------------|--|
| Explanation | The specified type of collision is an invalid value which indicates that there is no support for the generation of an internal identifier. This is an internal software error. |
|--------------------|--|

%QOS-3-COLLISION_TYPE : Type [int] is invalid for collision [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%QOS-3-COLLISION_DELETE : [chars] unable to remove index [hex]

| | |
|---------------------------|---|
| Explanation | The specified type of collision is unable to removed the specified index. This is an internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-3-COLLISION_COUNT : [chars] mismatch, count [int]

| | |
|---------------------------|---|
| Explanation | The specified type of collision has detected that although there are no collisions present the count of such indicates otherwise. This is an internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-6-COLLISION_MAX : Maximum number of collision entries, [int], reached

| | |
|---------------------------|---|
| Explanation | The system limit on the number of collision entries used in assigning unique identifiers for policy and class maps et al. has been reached. This indicates that no further configuration of entities which require additional generation of a unique identifier will be possible. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-3-INDEX_EXISTS : [chars] attempt to add index [hex] [chars]

| | |
|--------------------|---|
| Explanation | The specified entity is unable to add an entry due to the detection of an existing entry with the same index or name. This is an internal software error. |
|--------------------|---|

%QOS-3-INDEX_EXISTS : [chars] attempt to add index [hex] [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show cce cp id [collisions]** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QOS-3-INDEX_DELETE : [chars] unable to remove index [hex]

Explanation The specified entity is unable to removed the specified index. This is an internal software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QOS-3-BLT_INDEX : Failed to assign index for target/policy/class/action [int]/[int]/[int]/[chars]

Explanation The configuration of queuing has resulted in the failure to generate an internal unique identifier which represents the queue. This is an internal software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QOS-6-RELOAD : [chars], reloading [chars]

Explanation A synchronization attempt between the active and standby RP peers has failed with the reason indicated. The standby peer is reloaded in an attempt to resynchronize when operating in a stateful redundant mode.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%QOS-4-INVALIDBW : interface [chars]: Not enough bandwidth to configure service-policy

Explanation The issued interface bandwidth is less than the total bandwidth that is required for QoS policy on this interface.

Recommended Action Reconfigure the service policy for the new issued bandwidth on the interface, or increase the issued interface bandwidth to the required value. There is no user action required.

%QOS-6-ACTIVATE : Activating service policy [chars] on [chars] in [chars] direction

Explanation The interface bandwidth is more than the total bandwidth that is required for QoS policy on this interface.

Recommended Action There is no user action required.

%QOS-6-NON_AGG_WRED : ATM SPA doesn't support true non-aggregate WRED. All non-specified dscp/prec values will be aggregated in default WRED profile

Explanation ATM SPA has limited hardware capability which is not enough to support traditional WRED. ATM SPA would support 'limited' non-aggregate WRED for the specified dscp/prec values (maximum of 6) and the rest non-specified dscp/prec colors will go to default WRED profile.

Recommended Action There is no user action required.

%QOS-6-ACTIVATE_NOHW : Activating service policy [chars] in [chars] direction

Explanation

Recommended Action

%QOS-3-HA_GET_ARG_NUM : [chars] Failure in getting event identification

Explanation QoS configuration can't be synced to the standby

Recommended Action Contact your Cisco technical support representative.

%QOS-3-HA_BULK_SYNC : [chars] Failure in completing bulk sync

Explanation QoS configuration can't be synced to the standby

Recommended Action Contact your Cisco technical support representative.

| | |
|--|---|
| %QOS-3-HA_BULK_SYNC_BEFORE_TIMEOUT : [chars] Failure in completing bulk sync before timeout | |
| Explanation | QoS configuration can't be synced to the standby The interface bandwidth is more than the total bandwidth that is required for QoS policy on this interface. |
| Recommended Action | Contact your Cisco technical support representative. There is no user action required. |
| %QOS-3-HA_MISMATCH : Bulk sync failed for [chars] collisions, space available [int], buffer [int] | |
| Explanation | A synchronization attempt between the active and standby RP peers has failed due to the detection of a mismatch in the source and destination sizes of a buffer used in the transport of the collision information to the standby RP. This is an internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
| %QOS-3-ISSU_COMP : Failed to exchange capability with peer | |
| Explanation | The attempt to negotiate version capabilities and the exchange of the peer support has failed. This indicates that QoS is unable to support a redundant operation with the standby RP peer. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
| %QOS-3-MAIN_SUB_POLICY : FR fragmentation is not supported with interface or sub-interface based policies | |
| Explanation | On Cisco 7500 series routers, Frame Relay fragmentation is not supported when service policies are configured on the interface or subinterfaces. |
| Recommended Action | Remove the service policy configuration under the interface or subinterfaces and reissue either the class command from Frame-Relay DLCI interface configuration mode or the frame-relay fragment command from map-class configuration mode. |
| %QOS-3-CFGERR : interface [chars]: configuration failed | |
| Explanation | Enough memory is not available to configure feature |

%QOS-3-CFGERR : interface [chars]: configuration failed

| | |
|---------------------------|---|
| Recommended Action | It is not possible to configure issued command (feature) unless required memory is released by some other means |
|---------------------------|---|

%QOS-3-VTEMP_MLP_ERR : A service policy cannot be attached to a PPP virtual-access interface when ppp multilink is enabled. A service policy can be attached to a ppp multilink bundle interface only.

| | |
|--------------------|--|
| Explanation | A service policy attached to a virtual-template is usually copied to associated virtual-access interfaces. However, if such a virtual-access interface joins a multilink ppp bundle, the policy is not attached to the virtual-access interface. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | This is informational message. No action is required |
|---------------------------|--|

%QOS-3-VTEMP_VC_ERR : Attaching a service policy to a PPP/PPPoE virtual-access interface is not allowed when another policy is already attached to the vc/pvc to which the PPP/PPPoE virtual-access interface is bound.

| | |
|--------------------|---|
| Explanation | Attaching a service policy to a PPP/PPPoE virtual-access interface is not allowed when another policy is already attached to the vc/pvc to which the PPP/PPPoE virtual-access interface is bound. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Remove the policy attached to the vc/pvc before attaching a new policy to a PPP/PPPoE virtual-access interface |
|---------------------------|--|

%QOS-3-HQF_FEA_API_FAIL : Feature processing API returned NULL pak with INCOMPLETE flag

| | |
|--------------------|--|
| Explanation | HQF calls feature processing API to get the next packet from the feature, for example Frame-relay fragmentation. The API returns conflicting flags with NULL packet. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Check if the system resources, e.g. packet buffers, are exhausted. Contact technical support |
|---------------------------|--|

%QOS-3-VTEMP_SUB_ERR : Attaching a service policy to a PPP/PPPoE virtual-access interface is not allowed when another policy is already attached to the subinterface to which the PPP/PPPoE virtual-access interface is bound.

| | |
|--------------------|---|
| Explanation | Attaching a service policy to a PPP/PPPoE virtual-access interface is not allowed when another policy is already attached to the subinterface to which the PPP/PPPoE virtual-access interface is bound. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Remove the policy attached to the subinterface before attaching a new policy to a PPP/PPPoE virtual-access interface |
|---------------------------|--|

%QOS-3-VTEMP_MAIN_ERR : Attaching a service policy to a PPP/PPPoE virtual-access interface is not allowed when another policy is already attached to the main interface to which the PPP/PPPoE virtual-access interface is bound.

| | |
|---------------------------|---|
| Explanation | Attaching a service policy to a PPP/PPPoE virtual-access interface is not allowed when another policy is already attached to the main interface to which the PPP/PPPoE virtual-access interface is bound. |
| Recommended Action | Remove the policy attached to the main interface before attaching a new policy to a PPP/PPPoE virtual-access interface |

%QOS-3-HQFPOOLERR : interface [chars]: failed to allocate hqf particle

| | |
|---------------------------|--|
| Explanation | The HQF particle pool is empty. It cannot process a router generated packet |
| Recommended Action | Collect show buffer and show policy interface output and send to technical support |

%QOS-3-HQFNOPAK : interface [chars]: pak_reparent failed

| | |
|---------------------------|--|
| Explanation | pak_reparent has been invoked and failed. |
| Recommended Action | Collect show buffer and show policy interface output and send to technical support |

%QOS-3-MULTIPLE_INTERFACES : Load-sharing mode has changed. Queuing functionality may not be supported after this.

| | |
|---------------------------|--|
| Explanation | Dynamic interface has changed its route out of different physical interface. It might resolve into multiple interfaces for queuing. HQF functionality will get affected. |
| Recommended Action | Likely scenario is that CEF is returning multiple paths across different interfaces. For those tunnels which has queuing features need unique out-going interface to resolve queuing hierarchy. Common instance is per-prefix load-balancing to per-destination. Need to remove offending configurations. May also need reload to get the queuing in working state |

%QOS-3-ATLEAST_ONE_FAILOVER_ERR : Fail-over of dynamic interface [chars] failed

| | |
|---------------------------|---|
| Explanation | Dynamic interface has changed its route out of different physical interface and queuing can not set-up data-structures for that new physical interface |
| Recommended Action | One possibility is that new physical interface already has service-policy or some other dynamic interface already has queuing data-structures associated with that physical interface and conjunction of such service-policies are not allowed. Remove one or the other service-policy in that case. If that is not the case then contact technical support |

%QOS-3-HQFPAKREQUEUE : interface [chars]: pak_requeue_head has been invoked

Explanation pak_requeue_head() function has been invoked on a packet. One or more packets have been dropped. This is not the normal mode of operation

Recommended Action Collect show buffer and show policy interface output and send to technical support

%QOS-3-INVALID_POLICY : queueing policy at session/tunnel can co-exist only with class-default shaping policy at sub-interface/pvc

Explanation There already may be user-defined flat policy or hierarchical policy at the sub-interface/pvc. With existing of such policy no queueing policy is allowed on session

Recommended Action Make sub-interface/pvc based policy just one level policy with only class-default

%QOS-3-COEX_NOT_ALLWD : queueing policy at session cannot co-exist with service policy at sub-interface/pvc

Explanation There already may be user-defined flat policy or hierarchical policy at the sub-interface/pvc. With existing of such policy no queueing policy is allowed on session

Recommended Action Remove the policy attached to the sub-interface/pvc before attaching a new policy to a session

%QOS-3-BURST_BC_ERR : Burst Bc increased to [dec] bytes

Explanation If Burst BC is less than the default burst size then Burst Bc is increased to AF_DEAFULT_BURST

Recommended Action This is informational message. No action is required

%QOS-3-HQF_QID_ERR : Maximum number of QoS queues ([dec]) reached.

Explanation The system has run out of QoS queue identifiers and cannot allocate any more until existing queues are freed up.

Recommended Action Existing QoS configurations will need to be removed to free up more queue identifiers. For example, remove existing QoS service-policy configurations or modify policy-map templates to have fewer queueing actions.

%QOS-4-LC_STATS_MSG_DROPPED : QoS statistics update message dropped due to [chars]

| | |
|---------------------------|---|
| Explanation | Changes to QoS counters are sent periodically from linecards to the route processor. One of these statistics update messages was discarded because it was inconsistent or because the route processor ran out of message buffers. The packet and bytes counters for a single service-policy may be underreported by show commands and SNMP queries. |
| Recommended Action | This is an informational message only. No action is required. |

%QOS-3-XDRLEN : Invalid XDR length. Type [dec][chars]. XDR/buffer len [dec]/[dec]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-3-BADXDRSLOT : Invalid XDR slot. Type/len/slot [dec]/[dec]/[chars]. XDR at [hex]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-6-NORMAL_BURST_CHANGED_WARN : Illegal normal burst size; it is increased to [int]

| | |
|---------------------------|--|
| Explanation | Configured normal burst size is less than the Rate. It is considered to be illegal and has been reset based on the Rate. |
| Recommended Action | This is an informational message only. No action is required. |

%QOS-6-EXTENDED_BURST_CHANGED_WARN : Illegal extended burst size; it is increased to [int]

| | |
|---------------------------|--|
| Explanation | Configured extended burst size is less than the Rate. It is considered to be illegal and has been reset based on the Rate. |
| Recommended Action | This is an informational message only. No action is required. |

%QOS-4-FO_IN_USE : Releasing feature object with reference count [dec]

| | |
|---------------------------|---|
| Explanation | This is an internal software error. A QoS policy feature object has a stale reference. |
| Recommended Action | If the message recurs, try to isolate the traffic conditions which trigger the message and contact technical support. Provide the output from the show tech-support and show policy-map interface commands. |

%QOS-3-SA_SESSION_FAILOVER_ERR : Fail-over of dynamic SA session to interface [chars] failed

| | |
|---------------------------|---|
| Explanation | Dynamic SA session has changed its route out of different physical interface and queueing can not set-up data-structures for that new physical interface |
| Recommended Action | One possibility is that new physical interface already has service-policy with queueing configured Remove the other service-policy in that case. If that is not the case then contact technical support |

%QOS-4-DYN_SUSPEND : Queueing hierarchy move failed on [chars], suspending policy.

| | |
|---------------------------|---|
| Explanation | A forwarding path change has moved the given queue to a new port where its QoS queuing policy cannot be satisfied. This is likely due to a conflicting policy or insufficient bandwidth on the new port, or simply that a new port has not yet been calculated. The policy has thus been temporarily suspended. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-6-DYN_INSTALL : Installing suspended policy on [chars].

| | |
|---------------------------|---|
| Explanation | IOS is restoring a previously suspended policy. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%QOS-4-WRED_QLIMIT_OUT_OF_SYNC : On interface [chars] user-defined wred max threshold higher than default queue-limit

| | |
|--------------------|---|
| Explanation | The user defined random-detect is greater than the default queue-limit for this interface. Some of the random-detect configurations will not function properly due to this anomaly. |
|--------------------|---|

%QOS-4-WRED_QLIMIT_OUT_OF_SYNC : On interface [chars] user-defined wred max threshold higher than default queue-limit

Recommended Action If the random-detect value is configured greater than default queue-limit intentionally then keep it as it is else please investigate and use a random-detect value(s) that will be lower than the default queue-limit.

%QOS-4-HQUEUE_QLIMIT_VALUE_SYNC_ISSUE : The hold-queue value is less than the sum of queue-limit values.

Explanation The hold-queue value is less than the queue-limit configured. This will lead to no-buffer drops instead of tail drops

Recommended Action The hold-queue value should be properly adjusted to prevent no-buffer drops.

%QOS-4-QLIMIT_HQUEUE_VALUE_SYNC_ISSUE : The sum of all queue-limit value is greater than the hold-queue value.

Explanation The hold-queue value is less than the queue-limit configured. This will lead to no-buffer drops instead of tail drops

Recommended Action The hold-queue value should be properly adjusted to prevent no-buffer drops.

%QOS-6-RADIO_MULTI_REM : Remove [chars] policy before removing policy from ([chars])

Explanation Prevent the removal of policies from radio layer if child targets have any queuing policies.

Recommended Action This is an informational message only. No action is required.

%QOS-6-ADAPTIVE_QOS_DISABLED : Adaptive QoS functionality is disabled. Shaper is reset to upper-bound

Explanation Multiple and consecutive reports from peer are not received. This leads to an assumption that the peer has gone away.

Recommended Action Removal and re-application of policy may be required to re-enable the adaptive QoS functionality

RAC through RFS

- [RAC](#)

- [RADIUS](#)
- [RADIX](#)
- [RADPROXY](#)
- [RCMD](#)
- [REDUNDANCY](#)
- [REDUNDANCY_UTILS](#)
- [REGISTRY](#)
- [REPLICATE_OCE](#)
- [RFS](#)

RAC

%RAC-3-RACNOIPL : Can not find lease information for interface [chars]

| | |
|---------------------------|--|
| Explanation | Internal error - DHCP lease information is missing for the interface |
| Recommended Action | Report the problem and how it can be reproduced to Cisco TAC |

%RAC-3-RACNOQ : Can't create RAC work queue

| | |
|---------------------------|--|
| Explanation | Internal error - probable cause is insufficient memory resources |
| Recommended Action | Check available memory. |

%RAC-3-RACIPL : DHCP is already running on interface [chars]

| | |
|---------------------------|---|
| Explanation | The interface already has a DHCP originated address via some other system mechanism |
| Recommended Action | Verify the system configuration |

RADIUS

%RADIUS-3-SERVERTYPEMISMATCH : Servers [chars] and [chars] in server group '[chars]' are of different types.

| | |
|---------------------------|---|
| Explanation | All the servers in a server group should either be of type standard or non-standard. |
| Recommended Action | Enter show running-config command and make sure all the RADIUS servers in the server group printed above are of the same type - either standard or non-standard. |

%RADIUS-3-ALLDEADSERVER : Group [chars]: No active radius servers found. Id [dec].

| | |
|---------------------------|---|
| Explanation | This error message occurs when all the servers configured in a server group are found to be unresponsive. |
| Recommended Action | Check the network connectivity to the RADIUS servers, and check that the servers are running. |

%RADIUS-6-RESETDEADSERVER : Group [chars]: Marked alive as Radius server [chars]:[dec],[dec] configured.

| | |
|---------------------------|---|
| Explanation | RADIUS server is now configured in the server group which was previously marked dead. |
| Recommended Action | No action required. The message is informative in nature and tells that the dead server is now configured and up. |

%RADIUS-6-SERVERALIVE : Group [chars]: Radius server [chars]:[dec],[dec] is responding again (previously dead).

| | |
|---------------------------|--|
| Explanation | A RADIUS server, which previously was dead, has started responding again. |
| Recommended Action | No action required. This message is informative in nature and tells that the server has come up and running. |

%RADIUS-6-GETROUTES : Retrieving static routes in user [chars]

| | |
|---------------------------|--|
| Explanation | Getting initial static routes from RADIUS, using the given user's profile. |
| Recommended Action | No action required. The message is informative in nature and tells that it is getting the static routes based on user's profile. |

%RADIUS-6-GETPOOLS : Retrieving IP-Pools via user [chars]

| | |
|---------------------------|--|
| Explanation | Getting initial IP-Pool definitions from RADIUS, using the given user's profile. |
| Recommended Action | No action required. |

%RADIUS-3-NOHOSTNAME : Failed to retrieve my hostname.

| | |
|---------------------------|--|
| Explanation | Could not find the router's hostname. A hostname needs to be defined, since it determines the RADIUS profile we will retrieve. |
| Recommended Action | Define a hostname on the router's config. Refer to the hostname configuration section of IOS documentation. |

%RADIUS-3-FORKFAIL : Failed to fork process for [chars].

| | |
|---------------------------|---|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible. |
| Recommended Action | If this message recurs, enter show tech-support command and call your technical support representative for assistance. |

%RADIUS-3-IDENTFAIL : Saving of unique accounting ident aborted. Configuration has been modified.

| | |
|---------------------------|---|
| Explanation | The configuration has been modified. We can not save the unique accounting IDENT to nvram. The message is to inform the user that the saving of unique accounting ident is aborted due to the change in configuration. |
| Recommended Action | Save the configuration and try again. If the error persists, Enter show tech-support contact your Cisco technical support representative, and provide the representative with the gathered information for assistance. |

%RADIUS-6-IDENTSAVE : Saving config with new acct ident in nvram.

| | |
|---------------------------|--|
| Explanation | Saving an accounting ident in nvram. The message is informatory. |
| Recommended Action | No action required. |

%RADIUS-3-OVERRUN : Insufficient buffer space [dec] for string value.

| | |
|---------------------------|---|
| Explanation | This error occurs due to the insufficient memory allocated to the buffer. The condition could be caused by a software, less likely by a hardware. The traceback and process information is generated due to this condition. |
| Recommended Action | If the error re-occurs, check bug toolkit on Cisco web-site to look for a bug that has symptoms similar to the one occurred. If there is no entry for the problem you faced, collect the system message text exactly as it appears on the console or in the system log. Enter show tech-support , and contact your technical support representative, and provide the representative with all the information gathered. |

%RADIUS-3-NOSERVERS : No Radius hosts configured or no valid server present in the server group [chars]

| | |
|---------------------------|---|
| Explanation | RADIUS is attempting to send a request, but there are no hosts configured to which the request is send. |
| Recommended Action | Configure a host with the 'radius-server' command providing the IP address of the server. Refer to the radius-server host configuration section of IOS documentation. |

%RADIUS-3-SECRETDEFINERFAILED : Key definition ignored.

| | |
|---------------------------|--|
| Explanation | The user is attempting to store either a corrupted shared secret or memory allocation failed during secret definition. Any existing shared secret will be preserved. |
| Recommended Action | Configure a proper secret. Refer to the shared secret configuration section for RADIUS servers in IOS documentation. |

%RADIUS-3-FORMATLONG : Format string too long. Maximum allowed length is [dec].

| | |
|---------------------------|---|
| Explanation | The user is attempting to configure a format string with a prefix that is too long. |
| Recommended Action | Enter a shorter string to configure. |

%RADIUS-4-NOSERV : Warning: Server [chars]:[dec],[dec] is not defined.

| | |
|---------------------------|---|
| Explanation | The given server is not globally defined, please define it. |
| Recommended Action | Please define the server. Refer to the server configuration section of IOS documentation. |

%RADIUS-4-NOSERVNAME : Warning: Server [chars] is not defined.

| | |
|---------------------------|--|
| Explanation | The given server name is not globally defined, please define it. |
| Recommended Action | Please define the server. Refer to the new server name configuration section of IOS documentation. |

%RADIUS-4-SERVREF : Warning: Server [chars]:[dec],[dec] is still referenced by server group.

| | |
|---------------------------|--|
| Explanation | The server being removed is still referenced by a server group. This message appears when server configuration is removed but in a server group it still exists. |
| Recommended Action | Please dereference the server from the server group as soon as possible. Refer to server group configuration section in IOS documentation. |

%RADIUS-4-SERVREFNAME : Warning: Server %S is still referenced by server group.

| | |
|---------------------------|--|
| Explanation | The server being removed is still referenced by a server group. This message appears when server configuration is removed but in a server group it still exists. |
| Recommended Action | Please dereference the server from the server group as soon as possible. Refer to server group configuration section in IOS documentation. |

%RADIUS-3-NOATTRLIST : No attribute-list passed through parser.

Explanation An internal error has occurred. The reason could be hardware or software. The error appears when no attribute list is passed through the parser.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%RADIUS-3-INVALIDFORMAT : Invalid Nas Port Format: [chars] %c

Explanation The user is attempting to configure an incorrect format string.

Recommended Action Enter a 32 character string using supported characters only.

%RADIUS-4-BADATTRLIST : Unable to process attribute list.

Explanation The attribute list is syntactically incorrect.

Recommended Action Please specify the attribute list as a comma- delimited string of integers between 1 and 255.

%RADIUS-4-NOATTRLISTDEF : Warning: Attribute list [chars] is not defined.

Explanation The given attribute list is not defined.

Recommended Action Please define the attribute list as soon as possible.

%RADIUS-3-DATAERROR : Warning: [chars]

Explanation The given data passed into the Radius subsystem is considered invalid and may result in loss of attributes.

Recommended Action Please collect traceback and contact your technical support representative.

%RADIUS-3-SOURCEPORTALLOCERROR : Warning: Unable to allocate port [dec]

Explanation Unable to allocate a certain port, will not have the full range of source ports. This is not supposed to happen, contact support.

Recommended Action Contact support

%RADIUS-3-CORRUPTCONTEXT : Bad Magic pattern in [chars]:[hex], magic:[hex]!

| | |
|---------------------------|---|
| Explanation | The magic pattern imprinted on the internal hash table data structures in RADIUS subsystem is missing and indicates memory corruption. The memory is getting overwritten by a misbehaving process. The traceback and the process information is generated to the result of the error. |
| Recommended Action | Check bug toolkit on Cisco web-site to look for a bug that has symptoms similar to the one occurred. If there is no entry for the problem you faced, collect the system message text exactly as it appears on the console or in the system log. Enter show tech-support command, contact your technical support representative and provide the representative with the gathered information. |

%RADIUS-3-UNKNOWNAPI : Unknown API type [dec]

| | |
|---------------------------|---|
| Explanation | RADIUS code has been invoked using an unknown API type. This is the result of a bug in the RADIUS subsystem. |
| Recommended Action | Check bug toolkit on Cisco web-site to look for a bug which has symptoms similar to the one occurred. If there is no entry for the problem you faced, Please collect traceback and contact your technical support representative. |

%RADIUS-3-ZEROATTRLEN : Radius attr [dec] len 0

| | |
|---------------------------|---|
| Explanation | An internal error has occurred |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RADIUS-3-BUFFER_OVERFLOW : Radius I/O buffer has overflowed

| | |
|---------------------------|--|
| Explanation | An unusually large number of RADIUS attributes has caused AAA to overflow its RADIUS I/O buffer. The given server is not on the global public servers list. This is an internal consistency error |
| Recommended Action | This is an internal software error. Collect the trace-back appeared as a part of message and report it to your technical support representative. Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RADIUS-3-NOACCOUNTINGRESPONSE : Accounting message [chars] for session %*s failed to receive Accounting Response.

Explanation Maximum number of retransmissions is exceeded. The network is not accessible or the RADIUS server is down.

Recommended Action Check the network connectivity to the RADIUS servers, and check that the servers are running. If not able to debug the issue, enter **show running-config** and contact your technical support representative for assistance.

%RADIUS-3-CANNOT_OPEN_SOCKET : Cannot open UDP socket for service [chars]

Explanation The router is unable to open a socket for UDP communications by the indicated service. Most of the time another service might be using the same port.

Recommended Action Check your configuration to make sure that no other services are using the same port. If not able to debug the issue, enter **show running-config** and contact your technical support representative for assistance.

%RADIUS-4-NOPUBLICSERV : Warning: No servers were found in the public server list.

Explanation The given server is not on the global public servers list. This is an internal consistency error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%RADIUS-4-RADIUS_DEAD : RADIUS server [chars]:[int],[int] is not responding.

Explanation The server might not be available to serve request. server has not responded to repeated requests.

Recommended Action Check for the connectivity to server. Check if the RADIUS server is still active. If not able to debug the issue, enter **show running-config** and contact your technical support representative for assistance.

%RADIUS-4-RADIUS_ALIVE : RADIUS server [chars]:[int],[int] is being marked alive.

Explanation A RADIUS server that previously was not responding has responded to a new request or the deadtimer has expired.

Recommended Action No action is required.

%RADIUS-3-MALLOC_FAILED : Insufficient memory : [chars].

| | |
|---------------------------|---|
| Explanation | Memory allocation failed due to insufficient memory |
| Recommended Action | No action is required. |

%RADIUS-3-IPV4_FIB_SEND_FAILED : Radius ipv4 send failed due to FIB error. Error code: [dec].

| | |
|---------------------------|---|
| Explanation | Radius not able to send udp packets as fib failed |
| Recommended Action | No action is required. |

%RADIUS-3-INVALID_PACKET : Invalid packet posted to RADIUS.

| | |
|---------------------------|--|
| Explanation | Radius not able to process a packet as it in invalid |
| Recommended Action | No action is required. |

RADIX

%RADIX-3-NOMEMORY : No memory available [chars]

| | |
|---------------------------|---|
| Explanation | The system is out of memory. |
| Recommended Action | Try one of these actions to correct the problem: Reduce the number of routes accepted by this router. Upgrade hardware. Use a smaller subset image on run-from-RAM platforms. |

%RADIX-3-DELETE : Error deleting trie entry, [chars]

| | |
|---------------------------|---|
| Explanation | A software programming error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%RADIX-3-ADDMASK : Error adding mask entry, [chars]

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%RADIX-3-BADTREE : Invalid pointer to head of tree, [hex]

| | |
|---------------------------|---|
| Explanation | A software programming error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%RADIX-4-ORPHAN : Orphaned mask [hex], refcount=[dec] at [hex], next=[hex]

| | |
|---------------------------|---|
| Explanation | A software error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%RADIX-2-INIT : No memory for radix initialization: [chars]

| | |
|---------------------------|--|
| Explanation | The system ran out of memory during initialization. This should only occur if an image is too large for the existing dynamic memory. |
| Recommended Action | Use a smaller subset image or upgrade hardware. |

RADPROXY

%RADPROXY-3-NULL_FSM_CONTEXT : Encountered a NULL RP context in [chars]

| | |
|---------------------------|---|
| Explanation | Encountered a NULL context in RP. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RADPROXY-3-INVALID_FSM_STATE : Encountered an invalid RP state [dec] in [chars]

| | |
|---------------------------|---|
| Explanation | An internal RP error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RADPROXY-3-INVALID_FSM_EVENT : Received invalid RP event [chars] in state [chars]

| | |
|--------------------|--------------------------------|
| Explanation | An internal RP error occurred. |
|--------------------|--------------------------------|

%RADPROXY-3-INVALID_FSM_EVENT : Received invalid RP event [chars] in state [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%RADPROXY-3-INIT : Initialisation failure, [chars]

| | |
|---------------------------|---|
| Explanation | An internal error occurred during RP initialisation. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RADPROXY-3-MEMORY_CORRUPT : RP Memory magic corrupted

| | |
|---------------------------|---|
| Explanation | RP memory magic corrupted |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RADPROXY-3-INVALID_MAC : Received invalid MAC [chars] in [chars] from [IP_address] with NAS-IP [IP_address]

| | |
|---------------------------|---|
| Explanation | Error occurred on receiving a invalid MAC |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RADPROXY-3-MEMORY_LOW : Memory low in RP, terminating session

| | |
|---------------------------|---|
| Explanation | System memory is running low. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RADPROXY-3-PROTOCOL_VIOLATION : RP encountered fatal protocol violation

| | |
|---------------------------|---|
| Explanation | Unrecoverable protocol error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

RCMD

%RCMD-4-RCPATTEMPTED : Remote copy from [chars] at [chars] denied

| | |
|---------------------------|---|
| Explanation | An attempt was made to connect to a router through RCP, but the router was not configured as an RCP server. |
| Recommended Action | Configure an RCP server. |

%RCMD-4-RSHATTEMPTED : Remote shell from [chars] at [chars] denied

| | |
|---------------------------|---|
| Explanation | An attempt was made to connect to a router through rsh, but the router was not configured as an rsh server. |
| Recommended Action | Configure an rsh server. |

%RCMD-4-RCMDDNSFAIL : DNS hostname/ip address mismatch. [chars] unknown to DNS

| | |
|---------------------------|---|
| Explanation | The IP address for an incoming rcmd request is not registered with DNS. |
| Recommended Action | Add the IP address to DNS. |

REDUNDANCY

%REDUNDANCY-3-IPC : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | An Interprocess Communication (IPC) error occurred. The details about what was attempted and what went wrong will be printed. |
| Recommended Action | Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance. |

%REDUNDANCY-3-MEMORY_DIFF : WARNING, nonsymmetrical configuration: Active has [dec]K Standby has [dec]K

Explanation The redundant RPs have different memory configurations.

Recommended Action The configuration is allowed but discouraged.

%REDUNDANCY-3-FSM : [chars]

Explanation A REDUNDANCY Finite State Machine (FSM) error occurred. The details about what was attempted and what went wrong will be printed.

Recommended Action Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance.

%REDUNDANCY-3-FSM_ERROR : [chars], Error Code: [dec]

Explanation A REDUNDANCY Finite State Machine (FSM) error occurred. The details about what was attempted and what went wrong will be printed.

Recommended Action Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance.

%REDUNDANCY-3-SWITCHOVER : RP switchover ([chars])

Explanation A REDUNDANCY switchover has occurred.

Recommended Action Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance.

%REDUNDANCY-3-STANDBY_LOST : Standby processor fault ([chars])

Explanation The standby processor is no longer available.

Recommended Action Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance.

%REDUNDANCY-3-PEER_MONITOR : [chars]

Explanation A REDUNDANCY Peer Monitor error occurred. The details about what was attempted and what went wrong will be printed.

%REDUNDANCY-3-PEER_MONITOR : [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance. |
|---------------------------|---|

%REDUNDANCY-5-PEER_MONITOR_EVENT : [chars] ([chars][chars]([dec]))

| | |
|--------------------|---|
| Explanation | A REDUNDANCY Peer Monitor event occurred and reported. The report should help to find out the reason for a switch-over. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance. |
|---------------------------|---|

%REDUNDANCY-3-REDUNDANCY_ALARMS : [chars]

| | |
|--------------------|---|
| Explanation | A REDUNDANCY Alarm assertions error occurred. The details about what was attempted and what went wrong will be printed. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance. |
|---------------------------|---|

%REDUNDANCY-3-CONFIG_SYNC : [chars]

| | |
|--------------------|--|
| Explanation | A REDUNDANCY config sync error occurred. The details about what was attempted and what went wrong will be printed. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance. |
|---------------------------|---|

%REDUNDANCY-3-GENERAL : [chars]

| | |
|--------------------|--|
| Explanation | A REDUNDANCY error occurred. The details about what was attempted and what went wrong will be printed. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance. |
|---------------------------|---|

%REDUNDANCY-4-RELOADING_STANDBY : Reloading the Standby [chars]

| | |
|--------------------|--|
| Explanation | The Active has sent a reload IPC request to the Standby peer. If the reload is not successful then the Standby will be power cycled instead. |
|--------------------|--|

%REDUNDANCY-4-RELOADING_STANDBY : Reloading the Standby [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%REDUNDANCY-4-PEER_DID_NOT_RESPOND : Resetting peer [chars] because it did not respond to verification of HA role.

| | |
|---------------------------|---|
| Explanation | The platform uses the HA hardware lines to perform HA role negotiation at boot time. Whichever controller card becomes the Standby verifies this role via the MBUS with the Active. If the Active does not respond it is reset as it is either hung, or is running an old version of software. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%REDUNDANCY-6-STANDBY_HAS_RELOADED : The Standby [chars] has reloaded; reason: [chars]

| | |
|---------------------------|--|
| Explanation | The Standby peer has reloaded itself to correct a configuration mismatch between the Active and the Standby. The Standby has detected that it is missing configuration for a line card. This has most likely happened because the Standby was reloaded prior to the new card being inserted. |
| Recommended Action | No action is required. |

%REDUNDANCY-6-SWITCHOVERTIME : Time taken to switchover = [dec] milliseconds

| | |
|---------------------------|---|
| Explanation | This is how long the Standby peer took to become Active after a failure of the existing Active. |
| Recommended Action | No action is required. |

%REDUNDANCY-3-EHSAISSU : [chars] failed with error code [[chars]]

| | |
|---------------------------|---|
| Explanation | An ISSU related REDUNDANCY error occurred. The details about what was attempted and what went wrong will be printed. |
| Recommended Action | Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance. |

REDUNDANCY_UTILS

%REDUNDANCY_UTILS-3-INVALID_UNIT_DESIGNATION : An invalid redundancy designation ([chars]) has been detected.

Explanation The redundancy utility assigns each system a unit designation of either an Active Unit, Standby Unit, or Other Unit, and this designation was found to be invalid in the run-time module associated with the system traceback message. This condition most likely occurred because of a software error. The message text provides more information on the specific nature of the error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

REGISTRY

%REGISTRY-3-SEQ_LIST_OVERWRITE : Attempt made to overwrite a set sequence function ([chars])

Explanation A single function can be set as a callback for a specified sequence number for a sequenced list registry. This message indicates that an attempt to set a new callback has failed because a callback function has already been set for this sequence number.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%REGISTRY-3-STUB_CHK_OVERWRITE : Attempt made to overwrite a set stub function in [chars].

Explanation A single function can be set as a callback for when a stub w/ check registry is invoked. This message indicates that an attempt to set a new callback has failed because a callback function has already been set.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%REGISTRY-3-FASTCASE_OUT_OF_BOUNDS : Attempt made in [chars] to register with out of bounds key.

Explanation In FASTCASE registry the key has to be smaller than the size specified when the registry was created. This message indicates that an attempt was made to register with a key out of bounds.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%REGISTRY-3-REG_SUSPEND : Registry of type SUSPEND called when suspends are not allowed.

| | |
|---------------------------|---|
| Explanation | When process blocking has been disabled either using raise_interrupt_level or assign_blocking_disabled, a remote registry of type SUSPEND has been invoked. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%REGISTRY-3-REG_FLAG_ERR : Invalid combination of registry flag and scheduler control : [chars]

| | |
|---------------------------|---|
| Explanation | When process blocking has been disabled either using raise_interrupt_level or assign_blocking_disabled, a remote registry with flags REG_FLAG_DATA_SAFE/REG_FLAG_PEER has been invoked. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%REGISTRY-2-REG_FLAG_DEADLOCK : Registry call to [chars] timed out due to deadlock

| | |
|---------------------------|---|
| Explanation | When a remote registry is not serviced within 25 seconds, the remote process (and presumably the entire system) is deadlocked. This message is printed when the deadlock is broken by a timeout |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%REGISTRY-2-REG_PARSE_ERROR : [chars]: Could not parse notification [chars] : error/no. of items = [dec]

| | |
|---------------------------|---|
| Explanation | Registry library is unable to parse notification received from name server. This could be for several reasons: a) There is a bug in sscanf b) The notification block is corrupted c) The pathname published to the name server is invalid This is a serious issue that affects inter-process communication. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%REGISTRY-3-REG_XDR : [chars]

| | |
|---------------------------|---|
| Explanation | There was an error while marshalling a parameter to a remote (inter-process) registry call |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

REPLICATE_OCE

%REPLICATE_OCE-3-NETWORK_GET_FAIL : MPLS Multicast can not get network offset: datagram [hex]; network [hex]

Explanation MPLS failed to find a suitable packet network offset

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%REPLICATE_OCE-3-NETWORK_SET_FAIL : MPLS Multicast can not set network offset: datagram [hex]; length [dec]; offset [dec]

Explanation MPLS failed to set offset within packet

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%REPLICATE_OCE-6-PAK_TOO_SHORT : Packet too short, datagram size [dec], tl [dec]

Explanation An IP packet which is too short was received

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%REPLICATE_OCE-3-REPLICATE_PATH_WALK_FAIL : [chars] [dec]

Explanation Replicate path walk failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%REPLICATE_OCE-3-REPLICATE_INIT_INSUFFICIENT_PARTICLE_SIZE : Platform particle size [dec] may be insufficient for Label Switched multicast; Minimum particle size recommended is [dec]; Replicate packets may not be forwarded

| | |
|---------------------------|---|
| Explanation | LSM Replicated packets may not be forwarded. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

RFS

%RFS-3-CLIENT_REG : RFS Client ([dec]) Registration failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU client registration failed |
| Recommended Action | Enter the following command: 'show issu client' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why no uid with this value found registered in ISSU Database |

%RFS-3-ENTITY_REG : RFS Entity ([dec]) Registration failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU entity failed to register with ISSU |
| Recommended Action | Enter the following command: 'show issu entities' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this entity failed to register |

%RFS-3-MSGTYPE_REG : RFS Msg Type for Entity ([dec]) Registration failed

| | |
|---------------------------|--|
| Explanation | RFS ISSU Msg Type registration failed |
| Recommended Action | Enter the following commands: 'show issu entities', 'show issu message types' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this message types failed to register |

%RFS-3-MSGGROUP_REG : RFS Msg Group ([dec]) for Entity ([dec]) Registration failed

| | |
|---------------------------|--|
| Explanation | RFS ISSU Msg Group registration failed |
| Recommended Action | Enter the following commands: 'show issu message groups', and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this message group failed to register |

%RFS-3-CAPTYPE_REG : RFS Cap Type for Entity ([dec]) Registration failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU Cap Type registration failed |
| Recommended Action | Enter the following commands: 'show issu capability types' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this capability type failed to register |

%RFS-3-CAENTRY_REG : RFS Cap Entry ([dec]) for Entity ([dec]) Registration failed

| | |
|---------------------------|--|
| Explanation | RFS ISSU Cap Entry registration failed |
| Recommended Action | Enter the following commands: show issu capability entries and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this capability entry failed to register |

%RFS-3-CAPGROUP_REG : RFS Cap Group ([dec]) for Entity ([dec]) Registration failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU Cap Group registration failed |
| Recommended Action | Enter the following commands: show issu capability groups and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this capability group failed to register |

%RFS-3-CLIENT_SESSION_REG : RFS ISSU client shared msg session for entity ([dec]) registration failed

| | |
|---------------------------|--|
| Explanation | RFS ISSU client shared msg session registration failed |
| Recommended Action | Enter the following commands: show issu sessions and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this shared message session failed to register |

%RFS-3-CLIENT_SESSION_UNREG : RFS session ([dec]) Un-Registration failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU client session un-registration failed |
| Recommended Action | Enter the following commands: show issu sessions and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this client session failed to un-register |

%RFS-3-NEGO_SESSION_REG : RFS nego session for Entity ([dec]) Registration failed

| | |
|---------------------------|--|
| Explanation | RFS ISSU shared nego session registration failed |
| Recommended Action | Enter the following commands: 'show issu sessions', 'show issu entities' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this client negotiation session failed to register |

%RFS-3-NEGO_SESSION_UNREG : RFS session ([dec]) Un-Registration failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU shared nego session un-registration failed |
| Recommended Action | Enter the following commands: 'show issu sessions' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this client negotiation session failed to un-register |

%RFS-3-START_NEGO_SESSION : RFS nego ([dec]:[dec]) to [[chars]:[hex]] failed: [[chars]]

| | |
|---------------------------|---|
| Explanation | RFS ISSU start shared nego session failed |
| Recommended Action | Enter the following commands: 'show issu sessions' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this client negotiation session failed to start |

%RFS-3-NEGO_COMP : RFS nego is not compatible ([dec])

| | |
|---------------------------|---|
| Explanation | RFS ISSU start shared nego session failed |
| Recommended Action | Enter the following commands: 'show issu sessions' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this client negotiation session is not compatible |

%RFS-3-SEND_NEGO_MESSAGE : RFS send nego message ([IPV6 address]) failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU send nego message failed |
| Recommended Action | Enter the following commands: 'show issu session' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this client negotiation message failed |

%RFS-3-RECEIVE_NEGO_FAILED : RFS receive nego message ([IPV6 address]) failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU receive nego message failed |
| Recommended Action | Enter the following commands: 'show issu session' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this client negotiation message failed |

%RFS-3-RECEIVE_NEGO_NOT_DONE : RFS receive nego message is not done ([dec])

| | |
|--------------------|---|
| Explanation | RFS ISSU receive nego message is not done |
|--------------------|---|

%RFS-3-RECEIVE_NEGO_NOT_DONE : RFS receive nego message is not done ([dec])

| | |
|---------------------------|---|
| Recommended Action | Enter the following commands: show issu session and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this client negotiation failed to complete |
|---------------------------|---|

%RFS-3-IPC_GET_BUFFER : RFS issu ipc get buffer failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU ipc get buffer failed |
| Recommended Action | Enter the following commands: 'show proc mem' or 'show buffs' to check if memory or buffer is full. shutdown unused tasks or reset cards usually can recover those memory leak problem. Copy the error and send it to TAC if those actions do not help. |

%RFS-3-REG_PORT : RFS reg port ([dec]) failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU reg port failed |
| Recommended Action | Enter the following commands: show ipc port and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this port failed to register |

%RFS-3-LOCATE_PORT : RFS locates port ([chars]) failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU locates port failed |
| Recommended Action | Enter the following commands: show ipc port and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this ipc port could not be located |

%RFS-3-OPEN_CLIENT_PORT : RFS open client port ([chars]) failed. Reason:[chars]

| | |
|---------------------------|--|
| Explanation | RFS ISSU open client port failed |
| Recommended Action | Enter the following commands: show ipc port and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this ipc port could not be opened |

%RFS-3-OPEN_SERVER_PORT : RFS open server port ([chars]) failed

| | |
|---------------------------|--|
| Explanation | RFS ISSU open server port failed |
| Recommended Action | Enter the following commands: show ipc port and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this ipc port could not be opened |

%RFS-3-CREATE_CLIENT_PORT : RFS create client port ([chars]) failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU create client port failed |
| Recommended Action | Enter the following commands: show ipc port and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this ipc port could not be created |

%RFS-3-CREATE_SERVER_PORT : RFS create server port ([chars]) failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU create server port failed |
| Recommended Action | Enter the following commands: show ipc port and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this ipc port could not be created |

%RFS-3-RFS_ISSU_START_SESSION : RFS create rfs_issu_start_session watch boolean failed

| | |
|---------------------------|---|
| Explanation | RFS ISSU create rfs_issu_start_session watch boolean failed |
| Recommended Action | Copy the error and send it to TAC. TAC team can contact the file-systems team to check why this ipc port could not be created |

%RFS-3-RFS_ISSU_START_PORT : RFS create rfs_issu_start_port watch boolean failed

| | |
|---------------------------|--|
| Explanation | RFS ISSU create rfs_issu_start_port watch boolean failed |
| Recommended Action | Enter the following commands: show proc mem and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this watched boolean could not be created |

%RFS-3-RFS_ISSU_NEGO_PROCESS : RFS create rfs_issu_start_port watch boolean failed

| | |
|---------------------------|--|
| Explanation | RFS ISSU create nego process failed |
| Recommended Action | Enter the following commands: show proc mem and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this watched boolean could not be created |

%RFS-3-MSG_MTU : RFS Client ([dec]) get msg mtu failed. Error = [dec]

| | |
|---------------------------|--|
| Explanation | RFS ISSU client get msg mtu failed |
| Recommended Action | Enter the following commands: show issu fsm, show issu ses and copy the error and send it to TAC. TAC team can contact the file-systems team to check why get message mtu failed |

%RFS-3-MSG_XMIT : RFS Client ([dec]) on session ([dec]) to seat [[hex]] failed send transformation with error[[chars]]

Explanation RFS ISSU client send msg failed

Recommended Action Enter the following commands: show issu sessions and copy the error and send it to TAC. TAC team can contact the file-systems team to check why send message for this client failed

%RFS-3-MSG_RCV : RFS Client ([dec]) on session ([dec]) to seat [[hex]] failed receive transformation with error[[chars]]

Explanation RFS ISSU client receive msg failed

Recommended Action Enter the following commands: show issu sessions and copy the error and send it to TAC. TAC team can contact the file-systems team to check why receive message for this client failed

%RFS-3-UNREG_ENTITY : RFS ISSU Client unreg entity failed.

Explanation RFS ISSU client unreg entity failed

Recommended Action Enter the following command: 'show issu entities' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this entity failed to un-register

%RFS-3-RFS_ISSU_CLIENT_OR_ENTITY_ID : RFS ISSU couldnt find client/entity id in peer.

Explanation RFS ISSU couldnt find client/entity id in peer.

Recommended Action Enter the following command: 'show issu entities' and copy the error and send it to TAC. TAC team can contact the file-systems team to check why this client/entity id couldnt find in peer

%RFS-3-MSG_GET_NEGO_VER : RFS Client ([dec]) get msg negotiated version failed. Error = [dec]

Explanation RFS ISSU client get msg negotiated version failed

Recommended Action Enter the following commands: show issu fsm, show issu ses and copy the error and send it to TAC. TAC team can contact the file-systems team to check why get message negotiated version failed

%RFS-3-MSG_INCOMP : [chars](): msg_type [[dec]] under session [[dec]] is incompatible

Explanation The message types are incompatible under ISSU

%RFS-3-MSG_INCOMP : [chars](): msg_type [[dec]] under session [[dec]] is incompatible

| | |
|---------------------------|--|
| Recommended Action | Enter the following command: show issu message types 110 and copy the output and send it to TAC. TAC team can contact the file-systems team to check why messages are incompatible |
|---------------------------|--|

%RFS-3-RFS_RF_PROG_ERR : Failed to send the bulk sync notification done. Error [[dec]].

| | |
|---------------------------|---|
| Explanation | The RFS RF client failed to send the final bulk sync notification. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RFS-3-RFS_RF_PROG_NOT_SENT_ERR : [chars].

| | |
|---------------------------|---|
| Explanation | The RFS RF client has error in sending client progression. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RFS-3-RFS_BOOL_CREATE_ERR : [chars].

| | |
|---------------------------|---|
| Explanation | The RFS RF client has error in creating watched boolean. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

- [RPL](#)

RG_AR

%RG_AR-3-NOPROCESS : Unable to create process for [chars].

| | |
|---------------------------|--|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible.;msgdef_recommended_action(If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |
| Recommended Action | If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |

%RG_AR-3-NOPEER : Peer does not exist for RG ID = ([dec]) with error code = ([dec])

| | |
|---------------------------|---|
| Explanation | Failures in communication with peer |
| Recommended Action | Make sure that there are no configuration errors. |

RG_FAULTS

%RG_FAULTS-6-PRICHANGE : RG Infra RG[[dec]] Priority update. new priority [[dec]] old priority [[dec]] [chars]

| | |
|---------------------------|--|
| Explanation | The runtime priority of the group was updated |
| Recommended Action | Look at rg_infra trace for the cause for priority change |

%RG_FAULTS-6-PRICONFCHANGE : RG Infra RG[[dec]] Priority configuration changed. New runtime priority:[[dec]]

| | |
|---------------------------|--|
| Explanation | The configured priority changed, runtime priority was affected |
| Recommended Action | No action need to be taken |

%RG_FAULTS-3-NOPROCESS : Unable to create a new process for [chars].

| | |
|---------------------------|--|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible.;msgdef_recommended_action(If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |
| Recommended Action | If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |

RG_MEDIA

%RG_MEDIA-3-NOPROCESS : Unable to create process for [chars].

| | |
|---------------------------|--|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible.;msgdef_recommended_action(If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |
| Recommended Action | If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |

%RG_MEDIA-3-NOSOCKET : Unable to open socket

| | |
|---------------------------|--|
| Explanation | The system was unable to initialize an IP connection for RG Protocol |
| Recommended Action | Make sure that there is at least one interface configured to run IP. |

%RG_MEDIA-4-BADSEQ : Group [dec]: Sequence number larger than expected - indicates packet loss

| | |
|---------------------------|---|
| Explanation | Sequence number expected from peer is too big, this usually indicates packet loss |
| Recommended Action | Check for connectivity problems between the 2 peers. |

%RG_MEDIA-3-INVALIDPLATFORM : Unsupported Platform

| | |
|---------------------------|---|
| Explanation | The peer platform is unsupported as a RG-pair |
| Recommended Action | Only like platforms can be configured as a RG pair. |

%RG_MEDIA-3-TIMEREXPIRED : RG id [dec] Hello Timer Expired.

| | |
|---------------------------|--|
| Explanation | This router did not receive hello message from the peer within the configured hold time. This may result in a role change. |
| Recommended Action | Enter show tech-support , show history commands, collect all the information and error message and report it to your technical support representative. |

RG_PROTOCOL

%RG_PROTOCOL-3-NOPROCESS : Unable to create process for [chars].

| | |
|---------------------------|--|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible.;msgdef_recommended_action(If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |
| Recommended Action | If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |

%RG_PROTOCOL-5-ROLECHANGE : RG id [dec] role change from [chars] to [chars]

| | |
|---------------------------|--|
| Explanation | RG role (Init/Standby/Active) has been changed |
| Recommended Action | No action is required. |

%RG_PROTOCOL-3-UNEXPECTEDACTIVE : RG id [dec] unexpected Active peer [IP_address]

| | |
|---------------------------|---|
| Explanation | An unexpected Active peer has been detected via control interface; there are 2 Active RGs in the redundancy group |
| Recommended Action | If this is not a transient state, check for connectivity problems or inconsistency of rg protocol timer configuration between the peers |

%RG_PROTOCOL-4-UNEXPECTEDSTANDBY : RG id [dec] unexpected Standby peer [IP_address]

| | |
|---------------------------|---|
| Explanation | An unexpected Standby peer has been detected via control interface; there are 2 Standby RGs in the redundancy group |
| Recommended Action | If this is not a transient state, check for connectivity problems or inconsistency of rg protocol timer configuration between the peers |

RG_TRANSPORT**%RG_TRANSPORT-3-NOPROCESS : Unable to create process for [chars].**

| | |
|---------------------------|--|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible.;msgdef_recommended_action(If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |
| Recommended Action | If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |

%RG_TRANSPORT-3-TRANSFAIL : Negotiation failure with error code: [dec]

| | |
|---------------------------|---|
| Explanation | The query_status in msg is not RG_TRANS_SUCCESS |
| Recommended Action | Make sure that there are no configuration errors. |

RG_VP**%RG_VP-3-NOPROCESS : Unable to create process for [chars].**

| | |
|---------------------------|--|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible.;msgdef_recommended_action(If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |
| Recommended Action | If this message recurs. Check bug toolkit on Cisco website for the issue. If you didn't find one, Enter Show tech-support command, collect all the information and error message and report it to your technical support representative. |

%RG_VP-6-STANDBY_READY : RG group [dec] Standby router is in SSO state

| | |
|---------------------------|-----------------------------|
| Explanation | Indicates standby readiness |
| Recommended Action | No action is required. |

%RG_VP-6-BULK_SYNC_DONE : RG group [dec] BULK SYNC to standby complete.

| | |
|---------------------------|---------------------------------------|
| Explanation | Indicagtes Standby bulk sync complete |
| Recommended Action | No action is required. |

RMON**%RMON-5-RISINGTRAP : Rising threshold has been crossed because the value of [chars] exceeded the rising-threshold value [dec]**

Explanation A Rising Event will be generated. The value of the specified MIB object has exceeded the rising threshold value as configured by the **rmon alarm** command for the specified object

Recommended Action Take appropriate action on the specified object.

%RMON-5-FALLINGTRAP : Falling threshold has been crossed because the value of [chars] has fallen below the falling-threshold value [dec]

Explanation A Falling Event will be generated. The value of the specified MIB object has fallen below the falling threshold value as configured by the **rmon alarm** command for the specified object

Recommended Action Take appropriate action on the specified MIB object.

%RMON-5-HCRISINGTRAP : Rising trap is generated because the value of [chars] exceeded the rising-threshold hc value [int]

Explanation A Rising Trap has been generated. The value of the specified MIB object has exceeded the rising threshold value as configured by the **rmon hc-alarms** command for the specified object

Recommended Action Take appropriate action on the specified object.

%RMON-5-HCFALLINGTRAP : Falling trap is generated because the value of [chars] has fallen below the falling-threshold hc value [int]

Explanation A Falling Trap has been generated. The value of the specified MIB object has fallen below the falling threshold value as configured by the **rmon hc-alarms** command for the specified object

Recommended Action Take appropriate action on the specified MIB object.

ROLLBACK_ISSU**%ROLLBACK_ISSU-2-INIT : Rollback ISSU client initialization failed to [chars]. Error: [dec] ([chars])**

Explanation The Rollback ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%ROLLBACK_ISSU-3-TRANSFORM_FAIL : Rollback ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

Explanation The Rollback ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the Rollback state between the active device and the standby device is not identical.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>)

%ROLLBACK_ISSU-3-MSG_NOT_OK : Rollback ISSU client 'Message Type [dec]' is not compatible

Explanation The Rollback ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>)

%ROLLBACK_ISSU-3-MSG_SIZE : Rollback ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

Explanation The Rollback ISSU client failed to calculate the MTU for the specified message. The Rollback ISSU client is not able to send the message to the standby device.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>)

%ROLLBACK_ISSU-3-INVALID_SESSION : Rollback ISSU client does not have a valid registered session.

Explanation The Rollback ISSU client does not have a valid registered session.

%ROLLBACK_ISSU-3-INVALID_SESSION : Rollback ISSU client does not have a valid registered session.

| | |
|---------------------------|---|
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |
|---------------------------|---|

%ROLLBACK_ISSU-2-SESSION_REGISTRY : Rollback ISSU client failed to register session information. Error: [dec] ([chars])

| | |
|--------------------|--|
| Explanation | The Rollback ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |
|---------------------------|---|

%ROLLBACK_ISSU-3-SESSION_UNREGISTRY : Rollback ISSU client failed to unregister session information. Error: [dec] ([chars])

| | |
|--------------------|--|
| Explanation | The Rollback ISSU client failed to unregister session information. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |
|---------------------------|--|

%ROLLBACK_ISSU-2-SESSION_NEGO_FAIL_START : Failed to start Rollback ISSU session negotiation. Error: [dec] ([chars])

| | |
|--------------------|--|
| Explanation | The Rollback ISSU client failed to start session negotiation. If a problem occurs with the ISSU session start, the standby device cannot be brought up properly. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id>) |
|---------------------------|---|

%ROLLBACK_ISSU-2-SEND_NEGO_FAILED : Rollback ISSU client failed to send negotiation message. Error: [dec] ([chars])

| | |
|--------------------|--|
| Explanation | The Rollback ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |
|---------------------------|---|

%ROLLBACK_ISSU-2-GET_BUFFER : Rollback ISSU client failed to get buffer for message. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The Rollback ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |

ROUTEMAP

%ROUTEMAP-4-BADTRACKOBJECTTYPE : can't track this type of object

| | |
|---------------------------|---|
| Explanation | Route maps only support STATE type track objects. This object is not a STATE object |
| Recommended Action | Reconfigure the track object to make it a STATE object. |

RPL

%RPL-3-CONFIG_ERROR : RPL [chars] configuration failed: [chars] [chars] code [dec]

| | |
|---------------------------|---|
| Explanation | This Error message would be encountered when trying to configure rpl through api. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RPL-3-CHUNK_ERROR : [chars]

| | |
|---------------------------|---|
| Explanation | This Error message would be encountered when trying to 1. access chunk or chunk element when they are not valid. 2. lock failure on chunk element. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RPL-3-MALFORMEDMSG : Malformed [chars] received from: [IPv6 address]

| | |
|--------------------|--|
| Explanation | This Error message would be encountered if a malformed RPL Control message is received |
|--------------------|--|

%RPL-3-MALFORMEDMSG : Malformed [chars] received from: [IPV6 address]

Recommended Informational

Action

RSCMSM

%RSCMSM-3-NO_SUCH_INTERFACE : [chars]: The interface doesn't exist

Explanation The interface for resource measurement doesn't exist at the time of the operation.

%RSCMSM-3-NO_SUCH_INTERFACE : [chars]: The interface doesn't exist

Recommended Action Check the configuration to see if that interface is there

%RSCMSM-5-TEST_ALREADY_RUNNING : One test is already running.

Explanation there is already one test running at the same time.

Recommended Action Please wait for the completeness of the running test before starting another test.

%RSCMSM-3-NO_LIST_CREATED : [chars]: Cannot create interface-based rsc list.

Explanation This failure is due to the list create operation.

Recommended Action Please check the memory at the moment.

RSRB

%RSRB-4-OPTNULL : Remopened and t NULL

Explanation An internal software error occurred.

Recommended Action If any of these messages recur, call your technical support representative for assistance.

%RSRB-4-PEERSTAT : Peer [chars], wrong state [dec]

Explanation An internal software error occurred.

Recommended Action If any of these messages recur, call your technical support representative for assistance.

%RSRB-4-CONNSTAT : Peer [chars], IFin, bad connection state [dec]

Explanation An internal software error occurred.

Recommended Action If any of these messages recur, call your technical support representative for assistance.

%RSRB-4-BADLEN : Peer [chars], [chars], bad length [dec], trn [dec]

Explanation An internal software error occurred.

%RSRB-4-BADLEN : Peer [chars], [chars], bad length [dec], trn [dec]

Recommended Action If either message recurs, call your technical support representative for assistance.

%RSRB-3-BADVERSIONIF : IFin: [chars]: version mismatch, mine [dec], theirs [dec]

Explanation The remote end of a direct serial peer is running the wrong version of the system software. Either the local end, the remote end, or both are not up to date.

Recommended Action Call your technical support representative for an update.

%RSRB-3-BADVERSIONFST : FSTin: [chars]: version mismatch, mine [dec], theirs [dec]

Explanation The remote end of a direct serial peer is running the wrong version of the system software. Either the local end, the remote end, or both are not up to date.

Recommended Action Call your technical support representative for an update.

%RSRB-3-BADVERSIONTCP : [chars]: [dec]/[IP_address]: version mismatch, mine [dec], theirs [dec]

Explanation The remote end of a TCP remote peer is running the wrong version of the system software. Either the local end, the remote end, or both are not up to date.

Recommended Action Call your technical support representative for an update.

%RSRB-3-IFERR : [chars]: [chars]: [chars], op [hex], len [dec], trn [dec]

Explanation The remote end of a direct serial RSRB connection detected a configuration problem or traffic that is not recognized by the configuration.

Recommended Action Examine the configuration on both sides of the serial connection for possible problems. Examine the traffic being offered for propagation with respect to the configuration. The destination target ring is denoted by the value of trn.

%RSRB-3-SENDPUNTIF : [chars]: sent [chars] to [chars]

Explanation The local end of a direct serial RSRB connection detected a configuration problem or traffic that is not recognized by the configuration.

Recommended Action Examine the configuration on both sides of the serial connection for possible problems. Examine the traffic being offered for propagation with respect to the configuration.

%RSRB-3-FSTERR : [chars]: [chars]: [IP_address], op [hex], len [dec], trn [dec]

| | |
|---------------------------|--|
| Explanation | The remote end of a direct serial RSRB connection detected a configuration problem or traffic that is not recognized by the configuration. |
| Recommended Action | Examine the configuration on both sides of the serial connection for possible problems. Examine the traffic being offered for propagation with respect to the configuration. The destination target ring is denoted by the value of trn. |

%RSRB-3-SENDPUNTFST : [chars]: sent [chars] to [chars]

| | |
|---------------------------|--|
| Explanation | The local end of a direct serial RSRB connection detected a configuration problem or traffic that is not recognized by the configuration. |
| Recommended Action | Examine the configuration on both sides of the serial connection for possible problems. Examine the traffic being offered for propagation with respect to the configuration. |

%RSRB-4-BADLENIP : Peer [dec]/[IP_address], [chars], bad length [dec], trn [dec]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If either message recurs, call your technical support representative for assistance. |

%RSRB-4-ILLPEER : Peer [chars] [%-08x], illegal state [dec]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If either of these messages recur, call your technical support representative for assistance. |

%RSRB-4-CONNILLSTATE : Peer [chars], CONN, illegal state [dec]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%RSRB-4-CONIPST : Peer [dec]/[IP_address], CONN, illegal state [dec]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%RSRB-3-HDRNOVRP : Peer [IP_address], HDR, no vrp

Explanation An internal software error occurred.**Recommended Action** If any of these messages recur, call your technical support representative for assistance.

%RSRB-3-HDRVRP : Peer [dec]/[IP_address], HDR, vrp state wrong, [dec]

Explanation An internal software error occurred.**Recommended Action** If any of these messages recur, call your technical support representative for assistance.

%RSRB-4-HDRRECV : Peer [dec]/[IP_address], HDR, rcv state invalid, not empty [dec]

Explanation An internal software error occurred.**Recommended Action** If any of these messages recur, call your technical support representative for assistance.

%RSRB-3-NOMEMORY : Unit [dec], no memory for [chars]

Explanation The requested operation could not be accomplished because of a low memory condition.**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%RSRB-4-LOCAL : Unit [dec], local/vring set simultaneously, vrn [dec]

Explanation An internal software error occurred.**Recommended Action** If either of these messages recur, call your technical support representative for assistance.

%RSRB-3-NOTREM : Null idb and not remote

Explanation An internal software error occurred.**Recommended Action** If any of these messages recur, call your technical support representative for assistance.

%RSRB-4-BADVRE : Bad vre type

Explanation An internal software error occurred.

%RSRB-4-BADVRE : Bad vre type

Recommended Action If any of these messages recur, call your technical support representative for assistance.

%RSRB-4-RNGXFAIL : Ring exchange failure, resetting peer: [chars]

Explanation The RSRB peer initiation logic failed due to a memory shortage or congestion condition.

Recommended Action The problem should clear and the peers should re-open without operator intervention.

RSVP

%RSVP-5-CLEAR_COUNTERS : Clear RSVP message counters by [chars]

Explanation The RSVP message counters have been cleared

Recommended Action No action is required.

%RSVP-5-NO_MATCH_IF_ID_HOP : Received PATH ([IP_address] [int]->[IP_address] [int]) - Failed to find interface from IF_ID HOP from neighbor [IP_address]

Explanation The interface id in the HOP object does not match any of this node's interfaces.

Recommended Action Verify the configuration.

%RSVP-3-BAD_RMSG_TIMER : Inconsistent RSVP reliable message timer

Explanation The summary refresh timer may be blocked.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show tech-support rsvp** command to gather data which may help identify the nature of the error. Then send this information to your Cisco technical support representative.

%RSVP-3-BAD_RSVP_MSG_RCVD_LEN : RSVP Message had a bad length; ip data len: [dec] rsvp len: [dec]

Explanation The router received an RSVP message with the length field set to an unexpected value. Be aware that a bad length error may also be a side-effect of packet corruption.

Recommended Action LOG_BAD_RSVP_MSG_ACTION Copy the error message(s) exactly as it appears on the console or in the system log. Issue the **show tech-support rsvp** command to gather data that may help identify the nature of the error and send this information to your Cisco technical support representative.

%RSVP-3-BAD_RSVP_MSG_RCVD_MALFORMED : RSVP Message was malformed; traversed objects len: [dec] rsvp msg len: [dec]

Explanation An error was encountered during validation of the objects in an RSVP message received by the router.

Recommended Action LOG_BAD_RSVP_MSG_ACTION Copy the error message(s) exactly as it appears on the console or in the system log. Issue the **show tech-support rsvp** command to gather data that may help identify the nature of the error and send this information to your Cisco technical support representative.

%RSVP-3-BAD_RSVP_MSG_RCVD_VER : RSVP Message had a bad version: [dec]

Explanation The router received an RSVP message with the version field set to an unexpected value.

Recommended Action LOG_BAD_RSVP_MSG_ACTION Copy the error message(s) exactly as it appears on the console or in the system log. Issue the **show tech-support rsvp** command to gather data that may help identify the nature of the error and send this information to your Cisco technical support representative.

%RSVP-3-BAD_RSVP_MSG_RCVD_CHECKSUM : RSVP Message had a bad checksum: [dec] foo: [dec]

Explanation The router received an RSVP message with the checksum field incorrectly set. Bad checksums would most likely be caused by packet corruption outside RSVP. Be aware that corruption reported by RSVP might also be affecting other protocols on the router and might explain other unexpected non-RSVP protocol behavior. Please attempt to track down the source of the corruption.

Recommended Action LOG_BAD_RSVP_MSG_ACTION Copy the error message(s) exactly as it appears on the console or in the system log. Issue the **show tech-support rsvp** command to gather data that may help identify the nature of the error and send this information to your Cisco technical support representative.

%RSVP-3-BAD_RSVP_MSG_RCVD_TYPE : RSVP Message had a bad type: [dec]

Explanation The router received an incorrect RSVP message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show tech-support rsvp** command to gather data which may help identify the nature of the error. Then send this information to your Cisco technical support representative.

%RSVP-3-IP_HDR : [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

Explanation This is an auxiliary message to several packet-related messages. It displays the contents of 8 32-bit words immediately following the start of the IPv4/v6 header, in hex format. To decode the information in the IPv4 and IPv6 headers, please refer to RFCs 791 and 2460.

Recommended Action Decode the information in the IPv4 and IPv6 headers to determine the source of the RSVP message.

%RSVP-3-MSG_1 : [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

Explanation This is an auxiliary message to several packet-related messages. It displays the contents of the first 8 32-bit words immediately following the start of the RSVP header, in hex format. To decode the information in the RSVP header, please refer to RFC 2205.

Recommended Action If you need additional information about the packet, then turn on **debug ip rsvp dump-messages <msg type> [hex]** and try to capture the bad message. If you use the hex version of this command, you can convert it to pcap format with the offline tool text2pcap and then view the contents with another offline tool such as ethereal.

%RSVP-3-MSG_2 : [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

Explanation This is an auxiliary message to several packet-related messages. It displays the contents of the next 8 32-bit words following those that are printed by the MSG_1 message above, in hex format. To decode the information in these 32-bit words, please refer to RFC 2205.

Recommended Action If you need additional information about the packet, then turn on **debug ip rsvp dump-messages <msg type> [hex]** and try to capture the bad message. If you use the hex version of this command, you can convert it to pcap format with the offline tool text2pcap and then view the contents with another offline tool such as ethereal.

%RSVP-3-BAD_RSVP_MSG_RCVD_OBJ_LEN : Received a bad RSVP message, num objs: [dec] obj len: [dec] msg_len: [dec]

Explanation An error was encountered during validation of the objects in an RSVP message received by the router. The number of objects in the RSVP message was found to be greater than the maximum expected number or the size of an object was found to be smaller than the minimum expected size.

Recommended Action LOG_BAD_RSVP_MSG_ACTION Copy the error message(s) exactly as it appears on the console or in the system log. Issue the **show tech-support rsvp** command to gather data that may help identify the nature of the error and send this information to your Cisco technical support representative.

%RSVP-3-CONSISTENCY : [chars]: [chars] [chars] [chars]

| | |
|---------------------------|--|
| Explanation | An action attempted by the rsvp implementation encountered an unexpected condition |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support rsvp command to gather data which may help identify the nature of the error. Then send this information to your Cisco technical support representative. |

%RSVP-3-BAD_RSVP_MSG_RCVD_AUTH_NO_SA : [chars] message from [IP_address] discarded: no security association for [IP_address] - no RSVP security key configured or no memory left.

| | |
|---------------------------|---|
| Explanation | The router received an RSVP message that contained a secure hash but dropped the message because the router was not able to create a security association for the sending system. |
| Recommended Action | Check the configuration on the router to make sure that RSVP has access to a security key for the sending system. If such a key is configured, then check to see if the router has run out of memory. |

%RSVP-3-BAD_RSVP_MSG_RCVD_AUTH_DIGEST : [chars] message from [IP_address] discarded - incorrect message digest

| | |
|---------------------------|--|
| Explanation | The router received an RSVP message that contained a different secure hash from the one computed by the router. RSVP discarded the message because the message may have come from an untrusted source. |
| Recommended Action | Check the configuration on the router and the sending system to make sure they are using the correct security key and secure hash algorithm. |

%RSVP-3-BAD_RSVP_MSG_RCVD_AUTH_WIN : [chars] message from [IP_address] discarded - seq #[int] outside authentication window

| | |
|---------------------------|--|
| Explanation | The router received an RSVP message whose authentication sequence number is less than the lower limit of the out-of-order window. RSVP discarded the message because an untrusted source may be (unsuccessfully) attempting an RSVP message replay attack. |
| Recommended Action | It is possible that a trusted source is sending a burst of reordered RSVP messages that is too large for the authentication window size. If you can verify that the source is trusted and its messages are being sent in large reordered bursts, use the ip rsvp authentication window-size command to increase the window size on the receiving router. It is also possible that a trusted source has rebooted and its clock has gone backward in time; in this case, the source should be configured to synchronize its clock with an NTP server. Otherwise, the sender could be an untrusted source (unsuccessfully) attempting an RSVP message replay attack; try to find and disable the untrusted source. |

%RSVP-3-BAD_RSVP_MSG_RCVD_AUTH_DUP:[chars] message from [IP_address] discarded - authentication seq #[int] is a duplicate

Explanation The router received an RSVP message with an authentication sequence number that has already been seen. RSVP discarded the message because an untrusted source may be (unsuccessfully) attempting an RSVP message replay attack.

Recommended Action If you can verify that the source is trusted, it is possible that the source has rebooted and its clock has gone backward in time; in this case, the source should be configured to synchronize its clock with an NTP server. Otherwise, the sender could be an untrusted source (unsuccessfully) attempting an RSVP message replay attack; try to find and disable the untrusted source.

%RSVP-3-BAD_RSVP_MSG_RCVD_AUTH_COOKIE:[chars] message from [IP_address] discarded - challenge failed for key ID %*s

Explanation The router sent an RSVP message to challenge the untrusted source to compute a secure hash on a random piece of data and return the hash with the same data, but the source did not return the expected data. RSVP discarded the response because the untrusted source may be (unsuccessfully) attempting an RSVP challenge response replay attack.

Recommended Action If you can verify that the source is trusted, it is possible that the source has malfunctioned; in this case, copy the error message exactly as it appears on the console or in the system log, issue the **show tech-support rsvp** command to gather data which may help identify the nature of the error, and send this information to your Cisco technical support representative. Otherwise, try to find and disable the untrusted source.

%RSVP-3-RSVP_MSG_AUTH_CHALLENGE_TIMEOUT: No response to challenge issued to [IP_address] for key ID %*s

Explanation The router sent an RSVP message to challenge the untrusted source to compute a secure hash on a random piece of data and return the hash with the same data, but the source did not reply. The source may have crashed or lost its network connection. However, it is also possible that the source was (unsuccessfully) attempting to replay an RSVP message before the challenge and gave up when it saw the challenge from the router.

Recommended Action If you can verify that the source is trusted, try to determine if it has crashed or lost its network connection and then restore network connectivity to it. If the source repeatedly crashes when challenged, a temporary workaround might be to disable challenges on the router by issuing a **no ip rsvp authentication challenge** command until the problem on the source is resolved. Otherwise, assume the source is untrusted; try to find and disable it.

%RSVP-3-RSVP_MSG_AUTH_TYPE_MISMATCH : [chars] message from [IP_address] discarded - authentication algorithm mismatch

| | |
|---------------------------|--|
| Explanation | The router received an RSVP message from a source that required authentication but the received message was using the wrong authentication algorithm. |
| Recommended Action | Issue a show ip rsvp authentication detail <source> command on the router to display the expected algorithm type. Then find the source and change its configuration to match. |

%RSVP-5-RSVP_AUTH_ONE_KEY_EXPIRED : Key (ID) [int] in chain [chars] has expired

| | |
|---------------------------|--|
| Explanation | The router has detected that one key in a RSVP key chain has expired and that RSVP has switched to the next unexpired key in that chain. |
| Recommended Action | Update the key chain by changing the text and expiration time(s) for the expired key. |

%RSVP-2-RSVP_AUTH_KEY_CHAIN_EXPIRED : All the keys in chain [chars] have expired - please update the key chain now

| | |
|---------------------------|---|
| Explanation | The router attempted to use a key in an RSVP key chain but discovered that all the keys in the chain have expired. The router will attempt to find another suitable key. If no other suitable per-neighbor key can be found, the router will attempt to use key (chain) configured for the interface over which the authenticated RSVP message is being sent or received. |
| Recommended Action | Update the key chain by updating the text and expiration time(s) for the expired key(s). |

%RSVP-1-RSVP_AUTH_NO_KEYS_LEFT : No valid keys left for [IP_address]

| | |
|---------------------------|---|
| Explanation | The router attempted to use a key in an RSVP key chain but discovered that all the keys in the chain have expired and no other per-neighbor or per-interface keys are available for the specified neighbor. The router will continue to use the last key in the chain rather than revert to an unauthentication condition. However, the specified neighbor router may start discarding RSVP messages at that point and reservations with that neighbor may eventually time out. |
| Recommended Action | Update the key chain by updating the text and expiration time(s) for the expired key(s). |

%RSVP-4-RSVP_AUTH_DUPLICATE_KEY_ID : Key chains [chars] and [chars] contain duplicate key ID [int]

Explanation An attempt is being made to add a new key identifier to a key chain in the router configuration but RSVP detected that this identifier is found in another key chain already assigned to RSVP. Since key identifiers must be unique across all the key chains used by RSVP, RSVP will not use the keys with this identifier in all such key chains. This could cause RSVP authentication to fail in some cases.

Recommended Action Update the listed key chain(s) so they use different key identifiers.

%RSVP-5-RSVP_AUTH_KEY_ACL_CHANGE : Key chain [chars][chars] for [IP_address] because ACL [chars] [chars]

Explanation The ACL specified in the message text associates the key chain specified in the message text with a set of RSVP neighbors. RSVP uses the specified key chain to authenticate each RSVP message exchanged with that set of RSVP neighbors after the association is configured. Subsequently, the specified ACL has been reconfigured such that the key chain association is no longer valid for one or more RSVP neighbors in the set. This causes RSVP to search the configuration for another suitable key chain to use with those neighbors. If no such key chain is found, RSVP will no longer be able to provide authentication for messages exchanged with those RSVP neighbors. This causes RSVP to discard RSVP messages from that set of neighbors. Because this may ultimately lead to loss of RSVP functionality with those neighbors, RSVP generates this system message. This system message may also be generated if the ACL is subsequently changed so that it re-associates RSVP neighbors with the specified key chain. If RSVP is not using another key chain for the set of RSVP neighbors specified by the ACL, RSVP will begin using the specified key chain to exchange authenticated RSVP messages with that set of RSVP neighbors, potentially restoring RSVP functionality with those neighbors.

Recommended Action If the ACL change unexpectedly caused authentication to be disabled or enabled for one or more RSVP neighbors, undo the ACL change so that RSVP authentication is not impacted.

%RSVP-3-RSVP_MFI_RECOVERY : RSVP calculated Recovery Time is longer than TE Rewrite Hold-Time registered with LSD. Some LSPs may not be recovered.

Explanation TE registered a maximum cutover time with the LSD that is less than the time it may actually take to recover all LSPs. As a result, more than usual traffic loss may occur on some LSPs during recovery

Recommended Action Make note of the number of Checkpointed LSPs in the RSVP HA database by issuing the command **show ip rsvp high-availability database internal** . This number likely exceeds the hard defined limit of the number of recoverable LSPs. Provide this information to Cisco technical support representative.

RSVP_SYNC_ISSU**%RSVP_SYNC_ISSU-2-INIT : RSVP_SYNC ISSU client initialization failed to [chars]. Error: [dec] ([chars])**

Explanation The RSVP_SYNC ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%RSVP_SYNC_ISSU-3-TRANSFORM_FAIL : RSVP_SYNC ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

Explanation The RSVP_SYNC ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the RSVP_SYNC state between the active device and the standby device is not identical.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>)

%RSVP_SYNC_ISSU-3-MSG_NOT_OK : RSVP_SYNC ISSU client 'Message Type [dec]' is not compatible

Explanation The RSVP_SYNC ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>)

%RSVP_SYNC_ISSU-3-MSG_SIZE : RSVP_SYNC ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

Explanation The RSVP_SYNC ISSU client failed to calculate the MTU for the specified message. The RSVP_SYNC ISSU client is not able to send the message to the standby device.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>)

%RSVP_SYNC_ISSU-3-INVALID_SESSION : RSVP_SYNC ISSU client does not have a valid registered session.

Explanation The RSVP_SYNC ISSU client does not have a valid registered session.

%RSVP_SYNC_ISSU-3-INVALID_SESSION : RSVP_SYNC ISSU client does not have a valid registered session.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%RSVP_SYNC_ISSU-2-SESSION_REGISTRY : RSVP_SYNC ISSU client failed to register session information. Error: [dec] ([chars])

Explanation The RSVP_SYNC ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%RSVP_SYNC_ISSU-3-SESSION_UNREGISTRY : RSVP_SYNC ISSU client failed to unregister session information. Error: [dec] ([chars])

Explanation The RSVP_SYNC ISSU client failed to unregister session information.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%RSVP_SYNC_ISSU-2-SESSION_NEGO : RSVP_SYNC ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

Explanation An ISSU-compliant client transitions through a series of internal states. The RSVP_SYNC ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%RSVP_SYNC_ISSU-2-SEND_NEGO_FAILED : RSVP_SYNC ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The RSVP_SYNC ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%RSVP_SYNC_ISSU-2-GET_BUFFER : RSVP_SYNC ISSU client failed to get buffer for message. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The RSVP_SYNC ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |

%RSVP_SYNC_ISSU-3-MSG_NOT_COMPATIBLE_WITH_PEER : 'Message Type [dec]' is not supported by RSVP_SYNC ISSU client at peer

| | |
|---------------------------|--|
| Explanation | The RSVP_SYNC ISSU client at the peer supervisor is not compatible for this message type. The RSVP_SYNC client will be marked as incompatible with the peer. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%RSVP_SYNC_ISSU-3-CAP_NOT_COMPATIBLE : RSVP_SYNC ISSU client capability exchange result incompatible.

| | |
|---------------------------|--|
| Explanation | The RSVP_SYNC ISSU client capability exchange have negotiated as incompatible with the peer. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu negotiated capability <Session_ID>) |

%RSVP_SYNC_ISSU-3-CAP_INVALID_SIZE : RSVP_SYNC ISSU client capability list is empty.

| | |
|---------------------------|---|
| Explanation | The RSVP_SYNC ISSU client capability exchange list size is invalid. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entires <Client_ID>) |

RTMGR

%RTMGR-3-GENERAL : [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-UNLOCK_ERR : Attempt to unlock active topology '[chars]' (in VRF [chars] [chars])

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-VRF_ERR : Topology VRF [chars] creation error

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_VRF_ERR : Topology [chars] address-family [chars] has no VRF entry

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_IPMCAST_BASE_ERR : Failed to create the base mcast topology in vrf [chars] with error [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_INTF_CTX : Interface [chars] address-family [chars] topology context is NULL or the function [chars] is not set

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_SYNC_ERR : Failed to duplicate active topology on standby (rc=[dec]), id [hex] [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_UNSUPPORTED_AFI : Attempt to enable unsupported AFI ([hex])

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_AF_ENABLE_ERR : Failed to enable AF base topology [chars] (error [chars])

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_AFI_CTX : Topology address-family [chars] context block is NULL.

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%RTMGR-3-TOPO_AFI_CTX : Topology address-family [chars] context block is NULL.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%RTMGR-3-TOPO_INTF_INV_VRFID : Interface [chars] with invalid vrfid [hex]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%RTMGR-3-TOPO_CACHE_INIT_ERROR : ([chars])

Explanation cached topo initialization failure

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%RTMGR-3-TOPO_CACHE_ADD_ERROR : ([chars])

Explanation cached topo entry creation failure

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%RTMGR-3-TOPO_CACHE_ERROR : ([chars])

Explanation cached topo failure

%RTMGR-3-TOPO_CACHE_ERROR : ([chars])

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%RTMGR-3-TOPO_LCKMGR_INIT_ERROR : ([chars]) manager init failure

| | |
|---------------------------|---|
| Explanation | Topology lock manager initialization failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_LCKMGR_GET_LOCK_COUNT_ERROR : Failed to get lock count for topology([chars])

| | |
|---------------------------|---|
| Explanation | Topology lock manager get lock count failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_HA_LOCK_IVRF_TOPO : Acquired a HA lock on an iVRF topology([chars])

| | |
|---------------------------|---|
| Explanation | Topology HA lock shouldn't be applied in an iVRF topology |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_UNSUPPORTED_API : Topology API [chars] is unsupported due to [chars]

| | |
|---------------------------|---|
| Explanation | Topology API is unavailable |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_PROCESS_INIT_ERROR : Topology process init failed due to [chars]

| | |
|---------------------------|---|
| Explanation | Topology process initialization failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%RTMGR-3-TOPO_SUBMODE_ERROR : Unexpected transition from parser submode '[chars]'

| | |
|---------------------------|---|
| Explanation | An error occurred while parsing the topology command |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

RTT

%RTT-4-DuplicateEvent : IP SLAs [dec]: Duplicate event received. Event number [dec]

| | |
|---------------------------|---|
| Explanation | IP SLAs process has received a duplicate event |
| Recommended Action | This is only a warning message. If this recurs, enter the command <CmdBold>show ip sla configuration<NoCmdBld> and copy the output of the command. Copy the message as it appears on the console or in the system log, contact your Cisco technical support representative, and provide the representative with the gathered information along with information about the application that is configuring and polling the Service Assurance Agent probes. |

%RTT-3-IPSLANOPROCESS : IP SLAs: Cannot create a new process

| | |
|---------------------------|---|
| Explanation | IP SLAs is unable to start a new process, and may not be running. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%RTT-3-IPSLANEGATIVEVALUE : IP SLAs([dec]): Negative Value for [chars]

| | |
|---------------------------|---|
| Explanation | IP SLAs statistics has generated an error message. |
| Recommended Action | Contact your Cisco technical support representative |

%RTT-3-IPSLAPROBENOTFOUND : IP SLAs: Error deleting the probe

| | |
|---------------------------|---|
| Explanation | Trying to delete a probe which does not exist |
| Recommended Action | Contact your Cisco technical support representative |

%RTT-3-IPSLATHRESHOLD : IP SLAs([dec]): Threshold [chars] for [chars]

| | |
|---------------------------|--|
| Explanation | This informational message logs threshold violations in the Service Assurance Agent probes. This messages appears when the ip sla logging trap command is entered |
| Recommended Action | If this message is not necessary, enter the no ip sla logging trap command to disable logging. Otherwise, no action is required |

%RTT-3-IPSLAINITIALIZEFAIL : IP SLAs: Failed to initialize, IP SLAs functionality will not work

| | |
|---------------------------|---|
| Explanation | IP SLAs failed to initialize. This condition is caused by either a timer wheel timer functionality init that failed or a process that could not be created. A likely cause of this condition is that sufficient memory is not available to complete the task. |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . LOG_STD_REDUCE_ACTION |

%RTT-3-IPSLATWINITFAIL : IP SLAs: Generic Timer wheel timer functionality failed to initialize

| | |
|---------------------------|---|
| Explanation | IP SLAs could not initialize the timer wheel. |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . LOG_STD_REDUCE_ACTION |

%RTT-4-IPSLACLOCKNOTSET : IP SLAs Probe(s) could not be scheduled because clock is not set.

| | |
|---------------------------|---|
| Explanation | One or more IP SLAs probes could not be scheduled because system clock is not set. |
| Recommended Action | Ensure that the system clock is functional by using Network Time Protocol or another mechanism. |

%RTT-4-IPSLASCHEDCONFIGFAIL : IP SLAs Probe [dec]: [chars]

| | |
|--------------------|--|
| Explanation | The IP SLAs probe could not be scheduled. Either the configured starting time has already occurred, or the starting time is invalid. |
|--------------------|--|

%RTT-4-IPSLASCHEDCONFIGFAIL : IP SLAs Probe [dec]: [chars]

Recommended Action Reschedule the failed probe with a valid start time.

%RTT-3-IPSLARESPTWINITFAIL : IP SLAs responder initialization failed

Explanation

Recommended Action

%RTT-4-IPSLAENDPOINTDEREGISTER : IP SLAs end point de-registered by hub [IP_address].

Explanation

Recommended Action

%RTT-4-IPSLAAUTODISCOAUTHFAIL : IP SLAs end point discovery authentication failure for spoke [IP_address].

Explanation The IP SLAs responder initialization failed to initialize timerwheel. Because of this failure the IP SLAs probes on other routers for which this router acts as responder will not work.

Recommended Action Contact your Cisco technical support representative.

%RTT-3-IPSLARESPEVQINITFAIL : IP SLAs responder initialization failed

Explanation The IP SLAs responder initialization failed to initialize event queue. Because of this failure the IP SLAs probes on other routers for which this router acts as responder will not work.

Recommended Action Contact your Cisco technical support representative.

%RTT-3-IPSLARTPAPPINITFAILED : IP SLAs rtp operation application process initialization failed

Explanation The IP SLAs rtp operation application process failed to initialize. Because of this failure the IP SLAs rtp operations will not work.

Recommended Action Contact your Cisco technical support representative.

%RTT-4-SAASCHEDCONFIGFAIL : IP SLA Monitor Probe [dec]: [chars]

Explanation The IP SLA Monitor probe could not be scheduled. Either the configured starting time has already occurred, or the starting time is invalid.

Recommended Action Reschedule the failed probe with a valid start time.

%RTT-4-SAAGRPSCHEDCONFIGFAIL : Group Schedule Entry [dec]: [chars]

Explanation The probes could not be group scheduled. Either the configured starting time has already occurred, or the starting time is invalid.

Recommended Action Reschedule the group scheduling entry with a valid start time.

%RTT-3-SAAMPLS : IP SLA Monitor([dec]): MPLS [chars] Probe [chars] [chars] for destination-address [IP_address] lsp-selector [IP_address]

Explanation This informational message logs violations in the Service Assurance Agent probes. This messages appears when the **ip sla logging trap** command is entered

Recommended Action If this message is not necessary, enter the **no ip sla logging trap** command to disable logging. Otherwise, no action is required

%RTT-3-IPSLA_AQM : [chars]: [chars]

Explanation This message indicates software error in IPSLA auto qos monitor feature.

Recommended Action Contact your Cisco technical support representative.

%RTT-4-OPER_TIMEOUT : condition [chars], entry number = [dec]

Explanation This message logs timeout condition in the IPSLAs operations. This message is enabled when the **ip sla monitor logging trap** command is entered

Recommended Action Ensure that the destination for the IPSLAs operation is reachable. If you do not want to log these messages for IPSLAs operations, enter the **no ip sla monitor logging trap** command to disable the logging

%RTT-4-OPER_CLOSS : condition [chars], entry number = [dec]

Explanation This message logs connection loss condition in the IPSLAs operations. This message is enabled when the **ip sla monitor logging trap** command is entered

%RTT-4-OPER_CLOSS : condition [chars], entry number = [dec]

| | |
|---------------------------|--|
| Recommended Action | Ensure the the destination for the IPSLAs operation is reachable. Also ensure that the IPSLAs responder operation is configured on the destination. If you do not want to log these messages for IPSLA operations, enter the no ip sla monitor logging trap command to disable logging. |
|---------------------------|--|

%RTT-4-AUTOAPI : IPSLAs Auto CFG ERR: [chars]([chars]) [chars]

| | |
|--------------------|--|
| Explanation | An error occured while configuring IPSLAs Auto parameters. Some, or all of your configurations may not have been (un)set |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Please check the configuration and try again |
|---------------------------|--|

%RTT-4-AUTOAPIOPER : IPSLAs Auto CFG ERR: [chars]([chars])([dec]) [chars]

| | |
|--------------------|--|
| Explanation | An error occured while configuring IPSLAs Auto parameters. Some, or all of your configurations may not have been (un)set |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Please check the configuration and try again |
|---------------------------|--|

%RTT-3-AUTO : Error: [chars]

| | |
|--------------------|--|
| Explanation | An error occured while generating IPSLAs Auto operation. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Please check the configuration and try again |
|---------------------------|--|

%RTT-4-AUTOMEM : IPSLAs Auto MEM ERR: [chars]([chars]) [chars]

| | |
|--------------------|---|
| Explanation | IPSLAs Auto feature failed during memory allocation |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | These maybe transient errors, please try again |
|---------------------------|--|

%RTT-4-INVALIDSRCIPADDR : Possible invalid src IP address ([IP_address]) configured.

| | |
|--------------------|--|
| Explanation | This message appears when no source IP address is found on the host matching the one specified by the user |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Unconfigure the probe and reconfigure with valid source IP address |
|---------------------------|--|

%RTT-3-REACTNOTIFYFAILED : entry number = [dec], reason = [chars]

| | |
|---------------------------|---|
| Explanation | IPSLAs Reaction condition was met for specified operation and one or more IPSLAs Event Publisher clients have registered interest for this condition but the notification for this occurrence failed. |
| Recommended Action | These maybe transient system errors and the notification may work next time. Use show ip sla event-publisher command to see which clients are registered and take action recommended by them. |

%RTT-4-REACTPARTIALEVENT : entry number = [dec], missing data = [chars]

| | |
|---------------------------|--|
| Explanation | IPSLAs Reaction Event is missing some interesting data |
| Recommended Action | This could be because of IPSLAs software error. Please collect show ip sla config output and report issue to TAC |

%RTT-3-EPNOTIFYFAILED : event type = [chars], client = [chars], reason = [chars]

| | |
|---------------------------|--|
| Explanation | Notification for specified type to specified IPSLAs Event Publisher client failed |
| Recommended Action | This maybe transient system error and the notification may work next time. Take the action as suggested by the identified client for loss of notification. |

%RTT-3-EPSTARTERROR : Failed to start IPSLAs Event Publisher

| | |
|---------------------------|---|
| Explanation | IPSLAs is unable to start a new process for Event Publisher. Reaction Alert notifications will not work. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%RTT-3-EPURFTYPE : IPSLAs EventPublisher: Unknown reaction filter type for client [chars]

| | |
|---------------------------|---|
| Explanation | IPSLAs Event Publisher encountered unknown filter type while sending the reaction alert to specified client Reaction Alert notifications may continue to work for same and other clients. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%RTT-4-EPINIT : IPSLAs Event Publisher Init Failed. Reason = [chars]

| | |
|--------------------|---|
| Explanation | IPSLAs Event Publisher Initialization failed. The system will try to recover by doing the initialization tasks when first client subscribes to IPSLAs events. |
|--------------------|---|

%RTT-4-EPINIT : IPSLAs Event Publisher Init Failed. Reason = [chars]

| | |
|---------------------------|---|
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |
|---------------------------|---|

%RTT-4-EPAPI : IPSLAs EP API: [chars] api failed, client = [chars], reason = [chars]

| | |
|--------------------|---|
| Explanation | IPSLAs Event Publisher API failed for reason identified |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | The error code is reported to API client. Take the action recommended by the client identified. |
|---------------------------|---|

%RTT-4-OPER_PROTOERR : Entry number = [dec], Protocol Specific Error [chars], specific code = [dec]

| | |
|--------------------|---|
| Explanation | This message logs protocol specific error condition in the IPSLAs operations. This message is enabled when the ip sla logging traps command is entered |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Ensure that the destination for the IPSLAs operation is reachable. Also ensure that the IPSLA responder operation is configured on the destination. If you do not want to log these messages for IPSLAs operations, enter the no ip sla logging traps command to disable the logging |
|---------------------------|---|

SADB

%SADB-4-TREE_CORRUPTED : SADB : AVL Tree got corrupted

| | |
|--------------------|---|
| Explanation | SADB's one of the AVL Trees got corrupted |
|--------------------|---|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

SBC

%SBC-3-FEAT_DOWN : Invalid request [chars] while feature down, call id [int]

| | |
|--------------------|--|
| Explanation | While the feature was not active, an invalid request was received from another layer of the SBC software stack for the specified call ID. Some requests do not have an associated call ID. For them the displayed call ID is zero. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | This is a software issue. The consequences could be limited to only one or a few calls. LOG_STD_RECUR_ACTION |
|---------------------------|--|

%SBC-3-FEAT_UP : Invalid request [chars] while feature up

| | |
|--------------------|---|
| Explanation | While the feature was active, an invalid request was received from another layer of the SBC software stack. |
|--------------------|---|

%SBC-3-FEAT_UP : Invalid request [chars] while feature up

Recommended Action This is a software issue. There are no consequences as this can only have been an Init request while the feature was already active. LOG_STD_RECUR_ACTION

%SBC-3-NO_RES : [chars] resource not available for the [chars] request, call id [int]

Explanation The specified software resource was not available or could not be located for the specified request from upper SBC software stack layers for the specified call ID.

Recommended Action This is a software issue. The consequences are that the specified request could not be performed. LOG_STD_RECUR_ACTION

%SBC-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]

Explanation For a request from upper SBC software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck call that cannot be established etc. In rare cases this could also affect other operations such as feature activation, deactivation, modification, High-Availability switchover operations.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%SBC-3-IPC_NORES : No space for the IPC reply, size [int]

Explanation For a request from upper SBC software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck call that cannot be established etc. In rare cases this could also affect other operations such as feature activation, deactivation, modification, High-Availability switchover operations.

Recommended Action This is normally a software issue. LOG_STD_RECUR_ACTION

%SBC-2-IPC_INIT : IPC message handler registration failure, rc [int]

Explanation Registering an IPC message handler for the SBC feature failed. This will cause the feature not to function. The function

Recommended Action This is normally a software issue. The consequences are that the SBC feature will not function. LOG_STD_ACTION

%SBC-3-MEM_INIT_FAILED : Allocation of [chars] memory failed for SBC

Explanation SBC Initialization of channel pool failed.

%SBC-3-MEM_INIT_FAILED : Allocation of [chars] memory failed for SBC

Recommended Action LOG_STD_ACTION

%SBC-3-PKT_REPLICA_INIT_FAILED : Register to Generic Packet Replication failed for SBC

Explanation SBC Initialization of packet replication registration failed.
Recommended Action LOG_STD_ACTION

SBC_CFG

%SBC_CFG-3-DBE_CONFIG_FAILURE : An SBC DBE configuration failure has occurred.

Explanation SBC has been unable to apply its DBE configuration.
Recommended Action Attempt to manually reconfigure the SBC DBE. LOG_STD_ACTION

%SBC_CFG-6-SERVICE_CHANGE_COLD_BOOT : Delay [chars].

Explanation SBC has been configured to delay sending a ServiceChange message at boot. Upon the delay timer expiring, the ServiceChange message will be sent.
Recommended Action This message is for informational purposes only. A ServiceChange message will be sent out once the delay timer expires.

%SBC_CFG-4-SERVICE_CHANGE_COLD_BOOT_DELAY_FAILED : Failed to delay ServiceChange.

Explanation SBC has failed to start a timer for delaying a ServiceChange message at boot. The ServiceChange message will be sent out without a delay.
Recommended Action Ensure that SBC has been fully Activated and that all requested pinholes have been established. LOG_STD_ACTION

%SBC_CFG-3-SERVICE_CHANGE_COLD_BOOT_FAILED : Delayed ServiceChange failed.

Explanation SBC has failed to send the delayed ServiceChange message at boot.
Recommended Action Ensure that the SBC configuration is valid, and perform a manual SBC Activation.

%SBC_CFG-3-MED_NOT_DEL_V4 : IPv4 address(es) deleted ([IP_address][IP_address], VRF '[chars]'), media addresses/pools not removed.

Explanation One or more IPv4 addresses of an SBC interface were removed while the SBC was still active. Please remove the media addresses/pools later manually. If the media addresses/pools were associated with a VRF then it will be necessary to remove the media addresses/pools by unconfiguring the SBC.

Recommended Action

%SBC_CFG-3-MED_NOT_DEL_V6 : IPv6 address(es) deleted ([IPV6 address]/[int] VRF '[chars]'), media addresses/pools not removed.

Explanation One or more IPv6 addresses of an SBC interface were removed while the SBC was still active. Please remove the media addresses/pools later manually. If the media addresses/pools were associated with a VRF then it will be necessary to remove the media addresses/pools by unconfiguring the SBC.

Recommended Action

%SBC_CFG-3-SBC_NOT_CONFIG : SBC is not configured. VOIP LI configuration request failed

Explanation Since SBC is not configured, the VOIP LI request is rejected. First configure SBC and then VOIP LI requests will be processed.

Recommended Action

%SBC_CFG-4-BLACKLIST_CLEARED : Source [chars]: cleared blacklist event or alert, reason: [chars]

Explanation A blacklist event or alert is cleared.

Recommended Action

%SBC_CFG-4-BLACKLIST_MINOR : Source [chars]: minor blacklist alert, reason: [chars]

Explanation A minor blacklist alert has been generated.

Recommended Action

%SBC_CFG-4-BLACKLIST_MAJOR : Source [chars]: major blacklist alert, reason: [chars]

Explanation A major blacklist alert has been generated.

%SBC_CFG-4-BLACKLIST_MAJOR : Source [chars]: major blacklist alert, reason: [chars]

**Recommended
Action**

%SBC_CFG-4-BLACKLIST_CRITICAL : Source [chars]: critical blacklist alert, reason: [chars]

Explanation A critical blacklist alert has been generated.

**Recommended
Action**

%SBC_CFG-4-BLACKLIST_BLOCKED : Source [chars]: blacklisted, blocked, reason: [chars]

Explanation The source is blacklisted.

**Recommended
Action**

SBC_HA

%SBC_HA-3-INTERNAL : An internal SBC HA error has been encountered[chars].

Explanation An internal error has been encountered.

**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-LARGE_IPS_MSG : SBC failed to receive large sync message of size [dec].

Explanation The SBC module was unable to successfully receive a large sync message on the Standby. The Standby will be will not have an identical dynamic state as the Active.

**Recommended
Action** No action is required.

%SBC_HA-3-LARGE_IPS_MSG_FAIL : SBC failed to send large sync message of size [dec].

Explanation The SBC module was unable to successfully send a large sync message to the Standby because this version of the Standby does not support large messages. The Standby will be will not have an identical dynamic state as the Active.

**Recommended
Action** No action is required.

%SBC_HA-3-CONFIG_SYNC : SBC failed to cache SBC config of size [dec].

| | |
|---------------------------|---|
| Explanation | The SBC module was unable to successfully cache the SBC config on the Standby. The Standby will be unable to write SBC config to NVRAM. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-RF_REGISTRATION : SBC RF failed to register

| | |
|---------------------------|---|
| Explanation | The SBC module was unable to successfully register with the RF infrastructure. SBC will not be able to operate in a stateful mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-WATCH_PROGRESSION : SBC RF failed to create progression watch points.

| | |
|---------------------------|---|
| Explanation | The SBC module was unable to successfully create the RF progression watch points. RF progression will not be suspended at bulk synchronisation time, so some SBC calls may be lost if a switchover occurs immediately after the system reaches the Standby Hot redundancy state. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-NO_SYNC_PROCESS : SBC RF failed to start the config sync process.

| | |
|---------------------------|---|
| Explanation | The SBC module was unable to successfully start the configuration sync process. The Standby will be unable to fully initialise. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-RF_TIMER_EXTENSION_EXPIRY : SBC RF progression extension timer expired.

Explanation The SBC module's RF progression extension timer expired. RF progression will resume, but if a switchover occurs immediately after the system reaches the Standby Hot redundancy state then some SBC calls may be lost.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-HOLD_PROGRESSION : SBC RF failed to start the progression holding process.

Explanation The SBC module was unable to successfully start the RF progression holding process. RF progression will resume immediately, but if a switchover occurs immediately after the system reaches the Standby Hot redundancy state then some SBC calls may be lost.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-RF_PROGRESSION : SBC RF failed to resume RF progression at state [chars].

Explanation The SBC module was unable to successfully resume RF progression at the noted state. The Standby will be unable to fully initialise.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-RF_CONFIG_SYNC : SBC RF will not be able to synchronise SBC configuration to the Standby. Failure cause: [chars].

Explanation The SBC module will not be able to synchronise the SBC config to the Standby. The Standby will be unable to write SBC config to NVRAM.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-IPC_RMI_INIT : SBC IPC failed to register with RMI ([chars]).

| | |
|---------------------------|---|
| Explanation | The SBC IPC module was unable to successfully register with the Resource Manager. SBC may not be able to operate in a stateful mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-IPC_INIT : SBC IPC failed to initialise ([chars]).

| | |
|---------------------------|---|
| Explanation | The SBC IPC module was unable to successfully initialise. SBC may not be able to operate in a stateful mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-IPC_SEND : SBC IPC message send failed (error [chars]).

| | |
|---------------------------|---|
| Explanation | The SBC module was unable to successfully send a message to its peer. SBC will not be able to operate in a stateful mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-ISSU_REGISTRATION : SBC ISSU failed to register.

| | |
|---------------------------|---|
| Explanation | The SBC module was unable to successfully register with the ISSU infrastructure. SBC will not be able to operate in a stateful mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-ISSU_CLIENT_REGISTRATION : SBC Client ([dec]) Registration failed ([chars]).

| | |
|--------------------|--|
| Explanation | The SBC module was unable to successfully register with the ISSU infrastructure. SBC will not be able to operate in a stateful mode. |
|--------------------|--|

%SBC_HA-3-ISSU_CLIENT_REGISTRATION : SBC Client ([dec]) Registration failed ([chars]).

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show issu clients** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-ISSU_ENTITY_REGISTRATION : SBC Entity ([dec]) Registration failed ([chars]).

Explanation The SBC ISSU entity could not be registered. SBC will not be able to operate in a stateful mode.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show issu entities** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-ISSU_MSGTYPE_REGISTRATION : SBC Msg Type for Entity ([dec]) Registration failed ([chars]).

Explanation The message type for SBC ISSU could not be registered. SBC will not be able to operate in a stateful mode.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show issu message types** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-ISSU_MSGGROUP_REGISTRATION : SBC Msg Group ([dec]) for Entity ([dec]) Registration failed ([chars]).

Explanation The message group for SBC ISSU could not be registered. SBC will not be able to operate in a stateful mode.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show issu message groups** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-ISSU_CAPTYPE_REGISTRATION : SBC Cap Type for Entity ([dec]) Registration failed ([chars]).

Explanation A capability type could not be registered for SBC ISSU. SBC will not be able to operate in a stateful mode.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show issu capability types** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-ISSU_CAPENTRY_REGISTRATION : SBC Cap Entry ([dec] for Entity ([dec]) Registration failed ([chars]).

Explanation A capability entry could not be registered for SBC ISSU. SBC will not be able to operate in a stateful mode.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries)

%SBC_HA-3-ISSU_CAPGROUP_REGISTRATION : SBC Cap Group ([dec] for Entity ([dec]) Registration failed ([chars]).

Explanation A capability group could not be registered for SBC ISSU. SBC will not be able to operate in a stateful mode.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show capability groups** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-ISSU_SESSION_REGISTRATION : SBC session for Entity ([dec]) Registration failed ([chars]).

Explanation The SBC ISSU session could not be registered. SBC will not be able to operate in a stateful mode.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show issu sessions** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-ISSU_START_NEGOTIATION : SBC ISSU negotiation failed to start ([chars]).

| | |
|---------------------------|--|
| Explanation | The SBC module was unable to successfully start negotiation with its peer. SBC will not be able to operate in a stateful mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show issu fsm command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-4-ISSU_GET_BUFFER : SBC ISSU session failed to get buffer.

| | |
|---------------------------|--|
| Explanation | The SBC ISSU client failed to get a buffer. Some High-Availability SBC information may be missing from the peer. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show processes memory command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-ISSU_NEGOTIATION : SBC ISSU negotiation failed.

| | |
|---------------------------|---|
| Explanation | The SBC module was unable to successfully negotiate with its peer. SBC will not be able to operate in a stateful mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-ISSU_MSG_MTU : SBC Client ([dec]) get msg mtu failed. Error = [dec].

| | |
|---------------------------|--|
| Explanation | The SBC ISSU client could not obtain a message of the required size. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show issu fsm command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-ISSU_TRANSFORM : SBC ISSU [chars] transformation failed ([chars]).

| | |
|---------------------------|--|
| Explanation | The transformation operation for an SBC ISSU message has failed. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu fsm and show issu sessions) |

%SBC_HA-3-LARGE_IPS_UNSUPP : The current version of the SBC Standby does not support the syncing of large SBC contexts

| | |
|---------------------------|---|
| Explanation | The current version of the SBC Standby does not support the syncing of large SBC contexts. A context that contains 24 or more media and signaling flows is a large context. It is rare to have such a large context and thus, ISSU compatibility has been permitted even though this difference in support exists. Normal SBC High Availability synchronization will continue to operate successfully as long as no contexts contain more than 24 signaling or media flows. Context information beyond 24 flows will not be replicated and thus on RP switchover the Active RP will not have information about all the contexts |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-ILT_STUB : SBC ILT Stub process creation failed.

| | |
|---------------------------|---|
| Explanation | The SBC module was unable to successfully create the ILT Stub process. SBC will not be able to operate in a stateful mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-ILT_REGISTRATION : SBC ILT registration failed.

| | |
|---------------------------|---|
| Explanation | The SBC module was unable to successfully register for communication with the peer unit. SBC will not be able to operate in a stateful mode. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_HA-3-ILT_PROC_CREATE : SBC ILT process creation failed.

Explanation The SBC module was unable to successfully create an SBC process. SBC will not be able to operate in a stateful mode.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_HA-3-SBC_IPV6_CFG : SBC has detected configuration/dynamic state ([chars]) which is not supported on the peer.

Explanation Peer SBC does not support IPv6.

Recommended Action Manually remove IPv6 configuration and reinitiate ISSU. LOG_STD_ACTION

%SBC_HA-3-SBC_DYNAMIC_CODEC_CFG : SBC has detected Dynamic Codec configuration which is not supported on the peer. SBC cannot proceed as HA client. Remove all codec configuration to proceed with ISSU/ISSD.

Explanation Peer SBC does not support Dynamic Codec configuration.

Recommended Action Manually remove Dynamic Codec configuration and reinitiate ISSU. LOG_STD_ACTION

%SBC_HA-3-SBC_XML_BILLING_CFG : SBC has detected Xml Billing configuration which is not supported on the peer. SBC cannot proceed as HA client. Remove all xml billing configuration to proceed with ISSU/ISSD.

Explanation Peer SBC does not support Xml Billing configuration.

Recommended Action Manually remove Xml Billing configuration and reinitiate ISSU. LOG_STD_ACTION

%SBC_HA-3-SBC_RG_NO_TRANSPORT : SBC was unable to register a transport with the RG infrastructure for inter-chassis HA.

Explanation SBC will not be able to support inter-chassis HA.

Recommended Action No action is required.

%SBC_HA-3-SBC_RG_NO_CLIENT : SBC was unable to register the RG Client with the RG infrastructure for inter-chassis HA.

Explanation SBC will not be able to support inter-chassis HA.

Recommended Action No action is required.

%SBC_HA-3-SBC_RG_NO_PROCESS : SBC was unable to start a process used by the RG client

Explanation SBC will not be able to support inter-chassis HA.

Recommended Action No action is required.

%SBC_HA-3-SBC_RG_NO_SOCKET : SBC was unable to open a socket for the RG client

Explanation SBC will not be able to support inter-chassis HA.

Recommended Action No action is required.

%SBC_HA-3-SBC_RG SOCK_FAIL : SBC lost connection with RG peer, socket failure [chars], len=[dec]

Explanation SBC HA may be disabled until peer connection is established.

Recommended Action No action is required.

%SBC_HA-3-SBC_CODEC_INTERWORK_CFG : SBC has detected codec configuration which is not supported on the peer. SBC cannot proceed as HA client. Remove all newly entered codec configuration to proceed with ISSU/ISSD.

Explanation Peer SBC does not support codec preference, variant or interwork configuration.

Recommended Action Manually remove newly added codec configuration and reinitiate ISSU.
LOG_STD_ACTION

%SBC_HA-3-SBC_MSMB_CFG : SBC has detected Multi SBC Media Bypass configuration which is not supported on the peer. SBC cannot proceed as HA client. Remove all Multi SBC Media Bypass configuration to proceed with ISSU/ISSD.

Explanation Peer SBC does not support Multi SBC Media Bypass configuration.

Recommended Action Manually remove Multi SBC Media Bypass configuration and reinitiate ISSU.
LOG_STD_ACTION

%SBC_HA-3-SBC_DBL_NA_ALERT_CFG : SBC has detected blacklist entries configured which have reason na-policy-failure OR minor, major, critical alerts which is not supported on the peer. SBC cannot proceed as HA client. Remove all blacklist entries with this reason or any alerts configuration to proceed with ISSU/ISSD.

| | |
|---------------------------|--|
| Explanation | Peer SBC does not support blacklist reason na-policy-failure or blacklist alerts configuration. |
| Recommended Action | Manually remove blacklist reason na-policy-failure and minor, major or critical alerts configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_B2B_RESTART : SBC restart has taken longer than expected. The SBC will be restarted, but may require a shut/no shut of the redundancy group in order to return to stateful HA with the active router.

| | |
|---------------------------|---|
| Explanation | SBC process restart timedout, may require manual intervention. |
| Recommended Action | Shut/No shut the standby redundancy group associated with the SBC. LOG_STD_ACTION |

%SBC_HA-3-SBC_HA_CALL_ONA_CFG : SBC has detected first-outbound-na-table configured within a call-policy-set. This command is not supported on the peer. SBC cannot proceed as HA client. Remove all first-outbound-na-table configuration to proceed with ISSU/ISSD.

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support first-outbound-na-table configuration within a call-policy-set. |
| Recommended Action | Manually remove the first-outbound-na-table configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_HA_ADMIN_DOMAIN_CFG : SBC has detected an admin-domain configuration. This feature is not supported on the peer. SBC cannot proceed as HA client. Remove all admin-domain submodes from the configuration to proceed with ISSU/ISSD.

| | |
|---------------------------|--|
| Explanation | Peer SBC does not support admin-domain configuration. |
| Recommended Action | Manually remove the admin-domain submodes from configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_HA_CAC_AVG_PER2_CFG : SBC has detected averaging-period 2 cac configuration. Averaging-period 2 is not supported on the peer. SBC cannot proceed as HA client. Remove the cac-policy-set averaging-period 2 configuration to proceed with ISSU/ISSD.

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support averaging-period 2 cac configuration. |
| Recommended Action | Manually remove the cac-policy-set averaging-period 2 configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_HA_CAC_AVG_PER2_RATE_CFG : SBC has detected cac-policy-set rate limit configuration for averaging-period 2. Averaging-period 2 is not supported on the peer. SBC cannot proceed as HA client. Remove the cac-policy-set rate limit configuration for averaging-period 2 to proceed with ISSU/ISSD.

| | |
|---------------------------|--|
| Explanation | Peer SBC does not support cac rate limit configuration for averaging-period 2. |
| Recommended Action | Manually remove the rate limit commands for averaging-period 2 found within the cac-policy-set entry and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_HA_PORT_TAG_CFG : SBC has detected an port tag configuration. This feature is not supported on the peer. SBC cannot proceed as HA client. Remove all port tag from the configuration to proceed with ISSU/ISSD.

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support port tag configuration. |
| Recommended Action | Manually remove the port tag from configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_FLEX_MED_RTG_CFG : SBC has detected flexible media routing configuration. This feature is not supported on the peer. SBC cannot proceed as HA client. Remove all flexible media routing config from the configuration to proceed with ISSU/ISSD.

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support flexible media routing configuration. |
| Recommended Action | Manually remove flexible media routing from configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_HA_CAC_PRIVACY_SERV_CFG : SBC has detected cac-policy-set privacy-service configuration for a cac entry. This enhancement is not supported on the peer. SBC cannot proceed as HA client. Remove the cac-policy-set privacy-service related configuration to proceed with ISSU/ISSD.

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support cac-policy-set privacy-service configuration for a cac entry. |
| Recommended Action | Manually remove the privacy-service related commands configured within the cac-policy-set entry and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_IMP_NA_REGEX_CFG : SBC has detected number analysis entries that match on text addresses, which are not supported on the peer. Remove all regex number analysis entries to proceed with ISSU/D

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support regex number analysis entries. |
| Recommended Action | Manually remove regex number analysis entries and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_IMP_NA_EDITSRC_CFG : SBC has detected number analysis entries that have edit-src actions, which are not supported on the peer. Remove all edit-src actions from all number analysis entries to proceed with ISSU/D

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support edit-src actions in number analysis entries. |
| Recommended Action | Manually remove edit-src actions from all number analysis entries and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_IMP_NA_SRCANON_CFG : SBC has detected na-src-name-anonymous number analysis tables, which are not supported on the peer. Remove all na-src-name-anonymous number analysis tables to proceed with ISSU/D

| | |
|---------------------------|--|
| Explanation | Peer SBC does not support na-src-name-anonymous number analysis tables. |
| Recommended Action | Manually remove all na-src-name-anonymous number analysis tables and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_MESSAGE_EDITING_CFG : SBC has detected message editing configured which may have sip editor_type editor OR parameter-editor OR header-editor OR method-editor OR body-editor OR option-editor which is not supported on the peer. SBC cannot proceed as HA client. Remove all message editing config to proceed with ISSU/ISSD.

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support message editing configuration. |
| Recommended Action | Manually remove message editing configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_RG_NO_VRF : SBC VRF mismatch between active and standby, please add [chars]

| | |
|---------------------------|-----------------------------------|
| Explanation | SBC may fail to fully support SSO |
| Recommended Action | No action is required. |

%SBC_HA-3-SBC_RG_VRF_INUSE : VRF is used by SBC, add back or remove from active, please add [chars]

| | |
|---------------------------|-----------------------------------|
| Explanation | SBC may fail to fully support SSO |
| Recommended Action | No action is required. |

%SBC_HA-3-SBC_SIPS_H323_INTWK_CFG : SBC has detected SIPS-H323 Interworking configured which may have trusted H323 Adjacencies or secure calls configured which is not supported on the peer. SBC cannot proceed as HA client. Remove all SIPS-H323 Interworking config to proceed with ISSU/ISSD.

| | |
|--------------------|---|
| Explanation | Peer SBC does not support SIPS-H323 Interworking configuration. |
|--------------------|---|

%SBC_HA-3-SBC_SIPS_H323_INTWK_CFG : SBC has detected SIPS-H323 Interworking configured which may have trusted H323 Adjacencies or secure calls configured which is not supported on the peer. SBC cannot proceed as HA client. Remove all SIPS-H323 Interworking config to proceed with ISSU/ISSD.

Recommended Action Manually remove SIPS-H323 Interworking configuration and reinitiate ISSU.
LOG_STD_ACTION

%SBC_HA-3-SBC_LRU_CFG : SBC has detected LRU configured SBC cannot proceed now. Remove all LRU CONFIG to proceed with ISSU/ISSD.

Explanation Peer SBC does not support LRU configuration.

Recommended Action Manually remove LRU configuration and reinitiate ISSU. LOG_STD_ACTION

%SBC_HA-3-SBC_SDP_EDITING_CFG : SBC has detected sdp editing configured which may have script-set OR active-script-set OR test script-set on any adjacency configured which is not supported on the peer. SBC cannot proceed as HA client. Remove all sdp editing config to proceed with ISSU/ISSD.

Explanation Peer SBC does not support sdp editing configuration.

Recommended Action Manually remove sdp editing configuration and reinitiate ISSU. LOG_STD_ACTION

%SBC_HA-3-SBC_CAC_ENHANCEMENT_CFG : SBC has detected cac enhancement feature configured which may have branch cli OR cac-scope (adjacency ,account)cli SBC cannot proceed as HA client. Remove all cac enhancement feature config to proceed with ISSU/ISSD.

Explanation Peer SBC does not support cac enhancement feature configuration.

Recommended Action Manually remove cac enhancement feature configuration and reinitiate ISSU.
LOG_STD_ACTION

%SBC_HA-3-SBC_QOS_DEMARCATION_CFG : SBC has detected qos demarcation configured which may have statistics threshold OR g107a factor OR cal_moscqe OR g107 bpl OR g107 ie OR qos trap configured ,which is not supported on the peer. SBC cannot proceed as HA client. Remove all qos demarcation config to proceed with ISSU/ISSD.

Explanation Peer SBC does not support qos demarcation configuration.

Recommended Action Manually remove qos demarcation configuration and reinitiate ISSU.
LOG_STD_ACTION

%SBC_HA-3-SBC_VIA_PASSTHROUGH_CFG : SBC has detected Via Passthrough configured SBC cannot proceed now. Remove all Via Passthrough CONFIG to proceed with ISSU/ISSD.

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support Via Passthrough configuration. |
| Recommended Action | Manually remove Via Passthrough configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_MEDIA_BYPASS_NATTAGGEN_CFG : SBC has detected media bypass auto-nat-tag-gen configured SBC cannot proceed now. Remove all media bypass auto-nat-tag-gen config to proceed with ISSU/ISSD.

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support media bypass auto-nat-tag-gen configuration. |
| Recommended Action | Manually remove media bypass auto-nat-tag-gen configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_MEDIA_ADDRESS_PRESERVE_INIT_NEGO_CFG : SBC has detected media address preserve init-negotiation configured SBC cannot proceed now. Remove all media address preserve init-negotiation config to proceed with ISSU/ISSD.

| | |
|---------------------------|---|
| Explanation | Peer SBC does not support media address preserve init-negotiation configuration. |
| Recommended Action | Manually remove media address preserve init-negotiation configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_SUBSCRIBER_TCP_CFG : SBC has detected subscriber tcp configured which may have subscriber tcp incoming-only configured which is not supported on the peer. SBC cannot proceed as HA client. Remove all subscriber tcp config to proceed with ISSU/ISSD.

| | |
|---------------------------|--|
| Explanation | Peer SBC does not support subscriber tcp configuration. |
| Recommended Action | Manually remove subscriber tcp configuration and reinitiate ISSU. LOG_STD_ACTION |

%SBC_HA-3-SBC_IMS_RF_CFG : SBC has detected ims rf configured. SBC cannot proceed now. Remove all ims rf config to proceed with ISSU/ISSD.

| | |
|---------------------------|--|
| Explanation | Peer SBC does not support ims rf configuration. |
| Recommended Action | Manually remove ims rf configuration and reinitiate ISSU. LOG_STD_ACTION |

SBC_MPS

%SBC_MPS-3-INTERNAL : An internal IOSd SBC error has been encountered[chars].

| | |
|---------------------------|---|
| Explanation | An internal error has been encountered. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_MPS-3-INITFAIL : SBC module initialisation failure: [chars].

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which resulted in the module being unable to initialise. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_MPS-3-MAX_RESOURCES : The maximum resource limit has been reached.

| | |
|--------------------|--|
| Explanation | The system was asked to allocate more resources, but the maximum resource limit had already been reached |
|--------------------|--|

%SBC_MPS-3-MAX_RESOURCES : The maximum resource limit has been reached.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SBC_MPS-3-ENQUEFAIL : Enqueue of TDL message failed ([chars]).

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which resulted in configuration or event details not being forwarded. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_MPS-6-UNEXPECTED_TDL : An unexpected message ([chars]) has been received by SBC while in the [chars] state.

| | |
|---------------------------|---|
| Explanation | An internal message has been received by SBC, but it was not expecting that message at that particular time. The system will ignore the message and continue operation. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_MPS-4-UNEXPECTED_PKT : An unexpected packet for call [dec] has been received by SBC.

| | |
|---------------------------|---|
| Explanation | A packet been received by SBC for the noted call, but the call was not in a correct state to handle it. The system will ignore the packet and continue operating. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_MPS-3-UNEXPECTED_TIMEOUT : An unexpected timeout has been encountered by SBC ([chars]).

| | |
|--------------------|---|
| Explanation | A timeout was experienced by the IOSd SBC subsystem, but no such timeout should have occurred. The system will ignore the timeout and continue operating. |
|--------------------|---|

%SBC_MPS-3-UNEXPECTED_TIMEOUT : An unexpected timeout has been encountered by SBC ([chars]).

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SBC_MPS-6-DEACTIVATE_NO_RSP : SBC deactivate response is considered lost.

| | |
|---------------------------|---|
| Explanation | The response for SBC deactivate can get lost due to FP startup or switchover while deactivation is in progress. |
| Recommended Action | SBC can be activated now if needed. |

%SBC_MPS-6-DEACTIVATE_RESPONSE : SBC deactivate is complete.

| | |
|---------------------------|---|
| Explanation | SBC deactivation can take a while. This happens when SBC deactivation is done in the presence of a lot calls with deactivation-mode set to abort. SBC deactivate is now complete. |
| Recommended Action | SBC can be safely activated now if needed. |

%SBC_MPS-4-NEW_MPF_CAPABILITIES : New SBC MPF Capabilities handling failure.

| | |
|---------------------------|---|
| Explanation | SBC has received a new set of Media Packet Forwarding capabilities from the associated Forwarding Processor that are inconsistent with those already in use. SBC was unable to process these new capabilities online, and will automatically restart. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_MPS-4-TRANSCODE_MPF_CAPABILITIES : Transcoding SBC MPF Capabilities handling failure.

| | |
|---------------------------|---|
| Explanation | SBC has been unable to prepare a transcoding supported Media Packet Forwarding capabilities message. SBC will not be able to support transcoding functionality. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SBC_MPS-4-MPF_SRTP_CAPABILITIES : Unable to set SRTP capabilities

Explanation SBC made an attempt to set the platform capabilities with respect to its handling of SRTP streams and was not successful. SRTP streams will not be handled through the SBC.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_MPS-4-MPF_CAPABILITIES : SBC MPF Capabilities handling failure.

Explanation SBC has been unable to properly prepare a Media Packet Forwarding capabilities message. SBC may not be able to support select functionality such as transcoding or SRTP.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

SBC_SPF

%SBC_SPF-3-INTERNAL : An internal IOSd SBC error has been encountered[chars].

Explanation An internal error has been encountered.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_SPF-3-NOT_FOUND : An unsolicited message has been received by SBC ([chars] [int])

Explanation An internal message has been received by SBC, but it was not expecting that message at that particular time. The system will ignore the message and continue operation.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SBC_SPF-3-ENQUEFAIL : Enqueue of TDL message failed ([chars]).

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred which resulted in configuration or event details not being forwarded. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SCC

%SCC-3-XCVR_BAD_ID_HW : Failed identification test in [dec]/[dec]/[dec].

| | |
|---------------------------|---|
| Explanation | The Transceiver in the specified port has failed authentication. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SCHED_TEST

%SCHED_TEST-6-ERRMSG : This errmsg should print correctly.

| | |
|---------------------------|--|
| Explanation | |
| Recommended Action | |

%SCHED_TEST-2-EXITHOOK : Exit routine invoked for process [chars].

| | |
|---------------------------|--|
| Explanation | |
| Recommended Action | |

SCOOBY

%SCOOBY-5-SERIAL_BRIDGE_BLOCK_EVENT : Block [chars]/[dec] of serial bridge [dec] had I/O event [hex]

| | |
|---------------------------|--|
| Explanation | A serial bridge I/O event has occurred. This event is not serious but is logged for diagnostic purposes. |
| Recommended Action | No user action is required. |

%SCOOBY-0-SERIAL_BRIDGE_CRITICAL_ERROR : Reloading [chars] due critical event [hex] in block [chars]/[dec] of serial bridge [dec]

| | |
|---------------------------|--|
| Explanation | A critical serial bridge I/O event has occurred. |
| Recommended Action | The system automatically reloads the hardware component experiencing the error. If the problem persists, copy the message exactly as it appears on the console or in the system log, collect the output of show tech-support and any other relevant logs, and contact your Cisco technical support representative. |

%SCOOBY-5-SERIAL_BRIDGE_EVENT_RATE : The [chars] event rate of [int] has exceeded the threshold of [int] on serial bridge [dec] interconnect [dec]

| | |
|---------------------------|--|
| Explanation | A Serial Bridge has experienced a high event rate. This condition is not considered serious, but is logged for diagnostic purposes. This could be due to a hardware or software driver defect. |
| Recommended Action | No user action is required. If this message persists, a serial bridge critical message that needs to be addressed will appear. |

%SCOOBY-0-SERIAL_BRIDGE_CRITICAL_ERROR_RATE : Reloading [chars] due to critically high serial bridge error rate.

| | |
|---------------------------|---|
| Explanation | A Serial Bridge has experienced a persistently high error rate. The condition is serious and the card must be reloaded. This could be due to a hardware or software driver defect. |
| Recommended Action | Copy the message exactly as it appears on the console or in the system log, collect the output of show tech-support and any other relevant logs, and contact your Cisco technical support representative. |

SDFLASH

%SDFLASH-6-DEVICE_ENABLED : SDFlash device enabled

| | |
|---------------------------|--|
| Explanation | SDFlash device is enabled in the system. |
| Recommended Action | No action is required. |

%SDFLASH-1-DEVICE_DISABLED : SDFlash device disabled

| | |
|--------------------|---|
| Explanation | SDFlash device is disabled from the system. Please enable it for correct operation of the switch. |
|--------------------|---|

%SDFLASH-1-DEVICE_DISABLED : SDFlash device disabled

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

SDLC

%SDLC-4-DROPPED : Dropped SDLC packet from SDLC hold queue

| | |
|---------------------------|---|
| Explanation | An SDLC frame had to be dropped from the output hold queue, usually because of excessive congestion on the output link. |
| Recommended Action | If this message occurs frequently, determine why your SDLC link is being overloaded with data and resolve the cause (typically by either increasing bandwidth to your SDLC line or reducing the load on your link). |

%SDLC-3-NULLPAK : Interface [chars], NULL packet ptr, rvr [dec], vs [dec], vr [dec]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred in the router's SDLC processing system. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDLC-3-NOINPIDB : Input idb not set

| | |
|---------------------------|---|
| Explanation | This is a software error. A frame was given to the SDLC handler to process, but the interface on which the frame arrived is not known. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDLC-4-FRAMEERR : Interface [chars], Frame error: CF [hex], VS [dec] %c VR [dec], Reason [hex]

Explanation A FRMR frame was received. This can be due to a noisy serial line, an overloaded SDLC device, or corrupted data.

Recommended Action If this message recurs, service the serial line and the devices attached to it.

%SDLC-4-INFOBAD : Interface [chars], Info field not permitted

Explanation A bad SDLC frame was received.

Recommended Action If this message recurs, check the SDLC serial line and the devices attached to it.

%SDLC-4-CTRLBAD : Interface [chars], Invalid control field

Explanation A bad SDLC frame was received.

Recommended Action If this message recurs, check the SDLC serial line and the devices attached to it.

%SDLC-4-N1TOOBIG : Interface [chars], N1 too large

Explanation An information frame was received from the other end of the SDLC link that was larger than allowed with the N1 parameter on this link.

Recommended Action Either increase the value of the N1 parameter for this interface on the router or reduce the size of the maximum information frame sent by the other end of the link.

%SDLC-4-INVNR : Interface [chars], Invalid NR value

Explanation A bad SDLC frame was received.

Recommended Action If this message recurs, check the SDLC serial line and the devices attached to it.

%SDLC-4-SDLC_ERR : SDLC_ERROR with no poll

Explanation A protocol error was detected on a secondary station, but FRMR could not be sent because the station did not own the poll bit. This message indicates either poor line conditions or a faulty SDLC implementation.

Recommended Action If this message recurs, run traces on the SDLC line. Copy the error message exactly as it appears, and report it to your technical support representative.

%SDLC-2-ILLEGSTATE : [chars], illegal state for addr [hex], [chars]([dec])

| | |
|---------------------------|---|
| Explanation | An internal SDLC state violation was detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDLC-2-NOPOINTER : AW_SDLC_SEC with no sdllc_llc pointer.

| | |
|---------------------------|--|
| Explanation | An error condition occurred during SDLLC initiation. |
| Recommended Action | No action is required. The SDLLC session will restart without operator intervention. |

%SDLC-3-CONFIGERR : [chars], addr [hex], Sent SNRM, received SNRM. Check link station roles.

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDLC-4-NOUA : [chars], addr [hex] received command [hex] in response to SNRM, expected UA

| | |
|---------------------------|--|
| Explanation | The router received a frame other than a UA in response to a SNRM. |
| Recommended Action | Check the end station to see if the SNA stack is up and running. |

%SDLC-5-INVLDGRPPOLL : Interface [chars], not configured for group-poll frame, received [hex]

| | |
|---------------------------|---|
| Explanation | An unnumbered poll (UP) was received with the wrong group poll address. |
| Recommended Action | Make sure the group poll address configured on the router matches the one configured in the physical unit macro (GP3174=XX) in the Network Control Program (NCP) generate file. |

%SDLC-4-INVLDGRPCFG : Interface [chars], ignoring group-poll mismatch, UPOLL [hex]

| | |
|--------------------|--|
| Explanation | A hardware or software error occurred. |
|--------------------|--|

%SDLC-4-INVLDGRPCFG : Interface [chars], ignoring group-poll mismatch, UPOLL [hex]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SDLC-4-BADFRAME : [chars], Received bad SDLC [chars]frame, address [hex], control [hex]

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDLC-2-NOMEMORY : No memory available: [chars]

| | |
|---------------------------|---|
| Explanation | The requested operation failed because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%SDLC-3-DLU_ERROR : [chars], DLU failed to close station [hex] before re-opening, [chars]/[chars]

| | |
|---------------------------|---|
| Explanation | A hardware or software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDLC-4-XID_NOMATCH : [chars], XID mismatch for [hex]. CONNECTION REJECTED

| | |
|---------------------------|--|
| Explanation | An inbound exchange identification (XID) from a PU 2.0/PU 2.1 node was rejected. The targeted SDLC address is displayed. The XID information is displayed in a subsequent message = SDLLC-6-XID_DISPLAY or SDLLC-6-FORMAT. |
| Recommended Action | This is a security feature. Additional information is displayed to help trace the source of the rejected XID. If the message is undesirable, simply remove the XID statement from the router configuration. |

%SDLC-6-XID_DISPLAY : sa [enet] da [enet] ss [hex] ds [hex] [[hex][hex][hex][hex]]

Explanation This message supplies the information for the received and rejected XID.

Recommended Action See the SDLC-6-XID_NOMATCH error message.

%SDLC-6-XID_FORMAT : Unsupported XID format received, format [dec]

Explanation An inappropriate exchange identification (XID) format was received for this mode of SDLLC operation. Review the type of devices you are connecting with SDLLC to make sure they are supported.

Recommended Action See the SDLLC-6-XID_NOMATCH error message.

SDLLC

%SDLLC-5-ACT_LINK : SDLLC: [chars] LINK address [hex] ACTIVATED: [chars]

Explanation An SDLLC media conversion session was activated.

Recommended Action No action is required.

%SDLLC-5-DACT_LINK : SDLLC: [chars] LINK address [hex] DEACTIVATED: [chars]

Explanation An SDLLC media conversion session was deactivated. If deactivation is a result of an error condition, this message will include a reason.

Recommended Action If the message does not include a description of an error, the deactivation was normal and the message is for information only. If the message does include a description of an error, begin problem analysis. Determine whether session loss is related to LLC2 timers by issuing the debug llc2-err command. If the problem is related to LLC2 timers, consider using SDLLC with the local acknowledgment feature. Copy the error message exactly as it appears, and report it to your technical support representative.

SDVXLAN

%SDVXLAN-3-VXLAN_TUN_FULL : Auto-tunnel ID is running out now

Explanation All the vxlan auto-tunnel ID through the tunnel range was used, no more id available

Recommended Action If the auto-tunnel ID is running out, will need to config the auto-tunnel range to expand it

SDWAN_PROXY**%SDWAN_PROXY-3-SDWAN_MEM_REQ_FAILED : SDWAN IPC subtype: [dec]**

| | |
|---------------------------|---|
| Explanation | Requesting more memory failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDWAN_PROXY-3-SDWAN_MEM_EXTEND_FAILED : SDWAN IPC subtype: [dec]

| | |
|---------------------------|---|
| Explanation | Extending memory failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDWAN_PROXY-4-PROXY_INVALID_MSG_LEN : QFP SDWAN Proxy IPC invalid length, [dec]:[dec] len [dec] flags [hex] source [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SDWAN Proxy received invalid IPC message length from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDWAN_PROXY-4-PROXY_INVALID_MSG : QFP SDWAN Proxy received invalid message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SDWAN Proxy received an invalid message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDWAN_PROXY-2-PROXY_IPC_INIT_FAILED : QFP SDWAN Proxy IPC interface initialization failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SDWAN Proxy initialization detected that the IPC interface initialization failed. QFP SDWAN proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDWAN_PROXY-3-PROXY_BAD_MSG : QFP SDWAN Proxy received bad length message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SDWAN Proxy received a corrupted message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDWAN_PROXY-3-PROXY_IPC_ALLOC_FAILED : QFP SDWAN Proxy [chars] message lost due to message buffer allocation failure.

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SDWAN Proxy message processing detected a message buffer allocation failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SDWAN_PROXY-3-PROXY_IPC_SEND_FAILED : QFP SDWAN Proxy [chars] message lost due to message sent failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SDWAN Proxy message processing detected a message sent failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SEC

%SEC-4-TOOMANY : Box secured, too many options on internal packet

| | |
|---------------------------|--|
| Explanation | No room for all desired IP header options. Packet discarded. |
| Recommended Action | Configure for fewer IP header options. |

%SEC-2-NOOPT : Box secured, no option on internal packet

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SEC-2-NOTSEC : First opt in tcb not BASIC security

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, contact your technical support representative. |

%SEC-2-SECINS : Security opt in tcb not SECINSERT

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SEC-3-NOMAX : No default for NLESO defined

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SEC-6-IPACCESSLOGNP : list [chars] [chars] [dec] [IP_address] [chars]-> [IP_address], [dec] packet[chars] [chars]

| | |
|---------------------------|--|
| Explanation | A packet matching the log criteria for the given access list was detected. |
| Recommended Action | No action is required. |

%SEC-6-IPACCESSLOGDP : list [chars] [chars] [chars] [IP_address] [chars]-> [IP_address] ([dec]/[dec]), [dec] packet[chars] [chars]

| | |
|---------------------------|--|
| Explanation | A packet matching the log criteria for the given access list was detected. |
| Recommended Action | No action is required. |

%SEC-6-IPACCESSLOGP : list [chars] [chars] [chars] [IP_address]([dec]) [chars]-> [IP_address]([dec]), [dec] packet[chars] [chars]

| | |
|---------------------------|--|
| Explanation | A packet matching the log criteria for the given access list was detected. |
| Recommended Action | No action is required. |

%SEC-6-IPACCESSLOGRP : list [chars] [chars] [chars] [IP_address] [chars]-> [IP_address], [dec] packet [chars] [chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%SEC-6-IPACCESSLOGS : list [chars] [chars] [IP_address] [dec] packet [chars] [chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

%SEC-6-IPACCESSLOGRL : access-list logging rate-limited or missed [dec] packet [chars]

Explanation Some packet matching logs were missed because the access list log messages were rate-limited or no access list log buffers were available.

Recommended Action No action is required.

%SEC-4-SHELFCTLRTELOPT : malformed option on vty%t %c%c%c [dec] len [dec] [chars]

Explanation A packet containing shelf controller telnet options was malformed. Options were ignored or truncated.

Recommended Action No action is required.

SEC_LOGIN

%SEC_LOGIN-1-QUIET_MODE_ON : Still timeleft for watching failures is [int] secs, [user: [chars]] [Source: [chars]] [localport: [int]] [Reason: [chars]] [ACL: [chars]] at [chars]

Explanation Quiet Mode is ON. No request for connection is accepted other than allowed by the Access List, if configured for the blocking period. Else an implicity *deny all* login's will be in force

Recommended Action As all the requests from other sources are blocked check ACL and add any source addr. if needed.

%SEC_LOGIN-5-QUIET_MODE_OFF : Quiet Mode is OFF, because [chars] at [chars]

Explanation Quiet Mode is OFF. Router now operates in normal connection processing mode

%SEC_LOGIN-5-QUIET_MODE_OFF : Quiet Mode is OFF, because [chars] at [chars]

Recommended Action A notification that the device now operates in normal connection processing mode and the reason why it switched mode is also indicated with the notification.

%SEC_LOGIN-4-LOGIN_FAILED : Login failed [user: [chars]] [Source: [chars]] [localport: [int]] [Reason: [chars]] at [chars]

Explanation Invalid User Name or Password is given from terminal.

Recommended Action A notification to indicate that login failed

%SEC_LOGIN-5-LOGIN_SUCCESS : Login Success [user: [chars]] [Source: [chars]] [localport: [int]] at [chars]

Explanation A successful login happened with the device.

Recommended Action A notification that login succeeded.

%SEC_LOGIN-3-INIT_FAILED : Secure Login Initialization failed. [chars]

Explanation Initialization of Secure Login Subsystem failed

Recommended Action Copy the error message exactly as it appears; include the stack trace; and report it to your technical support representative.

SENSORMGR

%SENSORMGR-3-NOMEM : Sensor manger failed to allocate memory : [chars]

Explanation The sensor manager was not able to add a new threshold node to its database.

Recommended Action TBD

SERDES

%SERDES-3-SERDES_CRITICAL_ERROR : Critical error [chars] in FRU [chars] when [chars]

Explanation A critical error was occurred. The condition is serious and the card must be reloaded. This could be due to bad or unknown hardware (chassis or modules). Chassis Manager could also initialize the Serdes library with incorrect input parameters.

%SERDES-3-SERDES_CRITICAL_ERROR : Critical error [chars] in FRU [chars] when [chars]

Recommended Action Copy the message exactly as it appears on the console or in the system log. Collect the output of show platform, show version, show log, sh diag chassis eeprom detail, show diagnostic slot <slot#> eeprom detail, and any other relevant logs. Contact your Cisco technical support representative.

%SERDES-5-SERDES_NOTICE : from FRU [chars], [chars].

Explanation CMAN sends a significant Serdes event to IOSD to log it

Recommended Action No action is required for this notice.

SERIAL_12IN1

%SERIAL_12IN1-3-SPI4_ERR : SPA [dec]/[dec]: [chars] was encountered. Intr status: [hex]

Explanation The SPA driver detected a Hardware error condition on the SPA card. This might result in improper operation.

Recommended Action The SPA driver has encountered a Hardware error on the SPA's SPI4 bus. Please power down and reseal the indicated SPA card. If the condition persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at <http://www.cisco.com/public/support/tac/tools.shtml>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the **show logging**, **show monitor event-log spa all** and **show tech-support** commands, your troubleshooting logs, and the specific error message.

%SERIAL_12IN1-1-CLOCKRATE : [chars]:Link has been brought [chars] due to clock rate change, threshold configured = [int], received clock rate = [int]

Explanation The received clock rate is changed from below the threshold configured to above or vice versa..

Recommended Action Check the received clock rate from the provider end and the clockrate threshold configuration, if the clock rate goes below the threshold configured, interface is brought down

%SERIAL_12IN1-3-SW_ERR : [chars]: A software error was encountered at [chars]: [chars]

Explanation The SPA driver detected a software error condition on the SPA card. This might result in improper operation.

%SERIAL_12IN1-3-SW_ERR : [chars]: A software error was encountered at [chars]: [chars]

| | |
|---------------------------|--|
| Recommended Action | The SPA driver has encountered a software error. Please power down and reseal the indicated SPA card. Copy the error message exactly as it appears and open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the show logging, show monitor event-log spa all and show tech-support commands, your troubleshooting logs, and the specific error message. |
|---------------------------|--|

%SERIAL_12IN1-3-SW_ERR_1 : [chars]: A software error was encountered at [chars]: [chars] [hex]

| | |
|---------------------------|--|
| Explanation | The SPA driver detected a software error condition on the SPA card. This might result in improper operation. |
| Recommended Action | The SPA driver has encountered a software error. Please power down and reseal the indicated SPA card. Copy the error message exactly as it appears and open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the show logging, show monitor event-log spa all and show tech-support commands, your troubleshooting logs, and the specific error message. |

%SERIAL_12IN1-3-SW_ERR_2 : [chars]: A software error was encountered at [chars]: [chars] [hex]/[hex]

| | |
|---------------------------|--|
| Explanation | The SPA driver detected a software error condition on the SPA card. This might result in improper operation. |
| Recommended Action | The SPA driver has encountered a software error. Please power down and reseal the indicated SPA card. Copy the error message exactly as it appears and open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the show logging, show monitor event-log spa all and show tech-support commands, your troubleshooting logs, and the specific error message. |

SERVICES

%SERVICES-2-NOINIT : Error initializing services: [chars]

| | |
|---------------------------|---|
| Explanation | An application failed to initialize the core services library. The application will not be able to communicate with other modules on the system. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SERVICES-2-NORESOLVE_LOCAL : Error resolving local FRU: [chars]

| | |
|---------------------------|---|
| Explanation | An application was not able to determine its local FRU. The application was likely started incorrectly. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SERVICES-2-NORESOLVE_ACTIVE : Error resolving active FRU: [chars]

| | |
|---------------------------|---|
| Explanation | An application was not able to determine the active FRU. The application was likely started incorrectly. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SERVICES-2-NORESOLVE_STANDBY : Error resolving standby FRU: [chars]

| | |
|---------------------------|---|
| Explanation | An application was not able to determine the standby FRU. The application was likely started incorrectly. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SERVICES-0-INVALID_OWNERSHIP : Error using service handle [IPv6 address] - invalid ownership ([IPv6 address], [IPv6 address])

| | |
|---------------------------|--|
| Explanation | A multi-thread application is trying to incorrectly use the services library. Applications must follow thread confinement strategy with the services library. Each thread of the application must initialize private managed context of the service library. |
| Recommended Action | Copy the error message, tracebacks and version information and contact a Cisco representative. |

%SERVICES-3-INVALID_CHASFS : Thread [IPv6 address] has no global chasfs context

| | |
|---------------------------|--|
| Explanation | A multi-thread application is trying to incorrectly use the services library. Applications must follow thread confinement strategy with the services library. Each thread of the application must initialize private managed context of the service library. |
| Recommended Action | Copy the error message, tracebacks and version information and contact a Cisco representative. |

SERVICE_CHAIN

%SERVICE_CHAIN-3-ALLOC_FAILED : Allocation of [chars] memory failed for Service Chaining feature

| | |
|---------------------------|---|
| Explanation | Allocation of memory by the Service Chaining feature microcode failed. The name of the memory chunk is specified in the message. This indicates a software failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SERVICE_CHAIN-3-PKT_REPLICA_INIT_FAILED : Failed to register with generic packet replication for Service Chaining feature

| | |
|---------------------------|---|
| Explanation | Service Chaining initialization of packet replication registration failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SESSION_MGR

%SESSION_MGR-5-START :

| | |
|---------------------------|---|
| Explanation | Starting an authentication method |
| Recommended Action | Message notification informing about the session manager client is being started to authenticate the endpoint attached to the interface |

%SESSION_MGR-5-SUCCESS :

| | |
|---------------------------|--|
| Explanation | Authorization was successful. |
| Recommended Action | Client connected to the switch has been successfully authorized by the session manager framework |

%SESSION_MGR-5-FAIL :

| | |
|---------------------------|---|
| Explanation | Authorization was unsuccessful. |
| Recommended Action | Authorization was unsuccessful for the client. Collect the smd logs and system console logs |

%SESSION_MGR-5-VLANASSIGN :

| | |
|---------------------------|---|
| Explanation | VLAN assignment to an interface for the session |
| Recommended Action | No action is required. |

%SESSION_MGR-5-SECURITY_VIOLATION :

| | |
|---------------------------|---|
| Explanation | A host on the specified interface is attempting to gain access into the network or is trying to authenticate in a host mode that does not support the number of hosts attached. This is treated as a security violation and the port has been error-disabled. |
| Recommended Action | Ensure that the port is configured to support the host count attached. Enter the shutdown command followed by no shutdown command to restart the port. |

%SESSION_MGR-7-STOPPING :

| | |
|---------------------------|--|
| Explanation | Stopping the current authentication method |
| Recommended Action | No action is required. |

%SESSION_MGR-7-NOMOREMETHODS :

| | |
|---------------------------|--|
| Explanation | All available authentication methods have been tried |
| Recommended Action | No action is required. |

%SESSION_MGR-5-MACMOVE :

| | |
|---------------------------|--|
| Explanation | Client has moved to a new interface without logging off on the previous one. |
| Recommended Action | No action is required. |

%SESSION_MGR-5-MACREPLACE :

| | |
|---------------------------|--|
| Explanation | A new client has triggered a violation causing an existing client to be replaced |
| Recommended Action | No action is required. |

%SESSION_MGR-4-UNAUTH_MOVE :

| | |
|---------------------------|---|
| Explanation | Move while not authenticated on old IDB |
| Recommended Action | No action is required. |

%SESSION_MGR-4-ILLEGAL_TRACE_REQ :

| | |
|---------------------------|---------------------------------|
| Explanation | Component ID %d not registered. |
| Recommended Action | No action is required. |

%SESSION_MGR-0-CONFIG_CORRUPT :

| | |
|---------------------------|--|
| Explanation | Interface configuration field was modified unexpectedly. |
| Recommended Action | No action is required. |

SFF8472

%SFF8472-2-NOMEM : Not enough memory available for [chars]

| | |
|---------------------------|---|
| Explanation | The sff8472 subsystem could not obtain the memory it needed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SFF8472-3-THRESHOLD_VIOLATION : [chars]: [chars]; Operating value: [chars], Threshold value: [chars].

Explanation There has been a threshold violation as specified in the message. If the violation has occurred only during bootup/OIR/link up/down, you may ignore the message. Otherwise, the violations in optical tx/rx power are most likely due to incompatible/defective optical components or too long/short optical cables. It may also be due to faulty transceiver.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SFF8472-3-UNEXPECTEDEVENT : Process received unknown event (maj [hex], min [hex]).

Explanation A process can register to be notified when various events occur in the router. This message indicates that a process received an event it did not know how to handle.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

%SFF8472-3-INTERNAL_ERROR : [chars]

Explanation The SFF8472 subsystem encountered an internal software error. The error message contains text which can be used to help identify the nature of the problem.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SFF8472-3-READ_ERROR : [chars]

Explanation There was an error reading digital optical monitoring information from the transceiver at the specified interface.

Recommended Action Please try removing and reinserting the transceiver. If it still does not work, please replace the transceiver.

SFP**%SFP-3-EEPROM_DUP_ERR : SFP on ports [chars] and [chars] have duplicate serial numbers**

| | |
|---------------------------|--|
| Explanation | The GBIC/SFP was identified as a Cisco GBIC, but its vendor id and serial number match that of another GBIC on the system. |
| Recommended Action | Report to Cisco tech support. |

%SFP-4-EEPROM_READ_ERR : Error in reading SFP serial ID in [chars]

| | |
|---------------------------|---|
| Explanation | Error when reading SFP type from EEPROM |
| Recommended Action | Please remove SFP from this Port |

%SFP-4-EEPROM_CRC_ERR : EEPROM checksum error for SFP in [chars]

| | |
|---------------------------|---|
| Explanation | The SFP in the port specified in the error message has invalid EEPROM data. |
| Recommended Action | Remove the SFP from the specified port. |

%SFP-4-EEPROM_SECURITY_ERR : SFP in [chars] failed security check

| | |
|---------------------------|---|
| Explanation | The SFP in the port specified in the error message has invalid EEPROM data. |
| Recommended Action | Remove the SFP from the specified port. |

%SFP-4-REMOVED : SFP module removed from [chars]

| | |
|---------------------------|---|
| Explanation | The online insertion and removal (OIR) facility detected the removal of a SFP module from the interface specified in the error message. |
| Recommended Action | No action is required. |

%SFP-6-INSERTED : SFP module inserted in [chars]

| | |
|---------------------------|--|
| Explanation | The online insertion and removal (OIR) facility detected a newly inserted SFP module for the interface specified in the error message. |
| Recommended Action | No action is required. |

%SFP-3-NOT_SUPPORTED : Detected for SFP module in [chars], module disabled

Explanation The SFP module for the interface specified in the error message is not a cisco supported module. As a result of the error, the module is disabled.

Recommended Action Replace the module with a cisco supported SFP.

%SFP-3-NOT_COMPATIBLE : Detected for SFP module in [chars], module disabled

Explanation The SFP module for the interface specified in the error message is not compatible with the interface. As a result of the error, the module is disabled.

Recommended Action Replace the module with a compatible SFP.

SGBP

%SGBP-3-INVALIDB : [chars] for bundle '[chars]' -- [chars]

Explanation An internal software error has occurred.

Recommended Action LOG_STD_ACTION

%SGBP-7-NEWL : Local query #[dec] for [chars], count [dec], ourbid [dec]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-DUPL : Duplicate local query #[dec] for [chars], count [dec], ourbid [dec]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-NEWP : Peer query #[dec] for [chars], count [dec], peerbid [dec], ourbid [dec]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-CANCEL : Local query #[dec]:[dec] for bundle [chars]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-DONE : Query #[dec] for bundle [chars], count [dec], master is [chars]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action LOG_STD_NO_ACTION

%SGBP-3-TIMEOUT : Peer [IP_address] bidding; state 'PB [chars]' deleted

Explanation This message is generated only when SGBP event debugging is enabled. It indicates that a peer timed out while closing a query. The connection has been dropped.

Recommended Action Check the peer equipment and network media for problems.

%SGBP-7-MQB : tBundle: [chars]tState: [chars]tOurBid: %03d

Explanation This message is part of a list of debug states displayed at the request of the operator.**Recommended Action** LOG_STD_NO_ACTION

%SGBP-7-PB : t[IP_address]tState: [chars]tBid: %03d Retry: [dec]

Explanation This message is part of a list of debug states displayed at the request of the operator.**Recommended Action** LOG_STD_NO_ACTION

%SGBP-7-EQUAL : [dec] equal highest bids, randomly select bid# [dec]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.**Recommended Action** LOG_STD_NO_ACTION

%SGBP-7-HANGUP : I am a forward-only member, can't forward bundle [chars], hangup

Explanation This message is generated only when SGBP query, event and/or error debugging is enabled. This indicates a routine change of role for the router in its SGBP interactions with its peers.**Recommended Action** LOG_STD_NO_ACTION

%SGBP-3-INVFIELD : [chars] field type [hex] has [chars] [dec] (expected [dec])

Explanation This message indicates that an SGBP request from a peer contained invalid or corrupt data.**Recommended Action** Check the peer equipment or network media for any problems.

%SGBP-7-RCVD : MQ [chars] from [IP_address] for query [dec]:[dec], bundle [chars], bid [dec], prot[chars]

Explanation This message is generated only when SGBP message debugging is enabled. It indicates that an SGBP packet was received.**Recommended Action** LOG_STD_NO_ACTION

%SGBP-7-SENT : MQ [chars] to [IP_address] for query [dec]:[dec], bundle [chars], bid [dec], prot[chars], len [dec]

Explanation This message is generated only when SGBP message debugging is enabled. It indicates that an SGBP packet was sent.

Recommended Action LOG_STD_NO_ACTION

%SGBP-3-UNEXP : MQ [chars] from [IP_address] for query [dec]:[dec], bundle [chars], bid [dec], state [chars]

Explanation This message is generated only when SGBP error debugging is enabled. The SGBP connection has entered an unexpected state, possibly due to a software error.

Recommended Action LOG_STD_ACTION

%SGBP-3-INVALID : MQ message with [chars]

Explanation This message is generated only when SGBP error debugging is enabled. An invalid message was received and discarded.

Recommended Action This probably indicates an error in network media or a peer which is generating erroneous packets.

%SGBP-7-MQ : [chars] ([hex]) for query [dec]:[dec], bundle [chars], bid [dec], len [dec]

Explanation This message is generated only when SGBP error debugging is enabled. This message indicates that an SGBP query has been received.

Recommended Action LOG_STD_NO_ACTION

%SGBP-3-PEERERROR : Peer [IP_address] [chars] during 'PB [chars]' state for bundle [chars]

Explanation An internal software error has occurred.

Recommended Action LOG_STD_ACTION

%SGBP-3-UNKNOWNPEER : Event [hex] from peer at [IP_address]

Explanation This message is generated only when SGBP error debugging is enabled. An SGBP event came from a network host which was not recognizable as an SGBP peer. The event was discarded.

%SGBP-3-UNKNOWNPEER : Event [hex] from peer at [IP_address]

| | |
|---------------------------|--|
| Recommended Action | Check if a network media error could have corrupted the address, or if peer equipment is malfunctioning to generate corrupted packets. Depending on the network topology and firewalling, SGBP packets from a non-peer host could indicate probing and attempts to breach security. If there is a chance your network is under attack, obtain knowledgeable assistance. LOG_STD_ACTION |
|---------------------------|--|

%SGBP-3-UNKNOWNEVENT : Event [hex] from peer at [IP_address]

| | |
|--------------------|--|
| Explanation | This message is generated only when SGBP error debugging is enabled. An invalid event occurred, which probably indicates an internal software error. |
|--------------------|--|

| | |
|---------------------------|----------------|
| Recommended Action | LOG_STD_ACTION |
|---------------------------|----------------|

%SGBP-5-SHUTDOWN : [chars]

| | |
|--------------------|---|
| Explanation | This message is generated only when SGBP event debugging is enabled. A process involved in SGBP was terminated upon completion of its work. |
|--------------------|---|

| | |
|---------------------------|-------------------|
| Recommended Action | LOG_STD_NO_ACTION |
|---------------------------|-------------------|

%SGBP-5-STARTUP : [chars]

| | |
|--------------------|--|
| Explanation | This message is generated only when SGBP event debugging is enabled. A process involved in SGBP was started. |
|--------------------|--|

| | |
|---------------------------|-------------------|
| Recommended Action | LOG_STD_NO_ACTION |
|---------------------------|-------------------|

%SGBP-7-CLOSE : Closing pipe for member [chars]

| | |
|--------------------|---|
| Explanation | This message is generated only when SGBP event debugging is enabled. An interprocess communication link was closed. |
|--------------------|---|

| | |
|---------------------------|-------------------|
| Recommended Action | LOG_STD_NO_ACTION |
|---------------------------|-------------------|

%SGBP-5-ARRIVING : New peer event for member [chars]

| | |
|--------------------|---|
| Explanation | This message is generated only when SGBP event debugging is enabled. An SGBP peer joined the group. |
|--------------------|---|

| | |
|---------------------------|-------------------|
| Recommended Action | LOG_STD_NO_ACTION |
|---------------------------|-------------------|

%SGBP-5-LEAVING : Member [chars] leaving group [chars]

Explanation This message is generated only when SGBP event debugging is enabled. An SGBP peer has left the group.

Recommended Action LOG_STD_NO_ACTION

%SGBP-3-UNKNOWN : [IP_address] not known

Explanation This message is generated only when SGBP error debugging is enabled. An SGBP connection was attempted by a host which was not recognized as a peer. The connection was not accepted.

Recommended Action Depending on the network topology and firewalling, SGBP connection attempts from a non-peer host could indicate probing and attempts to breach security. If there is a chance your network is under attack, obtain knowledgeable assistance.
LOG_STD_ACTION

%SGBP-1-AUTHFAILED : Member [chars] failed authentication

Explanation This message is generated only when SGBP hellos or errors debugging is enabled. This indicates that an attempted peer connection ended in authentication failure. A peer may be misconfigured. Or this could indicate an attempted security breach.

Recommended Action Check if the peer is correctly configured. If there is a chance your network is under attack, obtain knowledgeable assistance. LOG_STD_ACTION

%SGBP-7-CHALLENGED : Rcv Hello Challenge message from member [chars] using [IP_address]

Explanation This message is generated only when SGBP hellos debugging is enabled. This indicates that an authentication challenge was received from a peer.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-RESPONSED : Rcv Hello Response message from member [chars] using [IP_address]

Explanation This message is generated only when SGBP hellos debugging is enabled. This indicates that a response to an authentication challenge was received from a peer.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-CHALLENGE : Send Hello Challenge to [chars] group [chars]

Explanation This message is generated only when SGBP hellos debugging is enabled. This indicates that an authentication challenge was sent to a peer.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-RESPONSE : Send Hello Response to [chars] group [chars]

Explanation This message is generated only when SGBP hellos debugging is enabled. This indicates that a response to an authentication challenge was sent to a peer.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-NORESP : Failed to respond to [chars] group [chars], may not have password

Explanation An authentication challenge was received but there was no information available to respond to it. This probably indicates a configuration error, a missing password.

Recommended Action Refer to the documentation to configure a username with the same name as the SGBP group.

%SGBP-1-UNKNOWNHELLO : Rcv Hello message from non-group member using [IP_address]

Explanation This message is generated only when SGBP hellos or error debugging is enabled. An SGBP Hello message was received from a host that is not a member of the SGBP group, and discarded.

Recommended Action This is a configuration error. Either that host should be listed in this router's configuration as a member (if that is actually true) or the other host is misconfigured to attempt to join this group.

%SGBP-1-MISSCONF : Possible misconfigured member [chars] using [IP_address]

Explanation This message is generated only when SGBP hellos or error debugging is enabled. This indicates a configuration error. Either this router has an incorrect IP address listed for the peer or the peer is using an incorrect IP address.

Recommended Action Find and correct the configuration error.

%SGBP-7-RCVINFO : Received Info Addr = [IP_address] Reference = [hex]

Explanation This message is generated only when SGBP hellos debugging is enabled. It indicates that data was received by a listener process.

%SGBP-7-RCVINFO : Received Info Addr = [IP_address] Reference = [hex]

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-SENDINFO : Send Info Addr to [chars]

Explanation This message is generated only when SGBP hellos debugging is enabled. It indicates that data was sent by the listener process in response to received data.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-KEEPALIVE : Sending Keepalive to [chars], retry=[dec]

Explanation This message is generated only when SGBP hellos debugging is enabled. It indicates that a keepalive message was send to an SGBP member.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-KEEPALIVE_TIMEOUT : Keepalive timeout on [chars]

Explanation This message is generated only when SGBP hellos debugging is enabled. It indicates that keepalive messages were not answered so the pipe to an SGBP member has been closed.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-SENDAUTHOK : Send Hello Authentication OK to member [chars] using [IP_address]

Explanation This message is generated only when SGBP hellos debugging is enabled. A message was send or re-sent to another SGBP member indicating that an authentication attempt from that member succeeded.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-AUTHOK : Member [chars] State -> AuthOK

Explanation This message is generated only when SGBP errors or events debugging is enabled. A message was received from another SGBP member indicating that an authentication attempt to that member succeeded.

Recommended Action LOG_STD_NO_ACTION

%SGBP-7-WAITINFO : Member [chars] State -> WaitInfo

Explanation**Recommended
Action**

%SGBP-7-ACTIVE : Member [chars] State -> Active

Explanation This message is generated only when SGBP errors or events debugging is enabled. This indicates that a link to another SGBP member has completed the interactions to set it up and is now entering the active state.

**Recommended
Action** LOG_STD_NO_ACTION

%SGBP-1-DIFFERENT : Rcv [chars]'s addr [IP_address] is different from the hello's addr [IP_address]

Explanation The internally-configured address for an SGBP member does not match the address of the host that tried to authenticate as that member. The configuration is incorrect on either this system or the other member - they must agree.

**Recommended
Action** Determine which configuration is in error and fix it.

%SGBP-1-NOTAUTH : Rcv Connection request by non-authenticated member [chars]

Explanation**Recommended
Action**

%SGBP-1-DUPLICATE : Rcv Duplicate bundle [chars] is found on member [chars]

Explanation This message is generated only when SGBP hellos or errors debugging is enabled. This indicates that a duplicate bundle was received from the same peer more than once. The duplicate was discarded.

**Recommended
Action** LOG_STD_RECUR_ACTION

%SGBP-3-INVALIDADDR : Stack group [chars] IP address [IP_address]

| | |
|---------------------------|---|
| Explanation | The current configuration does not allow a local IP address to be configured using sgbp member <address> . Any local address is automatically removed from the SGBP group. |
| Recommended Action | Do not configure sgbp member <address> using a local IP address. |

SGPM**%SGPM-3-POLICY_INCOMPLETE_RULE : Subscriber policy rule ([chars]), event ([chars]) is missing a mandatory action for service ([chars]) automatically adding.**

| | |
|---------------------------|---|
| Explanation | The subscriber policy rule was missing a mandatory action; automatically added. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SGPM-3-POLICY_CTX_POISONED : Policy context [hex] has bad magic, [hex].

| | |
|---------------------------|---|
| Explanation | The magic number in the policy context is wrong. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SGPM-3-PACL_NAME_TOO_LONG : The pacl name ([chars]-[chars]) is too long, it exceeds the maximum length of [dec].

| | |
|---------------------------|---|
| Explanation | Too many acl entries have made the pacl name exceed the maximum supported length |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SGPM-3-POLICY_RULE_SERVICE_CONFIG_ERROR : Service ([chars]) is configured incorrectly, service_failed event will be thrown

| | |
|--------------------|--|
| Explanation | In policy rule, the service is configured incorrectly, then a service-failed event will be thrown. |
|--------------------|--|

%SGPM-3-POLICY_RULE_SERVICE_CONFIG_ERROR : Service ([chars]) is configured incorrectly, service_failed event will be thrown

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SGPM-3-POLICY_CTX_ACTIVE : Active policy context [hex] has bad magic, [hex].

| | |
|---------------------------|---|
| Explanation | The magic number in the active policy context is wrong. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SHDSL

%SHDSL-3-NOMEM : SHDSL [chars] malloc failed : out of memory

| | |
|---------------------------|---|
| Explanation | The router does not have enough memory installed to run this SHDSL feature |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SHDSL-1-INIT : SHDSL([dec]/[dec]/[dec]): [chars].

| | |
|---------------------------|---|
| Explanation | An attempt to initialize the SHDSL NIM failed. This module cannot be used |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SHDSL-1-FWDNLD : [chars] [chars].

| | |
|--------------------|---|
| Explanation | An attempt to download firmware for SHDSL card failed. This interface cannot be used. |
|--------------------|---|

%SHDSL-1-FWDNLD : [chars] [chars].

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SHDSL-1-TCLAYER : SHDSL([dec]/[dec]/[dec]): [chars] [dec].

| | |
|---------------------------|--|
| Explanation | if CPE-CO mode(ATM/EFM) configuration is improper This Error Message is generated which means that the peer device has different TC layer or no common TC layer was selected during handshake. |
| Recommended Action | Change the mode(ATM to EFM or EFM to ATM)configuration on CPE or CO side |

%SHDSL-1-INFO : SHDSL([dec]/[dec]/[dec]): [chars].

| | |
|---------------------------|---|
| Explanation | Info on SHDSL card. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SHDSL-4-ERRORINT : Error interrupt: [chars] received

| | |
|---------------------------|---|
| Explanation | A spurious event happened for the SHDSL card. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SHDSL-6-DSLGROUP_UPDOWN : [chars] dsl-group [dec] state changed to [chars].

| | |
|---------------------------|-----------------------------|
| Explanation | DSL Group state is changed. |
| Recommended Action | No action is required. |

%SHDSL-6-EFM_BOND_LINK_RATE_CHANGE : [chars] EFM Link([dec]) bandwidth is changed.

| | |
|---------------------------|--|
| Explanation | SHDSL link is trained to a different rate EFM bonding group. |
| Recommended Action | No action is required. |

%SHDSL-6-EFM_ACT_LINK_CHANGE : [chars] EFM Group [dec] has [dec] active links, active link bitmap is [hex].

| | |
|---------------------------|--|
| Explanation | Active Links were added or removed from the Group, changing its bandwidth. |
| Recommended Action | No action is required. |

%SHDSL-5-DYING_GASP : Power failure at CPE detected at link no [dec].

| | |
|---------------------------|---|
| Explanation | CPE has gone down because of power failure. |
| Recommended Action | No action is required. |

%SHDSL-3-EFM_FRAME_SIZE : [chars] [chars].

| | |
|---------------------------|---|
| Explanation | An attempt to change the maximum frame size in EFM bonding scenario has failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SHDSL-1-EFM_BOND : [chars] CPE-CO configuration mismatch detected for link:[dec].

| | |
|---------------------------|---|
| Explanation | If CPE is configured in efm bonding and CO is configured in plain 2wire then link will come-up in plain 2-wire. Since CPE is configured in efm bonding, CPE will ignore link up event |
| Recommended Action | Correct either CPE or CO's configuration |

%SHDSL-3-FIRMWARE : [chars] [chars]

| | |
|--------------------|--|
| Explanation | Error occurred in the SHDSL module firmware. |
|--------------------|--|

%SHDSL-3-FIRMWARE : [chars] [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SHDSL-6-PHY_FWDNLD : [chars] [chars] [chars]

| | |
|---------------------------|---|
| Explanation | Info about status of SHDSL Phy firmware download. |
| Recommended Action | No action is required. |

%SHDSL-3-PHY_FWDNLD_FAIL : [chars] [chars] could be incomplete or corrupted or not present in [chars]

| | |
|---------------------------|--|
| Explanation | Error occurred in the SHDSL Phy firmware download. |
| Recommended Action | Use correct firmware package file |

%SHDSL-1-NGIO_DROP : Command dropped since phy re-init is in progress.

| | |
|---------------------------|---|
| Explanation | If ngio_drop_messages is set, then the messages are dropped in host |
| Recommended Action | Wait till the phy reinit is complete |

SHELL_ISSU

%SHELL_ISSU-2-INIT : Shell ISSU client initialization failed to [chars]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Shell ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SHELL_ISSU-3-MSG_NOT_OK : Shell ISSU client 'Message Type [dec]' is not compatible

| | |
|---------------------------|---|
| Explanation | The Shell ISSU client received an incompatible message from the peer device. The message cannot be processed. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%SHELL_ISSU-3-MSG_SIZE : Shell ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Shell ISSU client failed to calculate the MTU for the specified message. The Shell ISSU client is not able to send the message to the standby device. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%SHELL_ISSU-3-INVALID_SESSION : Shell ISSU client does not have a valid registered session.

| | |
|---------------------------|---|
| Explanation | The Shell ISSU client does not have a valid registered session. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%SHELL_ISSU-2-SESSION_REGISTRY : Shell ISSU client failed to register session information. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The Shell ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%SHELL_ISSU-3-SESSION_UNREGISTRY : Shell ISSU client failed to unregister session information. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The Shell ISSU client failed to unregister session information. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%SHELL_ISSU-2-SESSION_NEGO_FAIL_START : Failed to start Shell ISSU session negotiation. Error: [dec] ([chars])

| | |
|--------------------|---|
| Explanation | The Shell ISSU client failed to start session negotiation. If a problem occurs with the ISSU session start, the standby device cannot be brought up properly. |
|--------------------|---|

%SHELL_ISSU-2-SESSION_NEGO_FAIL_START : Failed to start Shell ISSU session negotiation. Error: [dec] ([chars])

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id>)

%SHELL_ISSU-2-SEND_NEGO_FAILED : Shell ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The Shell ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%SHELL_ISSU-2-GET_BUFFER : Shell ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The Shell ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%SHELL_ISSU-2-COPY_SHELL_INIT_TO_STANDBY : Failed to copy the shell init file [chars] to standby

Explanation If the shell init file is not copied to standby, the shell init file CLI will not be applied to maintain the consistency between active and standby.

Recommended Action LOG_STD_SH_CMD_ACTION(Try manually copy a file to standby to see if it's a filesystem issue. It could be a space issue in the standby disk)

%SHELL_ISSU-2-SAVE_TRIGGER_FOR_REAPPLY : Failed to add trigger to the re-apply queue. Trigger: [chars], Env: [chars]

Explanation Triggers that failed to get applied during ISSU must be saved and then re-applied after ISSU completes.

Recommended Action LOG_STD_SH_CMD_ACTION(Manually re-apply the trigger after ISSU completes)

SHFWD**%SHFWD-6-PACKET_TRACE_DONE : Packet Trace Complete: [chars]**

| | |
|---------------------------|---|
| Explanation | Packet trace cmd initiated by admin is complete |
| Recommended Action | No action is required |

%SHFWD-6-PACKET_TRACE_FLOW_ID : Packet Trace Flow id is [int]

| | |
|---------------------------|--|
| Explanation | Packet trace instance can be tracked by flowid |
| Recommended Action | No action is required |

%SHFWD-6-PACKET_TRACE_FAIL : Show fwd is failed at [chars]

| | |
|---------------------------|---|
| Explanation | Packet trace cmd initiated by admin is fail |
| Recommended Action | Collect the trace from all the switch using the cli \ (show platform software trace fed switch <>) |

SIGNAL_OCE**%SIGNAL_OCE-3-SOCE : Failed to [chars] signal oce [chars][chars]**

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIGNAL_OCE-3-SOCE_SB_OPERATION_FAILED : Failed to [chars] subblock on [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SIP

%SIP-3-QUEUE_ERROR : Unable to enqueue event [chars] ([dec]) to a process watched queue. Current size: [dec], max size: [dec]

| | |
|---------------------------|---|
| Explanation | An internal or external event was dropped because it could not be added to the queue, probably because the queue is full. The result may be minor (retransmission of a SIP message) or major (dropped call), depending on the event which was lost. This error may indicate that the call rate is exceeding the capacity of the gateway. If this is the case, the CPU utilization will be excessively high (above 75%). |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show process cpu command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-INSV_ERROR : Error encountered while trying to bring the SIP component into service

| | |
|---------------------------|---|
| Explanation | During bootup of the gateway, each of the Service Provider Interfaces (SPIs) are brought into service. The SIP SPI creates several processes and notifies the Call Control API (CCAPI) when it is finished. One or more of these tasks failed, so the SIP component will not be properly initialized. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-LIST_ERROR : Unable to create list for [chars]

| | |
|---------------------------|--|
| Explanation | Failure to create a list generally indicates that the router is out of memory, either due to a memory leak or insufficient memory. If the error was generated soon after a reload, its more likely that the router doesn't have enough memory. If the router has been running for a while, a memory leak is more likely. The SIP component is not properly initialized, and SIP calls may not complete properly. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show process memory command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-INTERNAL : [chars]

Explanation**Recommended
Action**

%SIP-3-UNSUPPORTED : [chars]

Explanation An internal software error has occurred.**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SIP-3-INVALID : Invalid [chars] [dec]

Explanation An internal software error has occurred.**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SIP-3-BADPAIR : Unexpected [chars] [dec] ([chars]) in state [dec] ([chars]) substate [dec] ([chars])

Explanation The SIP state machine has encountered an error while processing an event or timer.**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SIP-6-IGNORE : Unexpected [chars] [dec] ([chars]) in state [dec] ([chars]) substate [dec] ([chars])

Explanation The SIP state machine has encountered an error while processing an event or timer.

%SIP-6-IGNORE : Unexpected [chars] [dec] ([chars]) in state [dec] ([chars]) substate [dec] ([chars])

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%SIP-3-CONSTRUCT : Error encountered while trying to construct a [dec] [chars] [chars] message

| | |
|---------------------------|--|
| Explanation | An error was encountered while attempting to construct a SIP request or response message. If malloc errors were also seen, then that is most likely the root of the problem. If no memory allocation errors have occurred, then this may be an internal problem. |
| Recommended Action | If there were memory allocation errors at the same time as this error, then this error can be ignored. Otherwise: LOG_STD_SH_TECH_ACTION |

%SIP-3-NORESOURCE : No resources for [chars]

| | |
|---------------------------|---|
| Explanation | An error was encountered while trying to obtain memory resources for an internal queue or table. If malloc errors were also seen, then that is most likely the root of the problem. If no memory allocation errors have occurred, then this may be an internal problem. |
| Recommended Action | If there were memory allocation errors at the same time as this error, then this error can be ignored. Otherwise: LOG_STD_SH_TECH_ACTION |

%SIP-3-NOMATCH : Unable to find matching CCB for ccCallID [dec]

| | |
|---------------------------|--|
| Explanation | An internal error was encountered while trying to match a call ID with a call control block |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-5-DIALPEER_STATUS : VoIP dial-Peer <[dec]> is [chars]

| | |
|--------------------|--|
| Explanation | VoIP dial-peer's operational status is changed |
|--------------------|--|

%SIP-5-DIALPEER_STATUS : VoIP dial-Peer <[dec]> is [chars]

| | |
|---------------------------|--|
| Recommended Action | If the dial-peer status is busyout, the session target configured under the dial-peer is not reachable |
|---------------------------|--|

%SIP-3-DIGITEND : Missing digit end event for '%c' for call ID [chars]

| | |
|--------------------|--|
| Explanation | A digit begin event was detected without a matching digit end. This is most likely an internal error which is self correcting (the NOTIFY for the digit has been transmitted). |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SIP-3-FORKING_CODEEC : No forking codecs configured for dial-peer [dec], the forked m-lines will be rejected. Forking codecs are [chars]

| | |
|--------------------|---|
| Explanation | Media forking requests which arrive in an INVITE message are identified by multiple media lines (m-lines) in the SDP. Each media line defines a media stream with destination port and payload types. In order to fork multiple media streams from a single call, all streams must share the same payload type and codec. Only a subset of the full list of SIP codecs are available for media forking, and the dial-peer selected for the call which is to be forked must include one of these supported codecs. This error indicates that the dial-peer does not include one of the supported codecs, so only the original media stream will be maintained; the remaining media streams will be rejected in the response by setting the port number to zero (0) in the SDP. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Modify the dial-peer configuration to include one of the forking codecs listed using either the codec command or the voice-class codec command. |
|---------------------------|---|

%SIP-4-MAXSDP : SIP message sent with maximum SDP.

| | |
|--------------------|--|
| Explanation | An SIP protocol message containing the maximum allowable SDP size has been sent. If the desired SDP was greater than the maximum size limit, the SDP has been truncated at the limit. If the desired SDP was equal to the maximum size limit, no truncation has occurred. This warning may indicate that an SIP request containing an unusually large SDP has been received from an external SIP application for a specific call, resulting in an SIP response with the maximum SDP. |
|--------------------|--|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%SIP-3-DIGITQFULL : Unable to queue DTMF digit. Queue full. size: [dec]

| | |
|---------------------------|---|
| Explanation | A request to queue a DTMF digit was rejected because the DTMF queue is full. A 5xx server error has been returned. This error may indicate that a flood of DTMF digit requests from an external SIP application for a specific call has been received in a very short period of time. |
| Recommended Action | No action is required. |

%SIP-3-UNKNOWNOBJ : MIB object [chars].[dec] is not known by MIB API subsystem.

| | |
|---------------------------|---|
| Explanation | The MIB object specified in the SNMP GET PDU has been correctly identified by the SNMP Agent infrastructure, but was not correctly identified by the subsystem responsible for the MIB. Processing of the GET operation cannot continue. The SNMP Agent infrastructure and subsystem responsible for the MIB, under normal conditions, will always be synchronized to the same set of MIB objects (that is, the same version of the MIB). This condition indicates that synchronization has not occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-NOGETSTRUCT : No data structure passed to MIB API subsystem.

| | |
|---------------------------|---|
| Explanation | The SNMP Agent MIB subsystem for this MIB did not pass any data structure to the MIB API subsystem for the proper retrieval of the requested object data. Processing of the GET operation cannot continue. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-NOSETDATA : No SET data passed to MIB API subsystem.

| | |
|---------------------------|---|
| Explanation | The SNMP Agent MIB subsystem for this MIB did not pass any data to the MIB API subsystem for the proper assignment of values to the internal data structures of the object. Processing of the SET operation cannot continue. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-6-LONG_DUR_CALL_DETECTED : Long Duration Call is detected [chars]

| | |
|---------------------------|---|
| Explanation | The call is active for configured duration of long call |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-DIALPEERBWAC : Calling number [chars], called number [chars], dial-peer [dec], used bandwidth [dec], available bandwidth [dec], requested bandwidth [dec], call state [chars]

| | |
|---------------------------|---|
| Explanation | Bandwidth CAC has rejected the call/media renegotiation due to configured dial-peer bandwidth threshold being exceeded |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-INTBWAC : Calling number [chars], called number [chars], dial-peer [dec], interface [chars], used bandwidth [dec], available bandwidth [dec], requested bandwidth [dec], call state [chars]

| | |
|---------------------------|---|
| Explanation | Bandwidth CAC has rejected the call/media renegotiation due to configured interface bandwidth threshold being exceeded. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-PTIME : Unsupported Ptime value [dec], using minimum Ptime value of [dec] on CallID [dec] Codec=[chars]

| | |
|--------------------|------------------------------------|
| Explanation | Unsupported Ptime value negotiated |
|--------------------|------------------------------------|

%SIP-3-PTIME : Unsupported Ptime value [dec], using minimum Ptime value of [dec] on CallID [dec] Codec=[chars]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%SIP-3-INTCALLCAC : Call rejected due to CAC based on number of calls on the interface, sent response [dec]

| | |
|---------------------------|--|
| Explanation | Interface-calls CAC has rejected the call due to configured int-calls threshold being exceeded. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-TOTCALLCAC : Call rejected due to CAC based on Total-calls, sent response [dec]

| | |
|---------------------------|--|
| Explanation | Total-calls CAC has rejected the call due to configured total-calls threshold being exceeded. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-CPUCAC : Call rejected due to CAC based on CPU usage, sent response [dec]

| | |
|--------------------|--|
| Explanation | CPU usage CAC has rejected the call due to configured cpu-avg cpu-5sec threshold being exceeded. |
|--------------------|--|

%SIP-3-CPUCAC : Call rejected due to CAC based on CPU usage, sent response [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SIP-3-MEMCAC : Call rejected due to CAC based on Memory usage, sent response [dec]

Explanation Memory usage CAC has rejected the call due to configured io-mem|proc-mem|total-mem threshold being exceeded.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SIP-3-MAXCONNCAC : Call rejected due to CAC based on maximum number of connections on dial-peer [dec], sent response [dec]

Explanation Maximum number of connections CAC has rejected the call due to configured max-conn threshold being exceeded.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SIP-5-EVENT_TRACE_PATH_ERR : Event Trace Dump PATH [chars] not accesible. Verify credentials, directory path and network connectivity. Correct the Error and reconfigure Dump-file

Explanation Event Trace Dump-file Location not accesible

Recommended Action Correct the accesibility Error and reconfigure

%SIP-2-SILENT_DISCARD : Silent Discard [chars]

| | |
|---------------------------|--|
| Explanation | Request received from Untrusted Host. |
| Recommended Action | Block the request from untrusted host at network layer |

%SIP-5-BIND_LINE_STATUS : bind line proto status

| | |
|---------------------------|--|
| Explanation | Informational message on bind line proto |
| Recommended Action | No action is required. |

%SIP-4-WEAK_PASSWORD_TYPE : Command has been added to the configuration using a type [int] password. However, type [int] passwords will soon be deprecated. Migrate to a supported password type [int]

| | |
|---------------------------|---|
| Explanation | Password encryption type deprecated. New password type to be used |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-3-PASSWORD_REKEY_FAILED : Failed to encrypt type 6 password after master key change. Password [chars] will become unusable

| | |
|---------------------------|---|
| Explanation | Type 6 password encryption failed after master key change |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIP-2-TLS_HANDSHAKE_FAILED : TLS handshake failure - remote_addr=[chars], remote_port=[int]

| | |
|---------------------------|---|
| Explanation | TLS handshake failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SIPPHONE

**%SIPPHONE-6-REGISTER : VOICE REGISTER POOL-[dec] has registered. Name:[chars] IP:[chars]
DeviceType:Phone-[chars]**

Explanation SIP phone is registered.

**Recommended
Action** No action is required.

**%SIPPHONE-6-UNREGISTER : VOICE REGISTER POOL-[dec] has unregistered. Name:[chars] IP:[chars]
DeviceType:Phone-[chars]**

Explanation SIP phone is unregistered.

**Recommended
Action** No action is required.

%SIPPHONE-6-AUTOREGISTER80 : AUTO-REGISTER: 80%% of DN range is consumed

Explanation 80%% of capacity is consumed.

**Recommended
Action** No action is required.

%SIPPHONE-6-AUTOREGISTER100 : AUTO-REGISTER: 100%% of DN range is consumed

Explanation 100%% of capacity is consumed.

**Recommended
Action** No action is required.

SIPSPA

%SIPSPA-3-HWIDB_FAILURE : Creation: port [dec] vc [dec]

Explanation Failed to create a hwidb.

**Recommended
Action** Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SIPSPA-3-DEVICE_ERROR : subSlot [dec], spatype [hex]. Device error: [chars]

| | |
|---------------------------|---|
| Explanation | An error related to a device on the SPA is detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIPSPA-3-ISR_RC_ERROR : ISR return code out of range. rc=[dec]

| | |
|---------------------------|---|
| Explanation | The ISR error return code is out of range. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIPSPA-4-SPABUS : Bay [dec] [chars] failed. sz=[int] rd_par=[int] noresp=[int] err_l=[int] addr=[hex] data=[hex] parity=[hex] deadman=[int]

| | |
|---------------------------|---|
| Explanation | SPABUS has reported an error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIPSPA-4-SPABUS2 : Bay [dec] [chars] failed. sz=[int] rd_par=[int] noresp=[int] absent=[int] err_l=[int] addr=[hex] data=[hex] parity=[hex] deadman=[int]

| | |
|---------------------------|---|
| Explanation | SPABUS has reported an error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIPSPA-6-OIR : Bay [dec] [chars] changed to [chars]

| | |
|---------------------------|------------------------|
| Explanation | SPA OIR Sequence |
| Recommended Action | No action is required. |

%SIPSPA-4-MAX_BANDWIDTH : Total SPA bandwidth exceeds line card capacity of [int] Mbps

| | |
|---------------------------|--|
| Explanation | The total bandwidth of SPAs exceeds the rated capacity of this line card. |
| Recommended Action | Refer to the line card guidelines for the maximum allowed aggregated SPA bandwidth for the line card |

%SIPSPA-4-MAX_BANDWIDTH_NS : Total SPA bandwidth exceeds line card capacity, installed combination of SPA interfaces is not supported

| | |
|---------------------------|--|
| Explanation | The total bandwidth of SPAs exceeds the rated capacity of this line card. |
| Recommended Action | Refer to the line card guidelines for the maximum allowed aggregated SPA bandwidth for the line card |

%SIPSPA-4-SPI_PORT_LIMIT_EXCEEDED : SPI port limit exceeded, [chars] in [chars] has been powered down.

| | |
|---------------------------|--|
| Explanation | The total number of SPI ports required exceeds the capacity of this line card. |
| Recommended Action | Refer to the line card guidelines for SPA combinations supported by this line card |

%SIPSPA-3-POWER : Bay [dec] 12V power is [chars]

| | |
|---------------------------|---|
| Explanation | SPA 12V power fault indicator |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIPSPA-3-SPI4_INIT_FAILURE : Bay [dec] initialization failure

| | |
|---------------------------|--|
| Explanation | Failed to create SPI4 subblock |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, LOG_STD_ACTION |

%SIPSPA-3-MESSAGE_ERROR : Bay [dec]: [chars]

| | |
|---------------------------|--|
| Explanation | An unexpected error has occurred. |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, LOG_STD_ACTION |

%SIPSPA-3-SPI4_CONFIG_FAILURE : Bay [dec], spi4 configuration failure, error [dec]

| | |
|---------------------------|--|
| Explanation | Failed to configure SPI4 interface |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, LOG_STD_ACTION |

%SIPSPA-3-FCI_NOT_SET : Bay [dec]: [chars]: FCI type not set

| | |
|---------------------------|---|
| Explanation | An FCI type of zero was detected |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIPSPA-3-EFC_CHAN_ERR : EFC error - interface [chars], vc [dec], anyphy [dec], err_code [dec] : [chars]

| | |
|---------------------------|--|
| Explanation | Failed to configure efc channel/parameters |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, LOG_STD_ACTION |

%SIPSPA-3-INVALID_ANYPHY : Bay [dec] - Invalid anyphy number [int] for vc [dec]

| | |
|---------------------------|--|
| Explanation | Interface has invalid anyphy number |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%SIPSPA-3-LINKREC_ERROR : Link record error - Bay [dec] vc [dec], error code [dec]

| | |
|---------------------------|--|
| Explanation | Error processing link record structure |
| Recommended Action | Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%SIPSPA-3-SONET_CLOCK_FAILED : SPA Sonet clock has failed (status = [hex])

| | |
|---------------------------|---|
| Explanation | The SPA SONET clock has failed. SPAs that rely on the SPA SONET clock for proper operation, such as POS and ATM will be affected. |
| Recommended Action | If the SPA Sonet clock does not recover, perform an OIR. LOG_STD_RECUR_ACTION |

%SIPSPA-6-ERRORRECOVER : A Hardware or Software error occurred on [chars]. Reason : [chars] Automatic Error recovery initiated. No further intervention required.

| | |
|---------------------------|---|
| Explanation | An error occurred in one of the devices, recovery would be attempted. If recovery succeeds no further messages would be logged and no intervention would be required. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SIPSPA-3-SONET_CLOCK_RECOVERED : SPA Sonet clock has recovered (status = [hex])

| | |
|---------------------------|-------------------------------|
| Explanation | SPA Sonet clock has recovered |
| Recommended Action | No action is required. |

%SIPSPA-3-BADCMD : [chars]: Unsupported command [dec], arg0=[hex], arg1=[hex], arg2=[hex]

| | |
|---------------------------|---|
| Explanation | The Route Processor passed down a command that the software was not prepared to handle. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SIPSPA-3-IPCALLOCFAIL : Failed to allocate IPC buffer [chars]

| | |
|---------------------------|---|
| Explanation | The Linecard failed to allocate a buffer for communication with the Route Processor. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SIPSPA-3-IPCSENDFAIL : Failed to send IPC message [chars]

| | |
|---------------------------|---|
| Explanation | The Linecard failed to send a message to the Route Processor. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SIPSPA-3-BAD_IFCOMTYPE : Bad ifcom message type=[int]

| | |
|---------------------------|---|
| Explanation | The Route Processor passed down a message that the software was not prepared to handle. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SIPSPA-3-MSGTOOBIG : Message length exceeds max, [int] bytes

| | |
|---------------------------|---|
| Explanation | The Linecard attempted to send too large a message to the Route Processor. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SIPSPA-3-CMDNOINT : HWIDB Null for command [dec], arg=[hex]

| | |
|---------------------------|---|
| Explanation | The Route Processor passed down a command that the software was unprepared to handle. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SIPSPA-3-NODISPATCH : Dispatch vector Null, cmd=[dec], dintf=[dec]

| | |
|---------------------------|---|
| Explanation | No command dispatch vector was found for the specified interface. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SIPSPA-3-BADINT : Attempted to access HWIDB for port [int]

| | |
|---------------------------|---|
| Explanation | The Linecard attempted to access the HWIDB associated with a non-existent port. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

SIP_SUPPSERV

%SIP_SUPPSERV-6-TRANSFER : Transfer from pool([dec]) to [chars] is not allowed

| | |
|---------------------------|---|
| Explanation | Transfer from the SIP Phone to this specific destination is not allowed |
| Recommended Action | No action is required. |

%SIP_SUPPSERV-6-TRANSFER_BLOCKED : All external transfers from pool([dec]) are blocked

| | |
|---------------------------|--|
| Explanation | Transfer from the SIP Phone to any external destination is not allowed |
| Recommended Action | No action is required. |

%SIP_SUPPSERV-6-TRANSFER_LEN_EXCD : Transfer number exceeds configured number length. Transfer blocked for pool ([dec])

| | |
|---------------------------|--|
| Explanation | Transfer from the SIP Phone is blocked as the transfer digits entered exceeds the dialplan limit for transfers |
| Recommended Action | No action is required. |

%SIP_SUPPSERV-6-CONFERENCE : Conference from pool ([dec]) to [chars] is not allowed

| | |
|---------------------------|---|
| Explanation | Conference from the SIP Phone to this specific destination is not allowed |
| Recommended Action | No action is required. |

%SIP_SUPPSERV-6-CONFERENCE_BLOCKED : All external conferences from pool([dec]) are blocked

| | |
|---------------------------|--|
| Explanation | Conference from the SIP Phone to any external destination is not allowed |
| Recommended Action | No action is required. |

%SIP_SUPPSERV-6-CONFERENCE_LEN_EXCD : Conference number exceeds configured number length. Conference blocked for pool ([dec])

| | |
|---------------------------|--|
| Explanation | Conference from the SIP Phone is blocked as the conference digits entered exceeds the dialplan limit for conferences |
| Recommended Action | No action is required. |

SISF through SMAN

- [SISF](#)
- [SISF_ISSU](#)
- [SISF_TRACKING_HA](#)
- [SKINNYMAIN](#)
- [SKINNYSECURESERVICE](#)
- [SKINNYSERVER](#)
- [SLA](#)
- [SLIP](#)
- [SM](#)
- [SMAN](#)

SISF

%SISF-3-INTERNAL : Internal error, [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SISF-6-ENTRY_CREATED : Entry created [chars]

| | |
|---------------------------|---|
| Explanation | An entry was created in the binding table |
| Recommended Action | This is an informational message |

%SISF-6-ENTRY_DELETED : Entry deleted [chars]

| | |
|---------------------------|---|
| Explanation | An entry was created in the binding table |
| Recommended Action | This is an informationnal message |

%SISF-6-ENTRY_CHANGED : Entry changed [chars]

| | |
|---------------------------|---|
| Explanation | An entry was changed in the binding table |
| Recommended Action | This is an informationnal message |

%SISF-6-ENTRY_MAX_ORANGE : Reaching 80%% of max adr allowed per [chars]

| | |
|---------------------------|--|
| Explanation | Reached 80% of maximum # addresses for the target |
| Recommended Action | A client is approaching red zone and might soon be blocked. The maximum value configured may be too low and you should consider increasing it. Or some of this client addresses are stale and you could clear them |

%SISF-4-ENTRY_BLOCKED : Entry blocked [chars]

| | |
|---------------------------|--|
| Explanation | An attempt to install an entry in the IPv6 binding table was blocked. This can be due to a conflicting entry or maximum number of entries reached |
| Recommended Action | If the maximum table size is reached, consider increasing it. If a conflicting entry already exist, this maybe an attempt to steal address ownership. You should investigate which host is connected on the interface and wether it should be disconnected |

%SISF-4-IP_THEFT : IP Theft [chars]

| | |
|---------------------------|---|
| Explanation | A duplicate IP address has been detected (IP theft) and blocked This can be due to a configuration error on end-device, an intentional IP theft or an IP movind too quickly |
| Recommended Action | If the existing entry is REACHABLE in the binding table, and it moved to a new port consider reducing the REACHABLE timer otherwise it is either an attack or a configuration issue that must be resolved |

%SISF-4-MAC_THEFT : MAC Theft [chars]

| | |
|--------------------|--|
| Explanation | A duplicate MAC address has been detected (MAC theft) and blocked This can be due to a configuration error on end-device, an intentional MAC theft or MAC moving too quickly |
|--------------------|--|

%SISF-4-MAC_THEFT : MAC Theft [chars]

Recommended Action If the existing entry is REACHABLE in the binding table, and it moved to a new port consider reducing the REACHABLE timer otherwise it is either an attack or a configuration issue that must be resolved

%SISF-4-MAC_AND_IP_THEFT : MAC_AND_IP Theft [chars]

Explanation A duplicate MAC and IP address has been detected (MAC_AND_IP theft) and blocked. This can be due to a configuration error on end-device, an intentional MAC_AND_IP theft or MAC moving too quickly.

Recommended Action If the existing entry is REACHABLE in the binding table, and it moved to a new port consider reducing the REACHABLE timer otherwise it is either an attack or a configuration issue that must be resolved

%SISF-4-PAK_DROP : Message dropped [chars]

Explanation A message was dropped because one of the IPv6 first-hop security features said so

Recommended Action Look at the reason. It can either be a valid drop and the could go up to disconnect the host attached to the interface, or the policy configured on this interface is too severed and should be amended

%SISF-4-DATA_GLEAN_NOTIF_RECEIVED : No binding for [chars]

Explanation A data packet notification has been received because a snooping policy with the data glean option is configured and the Source address of the packet is not currently in the Binding Table.

Recommended Action There are valid scenarios where the binding could not be learned (e.g. control packet was lost) or the binding is lost (e.g. switch reboot). Conversely, it could also be the case that an unauthorized Source Address is trying to generate traffic, in which case this should be investigated further to determine if the host on this particular interface needs to be disconnected.

%SISF-4-RESOLUTION_VETO : Resolution vetoed [chars]

Explanation IPv6 Neighbor Discovery (ND) was about to resolve a target destination. SISF Destguard has vetoed this because the target is known not to be on-link.

Recommended Action A low rate of vetoed resolutions is not serious. If there is a high rate of vetos this might suggest that the link is under attack. Investigate the source of the packets driving these resolution requests

SISF_ISSU**%SISF_ISSU-2-INIT : Ssf ISSU client initialization failed to [chars]. Error: [dec] ([chars])**

Explanation The Ssf ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SISF_ISSU-3-TRANSFORM_FAIL : Ssf ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

Explanation The Ssf ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the Ssf state between the active device and the standby device is not identical.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>)

%SISF_ISSU-3-MSG_NOT_OK : Ssf ISSU client 'Message Type [dec]' is not compatible

Explanation The Ssf ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>)

%SISF_ISSU-3-MSG_SIZE : Ssf ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

Explanation The Ssf ISSU client failed to calculate the MTU for the specified message. The Ssf ISSU client is not able to send the message to the standby device.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>)

%SISF_ISSU-3-INVALID_SESSION : Ssf ISSU client does not have a valid registered session.

Explanation The Ssf ISSU client does not have a valid registered session.

%SISF_ISSU-3-INVALID_SESSION : Sisf ISSU client does not have a valid registered session.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%SISF_ISSU-2-SESSION_REGISTRY : Sisf ISSU client failed to register session information. Error: [dec] ([chars])

Explanation The Sisf ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%SISF_ISSU-3-SESSION_UNREGISTRY : Sisf ISSU client failed to unregister session information. Error: [dec] ([chars])

Explanation The Sisf ISSU client failed to unregister session information.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%SISF_ISSU-2-SESSION_NEGO : Sisf ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

Explanation An ISSU-compliant client transitions through a series of internal states. The Sisf ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%SISF_ISSU-2-SEND_NEGO_FAILED : Sisf ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The Sisf ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%SISF_ISSU-2-GET_BUFFER : Sif ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The Sif ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client)

%SISF_ISSU-3-CAP_NOT_COMPATIBLE : Sif ISSU client capability exchange result incompatible.

Explanation The Sif ISSU client capability exchange have negotiated as incompatible with the peer.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu negotiated capability <Session_ID>)

%SISF_ISSU-3-CAP_INVALID_SIZE : SISF ISSU client capability list is empty.

Explanation The SISF ISSU client capability exchange list size is invalid.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entires <Client_ID>)

SISF_TRACKING_HA

%SISF_TRACKING_HA-4-ENTRY_OUT_OF_SYNC : Host mac-address [enet] ip-address [IP_address] interface [chars]

Explanation An inconsistency has been detected in the IP device tracking table for this host between active and standby

Recommended Action No action is required.

SKINNYMAIN

%SKINNYMAIN-4-KEYPADFAST : Keypad messages from the phone [dec] are too fast

Explanation The inter digit interval is too short. Each digit may not be processed properly

Recommended Action Please configure keypad-normalize for the phone

%SKINNYMAIN-4-KEYPADFAST : Keypad messages from the phone [dec] are too fast

Explanation The inter digit interval is too short. Each digit may not be processed properly

%SKINNYMAIN-4-KEYPADFAST : Keypad messages from the phone [dec] are too fast

Recommended Action Please configure keypad-normalize for the phone

SKINNYSECURESERVICE

%SKINNYSECURESERVICE-3-NOINIT : Can't initialize Secure Skinny server

Explanation Internal problems with initializing ports for the Secure Skinny server

Recommended Action Make sure the Skinny secure server port is available on the local machine.

%SKINNYSECURESERVICE-3-NOMEM : Can't initialize memory for Secure Skinny server

Explanation Insufficient Memory for Secure Skinny server

Recommended Action Increase amount of available memory

%SKINNYSECURESERVICE-3-NOSOCKETS : Max Number of Skinny Secure Server sockets exceeded: too many IP phones

Explanation There are too many skinny Secure server clients requesting service

Recommended Action Reduce number of Secure IP phones requesting service

%SKINNYSECURESERVICE-3-NOPROC : Could not start Skinny Secure Server

Explanation Internal Problem in process creation

Recommended Action None

%SKINNYSECURESERVICE-6-TLS_EVAL_LIMIT : The TLS signaling tunnels usage exceeds the license limit.

Explanation The TLS signal tunnels usage exceeds the license limit.

Recommended Action Please install the Permanent license

%SKINNYSECURESERVICE-6-TLS_EVAL_FREE_ERROR : Error encountered on release TLS signaling tunnels.

| | |
|---------------------------|---|
| Explanation | Error encountered on release TLS signaling tunnels. |
| Recommended Action | Please install the Permanent license |

SKINNYSERVER

%SKINNYSERVER-3-NOINIT : Can't initialize Skinny server

| | |
|---------------------------|---|
| Explanation | Internal problems with initializing ports for the Skinny server |
| Recommended Action | Make sure the Skinny server port is available on the local machine. |

%SKINNYSERVER-3-NOMEM : Can't initialize memory for Skinny server

| | |
|---------------------------|---------------------------------------|
| Explanation | Insufficient Memory for Skinny server |
| Recommended Action | Increase amount of available memory |

%SKINNYSERVER-3-NOSOCKETS : Max Number of Skinny Server sockets exceeded: too many IP phones

| | |
|---------------------------|---|
| Explanation | There are too many skinny server clients requesting service |
| Recommended Action | Reduce number of IP phones requesting service |

SLA

%SLA-3-SLATHRESHOLD : IP SLAs([int]): Threshold for [chars]; [chars]; [dec]

| | |
|---------------------------|--|
| Explanation | This informational message logs threshold violations in the Service Assurance Agent probes. This messages appears when the ip sla logging trap command is entered |
| Recommended Action | If this message is not necessary, enter the no ip sla logging trap command to disable logging. Otherwise, no action is required |

%SLA-3-SLAAVAILABLEITY : IP SLAs([int]): State change for [chars];[chars];FLR - [dec]

| | |
|--------------------|--|
| Explanation | This informational message logs availability transitions in the Service Assurance Agent probes. This messages appears when the ip sla logging trap command is entered |
|--------------------|--|

%SLA-3-SLA AVAILABILITY : IP SLAs([int]): State change for [chars];[chars];FLR - [dec]

| | |
|---------------------------|--|
| Recommended Action | If this message is not necessary, enter the <code>no ip sla logging trap</code> command to disable logging. Otherwise, no action is required |
|---------------------------|--|

SLIP

%SLIP-2-BADSTATE : Impossible input state [hex]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SLIP-2-BADQUOTE : Impossible quoted character [hex]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SM

%SM-2-INITIALIZATION_FAILED :

| | |
|---------------------------|---|
| Explanation | Initialization of session manager process failed. |
| Recommended Action | Review SM logs taking note of the timestamp information to select specific information to review. Copy the message and other related information exactly as it appears on the console or in the system log. |

SMAN**%SMAN-3-PTL_RENDERER_FAILURE : Rendering error with [chars],[chars]. Transform is missing or invalid for data.**

| | |
|---------------------------|---|
| Explanation | The Shell Manager process attempted to render a command response but the transformation failed due to an internal error. The failure may have been caused by a missing transform file or an included file cannot be found. The transformation may also fail if the data returned in the response is binary and has not been processed correctly. In this case, the rendering engine is unable to interpret the data resulting in a failure. The transformation may also fail if there is a mismatch of packages installed on the system. In this case, incompatible messages are exchanged between the Shell Manager and the daemon servicing the command request and incorrect data is passed to the rendering engine. |
| Recommended Action | This error indicates a configuration issue resulting from bad or mismatched packages. Review the Shell Manager trace files and log files. Uninstall, then reinstall, any new packages. |

%SMAN-2-TDL_MESSAGE : Cannot construct an IPC message for library. The message name is [chars] and the reason is: [chars]

| | |
|---------------------------|---|
| Explanation | A problem occurred while constructing a type definition language (TDL) message or setting a field in a TDL message. If the problem occurred during construction of a TDL message, the system is out of memory. If the problem occurred while setting a field in the TDL message, there is a library mismatch issue. |
| Recommended Action | Check [uipeer] ERR entries in the log files for message reporting problems. |

%SMAN-2-NO_MEMORY : Cannot allocate memory for an internal data structure

| | |
|---------------------------|--|
| Explanation | An out-of-memory condition occurred when attempting to create an internal data structure. The daemon encountering the problem will exit, after which the process manager will restart. |
| Recommended Action | Check the log files for the associated daemon. Monitor processes for excessive memory consumption. |

%SMAN-3-INVALID_EPOCH_FILE : An upgrade or installation has produced an invalid messaging configuration file [chars], [chars]

| | |
|---------------------------|---|
| Explanation | During an upgrade or installation of a new package, an invalid messaging configuration file was produced. The file is either empty or has invalid permissions and cannot be read. |
| Recommended Action | Repeat the installation or upgrade. If the problem persists, revert to a previous known good package. |

%SMAN-3-HOSTINFO_READ_FAILURE : Error reading host info ([chars]): [chars]

Explanation During process startup and when changes occur, the Shell Manager reads host-related information, such as the hostname. This error occurs if there is a failure reading information.

Recommended Action Check the Shell Manager trace file for related details.

%SMAN-3-HOSTINFO_MONITOR_FAILURE : Error initializing host info monitoring: [chars]

Explanation During initialization, the Shell Manager monitors changes to host-related information, such as the hostname. This error occurs if initialization fails.

Recommended Action Check the Shell Manager trace file for related details.

%SMAN-3-NO_CD_L_FILE : Could not access command definition file [chars]: [chars]

Explanation During initialization, the Shell Manager loads a XML CDL file to load all the CLI structure. This file is for some reason not found.

Recommended Action Check the Shell Manager trace file for related details.

%SMAN-3-CRDU_PATCH_REPLY_TIMEOUT : Failed to receive patch response from peer process [chars]

Explanation During patch operation the Shell Manager broadcasts a request to all affected processes (peers). If a peer does not respond in time then the patch process cannot be completed correctly

Recommended Action Check that the process(es) that failed to respond are still active and check their trace files for any potential errors that could prevent them from responding to a patch request in a timely manner

SMANRP

%SMANRP-3-MSGDISPATCHNULL : Received NULL TDL message

| | |
|---------------------------|---|
| Explanation | An unexpected condition in which IOS has received a NULL TDL message from Shell Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-MSGDISPATCH : Unable to dispatch received TDL message '[chars]' from Shell Manager. LUID: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS is trying to dispatch to the TDL message handler functions for received TDL messages from Shell Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-MSGMISSINGFIELD : Missing field '[chars]' in TDL message '[chars]' received from the Shell Manager

| | |
|---------------------------|---|
| Explanation | A message missing a required field was received from the Shell Manager |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-MSGINVALIDFIELDINT : Invalid field '[chars]' in TDL message '[chars]' received: value '[int]' from the Shell Manager

| | |
|--------------------|---|
| Explanation | A message with an invalid field value was received from the Shell Manager |
|--------------------|---|

%SMANRP-3-MSGINVALIDFIELDINT : Invalid field '[chars]' in TDL message '[chars]' received: value '[int]' from the Shell Manager

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SMANRP-3-MSGINVALIDFIELDSTR : Invalid field '[chars]' value '[chars]' in TDL message '[chars]' received from the Shell Manager

| | |
|---------------------------|---|
| Explanation | A message with an invalid field value was received from the Shell Manager |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-MSGERROR : Error [dec] handling a received TDL message '[chars]' from the Shell Manager: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS is processing a TDL message received from the Shell Manager |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-MSGBUILDERROR : Error [dec] building TDL message '[chars]' to send to the Shell Manager: [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition has occurred while IOS is building a TDL message to send to the Shell Manager |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-MSGMARSHALERROR : Error '[dec]' marshaling TDL message '[chars]' to send to the Shell Manager

Explanation An unexpected condition has occurred while IOS is marshaling TDL message to send to the Shell Manager

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SMANRP-3-MSGENQUEUEERROR : Error queueing TDL message '[chars]' to send to the Shell Manager

Explanation An unexpected condition has occurred when IOS attempted to queue a TDL message to send to the Shell Manager

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SMANRP-3-BADREPLYJOBID : Incorrect command reply job id [int] (origin [chars]), expecting [int]

Explanation A command reply message from the Shell Manager referenced the wrong originating job id

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SMANRP-3-CMDTOOLONG : Interactive command too long

Explanation Instructions for command execution would result in creation of a command string that is beyond the maximum size.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SMANRP-3-CMDBUILD : Interactive command directive [dec] of [dec] failed

| | |
|---------------------------|---|
| Explanation | In processing a CLI command, one of the instructions returned through the Shell Manager could not be turned into an interactive command for remote execution. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-CMDCONNECT : Connection to local interactive relay failed: [chars]

| | |
|---------------------------|---|
| Explanation | Connecting to the local relay for an interactive command failed due to the reason indicated in the error message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-CMDSEND : Send interactive command to relay failed: [chars]

| | |
|---------------------------|---|
| Explanation | Sending the interactive command string to the local relay after the connection was established failed by the reason indicated in the error message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-MSGBIPCONNERR : Unable to register with the BIPC subsystem for connections to Shell Manager

| | |
|---------------------------|---|
| Explanation | IOS Shell Manager client code could not register with the BIPC communications infrastructure in order to establish a connection with the Shell Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-MSGBIPCERR : Unable to process received BIPC messages from Shell Manager, error: [chars]

Explanation An unexpected condition has occurred while IOS trying to process a received BIPC message from Shell Manager.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SMANRP-3-MSGBIPCBUFFER : Unable to acquire a BIPC buffer for sending messages.

Explanation A message was to be sent by IOS, but no BIPC buffer was available. The message to be sent has been discarded and the associated operation failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SMANRP-3-INVALIDCONNHANDLE : Invalid connection handle [int] referenced during command execution.

Explanation The execution of a CLI command, which must communicate with Shell Manager for command execution, has referenced a connection handle that is invalid. The CLI command execution will have failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SMANRP-3-SMAN_INIT_WQ_FAIL : Shell Manager client connection handler initialization failed: Unable to create [int] of [int] receiving queues.

Explanation The Shell Manager client has failed to create all of its receiving queues. Ability to execute some CLI commands will be severely restricted or non-existent.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SMANRP-3-SMAN_INIT_CONN_FAIL : Shell Manager client connection pool initialization failed: Unable to request creation of [int] of [int] connections.

| | |
|---------------------------|---|
| Explanation | The Shell Manager client has failed to create all of its connections to Shell Manager. Ability to execute some CLI commands will be severely restricted or non-existent. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-SMAN_HANDLER_QUEUE_NOTEMPTY : Dynamic command handler exited foreground process with non-empty queue

| | |
|---------------------------|---|
| Explanation | The dynamic command handler which dispatches commands to the shell manager, has exited without proper cleanup. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-SMAN_INIT_DC_TDL_FAIL : Shell Manager client initialization failed: Unable to initialize messaging: [chars]

| | |
|---------------------------|---|
| Explanation | The Shell Manager client has failed to initialize the infrastructure for messaging with the Shell Manager. Ability to execute some CLI commands will be severely restricted or non-existent. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SMANRP-3-SET_ACCESS_FAIL : Installing LIIN interface access control failed

| | |
|---------------------------|---|
| Explanation | This error happens when the Shell Manager shim failed to set the access control function for the LIIN, possibly due to IOS out of memory or corruption. Interactive commands will not work. |
| Recommended Action | LOG_STD_ACTION |

%SMANRP-6-SMSTATUS : Shell Manager is [chars]

| | |
|---------------------------|--------------------------------------|
| Explanation | The current status of Shell Manager. |
| Recommended Action | No action is required. |

SMF

%SMF-4-INVALID_ACTION : failed to create SMF entry for [enet] on [chars] with result [hex]

| | |
|---------------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
| Recommended Action | LOG_STD_ACTION |

SMRP

%SMRP-6-PORTUP : [chars]: SMRP port up - [chars]

| | |
|---------------------------|--|
| Explanation | An SMRP port has come up. |
| Recommended Action | Notification message only. No action required. |

%SMRP-5-PORTDOWN : [chars]: SMRP port down - [chars]

| | |
|---------------------------|--|
| Explanation | An SMRP port is down and is no longer operational. |
| Recommended Action | Notification message only. No action required. |

%SMRP-6-NEIGHBORUP : [chars]: SMRP neighbor up - [chars]

| | |
|---------------------------|--|
| Explanation | A neighboring SMRP router has appeared. |
| Recommended Action | Notification message only. No action required. |

%SMRP-5-NEIGHBORDOWN : [chars]: SMRP neighbor down - [chars]

| | |
|---------------------------|--|
| Explanation | A neighboring SMRP router is now down. |
| Recommended Action | Notification message only. No action required. |

%SMRP-3-NOFDDICOMPAT : SMRP port [chars] disabled; pre-fdditalk not supported

| | |
|---------------------------|--|
| Explanation | SMRP cannot be started on an interface that is running pre-FDDITalk. |
| Recommended Action | Use FDDITalk on the FDDI ring if possible. |

%SMRP-2-ASSERTFAILED : SMRP assertion failed: [chars]

| | |
|---------------------------|---|
| Explanation | The software detected an inconsistency. This is considered a serious error. The router attempts to continue, but SMRP processing may be impaired. |
| Recommended Action | Copy the error message exactly as it appears, noting any SMRP problems that you are experiencing, and report it to your technical support representative. |

%SMRP-7-DEBUGMSG : SMRP Debug: [chars]

| | |
|---------------------------|--|
| Explanation | This message is generated by some debug commands to provide additional information about conditions in SMRP. |
| Recommended Action | If you are experiencing problems in SMRP, these messages should be provided, along with any other information, in a report to your technical support representative. |

SNAPSHOT**%SNAPSHOT-2-BADSTATE : Bad state for Snapshot block [chars][[dec]], location [dec]**

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SNAPSHOT-2-TOOMANYDIALERS : Exceeded maximum dialer interfaces to watch. Ignoring [chars]

| | |
|---------------------------|---|
| Explanation | Snapshot is being used over more than 100 DDR interfaces. |
| Recommended Action | Do not use snapshot over more than 100 DDR interfaces. |

SNMP**%SNMP-3-TRAPINTR : Attempt to generate SNMP trap from interrupt level**

| | |
|--------------------|--|
| Explanation | During the processing of an interrupt, the code attempted to generate an SNMP trap. This is not allowed. |
|--------------------|--|

%SNMP-3-TRAPINTR : Attempt to generate SNMP trap from interrupt level

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%SNMP-3-TRAPBLOCK : Attempt to generate SNMP trap from a process with blocking disabled

| | |
|--------------------|--|
| Explanation | During processing, a process with blocking disabled attempted to generate an SNMP trap which would block. This is not allowed. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%SNMP-4-TRAPDROP : [chars]

| | |
|--------------------|---|
| Explanation | An attempt was made to generate an SNMP trap, but the trap could not be sent because of the reason given in this message. Most likely, this message means that the SNMP traps process is not running. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. Use the show process command to determine whether the SNMP traps process is running. If it is not running, reload the system. If, after reloading, the SNMP traps process is still not running, there may not be enough memory for it to run. |
|---------------------------|--|

%SNMP-3-BADVALUE : Maximum number of index supported is 20

| | |
|--------------------|---|
| Explanation | An SNMP trap contains some number of MIB objects, and the size of the instance identifier for these objects is restricted. This message indicates that an attempt was made to generate an SNMP trap containing a MIB object whose size exceeded this limit. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%SNMP-3-BADOID : Attempt to generate an invalid object identifier

| | |
|--------------------|--|
| Explanation | A valid object identifier must contain at least two subidentifiers. An attempt was made to generate an object identifier whose size was less than two. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%SNMP-3-CPUHOG : Processing [chars] of [chars]

| | |
|--------------------|---|
| Explanation | SNMP took too much time processing a request. |
|--------------------|---|

%SNMP-3-CPUHOG : Processing [chars] of [chars]

| | |
|---------------------------|--|
| Recommended Action | If feasible, use the debug snmp packet command to determine the contents of the SNMP request that is causing the message. Copy the error message exactly as it appears, and report it along with any debug output to your technical support representative. |
|---------------------------|--|

%SNMP-4-HIGHCPU : Process exceeds [dec]ms threshold ([dec]ms IOS quantum) for [chars] of [chars]--result [chars]

| | |
|--------------------|---|
| Explanation | SNMP took more than the warning threshold processing a var-binding. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | If feasible, use the debug snmp packet command to determine the contents of the SNMP request that is causing the message. Copy the error message exactly as it appears, and report it along with any debug output to your technical support representative. Some MIB objects require a relatively large amount of time to process. MIB objects in the multi-variable-binding are processed one by one. If possible, MIB objects appearing in this message should NOT be retrieved using multi-variable-binding SNMP PDUs. |
|---------------------------|--|

%SNMP-3-SYNCFAIL : SNMP MIB Sync Failure: [chars]

| | |
|--------------------|---|
| Explanation | One of the SNMP MIB Sync to standby failed. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%SNMP-3-DYNSYNCFAIL : Snmp Dynamic Sync Failed for [chars] = [chars]

| | |
|--------------------|---|
| Explanation | One of the SNMP MIB Dynamic Sync(sync of Snmp SET) to standby failed. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%SNMP-4-NOFLASH : Reading snmpEngineBoots from flash failed

| | |
|--------------------|---|
| Explanation | An attempt to read the snmpEngineBoots file from flash failed. Most likely, this means that the flash card does not exist on the router. This message should appear only when the router is reloaded. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Check if installing a flash card makes the message go away. If a flash card exists already, it may be full. Try erasing flash and reloading the router. If after these steps, the problem persists, copy the error message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%SNMP-4-NOENGINEID : Remote snmpEngineID for [IP_address] not found when creating user: [chars]

| | |
|---------------------------|--|
| Explanation | An attempt to create a user failed.This is likely because the engine ID of the remote agent (or SNMP manager) was not configured. |
| Recommended Action | Configure the remote snmpEngineID and reconfigure the user. If the problem persists, copy the error message exactly as it appears, and report it to your technical support representative. |

%SNMP-4-NOENGINEIDV6 : Remote snmpEngineID for [IPV6 address] not found when creating user: [chars]

| | |
|---------------------------|--|
| Explanation | An attempt to create a user failed.This is likely because the engine ID of the remote agent (or SNMP manager) was not configured. |
| Recommended Action | Configure the remote snmpEngineID and reconfigure the user. If the problem persists, copy the error message exactly as it appears, and report it to your technical support representative. |

%SNMP-5-COLDSTART : SNMP agent on host [chars] is undergoing a cold start

| | |
|---------------------------|--|
| Explanation | The snmp server underwent a coldstart. |
| Recommended Action | Notification message only. No action required. |

%SNMP-5-WARMSTART : SNMP agent on host [chars] is undergoing a warm start

| | |
|---------------------------|--|
| Explanation | The snmp server underwent a warmstart. |
| Recommended Action | Notification message only. No action required. |

%SNMP-3-AUTHFAIL : Authentication failure for SNMP req from host [IP_address]

| | |
|---------------------------|--|
| Explanation | An SNMP request was sent to this host which was not properly authenticated. |
| Recommended Action | Make sure that the community/user name used in the SNMP req has been configured on the router. |

%SNMP-5-LINK_DOWN : LinkDown:Interface [chars] changed state to down

| | |
|---------------------------|--|
| Explanation | The state of the Interface is changed to down. |
| Recommended Action | |

%SNMP-5-LINK_UP : LinkUp:Interface [chars] changed state to up

Explanation The state of the Interface is changed to up.

**Recommended
Action**

%SNMP-6-VIEWNAMELENGTH : Invalid view name length; truncated.

Explanation SNMP agent generated view length greater than that allowed by definition so the view name was truncated to fit the defined maximum view name length.

**Recommended
Action** Make sure your trap group and view names are setup appropriately. You can override with 'snmp-server group' command. Notify Cisco that this needs to be fixed.

%SNMP-3-AUTHFAILIPV6 : Authentication failure for SNMP request from host [IPV6 address]

Explanation An SNMP request was sent by this host which was not properly authenticated.

**Recommended
Action** Make sure that the community/user name used in the SNMP req has been configured on the router.

%SNMP-5-MODULETRAP : Module [dec] [[chars]] Trap

Explanation This message shows the SNMP agent sends out the Module Up/Down Traps to the engine ID of the remote agent (or SNMP manager) because the corresponding module is up/down.

**Recommended
Action**

%SNMP-5-CHASSISALARM : Chassis Alarm Trap: tmpAlarm([chars]), minorAlarm([chars]), and/or majorAlarm([chars])

Explanation This message shows the SNMP agent sends out the Chassis Alarm On/Off Traps to the engine ID of the remote agent (or SNMP manager) because the corresponding chassis alarm is on/off.

**Recommended
Action**

%SNMP-3-BADIFINDEXTABLE : The file nvram:ifIndex-table is corrupt.

Explanation The file is not in the expected format.

**Recommended
Action** If possible, please delete the file.

%SNMP-3-IFINDEXTABLEFILEINTWOFORMATS : ifIndex-table is present in two formats.

Explanation Both nvram:ifIndex-table and nvram:ifIndex-table.gz are present.

Recommended Action No action is necessary.

%SNMP-3-IFINDEXTABLE_DECOMPRESSFAILED : The file nvram:ifIndex-table.gz could not be decompressed.

Explanation There is either insufficient memory to compress it or the nvram space is insufficient or some other reason.

Recommended Action If possible, please delete the file.

%SNMP-3-TOOMANYIFINDICES : Some ifindices might not be persisted.

Explanation There are too many ifindices and the system is unable to persist all of them.

Recommended Action Most likely, this is a system limitation and there is no workaround.

%SNMP-3-FILEOPENFAILED : Could not open [chars].

Explanation The ifIndex-table is not accesible, and hence the facility for ifindex persistence may not be available.

Recommended Action Please debug using the debug ifs file command.

%SNMP-3-FILESTATFAILED : Could not get information for file [chars].

Explanation The ifIndex-table is not accesible, and hence the facility for ifindex persistence may not be available.

Recommended Action Please debug using the debug ifs file command.

%SNMP-3-INCORRECT_SIZE_FOR_NVRAM : Size should be > 0, but it is [dec].

Explanation There is some initialization problem in software.

Recommended Action Ideally, you should never see this message. If you do, please report it at the earliest convenience.

%SNMP-4-IFINDEXPERS_INTERNAL_ERROR : An internal error occurred in ifindex persistence code.

Explanation There is an unexpected internal error in ifindex persistence software.

Recommended Action

%SNMP-3-ISSU_ERR : [chars]

Explanation Error happens when doing ISSU Versioning Operation

Recommended Action Report this message to technical support

%SNMP-3-DUPLICATE_IFINDEX : [chars] has [dec] duplicate ifIndices.

Explanation ifIndex-table file is corrupt. Ignoring duplicate entries.

Recommended Action If ifIndex-table is not needed, please delete the file from nvram.

%SNMP-3-NON_POSITIVE_IFINDEX : [chars] has [dec] non-positive ifIndices.

Explanation ifIndex-table file has some invalid entries that have non-positive ifIndex values. Ignoring invalid entries.

Recommended Action If ifIndex-table is not needed, please delete the file from nvram.

%SNMP-3-INPUT_QFULL_ERR : Packet dropped due to input queue full

Explanation Snmp packet dropped due to input queue full error

Recommended Action The condition is usually caused by a large delay collecting data for a specific OID, which will backup the SNMP queue with subsequent requests. You may see an accompanying SNMP-CPUHOG message that displays which OID is taking too long. If the SNMP-CPUHOG error consistently points to the same OID, then the user should search for a matching Cisco CDETS ID which improves performance of that OID. Blocking the OID with an snmp view is an optional workaround, but that will impact the ability for management software to get data from the device. In a small percentage of cases, the root cause is overall CPU utilization, which affects all processes, including SNMP. So, reducing CPU load (especially on the control plane CPU) is recommended. This is more likely the root cause if the SNMP-CPUHOG errors point to a variety of OIDs.

%SNMP-3-INTERRUPT_CALL_ERR : [chars] function, cannot be called from interrupt handler

Explanation This message indicates that a call has been made to the function from an interrupt handler. This is not permitted because it will fail and device will reboot down the stack in malloc call.

Recommended Action If this messages recurs, copy it exactly as it appears and report it to your technical support representative.

%SNMP-3-DVR_DUP_REGN_ERR : Attempt for dupe regn with SNMP IM by driver having ifIndex [dec] and ifDescr [chars]

Explanation Driver is attempting to register an idb with the interface manager while there is already an interface with the same ifIndex and ifDescr BUT different idb registered. This would lead into the problem that interface counters shown by snmp would not work properly for this particular interface.

Recommended Action Fix the duplicate registration in driver level.

%SNMP-3-DVR_DUP_REGN_WARNING : Attempt for dupe regn with SNMP IM by driver having ifIndex [dec] and ifDescr [chars]

Explanation Driver is attempting to register the same idb with the interface manager while it's already registered. This is just a warning message and handled by snmp.

Recommended Action Fix the duplicate registration in driver level.

%SNMP-3-MAX_TRAPS_EXCEED_ERR : Maximum number of traps exceeded the maximum allowed in the current sync-message to STANDBY

Explanation This message indicates the number of SNMP traps defined exceeded the maximum we can accommodate in a checkpoint sync-message. You, the developer need to increase SNMP_SYNC_BITMASK_MAX to a higher value. Please check smci_rf_status_event() for further details.

Recommended Action Developers will never see this error message.

%SNMP-5-MODULERESET : [chars] object has been set to 'reset' for [chars]=[dec] from IP address [chars].

Explanation The SNMP server has reset a module.

Recommended Action Notification message only. No action required.

%SNMP-3-RESPONSE_DELAYED : processing [chars] of [chars] ([dec] msec)

| | |
|---------------------------|--|
| Explanation | SNMP OID that is not responding within the threshold time specified |
| Recommended Action | Get the OID causing the error and block using snmp views Contact mib owners to solve the issue further |

SNMP_MGR

%SNMP_MGR-4-NOTENABLED : SNMP Manager not enabled (requested by [chars])

| | |
|---------------------------|--|
| Explanation | An IOS application is attempting to make use of the SNMP manager's services. However the SNMP manager functionality has not been enabled. |
| Recommended Action | If you wish to enable the SNMP manager services you may do so via the 'snmp-server manager' config command. Otherwise the IOS application that is requesting these services is given in the message. Disable or reconfigure this application such that it no longer tries to make SNMP manager requests. |

%SNMP_MGR-3-NOPROC : Failed to create SNMP Manager process

| | |
|---------------------------|---|
| Explanation | The SNMP manager process was unable to initialize. This is most likely due to a lack of memory. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. Use the show memory command to examine the amount of available memory. If free memory is low, you may need to reconfigure and/or reload the system. |

%SNMP_MGR-3-RESPDROP : Insufficient memory to handle response to request id [int]

| | |
|---------------------------|---|
| Explanation | An SNMP response PDU was received but there was not enough memory available in order to cache the response and return it to the original requesting IOS application. |
| Recommended Action | If this was only a transient problem, the original SNMP request will likely be resent, another SNMP response will be returned and delivered to the original requesting IOS application. If this message repeats, then you will need to free up some memory in order for the SNMP manager to function. Use show memory to verify whether available memory is low. You may need to reconfigure and/or reload the system in order to free up some memory. Otherwise you can disable the SNMP manager functionality via the no snmp-server manager command. |

%SNMP_MGR-3-BADAGETIMER : Unexpected age timer found on session [hex]

| | |
|--------------------|---|
| Explanation | An internal timer was found running when it should not have been. |
|--------------------|---|

%SNMP_MGR-3-BADAGETIMER : Unexpected age timer found on session [hex]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. Disable the SNMP manager via the no snmp-server manager command. Then re-enable it via the snmp-server manager command. This should effectively reset all of the internal structures. |
|---------------------------|---|

%SNMP_MGR-3-BADUSECOUNT : Corrupted use counter found on session [hex]

| | |
|---------------------------|---|
| Explanation | A cached SNMP session structure appears to have been corrupted. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. Disable the SNMP manager via the no snmp-server manager command. Then re-enable it via the snmp-server manager command. This should effectively reset all of the internal structures. |

%SNMP_MGR-3-BADPDUTYPE : Received unknown PDU type: [int]

| | |
|---------------------------|---|
| Explanation | The SNMP manager was delivered a PDU of an unknown type. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SNMP_MGR-3-BADTRANSPORT : Unknown transport type: [int]

| | |
|---------------------------|---|
| Explanation | The SNMP manager was delivered a PDU from an unknown transport type. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SNMP_MGR-3-SESSIONINUSE : Attempt to destroy session [hex] that is still in use

| | |
|---------------------------|--|
| Explanation | An attempt was made to remove a cached SNMP session structure, however it appears that the session is still in use, and therefore should not be removed. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SNMP_MGR-3-BADOP : Unknown operation code [int]

| | |
|---------------------------|---|
| Explanation | An SNMP PDU delivered to the SNMP manager contains an unknown operation code. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SNMP_MGR-3-MISSINGHOST : Cannot locate information on SNMP informs host: [IP_address]

| | |
|---------------------------|--|
| Explanation | A table entry for the mentioned SNMP informs destination cannot be found. As a result, inform notifications will not be sent to this destination. |
| Recommended Action | Run the 'show snmp host' and 'show snmp' commands. Copy the error message and output from the show commands exactly as they appear, and report it to your technical support representative. Deleting and re-adding the informs destination via the 'snmp-server host' configuration command may clear the condition. Otherwise, reloading the system may be necessary. |

%SNMP_MGR-3-MISSINGHOSTIPV6 : Cannot locate information on SNMP informs host: [IPv6 address]

| | |
|---------------------------|--|
| Explanation | A table entry for the mentioned SNMP informs destination cannot be found. As a result, inform notifications will not be sent to this destination. |
| Recommended Action | Run the 'show snmp host' and 'show snmp' commands. Copy the error message and output from the show commands exactly as they appear, and report it to your technical support representative. Deleting and re-adding the informs destination via the 'snmp-server host' configuration command may clear the condition. Otherwise, reloading the system may be necessary. |

%SNMP_MGR-3-BADINFORMTRANSPORT : Unknown inform transport type: [chars]

| | |
|---------------------------|--|
| Explanation | This SNMP inform destination uses an unknown transport type. Inform notifications cannot be sent to this destination. |
| Recommended Action | Copy the error message and the output from 'show techsupport' exactly as it appears, and report it to your technical support representative. |

%SNMP_MGR-4-EMPTYQUEUE : Input queue is empty

| | |
|---------------------------|---|
| Explanation | The SNMP Manager process was notified that it needs to process its input queue. But, when the queue was examined, it was found to be empty. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SNMP_MGR-4-BADRESPONSESTATUS : Unknown response status code: [int]

| | |
|---------------------------|---|
| Explanation | The SNMP Manager process received an internal response with an unknown status code. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SNMP_MGR-4-BADAUTHTYPE : Unsupported SNMP authorization type: [int]

| | |
|---------------------------|--|
| Explanation | An unknown SNMP authorization type was found. This may result in the inability of the SNMP manager functionality to correctly send and/or receive SNMP messages to/from a particular SNMP agent. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SNMP_MGR-4-NOCANCEL : Unable to cancel a previously sent inform request.

| | |
|---------------------------|--|
| Explanation | The number of unacknowledged inform requests in-flight has reached the configured maximum limit. In order to make available resources for sending out a new inform request, one of these older inform requests must be cancelled. The algorithm used to choose the most appropriate inform to cancel has failed to choose any. The new inform that was to be sent will be dropped instead. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

SNMP_MIB_ISSU

%SNMP_MIB_ISSU-2-INIT : SNMP MIB ISSU client initialization failed to [chars]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The SNMP MIB ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SNMP_MIB_ISSU-3-TRANSFORM_FAIL : SNMP MIB ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The SNMP MIB ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the SNMP MIB state between the active device and the standby device is not identical. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>) |

%SNMP_MIB_ISSU-3-MSG_NOT_OK : SNMP MIB ISSU client 'Message Type [dec]' is not compatible

| | |
|---------------------------|---|
| Explanation | The SNMP MIB ISSU client received an incompatible message from the peer device. The message cannot be processed. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%SNMP_MIB_ISSU-3-MSG_SIZE : SNMP MIB ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The SNMP MIB ISSU client failed to calculate the MTU for the specified message. The SNMP MIB ISSU client is not able to send the message to the standby device. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%SNMP_MIB_ISSU-3-INVALID_SESSION : SNMP MIB ISSU client does not have a valid registered session.

| | |
|---------------------------|---|
| Explanation | The SNMP MIB ISSU client does not have a valid registered session. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%SNMP_MIB_ISSU-2-SESSION_REGISTRY : SNMP MIB ISSU client failed to register session information. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The SNMP MIB ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%SNMP_MIB_ISSU-3-SESSION_UNREGISTRY : SNMP MIB ISSU client failed to unregister session information. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The SNMP MIB ISSU client failed to unregister session information. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%SNMP_MIB_ISSU-2-SESSION_NEGO : SNMP MIB ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | An ISSU-compliant client transitions through a series of internal states. The SNMP MIB ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>) |

%SNMP_MIB_ISSU-2-SEND_NEGO_FAILED : SNMP MIB ISSU client failed to send negotiation message. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The SNMP MIB ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |

%SNMP_MIB_ISSU-2-GET_BUFFER : SNMP MIB ISSU client failed to get buffer for message. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The SNMP MIB ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |

%SNMP_MIB_ISSU-3-CAP_NOT_COMPATIBLE : SNMP MIB ISSU client capability exchange result incompatible.

| | |
|---------------------------|---|
| Explanation | The SNMP MIB ISSU client capability exchange have negotiated as incompatible with the peer. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu negotiated capability <Session_ID>) |

%SNMP_MIB_ISSU-3-CAP_INVALID_SIZE : SNMP MIB ISSU client capability list is empty.

| | |
|---------------------------|--|
| Explanation | The SNMP MIB ISSU client capability exchange list size is invalid. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entires <Client_ID>) |

SONET

%SONET-4-ALARM : [chars]: [chars] [chars]

Explanation The specified SONET Alarm has been declared or released.

Recommended Action Recommended action is to repair the source of the alarm.

%SONET-4-APSMM : [chars]: APS mode mismatch - [chars]

Explanation There has been a unidirectional/bidirectional mismatch detected by the APS system

Recommended Action It is recommended that the router configuration match the provisioned circuit.

%SONET-3-BDAUTH : [chars]: APS Bad authentication from [IP_address],

Explanation APS software has detected unauthorized message.

Recommended Action This message could result from improper configuration, unauthorized access, or packet corruption. LOG_STD_ACTION

%SONET-3-MISVER : [chars]: APS version mismatch.t WARNING: Loss of Working-Protect link can deselect both protect and working interfaces. [chars] router requirest software upgrade for full protection.

Explanation APS software has detected that either the working or protect router requires software upgrade. APS operation can continue prior to the upgrade.

Recommended Action Upgrade specified router.

%SONET-6-APSREFL : [chars]: Remote reflection of APS status now [chars]

Explanation APS software has detected a change in the reflected local APS status

Recommended Action None - normal situation.

%SONET-6-APSMANPRO : Manual APS switchover initiated for [chars]

Explanation APS manual switchover is initiated

Recommended Action None - normal situation.

%SONET-3-APSEVENT : [chars]: APS event type error: event [dec] undefined

| | |
|---------------------------|---|
| Explanation | APS software has malfunctioned |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SONET-6-APSREMSWI : [chars]: Remote APS status now [chars]

| | |
|---------------------------|--|
| Explanation | APS software has detected a change in the APS status of the remote interface |
| Recommended Action | None - normal situation. |

%SONET-3-APSNCHN : APS Local request [dec] has no corresponding channel number

| | |
|---------------------------|---|
| Explanation | APS software has malfunctioned. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SONET-3-APSNOINTFC : APS No interfaces available for IP connection

| | |
|---------------------------|--|
| Explanation | APS requires an out-of-band path for inter-router communication. |
| Recommended Action | Configure an out-of-band path for inter-router APS communication |

%SONET-3-NOBUFFER : No buffer available for sending APS message

| | |
|---------------------------|---|
| Explanation | No data buffer was available for sending APS message. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SONET-3-NOSOCKET : Unable to open socket

| | |
|---------------------------|---|
| Explanation | APS system unable to open a socket for communication purposes |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SONET-3-APSCOMM : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | APS errors related to failure of working-protect communication |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SONET-3-APSCOMMEST : [chars]: Link to [chars] channel established - PGP protocol version [dec]

| | |
|---------------------------|---|
| Explanation | APS has established connectivity between working and protect routers. |
| Recommended Action | None - information only. |

%SONET-3-APSCOMMCHANGE : [chars]: Link to [chars] channel reverts to PGP protocol version [dec]

| | |
|---------------------------|--|
| Explanation | APS has reverted to a different version of the PGP protocol between working and protect routers. |
| Recommended Action | None - information only. |

%SONET-3-APSCOMMLOST : [chars]: Link to [chars] channel lost

| | |
|---------------------------|--|
| Explanation | Connectivity between Working and Protect has been lost. APS operation can continue in degraded mode. |
| Recommended Action | Restore connectivity between working and protect routers. |

%SONET-3-ALARMTIMERFAIL : [chars]

| | |
|--------------------|---|
| Explanation | Alarm timer monitor process creation failed |
|--------------------|---|

%SONET-3-ALARMTIMERFAIL : [chars]

| | |
|---------------------------|---|
| Recommended Action | Report this occurrence to Engineering. Use Topic to search for a similar DDTS. If you find none, write a DDTS for this problem. |
|---------------------------|---|

%SONET-3-APSSYNCSECONDARY : [dec]/[dec]: No hwidb

| | |
|--------------------|---|
| Explanation | New secondary RP unable to find device descriptor block corresponding to slot/unit specified by primary RP. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SONET-3-APSHOLDTIME : [chars]: [chars]

| | |
|--------------------|---|
| Explanation | Messages issued by HA APS when PGP holdtime is adjusted |
|--------------------|---|

| | |
|---------------------------|--------------------------|
| Recommended Action | None - information only. |
|---------------------------|--------------------------|

%SONET-3-DELAYTIMER : [chars]

| | |
|--------------------|------------------------------|
| Explanation | Delay timer creation failure |
|--------------------|------------------------------|

| | |
|---------------------------|---|
| Recommended Action | Report this occurrence to Engineering. Use Topic to search for a similar DDTS. If you find none, write a DDTS for this problem. |
|---------------------------|---|

%SONET-3-BADTCA : TCA signal [dec] is invalid

| | |
|--------------------|---------------------------------|
| Explanation | TCA software has malfunctioned. |
|--------------------|---------------------------------|

| | |
|---------------------------|---|
| Recommended Action | Report this occurrence to Engineering. Use Topic to search for a similar DDTS. If you find none, write a DDTS for this problem. |
|---------------------------|---|

%SONET-3-BADTCATH : TCA threshold [int] is not supported

| | |
|--------------------|---|
| Explanation | The specific TCA threshold is not supported |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Report this occurrence to Engineering. Use Topic to search for a similar DDTS. If you find none, write a DDTS for this problem. |
|---------------------------|---|

SONETIFMIB**%SONETIFMIB-3-OUTOFBOUND : Out of bound values path=[dec]/tug2=[dec]/e1=[dec]**

Explanation Invalid values used while determining the ifAlias

Recommended Action No action is required.

%SONETIFMIB-3-NULLPTR : NULL pointer at step = [dec]

Explanation Attempted to initialize ifAlias for VT using a NULL pointer.

Recommended Action No action is required.

SONETMIB**%SONETMIB-1-LOSTUPDATE : Lost raw stats update for if_index=[dec]**

Explanation

Recommended Action

%SONETMIB-1-MALLOCNEW : Malloc failed for new interface=[dec]

Explanation Unable to allocate enough memory to create SONET MIB structure for new interface.

Recommended Action No action is required.

%SONETMIB-1-DELETE : could not delete interface, if_index=[dec]

Explanation The specified interface was not successfully dequeued.

Recommended Action No action is required.

%SONETMIB-3-NULLCFGPTR : NULL SONET MIB config pointer, if_index=[dec]

Explanation Attempted to initialize the SONET MIB using a NULL pointer.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

SPAN through SPA_ETHER_INTERNAL_IF

- [SPAN](#)
- [SPANTREE](#)
- [SPANTREE_VLAN_SHIM](#)
- [SPANTREE_VLAN_SW](#)
- [SPA_CHOXC](#)
- [SPA_CHOXC_MCPRP](#)
- [SPA_CHOC_DSX](#)
- [SPA_CT3](#)
- [SPA_DSPRM](#)
- [SPA_ETHER_INTERNAL_IF](#)

SPAN

%SPAN-3-UNKN_ERR : An internal error occurred during a SPAN operation.

| | |
|---------------------------|---|
| Explanation | SPAN detected an error in its internal operation. |
| Recommended Action | The error might be transient, in which case trying the SPAN operation again might be successful. If this fails, the switch might need to be reloaded for the desired operation to complete. |

%SPAN-3-UNKN_ERR_PORT : An internal error occurred when configuring SPAN on port [chars]

| | |
|---------------------------|---|
| Explanation | SPAN detected an error in its internal operation. |
| Recommended Action | The error might be transient, in which case trying the SPAN operation again might be successful. If this fails, the switch might need to be reloaded for the desired operation to complete. |

%SPAN-3-MEM_UNAVAIL : Memory was not available to perform the SPAN operation

| | |
|---------------------------|---|
| Explanation | Unable to perform a SPAN operation because of a lack of memory |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%SPAN-3-SESS_HW_UNAVAIL : SPAN hardware resource not available [chars]

| | |
|---------------------------|--|
| Explanation | The system could not allocate a SPAN hardware resource for the feature specified in the error message. A possible cause of this condition is that all available SPAN source sessions are already in use. The system can be configured with a maximum of two SPAN source sessions or one RSPAN source session |
| Recommended Action | Remove one of the existing SPAN or RSPAN source sessions and retry the operation. |

%SPAN-5-ERSPAN_ADJ_TUNNEL : ERSPAN Destination behind a tunnel. Shutting down session [dec]

| | |
|---------------------------|---|
| Explanation | The next hop to the IP Address specified as the ERSPAN destination lies behind a tunnel. This configuration is not supported. ERSPAN session is shut down when such configuration is detected |
| Recommended Action | Specify another IP address as the ERSPAN destination which does not have tunnel as the next-hop adjacency. |

%SPAN-6-SPAN_EGRESS_REPLICATION_MODE_CHANGE : Span Egress HW Replication Mode Change Detected. Current replication mode for session [chars] is [chars]

| | |
|---------------------------|--|
| Explanation | When auto detection of egress span replication mode is enabled, the system will transition any available sessions to centralized mode when an distributed egress span incapable linecard is inserted. The system will transition back the available sessions to distributed egress span mode when the last distributed egress span incapable linecard is removed |
| Recommended Action | To prevent a session switching back to distributed egress span mode, use the command monitor session egress replication-mode centralized |

%SPAN-3-REDIR_HW_UNAVAIL : Redirect hardware resource not available [chars]

| | |
|---------------------------|--|
| Explanation | The system could not allocate resource for redirecting BPDUs. A possible cause of this condition is that all available redirect registers in PFC are used by other features. |
| Recommended Action | Free up a redirect register in PFC by unconfiguring features that use redirect registers and retry allowing BPDUs for SPAN servicemodules. If Protocol Tunneling is configured on any ports, then remove Protocol Tunneling configuration from all ports to free up one redirect register. |

%SPAN-5-PKTCAP_START : Packet capture session [dec] started

| | |
|--------------------|---|
| Explanation | Packet capture is activated by user or after the scheduled time |
|--------------------|---|

%SPAN-5-PKTCAP_START : Packet capture session [dec] started

| | |
|---------------------------|--|
| Recommended Action | Stop the capture when it is not required. You can change the rate of packets reaching CPU for capturing by configuring the rate-limit value in the monitor session type capture config mode. Protocol packets may get dropped if the capture traffic rate is high. |
|---------------------------|--|

%SPAN-5-PKTCAP_STOP : Packet capture session [dec] ended [chars], [dec] packets captured

| | |
|--------------------|---|
| Explanation | Packet capture is stopped. This will happen if the capture buffer is full or if user stops the capture or if capture timeout happens. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Packet capture is stopped. You can export the capture buffer using the 'monitor capture <id> export buffer <url>' command. Buffer can be displayed on the console also. Delete the capture session, if it is no longer required. |
|---------------------------|--|

SPANTREE

%SPANTREE-3-PORT_SELF_LOOPED : [chars] disabled.- received BPDU src mac ([enet]) same as that of interface

| | |
|--------------------|---|
| Explanation | The source MAC address contained in a BPDU received on the listed interface matches the MAC address assigned to that interface This indicates the possibility that a port is looped back to itself, possibly due to a diagnostic cable being plugged in. The interface will be administratively shutdown. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Check the interface configuration and any cable plugged into the interface. Once problem resolved, re-enable interface by doing a no shutdown in the interface configuration. |
|---------------------------|---|

%SPANTREE-3-BAD_PORTNUM_SIZE : Rejected an attempt to set the port number field size to [dec] bits (valid range is [dec] to [dec] bits).

| | |
|--------------------|---|
| Explanation | The spanning tree port identifier is a 16 bit wide field that is, by default, divided evenly between port priority and port number, each sub field being 8 bits wide. This allows the port number field to represent port numbers between 1 and 255. However, on systems with greater than 255 ports, the size of port number portion of the port id must be increased to support the greater number of ports. This is done by the STP subsystem at system init time since the maximum number of ports on a particular platform will not change. This error would only occur due to an error in the platform specific code which caused it to request more (or less) bits than were possible. This error should not be seen in any production images. |
|--------------------|---|

%SPANTREE-3-BAD_PORTNUM_SIZE : Rejected an attempt to set the port number field size to [dec] bits (valid range is [dec] to [dec] bits).

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show version** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPANTREE-7-RECV_1Q_NON_TRUNK : Received 802.1Q BPDU on non trunk [chars] [chars].

Explanation A SSTP BPDU was received on the listed interface that was not operationally a trunk.

Recommended Action Verify that the configuration and operational state of the listed interface and that of the interface to which it is connected have the same mode (access vs trunk). If mode is trunk, verify the same encapsulation (none, ISL, 802.1Q). Once these parameters are consistent, spanning tree will automatically unblock the interfaces as appropriate.

%SPANTREE-2-RECV_1Q_NON_1QTRUNK : Received 802.1Q BPDU on non 802.1Q trunk [chars] [chars].

Explanation The listed interface on which a SSTP BPDU was received, was in trunk mode but not using 802.1Q encapsulation.

Recommended Action Verify that the configuration and operational state of the listed interface and that of the interface to which it is connected have the same mode (access vs trunk). If mode is trunk, verify the same encapsulation (ISL, 802.1Q). Once these parameters are consistent, spanning tree will automatically unblock the interfaces as appropriate.

%SPANTREE-2-RECV_PVID_ERR : Received BPDU with inconsistent peer vlan id [dec] on [chars] [chars].

Explanation The listed interface received a SSTP BPDU that is tagged with a VLAN id that does not match the VLAN id on which the BPDU was received. This occurs when the native VLAN is not consistently configured on both ends of a 802.1Q trunk.

Recommended Action Verify that the configuration of the native VLAN id is consistent on the interfaces on each end of the 802.1Q trunk connection. Once corrected, spanning tree will automatically unblock the interfaces as appropriate.

%SPANTREE-2-RECV_BAD_TLV : Received SSTP BPDU with bad TLV on [chars] [chars].

Explanation The list interface received a SSTP BPDU that was missing the VLAN id tag. The BPDU is discarded.

%SPANTREE-2-RECV_BAD_TLV : Received SSTP BPDU with bad TLV on [chars] [chars].

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPANTREE-7-BLOCK_PORT_TYPE : Blocking [chars] on [chars]. Inconsistent port type.

Explanation The listed interface is being held in spanning tree blocking state until the port type inconsistency is resolved.

Recommended Action Verify that the configuration and operational state of the listed interface and that of the interface to which it is connected have the same mode (access vs trunk). If mode is trunk, verify the same encapsulation (ISL, 802.1Q). Once these parameters are consistent, spanning tree will automatically unblock the interfaces as appropriate.

%SPANTREE-4-PORT_NOT_FORWARDING : [chars] [chars] [chars] [chars]

Explanation The port is not forwarding packets, i.e it is not in a forwarding state

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPANTREE-2-BLOCK_PVID_PEER : Blocking [chars] on [chars]. Inconsistent peer vlan.

Explanation The spanning tree port associate with the listed spanning tree instance and interface will be held in spanning tree blocking state until the port VLAN Id (PVID) inconsistency is resolved. The listed spanning tree instance is that of the native VLAN id of interface on the peer switch to which the listed interface is connected.

Recommended Action Verify that the configuration of the native VLAN id is consistent on the interfaces on each end of the 802.1Q trunk connection. Once corrected, spanning tree will automatically unblock the interfaces as appropriate.

%SPANTREE-2-BLOCK_PVID_LOCAL : Blocking [chars] on [chars]. Inconsistent local vlan.

Explanation The spanning tree port associate with the listed spanning tree instance and interface will be held in spanning tree blocking state until the Port VLAN ID (PVID) inconsistency is resolved. The listed spanning tree instance is that of the native VLAN id of the listed interface.

%SPANTREE-2-BLOCK_PVID_LOCAL : Blocking [chars] on [chars]. Inconsistent local vlan.

Recommended Action Verify that the configuration of the native VLAN id is consistent on the interfaces on each end of the 802.1Q trunk connection. Once corrected, spanning tree will automatically unblock the interfaces as appropriate.

%SPANTREE-2-UNBLOCK_CONSIST_PORT : Unblocking [chars] on [chars]. Port consistency restored.

Explanation The Port VLAN ID and/or Port Type inconsistencies have been resolved and spanning tree will now unblock the listed interface of the listed spanning tree instance as appropriate.

Recommended Action No action is required.

%SPANTREE-2-BLOCK_BPDUGUARD : Received BPDU on port [chars] with BPDU Guard enabled. Disabling port.

Explanation A BPDU was received in the interface specified in the error message that has the spanning tree BPDU Guard feature enabled. As a result, the interface was administratively shut down.

Recommended Action Either remove the device sending BPDUs or disable the BPDU Guard feature. The BPDU Guard feature can be locally configured on the interface or globally configured on all ports that have portfast enabled. After the conflict has been resolved, reenable the interface by entering the **no shutdown** command in interface configuration mode.

%SPANTREE-2-BLOCK_BPDUGUARD_VP : Received BPDU on port [chars], vlan [dec] with BPDU Guard enabled. Disabling vlan.

Explanation A BPDU was received on the interface and vlan specified in the error message. The spanning tree BPDU Guard feature was enabled and configured to shutdown the vlan. As a result, the vlan was placed in the error-disabled state.

Recommended Action Either remove the device sending BPDUs or disable the BPDU Guard feature. The BPDU Guard feature can be locally configured on the interface or globally configured on all ports that have portfast enabled. After the conflict has been resolved, reenable the interface/vlan by entering the **clear errdisable** command.

%SPANTREE-2-ROOTGUARD_CONFIG_CHANGE : Root guard [chars] on port [chars].

Explanation The spanning tree root guard configuration for the listed interface has been changed. If enabled, any BPDU received on this interface which advertizes a superior spanning tree root bridge to that already in use will cause the interface to be put into blocking state and marked as root guard inconsistent.

%SPANTREE-2-ROOTGUARD_CONFIG_CHANGE : Root guard [chars] on port [chars].

| | |
|---------------------------|--|
| Recommended Action | Verify that this is the desired configuration for the listed interface. Correct it if this is not the desired configuration otherwise no further action is required. |
|---------------------------|--|

%SPANTREE-2-ROOTGUARD_BLOCK : Root guard blocking port [chars] on [chars].

| | |
|--------------------|---|
| Explanation | A BPDU was received on the listed interface which advertizes a superior spanning tree root bridge to that currently in use. The interface is put into blocking state and marked as root guard inconsistent in order to prevent a suboptimal spanning tree topology to form. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Issue the show spanning-tree inconsistentports command to review the list of interfaces with root guard inconsistencies. Determine why devices connected to the listed ports are sending BPDUs with a superior root bridge and take action to prevent further occurrences. Once the bogus BPDUs have been stopped, the interfaces will automatically recover and resume normal operation. Make sure that it is appropriate to have root guard enabled on the interface. |
|---------------------------|--|

%SPANTREE-2-ROOTGUARD_UNBLOCK : Root guard unblocking port [chars] on [chars].

| | |
|--------------------|--|
| Explanation | The listed interface is no longer receiving BPDUs advertizing a superior root bridge. The root guard inconsistency is cleared for the interface and then it is taken out of the blocking state if appropriate. |
|--------------------|--|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

%SPANTREE-2-LOOPGUARD_CONFIG_CHANGE : Loop guard [chars] on port [chars].

| | |
|--------------------|---|
| Explanation | The spanning tree loopguard configuration for the listed interface has been changed. If enabled, the interface will be put into blocking state and marked as loopguard inconsistent when the message age timer expires because no BPDU were received from the designated bridge. This feature is mainly used to detect unidirectional links |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Verify that this is the desired configuration for the listed interface. Correct it if this is not the desired configuration otherwise no further action is required. |
|---------------------------|--|

%SPANTREE-2-LOOPGUARD_BLOCK : Loop guard blocking port [chars] on [chars].

| | |
|--------------------|---|
| Explanation | The spanning tree message age timer has expired because and no BPDUs were received from the designated bridge. Since this condition could be caused by an unidirectional link failure, the interface is put into blocking state and marked as loop guard inconsistent in order to prevent possible loops from being created |
|--------------------|---|

%SPANTREE-2-LOOPGUARD_BLOCK : Loop guard blocking port [chars] on [chars].

| | |
|---------------------------|---|
| Recommended Action | Issue the show spanning-tree inconsistentports command to review the list of interfaces with loop guard inconsistencies. Determine why devices connected to the listed ports are not sending BPDUs. One reason could be that they do not run the spanning tree protocol; in this case you should disable loopguard in the inconsistent interface/s or start the spanning tree protocol on the other side of the link/s. depending on the context. Another reason could be a failure in the cable: if the link has a failure that makes it unidirectional (you can transmit but you can not receive) it should be replaced with a proper cable. |
|---------------------------|---|

%SPANTREE-2-LOOPGUARD_UNBLOCK : Loop guard unblocking port [chars] on [chars].

| | |
|---------------------------|---|
| Explanation | The listed interface has received a BPDU and therefore if the inconsistency was due to an unidirectional link failure, now the problem is not there anymore. The loop guard inconsistency is cleared for the interface which is taken out of the blocking state if appropriate. |
| Recommended Action | No action is required. |

%SPANTREE-2-CHNL_MISCFG : Detected loop due to etherchannel misconfiguration of [chars] [chars]

| | |
|---------------------------|---|
| Explanation | A loop caused the misconfiguration of a channel group has been detected. An example of such a misconfiguration would be where the ports on one side of the etherchannel either aren't configured to be in the channel or failed to bundle for some reason while the other side has successfully bundled the ports into the etherchannel |
| Recommended Action | Determine which local ports are involved using the command show interfaces status err-disabled and then check etherchannel configuration on the remote device using the command show etherchannel summary on the remote device. Once the configuration is corrected, do shutdown / no shutdown on the associated port-channel interface. |

%SPANTREE-3-ERR_NO_UNIDIR_EDGE : [chars]: Portfast disabled, reverting to bidirectional mode

| | |
|---------------------------|--|
| Explanation | Because UCP is for edge ports only, portfast must be configured. This message is typically seen when spanning-tree portfast is enabled on a port, then authentication control-direction is set to inbound (unidirectional), and then portfast is disabled. |
| Recommended Action | Re-enable portfast on the edge port. This will re-enable unidirectional authentication control. |

%SPANTREE-5-EXTENDED_SYSID : Extended SysId [chars] for type [chars]

Explanation The extended system id feature has either enabled or disabled for the given type of spanning tree. If enabled, the spanning tree instance identifier is stored in the lower portion of the bridge id priority field and this will cause the allowed values for the bridge priority to be limited to the range of 0 to 61440 in increments of 4096. If disabled, the bridge id priority field consists entirely of the configured priority but some spanning tree features may not be available on a given platform (i.e. 4096 vlan support). On some platforms, this feature may be mandatory.

Recommended Action No action is required.

%SPANTREE-2-PVSTSIM_FAIL : Blocking [chars] port [chars]: Inconsistent [chars] PVST BPDU received on VLAN [dec], claiming root [dec]:[enet]

Explanation When a MST switch is connected to a PVST+ switch, the CIST (MST00) information on the port of the MST switch must be consistently better than all the PVST+ messages if the port is designated or consistently worse than all the PVST+ messages if the port is root. If this constraint is not respected, the port on the MST switch is blocked in order to prevent a potential bridging loop

Recommended Action When STP is converging after a new switch, or switch port is added to the topology, this condition may happen transiently. The port unblocks automatically in such cases. If the port remains blocked, identify the root bridge as reported in the message, and configure a worse or better priority for the VLAN spanning tree consistent with the CIST role on the port of the MST switch. There could be more inconsistencies than the message indicates, and the port will not recover until all such inconsistencies are cleared. If you cannot determine which other VLANs have inconsistencies, disable and reenable the port. This message will appear again and specify another VLAN with inconsistencies to be fixed. Repeat this process until all inconsistencies on all VLANs are cleared.

%SPANTREE-2-PVSTSIM_OK : PVST Simulation inconsistency cleared on port [chars].

Explanation The listed interface is no longer receiving PVST BPDUs advertising an information inconsistent with the CIST port information. The PVST Simulation Inconsistency is cleared and the interface returns to normal operation

Recommended Action No action is required.

%SPANTREE-6-PORT_STATE : Port [chars] instance [dec] moving from [chars] to [chars]

Explanation The Spanning-Tree port has changed state.

Recommended Action No action is required.

%SPANTREE-7-PORTDEL_SUCCESS : [chars] deleted from Vlan [dec]

Explanation The interface has been deleted from Vlan**Recommended Action** No action is required.

%SPANTREE-6-PORTDEL_ALL_VLANS : [chars] deleted from all Vlans

Explanation The interface has been deleted from all Vlans**Recommended Action** No action is required.

%SPANTREE-6-PORTADD_ALL_VLANS : [chars] added to all Vlans

Explanation The interface has been added to all Vlans**Recommended Action** No action is required.

%SPANTREE-5-TOPOTRAP : Topology Change Trap for [chars] [dec]

Explanation A trap has been generated to indicate the change in topology**Recommended Action** No action is required.

%SPANTREE-5-ROOTCHANGE : Root Changed for [chars] [dec]: New Root Port is [chars]. New Root Mac Address is [enet]

Explanation The Root has changed for an instance of spanning tree**Recommended Action** No action is required.

%SPANTREE-3-PRESTD_NEIGH : pre-standard MST interaction not configured ([chars]). Please, configure: 'spanning-tree mst pre-standard' on ports connected to MST pre-standard switches.

Explanation The switch has received a pre-standard MST BPDU on a port that is not configured for pre-standard MST BPDU transmission. The switch will automatically adjust its mode of operation on this port and will start sending pre-standard BPDUs. However, this auto-detection of pre-standard neighbors is not 100% accurate and it is recommended to configure explicitly the port for pre-standard MST BPDU transmission. This warning message will only be display once.

%SPANTREE-3-PRESTD_NEIGH : pre-standard MST interaction not configured ([chars]). Please, configure: 'spanning-tree mst pre-standard' on ports connected to MST pre-standard switches.

Recommended Action Configure 'spanning-tree mst pre-standard' on all the ports that are connected to switches running Cisco's pre-standard version of MST. It is recommended to migrate all the switches in the network to the IEEE standard MST version when it is possible.

%SPANTREE-2-BRIDGE_ASSURANCE_BLOCK : Bridge Assurance blocking port [chars][chars].

Explanation BPDUs were not received from a neighboring switch on the interface that has spanning tree Bridge Assurance configured. As a result, the interface was moved to the spanning tree Blocking state

Recommended Action Either disable Bridge Assurance configuration on the interface or make sure that the interface is connected to a L2 switch/bridge device

%SPANTREE-2-BRIDGE_ASSURANCE_UNBLOCK : Bridge Assurance unblocking port [chars][chars].

Explanation The interface listed in the message has been restored to normal spanning tree state after receiving BPDUs from the neighboring L2 switch/bridge

Recommended Action No action is required.

%SPANTREE-2-PVST_PEER_BLOCK : PVST+ peer detected on port [chars]

Explanation PVST+ BPDU(s) are detected on the listed interface when MSTP PVST+ Simulation feature is disabled

Recommended Action Please make sure the PVST+ switch is removed from the network or enable the MSTP PVST Simulation feature.

%SPANTREE-2-PVST_PEER_UNBLOCK : Unblocking port [chars]

Explanation The listed interface is no longer receiving the PVST+ BPDUs. The inconsistency is cleared and the interface returns to normal operation.

Recommended Action No action is required.

%SPANTREE-2-NOMEM : Memory Allocation Failure - [chars]: [chars]

Explanation The system could not allocate the memory that is required for the STP feature. This condition might indicate that more memory must be installed on the system.

%SPANTREE-2-NOMEM : Memory Allocation Failure - [chars]: [chars]

| | |
|---------------------------|--|
| Recommended Action | Check available memory and install more if necessary. If sufficient memory is available, reload the Cisco IOS image on the affected platform. If the error persists, LOG_STD_SH_CMD_ACTION(show tech-support and show logging) |
|---------------------------|--|

SPANTREE_VLAN_SHIM

%SPANTREE_VLAN_SHIM-2-MAX_INSTANCE : Platform limit of [dec] STP instances exceeded. No instance created for [chars] (port [chars]).

| | |
|---------------------------|---|
| Explanation | The number of currently active VLAN spanning tree instances has reached a platform specific limit. No additional VLAN instances will be created until the number of existing instances drops below the platform limit. The message shows the smallest VLAN number of those VLANs that are unable have STP instances created. |
| Recommended Action | Reduce the number of currently active spanning tree instances by either disabling some of the currently active spanning tree instances or deleting the VLANs associated with currently active spanning tree instances. Note : need to manually enable the spanning-trees that were unable to be created due to limited instances. |

%SPANTREE_VLAN_SHIM-3-ADD_REGISTRY_FAILED : Subsystem [chars] fails to add callback function [chars]

| | |
|---------------------------|--|
| Explanation | Other subsystem must have mistakenly add its own callback functions. This syslog is for debugging purpose. |
| Recommended Action | No action is required. |

SPANTREE_VLAN_SW

%SPANTREE_VLAN_SW-2-MAX_INSTANCE : Platform limit of [dec] STP instances exceeded. No instance created for [chars] (port [chars]).

| | |
|---------------------------|---|
| Explanation | The number of currently active VLAN spanning tree instances has reached a platform specific limit. No additional VLAN instances will be created until the number of existing instances drops below the platform limit. The message shows the smallest VLAN number of those VLANs that are unable have STP instances created. |
| Recommended Action | Reduce the number of currently active spanning tree instances by either disabling some of the currently active spanning tree instances or deleting the VLANs associated with currently active spanning tree instances. Note : need to manually enable the spanning-trees that were unable to be created due to limited instances. |

SPA_CHOXC**%SPA_CHOXC-3-ERROR : Failed to create for [chars] : slot/bay:[dec]/[dec]**

| | |
|---------------------------|---|
| Explanation | The channelized SPA controller encountered an error. |
| Recommended Action | Check the memory available in system and LOG_STD_SH_TECH_ACTION |

%SPA_CHOXC-3-FATAL_ERROR : Fatal error for [chars] : slot/bay:[dec]/[dec]

| | |
|---------------------------|---|
| Explanation | The channelized SPA controller encountered a fatal error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_CHOXC-3-INVALID_SPA_TYPE : Invalid SPA type : slot/bay:[dec]/[dec], spa_type=[dec].

| | |
|---------------------------|---|
| Explanation | The channelized SPA type cannot be recognized by the version of Cisco IOS software currently running on the system. |
| Recommended Action | Upgrade your system to a version of Cisco IOS software that supports this SPA type. |

%SPA_CHOXC-3-CREATE_FAIL : Failed to create [chars] : slot/bay:[dec]/[dec]

| | |
|---------------------------|---|
| Explanation | The channelized SPA controller descriptor block creation failed. Check the amount of available system memory. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_CHOXC-3-NUL_INSTANCE : Null [chars] instance for [chars] : slot/bay:[dec]/[dec]

| | |
|---------------------------|---|
| Explanation | The instance pointer is NULL when getting data structure. |
| Recommended Action | SPA_CHOXC_INTERNAL_SW_ERROR_ACTION |

%SPA_CHOXC-3-UNKNOWN_OPTION : Received unknown [chars]: option=[dec]

Explanation Unknown option received.**Recommended Action** SPA_CHOXC_INTERNAL_SW_ERROR_ACTION

%SPA_CHOXC-3-RETURN_ERROR : Return error for [chars]: return_value=[dec]

Explanation Return error code received.**Recommended Action** SPA_CHOXC_INTERNAL_SW_ERROR_ACTION

%SPA_CHOXC-6-XFP_OK : [dec]/[dec]/[dec]: [chars] detected/inserted

Explanation XFP has been detected or inserted in a port in Channelized SPA.**Recommended Action** This is a information message, no action required

%SPA_CHOXC-3-XFP_UNSUPPORTED : [dec]/[dec]/[dec]: [chars] detected/inserted is not supported

Explanation Unsupported XFP has been detected or inserted in a port in Channelized SPA.**Recommended Action** Remove the unsupported XFP/SFP and replace it with supported one.

%SPA_CHOXC-6-XFP_REMOVED : [dec]/[dec]/[dec]

Explanation XFP removed from a port in Channelized SPA**Recommended Action** This is a information message, no action required

%SPA_CHOXC-3-NUL : [chars]

Explanation The NULL pointer was detected when getting the data structure.**Recommended Action** SPA_CHOXC_ENABLE_DEBUG_ACTION

%SPA_CHOXC-6-SONET_ALARM : [chars] [chars] [chars] [chars] [chars]

Explanation This message is generated whenever (a) sonet alarm is present in the system (and the alarm status has been reported to the RP) or (b) sonet alarm has been removed from the system (and the alarm status has been reported to the RP)

Recommended Action No action is required.

%SPA_CHOXC-3-INTFC_FAILED : Channel provisioning failed for [chars]

Explanation Channel could not be provisioned on SPA for this interface, interface corresponding to that channel has been moved to down state. If this interface was provisioned using the user interface then it may not appear in the interface list.

Recommended Action SPA_CHOXC_INTERNAL_SW_ERROR_ACTION

%SPA_CHOXC-3-CORRUPT : Corrupt configuration, unsupported [chars] ([int]) encountered

Explanation The OC3/STM1 RP driver running configuration is corrupted.

Recommended Action SPA_CHOXC_INTERNAL_SW_ERROR_ACTION

%SPA_CHOXC-3-NUL SUBBLOCK : Null ssb for [chars]

Explanation The hwidb subblock is NULL.

Recommended Action SPA_CHOXC_INTERNAL_SW_ERROR_ACTION

%SPA_CHOXC-5-DEF_SUBRATE : [chars] [chars]

Explanation Remote subrate configuration changed.

Recommended Action Inform the network operator that subrate configuration was changed by remote end.

%SPA_CHOXC-3-FRR_ERROR : Error in handling FRR: [chars], [chars], [hex], [hex]

Explanation Error in FRR processing.

Recommended Action This is an internal software error. If this error happened while configuring FRR, try reconfiguring the interface. If the error persists or occurred during normal operation, decode the traceback and LOG_STD_ACTION

%SPA_CHOXC-3-CHOXC_NAMESTRING_ERROR : failed to get [chars] namestring

Explanation Error in retrieving namestring of a specified Controller/IDB**Recommended Action** This is a internal software error. If the error persists or occurred during normal operation, decode the traceback and LOG_STD_ACTION

%SPA_CHOXC-3-SONET_ALARM_PROC_ERR : [chars] Error has occurred while processing in the sonet alarm-proc

Explanation Either free/create of the memory failed in SONET alarm proc**Recommended Action**

SPA_CHOXC_MCPRP

%SPA_CHOXC_MCPRP-5-PATH_UPDOWN : Path [chars], changed state to [chars]

Explanation A Sonet high order path changed its state.**Recommended Action** This is a internal software error. Decode the traceback and get the output of **show controller sonet**. Look into this output to see if there are any alarms being reported at the path level. Check Bug Toolkit before calling the TAC. When calling the TAC, please provide the above information along with the output of **show tech details**

%SPA_CHOXC_MCPRP-5-T3_UPDOWN : T3 [chars], changed state to [chars]

Explanation A T3 within STS1 changed its state.**Recommended Action** This is a internal software error. Decode the traceback and get the output of **show controller sonet**. Look into this output to see if there are any alarms being reported at the T3 level. Check Bug Toolkit before calling the TAC. When calling the TAC, please provide the above information along with the output of **show tech details**

%SPA_CHOXC_MCPRP-3-CORRUPT : Corrupt configuration, unsupported [chars] ([int]) encountered

Explanation The OC3/STM1 RP driver running configuration is corrupt**Recommended Action** This is a internal software error. Decode the traceback and get the output of **show running-config**. Check Bug Toolkit before calling the TAC. When calling the TAC, please provide the above information along with the output of **show tech details**

%SPA_CHOXC_MCPRP-1-ALLOCFAIL : OC3/STM1 [dec]/[dec] [chars] allocation failure

| | |
|---------------------------|--|
| Explanation | CHOXC controller or channel memory allocation failure |
| Recommended Action | This is an internal software error. Decode the traceback. Enable debug hw-module subslot <slot>/<bay> oir plugin when the problem is happening. Check Bug Toolkit before calling the TAC. When calling the TAC, please provide the above information along with output of show logging and the output of show tech details. |

%SPA_CHOXC_MCPRP-3-TIMEOUT : Interface ([chars]): [chars]

| | |
|---------------------------|--|
| Explanation | The CHOXC RP driver queries the LC for SONET information, the LC didn't reply. |
| Recommended Action | This is an internal software error. Decode the traceback. Enable debug hw-module subslot <slot>/<bay> command . Check Bug Toolkit before calling the TAC. When calling the TAC, please provide the above information along with the output of show logging and the output of show tech details. |

%SPA_CHOXC_MCPRP-3-PLUGIN_ERR : [chars]

| | |
|---------------------------|--|
| Explanation | The RP plugin encountered an error during one of the Plugin calls |
| Recommended Action | This is an internal software error. Decode the traceback. Enable debug hw-module subslot <slot>/<bay> oir plugin when the problem is happening. Check Bug Toolkit before calling the TAC. When calling the TAC, please provide the above information along with the output of show logging and the output of show tech details. |

%SPA_CHOXC_MCPRP-3-NULL_SUBBLOCK : Null ssb for [chars]

| | |
|---------------------------|---|
| Explanation | The hwidb subblock is NULL |
| Recommended Action | This is an internal software error. Decode the traceback and get the output of show running-config . Check Bug Toolkit before calling the TAC. When calling the TAC, please provide the above information along with the output of show running and show tech details. |

%SPA_CHOXC_MCPRP-3-APS_CMD_FAIL : Failed to send APS command [hex] to [chars] (retcode [hex])

| | |
|---------------------------|---|
| Explanation | APS command sending failed |
| Recommended Action | This is an internal software error. If this error happened while configuring APS, try reconfiguring the interface. If the error persists or occurred during normal operation, decode the traceback and LOG_STD_ACTION |

%SPA_CHOXC_MCPRP-5-DEF_SUBRATE : [chars] [chars]

Explanation Remote subrate configuration changed**Recommended Action** Inform the network operator that subrate configuration changed by remote end

%SPA_CHOXC_MCPRP-3-FRR_ERROR : Error in handling FRR: [chars], [chars], [hex], [hex]

Explanation Error in FRR processing**Recommended Action** This is a internal software error. If this error happened while configuring FRR, try reconfiguring the interface. If the error persists or occurred during normal operation, decode the traceback and LOG_STD_ACTION

SPA_CHOXC_DSX

%SPA_CHOXC_DSX-4-UNPROV_FAIL : Interface [chars] unprovisioning failed: [chars]

Explanation The system failed to respond to an unprovisioning command. A hidden VLAN could not be deleted within a 2 second timeout window. This condition may be caused by a system that is too busy, or by a FIB IPC failure. The line card driver code will attempt to delete the hidden VLAN.**Recommended Action** If processing continues normally, no action is required. If system operation is adversely affected, LOG_STD_ACTION

%SPA_CHOXC_DSX-3-NODESTROYSUBBLOCK : The [chars] subblock named [chars] was not removed

Explanation IDB sub-blocks could not be removed during the unprovisioning of a channel. This condition indicates a software error.**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_CHOXC_DSX-3-AUTODNR : [chars] failed for slot [dec] bay [dec]

Explanation AUTODNR/USNDNR process has failed. The SPA and SIP are out of synchronization. This condition indicates a software error.

%SPA_CHOC_DSX-3-AUTODNR : [chars] failed for slot [dec] bay [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SPA_CHOC_DSX-3-UNKNOWN_CMD : Unknown [chars] command recieved on slot/bay:[dec]/[dec]. Command Type = [dec]

| | |
|---------------------------|---|
| Explanation | An unknown command was recieved by the SPA card carrier |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_CHOC_DSX-3-INVLIAD_IF_INDEX : Invalid interface index [dec] on slot/bay:[dec]/[dec]. Min. Index = [dec]. MAX. Index = [dec].

| | |
|---------------------------|---|
| Explanation | The index is not valid for the interface specified in the error message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_CHOC_DSX-3-NULL_DATA_STRUCTURE : Failed to create [chars] on slot/bay:[dec]/[dec]. Port Number = [dec].

| | |
|---------------------------|---|
| Explanation | The software resource can not be allocated for this hardware |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_CHOC_DSX-3-INVALID_IF_TYPE : Invalid SPA type [dec] on [chars]. Port Number = [dec].

| | |
|--------------------|---|
| Explanation | The software can not recognize the interface type |
|--------------------|---|

%SPA_CHOC_DSX-3-INVALID_IF_TYPE : Invalid SPA type [dec] on [chars]. Port Number = [dec].

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SPA_CHOC_DSX-3-NULL_SPA_PTR :

| | |
|---------------------------|---|
| Explanation | The pointer to an SPA value is of a null value. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_CHOC_DSX-3-NULL_VIRT_SPA_PTR : [chars]

| | |
|---------------------------|---|
| Explanation | Pointer to virtual SPA object is NULL in card prot grp. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_CHOC_DSX-3-SPA_CMD_SEND_ERR : Failed to send [chars] command to SPA

| | |
|---------------------------|---|
| Explanation | The host failed to send a command to SPA |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_CHOC_DSX-3-SPA_CMD_RETURN_ERR : SPA command [chars] return error [int]

| | |
|--------------------|---|
| Explanation | The SPA returned an error status for a host command |
|--------------------|---|

%SPA_CHOC_DSX-3-SPA_CMD_RETURN_ERR : SPA command [chars] return error [int]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_CHOC_DSX-3-EFC_ERROR : EFC ERROR: [chars] - [chars] [int]

Explanation The SPA Extended Flow Control encountered an error

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_CHOC_DSX-3-T3CFG_ERROR : Interface [chars] T3 [int] config command error (cmd [int], arg [int], retval [int])

Explanation A command sent from the system to a linecard has failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_CHOC_DSX-3-T1CFG_ERROR : Interface [chars] T3 [int] T1 [int] config command error (cmd [int], arg [int], retval [int])

Explanation A command sent from the system to a linecard has failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_CHOC_DSX-3-VCCFG_ERROR : Interface [chars] config command error (cmd [int], arg [int], retval [int])

| | |
|---------------------------|---|
| Explanation | A command sent from the system to a linecard has failed. |
| Recommended Action | This is an internal software error. Decode the traceback and get the output of the show logging command on RP and SIP and check if there are any errors being reported. Try to recreate the problem to see if there is a consistent method to recreate. Check the Bug Toolkit before contacting TAC. When contacting TAC, provide the above information along with the output of the show tech-support command. |

%SPA_CHOC_DSX-3-LINK_TABLE_ERR : [chars]: Could not create link table, error [dec]

| | |
|---------------------------|---|
| Explanation | Error creating link record table. Interfaces may not come up / pass traffic. |
| Recommended Action | If the ports on the SPA are not operating as expected, power down and reseal the indicated SPA card. If the error messages persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at http://www.cisco.com/public/support/tac/tools.shtml . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a tech-support to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%SPA_CHOC_DSX-3-UNCOR_MEM_ERR : SPA [dec]/[dec]: [dec] uncorrectable [chars] memory error(s) encountered. The memory address of most the recent error is: [hex] The SPA is being restarted.

| | |
|---------------------------|--|
| Explanation | The SPA driver detected an uncorrectable memory error condition on the SPA card. Packet corruption may result. |
| Recommended Action | The SPA driver has encountered an uncorrectable memory error on the SPA card. The hexadecimal memory address of the most recent error is specified in the message text on the console or in the system log. Please power down and reseal the indicated SPA card. If the condition persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at http://www.cisco.com/public/support/tac/tools.shtml . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a tech-support to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%SPA_CHOC_DSX-3-BAD_SIZE_ERR : SPA [dec]/[dec]: [dec] [chars] events on HDLC Controller were encountered. The SPA is being restarted.

| | |
|--------------------|--|
| Explanation | The SPA driver detected an error event on the HDLC controller. |
|--------------------|--|

%SPA_CHOC_DSX-3-BAD_SIZE_ERR : SPA [dec]/[dec]: [dec] [chars] events on HDLC Controller were encountered. The SPA is being restarted.

Recommended Action The SPA driver has encountered an error event on the SPA card. If the condition persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at <http://www.cisco.com/public/support/tac/tools.shtml>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case> or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a **tech-support** to your support representative, or attach it to your case in non-zipped, plain text format (.txt).

%SPA_CHOC_DSX-3-HDLC_CTRL_ERR : SPA [dec]/[dec]: [dec] [chars] events on HDLC Controller were encountered.

Explanation The SPA driver detected an error event on the HDLC Controller.

Recommended Action The SPA driver has encountered an error event on the SPA card. If the condition persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at <http://www.cisco.com/public/support/tac/tools.shtml>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case> or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a **tech-support** to your support representative, or attach it to your case in non-zipped, plain text format (.txt).

%SPA_CHOC_DSX-3-COR_MEM_ERR : SPA [dec]/[dec]: [dec] correctable [chars] memory error(s) encountered. The error has been corrected and normal processing should continue. The memory address of most the recent error is: [hex]

Explanation The SPA driver detected a correctable memory error on the SPA card.

Recommended Action The SPA has encountered a correctable memory error on the SPA card. The error has been corrected and normal processing should continue. The hexadecimal memory address of the most recent error is specified in the message text on the console or in the system log. If the condition persists, or other errors are indicated for the SPA, copy the error message exactly as it appears. Then power down and reseal the indicated SPA card. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at <http://www.cisco.com/public/support/tac/tools.shtml>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case> or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a **tech-support** to your support representative, or attach it to your case in non-zipped, plain text format (.txt).

%SPA_CHOC_DSX-3-UNCOR_PARITY_ERR : SPA [dec]/[dec]: [dec] [chars] parity error(s) encountered. The address of the most recent error is: [hex]

| | |
|---------------------------|--|
| Explanation | The SPA driver detected an uncorrectable parity error condition on the SPA card. Packet corruption may result. |
| Recommended Action | Please power down and reseal the indicated SPA card. If the condition persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at http://www.cisco.com/public/support/tac/tools.shtml . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a tech-support to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%SPA_CHOC_DSX-3-SPI4_HW_ERR : SPA on [chars]: [chars] Hardware error was encountered.

| | |
|---------------------------|---|
| Explanation | The SPA driver detected a Hardware error condition on the SPA card. This might result in improper operation. |
| Recommended Action | The SPA driver has encountered a Hardware error on the SPA's SPI4 bus. Please power down and reseal the indicated SPA card. If the condition persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at http://www.cisco.com/public/support/tac/tools.shtml . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a tech-support to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%SPA_CHOC_DSX-3-SPA_SW_ERR : SPA on [chars]: [chars] Software error was encountered.

| | |
|---------------------------|--|
| Explanation | The SPA driver detected a Software error condition on the SPA card. This might result in improper operation. |
| Recommended Action | The SPA driver has encountered a Software error. Please first reload the configuration by doing shut/no shut on the controllers. If the problem persists, please power cycle the SPA. If the condition persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the Bug Toolkit on the Cisco web-site. If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a tech-support to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%SPA_CHOC_DSX-3-SEMAHOG : SPA on [chars]: Semaphore Hog was encountered.Hogged by process [chars]

Explanation The semaphore used by the IPC communication between host and the SPA was hogged by one process. This behavior would cause other processes fail to send commands down to the SPA. This might result improper operation.

Recommended Action Please first stop all the traffic on the SPA and then reload the configuration by doing shut/no shut on the controllers. If the problem persists, please power cycle the SPA. If the condition persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the Bug Toolkit on the Cisco web-site. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case> or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a **tech-support** to your support representative, or attach it to your case in non-zipped, plain text format (.txt).

%SPA_CHOC_DSX-3-PERIODIC_PROCESS : [chars]: periodic process error [chars].

Explanation The SPA driver detected an error with the periodic processing routine.

Recommended Action If the ports on the SPA are not operating as expected, take it out of service by issuing command `hw-module subslot`
`<noCmdBold><CmdArg>slot#/bay#<noCmdArg><CmdBold> stop` followed by `hw-module subslot`
`<noCmdBold><CmdArg>slot#/bay#<noCmdArg><CmdBold> start` for the indicated SPA card. If the error messages persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at <http://www.cisco.com/public/support/tac/tools.shtml>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <https://mycase.cloudapps.cisco.com/case> or contact your Cisco technical support representative.

%SPA_CHOC_DSX-3-DPIDX_LKUP_ERR : Failed to retrieve datapath identifier for interface [chars]

Explanation The SPA driver is not able to retrieve the datapath identifier for the interface specified in the message. This indicates a software error.

Recommended Action No action is required.

%SPA_CHOC_DSX-3-PROCESS_FAIL : process creation failed in [chars] spa type [chars] for [chars]

Explanation The Periodic one second process creation failed. This indicates a software error.

%SPA_CHOC_DSX-3-PROCESS_FAIL : process creation failed in [chars] spa type [chars] for [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SPA_CHOC_DSX-5-CHNL_GRP_ADD : Channel Group created on the interface [chars]

| | |
|---------------------------|---|
| Explanation | Channel Group created on the serial interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_CHOC_DSX-5-CHNL_GRP_DEL : Channel Group delete from the interface [chars]

| | |
|---------------------------|---|
| Explanation | Channel Group deleted from the serial interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SPA_CT3**%SPA_CT3-3-INVALID_SPA_TYPE : Invalid SPA type : slot/bay:[dec]/[dec], spa_type=[dec].**

| | |
|---------------------------|--|
| Explanation | The Channelized T3 SPA type cannot be recognized by the version of Cisco IOS software currently running on the system. |
| Recommended Action | Upgrade your system to the latest version of Cisco IOS software in your release train. If you require further assistance, LOG_STD_SH_TECH_ACTION |

%SPA_CT3-3-PROCESS_FAIL : process creation failed for [chars]

| | |
|---------------------------|---|
| Explanation | A command could not be processed because of a process creation failure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_CT3-3-SUBRATE_FPGA_DL_FAILED : [chars]: Failed to download the subrate FPGA image.

Explanation The indicated SPA was not able to download the subrate FPGA image during card initialization sequence. The image might be corrupted and the system will try to recover from this error by upgrading the image.

Recommended Action If the system cannot recover from this error automatically after a few attempts, it will power-off the affected SPA. In this case, copy the error message exactly as it appears and gather the output of the **show hw-module subslot slot/subslot fpd** and **show hw-module subslot slot/subslot oir** commands, then contact your technical support representative with the gathered information.

%SPA_CT3-5-DEF_SUBRATE : [chars] [chars]

Explanation Remote subrate configuration changed

Recommended Action Inform the network operator that subrate configuration changed by remote end

SPA_DSPRM

%SPA_DSPRM-3-DSPALARM : Received alarm indication from dsp ([dec]/[dec]/[dec]).

Explanation Operational error detected in DSP.

Recommended Action Reload the SPA card and if the problem persists LOG_STD_ACTION

%SPA_DSPRM-5-UPDOWN : DSP ([dec]/[dec]/[dec]) is [chars]

Explanation DSP device changed state up/down

Recommended Action No action is required.

%SPA_DSPRM-5-RESTART : DSP ([dec]/[dec]/[dec]) is restarted

Explanation DSP device restarted

Recommended Action No action is required.

%SPA_DSPRM-3-INSUFFICIENT : Insufficient memory for [chars]

Explanation Insufficient memory for SPA-DSP DSPRM operation

%SPA_DSPRM-3-INSUFFICIENT : Insufficient memory for [chars]

| | |
|---------------------------|--|
| Recommended Action | Enter the show memory summary command to attempt to determine the cause of the error. LOG_STD_REDUCE_ACTION |
|---------------------------|--|

%SPA_DSPRM-3-DSPALARMINFO : [chars]

| | |
|---------------------------|--|
| Explanation | DSP Alarm Data |
| Recommended Action | Reload the SPA card and if the problem persists LOG_STD_ACTION |

SPA_ETHER_INTERNAL_IF

%SPA_ETHER_INTERNAL_IF-3-ETHER_INTERNAL_IF_SW_ERR : NULL

| | |
|---------------------------|---|
| Explanation | The module driver detected a software error condition on the module card. This might result in improper operation. |
| Recommended Action | The module driver has encountered a software error. Power down and reseal the indicated module card. If the problem persists, copy the error message exactly as it appears in the console and open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN , or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the show logging , show monitor event-trace spa all and show tech-support commands, your troubleshooting logs, and the specific error message. |

SPA_FPD through SPA_UCSE_IF

- [SPA_FPD](#)
- [SPA_GE_DWDM](#)
- [SPA_LNM](#)
- [SPA_NGIO_ETHER_INTERNAL](#)
- [SPA_NGIO_UCSE](#)
- [SPA_SE1](#)
- [SPA_SRVCS_ENGINE](#)
- [SPA_SRVCS_IF](#)
- [SPA_T3E3](#)
- [SPA_UCSE_IF](#)

SPA_FPD

%SPA_FPD-6-IMG_CORRUPTION : [chars]: FPD image corruption detected for [chars] (ID=[dec]), forcing upgrade of the corrupted image to correct this problem.

Explanation The software detected corruption on a FPD image and it is triggering the FPD automatic upgrade mechanism to correct the problem.

Recommended Action No Action is required.

%SPA_FPD-4-UPGRADE_ABORTED : [chars]: Upgrade aborted for [chars] (ID=[dec]) - [chars]

Explanation The upgrade operation for the FPD image was aborted because the provided image cannot be used by the driver to perform the image programming operation.

Recommended Action Make sure that the provide FPD image package for the FPD upgrade operation is a valid one for the Cisco IOS release in use. This can be verified with the **show upgrade fpd package default** command to display the required FPD image package version for the IOS image.

%SPA_FPD-3-GETVER_FAILED : [chars]: Failed to get FPD version for [chars] (ID=[dec]): [chars].

Explanation Failed to get FPD version due to either IPC problem or operation error. The card will be disabled.

Recommended Action Check SPA seating and SPA status. Ensure compatibility among FPD, IOS and possible SPA firmware by comparing output of command **show hw-module subslot fpd** with IOS Release Notes. Obtain IOS version by command **show version**.

%SPA_FPD-3-UPGRADE_FAILED : [chars]: Failed to upgrade FPD, [chars].

Explanation The FPD image upgrade operation failed. This error is specific to the SPA. The cause could be a wrong image file, error in accessing fpga storage, physical interrupt such as power failure or card removal. Depending on SPA type and error cause, the card could be in an unusable status. Normally the system automatically reattempts the upgrade and shuts the card after repeated failures.

Recommended Action Do not interrupt the system while an FPD upgrade is in progress. Obtain the matching FPD package. Refer to IOS Release Notes for more information on obtaining the correct FPD package for the SPA. Review the output of the RP FPD logs.

%SPA_FPD-3-JTAG_ERR : [chars]: Failed to program a [chars] FPD image file. Error code [hex].

Explanation While attempting to program a SPA FPGA via JTAG bus, an error occurs. It could be caused by an outdated carrier card FPGA or SPA connection. It may also flag an internal software error.

%SPA_FPD-3-JTAG_ERR : [chars]: Failed to program a [chars] FPD image file. Error code [hex].

| | |
|---------------------------|---|
| Recommended Action | Retry the upgrade after reseating SPA. Verify carrier card FPGA is current. Copy exact the error message and report to TAC. |
|---------------------------|---|

%SPA_FPD-3-SW_ERROR : NULL

| | |
|--------------------|---|
| Explanation | This error is seen when there is a problem in internal software coding; it should not be seen under normal operation. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SPA_FPD-3-PWR_OFF_FAILED : Failed to power-off [chars] in [chars] for FPD offline upgrade within [dec] seconds.

| | |
|--------------------|---|
| Explanation | The power-off operation of the indicated SPA failed within the number of specified seconds. This might indicate that the time used to wait for SPA to power-off is not long enough, which can happen if the SPA has a lot of interfaces configured. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Retry the upgrade operation again later. If the problem persists, remove the configuration of the SPA before trying again the upgrade operation. |
|---------------------------|--|

%SPA_FPD-3-SMM665_CONF_WRITE_ERROR : [chars]: Failed to write new configuration into SMM665 device.

| | |
|--------------------|--|
| Explanation | The write operation to SMM665 is performed through C2W serial interface from SPA carrier card, the indicated failure might be caused by busy C2W serial interface. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Retry the upgrade operation again later. If the problem persists, remove the configuration of the SPA before trying again the upgrade operation. |
|---------------------------|--|

%SPA_FPD-3-ADM106X_READ_VER_ERROR : [chars]: Failed to read version info from ADM106x device - [chars]

| | |
|--------------------|--|
| Explanation | The read operation to ADM106x is performed through C2W serial interface from SPA carrier card, the indicated failure might be caused by busy C2W serial interface. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Try to reload the SPA with <code>hw-module subslot slot#/subslot# reload</code> command to correct the failure. If problem persists, move the SPA to another bay of the carrier card. |
|---------------------------|---|

%SPA_FPD-3-IHEX_PARSE_ERROR : NULL

Explanation This error is seen when there is a problem in the format of the Intel HEX data; it should not be seen under normal operation.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_FPD-3-ADM106X_EEPROM_READ_ERROR : [chars]: Failed to read the content of ADM106x [chars] EEPROM section - [chars]

Explanation The read operation to ADM106x is performed through C2W serial interface from SPA carrier card, the indicated failure might be caused by busy C2W serial interface.

Recommended Action Retry the same operation again later. If the problem persists, remove the configuration of the SPA before trying again the operation.

%SPA_FPD-3-ADM106X_EEPROM_WRITE_ERROR : [chars]: Failed to write new configuration into ADM106x [chars] EEPROM section - [chars]

Explanation The write operation to ADM106x is performed through C2W serial interface from SPA carrier card, the indicated failure might be caused by busy C2W serial interface.

Recommended Action Retry the upgrade operation again later. If the problem persists, remove the configuration of the SPA before trying again the upgrade operation.

%SPA_FPD-3-ADM106X_EEPROM_VERIFY_ERROR : [chars]: Verification of write operation failed in ADM106x [chars] EEPROM section for address [hex] - read value '[hex]', expected value '[hex]'.

Explanation The verification of the write operation has found a mismatch on the EEPROM data. The problem might be an indication of aging effect on the device that cannot longer hold written data.

Recommended Action Retry the upgrade operation again later. If the problem persists, replace the SPA.

%SPA_FPD-2-PWR_NO_OK : SPA POWER OK signal is not asserted for [chars] in [chars] for FPD upgrade.

Explanation The check for SPA POWER OK signal assertion failed. This might indicate a HW problem with the SPA.

Recommended Action Contact your Cisco technical support representative to have the SPA replaced.

SPA_GE_DWDM**%SPA_GE_DWDM-3-DWDM_ERROR : [chars]**

| | |
|---------------------------|---|
| Explanation | SPA driver detected an error in the DWDM init routine |
| Recommended Action | The SPA driver has detected problem with DWDM init routine. If the ports on the SPA are not operating as expected, power down and reseal the indicated SPA card. If the error messages persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at http://www.cisco.com/public/support/tac/tools.shtml . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%SPA_GE_DWDM-3-NULL_DATA_STRUCTURE : [chars] [dec] [dec]

| | |
|---------------------------|---|
| Explanation | The SPA driver detected NULL data during DWDM initialization |
| Recommended Action | Reload the SPA card and if the problem persists contact your technical support representative |

%SPA_GE_DWDM-3-PLL_NOT_LOCKED : [chars] not locked after [dec] retries [hex]

| | |
|---------------------------|---|
| Explanation | The SPA driver failed to initialize the PLL |
| Recommended Action | The SPA driver has detected problem with DWDM init routine. If the ports on the SPA are not operating as expected, power down and reseal the indicated SPA card. If the error messages persists, copy the error message exactly as it appears. Next research and attempt to resolve the issue using the SPA hardware troubleshooting documentation as well as the tools and utilities provided at http://www.cisco.com/public/support/tac/tools.shtml . If you still require assistance, open a case with the Technical Assistance Center via the Internet at https://mycase.cloudapps.cisco.com/case or contact your Cisco technical support representative. Be sure to provide the the information you have gathered and a 'show tech-support' to your support representative, or attach it to your case in non-zipped, plain text format (.txt). |

%SPA_GE_DWDM-3-MALLOC_FAILED : [chars]

| | |
|---------------------------|---|
| Explanation | The SPA driver detected a memory error on the SPA card |
| Recommended Action | Reload the card and if the problem persists, call the TAC |

%SPA_GE_DWDM-3-UT2_SPA : [chars]

| | |
|---------------------------|---|
| Explanation | The SPA driver did not detect a UT2 transponder module |
| Recommended Action | Check if the SPA is a DWDM SPA before executing the command |

%SPA_GE_DWDM-3-SFP_DETECT : [chars]

| | |
|---------------------------|---|
| Explanation | The SPA driver did not detect a Cu-SFP for the port |
| Recommended Action | Please plugin a CISCO compliant SFP in the corresponding port and retry the command |

SPA_LNM

%SPA_LNM-5-ENABLED : Interface [chars], noise monitoring enabled for [chars]

| | |
|---------------------------|---|
| Explanation | Link Noise Monitoring has been enabled on the specified T1/E1 interface |
| Recommended Action | This is an information message to notify that Link Noise Monitoring has been enabled on the T1/E1 link. No user action is required. |

%SPA_LNM-5-DISABLED : Interface [chars], noise monitoring disabled for [chars]

| | |
|---------------------------|--|
| Explanation | Link Noise Monitoring has been disabled on the specified T1/E1 interface |
| Recommended Action | This is an information message to notify that Link Noise Monitoring has been disabled on the T1/E1 link. No user action is required. |

%SPA_LNM-3-MINWARNEXCEED : Interface [chars], noise exceeded above minor warning threshold

| | |
|---------------------------|---|
| Explanation | Noise on the link has exceeded above the threshold value configured for minor warning level |
| Recommended Action | This link requires administrative attention |

%SPA_LNM-3-MINWARNIMPROVE : Interface [chars], noise improved below minor warning threshold

| | |
|---------------------------|--|
| Explanation | Noise on the link has improved and is below the threshold value configured for minor warning level |
| Recommended Action | No action required |

%SPA_LNM-3-MAJWARNEXCEED : Interface [chars], noise exceeded above major warning threshold

Explanation Noise on the link has exceeded above the threshold value configured for major warning level

Recommended Action This link requires administrative attention

%SPA_LNM-3-MAJWARNIMPROVE : Interface [chars], noise improved below major warning threshold

Explanation Noise on the link has improved and is below the threshold value configured for major warning level

Recommended Action No action required

%SPA_LNM-2-REMOVE : Interface [chars] removed from bundle. Noise exceeded above remove threshold

Explanation Noise on the link has crossed the threshold value configured for link removal. This link is taken out of the MLP bundle. This is critical status for the link. This link is under monitoring state and will be added to the bundle again when the noise level is below the configured value.

Recommended Action This link requires administrative attention

%SPA_LNM-2-RESTORE : Interface [chars] restored to bundle. Noise improved below removal threshold

Explanation Noise on the link has improved below the threshold value configured for link removal. This link is restored back to MLP bundle.

Recommended Action No action required

%SPA_LNM-2-REMEXCEED : Interface [chars], noise exceeded above removal threshold

Explanation Noise on the link has exceeded above the threshold value configured for link removal

Recommended Action This link requires administrative attention

%SPA_LNM-2-REMIMPROVE : Interface [chars], noise improved below removal threshold

Explanation Noise on the link has improved and is below the threshold value configured for link removal

%SPA_LNM-2-REMIMPROVE : Interface [chars], noise improved below removal threshold

Recommended Action No Action required

%SPA_LNM-2-REMFAILED : Interface [chars], failed to remove link from bundle

Explanation Noise on the link has exceeded above the threshold value configured for link removal. However, this link is not removed from the MLP bundle

Recommended Action No Action required

%SPA_LNM-2-RESTOREFAILED : Interface [chars], failed to restore link to the bundle

Explanation Noise on the link has improved and is below the threshold value configured for link removal. However, the link restore back to the MLP bundle failed

Recommended Action No Action required

%SPA_LNM-2-REMEXCEEDLASTLINK : Interface [chars], Last link in bundle, noise exceeded above removal threshold

Explanation Noise on the link has exceeded above the threshold value configured for link removal. However, this link is the last link in the multilink bundle and it is not removed from the service.

Recommended Action This link requires administrative attention

%SPA_LNM-3-GENEVENT : [chars]

Explanation An Error has occurred in the link noise monitoring

Recommended Action Copy the error message exactly as it appears and report it to your technical support representative

SPA_NGIO_ETHER_INTERNAL

%SPA_NGIO_ETHER_INTERNAL-3-SW_ERR : NULL

Explanation The module driver detected a software error condition on the module card. This might result in improper operation.

%SPA_NGIO_ETHER_INTERNAL-3-SW_ERR : NULL

| | |
|---------------------------|--|
| Recommended Action | The module driver has encountered a software error. Please power down and reset the indicated module card. Copy the error message exactly as it appears and open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the show logging , show monitor event-log module all and show tech-support commands, your troubleshooting logs, and the specific error message. |
|---------------------------|--|

SPA_NGIO_UCSE

%SPA_NGIO_UCSE-3-NGIO_MSG_VER_MISMATCH : UCSE [chars] is using incorrect NGIO message version (expected version = [dec], current version = [dec]). Please update the software package for the module with the correct version. Unexpected behavior might occur if the issue is not addressed.

| | |
|---------------------------|---|
| Explanation | UCSE SW is running with a software version that doesn't use the same NGIO message header version. This could happen if the wrong version of the software package for the module was installed in the system. |
| Recommended Action | Find the appropriate software package for the module based on the Cisco IOS software version that the system is running. Follow the installation documentation that corresponds to your software version and platform to properly install the software package and correct the problem. |

%SPA_NGIO_UCSE-3-SHUTDOWN_FAILED : UCSE Module [chars] shutdown failed to be executed.

| | |
|---------------------------|---|
| Explanation | The UCSE Module did not yet respond to the shutdown request. This is probably due to a bug. |
| Recommended Action | No action is required. |

%SPA_NGIO_UCSE-5-SHUTDOWN_NOT_DONE : UCSE Module [chars] shutdown was not done in a proper fashion: Reseating the module may corrupt the hard disk.

| | |
|---------------------------|--|
| Explanation | The module was not properly shutdown before removal of the module. This could result in the corruption of the hard disk on the module. |
| Recommended Action | No action is required. |

%SPA_NGIO_UCSE-3-SE_RESET : UCSE Module [chars] will be reset to recover from failure ([chars]).

| | |
|---------------------------|---|
| Explanation | The module is restarting to recover from the communication failure with host. |
| Recommended Action | No action is required. |

%SPA_NGIO_UCSE-3-APP_RESET : Application on UCSE Module [chars] has failed and requested a UCSE Module reset.

Explanation The application running on the service module failed and as a result the UCSE Module will be restarted in order to recover from the communication failure with host.

Recommended Action No action is required.

%SPA_NGIO_UCSE-3-APP_STATUS : Application on UCSE Module [chars] is [chars]

Explanation The Application running on the service module has changed state.

Recommended Action No action is required.

%SPA_NGIO_UCSE-5-SHUTDOWN_DONE : UCSE Module [chars] shutdown complete

Explanation The shutdown of the UCSE Module was completed.

Recommended Action No action is required.

%SPA_NGIO_UCSE-5-SHUTDOWN_BUTTON : UCSE Module [chars] shutdown button was pressed, shutdown initiated.

Explanation The Shutdown button on the module was pressed and shutdown initiated.

Recommended Action No action is required.

%SPA_NGIO_UCSE-5-NEWPASSWORD : UCSE Module [chars] password changed to '[chars]'.

Explanation The password of the service module was changed.

Recommended Action No action is required.

%SPA_NGIO_UCSE-5-UNCONFIGURE_IP : UCSE Module [chars] UCSE Module ip address unconfigured.

Explanation The UCSE Module IP address is unconfigured as interface IP address changed.

Recommended Action No action is required.

%SPA_NGIO_UCSE-5-RESTORE_IP : UCSE Module [chars] UCSE Module ip address restored.

Explanation The UCSE Module IP address was restored after the system verified that the interface IP address changed. There are certain configuration requirements for the service-engine IP address and the default gateway IP address with the module interface IP address. The system has verified these requirements and restored the IP address.

Recommended Action No action is required.

%SPA_NGIO_UCSE-5-UNCONFIGURE_EXT_IP : UCSE Module [chars] UCSE Module ext ip address unconfigured.

Explanation The UCSE Module external IP address is unconfigured as interface IP address changed.

Recommended Action No action is required.

%SPA_NGIO_UCSE-5-RESTORE_EXT_IP : UCSE Module [chars] ucse ext ip address restored.

Explanation The UCSE Module external IP address was restored after the system verified that the interface IP address changed. There are certain configuration requirements for the UCSE Module IP address and the default gateway IP address with the module interface IP address. The system has verified these requirements and restored the external IP address.

Recommended Action No action is required.

%SPA_NGIO_UCSE-5-UNCONFIGURE_DEF_GW : UCSE Module [chars] UCSE ip default-gateway unconfigured.

Explanation The UCSE Module default gateway IP is unconfigured as interface IP address changed.

Recommended Action No action is required.

%SPA_NGIO_UCSE-5-RESTORED_DEF_GW : UCSE Module [chars] UCSE ip default-gateway restored.

Explanation The UCSE Module default gateway IP address was restored after the system verified that the interface IP address was changed. There are certain configuration requirements for the UCSE Module IP address and the default gateway IP address with the module interface IP address. The system has verified that the IP address for the UCSE Module IP default gateway is still on the same subnet as the UCSE Module IP address and therefore, the default-gateway configuration is restored.

Recommended Action No action is required.

%SPA_NGIO_UCSE-4-BADPLATFORMINFO : UCSE Module [chars] platform information not received correctly.

| | |
|---------------------------|---|
| Explanation | The platform and service module hardware information was not received correctly. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_NGIO_UCSE-2-CONFIGFAILED : UCSE Module [chars] [chars] configuration failed

| | |
|---------------------------|---|
| Explanation | The indicated configuration for the UCSE Module interface has failed. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_NGIO_UCSE-3-SW_ERR : NULL

| | |
|---------------------------|---|
| Explanation | The module driver detected a software error condition on the module card. This might result in improper operation. |
| Recommended Action | The module driver has encountered a software error. Please power down and reseal the indicated module card. Copy the error message exactly as it appears and open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the show logging , show monitor event-log module all and show tech-support commands, your troubleshooting logs, and the specific error message. |

%SPA_NGIO_UCSE-3-PASSWORDRESET : UCSE Module [chars] password reset [chars][chars]

| | |
|---------------------------|---|
| Explanation | The password reset of the service module failed or is not supported. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_NGIO_UCSE-3-SPA_CPU_ERR : [chars]: module CPU HW errors: [chars]

Explanation An internal hardware device error has occurred on the module CPU. The error message indicates the modular card slot, the module subslot, the module type and the name of the hardware device. The module has been deactivated and reactivated to resolve the problem. If the error occurs more than five times within an hour, no further attempts to reactivate the module will be made. This message is likely due to an unrecoverable hardware failure

Recommended Action If the module does not recover automatically, perform OIR of the module located in the specified subslot. Before removing the module, enter the **hw-module subslot stop** command. Remove the module, wait 5 seconds, and reinsert the module into the slot. If the problem persists, copy the error message text exactly as it appears on the console or in the system log, enter the **show tech-support** command, contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_NGIO_UCSE-3-HW_ERR : [chars]: A Hardware device error was detected by [chars], trying to recover the module by reload.

Explanation An internal hardware device error has occurred on the module. The error message indicates the slot, the module subslot, the module type and the name of the hardware device. The module has been deactivated and reactivated to resolve the problem. If the error occurs more than five times within an hour, no further attempts to reactivate the module will be made. This message is likely due to an unrecoverable hardware failure.

Recommended Action Perform OIR of the module located in the specified subslot. Before removing the module, enter the **hw-module subslot stop** command. Remove the module, wait 5 seconds, and reinsert the module into the slot. If the problem persists, copy the error message text exactly as it appears on the console or in the system log, enter the **show diag** command, contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_NGIO_UCSE-0-APP_MSG_EMER : NULL

Explanation The application running on the service module has encountered an emergency error.

Recommended Action UCSE_APP_MSG_STD_ACTION

%SPA_NGIO_UCSE-1-APP_MSG_ALERT : NULL

Explanation The application running on the service module has issued an alert.

Recommended Action UCSE_APP_MSG_STD_ACTION

%SPA_NGIO_UCSE-2-APP_MSG_CRIT : NULL

| | |
|---------------------------|---|
| Explanation | The application running on the service module has encountered a critical error. |
| Recommended Action | UCSE_APP_MSG_STD_ACTION |

%SPA_NGIO_UCSE-3-APP_MSG_ERR : NULL

| | |
|---------------------------|---|
| Explanation | The application running on the service module has encountered an error. |
| Recommended Action | UCSE_APP_MSG_STD_ACTION |

%SPA_NGIO_UCSE-4-APP_MSG_WARN : NULL

| | |
|---------------------------|---|
| Explanation | The application running on the service module has issued a warning message. |
| Recommended Action | UCSE_APP_MSG_STD_ACTION |

%SPA_NGIO_UCSE-5-APP_MSG_NOTICE : NULL

| | |
|---------------------------|---|
| Explanation | The application running on the service module has issued a notice. |
| Recommended Action | Refer to the software application documentation for more information. |

%SPA_NGIO_UCSE-6-APP_MSG_INFO : NULL

| | |
|---------------------------|---|
| Explanation | The application running on the service module has issued a informational message. |
| Recommended Action | Refer to the software application documentation for more information. |

%SPA_NGIO_UCSE-7-APP_MSG_DEBUG : NULL

| | |
|---------------------------|--|
| Explanation | The application running on the service module has displayed a debug message. |
| Recommended Action | Refer to the software application documentation for more information. |

SPA_SE1

%SPA_SE1-3-MEM_CPU_BIST_ERR : [chars]: CPU BIST failure detected, with error ([chars], error code = [hex]).

Explanation The service SPA CPU Build-In Self Test (BIST) to check memory used by SPA ROMMON has failed. If this test fails, there is probably an issue with the DDR2 memory used by the SPA.

Recommended Action BUTLER_MEM_ERROR_STD_ACTION

%SPA_SE1-3-MEM_INIT_ERR : [chars]: memory init failure occurred [chars], with error ([chars], error code = [hex]).

Explanation The service SPA memory initialization procedure failed.

Recommended Action BUTLER_MEM_ERROR_STD_ACTION

%SPA_SE1-5-NO_VALID_PARTITION : [chars]: no valid partition was found in disk drive ([chars], error code = [hex]).

Explanation The disk driver in service SPA doesn't have a valid partition.

Recommended Action Follow the instructions on the Cisco IOS installation and configuration guide to format the disk drive to correct this problem.

%SPA_SE1-5-NO_APPL_IN_DISK : [chars]: no application image was found in disk drive.

Explanation The disk driver in service SPA doesn't have a valid application image.

Recommended Action No action is required.

%SPA_SE1-5-BOOTING_HELPER : [chars]: booting the helper image.

Explanation The service SPA is booting the helper image from bootflash.

Recommended Action No action is required.

%SPA_SE1-5-BOOTING_DEFAULT_APPL : [chars]: booting the default application image.

Explanation The service SPA is booting the default application image from disk.

Recommended Action No action is required.

%SPA_SE1-5-BOOTING_HOST_IMAGE : [chars]: booting application image downloaded from host.

Explanation The service SPA is booting the default application image from disk.

Recommended Action No action is required.

%SPA_SE1-3-SW_ERR : NULL

Explanation The SPA driver detected a software error condition on the SPA card. This might result in improper operation.

Recommended Action The SPA driver has encountered a software error. Power down and reseal the indicated SPA card. If the problem persists, copy the error message exactly as it appears on the console, and open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN , or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the **show logging**, **show monitor event-log spa all** and **show tech-support** commands, your troubleshooting logs, and the specific error message.

%SPA_SE1-3-MAINTENANCE_MODE : Service engine [chars] has been booted in maintenance mode. This is an engineering use only mode and some or all of the SPA functions could be disabled.

Explanation The SPA was booted with **test hw-module subslot subslot# maintenance-mode enable** configured. Disable this mode and reload the SPA for normal SPA operation

Recommended Action No action is required.

%SPA_SE1-3-ROMMON_BOOT_ERR : [chars]: ROMMON boot error detected [chars] - [chars]

Explanation Service SPA ROMMON error was detected during booting of the SPA. The system will attempt to reload the SPA to recover from the failure.

Recommended Action BUTLER_ROMMON_ERROR_STD_ACTION

%SPA_SE1-3-HELPER_BOOT_ERR : [chars]: Helper image boot error detected ([chars], error code = [hex]).

Explanation Service SPA helper image error was detected during booting of the SPA.

Recommended Action No action is required.

%SPA_SE1-3-APPL_BOOT_ERR : [chars]: Application boot error detected [chars], with error ([chars], error code = [hex]).

Explanation Service SPA application error was detected during booting of the SPA.

Recommended Action BUTLER_APPBOOT_ERROR_STD_ACTION

%SPA_SE1-3-DEFAULT_APPL_BOOT_TIMEOUT : [chars]: Timeout booting the default application image, will attempt to boot the helper image.

Explanation Initialization of service SPA timed out during booting of the default application image, the system will attempt to recover from the failure by trying to boot the helper image.

Recommended Action No action is required.

%SPA_SE1-3-APPL_BOOT_TIMEOUT : [chars]: Timeout booting application image.

Explanation Initialization of service SPA timed out during booting of the sipspawmak9 sub-package. The system will attempt to reload the SPA to recover from the failure.

Recommended Action BUTLER_APPBOOT_ERROR_STD_ACTION

%SPA_SE1-3-ROMMON_BOOT_TIMEOUT : [chars]: Timeout booting ROMMON image in [chars] state [chars] - [chars]

Explanation Initialization of service SPA timed out during booting of the ROMMON image, the system will now attempt to reload the SPA to recover from the failure.

Recommended Action BUTLER_ROMMON_ERROR_STD_ACTION

%SPA_SE1-3-ROMMON_SPI4SYNC_TIMEOUT : [chars]: Timeout getting SPI4 sync from ROMMON

Explanation Initialization of the service SPA timed out after failing to get SPI4 sync. The system will attempt to reload the SPA to recover from the failure.

Recommended Action BUTLER_ROMMON_ERROR_STD_ACTION

%SPA_SE1-3-ROMMON_IMG_RECOVER : [chars]: ROMMON boot failed, recovering ROMMON image with backup copy.

Explanation A service SPA ROMMON error was detected during booting of the SPA. An attempt to re-program the ROMMON image will be performed to recover from this failure. This problem could have been caused by a previous interruption of the ROMMON FPD upgrade operation.

Recommended Action No action is required.

%SPA_SE1-3-BOOTFLASH_DEBUG_MODE : Service engine [chars] has been booted in bootflash debug mode. This is an engineering use only mode and some or all of the SPA functions could be disabled.

Explanation The SPA was booted with `test hw-module subslot bay_num bootflash debug enable` configured. Disable this mode and reload the SPA for normal SPA operation.

Recommended Action No action is required.

%SPA_SE1-3-CHECKING_DISK : [chars]: Disk is being checked because of previous unclean shutdown of the SPA or mount count limit reached. Boot time will take longer because of this operation (e.g. 5 to 7 minute for a 250GB disk). Please do not remove the SPA when this operation is being performed.

Explanation Checking of the disk file system is being performed to correct any error due to unclean shutdown of the SPA. Make sure that the SPA is properly shutdown before removing it from the system to prevent file system corruption.

Recommended Action No action is required.

%SPA_SE1-3-DISK_CHECKING_TIMEOUT : [chars]: Timeout checking the disk after more than [dec] seconds. Another attempt to check the disk will be done after the SPA reload.

Explanation The disk checking operation has not completed in the expected time frame. To recover from possible disk checking failure, the SPA will be reloaded to allow a retry of the disk checking operation.

Recommended Action BUTLER_DISK_FS_ERROR_STD_ACTION

%SPA_SE1-3-SKIPPED_DISK_MOUNT : [chars]: Disk mounting operation has been skipped for manual disk repair operation. Please follow the procedures on hardware configuration guide on how to enter into service engine console to continue with the disk repair operation.

Explanation The SPA was configured to not mount the disk after a reload operation. This is the initial step to prepare the SPA for manual disk repair operation.

%SPA_SE1-3-SKIPPED_DISK_MOUNT : [chars]: Disk mounting operation has been skipped for manual disk repair operation. Please follow the procedures on hardware configuration guide on how to enter into service engine console to continue with the disk repair operation.

Recommended Action No action is required.

%SPA_SE1-3-DISK_NOT_PRESENT : [chars]: Cannot detect the presence of disk drive on the SPA. Please check for loose cable connection to the drive. The SPA will continue operating without the disk.

Explanation The disk was not detected by the SPA during bootup, and this will prevent the SPA from operating under normal conditions. The ability to store error logging on the disk will not be available and any debugging information will be lost after a SPA reload. Performance of the SPA might also get affected because of reduced memory storage.

Recommended Action BUTLER_DISK_STATE_ERROR_STD_ACTION

%SPA_SE1-3-DISK_UNKNOWN_STATE : [chars]: The disk drive on the SPA is in a unknown operational state. Check for a loose cable connection to the drive. The SPA will continue operating without the disk.

Explanation The disk was in an unknown operational state during SPA bootup, and this will prevent the SPA from operating under normal conditions. The ability to store error logging on the disk will not be available and any debugging information will be lost after a SPA reload. Performance of the SPA might also get affected because of the reduced memory storage.

Recommended Action BUTLER_DISK_STATE_ERROR_STD_ACTION

%SPA_SE1-3-DISK_UNFORMATTED : [chars]: The disk drive on the SPA it is not formatted. The SPA cannot use an unformatted disk. Please follow instructions in the Cisco IOS installation and configuration guide to perform the manual format operation. The SPA will continue operating without the disk.

Explanation The disk was not formatted, and this will prevent the SPA from operating under normal conditions. The ability to store error logging on the disk will not be available and any debugging information will be lost after a SPA reload. Performance of the SPA might also get affected because of the reduced memory storage.

Recommended Action Follow the instructions on the Cisco IOS installation and configuration guide to format the disk drive to correct this problem.

%SPA_SE1-3-DISK_CHECK_ERROR : [chars]: Disk file system check error detected, manual execution of disk checking operation will be required to correct this problem. The SPA will continue operating with reduced disk space.

Explanation An error was detected during automatic checking operation of disk file system integrity. The affected disk partition won't be mounted, and this will prevent the SPA from operating under normal conditions. The ability to store error logging on the disk might not be available and any debugging information could be lost after a SPA reload. Performance of the SPA might also get affected because of the reduced memory storage.

Recommended Action BUTLER_DISK_FS_ERROR_STD_ACTION

%SPA_SE1-3-DISK_MOUNT_ERROR : [chars]: Disk mount error detected, manual execution of disk checking operation might be required to correct this problem. The SPA will continue operating with reduced disk space.

Explanation Error were detected during mounting operation of disk partition. The affected disk partition won't be mounted, this will prevent the SPA from operating at normal condition. Capability to store error logging on the disk might not be available and any debugging information could be lost after SPA reload. Performance of the SPA might also get affected because of the reduced memory storage.

Recommended Action BUTLER_DISK_FS_ERROR_STD_ACTION

%SPA_SE1-3-CHECK_SPA_CONNECTOR : [chars]: SPI4 error was detected during bootup, automatic reload operation will be attempted for recovering the SPA. Please make sure that the SPA is secured properly in the SIP slot.

Explanation SPI4 error has occurred during SPA bootup. The SPA has been deactivated and reactivated to resolve the problem. If the error occurs more than five times within an hour, no further attempts to reactivate the SPA will be made. This message is likely due to bad connection of the SPA connector with the SIP slot.

Recommended Action Pull out and reinsert the SPA to make secure connection with the SIP slot. Before removing the SPA, make sure to stop the SPA by entering the **hw-module subslot slot#/ subslot# stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the SIP. If the problem persists, check for physical damage in the connector of both SPA and SIP. If no damage is visible, then copy the error message exactly as it appears and gather the output from the **show hw-module subslot bay_num tech-support** command from the SIP console, then contact your Cisco technical support representative with the gathered information.

%SPA_SE1-3-SYSINIT_FAILURE : [chars]: System init failure was detected during bootup - [chars]. SPA will be disabled because of this failure.

Explanation A failure was detected during system bootup of the SPA. The SPA has been deactivated because of the problem.

%SPA_SE1-3-SYSINIT_FAILURE : [chars]: System init failure was detected during bootup - [chars]. SPA will be disabled because of this failure.

Recommended Action Copy the error message exactly as it appears on the console, and gather the output from the `show hw-module subslot bay_num tech-support` command from the SIP console. Contact your Cisco technical support representative with the gathered information.

SPA_SRVCS_ENGINE

%SPA_SRVCS_ENGINE-3-RBCP_MSG_VER_MISMATCH : Service Engine [chars] is using incorrect RBCP message version (expected version = [dec], current version = [dec]). Please update the software package for the SPA with the correct version. Unexpected behavior might occur if the issue is not addressed.

Explanation The service engine is running with a software version that doesn't use the same RBCP message header version. This could happen if the wrong version of the software package for the SPA was installed in the system.

Recommended Action Find the appropriate software package for the SPA based on the Cisco IOS software version that the system is running. Follow the installation documentation that corresponds to your software version and platform to properly install the software package and correct the problem.

%SPA_SRVCS_ENGINE-3-SHUTDOWN_FAILED : Service Engine [chars] shutdown failed to be executed.

Explanation The service engine did not yet respond to the shutdown request. This is probably due to a bug.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-5-SHUTDOWN_NOT_DONE : Service Engine [chars] shutdown was not done in a proper fashion: Reseating the SPA may corrupt the hard disk.

Explanation The SPA was not properly shutdown before removal of the SPA. This could result in the corruption of the hard disk on the SPA.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-3-SE_RESET : Service engine [chars] will be reset to recover from failure ([chars]).

Explanation The service SPA is restarting to recover from the communication failure with host.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-3-APP_RESET : Application on service engine [chars] has failed and requested a service engine reset.

Explanation The application running on the service SPA failed and as a result the service engine will be restarted in order to recover from the communication failure with host.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-3-APP_STATUS : Application on service engine [chars] is [chars]

Explanation The Application running on the service SPA has changed state.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-5-SHUTDOWN_DONE : Service engine [chars] shutdown complete

Explanation The shutdown of the service engine was completed.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-5-SHUTDOWN_BUTTON : Service engine [chars] shutdown button was pressed, shutdown initiated.

Explanation The Shutdown button on the SPA was pressed and shutdown initiated.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-5-NEWPASSWORD : Service Engine [chars] password changed to '[chars]'.

Explanation The password of the service SPA was changed.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-5-UNCONFIGURE_IP : Service Engine [chars] service-engine ip address unconfigured.

Explanation The service-engine IP address is unconfigured as interface IP address changed.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-5-RESTORE_IP : Service Engine [chars] service-engine ip address restored.

Explanation The service-engine IP address was restored after the system verified that the interface IP address changed. There are certain configuration requirements for the service-engine IP address and the default gateway IP address with the SPA interface IP address. The system has verified these requirements and restored the IP address.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-5-UNCONFIGURE_EXT_IP : Service Engine [chars] service-engine ext ip address unconfigured.

Explanation The service-engine external IP address is unconfigured as interface IP address changed.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-5-RESTORE_EXT_IP : Service Engine [chars] service-engine ext ip address restored.

Explanation The service-engine external IP address was restored after the system verified that the interface IP address changed. There are certain configuration requirements for the service-engine IP address and the default gateway IP address with the SPA interface IP address. The system has verified these requirements and restored the external IP address.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-5-UNCONFIGURE_DEF_GW : Service Engine [chars] service-engine ip default-gateway unconfigured.

Explanation The service-engine default gateway IP is unconfigured as interface IP address changed.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-5-RESTORED_DEF_GW : Service Engine [chars] service-engine ip default-gateway restored.

Explanation The service-engine default gateway IP address was restored after the system verified that the interface IP address was changed. There are certain configuration requirements for the service-engine IP address and the default gateway IP address with the SPA interface IP address. The system has verified that the IP address for the service-engine IP default gateway is still on the same subnet as the service-engine IP address and therefore, the default-gateway configuration is restored.

%SPA_SRVCS_ENGINE-5-RESTORED_DEF_GW : Service Engine [chars] service-engine ip default-gateway restored.

Recommended Action No action is required.

%SPA_SRVCS_ENGINE-4-BADPLATFORMINFO : Service Engine [chars] platform information not received correctly.

Explanation The platform and service SPA hardware information was not received correctly.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_SRVCS_ENGINE-2-CONFIGFAILED : Service Engine [chars] [chars] configuration failed

Explanation The indicated configuration for the service-engine interface has failed.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_SRVCS_ENGINE-3-SW_ERR : NULL

Explanation The SPA driver detected a software error condition on the SPA card. This might result in improper operation.

Recommended Action The SPA driver has encountered a software error. Please power down and reseal the indicated SPA card. Copy the error message exactly as it appears and open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the **show logging**, **show monitor event-log spa all** and **show tech-support** commands, your troubleshooting logs, and the specific error message.

%SPA_SRVCS_ENGINE-3-PASSWORDRESET : Service Engine [chars] password reset [chars][chars]

Explanation The password reset of the service SPA failed or is not supported.

%SPA_SRVCS_ENGINE-3-PASSWORDRESET : Service Engine [chars] password reset [chars][chars]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_SRVCS_ENGINE-3-SPA_CPU_ERR : [chars]: SPA CPU HW errors: [chars]

Explanation An internal hardware device error has occurred on the Services SPA CPU. The error message indicates the modular services card slot, the SPA subslot, the SPA type and the name of the hardware device. The SPA has been deactivated and reactivated to resolve the problem. If the error occurs more than five times within an hour, no further attempts to reactivate the SPA will be made. This message is likely due to an unrecoverable hardware failure

Recommended Action If the SPA does not recover automatically, perform OIR of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the SIP. If the problem persists, copy the error message text exactly as it appears on the console or in the system log, enter the **show tech-support** command, contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_SRVCS_ENGINE-3-HW_ERR : [chars]: A Hardware device error was detected by [chars], trying to recover the SPA by reload.

Explanation An internal hardware device error has occurred on the services SPA. The error message indicates the SIP slot, the SPA subslot, the SPA type and the name of the hardware device. The SPA has been deactivated and reactivated to resolve the problem. If the error occurs more than five times within an hour, no further attempts to reactivate the SPA will be made. This message is likely due to an unrecoverable hardware failure.

Recommended Action Perform OIR of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the SIP. If the problem persists, copy the error message text exactly as it appears on the console or in the system log, enter the **show diag** command, contact your Cisco technical support representative and provide the representative with the gathered information.

%SPA_SRVCS_ENGINE-0-APP_MSG_EMER : NULL

Explanation The application running on the service SPA has encountered an emergency error.

%SPA_SRVCS_ENGINE-0-APP_MSG_EMER : NULL

Recommended Action Refer to the software application documentation for more information. If the problem persists, copy the error message exactly as it appears on the console, and gather the output from the **show hw-module subslot bay_num tech-support** command from the SIP console, and the output of **show tech-support** command from service engine Vegas shell console. Contact your Cisco technical support representative with the gathered information.

%SPA_SRVCS_ENGINE-1-APP_MSG_ALERT : NULL

Explanation The application running on the service SPA has issued an alert.

Recommended Action Refer to the software application documentation for more information. If the problem persists, copy the error message exactly as it appears on the console, and gather the output from the **show hw-module subslot bay_num tech-support** command from the SIP console, and the output of **show tech-support** command from service engine Vegas shell console. Contact your Cisco technical support representative with the gathered information.

%SPA_SRVCS_ENGINE-2-APP_MSG_CRIT : NULL

Explanation The application running on the service SPA has encountered a critical error.

Recommended Action Refer to the software application documentation for more information. If the problem persists, copy the error message exactly as it appears on the console, and gather the output from the **show hw-module subslot bay_num tech-support** command from the SIP console, and the output of **show tech-support** command from service engine Vegas shell console. Contact your Cisco technical support representative with the gathered information.

%SPA_SRVCS_ENGINE-3-APP_MSG_ERR : NULL

Explanation The application running on the service SPA has encountered an error.

Recommended Action Refer to the software application documentation for more information. If the problem persists, copy the error message exactly as it appears on the console, and gather the output from the **show hw-module subslot bay_num tech-support** command from the SIP console, and the output of **show tech-support** command from service engine Vegas shell console. Contact your Cisco technical support representative with the gathered information.

%SPA_SRVCS_ENGINE-4-APP_MSG_WARN : NULL

Explanation The application running on the service SPA has issued a warning message.

%SPA_SRVCS_ENGINE-4-APP_MSG_WARN : NULL

Recommended Action Refer to the software application documentation for more information. If the problem persists, copy the error message exactly as it appears on the console, and gather the output from the **show hw-module subslot bay_num tech-support** command from the SIP console, and the output of **show tech-support** command from service engine Vegas shell console. Contact your Cisco technical support representative with the gathered information.

%SPA_SRVCS_ENGINE-5-APP_MSG_NOTICE : NULL

Explanation The application running on the service SPA has issued a notice.

Recommended Action Refer to the software application documentation for more information.

%SPA_SRVCS_ENGINE-6-APP_MSG_INFO : NULL

Explanation The application running on the service SPA has issued an informational message.

Recommended Action Refer to the software application documentation for more information.

%SPA_SRVCS_ENGINE-7-APP_MSG_DEBUG : NULL

Explanation The application running on the service SPA has displayed a debug message.

Recommended Action Refer to the software application documentation for more information.

SPA_SRVCS_IF

%SPA_SRVCS_IF-3-SRVCS_IF_SW_ERR : NULL

Explanation The SPA driver detected a software error condition on the SPA card. This might result in improper operation.

Recommended Action The SPA driver has encountered a software error. Power down and reseal the indicated SPA card. If the problem persists, copy the error message exactly as it appears in the console and open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN , or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the **show logging**, **show monitor event-log spa all** and **show tech-support** commands, your troubleshooting logs, and the specific error message.

SPA_T3E3**%SPA_T3E3-5-BERT : Interface [chars], BERT [chars]**

| | |
|---------------------------|---|
| Explanation | The spa t3e3 driver processed a BERT task. |
| Recommended Action | None, this is just a notification upon completion of a BERT task. |

%SPA_T3E3-5-DEF_SUBRATE : [chars] [chars]

| | |
|---------------------------|--|
| Explanation | Remote subrate configuration changed |
| Recommended Action | Inform the network operator that subrate configuration changed by remote end |

%SPA_T3E3-3-MSGERR : Illegal message type [dec] received for Interface [chars]

| | |
|---------------------------|---|
| Explanation | An unknown message was received by RP. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_T3E3-3-NO_SSB : [chars]: Failed to get serial subblock.

| | |
|---------------------------|---|
| Explanation | Serial subblock pointer is NULL. Internal software error. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_T3E3-3-SSBINIT : [chars]: Fail to initialize serial IDB

| | |
|--------------------|--|
| Explanation | Most common reason is lack of system memory. Earlier messages might indicate memory allocation failures. |
|--------------------|--|

%SPA_T3E3-3-SSBINIT : [chars]: Fail to initialize serial IDB

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%SPA_T3E3-3-LOVEFAIL : [chars]: failed to send [chars] love letter

| | |
|---------------------------|--|
| Explanation | A love letter (status or configuration message) could not be sent. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SPA_T3E3-5-MSG_QUEUE_ERR : [chars]: T3E3 process message queue not initialized.

| | |
|---------------------------|--|
| Explanation | The T3E3 process message queue is not ready. |
| Recommended Action | Copy the error message exactly as it appears, collect the output of 'show tech-support' command immediately, and report it to your technical support representative. |

%SPA_T3E3-5-MSG_ENQUEUE_ERR : [chars]: Unable to enqueue message to T3E3 SPA process

| | |
|---------------------------|--|
| Explanation | The T3E3 SPA process message queue is full. |
| Recommended Action | Copy the error message exactly as it appears, collect the output of 'show tech-support' command immediately, and report it to your technical support representative. |

%SPA_T3E3-5-MSG_UNEXPECTED_ERR : [chars]: Unexpected SPA message [dec].

| | |
|---------------------------|---|
| Explanation | SPA has been removed, but still there are outstanding events. |
| Recommended Action | If the CPU utilization is high, try to reduce the CPU utilization |

%SPA_T3E3-4-SUBRATE_FPGA_LOAD_FAILED : [chars] Programming [chars] subrate FPGA failed. The FPGA image is corrupted. One upgrade attempt is made.

| | |
|---------------------------|--|
| Explanation | The indicated subrate FPGA image is corrupted and programming of FPGA failed. One upgrade attempt will be made to recover from the failure. |
| Recommended Action | Automatically upgrade the subrate FPGA image uses default FPD Image Package. The package should match the running Cisco IOS release. This can be verified by the use of show upgrade fpd package default command. If subrate FPGA failure persists after upgrade, SPA is disabled. Ensure the package file is intact. |

%SPA_T3E3-3-SUBRATE_FPGA_LOAD_FAILED2 : [chars] Programming [chars] subrate FPGA failed. The FPGA image is corrupted. FPD upgrade has been attempted. SPA is shut.

| | |
|---------------------------|--|
| Explanation | The indicated subrate FPGA image is corrupted even after FPD upgrade. The SPA is disabled until this problem is corrected. |
| Recommended Action | Verify the correctness of the FPD Image Package. Note that the FPD Image Package used in the upgrade should match the running Cisco IOS release. This can be verified by the use of show upgrade fpd package default command. |

SPA_UCSE_IF

%SPA_UCSE_IF-3-UCSE_IF_SW_ERR : NULL

| | |
|---------------------------|--|
| Explanation | The module driver detected a software error condition on the module card. This might result in improper operation. |
| Recommended Action | The module driver has encountered a software error. Power down and reset the indicated module card. If the problem persists, copy the error message exactly as it appears in the console and open a case with the Technical Assistance Center via the Internet at TAC_CASE_OPEN , or contact your Cisco technical support representative and provide the representative with the information you have gathered. Be sure to attach to your case the output of the show logging , show monitor event-trace spa all and show tech-support commands, your troubleshooting logs, and the specific error message. |

SRP

%SRP-4-RAC_ALARM : [chars] Side %c [chars]

| | |
|---------------------------|--|
| Explanation | A physical error condition detected at the indicated RAC |
| Recommended Action | Diagnose and repair the physical error |

%SRP-4-ALARM : [chars] Side %c [chars]

| | |
|---------------------------|---|
| Explanation | A physical line error condition exists on the indicated network |
| Recommended Action | Diagnose and repair the physical error |

%SRP-3-NULL_P_ALARM : Dereferencing NULL pointer [chars] in [chars]

| | |
|---------------------------|---|
| Explanation | NULL pointer error condition exists. Some features/commands may not work properly |
| Recommended Action | Please Contact Cisco Systems TAC support |

%SRP-3-FALSE_VAL_ALARM : [chars] - error in [chars]

| | |
|---------------------------|--|
| Explanation | FALSE value returned. Some features/commands may not work properly |
| Recommended Action | Please Contact Cisco Systems TAC support |

%SRP-3-DUP_MAC_ADDR : [chars] : Duplicate mac addresses in topology

| | |
|---------------------------|---|
| Explanation | The topology contains 1 or more duplicate mac addresses |
| Recommended Action | Identify duplicate address and correct configuration. |

%SRP-3-SINGLE_NODE_TOPO : [chars] : Single node in topology

Explanation The topology discovery resulted in a single node being found

Recommended Action This can be due to duplicated mac addresses. Identify mac address of interface and ensure it is not duplicated on other nodes. If the node is in loopback, disregard this message.

%SRP-3-RING_ID_ERROR : [chars] : Rx side [chars], Tx side of fiber originates on side [chars]

Explanation The fiber on the specified side is remotely connected to the wrong side

Recommended Action Verify that each side A is connected to side B and each side B is connected to side A.

%SRP-4-WRAP_STATE_CHANGE : [chars] [chars] on side %c ([chars])

Explanation The specified side of the interface is wrapped or unwrapped.

Recommended Action Diagnose the cause of the wrap.

%SRP-4-SRR_STATE_CHANGE : [chars] SRR usage changed ([chars])

Explanation SRR ring usage is changed using Inner, Outer or Both rings.

Recommended Action Diagnose the cause of the ring usage change.

%SRP-4-SRR_VER_MISMATCH : [chars] SRR version mismatch detected.

Explanation Different SRR version received from other nodes.

Recommended Action Update the IOS image on all nodes of the ring to the same SRR version

%SRP-1-WRAPPING_PROCESS_LOCKED : [chars] The wrap/unwrap state-change process is locked

Explanation A wrap/unwrap state change process has not come to an end on time.

Recommended Action If message is periodic, issue a shut and no shut on the interface.

SRPMIB**%SRPMIB-3-NULL_P_ALARM : Dereferencing NULL pointer [chars] in [chars]**

| | |
|---------------------------|---|
| Explanation | NULL pointer error condition exists. Some feature/command may not work properly |
| Recommended Action | Please Contact Cisco Systems TAC support |

%SRPMIB-3-FALSE_VAL_ALARM : [chars] - error in [chars]

| | |
|---------------------------|--|
| Explanation | FALSE value returned. Some features/commands may not work properly |
| Recommended Action | Please Contact Cisco Systems TAC support |

SRW**%SRW-7-SRW_ERROR : [chars]: [hex] [hex] [dec] [dec] [dec] [dec] [hex]**

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SRW-7-SRW_ERROR2 : [chars]: [hex] [hex] [dec] [dec] [dec] [dec] [hex] [hex] [hex] [hex] [dec]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SRW-7-SRW_ERROR3 : [chars]: [hex] [hex] [dec] [dec] [dec] [dec] [hex] [hex] [hex] [dec] [hex] [dec]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%SRW-7-SRW_ERROR3 : [chars]: [hex] [hex] [dec] [dec] [dec] [dec] [hex] [hex] [hex] [dec] [hex] [dec]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SRW-7-BAD_SRW_DATA : Bad SRW data ([hex])

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SRW-7-BAD_SRW_MAGIC : Bad SRW magic [hex] @ [hex]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

SSL

%SSL-3-SSL_REC_HDR_BUF_OVERFLOW : QFP SSL record header buffer overflow

Explanation Cisco internal software error. QFP SSL record processing detected header buffer overflow condition. The SSL connection will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SSL-3-SSL_STUB : QFP SSL ([chars]) feature executes stub entry in [chars] direction

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SSL feature stub entry got executed. The packet will be dropped. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SSLMGR**%SSLMGR-0-ASYMMETRIC_KEY_FAIL : Asymmetric key failure: [chars].**

| | |
|---------------------------|---|
| Explanation | Asymmetric key failure. |
| Recommended Action | No action required - forwarding processor (ESP) rebooted automatically. |

%SSLMGR-0-SYMMETRIC_KEY_FAIL : Symmetric key failure: [chars].

| | |
|---------------------------|---|
| Explanation | Symmetric key failure. |
| Recommended Action | No action required - forwarding processor (ESP) rebooted automatically. |

%SSLMGR-3-N2_CONTEXT_FAIL : Context failure: [chars].

| | |
|---------------------------|--|
| Explanation | Coprocessor context operation failed due to resource limit |
| Recommended Action | Monitoring required |

%SSLMGR-0-N2_VSERVER_FAIL : Virtual server context failure: [chars].

| | |
|---------------------------|---|
| Explanation | Cryptographic coprocessor critical operation failed. Further data processing on ESP is halted |
| Recommended Action | forwarding processor (ESP) is rebooted automatically. no action needed |

SSLVPN**%SSLVPN-6-RADIUS_ATTRIBUTE_TOO_LONG : Attribute length [dec] is longer than buffer size [dec]**

Explanation This message indicates that the attribute configured on the Radius server is longer than the allocated buffer size and will be ignored.

Recommended Action Reconfigure the radius attribute with the appropriate length

%SSLVPN-6-INVALID_RADIUS_CONFIGURATION : Radius configured [chars] [chars] does not exist

Explanation This message indicates that the name configured on the Radius server, does not match any of the configured names on the gateway `*//*` "This message indicates that the HTTP Authentication method configured " `*//*` "on the server for the url, is not supported by the gateway"); `*//* msgdef_recommended_action(*//* "Check the server configuration and reconfigure it"); */`

Recommended Action Check the gateway configuration and reconfigure the radius server `*//*` "Check the server configuration and reconfigure it"); `*/`

%SSLVPN-6-UNSUPPORTED_HTTPAUTH_METHOD : Unsupported HTTP Authentication method configured for url [chars]:/[chars][chars] being accessed by user [chars] in context [chars]

Explanation `msgdef (UNSUPPORTED_HTTPAUTH_METHOD, SSLVPN, LOG_INFO, 0 , Unsupported HTTP Authentication method configured for url %s:/%s%s being accessed by user %s in context %s This message indicates that the HTTP Authentication method configured on the server for the url, is not supported by the gateway`

Recommended Action `msgdef (UNSUPPORTED_HTTPAUTH_METHOD, SSLVPN, LOG_INFO, 0 , Unsupported HTTP Authentication method configured for url %s:/%s%s being accessed by user %s in context %s Check the server configuration and reconfigure it`

%SSLVPN-6-UNSUPPORTED_BASIC_HTTP_METHOD : Unsupported Basic HTTP method configured for url [chars]:/[chars][chars] being accessed by user [chars] in context [chars]

Explanation This message indicates that the Basic HTTP method configured on the server for the url, is not supported by the gateway

Recommended Action Check the server configuration and reconfigure it

%SSLVPN-6-HTTPAUTH_NTLM_NEGO_ERROR : NTLM Negotiation error while doing HTTP authentication for url [chars]:/[chars][chars] being accessed by user [chars] in context [chars]

Explanation This message indicates that a NTLM negotiation error occurred while doing the HTTP authentication with the the server for the url

%SSLVPN-6-HTTPAUTH_NTLM_NEGO_ERROR : NTLM Negotiation error while doing HTTP authentication for url [chars]://[chars][chars] being accessed by user [chars] in context [chars]

Recommended Action Check the server configuration and reconfigure it

%SSLVPN-6-OVERSIZE_NTLM_TYPE3_CREDENTIALS : NTLM Type3 credentials size is larger than supported for url [chars]://[chars][chars] being accessed by user [chars] in context [chars]

Explanation This message indicates that the NTLM Type3 credentials size for the url, is larger than what is supported on the gateway

Recommended Action Check the server configuration and reconfigure it

%SSLVPN-6-HTTP_KEEPALIVE_DISABLED : HTTP Keepalive is disabled on the server for url [chars]://[chars][chars] being accessed by user [chars] in context [chars]

Explanation This message indicates that the HTTP Keepalive is disabled on the server for the url.

Recommended Action Check the server configuration and reconfigure it

%SSLVPN-3-CERT_GEN_FAILED : Generation of self-signed certificate failed for Gateway [chars]

Explanation This message indicates that generation of self-signed certificate failed

Recommended Action Check the server configuration and reconfigure it

%SSLVPN-6-CONTEXT_MAX_USERS_LOGIN_DENIED : Login denied for user [chars] ; Max users exceeded for profile [chars]

Explanation This message indicates that the user was denied to login because the the max users for the profile has been exceeded

Recommended Action Check the gateway configuration and reconfigure the maximum allowed users in the profile

%SSLVPN-6-CONTEXT_OUT_OF_SERVICE : Failed to apply configuration on vaccess ; Context [chars] is made out of service ; [chars]

Explanation This message indicates that applying configuration on vaccess failed. This is caused if the configuration is not valid while doing inservice.

Recommended Action Check the configuration before doing inservice of the context.

%SSLVPN-6-GLOBAL_MAX_USERS_LOGIN_DENIED : Login denied for user [chars] ; Global max users limit reached

Explanation This message indicates that the user was denied to login because the the max users limit reached

Recommended Action To support more users, more sslvpn gateways need to be installed

%SSLVPN-6-WEBVPN_TUNNEL_USER_LOGOUT : User: [chars] has logged out from gateway [chars] context [chars]

Explanation A Tunneling user has logged out from the given gateway/context

Recommended Action The information is used to track user logout events. No action is required.

%SSLVPN-5-UPDOWN : sslvpn [chars] : [chars] changed state to [chars]

Explanation sslvpn service state changed.

Recommended Action No action is required.

%SSLVPN-5-SSLVPNMGR_ERROR : [chars] [chars]

Explanation SSLVPN Manager error.

Recommended Action No action is required.

%SSLVPN-6-WEBVPN_APP_ACL_URL : The request(scheme: [chars], host : [chars], port : [dec], path : [chars]) from user [chars] is [chars] by ACL

Explanation A request is matched with application ACL.

Recommended Action No action is required.

%SSLVPN-6-WEBVPN_APP_ACL_NET : The request(source ip: [IP_address], destion ip : [IP_address]) from user [chars] is [chars] by ACL

Explanation A request is matched with network ACL.

Recommended Action No action is required.

%SSLVPN-6-WEBVPN_SSO_AUTH_SUCCESS : Single Sign On session successfully established for user: [chars] in context [chars]

Explanation This message indicates that a Single Sign On session was established for the user

Recommended Action The information is used to track Single Sign On events. No action is required.

%SSLVPN-6-WEBVPN_SSO_AUTH_REJECT : Single Sign On session establishment failed for user: [chars] in context [chars]

Explanation This message indicates that a Single Sign On session failed for the user

Recommended Action The information is used to track Single Sign On events. No action is required.

%SSLVPN-6-WEBVPN_SSO_SESSION_FAIL : Single Sign On session creation failed for user: [chars] in context [chars]

Explanation This message indicates that a Single Sign On session creation failed for the user. Session creation can fail for various reasons such as DNS lookup failure, timeouts and retry attempts exceeded

Recommended Action The information is used to track Single Sign On events. No action is required.

%SSLVPN-5-LOGIN_AUTH_PASSED : vw_ctx: [chars] vw_gw: [chars] remote_ip: [IP_address] user_name: [chars], Authentication successful, user logged in

Explanation This message indicates that login authentication succeeded for user

Recommended Action No action is required.

%SSLVPN-5-LOGIN_AUTH_FAILED : vw_ctx: [chars] vw_gw: [chars] remote_ip: [IP_address] user_name: [chars], Failed to contact authentication server

Explanation This message is seen when the authentication server is unavailable because it is down or unreachable

Recommended Action Verify if routes are configured correctly to reach authentication and the server is configured correctly

%SSLVPN-5-LOGIN_AUTH_REJECTED : vw_ctx: [chars] vw_gw: [chars] remote_ip: [IP_address] user_name: [chars], Failed to authenticate user credentials

Explanation This message indicates that authentication server failed to validate credentials provided by the user to login under webvpn context

Recommended Action Check username and password configured on authentication server

%SSLVPN-5-SESSION_TERMINATE : vw_ctx: [chars] vw_gw: [chars] remote_ip: [IP_address] user_name: [chars] reason: [chars]

Explanation This message indicates that user session is terminated due to reason indicated

Recommended Action No action is required.

%SSLVPN-5-SSL_TLS_ERROR : vw_ctx: [chars] vw_gw: [chars] i_vrf: [dec] f_vrf: [dec] status: SSL/TLS connection error with remote at [IP_address]:[dec]

Explanation This message indicates that SSL/TLS connection has encountered error this normally means that either handshake failed or protocol error occurred during life-time of the connection

Recommended Action Check certificate and trustpoint configuration in global config mode as well as under webvpn gateway

%SSLVPN-5-SSL_TLS_CONNECT_OK : vw_ctx: [chars] vw_gw: [chars] i_vrf: [dec] f_vrf: [dec] status: SSL/TLS connection successful with remote at [IP_address]:[dec]

Explanation This message indicates that SSL/TLS handshake with peer was successful

Recommended Action No action is required.

%SSLVPN-5-HTTP_REQUEST_NOT_AUTHORIZED : vw_ctx: [chars] vw_gw: [chars] remote_ip: [IP_address] status: HTTP request without login cookie resource: [chars]

Explanation This message indicates that HTTP request doesn't have valid login cookie and is not authorized to access the resource

Recommended Action No action is required.

%SSLVPN-1-LICENSE_EXPIRED : IOS SSLVPN evaluation license has expired

| | |
|---------------------------|--|
| Explanation | IOS SSLVPN evaluation license has expired and a new license needs to be obtained. Existing user sessions will continue till they are closed and no new sessions will be allowed. |
| Recommended Action | Please visit http://www.cisco.com/go/sslvpn for instructions on how to obtain a IOS SSLVPN license |

%SSLVPN-6-LICENSE_NO_FREE_COUNT : All available SSLVPN session licenses are in use

| | |
|---------------------------|--|
| Explanation | All SSLVPN sessions available per current license are in use. Hence, no additional user sessions can be allowed. |
| Recommended Action | To support more users, additional license needs to be purchased. Please visit http://www.cisco.com/go/sslvpn for instructions on how to obtain a IOS SSLVPN license |

%SSLVPN-4-LICENSE_COUNT_EXCEEDS_MAX_LIMIT : License count of currently installed license exceeds the maximum supported sessions on this platform

| | |
|---------------------------|--|
| Explanation | License count of currently installed license exceeds the maximum supported sessions on this platform. Excess count will not be utilized. |
| Recommended Action | Please collect the output of show license detail command and contact your technical support representative. |

%SSLVPN-3-LICENSE_NO_LICENSE : No valid license is available to use IOS SSLVPN service

| | |
|---------------------------|---|
| Explanation | IOS SSLVPN service is a licensed feature on this platform. It will not be functional until a valid license is installed. |
| Recommended Action | Please visit http://www.cisco.com/go/sslvpn for instructions on how to obtain a IOS SSLVPN license |

SSLVPMGR**%SSLVPMGR-5-LOGIN_AUTH_FAILED : Failed to contact authentication server. [chars]**

| | |
|---------------------------|--|
| Explanation | Authentication server is unavailable because it is down or unreachable |
| Recommended Action | Verify if routes are configured correctly to reach authentication and the server is configured correctly |

%SSLVPMGR-5-LOGIN_AUTH_REJECTED : Failed to authenticate user credentials. [chars]

Explanation Authentication server failed to validate credentials provided by the user to login under webvpn context

Recommended Action Check username and password configured on authentication server

%SSLVPMGR-6-CONTEXT_MAX_USERS_LOGIN_DENIED : Authentication successful, user logged in. [chars]Session terminated. [chars]HTTP request without login cookie. [chars]Login denied for user [chars]. Max users exceeded for context [chars]

Explanation This message indicates that login authentication succeeded for user SSLVPN session was terminated This message indicates that HTTP request doesn't have valid login cookie and is not authorized to access the resource This message indicates that user was denied to login because the the max users for the context has been exceeded

Recommended Action Check the gateway configuration and reconfigure the maximum allowed users in the context

SSLVPN_PROXY

%SSLVPN_PROXY-2-PROXY_IPC_INIT_FAILED : QFP SSLVPN Proxy IPC interface initialization failure (result: [dec]).

Explanation Cisco internal software error. QFP SSLVPN Proxy initialization detected that the IPC interface initialization failed. QFP SSLVPN proxy will not be functional while this condition exists.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SSLVPN_PROXY-3-PROXY_BAD_MSG : QFP SSLVPN Proxy received bad length message type [dec]

Explanation Cisco internal software error. QFP SSLVPN Proxy received a corrupted message from control plane. This message will be ignored.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SSLVPN_PROXY-3-PROXY_INV_MSG : QFP SSLVPN Proxy received invalid message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SSLVPN Proxy received an invalid message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSLVPN_PROXY-3-PROXY_IPC_ALLOC_FAILED : QFP SSLVPN Proxy [chars] message lost due to message buffer allocation failure.

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SSLVPN Proxy message processing detected a message buffer allocation failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSLVPN_PROXY-3-PROXY_IPC_SEND_FAILED : QFP SSLVPN Proxy [chars] message lost due to message sent failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SSLVPN Proxy message processing detected a message sent failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSLVPN_PROXY-4-PROXY_CRYPTO_CTX_REQ_FAIL : QFP SSLVPN Proxy failed to replenish hardware context handles., MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SSLVPN Proxy message processing detected out-of-resource condition and cannot replenish hardware context handles. QFP SSLVPN will not be functional properly while this condition exist. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSLVPN_PROXY-3-PROXY_SSL_CTX_MEM_REQ_FAIL : QFP SSLVPN Proxy failed to repleneish SSL context memory., MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SSLVPN Proxy message processing detected leaking of SSL context memory condition. QFP SSLVPN will not be functional properly while this condition exist. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSLVPN_PROXY-3-PROXY_CRYPTO_CTX_MEM_REQ_FAIL : QFP SSLVPN Proxy failed to repleneish crypto context memory., MSGDEF_LIMIT_SLOW

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SSLVPN Proxy message processing detected leaking of crypto context memory condition. QFP SSLVPN will not be functional properly while this condition exist. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SSSMGR

%SSSMGR-3-NULL_FSM_CONTEXT : Encountered a NULL SSS Mgr context in [chars]

| | |
|---------------------------|---|
| Explanation | Encountered a NULL context in SSS Manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-INVALID_FSM_STATE : Encountered an invalid SSS Mgr state [dec] in [chars]

| | |
|---------------------------|---|
| Explanation | An internal SSS Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-INIT : Initialisation failure, [chars]

| | |
|---------------------------|---|
| Explanation | An internal SSS Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-MEMORY_LOW : Memory low ([dec] times), disconnecting session

| | |
|---------------------------|---|
| Explanation | Required memory is running low. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-RESOURCE_OVERFLOW : Resource overflow

| | |
|---------------------------|---|
| Explanation | A fixed size system resource has been exceeded. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-NULL_INFO_STRING : Received a NULL info string value.

| | |
|---------------------------|---|
| Explanation | An internal SSS Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-UNEXPECTED_SIP_INFO : Encountered an unexpected SIP info: [chars]

| | |
|--------------------|-------------------------------------|
| Explanation | Encountered an unexpected SIP info. |
|--------------------|-------------------------------------|

%SSSMGR-3-UNEXPECTED_SIP_INFO : Encountered an unexpected SIP info: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SSSMGR-3-INVALID_INFO_TYPE : Received an INVALID info type value ([dec]).

| | |
|---------------------------|---|
| Explanation | An internal SSS Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-INVALID_SERVICE_TYPE : Received an INVALID service type ([dec])[chars].

| | |
|---------------------------|---|
| Explanation | An internal SSS Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-INFO_TYPE_NO_COPY_VECTOR : info type has no copy vector ([dec]).

| | |
|---------------------------|---|
| Explanation | An internal SSS Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-DYNAMIC_UPDATE_NOT_SUPPORTED : [[dec]] Dynamic session updates not allowed on this [chars] session. It is an unsupported configuration.

| | |
|---------------------------|---|
| Explanation | Updates on these sessions not supported. This is an unsupported configuration. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-UNEXPECTED_MSG : Encountered an unexpected message: [chars]

| | |
|---------------------------|---|
| Explanation | Encountered an unexpected message. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-5-IFCFG_NOTALLWED_IN_SVC : Interface-config not allowed at service config level, ignoring

| | |
|---------------------------|--|
| Explanation | Interface-config attribute is not allowed while in a service profile. It is only supported in user profiles. |
| Recommended Action | Remove interface-config attribute from the service profile and reconfigure using a user profile. |

%SSSMGR-3-UNSUPPORTED_CFG : Unsupported configuration detected: [uid: [int]] [chars]

| | |
|---------------------------|---|
| Explanation | Unsupported configuration detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-5-UNSUPPORTED_CFG_NOTICE : Unsupported configuration detected, [chars]

| | |
|---------------------------|---|
| Explanation | The value of the specified configuration parameter was out of range. This is not considered an error as the value was adjusted to be within the supported range. Update the configuration source to a value within the supported range to avoid this message. |
| Recommended Action | No action is required. |

%SSSMGR-3-ERROR_RESOURCE_OVERFLOW : Resource overflow

| | |
|---------------------------|---|
| Explanation | A fixed size system resource has been exceeded. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-4-WARN_RESOURCE_ABOVE_WM : Resource above watermark

| | |
|---------------------------|---|
| Explanation | A fixed size system resource is above watermark. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

| | |
|---------------------------|---|
| Explanation | Initialization of the specified subblock data structure could not be accomplished. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-5-BB_LICENSE_REQUEST_SENT : Broadband license request sent for [int] license with configured license count [int]

| | |
|---------------------------|---|
| Explanation | |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-5-BB_LICENSE_PROCUREMENT_SUCCESS : Successfully procured [int] BroadBand licenses

| | |
|---------------------------|---|
| Explanation | |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SSSMGR-5-BB_LICENSE_PROCUREMENT_FAILURE : Failed to procure [int] BroadBand licenses

Explanation

%SSSMGR-5-BB_LICENSE_PROCUREMENT_FAILURE : Failed to procure [int] BroadBand licenses

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SSSMGR-5-BB_LICENSE_RELEASE_SUCCESS : Successfully released all BroadBand licenses**Explanation**

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SSSMGR-5-BB_LICENSE_RELEASE_FAILURE : Failed to release all BroadBand licenses**Explanation**

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

STACKMGR**%STACKMGR-6-DISC_START : [chars] [dec] is starting stack discovery.**

Explanation The specified switch is starting stack discovery.

Recommended Action No action is required

%STACKMGR-6-DISC_DONE : [chars] [dec] has finished stack discovery.

Explanation The specified switch has completed stack discovery and is moving to the election phase.

Recommended Action No action is required

%STACKMGR-5-SWITCH_REMOVED : [chars] [dec] has been removed from the stack.

Explanation The specified switch has been removed from the stack.

Recommended Action No action is required

%STACKMGR-6-CHASSIS_REMOVED : [chars] [dec] has been removed from the stack.

Explanation The specified chassis has been removed from the stack.

Recommended Action No action is required

%STACKMGR-5-SWITCH_ADDED : [chars] [dec] has been added to the stack.

Explanation The specified switch has been added to the stack.

Recommended Action No action is required

%STACKMGR-6-CHASSIS_ADDED : [chars] [dec] has been added to the stack.

Explanation The specified chassis has been added to the stack.

Recommended Action No action is required

%STACKMGR-6-ACTIVE_READY : Active [chars] [dec] is ready.

Explanation The active switch is ready.

Recommended Action No action is required

%STACKMGR-6-ACTIVE_ELECTED : [chars] [dec] has been elected ACTIVE.

Explanation The specified switch has been elected active.

Recommended Action No action is required

%STACKMGR-6-STANDBY_ELECTED : [chars] [dec] has been elected STANDBY.

Explanation The specified switch has been elected standby.

%STACKMGR-6-STANDBY_ELECTED : [chars] [dec] has been elected STANDBY.

Recommended Action No action is required

%STACKMGR-6-SWITCH_READY : [chars] [dec] is ready.

Explanation The specified switch is ready.

Recommended Action No action is required

%STACKMGR-6-CHASSIS_READY : [chars] [dec] is ready.

Explanation The specified chassis is ready.

Recommended Action No action is required

%STACKMGR-1-RELOAD_REQUEST : Received reload request for [chars], reason [chars]

Explanation The specified switches are being reloaded.

Recommended Action No action is required

%STACKMGR-1-RELOAD : Reloading due to reason [chars]

Explanation The specified switch has received a reload request and is being reloaded.

Recommended Action No action is required

%STACKMGR-1-FATAL_ERR : Stack manager encountered an unrecoverable error. [chars]

Explanation The stack manager process has encountered an unrecoverable error and the switch is being reloaded.

Recommended Action Please ensure valid switch numbers are being used. If you still believe there is an error in the system, please send the system report to a TAC representative

%STACKMGR-6-STACK_LINK_CHANGE : Stack port [dec] on [chars] [dec] is [chars]

Explanation The specified stack port has changed status.

%STACKMGR-6-STACK_LINK_CHANGE : Stack port [dec] on [chars] [dec] is [chars]

Recommended Action No action is required

%STACKMGR-1-STACK_MERGE_IGNORE : Stack Merge Ignored [chars]

Explanation Switch detected multiple Active switches. But stack-merge is being ignored.
Recommended Action No action is required

%STACKMGR-1-DUAL_ACTIVE_CFG_MSG : Dual Active Detection [chars]

Explanation Switch detected availability or unavailability of Dual Active Detection ports.
Recommended Action No action is required

%STACKMGR-1-EPA_MISMATCH : [chars]. The mis-match may caused by hardware failure or different EPA types.

Explanation The Standby EPA mismatch with Active EPA.
Recommended Action Need to make them match

%STACKMGR-1-LIC_MISMATCH : License level is [chars] and needs to be upgraded to [chars] for Stackwise Virtual to function.

Explanation Current Licnese level on active switch does not support Stackwise Virtual.
Recommended Action Need to be upgraded to supported license level

STILE through SWPORT_PROXY

- [STILE](#)
- [STILE_CLIENT](#)
- [STILE_PROXY](#)
- [STP_ISSU](#)
- [STUN](#)

- SUBSYS
- SWITCH
- SWITCH_L2M
- SWPORT
- SWPORT_PROXY

STILE

%STILE-4-STATIC_SLINK_ALLOC_FAILED : Memory resources exhausted to configure custom/sub protocol, MSGDEF_LIMIT_GLACIAL

| | |
|---------------------------|---|
| Explanation | This message indicates that current user configuration could not be activated because of unavailability of memory resources. The NBAR cannot classify packets for this new protocol configured. |
| Recommended Action | The memory resource exhaustion is happening because too many port range based protocols are configured by the user. Recommended action is to avoid very large range of ports. |

%STILE-3-PDL_DEBUG : Action action_print is supported only in pdl debug mode. Text = [chars] Value = [hex]

| | |
|---------------------------|---|
| Explanation | print action output |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%STILE-3-NBAR_DEBUG_REG_FAILED : [dec]

| | |
|---------------------------|---|
| Explanation | NBAR Conditional debugging registration failed. |
| Recommended Action | |

%STILE-3-VM_ERRORS : STILE VM traceback with cause: *[chars]*, please see FP log for more information

| | |
|---------------------------|--|
| Explanation | |
| Recommended Action | |

STILE_CLIENT

%STILE_CLIENT-4-MAX_LINK_TOUCH_WARN : NBAR number of [chars] threshold is reached, can't allocate more memory for [chars].

Explanation Because of non-availability of flow links new traffic flows may not be classified properly

Recommended Action No action is required.

%STILE_CLIENT-4-MAX_LINK_TOUCH_CLEAR : NBAR number of [chars] has declined below its threshold, links are available for [chars].

Explanation After NBAR was in links shortage, the number of links has declined below its threshold. New traffic flows will be classified properly

Recommended Action No action is required.

%STILE_CLIENT-4-NBAR_MEMORY_BOUNDARY_TOUCH_WARN : NBAR reached maximum configured memory utilization. Can't allocate more memory for [chars].

Explanation Because of NBAR memory shortage new flows may not be classified properly

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STILE_CLIENT-4-NBAR_MEMORY_BOUNDARY_TOUCH_CLEAR : NBAR memory utilization has declined below its threshold, memory is available for [chars].

Explanation After NBAR was in memory shortage, memory utilization has declined below its threshold New traffic flows will be classified properly

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STILE_CLIENT-4-SYS_FREE_MEMORY_LOW_WATERMARK_TOUCH_WARN : System free memory has reached its lower watermark. Can't allocate more memory for [chars].

Explanation Because of system memory shortage new flows may not be classified properly

%STILE_CLIENT-4-SYS_FREE_MEMORY_LOW_WATERMARK_TOUCH_WARN : System free memory has reached its lower watermark. Can't allocate more memory for [chars].

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STILE_CLIENT-4-SYS_FREE_MEMORY_LOW_WATERMARK_TOUCH_CLEAR : System free memory has increased above its lower watermark, memory is available for [chars].

Explanation After system memory was in shortage, free memory has increased above its lower watermark. New traffic flows will be classified properly.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STILE_CLIENT-4-NBAR_NOT_ENOUGH_STATIC_MEMORY : NBAR does not have enough memory to be activated.

Explanation System does not have enough free memory to allow activation of NBAR.

Recommended Action No action is required.

%STILE_CLIENT-4-NBAR_ACTIVATION_FAILED : NBAR activation process has failed with errcode [dec].

Explanation Activation of NBAR has failed. The cause is provided through the error code from cernno.h.

Recommended Action No action is required.

%STILE_CLIENT-4-NBAR_GENERAL_FAILED : An error occurred, with errcode [dec].

Explanation An error occurred, will not handle the messages, wait for deactivate the cause is provided through the error code from cernno.h.

Recommended Action No action is required.

STILE_PROXY**%STILE_PROXY-3-IPC_OPEN_REPLY : IPC Open Reply failed, request [int]**

Explanation For a request from upper STILE software stack layers it was not possible to open the reply buffer. The consequence of this could be a stuck binding that cannot be established etc. In rare cases this could also affect other operations such as feature activation.

Recommended Action This is normally a software issue. LOG_STD_ACTION

%STILE_PROXY-3-IPC_NORES : No space for the IPC reply, size [int]

Explanation For a request from upper STILE software stack layers it was not possible to allocate space for a reply for the specified size. The consequence of this could be a stuck binding that cannot be established etc. In rare cases this could also affect other operations such as feature activation.

Recommended Action This is normally a software issue. LOG_STD_ACTION

%STILE_PROXY-3-IPC_UNHANDLED : type [dec]

Explanation An unknown message was received by the STILE Client Proxy.

Recommended Action LOG_STD_ACTION

%STILE_PROXY-3-SLINK_MEM_REQ_FAILED :

Explanation IPC Failure occurred when attempting to request more stile link memory.

Recommended Action LOG_STD_ACTION

%STILE_PROXY-3-PROXY_SLINK_MEM_EXTEND_FAILED :

Explanation Increasing of stile slink pool failed.

Recommended Action LOG_STD_ACTION

%STILE_PROXY-3-PROXY_IPC_SEND_FAILED : IPC send msg for [chars] [dec] failed

Explanation IPC failed to reply

%STILE_PROXY-3-PROXY_IPC_SEND_FAILED : IPC send msg for [chars] [dec] failed

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

STP_ISSU

%STP_ISSU-2-INIT : STP ISSU client initialization failed to [chars]. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The STP ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%STP_ISSU-3-TRANSFORM_FAIL : STP ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The STP ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the STP state between the active device and the standby device is not identical. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated version <session_id>) |

%STP_ISSU-3-MSG_NOT_OK : STP ISSU client 'Message Type [dec]' is not compatible

| | |
|---------------------------|---|
| Explanation | The STP ISSU client received an incompatible message from the peer device. The message cannot be processed. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>) |

%STP_ISSU-3-MSG_SIZE : STP ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

Explanation The STP ISSU client failed to calculate the MTU for the specified message. The STP ISSU client is not able to send the message to the standby device.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu message group <client_id> and show issu session <client_id> and show issu negotiated version <session_id>)

%STP_ISSU-3-INVALID_SESSION : STP ISSU client does not have a valid registered session.

Explanation STP ISSU client does not have a valid registered session.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%STP_ISSU-2-SESSION_REGISTRY : STP ISSU client failed to register session information. Error: [dec] ([chars])

Explanation The STP ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>)

%STP_ISSU-3-SESSION_UNREGISTRY : STP ISSU client failed to unregister session information. Error: [dec] ([chars])

Explanation The STP ISSU client failed to unregister session information.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%STP_ISSU-2-SESSION_NEGO : STP ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

Explanation An ISSU-compliant client transitions through a series of internal states. The STP ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action LOG_STD_SH_CMD_ACTION(show issu session <client_id> and show issu negotiated capability <session_id>)

%STP_ISSU-2-SEND_NEGO_FAILED : STP ISSU client failed to send negotiation message. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | The STP ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |

%STP_ISSU-2-SESSION_ARBITRATE : STP ISSU client failed to register arbitrate callback. Error: [dec] ([chars])

| | |
|---------------------------|--|
| Explanation | The STP ISSU client failed to register arbitrate callback. If a problem occurs with the callback registration, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%STP_ISSU-2-GET_BUFFER : STP ISSU client failed to get buffer for message. Error: [dec] ([chars])

| | |
|---------------------------|---|
| Explanation | STP ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show logging and show checkpoint client) |

%STP_ISSU-3-INVALID_CAPABILITY : STP ISSU client: invalid capability list

| | |
|---------------------------|--|
| Explanation | STP ISSU client observed an error during capability negotiaiton. When this error happens there is a mismatch in the client capability between the active and standby unit. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%STP_ISSU-3-REJECTED_CAPABILITY : STP ISSU client rejected capability '[chars]'

| | |
|---------------------------|---|
| Explanation | STP ISSU client rejected a capability during negotiaiton. When this error happens there is a mismatch in the client capability between the active and standby unit. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%STP_ISSU-3-REJECTING_CAPABILITY : STP ISSU client rejecting capability '[chars]'

| | |
|---------------------------|---|
| Explanation | STP ISSU client is rejecting a capability during negotiaiton. When this error happens there is a mismatch in the client capability between the active and standby unit. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu capability entries <client_id> and show issu session <client_id> and show issu negotiated capability <session_id>) |

%STP_ISSU-3-POLICY_NOT_SUPPORTED : STP ISSU client does not support Message Type [dec]

| | |
|---------------------------|---|
| Explanation | STP ISSU client received an message type which it does not support. The policy is applied to make the session incompatible. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show issu session <client_id>) |

STUN

%STUN-4-DUPROUTE : Cannot define duplicate route on the same group

| | |
|---------------------------|---|
| Explanation | This route command is defined on another interface belonging to the same group. Cannot define duplicate route on the same group |
| Recommended Action | Consider defining a new group and moving this interface onto that group |

%STUN-4-PEERSTATE : Peer [chars], wrong state [dec] ([dec])

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%STUN-3-BADMAGIC : [chars]: wrong magic, mine [hex], theirs [hex] ([dec])

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%STUN-3-BADMAGICTCP : [chars]: peer [chars], wrong magic, mine [hex], theirs [hex]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STUN-3-BADLENOP : [chars]: bad len or unknown op, op [dec], len [dec]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STUN-6-TCPPEERSHUT : [chars] [chars], [IP_address]([dec])

Explanation This route closed a STUN connection with a remote peer.

Recommended Action Examine this router to see why it closed this connection with this peer. (This can be caused by normal events, such as reconfiguration.)

%STUN-3-CONNILLSTATE : CONN: Peer [chars], illegal state [dec]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STUN-3-BADCONN : CONN: bad connection ([dec]), peer: [chars]

Explanation An internal software error occurred.

%STUN-3-BADCONN : CONN: bad connection ([dec]), peer: [chars]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STUN-4-ERR : [chars]: [chars]: [chars], op [hex], len [dec]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STUN-3-SENDPUNT : [chars]: sent [chars] to [chars]

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STUN-3-SENDPUNTTCP : [chars]: sent [chars] to ([[int]])IP_address

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STUN-6-OPENING : CONN: opening peer [chars], [dec]

Explanation A connection attempt to a remote peer completed successfully (OPENED, PASSIVE-OPEN) or is in the process of being opened (OPENING). This is good, expected behavior.

%STUN-6-OPENING : CONN: opening peer [chars], [dec]

Recommended Action No action is required.

%STUN-6-CONNOPENFAIL : CONN: peer [chars] open failed, [chars] [[int]]

Explanation An attempt to connect to a remote TCP STUN peer failed.

Recommended Action Verify that the remote peer is accessible from this router, that it is running software capable of supporting STUN, and that it is configured correctly.

%STUN-3-BADPASSIVEOPEN : passive open from [IP_address]([dec]) -> [dec] failed

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STUN-6-PASSIVEOPEN : passive open [IP_address]([dec]) -> [dec]

Explanation A connection attempt to a remote peer completed successfully (OPENED, PASSIVE-OPEN) or is in the process of being opened (OPENING). This is good, expected behavior.

Recommended Action No action is required.

%STUN-6-TCPFINI : peer [chars] closed [previous state [chars]]

Explanation A remote peer closed a STUN connection with this router.

Recommended Action Examine the other router to see why it closed this connection with this peer. (This can be caused by normal events, such as reconfiguration.)

%STUN-6-PEERSHUTDOWN : shutting down peer [chars] on [chars]

Explanation A connection to a remote peer is being shut down. This is typically the result of user intervention in STUN reconfiguration or disabling. This is good, expected behavior.

Recommended Action No action is required.

%STUN-6-OPENED : [chars]: peer [chars] opened, [previous state [chars]]

Explanation A connection attempt to a remote peer completed successfully (OPENED, PASSIVE-OPEN) or is in the process of being opened (OPENING). This is good, expected behavior.

Recommended Action No action is required.

%STUN-3-NOINPIDB : Input idb not set

Explanation A software or hardware error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%STUN-6-RECONNECT : PHDR: reconnect from peer [chars]

Explanation A remote peer reestablished a connection to this router.

Recommended Action No action is required.

%STUN-2-NOBUF : Interface [chars], no buffer available to [chars]

Explanation A memory shortage existed at the time that the configuration command was issued. This condition is rare and, under normal conditions, temporary.

Recommended Action Reconfigure the STUN group. If memory shortages persist, call your Cisco technical support representative for assistance.

%STUN-2-NOTGI : Please remove and redefine protocol group [dec]

Explanation An internal error occurred. The configuration is irregular.

Recommended Action Remove and reconfigure the STUN protocol group. Record the configuration and call your Cisco technical support representative for assistance.

%STUN-2-NOMEMORY : No memory available: [chars]

| | |
|---------------------------|---|
| Explanation | The requested operation failed because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

SUBSYS**%SUBSYS-2-BADVERSION : Bad subsystem version number ([dec]) - ignoring subsystem**

| | |
|---------------------------|---|
| Explanation | A software consistency check failed. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SUBSYS-2-MISMATCH : Kernel and subsystem version differ ([dec].[dec]) - ignoring subsystem

| | |
|---------------------------|---|
| Explanation | A software consistency check failed. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SUBSYS-2-BADCLASS : Bad subsystem class ([dec]) - ignoring subsystem

| | |
|---------------------------|---|
| Explanation | A software consistency check failed. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SUBSYS-2-BADSEQUENCE : Subsystem ([chars]) has cross-class sequence for ([chars])

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SUBSYS-2-RECURSION : Maximum sequence depth exceeded ([dec]) by ([chars])

| | |
|---------------------------|---|
| Explanation | A software or hardware error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SUBSYS-2-NOTFOUND : Subsystem ([chars]) needs subsystem ([chars]) to start

| | |
|---------------------------|---|
| Explanation | A software consistency check failed. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SUBSYS-3-PAGEZERO : The [chars] class subsystem [chars] was being initialized.

| | |
|---------------------------|---|
| Explanation | In all Cisco products the first 256 bytes of memory is unused and off limits. Newer platforms have hardware to immediately trap reads or writes to this area. Older platforms periodically perform checks on this memory. This message appears only on older platforms and indicates that this off limits memory area was modified. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%SUBSYS-3-NOAPIHOOK : The API [chars] has no lookup hook for subsystems.

| | |
|---------------------------|--|
| Explanation | This process uses the named API, but the process initialization code could not find the subsystem-initialization hook for this API. Process initialization cannot proceed without all hooks being present. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative, along with output from 'show tech'. |

%SUBSYS-3-UNORDERED : The subsys class [dec]([chars]) has no initialization order.

| | |
|---------------------------|---|
| Explanation | The specified class subsystem has an unknown initialization order. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative, along with output from 'show tech'. |

%SUBSYS-4-MALLOC : Class [chars], subsys [chars], bytes [int], malloc [dec]

| | |
|---------------------------|---|
| Explanation | This message is only for tracking malloc/free in a subsys init. |
| Recommended Action | For development debugging only. |

SWITCH**%SWITCH-1-NOMEMORY : msgtxt_nomemory**

| | |
|---------------------------|---|
| Explanation | The CPU was unable to access the memory it needs to carry out its functions. Here are some possible causes. The network is large, requiring a lot of memory for routing tables, and so on. The router configuration has many features enabled, each of which require a certain amount of memory. A software error (memory leak) exists. |
| Recommended Action | Reduce system activity to ease the memory demand, or upgrade to a larger memory configuration. |

SWITCH_L2M**%SWITCH_L2M-3-INIT_FAILED : Initialization of the SVI feature in QFP failed**

| | |
|---------------------------|---|
| Explanation | Initialization of the SWITCH_L2M feature in the QFP failed. This indicates a software failure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SWITCH_L2M-3-ALLOC_FAILED : Allocation of [chars] memory failed for SWITCH_L2M feature in QFP

| | |
|---------------------------|---|
| Explanation | Allocation of memory by the QFP SWITCH_L2M feature microcode failed. The name of the memory chunk is specified in the message. This indicates a software failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SWITCH_L2M-3-PKT_REPLICA_INIT_FAILED : Failed to register with generic packet replication for SWITCH_L2M feature in QFP

| | |
|---------------------------|---|
| Explanation | SWITCH_L2M initialization of packet replication registration failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SWPORT**%SWPORT-3-INIT_FAILED : Initialization of the SWPORT feature in QFP failed**

| | |
|---------------------------|---|
| Explanation | Initialization of the SWPORT feature in the QFP failed. This indicates a software failure. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SWPORT-3-ALLOC_FAILED : Allocation of [chars] memory failed for SWPORT feature in QFP

| | |
|---------------------------|---|
| Explanation | Allocation of memory by the QFP SWPORT feature microcode failed. The name of the memory chunk is specified in the message. This indicates a software failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SWPORT_PROXY**%SWPORT_PROXY-3-SWPORT_MEM_REQ_FAILED : SWPORT IPC subtype: [dec]**

| | |
|---------------------------|---|
| Explanation | Requesting more memory failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SWPORT_PROXY-3-SWPORT_MEM_EXTEND_FAILED : SWPORT IPC subtype: [dec]

| | |
|---------------------------|---|
| Explanation | Extending memory failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SWPORT_PROXY-4-PROXY_INVALID_MSG_LEN : QFP SWPORT Proxy IPC invalid length, [dec]:[dec] len [dec] flags [hex] source [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SWPORT Proxy received invalid IPC message length from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SWPORT_PROXY-4-PROXY_INVALID_MSG : QFP SWPORT Proxy received invalid message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SWPORT Proxy received an invalid message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SWPORT_PROXY-2-PROXY_IPC_INIT_FAILED : QFP SWPORT Proxy IPC interface initialization failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SWPORT Proxy initialization detected that the IPC interface initialization failed. QFP SWPORT proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SWPORT_PROXY-3-PROXY_BAD_MSG : QFP SWPORT Proxy received bad length message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SWPORT Proxy received a corrupted message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SWPORT_PROXY-3-PROXY_IPC_ALLOC_FAILED : QFP SWPORT Proxy [chars] message lost due to message buffer allocation failure.

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SWPORT Proxy message processing detected a message buffer allocation failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SWPORT_PROXY-3-PROXY_IPC_SEND_FAILED : QFP SWPORT Proxy [chars] message lost due to message sent failure (result: [dec]).

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP SWPORT Proxy message processing detected a message sent failure. The message is lost as the result of this condition. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

SW_MATM

%SW_MATM-4-MACFLAP_NOTIF : Host [enet] in [chars] [dec] is flapping between port [chars] and port [chars]

Explanation The system has found the specified host moving between the specified ports.

%SW_MATM-4-MACFLAP_NOTIF : Host [enet] in [chars] [dec] is flapping between port [chars] and port [chars]

Recommended Action Check the network for possible loops.

%SW_MATM-4-WIRELESS_MAC_MOVE_NOTIF : Host [enet] moving from Port [chars] to Port [chars] as wireless entry

Explanation The system has found the specified host moving between the specified ports. The host transitioned from wired to wireless.

Recommended Action Check that this move does not happen too often

%SW_MATM-4-WIRELESS_MAC_MOVE_DENY_NOTIF : Host [enet] moving from Port [chars] to Port [chars] as wired entry not allowed

Explanation The system has found the specified host moving between the specified ports. The host transition from wireless to wired not allowed.

Recommended Action Check that this move does not happen too often

SW_MGR

%SW_MGR-3-INVALID_HANDLE : Segment Manager Error - Invalid [chars] handle - [dec].

Explanation A Connection Manager error occurred due to a invalid handle.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_MGR-3-INVALID_SEGMENT : Segment Switch Manager Error - Invalid segment - [chars].

Explanation A Segment Switch Manager error occurred due to a invalid segment.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_MGR-3-CM_ERROR_CLASS : Connection Manager Error: Class [chars]: - [chars].

| | |
|---------------------------|---|
| Explanation | A Segment Switch Connection Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SW_MGR-3-CM_ERROR : Connection Manager Error - [chars].

| | |
|---------------------------|---|
| Explanation | A Segment Switch Connection Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SW_MGR-3-SM_ERROR : Segment Manager Error - [chars].

| | |
|---------------------------|---|
| Explanation | A Segment Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SW_MGR-3-FHM_ERROR : SSM Feature Handler Manager Error - [chars].

| | |
|---------------------------|---|
| Explanation | A Feature Handler Manager error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SW_MGR-3-CM_ERROR_FEATURE_CLASS : Connection Manager Feature Error: Class [chars]: ([chars]) - [chars].

| | |
|--------------------|---|
| Explanation | A Segment Switch Connection Manager feature error occurred. |
|--------------------|---|

%SW_MGR-3-CM_ERROR_FEATURE_CLASS : Connection Manager Feature Error: Class [chars]: ([chars]) - [chars].

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_MGR-3-CM_ERROR_FEATURE : Connection Manager Feature Error: ([chars]) - [chars].

Explanation A Segment Switch Connection Manager feature class error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_MGR-3-SSM_SEG_ISSU : SSM Segment ISSU: [chars] not supported.

Explanation ISSU of this SSM Segment is not supported.

Recommended Action No action is required.

%SW_MGR-3-XDRREGISTRATION : XDR failed to register [chars] client due to [chars]

Explanation Failure to register the said XDR client.

Recommended Action No action is required.

SW_VLAN

%SW_VLAN-6-VTP_MODE_CHANGE : VLAN manager changing device mode from [chars] to [chars].

Explanation Some switch devices must automatically change VTP device modes upon receipt of a VLAN configuration database containing more than a set number of VLANs, depending on the device. This message indicates that such a spontaneous conversion has occurred, what the previous mode was, and what the current mode is.

Recommended Action No action is required.

%SW_VLAN-6-VTP_DOMAIN_NAME_CHG : VTP domain name changed to [chars].

Explanation The VTP domain name was changed through configuration to the name specified in the message. A management domain is the naming scope of a VLAN name. Each VLAN has a name that is unique within the management domain.

Recommended Action No action is required.

%SW_VLAN-4-VTP_FLOOD_ERROR : Primary server request failedPrimary server can only change once every [dec] seconds

Explanation VTP takeover packet received within takeover rate limit

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-4-VTP_INTERNAL_ERROR : VLAN manager received an internal error [dec] from vtp function [chars]: [chars]

Explanation An unexpected error code was received by the VLAN Manager from the VTP configuration software.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-4-VTP_INVALID_DATABASE_DATA : VLAN manager received bad data of type [chars]: value [dec] from vtp database function [chars]

Explanation Invalid data was received by the VLAN Manager from a VTP configuration database routine.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-4-NO_PM_COOKIE_RETURNED : VLAN manager unexpectedly received a null [chars] type cookie from the Port Manager, data reference: [chars]

| | |
|---------------------------|---|
| Explanation | The VLAN manager queried the Port Manager for a reference cookie but received a NULL pointer instead. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SW_VLAN-4-BAD_PM_VLAN_COOKIE_RETURNED : VLAN manager unexpectedly received a bad PM VLAN cookie from the Port Manager, VLAN indicated: [dec]

| | |
|---------------------------|---|
| Explanation | The VLAN manager received an upcall from the Port Manager containing a VLAN cookie which translated to a bad VLAN number. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SW_VLAN-4-VTP_INVALID_EVENT_DATA : VLAN manager received bad data of type [chars]: value [dec] while being called to handle a [chars] event

| | |
|---------------------------|---|
| Explanation | Invalid data was received by the VLAN Manager from the VTP configuration software. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SW_VLAN-3-VTP_PROTOCOL_ERROR : VTP protocol code internal error: [chars]

| | |
|--------------------|---|
| Explanation | VTP protocol code encountered an unexpected error will processing configuration request, packet, or timer expiration. |
|--------------------|---|

%SW_VLAN-3-VTP_PROTOCOL_ERROR : VTP protocol code internal error: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%SW_VLAN-4-VTP_USER_NOTIFICATION : VTP protocol user notification: [chars]

| | |
|---------------------------|---|
| Explanation | VTP protocol code encountered an unusual diagnostic situation which the user should be made aware of. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SW_VLAN-4-IFS_FAILURE : VLAN manager encountered file operation error: call = [chars] / file = [chars] / code = [dec] ([chars]) / bytes transfered = [dec]

| | |
|---------------------------|---|
| Explanation | The VLAN manager received an unexpected error return from a IOS file system call. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SW_VLAN-4-BAD_VLAN_CONFIGURATION_FILE : VLAN configuration file contained incorrect verification word: [hex]

| | |
|---------------------------|---|
| Explanation | The VLAN configuration file read by the VLAN manager did not begin with correct value which would indicate a valid VLAN configuration file. Thus, it has been rejected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%SW_VLAN-4-BAD_VLAN_CONFIGURATION_FILE_VERSION : VLAN configuration file contained unknown file version: [dec]

Explanation The VLAN configuration file read by the VLAN manager contained an unrecognized file version number. (This may indicate an attempt to regress to an older version of the VLAN manager software.)

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-4-BAD_VLAN_DOMAIN_NAME_LENGTH : VLAN configuration file contained incorrect domain name length: [int]

Explanation The VLAN configuration file read by the VLAN manager did not contain a valid domain name length. Thus, it has been rejected.

Recommended Action Please provision VTP domain name again

%SW_VLAN-4-BAD_VLAN_PASSWORD_LENGTH : VLAN configuration file contained incorrect VTP password length: [int]

Explanation The VLAN configuration file read by the VLAN manager did not contain a valid VTP password length. Thus, it has been rejected.

Recommended Action Please provision VTP password again

%SW_VLAN-4-BAD_VLAN_TIMER_ACTIVE_VALUE : Encountered incorrect VLAN timer active value: [chars]

Explanation Due to a software error, a VLAN timer was detected active when it should have been inactive or inactive when it should have been active.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-3-VLAN_PM_NOTIFICATION_FAILURE : VLAN Manager synchronization failure with Port Manager over [chars]

Explanation Due to lack of ready pool space, the VLAN manager dropped a notification from the Port Manager as indicated by the message.

%SW_VLAN-3-VLAN_PM_NOTIFICATION_FAILURE : VLAN Manager synchronization failure with Port Manager over [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-6-OLD_CONFIG_FILE_READ : Old version [dec] VLAN configuration file detected and read OK. Version [dec] files will be written in the future.

Explanation VLAN software detected an old version of the VLAN configuration file format. It was able to interpret the file with no problems but will create files using the new format in the future.

Recommended Action No action is required.

%SW_VLAN-4-BAD_STARTUP_VLAN_CONFIG_FILE : Failed to configure VLAN from startup-config. Fallback to use VLAN configuration file from non-volatile memory

Explanation VLAN software failed to use VLAN configuration from startup-config file. It will fallback to use the binary VLAN configuration file in non-volatile memory.

Recommended Action No action is required.

%SW_VLAN-4-EXT_VLAN_INTERNAL_ERROR : Extended VLAN manager received an internal error [dec] from [chars]: [chars]

Explanation An unexpected error code was received by the VLAN Manager from the extended VLAN configuration software.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-4-EXT_VLAN_INVALID_DATABASE_DATA : Extended VLAN manager received bad data of type [chars]: value [dec] from function [chars]

Explanation Invalid data was received by the extended VLAN Manager from an extended VLAN configuration database routine.

%SW_VLAN-4-EXT_VLAN_INVALID_DATABASE_DATA : Extended VLAN manager received bad data of type [chars]: value [dec] from function [chars]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-4-VLANMGR_INVALID_DATABASE_DATA : VLAN MANAGER received bad data of type [chars]: value [dec] from function [chars]

Explanation Invalid data was received by the VLAN MANAGER from a VLAN configuration database routine.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-4-VLAN_CREATE_FAIL : Failed to create VLANs [chars]: [chars]

Explanation The VLANs specified in the error message could not be created. The VLAN manager called an VLAN database routine to create one or more VLANs, but the Port Manager failed the VLAN creation requests. A possible cause of this error is that the VLANs already exist in the Port Manager as internal VLANs.

Recommended Action Check the internal VLAN usage using 'show vlan internal usage' command. Unconfigure the feature which occupies the internal VLAN and retry the VLAN creation operation. LOG_STD_SH_TECH_ACTION

%SW_VLAN-4-STARTUP_EXT_VLAN_CONFIG_FILE_FAILED : Failed to configure extended range VLAN from startup-config. Error [chars]

Explanation VLAN software failed to use extended VLAN configuration from startup-config file. All extended range VLANs configuration will be lost after system boot up.

Recommended Action No action is required.

%SW_VLAN-4-VTP_SEM_BUSY : VTP semaphore is unavailable for function [chars]. Semaphore locked by [chars]

Explanation The VTP database is currently locked by another task and is not available. Users should retry the operation sometime later.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-3-MALLOC_FAIL : Failed to allocate [dec] bytes

Explanation Memory allocation failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-6-VLAN_DAT_CACHE_EXISTS : Unexpected vlan.dat cache exists. Removing the cache and continuing the sync with new set.

Explanation Although we do not expect to see this message ever, the switch continues to work properly even after encountering this situation. Please report it to Customer Support.

Recommended Action No action is required.

%SW_VLAN-3-VLAN_DAT_CACHE_SEQUENCE : Out of sequence vlan.dat sync message. Expected: [dec]; received: [dec].

Explanation vlan.dat file is synced to the STANDBY via one or more checkpoint message from ACTIVE. The sequence number for each such set of checkpoint messages starts with 1. These messages are cached at the STANDBY till the end-of-set indication is received. Here, the STANDBY received a checkpoint message with a sequence number that does not match the expected sequence number. Please report it to Customer Support.

%SW_VLAN-3-VLAN_DAT_CACHE_SEQUENCE : Out of sequence vlan.dat sync message. Expected: [dec]; received: [dec].

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-3-VLAN_DAT_CACHE_SIZE_EXCEED : Data exceeds allocated size. Offset: [dec]; data_size: [dec]; allocated: [dec]

Explanation vlan.dat file is synced to the STANDBY via one or more checkpoint message from ACTIVE. The sequence number for each such set of checkpoint messages starts with 1. These messages are cached at the STANDBY till the end-of-set indication is received. Here, the STANDBY received a checkpoint message with a size that does not fit the size of cache specified in the checkpoint message with sequence number 1. Please report it to Customer Support.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%SW_VLAN-4-VTP_PRIMARY_SERVER_CHG : [enet] has become the primary server for the [chars] VTP feature

Explanation The primary server status has changed and the indicated device has become the primary server for the indicated VTP feature.

Recommended Action No action is required.

%SW_VLAN-4-VTP_DB_SIZE_CHECK_FAILED : The [chars] VTP database of length [dec] cannot be supported by the system

Explanation The VTP database size is more than what the system can support.

Recommended Action Reduce the database size by decreasing the configuration parameters, example, reduce the size of vlan-names

%SW_VLAN-3-IIF_ID_ALLOC_FAILED : IIF_ID alloc failed for vlan [dec] due to memory allocation failure. Some features will not work.

| | |
|---------------------------|---|
| Explanation | The system is low on memory due to which IIF-ID allocation failed. This results in failure to apply polices such as QoS and Security acls on this vlan. |
| Recommended Action | LOG_STD_REDUCE_ACTION Once memory is available, shutdown the vlan and then unshut the vlan |

%SW_VLAN-3-IIF_ID_REGISTRATION_FAILED : IIF_ID registration failed for vlan [dec] due to memory allocation failure. Some features will not work. Vlan has been shutdown

| | |
|---------------------------|---|
| Explanation | The system is low on memory due to which IIF-ID registration failed. This results in failure to apply polices such as QoS and Security acls on this vlan. If vlan exists, it is shutdown. If vlan doesn't exist, then it will be shutdown when it is created. |
| Recommended Action | LOG_STD_REDUCE_ACTION Once memory is available, run 'no shutdown' on the vlan |

SYNCE_SPA_INFO

%SYNCE_SPA_INFO-6-NETSYNC_UNCONF_SOURCE : CLOCK LOCK is [chars] for [chars] interface, which is not selected as source to synchronize chassis.

| | |
|---------------------------|--|
| Explanation | INFORMATION Message: CLOCK LOCK is Cleared/Asserted for interface which is not configure as a source |
| Recommended Action | No further action required. This is source monitor INFORMATION message, not an error Message. |

SYS

%SYS-1-CISCOPRO : CiscoPro hardware requires CiscoPro software.

| | |
|---------------------------|--|
| Explanation | The CiscoPro hardware platforms require the use of CiscoPro specific software. Other software images from Cisco Systems will not function on this hardware |
| Recommended Action | Obtain the appropriate CiscoPro software for your hardware. |

SYSHW

%SYSHW-3-SYSHW_READ : A read operation has failed for device: [chars] error: [chars]

| | |
|--------------------|--|
| Explanation | A syshw read operation failed for the mentioned device |
|--------------------|--|

%SYSHW-3-SYSHW_READ : A read operation has failed for device: [chars] error: [chars]

| | |
|---------------------------|---|
| Recommended Action | The error message indicates a read failure for the device. No action is needed from the user. However, if these errors come continuously or frequently, it may indicate permanent fault with the specific device/component. |
|---------------------------|---|

%SYSHW-3-SYSHW_WRITE : A write operation has failed for device: [chars] error: [chars]

| | |
|--------------------|---|
| Explanation | A syshw write operation failed for the mentioned device |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | The error message indicates a write failure for the device. No action is needed from the user. However, if these errors come continuously or frequently, it may indicate a permanent fault with the specific device/component. |
|---------------------------|--|

%SYSHW-3-SYSHW_REG_READ : A register read operation has failed for device: [chars] register: [chars] error: [chars]

| | |
|--------------------|---|
| Explanation | A syshw register read operation failed for the mentioned device |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | The error message indicates a read failure for the device. No action is needed from the user. However, if these errors come continuously or frequently, it may indicate permanent fault with the specific device/component. |
|---------------------------|---|

%SYSHW-3-SYSHW_REG_WRITE : A register write operation has failed for device: [chars] register: [chars] error: [chars]

| | |
|--------------------|---|
| Explanation | A syshw register read operation failed for the mentioned device |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | The error message indicates a read failure for the device. No action is needed from the user. However, if these errors come continuously or frequently, it may indicate permanent fault with the specific device/component. |
|---------------------------|---|

SYSPLAT

%SYSPLAT-5-PLIM_BLOCK_EVENT : Block [chars]/[dec] of PLIM device had I/O event [hex]

| | |
|--------------------|--|
| Explanation | A PLIM device I/O event has occurred. This event is not serious but is logged for diagnostic purposes. |
|--------------------|--|

| | |
|---------------------------|-----------------------------|
| Recommended Action | No user action is required. |
|---------------------------|-----------------------------|

%SYSPLAT-3-PLIM_BRIDGE_CRITICAL_ERROR : Reloading [chars] due critical event [hex] in block [chars]/[dec] of PLIM device

| | |
|--------------------|--|
| Explanation | A critical PLIM device I/O event has occurred. |
|--------------------|--|

%SYSPLAT-3-PLIM_BRIDGE_CRITICAL_ERROR : Reloading [chars] due critical event [hex] in block [chars]/[dec] of PLIM device

Recommended Action The system automatically reloads the hardware component experiencing the error. If the problem persists, copy the message exactly as it appears on the console or in the system log, collect the output of show tech-support and any other relevant logs, and contact your Cisco technical support representative.

%SYSPLAT-5-PLIM_EVENT_RATE : The [chars] event rate of [int] has exceeded the threshold of [int] on interconnect [dec]

Explanation A Serial Bridge has experienced a high event rate. This condition is not considered serious, but is logged for diagnostic purposes. This could be due to a hardware or software driver defect.

Recommended Action No user action is required. If this message persists, a PLIM device critical message that needs to be addressed will appear.

%SYSPLAT-3-PLIM_CRITICAL_ERROR_RATE : Reloading [chars] due to critically high PLIM device error rate.

Explanation A Serial Bridge has experienced a persistently high error rate. The condition is serious and the card must be reloaded. This could be due to a hardware or software driver defect.

Recommended Action Copy the message exactly as it appears on the console or in the system log, collect the output of show tech-support and any other relevant logs, and contact your Cisco technical support representative.

TAC

%TAC-6-SENDTMO : Send type [dec] to [IP_address] timed out

Explanation A background TACACS notification (enabled with the command tacacs notify) was not acknowledged by the TACACS server processor within the timeout period (5 minutes). The information contained in that notification was lost. This loss of information may interfere with accounting or auditing on the server. This condition arises when the TACACS server is misconfigured, crashed, or became unreachable via the network.

Recommended Action Check the TACACS server and the network attached to it.

%TAC-4-UNEXREP : Reply for non-existent request, [dec] on queue

Explanation The TACACS facility received a message it was not expecting. This may occur when a TACACS server sends duplicate responses or when it responds to a request that has already timed out. It also may be due to an internal software problem.

Recommended Action If this message recurs, call your technical support representative for assistance.

%TAC-3-XTACACL : [chars]: accesslist [hex] out of range for [chars]

Explanation The TACACS facility created a message that contains an accesslist which is not a valid accesslist (out of bounds).

Recommended Action If this message recurs, call your technical support representative for assistance.

%TAC-4-NOTIMEOUT : Warning: This command has been deprecated in favor of the line-command timeout login response

Explanation This command is deprecated, and should no longer be used. Instead, the line-command **timeout login response** now provides this functionality

Recommended Action Use the line-command **timeout user-response**

%TAC-3-PICKCTX : No pick-context

Explanation The context to pick the next server has disappeared.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TAC-4-SERVREF : Warning: Server [chars]:[dec] is still referenced by server group.

Explanation The server being removed is still referenced by a server group

Recommended Action Please dereference the server from the server group as soon as possible.

%TAC-4-SERVREFNAME : Warning: Server [chars] is still referenced by server group.

Explanation The server being removed is still referenced by a server group

%TAC-4-SERVREFNAME : Warning: Server [chars] is still referenced by server group.

Recommended Action Please dereference the server from the server group as soon as possible.

%TAC-3-SERVNO : Server [chars] is not configured

Explanation The server is not configured

Recommended Action Please configure a server before un-configuring it

%TAC-6-SERVDEP : tacacs-server host CLI will be deprecated soon. Please move to tacacs server <name> CLI

Explanation Migration from tacacs-server host CLI to tacacs server <name> CLI

Recommended Action Please try to use new CLI

%TAC-3-SERVCONF : Server config failure: [chars]

Explanation The server configuration failed

Recommended Action Please configure the server properly

%TAC-3-SERVINT : [chars]

Explanation This is an internal software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TAC-3-SECRETDEFINEFAILED : Key definition ignored.

Explanation The user is attempting to store either a corrupted shared secret or memory allocation failed during secret definition. Any existing shared secret will be preserved.

Recommended Action Configure a proper secret.

TAR_FS**%TAR_FS-3-IMAGE_FILE_INVALID : [chars] file not found in archive**

| | |
|---------------------------|---|
| Explanation | The Tar File System could not locate the relevant tar element inside the archive |
| Recommended Action | Check whether the Archive is complete and not corrupted or of the wrong format. If the problem could be recreated with debug ifs file turned on, it could help in quick identification of the problem. Collect the output of archive tar /table archive-name if it is a pure tar archive or show image contents file archive-name if the archive is a system image |

TCP**%TCP-3-TCP_REG_FAILED : QFP TCP registers failed**

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP TCP feature initialization detected that registration failed. QFP TCP will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

TCP_PROXY through TN

- [TCP_PROXY](#)
- [TDLDB](#)
- [TELNETD](#)
- [TENSFRFSM](#)
- [THREAT_DEFENSE](#)
- [THREAT_DEFENSE_PROXY](#)
- [TIME](#)
- [TLSCLIENT](#)
- [TMQ](#)
- [TN](#)

TCP_PROXY**%TCP_PROXY-2-PROXY_IPC_INIT_FAILED : QFP TCP Proxy IPC initialization failure (result: [dec]).**

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP TCP Proxy initialization detected that the IPC interface initialization failed. QFP TCP proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TCP_PROXY-3-PROXY_BAD_MSG : CPP TCP Proxy received bad length message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP TCP Proxy received a corrupted message from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TCP_PROXY-3-PROXY_INV_MSG : CPP TCP Proxy received invalid message type [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. CPP TCP Proxy received an invalid message type from control plane. This message will be ignored. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TCP_PROXY-3-PROXY_IPC_CHUNK_FAILED : CPP TCP Proxy chunk memory failure [dec]

| | |
|---------------------------|---|
| Explanation | Cisco internal software error. QFP TCP Proxy chunk memory allocation detected failure. QFP TCP proxy will not be functional while this condition exists. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TCP_PROXY-3-PROXY_IPC_ALLOC_FAILED : CPP TCP Proxy [chars] message lost due to message buffer allocation failure.

Explanation Cisco internal software error. CPP TCP Proxy message processing detected a message buffer allocation failure. The message is lost as the result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TCP_PROXY-3-PROXY_IPC_SEND_FAILED : CPP TCP Proxy [chars] message lost due to message sent failure (result: [dec]).

Explanation Cisco internal software error. CPP TCP Proxy message processing detected a message sent failure. The message is lost as the result of this condition.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TCP_PROXY-3-PROXY_DEBUG_REG_FAILED :

Explanation TCP Conditional Debugging registration failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

TDLDB

%TDLDB-3-SESSION_LOCK_TIMEOUT : Owner: user-proc: [chars], DB: [chars]. Lock expired [chars] ago.

Explanation An application running in a process wishes to have an exclusive write access to DB. It acquires a session lock with for a specific period and is expected to release or renew the session lock. The application has failed to do so and hence the unexpected timeout has occurred

Recommended Action This is unexpected. Report this to Cisco TAC.

TELNETD**%TELNETD-3-ISSUE_FILE_OPEN : Error opening login banner: [chars]**

| | |
|---------------------------|---|
| Explanation | An error has occurred opening the login banner. It could not be displayed to a user connecting via telnet. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

TENSRFSM**%TENSRFSM-3-NULLMACH : Invalid machine pointer [hex]**

| | |
|---------------------------|---|
| Explanation | state machine invalid pointer |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TENSRFSM-3-INVSTATE : Invalid current state [hex]

| | |
|---------------------------|---|
| Explanation | state machine invalid state |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TENSRFSM-3-INVEVENT : Invalid event_id [hex]

| | |
|---------------------------|---|
| Explanation | state machine invalid event |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TENSRRFSM-3-INVTRANS : obj: [[hex]] event_id: [[hex]] er_p: [[hex]] arg: [[hex]] session state [chars] -> [chars]

Explanation state machine invalid transition

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TENSRRFSM-3-NOEVENT : Unable to apply event [hex]

Explanation state machine transition failure

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TENSRRFSM-3-NOPROCID : Unable to launch TE NSR FSM Process.

Explanation state machine transition process launch failure

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

THREAT_DEFENSE

%THREAT_DEFENSE-3-VTCP_INIT_FAILED :

Explanation Initialization of VTCP failed.

Recommended Action LOG_STD_ACTION

%THREAT_DEFENSE-3-DESTROY_CHUNK_FAILED :

Explanation Destroy chunk failed.

Recommended Action LOG_STD_ACTION

%THREAT_DEFENSE-4-TD_ERM_AVERAGE_THREAT : Event Rate Monitoring: Average threat identified. Zone [[chars]], event type [[chars]], average [[dec]] configured threshold [[dec]]

Explanation Event Rate Monitoring: Average threat identified

Recommended Action LOG_STD_ACTION

%THREAT_DEFENSE-4-TD_ERM_BURST_THREAT : Event Rate Monitoring: Burst threat identified. Zone [[chars]], event type [[chars]], configured threshold [[dec]]

Explanation Event Rate Monitoring: Burst threat identified

Recommended Action LOG_STD_ACTION

THREAT_DEFENSE_PROXY

%THREAT_DEFENSE_PROXY-3-PROXY_MEM_EXTEND_FAILED :

Explanation Extending memory failed.

Recommended Action LOG_STD_ACTION

%THREAT_DEFENSE_PROXY-4-PROXY_IPC_INVALID_MSG_LEN : [dec]:[dec] len [dec] flags [hex] source [dec]

Explanation Invalid IPC message length.

Recommended Action LOG_STD_ACTION

%THREAT_DEFENSE_PROXY-4-PROXY_IPC_INVALID_MSG : [dec]

Explanation Invalid IPC message

Recommended Action LOG_STD_ACTION

%THREAT_DEFENSE_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]

Explanation IPC handler initialization failed.

Recommended Action LOG_STD_ACTION

TIME**%TIME-3-HB_SEQ_FAIL : expected seq_num [hex], rcvd seq_num [hex], MSGDEF_LIMIT_MEDIUM**

| | |
|---------------------------|---|
| Explanation | The timer services had exceeded the maximum number of timer heartbeat sequence number errors. |
| Recommended Action | LOG_STD_ACTION |

%TIME-2-TIMESTAMP_BAD_CLOCK : [int]

| | |
|---------------------------|---------------------------------------|
| Explanation | Unsupported PPE core clock frequency. |
| Recommended Action | LOG_STD_ACTION |

%TIME-2-HB_START_FAILED : timer services failed to start

| | |
|---------------------------|--|
| Explanation | The timer services could not be started, because GPM allocation failed |
| Recommended Action | LOG_STD_ACTION |

TLSCIENT**%TLSCIENT-5-UPDOWN : Session [[IPV6 address]] to TLSGW: [[chars]] is [chars]**

| | |
|---------------------------|-----------------------------------|
| Explanation | TLS Tunnel service state changed. |
| Recommended Action | No action is required. |

%TLSCIENT-5-REKEY_CONN_FAILURE : Rekey failed for Session [[IPV6 address]] to TLSGW [[chars]]

| | |
|---------------------------|--|
| Explanation | This message indicates that the Rekey for the tunnel to the tlgw failed. |
| Recommended Action | Either the server is down or the connectivity to the server is broken |

TMO**%TMO-3-NOTFOUND : TMO, Attempt to delete entry not in queue**

| | |
|--------------------|--|
| Explanation | An attempt was made to delete an entry not in the queue. |
|--------------------|--|

%TMO-3-NOTFOUND : TMO, Attempt to delete entry not in queue

Recommended Action Advisory message only. No action required.

TN

%TN-3-READLINE : Unknown return code [dec] from telnet_readline()

Explanation An internal software error occurred.

Recommended Action If any message recurs, call your technical support representative for assistance.

%TN-3-BADSTATE : Illegal state [dec]

Explanation An internal software error occurred.

Recommended Action If any message recurs, call your technical support representative for assistance.

%TN-2-BADLOGIN : Bad login string pointer [hex]

Explanation An internal software error occurred.

Recommended Action If any message recurs, call your technical support representative for assistance.

%TN-2-BADCONN : Bad conn pointer [hex] closing all connections on terminal line [dec]

Explanation An internal software error occurred.

Recommended Action If any message recurs, call your technical support representative for assistance.

TN3270 through TUN

- [TN3270](#)
- [TPLUS](#)
- [TR](#)
- [TRACK](#)
- [TRANSCEIVER](#)

- TRCCFG
- TSP
- TTY
- TTYMON
- TUN

TN3270

%TN3270-2-INP_OVF1 : Input Buffer overflow

| | |
|---------------------------|--|
| Explanation | A problem in TN3270 protocol was detected. Eight KB (8192) bytes of data were received without a TN3270 end-of-packet indicator. The TN3270 buffer overflowed. |
| Recommended Action | Copy this error message exactly as it appears, and contact your technical support representative for assistance. |

TPLUS

%TPLUS-3-FORKFAIL : Failed to fork process for [chars].

| | |
|---------------------------|--|
| Explanation | Quite likely, we ran out of memory. Other explanations are possible. |
| Recommended Action | If this message recurs, call your technical support representative for assistance. |

%TPLUS-3-UNKNOWNATYPE : TPLUS: [hex] Unknown Request type [int].

| | |
|---------------------------|---|
| Explanation | Unknown request type in client request |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

TR

%TR-2-PANICTYPE : Unit [dec], [chars] error

| | |
|--------------------|--|
| Explanation | This message is similar to the %TR-3-PANIC error message, but indicates a nonfatal error. This message appears in very unusual situations that should not arise in normal operation. |
|--------------------|--|

%TR-2-PANICTYPE : Unit [dec], [chars] error

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TR-2-PANIC : Unit [dec], panic %-08x %-08x %-08x

Explanation The Token Ring monitor firmware detected a fatal error that indicates an impending interface failure.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TR-2-PANICINF : Unit [dec], PI %-08x %-08x %-08x %-08x %-08x %-08x

Explanation This message is similar to the %TR-3-PANIC error message, but indicates a nonfatal error. This message appears in very unusual situations that should not arise in normal operation.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TR-3-BADMUL : [chars]: Can't set address to a multicast ([enet])

Explanation An attempt was made to set the Token Ring interface MAC address to a reserved multicast address.

Recommended Action Check your configuration. Make sure that your XNS and/or Novell Token Ring addresses have not inadvertently been set to reserved multicast addresses.

%TR-3-BADSTART : Unit [dec], Start completion and wrong idb state - state= [dec]

Explanation An internal software error occurred.

%TR-3-BADSTART : Unit [dec], Start completion and wrong idb state - state= [dec]

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TR-3-RESETFAIL : Unit [dec], reset failed, error code %-08x.

Explanation An internal software error occurred.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TR-6-STATE : [chars]: Ring Status: [chars]

Explanation This message is displayed when the Token Ring's status changed as determined by the chipset. This information also is used to automatically determine whether the interface is still usable to propagate network traffic.

Recommended Action No action is required.

%TR-6-STATRING : TR[dec]: Ring Status: [chars] [chars]

Explanation This message is displayed when the Token Ring's status changed as determined by the chipset. This information also is used to automatically determine whether the interface is still usable to propagate network traffic. The meaning of each status code is shown in the Token Ring Status Codes Table. Code Explanation Fatal 0x8000 Signal loss Yes 0x4000 Hard error Yes 0x2000 Soft error No 0x1000 Transmit beacon Yes 0x0800 Lobe wire fault Yes 0x0400 Auto removal error Yes 0x0100 Receive request removed Yes 0x0080 Counter overflow No 0x0040 Single station No 0x0020 Ring recovery No

Recommended Action Check the Token Ring for the indicated condition.

%TR-3-INTFAIL : Unit [dec] interface failure: [hex] [hex] [hex], idb state [dec]

Explanation The Token Ring Monitor firmware detected a fatal error due either to an internal software problem or to a hardware failure.

%TR-3-INTFAIL : Unit [dec] interface failure: [hex] [hex] [hex], idb state [dec]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%TR-3-BADRNGNUM : Unit [dec], ring number ([dec]) doesn't match established number ([dec]).

| | |
|---------------------------|---|
| Explanation | The number you have configured for the local ring does not match the value currently in use on the ring. |
| Recommended Action | Check the configuration to make sure you used the correct ring number. If it is correct, confirm the configuration of all other bridges on the ring to make sure they are using the same ring number. |

%TR-3-WIREFAULT : Unit [dec], wire fault: check the lobe cable MAU connection.

| | |
|---------------------------|--|
| Explanation | The Token Ring hardware is reporting a wire fault condition. |
| Recommended Action | Check the cable connecting the router to the Token Ring media attachment unit (MAU). |

%TR-3-OPENFAIL : Unit [dec], open failed: [chars], [chars]

| | |
|---------------------------|---|
| Explanation | The Token Ring interface was unable to insert itself into the ring. This is an indication of a busy or broken ring. The first character string in this error message indicates the stage of initialization at which the error occurred, and the second describes the error. |
| Recommended Action | Try to open the interface again. This generally can be accomplished by issuing the clear interface tokenring command. If the error message recurs, call your Cisco technical support representative for assistance. |

%TR-3-OPENFAIL2 : Unit [dec], open failed: check the lobe cable DB-9 connection.

| | |
|---------------------------|---|
| Explanation | The Token Ring interface was unable to insert itself into the ring, and the error code returned indicates a wiring problem. |
| Recommended Action | Check the cable connecting the router to the Token Ring MAU, and try to open the interface again. This generally can be accomplished by issuing the clear interface tokenring command. LOG_STD_RECUR_ACTION |

%TR-3-SETGRPFail : Unit [dec], set group address failed (code [hex]).

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TR-3-SETFUNFail : Unit [dec], set functional address failed (code [hex]).

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TR-3-SETBRIDGEFail : Unit [dec], set bridge failed (code [hex]).

| | |
|---------------------------|---|
| Explanation | A hardware error occurred. The source routing accelerator (SRA) chip on the Token Ring card could not be initialized. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TR-3-BADUNIT : Bad unit number [dec]

| | |
|---------------------------|--|
| Explanation | This error message pertains only to the IGS. When displayed, it indicates that the system cannot find the chipset registers where it expects them to be. This is most likely a hardware error. |
| Recommended Action | If this message recurs, call your technical support representative for assistance. It will be necessary to determine the hardware unit configuration. |

%TR-3-BADBUFFSIZE : Unit [dec], bad buffersize = [dec]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%TR-3-BADBUFSIZE : Unit [dec], bad buffersize = [dec]

| | |
|---------------------------|--|
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

%TR-3-BADFUNC : Unit [dec], bad functional address=[hex], ring mode=[hex]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TR-3-BADBRDGPparms : Unit [dec], bad bridge parameters: bridge_num=[dec], max_rd=[dec]thisring=[dec], targetring=[dec]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TR-3-INITFAIL : Unit [dec], init failed. result code=[hex], error code=[hex]

| | |
|---------------------------|--|
| Explanation | The Token Ring hardware failed to initialize properly. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TR-3-MODEFAIL : Unit [dec], change mode failed. result code=[hex], error code=[hex]

| | |
|--------------------|--|
| Explanation | An internal hardware or software error occurred. |
|--------------------|--|

%TR-3-MODEFAIL : Unit [dec], change mode failed. result code=[hex], error code=[hex]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TR-3-NOFIRM : Unit [dec], no TMS380 firmware present. eagle=[hex], magic=[hex]

Explanation An internal hardware or software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TR-3-BADFIRMTYPE : Unit [dec], bad firmware type code during [chars]. type=[hex], fw=[hex]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TR-3-BADFIRM : Unit [dec], Tokenring firmware download failed got [hex], expected [hex], at address [hex].[hex]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TR-2-NOMEMORY : Unit [dec], no memory for [chars]

| | |
|---------------------------|---|
| Explanation | The requested operation could not be accomplished because of a low memory condition. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%TR-3-DIAGFAIL : Interface [chars] failed init diags ([hex]), [chars]

| | |
|---------------------------|--|
| Explanation | The microcode attempted to run its diagnostics on the chip and failed. |
| Recommended Action | Issue a clear interface command. LOG_STD_RECUR_ACTION |

%TR-3-ADPCHK : Interface [chars], adapter check error (non-fatal)([hex] [hex] [hex] [hex])

| | |
|---------------------------|---|
| Explanation | The Token Ring monitor firmware detected a non-fatal error on the interface card. |
| Recommended Action | Issue a clear interface command. If this message recurs, call your technical support representative for assistance. |

%TR-3-ADPCHKFATAL : Interface [chars], adapter check error (fatal) ([hex] [hex] [hex] [hex])

| | |
|---------------------------|--|
| Explanation | The Token Ring monitor firmware detected a fatal error on the interface card. |
| Recommended Action | Issue a clear interface command. If this message recurs, call your technical support representative for assistance. You may need to replace the interface card |

TRACK**%TRACK-3-ERROR : Internal error, [chars]**

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TRACK-4-WARN : Internal warning, [chars]

| | |
|--------------------|--|
| Explanation | An internal software warning occurred. |
|--------------------|--|

%TRACK-4-WARN : Internal warning, [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%TRACK-6-STATE : [chars]

| | |
|---------------------------|---------------------------------------|
| Explanation | The Tracked object has changed state. |
| Recommended Action | No action is required. |

%TRACK-6-INFO : Internal info, [chars]

| | |
|---------------------------|---|
| Explanation | An internal software information message occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

TRANSCEIVER

%TRANSCEIVER-3-INTERNAL_ERROR : [chars]

| | |
|---------------------------|---|
| Explanation | The TRANSCEIVER subsystem encountered an internal software error. The error message contains text which can be used to help identify the nature of the problem. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

TRCCFG

%TRCCFG-3-INVALID_BOOT_TRACE_CFG : Boottime trace configuration string [chars] invalid

| | |
|--------------------|--|
| Explanation | The value is not accepted by flash library due to an error. The result is that the boottime trace configuration settings are not successfully saved for use across re-boots. |
|--------------------|--|

%TRCCFG-3-INVALID_BOOT_TRACE_CFG : Boottime trace configuration string [chars] invalid

Recommended Action Check that the boot trace configuration is valid. If valid, try saving configuration again.

%TRCCFG-3-ROMMON_OUT_OF_SPACE_TRACE_CFG : No space in rommon for boot trace configuration

Explanation Rommon is full and does not have room to save boot trace configuration.

Recommended Action Remove any unnecessary rommon variables to free up space and retry.

TSP

%TSP-3-NOEVENT : no free event structure available from [chars] for DSP message

Explanation There were no event structures remaining in the system pools to alert the router of a voice or signaling event.

Recommended Action Check that the voice port for which the event was reported is still operational. If not, clear the voice port.

%TSP-3-CAPABILITYMISMATCH : voice port [chars]: call connection id [[hex] [hex] [hex] [hex]]

Explanation There was a capabilities mismatch between the two call legs. capabilities are negotiated between call legs for CODEC, VAD and FAX rate.

Recommended Action Check that the dial peer configuration is appropriate for the interface in question. Also check that and configuration on the interface is correct.

%TSP-3-DSPALARM : voice port [chars]: status=[hex] message=[hex]

Explanation The DSP reported a fatal error. All calls on the DSP were dropped and a DSP reload was attempted.

Recommended Action Verify that the DSP reloaded properly by attempting to place a call on the affected voice port. Contact your technical support representative, include the full text of the error message.

%TSP-5-PRI : [chars] at slot [dec], unit [dec], channel [dec]

Explanation A PRI signalling channel is added/deleted to TSP's inventory of signalling channels.

Recommended Action This is a notification message only. No action is required.

%TSP-3-FSM_ERROR : [chars]

| | |
|---------------------------|--|
| Explanation | Internal Finite State Machine Error. |
| Recommended Action | Contact your technical support representative, include the full text of the error message. |

TTY

%TTY-3-AUTOCONFIG : TTY%t: Modem auto-configuration failed

| | |
|---------------------------|---|
| Explanation | Modem auto-configuration failed either because the modem rejected the configuration string or because of a timeout. An attempt should be made to apply the configuration string manually. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TTY-3-NOPROCESS : Cannot create [chars] process

| | |
|---------------------------|---|
| Explanation | Failed creating the process. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

TTYMON

%TTYMON-3-INIT : The software which monitors ownership of the console port cannot be initialized correctly

| | |
|---------------------------|---|
| Explanation | The Host Manager process on the Route Processor, and only the Route Processor, is responsible for determining which process has control of the console port, either IOSd or an IOSXE process. A user can initiate a switch in ownership by entering the 'send break' command at a telnet prompt to switch from IOSd to a shell instance. Control is returned to IOSd by exiting the shell instance. The component within the Host Manager responsible for this has encountered an initialization error and console monitoring is no longer available. |
| Recommended Action | Check the status of the Host Manager process. Check the Host Manager log files for further indications as to why the initialization failed and if necessary restart the machine. |

%TTYMON-3-CHASFS : The software which monitors ownership of the console port cannot [chars] a filesystem configuration value.

| | |
|---------------------------|---|
| Explanation | The Host Manager process on the Route Processor, and only the Route Processor, is responsible for determining which process has control of the console port, either IOSd or an IOSXE process. A user can initiate a switch in ownership by by entering the 'send break' command at a telnet prompt to switch from IOSd to a shell instance. Control is returned to IOSd by exiting the shell instance. The component within the Host Manager responsible for monitoring a change of console ownership uses the filesystem to store various settings. This error indicates that the daemon encountered a problem either reading or writing a value from/to the filesystem. |
| Recommended Action | Check the log files for the Host Manager and search for entries related to 'ttymon' and 'chasfs' and this should give an indication as to why the operation failed. Check available resources and see if other daemons are also experiencing problems with the chassis filesystem since this may indicate a more pervasive problem. If so the reboot the box. |

%TTYMON-3-AGETTY : Cannot initiate a switch in console ownership. A required program could not be launched successfully.

| | |
|---------------------------|--|
| Explanation | The Host Manager process on the Route Processor, and only the Route Processor, is responsible for determining which process has control of the console port, either IOSd or an IOSXE process. A user can initiate a switch in ownership by by entering the 'send break' command at a telnet prompt to switch from IOSd to a shell instance. Control is returned to IOSd by exiting the shell instance. Switching ownership of the console port is initiated by the user entering a 'send break' command at a telnet prompt. The Host Manager launches one or more programs to authenticate users and to provide a shell instance. One or more of these programs has not been configured correctly. |
| Recommended Action | Some required programs are either not available or not configured correctly or are failing for some reason. If this occurs after a recent upgrade it is possible that the upgrade has corrupted the current installation. |

TUN

%TUN-3-API_ARGS : unexpected arguments: [chars], [chars]

| | |
|---------------------------|---|
| Explanation | A public tunnel component api was driven with arguments outside the expected boundaries. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-TUN_DB_IF : Operation on tunnel interface table failed for [chars] - [chars]

| | |
|--------------------|--|
| Explanation | Manipulation of the tunnel interface table failed. |
|--------------------|--|

%TUN-5-TUN_DB_IF : Operation on tunnel interface table failed for [chars] - [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%TUN-5-RECURDOWN : [chars] temporarily disabled due to recursive routing

| | |
|---------------------------|--|
| Explanation | When routing the same payload protocol over a carrier protocol (tunneling IP over IP, for example), it is possible to misconfigure your network so that you will try to route to the tunnel destination address via the tunnel. This is usually caused by a misconfiguration of the tunnel or a temporary instability due to route flapping elsewhere in your network. It is important to take steps to ensure that routing information between the carrier networks and the payload networks is not allowed to mix. If the router discovers a recursive routing problem, it will temporarily shut down the tunnel interface for a few minutes so that the situation that is causing this problem can resolve itself as routing protocols converge. If the problem is caused by misconfiguration, the link may oscillate indefinitely. |
| Recommended Action | No action is required. |

%TUN-5-RECURDOWN_SRC : [chars] linestate down, recursive source interface, next output [chars]

| | |
|---------------------------|---|
| Explanation | Whilst evaluating tunnel linestate we revisited a source interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-ENDPOINT_STORE : Operation [chars] failed for [chars]

| | |
|---------------------------|---|
| Explanation | Manipulation of the tunnel endpoint store failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-MULTI_KEYS_INFO : [chars] [chars]

| | |
|--------------------|--|
| Explanation | Manipulation of the tunnel keys database failed. |
|--------------------|--|

%TUN-3-MULTI_KEYS_INFO : [chars] [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%TUN-3-MULTI_KEYS_INFO_ERROR : [chars] [dec]

| | |
|---------------------------|---|
| Explanation | Manipulation of the tunnel keys database failed because of incorrect idb_index. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-4-UDLR_IDB_ERROR : UDLR [chars] - [chars]

| | |
|---------------------------|--|
| Explanation | An error was encountered on a udlr interface |
| Recommended Action | No action is required. |

%TUN-3-ENDPOINT_ERROR : [chars] [chars]

| | |
|---------------------------|--|
| Explanation | An internal software error occurred when manipulating the tunnel endpoint database |
| Recommended Action | No action is required. |

%TUN-5-IGNOREICMPMTU : [chars] ignoring received ICMP Type 3 Code 4, due to pmtud min-mtu setting

| | |
|---------------------------|--|
| Explanation | An ICMP Type 3 Code 4 (fragmentation needed and DF set) packet has been received. This packet has specified a Next-Hop MTU smaller than the tunnel current minimum path mtu discovery mtu value. The ICMP packet has been ignored and the MTU of the tunnel has not been changed. |
| Recommended Action | If you want the ICMP packet to be accepted and to be used to decrease the tunnel MTU then use the tunnel path-mtu-discovery min-mtu command to decrease the minimum mtu allowed. The min-mtu specified is the minimum tunnel payload mtu allowed. Use the show interface tunnel command to view the current path mtu discovery settings. |

%TUN-5-IGNOREICMP6MTU : [chars] ignoring received ICMP6 Type 2 Code 0 , due to pmtud min-mtu setting

Explanation An ICMP6 Type 2 Code 0 (ICMP6 Packet Too Big message) packet has been received. This packet has specified a Next-Hop MTU smaller than the tunnel current minimum path mtu discovery mtu value. The ICMP6 packet has been ignored and the MTU of the tunnel has not been changed.

Recommended Action If you want the ICMP6 packet to be accepted and to be used to decrease the tunnel MTU then use the **tunnel path-mtu-discovery min-mtu** command to decrease the minimum mtu allowed. The min-mtu specified is the minimum tunnel payload mtu allowed. Use the **show interface tunnel** command to view the current path mtu discovery settings.

%TUN-3-MTUCONFIGEXCEEDSL2MTU_IPV4 : [chars] IPv4 MTU configured [int] exceeds tunnel maximum MTU [int]

Explanation An IPv4 MTU value is configured on the tunnel interface and this value exceeds the tunnel's maximum MTU. This message is typically observed when the tunnel header size changes or when the MTU of the underlying exit interface changes. As a result of either, the tunnel maximum MTU can change. This message can also be observed when using an IPv6 tunnel to carry IPv4 since IPv4 MTU config in this case allows for a value to be configured that is greater than the tunnel's maximum MTU. As a result of any of these conditions, packets may be dropped.

Recommended Action If a specific IPv4 MTU value is not required, it is recommended that you leave the value at the default by typing **no ip mtu** on the tunnel interface. If a specific value is required, it is recommended that you check the interface MTU value from the **show interface tunnel** command and adjust **ip mtu** on the tunnel interface to be lower than or equal to this.

%TUN-3-MTUCONFIGEXCEEDSL2MTU_IPV6 : [chars] IPv6 MTU configured [int] exceeds tunnel maximum MTU [int]

Explanation An IPv6 MTU value is configured on the tunnel interface and this value exceeds the tunnel's maximum MTU. This message is typically observed when the tunnel header size changes or when the MTU of the underlying exit interface changes. As a result of either, the tunnel maximum MTU can change. This message can also be observed when using an IPv6 tunnel to carry IPv6 since IPv6 MTU config in this case allows for a value to be configured that is greater than the tunnel's maximum MTU. As a result of any of these conditions, packets may be dropped.

Recommended Action If a specific IPv6 MTU value is not required, it is recommended that you leave the value at the default by typing **no ipv6 mtu** on the tunnel interface. If a specific value is required, it is recommended that you check the interface MTU value from the **show interface tunnel** command and adjust **ipv6 mtu** on the tunnel interface to be lower than or equal to this.

%TUN-4-MTUCONFIGLESSTHAN_MINIPV4MTU : [chars] IPv4 MTU [int] is lesser than the minimum IP MTU [int], fragmentation may occur

| | |
|---------------------------|---|
| Explanation | The IPv4 MTU value calculated on the tunnel interface is less than the minimum IP MTU. The MTU of the underlying exit interface of the tunnel is too small. As a result, fragmentation of the transport packet may occur before this goes out of the underlying exit interface. |
| Recommended Action | If a specific MTU value is not required for the exit interface, it is recommended that you leave the value at the default by typing no mtu on the exit interface. If a specific value is required, it is recommended that you check the MTU value from the show interface command for the exit interface and adjust mtu on the tunnel exit to be higher than this. |

%TUN-4-MTUCONFIGEXCEEDSTRMTU_IPV4 : [chars] IPv4 MTU configured [int] exceeds tunnel transport MTU [int]

| | |
|---------------------------|--|
| Explanation | An IPv4 MTU value has been configured on the tunnel interface and this value exceeds the tunnel's transport (default) MTU. As a result, fragmentation of the transport packet may occur before this goes out of the underlying exit interface. |
| Recommended Action | If a specific IPv4 MTU value is not required, it is recommended that you leave the value at the default by typing no ip mtu on the tunnel interface. If a specific value is required, it is recommended that you check the tunnel transport MTU value from the show interface tunnel command and adjust ip mtu on the tunnel interface to be lower than or equal to this. |

%TUN-4-MTUCONFIGEXCEEDSTRMTU_IPV6 : [chars] IPv6 MTU configured [int] exceeds tunnel transport MTU [int]

| | |
|---------------------------|--|
| Explanation | An IPv6 MTU value has been configured on the tunnel interface and this value exceeds the tunnel's transport (default) MTU. As a result, fragmentation of the transport packet may occur before this goes out of the underlying exit interface. |
| Recommended Action | If a specific IPv6 MTU value is not required, it is recommended that you leave the value at the default by typing no ipv6 mtu on the tunnel interface. If a specific value is required, it is recommended that you check the tunnel transport MTU value from the show interface tunnel command and adjust ipv6 mtu on the tunnel interface to be lower than or equal to this. |

%TUN-4-MTUDEFAULTEXCEEDSL2MTU_IPV4 : [chars] transport MTU [int] exceeds [chars] configured IPv4 MTU [int], fragmentation may occur

| | |
|---------------------------|---|
| Explanation | A default MTU value has been configured on the tunnel and this value exceeds the underlying physical interface MTU. As a result, fragmentation of the transport packet may occur before this goes out of the underlying exit interface. |
| Recommended Action | If possible, increase the size of the IPv4 MTU on the underlying physical interface using ip mtu . |

%TUN-5-TUN_TABLE : Operation [chars] on tunnel table failed for [chars] - [chars]

| | |
|---------------------------|---|
| Explanation | Manipulation of the tunnel table failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-DECAP_OCE : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred in the tunnel subsystem which is responsible for building forwarding for the purposes of decapsulation |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-DECAP_TINFO : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred in the tunnel subsystem which is responsible for driving forwarding based on the tinfo configuration |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-ILLEGAL_ARGS : Illegal arguments - [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-TUN_HWIDB_RECYCLE : Failed to recycle hwidb for Tunnel [dec] index [dec]

| | |
|--------------------|---------------------------------------|
| Explanation | Recycling of tunnel interface failed. |
|--------------------|---------------------------------------|

%TUN-5-TUN_HWIDB_RECYCLE : Failed to recycle hwidb for Tunnel [dec] index [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%TUN-5-TUN_SWIDB_RECYCLE : Failed to recycle swidb for Tunnel [dec] index [dec]

| | |
|---------------------------|---|
| Explanation | Recycling of tunnel interface failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-TUN_HWIDB_DELETE : Failed to delete hwidb for Tunnel [dec] index [dec]

| | |
|---------------------------|---|
| Explanation | Deletion of tunnel interface failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-TUN_SWIDB_DELETE : Failed to delete swidb for Tunnel [dec] index [dec]

| | |
|---------------------------|---|
| Explanation | Deletion of tunnel interface failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-TUN_INTF_STATE_RESET : Failed to reset tunnel interface state for [chars]

| | |
|---------------------------|---|
| Explanation | Reset of tunnel interface failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-TUN_UNIT_LIST_INSERT : Failed to add entry unit [dec] to tunnel unit list

| | |
|---------------------------|---|
| Explanation | Insertion of tunnel unit failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-TUN_HWIDB_LIST_INSERT : Failed to add [chars] to tunnel hwidb list

| | |
|---------------------------|---|
| Explanation | Insertion of tunnel to hwidb list failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-TUN_UNIT_LIST_DELETE : Failed to delete entry unit [dec] to tunnel unit list

| | |
|---------------------------|---|
| Explanation | Deletion from tunnel unit failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-TUN_HWIDB_LIST_DELETE : Failed to delete [chars] from tunnel hwidb list

| | |
|---------------------------|---|
| Explanation | Deletion of tunnel from hwidb list failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-TUN_LIST_CREATE : Failed to create tunnel list [chars]

| | |
|--------------------|---------------------------------|
| Explanation | Creation of tunnel list failed. |
|--------------------|---------------------------------|

%TUN-5-TUN_LIST_CREATE : Failed to create tunnel list [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%TUN-5-HW_IF_INDEX_ILLEGAL : Attempt to create tunnel interface for [chars] with illegal index: [dec]

| | |
|---------------------------|---|
| Explanation | Creation of tunnel interface failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-INIT_ERROR : A critical error [chars] occurred during initialization

| | |
|---------------------------|---|
| Explanation | Creation of tunnel subsystem failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-TUN_SIDB2TUNS : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-TUN_SB : TUN_SB: [chars][chars][chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-TUN_DBG : TUN_DBG: [chars] [chars]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-TUN_HA : Tunnel HA: [chars]

| | |
|---------------------------|---|
| Explanation | Tunnel HA encountered an internal software error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-GROUPS : Tunnel Groups: [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | The tunnel group component encountered an internal software error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-WCCP_GROUP : Tunnel WCCP Groups: [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | The tunnel group component encountered an internal software error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-OTV_GROUP : Tunnel OTV Groups: [chars]: [chars]

| | |
|--------------------|---|
| Explanation | The tunnel group component encountered an internal software error |
|--------------------|---|

%TUN-3-OTV_GROUP : Tunnel OTV Groups: [chars]: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%TUN-3-L3VPN_GROUP : Tunnel L3VPN Groups: [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | The tunnel group component encountered an internal software error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-L3VPN_ENCAP_IP_PROFILE : L3VPN Encap IP : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | The L3VPN Encap IP component encountered an internal software error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-4-L3VPN_ENCAP_IP_SRC_DEL : L3VPN Encap IP : [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | The user configuration change results in a warning. This message is typically printed when the user tries to delete a loopback interface, and the loopback interface is configured as the source interface of the L3VPN encap IP profile |
| Recommended Action | It is recommended that the user removes the loopback interface as the source interface of the L3vpn encap ip profile, before deleting the loopback interface. |

%TUN-3-SIA_GROUP : Tunnel SIA Groups: [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | The tunnel group component encountered an internal software error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-6RD : [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | The tunnel 6RD feature encountered an internal software error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-6RD_INFO : [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | 6RD configuration has been removed as it is not compatible with the new sub-mode |
| Recommended Action | No action is required. |

%TUN-3-CM1 : [chars]

| | |
|---------------------------|---|
| Explanation | The tunnel classification module encountered an internal software error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-CM2 : [chars] [dec]

| | |
|---------------------------|---|
| Explanation | The tunnel classification module encountered an internal software error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-3-TUNTO : Operation: [chars], Action: [chars], Reason: [chars]

| | |
|---------------------------|---|
| Explanation | The tunnel-to module encountered an internal software error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TUN-5-L3VPN_IP_PROFILE_DELETE : l3vpn encap ip profile [chars] deleted

| | |
|---------------------------|-----------------------------------|
| Explanation | l3vpn encap ip profile is deleted |
| Recommended Action | No action is required. |

TVI_PROXY through UIPEER

- [TVI_PROXY](#)

TVI_PROXY

%TVI_PROXY-2-TVI_MSG_PROXYINIT_FAILURE : ET-Analytics - Failed to register IPC message handler, result code [int]

| | |
|---------------------------|---|
| Explanation | QFP ET-Analytics feature failed to register an IPC message handler for communication with control plane. This will cause the feature not to function. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TVI_PROXY-3-TVI_MSG_PROXY_UNKNOWN_IPMSG : ET-Analytics - Received an unknown type (code [int]), IPC message

| | |
|--------------------|---|
| Explanation | QFP ET-Analytics feature received an unknown message from another layer of ET-Analytics feature's software stack. |
|--------------------|---|

%TVI_PROXY-3-TVI_MSG_PROXY_UNKNOWN_IPMSG : ET-Analytics - Received an unknown type (code [int]), IPC message

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TVI_PROXY-3-TVI_MSG_PROXY_INVALID_MSGLEN : ET-Analytics - Received an invalid length IPC message

Explanation QFP ET-Analytics feature received an incorrect length of IPC message from another layer of ET-Analytics feature's software stack, m_enum %d, m_subtype %d, m_len %d, m_flags 0x%x, m_source %d.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TVI_PROXY-3-TVI_MSG_PROXY_ALLOC_FAILURE : ET-Analytics - Failed to get [int] bytes space for IPC reply message

Explanation QFP ET-Analytics feature detected buffer allocation failure while sending reply to a message from another layer of ET-Analytics feature's software stack.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TVI_PROXY-3-TVI_MSG_PROXY_OPENREPLY_FAIL : ET-Analytics - Failed to open reply message part of IPC packet

Explanation QFP ET-Analytics feature failed to open message part of IPC packet while sending a reply to another layer of ET-Analytics feature's software stack.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%TVI_PROXY-3-TVI_MSG_PROXY_IPCSEND_FAIL : ET-Analytics - Failed to send IPC message, result code [dec]

| | |
|---------------------------|---|
| Explanation | QFP ET-Analytics feature failed to send IPC message to another layer of ET-Analytics feature's software stack. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TVI_PROXY-3-TVI_MSG_PROXY_DEBUG_REG_FAILED :

| | |
|---------------------------|---|
| Explanation | ET-Analytics Conditional Debugging Registration failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%TVI_PROXY-4-PROXY_IPC_INVALID_MSG_LEN : [dec]:[dec] len [dec] flags [hex] source [dec]

| | |
|---------------------------|--|
| Explanation | Invalid ET-Analytics IPC message length. |
| Recommended Action | LOG_STD_ACTION |

%TVI_PROXY-3-PROXY_HSL_CREATE_FAILED :

| | |
|---------------------------|----------------------|
| Explanation | HSL creation failed. |
| Recommended Action | LOG_STD_ACTION |

%TVI_PROXY-3-PROXY_HSL_ADD_DEST_FAILED :

| | |
|---------------------------|-----------------------------|
| Explanation | HSL add destination failed. |
| Recommended Action | LOG_STD_ACTION |

%TVI_PROXY-4-PROXY_HSL_ALREADY_INIT :

| | |
|--------------------|--------------------------------|
| Explanation | HSL logger already initialized |
|--------------------|--------------------------------|

%TVI_PROXY-4-PROXY_HSL_ALREADY_INIT :

Recommended Action LOG_STD_ACTION

%TVI_PROXY-3-PROXY_HSL_MODIFY_DEST_FAILED :

Explanation HSL modify destination failed.
Recommended Action LOG_STD_ACTION

%TVI_PROXY-3-PROXY_HSL_BIND_FAILED :

Explanation HSL bind failed.
Recommended Action LOG_STD_ACTION

%TVI_PROXY-3-PROXY_HSL_ENABLE_FAILED :

Explanation HSL enable failed.
Recommended Action LOG_STD_ACTION

%TVI_PROXY-4-PROXY_HSL_NOT_INIT : [int]

Explanation HSL logger not initialized
Recommended Action LOG_STD_ACTION

%TVI_PROXY-3-PROXY_HSL_MODIFY_FAILED :

Explanation HSL modification failed.
Recommended Action LOG_STD_ACTION

%TVI_PROXY-3-PROXY_HSL_BIND_TEMPLATE_FAILED : [dec]

Explanation HSL bind tempalte failed at given index.
Recommended Action LOG_STD_ACTION

UBD

%UBD-2-INITIALIZATION_FAILED :

| | |
|---------------------------|---|
| Explanation | Initialization of ursa bootstrap process failed. |
| Recommended Action | Review UBOOTD logs taking note of the timestamp information to select specific information to review. Copy the message and other related information exactly as it appears on the console or in the system log. |

%UBD-0-MQIPC_INITIALIZATION : MQIPC initialization failed because [chars]

| | |
|---------------------------|--|
| Explanation | MQIPC initialization failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%UBD-0-MQIPC_ADVANCE : Failed to advance MQIPC queue because [chars]

| | |
|---------------------------|--|
| Explanation | The MQIPC initialization failed. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

%UBD-0-EVENT_LIBRARY : An event facility initialization or maintenance function failed because [chars]

| | |
|---------------------------|--|
| Explanation | An event facility initialization or maintenance function failed. This could be due to a software defect or system resource exhaustion. |
| Recommended Action | In most cases, the problem can be corrected by reloading the impacted hardware using the hw-module [slot subslot] slot-number reload command. If the reload fails to correct the problem, collect the output of the error message, the logs, and the output of show tech-support and provide the gathered information to a Cisco technical support representative. |

UCODE**%UCODE-3-BADCHKSUM : Bad checksum in [chars], found [hex] expected [hex]**

| | |
|---------------------------|---|
| Explanation | The microcode file is corrupted in some way; the checksum computed after reading the file from Flash does not match the one in the file. The file will not be downloaded, and the onboard ROM microcode will be used instead. |
| Recommended Action | Reload the microcode. If the message recurs, call your technical support representative for assistance. |

%UCODE-3-HDRCORRUPT : Ucode header corrupted in [chars], found [hex] expected [hex]

| | |
|---------------------------|---|
| Explanation | The microcode file is corrupted in some way; the checksum computed after reading the file from Flash does not match the one in the file. The file will not be downloaded, and the onboard ROM microcode will be used instead. |
| Recommended Action | Reload the microcode. If the message recurs, call your technical support representative for assistance. |

%UCODE-3-LDFAIL : Unable to download ucode from [chars] in slot [dec], trying [chars] ucode

| | |
|---------------------------|--|
| Explanation | For some reason, the microcode file specified by the configuration is not suitable for downloading, or another error occurred. The onboard ROM microcode will be loaded so the interface can remain operational. |
| Recommended Action | Attempt to reload the microcode. If the message recurs, call your technical support representative for assistance. |

%UCODE-3-NOFILE : Ucode file [chars] not found, system ucode loaded in slot [dec]

| | |
|---------------------------|---|
| Explanation | The file specified by the configuration was not found in Flash. The onboard ROM microcode will be loaded so the interface can remain operational. |
| Recommended Action | Use show flash to determine if the file is located in Flash. If the file is there, attempt to reload the microcode. If the message recurs, call your technical support representative for assistance. |

%UCODE-3-BADHWVER : Ucode file [chars] requires [chars] version [dec].x hardware

| | |
|---------------------------|---|
| Explanation | A mismatch was detected during an attempt to load a microcode file into an interface processor. The hardware requires a different version than the one specified. |
| Recommended Action | Use the required microcode version. |

%UCODE-3-RDFAIL : Unable to read ucode file [chars] from flash

| | |
|---------------------------|--|
| Explanation | For some reason, the microcode file was not read from Flash. Flash might be locked by another process or otherwise unavailable. |
| Recommended Action | Use the show flash command to determine whether Flash is in use and issue another microcode reload when Flash is free. If the message recurs, call your technical support representative for assistance. |

%UCODE-3-TOOBIG : File [chars] at length [dec] is too long for buffer (size [dec])

| | |
|---------------------------|---|
| Explanation | The file is too large for the buffer. The onboard ROM microcode will be loaded. |
| Recommended Action | If the error message recurs after the onboard ROM microcode is loaded, call your technical support representative for assistance. |

%UCODE-3-WRONGHARD : [chars] is [chars] ucode not [chars], microcode/hardware mismatch

| | |
|---------------------------|---|
| Explanation | The specified microcode file is for a different interface processor than specified in the configuration. The user has made a configuration error. The onboard ROM microcode will be loaded. |
| Recommended Action | Reenter your microcode configuration command after confirming the interface type and reload the microcode. |

%UCODE-5-OBSOLETE : FDDI unit [dec] has obsolete microcode: please upgrade it

| | |
|---------------------------|--|
| Explanation | This message occurs when an FDDI interface processor is found running microcode that does not support microcode CMT, which is required for all software releases from 10.2 on. |
| Recommended Action | Upgrade the microcode on the interface processor. |

%UCODE-3-VERSIONCK : Inappropriate version [int].[int] for [chars]

| | |
|---------------------------|--|
| Explanation | An attempt was made to load an inappropriate version of microcode. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%UCODE-3-NOBUF : Unable to allocate memory for ucode buffer

| | |
|--------------------|---|
| Explanation | A buffer is required to decompress microcode before loading it into an interface processor. This buffer could not be allocated for some reason. |
|--------------------|---|

%UCODE-3-NOBUF : Unable to allocate memory for ucode buffer

| | |
|---------------------------|--|
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |
|---------------------------|--|

%UCODE-3-NOMEMORY : Unable to allocate memory during microcode reload

| | |
|--------------------|--|
| Explanation | An attempt at memory allocation failed while downloading microcode to Interface processor. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |
|---------------------------|--|

%UCODE-3-NOROM : Invalid attempt to load ROM ucode in slot [dec]

| | |
|--------------------|---|
| Explanation | Some interface processors cannot load microcode from ROM. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Remove the erroneous configuration statement. |
|---------------------------|---|

%UCODE-3-IPCINITFAIL : Unable to initialize IPC [chars] services

| | |
|--------------------|---|
| Explanation | The InterProcess Communication (IPC) service used to download microcode to certain interface processors has failed to initialize. |
|--------------------|---|

| | |
|---------------------------|--|
| Recommended Action | Certain Interface Processors will not load properly. The router must be reloaded to clear the problem. |
|---------------------------|--|

%UCODE-3-IPCBUFFAIL : Unable to obtain IPC resources

| | |
|--------------------|--|
| Explanation | The InterProcess Communication (IPC) service used to download microcode to certain interface processors has failed to obtain a buffer. |
|--------------------|--|

| | |
|---------------------------|---|
| Recommended Action | Certain interface processors will not load properly. Try the reload command again. If this message recurs, call your technical support representative for assistance. |
|---------------------------|---|

%UCODE-3-IPCINVALID : Invalid IPC request ([dec]) received from ([hex])

| | |
|--------------------|--|
| Explanation | The InterProcess Communication (IPC) service used to download microcode to certain interface processors has received an invalid message. |
|--------------------|--|

| | |
|---------------------------|--|
| Recommended Action | Verify that the proper revisions of code are selected. |
|---------------------------|--|

%UCODE-3-SRCTYPE : Invalid Ucode source type ([dec])

| | |
|---------------------------|---|
| Explanation | Microcode source type as specified is not supported on the given platform |
| Recommended Action | Verify that the proper revisions of code are selected. |

UC_SAF

%UC_SAF-3-COMM_INT_ERR : Internal error occurred: [chars]

| | |
|---------------------------|---|
| Explanation | |
| Recommended Action | If the error is due to lack of memory check the size of free memory to make sure there is enough to run SAF service |

%UC_SAF-3-COMM_OUTOFSYNC_ERR : [chars] error occurred with client [[chars]] on channel[[dec]]

| | |
|---------------------------|--|
| Explanation | COMM process is out of sync with client |
| Recommended Action | Disable/delete the channel and retry the operation. If that does not help then shutdown and restart the client's SAF service |

%UC_SAF-3-COMM_ENCODE_ERR : [chars] while encoding element [chars]

| | |
|---------------------------|--|
| Explanation | Error occurred while trying to encode the client supplied data |
| Recommended Action | Modify the element that failed to encode using client's configuration clis |

%UC_SAF-3-COMM_FWDR_REG_ERR : [chars] for operation [chars] for client [[chars]] on channel [[dec]]

| | |
|---------------------------|--|
| Explanation | Error occurred while trying to request an action from SAF Forwarder |
| Recommended Action | If the failure is due to lack of memory, then check the size of free memory to ensure there is enough memory to run SAF service. If the failure is due to invalid AS or vrouter name, check the values configured in the client with those of the Forwarder. If the error is due to mismatch between client and forwarder, then undo the current operation and retry |

%UC_SAF-3-COMM_FWDR_ERR : [chars] for operation [chars] on instance [[int].[int].[int].[int]] sub-service [[dec]] for client [[chars]] on channel [[dec]]

| | |
|--------------------|---|
| Explanation | Error occurred while trying to request an action from SAF Forwarder |
|--------------------|---|

%UC_SAF-3-COMM_FWDR_ERR : [chars] for operation [chars] on instance [[int],[int],[int],[int]] sub-service [[dec]] for client [[chars]] on channel [[dec]]

Recommended Action If the failure is due to lack of memory, then check the size of free memory to make sure there is enough memory to run SAF service. If the error is due to mismatch between client and forwarder, then undo the current operation and retry. If the error is due to publish data is too large, then reduce the amount of data to be advertised and retry

%UC_SAF-3-COMM_NOTIFY_ERR : [chars] for operation [chars] on instance [[int],[int],[int],[int]] sub-service [[dec]] for client [[chars]] on channel [[dec]]

Explanation Error occurred while acting upon a notification from SAF Forwarder

Recommended Action If the failure is due to lack of memory, then check the size of free memory to make sure there is enough memory to run SAF service. If the error is due to invalid data received in the SAF advertisement, turn on error debugs and re-publish the service from the specified instance. Based on the information in the error debugs, check and correct the configuration on the remote publisher

%UC_SAF-3-COMM_DECODE_ERR : [chars] while decoding [chars]

Explanation Error occurred while trying to decode the SAF advertisement

Recommended Action Turn on error debugs and re-publish the specified instance. Based on the information in the error logs, check and correct the configuration on the remote publisher

%UC_SAF-6-COMM_CHANNEL_UNREG : [chars] for client [[chars]] on channel [[dec]] could not be completed because channel was unregistered

Explanation The most likely reason could be that the forwarder sent REGISTRATION notification message to UC SAF COMM process which causes the channel to be unregistered. Any messages from VSAF client in the interim for that channel will fail

Recommended Action Take the necessary steps to re-instate the vrouter configurations. Then do shut followed by no shut on VSAF channel cli

%UC_SAF-3-VSAF_CLIENT_INSV_ERR : Could not bring voice saf client in service

Explanation Failed to instantiate client abstraction or initialization/ registration with other support modules has failed while voice service saf command was executed

Recommended Action Check the size of free memory to make sure there is enough memory to run SAF service

%UC_SAF-3-VSAF_CLIENT_PROCESS_CONTROL_ERR : Client process event loop detected - [chars]

| | |
|---------------------------|---|
| Explanation | Invalid state or unexpected events detected at the client manager process execution |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UC_SAF-3-VSAF_CLIENT_TASK_QUEUE_ERROR : Unable to enqueue task event [chars] ([dec]) to process watched queue

| | |
|---------------------------|--|
| Explanation | An internal event was dropped because it could not be added to the queue, most likely due to system's memory constraints. This may sometimes result in internal data structures to get into undeterministic state. |
| Recommended Action | Check the size of free memory to make sure there is enough memory. |

%UC_SAF-3-VSAF_CLIENT_COMM_QUEUE_ERROR : Unable to enqueue uc-comm event [chars] ([dec]) to process watched queue

| | |
|---------------------------|--|
| Explanation | An event to lower layer was dropped because it could not be added to the queue, most likely due to system's memory constraints. This may sometimes result in data and state inconsistencies across one or more modules or even nodes. Say in the case of publish the other nodes in the network who has subscribed to the service on this router may not get the latest advertised service data. |
| Recommended Action | Check the size of free memory to make sure there is enough memory. Manually execute publish command when the memory conditions on the router improves to ensure the latest profile is advertised to other subscribed nodes. |

%UC_SAF-3-VSAF_CLIENT_TASK_BAG_ERROR : Error while performing task bag [chars] corresponding to task event [dec] job.

| | |
|---------------------------|--|
| Explanation | A transient object that carries task parameters could not be instantiated or is corrupted. This may result in improper execution of the associated task which inturn can affect the ongoing operation. |
| Recommended Action | Check the size of free memory to make sure there is enough memory. |

%UC_SAF-3-VSAF_CLIENT_SUBS_NOTIFICATION_ERROR : Error while adding or updating subscription notification from instance [dec]:[int].[int].[int].[int]

| | |
|---------------------------|---|
| Explanation | Subscription notification received from the specified instance could not be added in the database. This could be because none of the advertised patterns were found to be valid or trunk-route parameters were invalid or the SAF DN database was already full. |
| Recommended Action | If the error is due to invalid advertisement, turn on error debugs and re-publish the specified instance. Based on the error logs check and correct the configuration on the remote publisher |

%UC_SAF-6-VSAF_CHANNEL_REGISTER : Client channel id [dec] is [chars]

| | |
|---------------------------|---|
| Explanation | Configured voice saf operational state |
| Recommended Action | If the channel went down unintentionally it is probably due to misconfiguration resulting in error. Check if the configured channel arguments matches those under router eigrp command level. Do shut/no shut under the channel to reset the voice saf channel operations |

%UC_SAF-6-VSAF_SERVICE_WITHDRAWN_INVALID_PROFILE : Service [chars] ([dec]) with inst-id <[int].[int].[int].[int]> has been withdrawn due to invalid profile [dec] detection.

| | |
|---------------------------|--|
| Explanation | Withdrawal of service triggered due to change in state of configured profile. |
| Recommended Action | If the service was unintentionally withdrawn it was probably due to certain critical parameters missing in the profile or if the state of the hardware used in the profile is down. Say ip interface state used in the trunk-route is down. Please verify and re-do the publish command from the config or exec level. |

%UC_SAF-6-VSAF_SERVICE_PUBLISH_INVALID_PROFILE : Attempted publish of service [chars] ([dec]) with tag [dec] failed due to invalid profile.

| | |
|---------------------------|---|
| Explanation | The user or system triggered service advertisement failed due to the detection of invalid or incomplete profile. |
| Recommended Action | Please check for the completeness of the service profile constructs. If they look ok, pls check the status of the interfaces used under the trunk-route profile session parameters. |

%UC_SAF-3-VSAF_CLIENT_INTERNAL : [chars]

| | |
|--------------------|---|
| Explanation | An internal software error has occurred |
|--------------------|---|

%UC_SAF-3-VSAF_CLIENT_INTERNAL : [chars]

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

UDEV

%UDEV-3-UDEVPERMS : An invalid permissions value, [chars], was found in a udev file

| | |
|---------------------------|--|
| Explanation | The udev files for a particular filesystem contain a description the file system. If the permissions attribute is not recognized then this file system may run with incorrect permissions. |
| Recommended Action | No action is required. |

UDLD

%UDLD-3-UDLD_INTERNAL_ERROR : UDLD internal error: [chars]

| | |
|---------------------------|--|
| Explanation | A softare sanity check failed in the course of UDLD processing. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UDLD-3-UDLD_INTERNAL_IF_ERROR : UDLD internal error, interface [chars]: [chars]

| | |
|---------------------------|--|
| Explanation | A softare sanity check failed in the course of UDLD processing. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UDLD-3-UDLD_IDB_ERROR : UDLD error handling [chars] interface: [chars]

| | |
|---------------------------|---|
| Explanation | A software error occurred in UDLD processing associated with a specific interface. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UDLD-4-UDLD_PORT_DISABLED : UDLD disabled interface [chars], [chars] detected

| | |
|---------------------------|---|
| Explanation | An interface was disabled because UDLD protocol detected the cause indicated on the interface indicated. Cause is likely due to bad interface hardware or cable misconfiguration. User should investigate. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UDLD-6-UDLD_PORT_RESET : UDLD reset interface [chars]

| | |
|---------------------------|---|
| Explanation | A port which had been disabled for UDLD has been reset. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UDLD-4-UDLD_PORT_FAILURE : UDLD failure reported per user request, interface [chars], [chars] detected.

| | |
|--------------------|---|
| Explanation | An interface failure was reported because UDLD protocol detected the cause indicated on the interface. Cause is likely due to bad interface hardware or cable misconfiguration. Interface not err-disabled as user choose to see error-report. User should investigate and take action. |
|--------------------|---|

%UDLD-4-UDLD_PORT_FAILURE : UDLD failure reported per user request, interface [chars], [chars] detected.

| | |
|---------------------------|--|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|--|

UFAST_MCAST_SW**%UFAST_MCAST_SW-4-MEM_NOT_AVAILABLE : No memory is available for transmitting UplinkFast packets on Vlan [dec].**

| | |
|---------------------------|---|
| Explanation | UplinkFast packets will not be transmitted on Vlan %d due to a lack of memory. |
| Recommended Action | Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. |

%UFAST_MCAST_SW-3-PROC_START_ERROR : No process available for transmitting UplinkFast packets.

| | |
|---------------------------|--|
| Explanation | UplinkFast packets will not be transmitted as the process could not be created. |
| Recommended Action | UplinkFast will not work unless you reload. If this problem persists even after reload, please contact your Cisco Technical Support representative with the configuration and technical support information. |

UI**%UI-6-NOHANDLER : module type [int] subtype [int]**

| | |
|---------------------------|--|
| Explanation | A UI message was received containing an unrecognized module type or module subtype |
| Recommended Action | LOG_STD_ACTION |

%UI-3-REPLY : module type [int] subtype [int]

| | |
|---------------------------|--|
| Explanation | A UI reply message failed in the IPC send. Sender will not get reply |
| Recommended Action | LOG_STD_ACTION |

%UI-3-IPC_ALLOC : module type [int] subtype [int]

| | |
|---------------------------|--|
| Explanation | IPC packet allocation failed for UI reply. Sender will not get reply |
| Recommended Action | LOG_STD_ACTION |

UICFGEXP

%UICFGEXP-3-MESSAGE_ERROR : Unable to process message for '[chars]': [chars]

| | |
|---------------------------|---|
| Explanation | A message was received by the configuration export module which could not be processed. The message has been discarded. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UICFGEXP-3-WRITE_FAILED : Unable to write configuration for '[chars]': [chars]

| | |
|---------------------------|---|
| Explanation | The configuration export module failed to write the server configuration files. The server configuration change has not occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UICFGEXP-6-SERVER_NOTIFIED_START : Server [chars] has been notified to start

| | |
|---------------------------|--|
| Explanation | The server has been notified to start. |
| Recommended Action | No action is required. |

%UICFGEXP-6-SERVER_NOTIFIED_STOP : Server [chars] has been notified to stop

| | |
|---------------------------|---------------------------------------|
| Explanation | The server has been notified to stop. |
| Recommended Action | No action is required. |

%UICFGEXP-3-LIBRARY_ERROR : Error loading library '[chars]': [chars]

| | |
|---------------------------|---|
| Explanation | A configuration message was received which required a library to be loaded. The library failed to load. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UICFGEXP-3-SYMBOL_ERROR : Error loading library symbol '[chars]' from '[chars]': [chars]

| | |
|---------------------------|---|
| Explanation | A configuration message was received which required a library to be loaded. The library failed to load all required symbols. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

UIPEER**%UIPEER-3-INVALID_EPOCH_MESSAGE : The peer process was unable to process an incoming epoch update message from the shell-manager**

| | |
|---------------------------|--|
| Explanation | For each new type definition language (TDL) epoch, the Shell Manager broadcasts a change notification message to its peers. If the Shell Manager's message is incorrect or corrupt, the peers are unable to identify the new epoch. In this case, the peers reject the proposed epoch. |
| Recommended Action | Check the trace files for the Shell Manager failed process. Check or undo any recently installed packages, then restart the system. |

%UIPEER-3-INVALID_DEBUG_MESSAGE : The peer process was unable to process an incoming message for 'debug all' from the shell-manager

| | |
|---------------------------|--|
| Explanation | When the 'debug all' command is issued, the Shell Manager broadcasts a notification of the command request to its peers. If the notification message has been corrupted or incorrectly created, the peers cannot complete the requested operation. |
| Recommended Action | Check the trace files for the Shell Manager failed process. Restart the system. |

%UIPEER-3-INVALID_HOSTINFO_MESSAGE : The peer process was unable to process an incoming message for host info from the shell-manager

Explanation When host information, such as the hostname, changes, the Shell Manager broadcasts a notification of the change to its peers. If the notification message has been corrupted or incorrectly created, the peers cannot complete the requested operation.

Recommended Action Check the trace files for the Shell Manager failed process. Restart the system.

%UIPEER-2-TDL_MESSAGE : Cannot construct an IPC message for library. The message name is [chars] and the reason is: [chars]

Explanation A problem occurred while constructing a type definition language (TDL) message or setting a field in a TDL message. If the problem occurred during construction of a TDL message, then the system is out of memory. If the problem occurred while setting a field in the TDL message, there is a library mismatch issue.

Recommended Action Check [uipeer] ERR entries in the log files for message reporting problems.

%UIPEER-3-NO_PEER : A process was unable to retrieve a shell-manager peer handle.

Explanation A process was attempting to communicate with the Shell Manager daemon using the integrated [uipeer] component. The error occurred because the peer instance could not be found.

Recommended Action Check [uipeer] ERR entries in the log files for message reporting problems.

%UIPEER-5-TIMER_ACCURACY_TEST : Timer Accuracy Test [chars].

Explanation Test result of Timer Accuracy Test

Recommended Action No action is required. This is informational message

UMBRELLA through VIDB

UMBRELLA

%UMBRELLA-6-UMBRELLA_DIRECT_CLOUD_ACCESS : Direct cloud access is enabled

| | |
|---------------------------|---|
| Explanation | Umbrella Direct cloud access Enabled |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-3-DNSCRYPT_CERT_MAGIC_MISMATCH : Invalid certificate received: Certificate magic mismatch

| | |
|---------------------------|---|
| Explanation | Umbrella DNSCrypt certificate magic mismatch |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-3-DNSCRYPT_UMBRELLA_OUT_FAILURE : DNSCrypt Channel connect failed: Interface with umbrella out config not found

| | |
|---------------------------|---|
| Explanation | Umbrella out is required on an interface for DNSCrypt channel connect |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-3-DNSCRYPT_CERT_MAJOR_VER_MISMATCH : Invalid certificate received: Certificate major version mismatch

| | |
|---------------------------|--|
| Explanation | Umbrella DNSCrypt certificate major version mismatch |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-3-DNSCRYPT_CERT_MINOR_VER_MISMATCH : Invalid certificate received: Certificate minor version mismatch

| | |
|--------------------|--|
| Explanation | Umbrella DNSCrypt certificate minor version mismatch |
|--------------------|--|

%UMBRELLA-3-DNSCRYPT_CERT_MINOR_VER_MISMATCH : Invalid certificate received: Certificate minor version mismatch

Recommended Action This message is for informational purposed only

%UMBRELLA-3-DNSCRYPT_CERT_SIGNATURE_MISMATCH : Invalid certificate received: Certificate signature mismatch

Explanation Umbrella DNSCrypt certificate signature mismatch

Recommended Action This message is for informational purposed only

%UMBRELLA-3-DNSCRYPT_CERT_INVALID_START_TIME : Invalid certificate received: Certificate not active yet: start time [chars]

Explanation Umbrella DNSCrypt certificate not active yet

Recommended Action This message is for informational purposed only

%UMBRELLA-3-DNSCRYPT_CERT_INVALID_END_TIME : Invalid certificate received: Certificate expired on [chars]

Explanation Umbrella DNSCrypt certificate expired

Recommended Action This message is for informational purposed only

%UMBRELLA-3-DNSCRYPT_CERT_SUCCESS : Umbrella DNSCrypt certificate successfully received

Explanation Umbrella DNSCrypt certificate successfully received

Recommended Action This message is for informational purposed only

%UMBRELLA-3-DNSCRYPT_CERT_FAILURE : Failed to fetch Umbrella DNSCrypt certificate

Explanation Failed to fetch Umbrella DNSCrypt certificate

Recommended Action This message is for informational purposed only

%UMBRELLA-3-DNS_RES_FAILURE : Failed to resolve name [chars] Retry attempts:[dec]

| | |
|---------------------------|---|
| Explanation | Umbrella dns resolution for device registration server is failed. |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-3-SSL_HANDSHAKE_FAILURE : SSL handshake failed

| | |
|---------------------------|---|
| Explanation | Umbrella device registration failed,as SSL handshake did not succed |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-3-CONNECT_FAILURE : socket connection to the server [chars] failed ,Retry attempts:[dec]

| | |
|---------------------------|---|
| Explanation | Umbrella device registration failed, as socket connect failed |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-3-NO_UMBRELLA_OUT_FAILURE : umbrella out is not configured on wan interface

| | |
|---------------------------|---|
| Explanation | Umbrella out is required on wan for device registration |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-6-DEV_REG_SUCCESS : Device id for [chars]/tag [chars]/[chars] is [chars]

| | |
|---------------------------|--|
| Explanation | Device registration for the interface/profile is successfull |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-3-DEV_REG_UNAUTHORIZED : Invalid token/API key

| | |
|---------------------------|---|
| Explanation | Token/API key used for device registration is invalid |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-3-DEV_REG_INTERNAL_SERVER_ERROR : Internal Server Error

| | |
|--------------------|-----------------------------------|
| Explanation | Server is not down/not responding |
|--------------------|-----------------------------------|

%UMBRELLA-3-DEV_REG_INTERNAL_SERVER_ERROR : Internal Server Error

Recommended Action This message is for informational purposed only

%UMBRELLA-6-DEV_REG_CONFLICT : Device id is already assigned

Explanation Device id for this Token/API key is already assigned

Recommended Action This message is for informational purposed only

%UMBRELLA-6-DEV_REG_BAD_REQUEST : Request for device registration does not contain required parameters

Explanation Request for device registration does not contain required parameters

Recommended Action This message is for informational purposed only

%UMBRELLA-3-UMBRELLA_SPLITDNS_MAX_PAT_EXCEEDED : UMBRELLA local domain bypass (maximum 64 rules allowed): [chars]

Explanation Max number of local domain patterns cannot exceed 64 as allowed by DSA.

Recommended Action This message is for informational purposed only

%UMBRELLA-3-UMBRELLA_SPLITDNS_MAX_PAT_LEN_EXCEEDED : UMBRELLA splitdns ignoring pattern as length exceeds maximum limit.[chars]

Explanation Local domain pattern length cannot exceed 100 for DSA.

Recommended Action This message is for informational purposed only

%UMBRELLA-3-UMBRELLA_HA_INIT_FAILURE : Failed to register with RF, rc = [dec]

Explanation Failed to register with RF during system initialization

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%UMBRELLA-3-UMBRELLA_HA_SYNC_FAILED : UMBRELLA HA syncing [chars] failed.

| | |
|---------------------------|---|
| Explanation | syncing of info to the peer node failed. |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-6-UMBRELLA_HA_MSG_RECV : UMBRELLA HA message [chars] received.

| | |
|---------------------------|---|
| Explanation | Message HA message received from peer node. |
| Recommended Action | This message is for informational purposed only |

%UMBRELLA-3-DEV_REG_TOKEN_INVALID : Token expired

| | |
|---------------------------|--|
| Explanation | Token used for device registration expired |
| Recommended Action | Reactivtae Umbrella license |

%UMBRELLA-3-DEV_REG_ORG_NOT_EXISTS : Org does not exists

| | |
|---------------------------|------------------------------|
| Explanation | Organization does not exists |
| Recommended Action | Reactivtae Umbrella license |

URLF

%URLF-6-SITE_ALLOWED : [chars]Client [IP_address]:[dec] accessed server [IP_address]:[dec]

| | |
|---------------------------|---|
| Explanation | This message indicates that all URLs belongs to the server are allowed to be passed with out URL filter servers authentication |
| Recommended Action | This message is just for informational purpose, it can be used to keep track of number of GET request that are sent from client to server |

%URLF-4-SITE_BLOCKED : [chars]Access denied for the site '[chars]', client [IP_address]:[dec] server [IP_address]:[dec]

| | |
|---------------------------|---|
| Explanation | This message indicates that all underlying URLs of the specified domain are blocked |
| Recommended Action | This indicates that an user has made an attempt to browse a forbidden site |

%URLF-6-URL_ALLOWED : [chars]Access allowed for URL '[chars]', client [IP_address]:[dec] server [IP_address]:[dec]

Explanation This message indicates that the http GET request sent from client is allowed to be transmitted to http server

Recommended Action This is just an informational message

%URLF-4-URL_BLOCKED : [chars]Access denied URL '[chars]', client [IP_address]:[dec] server [IP_address]:[dec]

Explanation This message indicates that access to the requested URL is denied and the corresponding TCP connection is closed

Recommended Action This indicates that an user has made an attempt to browse a forbidden site

%URLF-3-SERVER_DOWN : [chars]Connection to the URL filter server [IP_address] is down

Explanation This messages indicates that a connection between the router and a url filter server is down. If more than one servers are configured the router will make use of other servers for URL authentication, otherwise it will check whether allow mode is 'on' or 'off'. If allow mode is 'on' the router will pass all the packets, otherwise it will drop all the packet and close the TCP connection.

Recommended Action The network administrator can possibly check whether the URL filter server (WebSense/N2H2) is down and restart it if required. If it still does not work then the admin may have to install a URL filter server on another system and configure the same on the router.

%URLF-3-ALLOW_MODE : [chars]Connection to all the URL filter servers are down and the allow mode is '[chars]'

Explanation This messages indicates that connection to all the URL filter servers are down. If allow mode is 'on' the router will pass all the http traffic, otherwise it will drop the http traffic and close the TCP connection

Recommended Action The network administrator can possibly check whether the URL filter server (WebSense/N2H2) is down and restart it if required. If it still does not work then the admin may have to install a URL filter server on another system and configure the same on the router.

%URLF-5-SERVER_UP : [chars]Connection to an URL filter server([IP_address]) is made, the router is returning from ALLOW MODE

Explanation This message indicates that at least one connection is up between router and a URL filter server. System is leaving out of allow mode

%URLF-5-SERVER_UP : [chars]Connection to an URL filter server([IP_address]) is made, the router is returning from ALLOW MODE

Recommended Action This is just an informational message

%URLF-3-URL_TOO_LONG : [chars]URL sent from [IP_address] is too long (more than [dec] bytes), possibly a fake packet?

Explanation The URL parsed from http GET request is too long, it could possibly be a fake packet, so the packet will be dropped

Recommended Action This could be a fake packet sent by the attackers

%URLF-3-MAX_REQ : [chars]The number of pending request exceeds the maximum limit [dec]

Explanation This message indicates that the number of requests pending in the router for URL authentication from URL filter server exceeds the maximum limit. In this case the http request will be dropped

Recommended Action This message is just for informational purpose

%URLF-3-RESOURCE_ALLOC_FAILED : The resource allocation failed for URL filter subsystem

Explanation This message indicates that the URLF feature is not able to allocate memory for various data structures

Recommended Action The router is running out of memory, disable the features that are not used, or check if something goes wrong

USB_TOKEN

%USB_TOKEN-3-USB_TOKEN_NOMEM : No available memory for [chars]

Explanation Memory allocation failure.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

%USB_TOKEN-3-USB_TOKEN_MSG_FAILURE : Failure in handling USB Security Token insertion/removal event

Explanation Retrieving Token insertion/removal message failed in Token Daemon

%USB_TOKEN-3-USB_TOKEN_MSG_FAILURE : Failure in handling USB Security Token insertion/removal event

Recommended Action Remove the token and insert it back. If the problem still persists, report the problem to your technical support representative along with the output of show usb device, show usb controller and show file systems commands.

%USB_TOKEN-3-USB_TOKEN_SEMCREATE_FAILURE : Failure in creating USB Security Token semaphore

Explanation Watched semaphore creation failed

Recommended Action Report the problem to your technical support representative along with the output of show usb device and show usb controller commands.

%USB_TOKEN-3-USB_TOKEN_MAX_TOKENS_INSERTED : Unavailable USB Security Token slot

Explanation Maximum number of tokens that can be supported are already inserted

Recommended Action Remove the other tokens that are not in use. And, remove and insert this token again.

USB_TOKEN_FILESYS

%USB_TOKEN_FILESYS-6-USB_TOKEN_INSERTED : USB Token device inserted: [chars].

Explanation A USB Token device has been detected.

Recommended Action Informational message only. No action required.

%USB_TOKEN_FILESYS-6-USB_TOKEN_REMOVED : USB Token device removed: [chars].

Explanation A USB Token device has been removed.

Recommended Action Informational message only. No action required.

%USB_TOKEN_FILESYS-6-REGISTERING_WITH_IFS : Registering USB Token File System [chars]: might take a while...

Explanation Registering USB Token File System is being registered.

Recommended Action Informational message only. No action required.

%USB_TOKEN_FILESYS-3-FAIL_TO_BUILD_MFD : USB Token File System failed to build MFD...

| | |
|---------------------------|---|
| Explanation | USB Token File System failed to build the Master File Directory (MFD) database. |
| Recommended Action | Remove this token and insert it again. If the problem still persists, report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-MFD_FORWARD_INCOMPATIBLE : Unable to understand MFD database of version [dec].[dec].

| | |
|---------------------------|---|
| Explanation | The version of the Master File Directory (MFD) database stored in token device is higher than what the running USB Token File System can support or understand. |
| Recommended Action | Upgrade the USB Token File System by reloading the router with a higher version of IOS software. |

%USB_TOKEN_FILESYS-6-REGISTERED_WITH_IFS : USB Token File System [chars] is registered...

| | |
|---------------------------|---|
| Explanation | USB Token File System registered successfully. |
| Recommended Action | Informational message only. No action required. |

%USB_TOKEN_FILESYS-3-FAIL_TO_REGISTER_WITH_IFS : Failed to register USB Token File System with IFS.

| | |
|---------------------------|---|
| Explanation | The process of registering USB Token File System with IOS File System (IFS) did not succeed. IFS provides a common user interface to all users of file system functionality regardless of the differences among file systems. |
| Recommended Action | Remove this token and insert it again. If the problem still persists, report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-MAX_TOKENS_INSERTED : The number of tokens exceeded the maximum that can be supported by USB Token File System.

| | |
|---------------------------|--|
| Explanation | Maximum number of tokens that can be supported by USB Token File System are already inserted. |
| Recommended Action | Remove the other tokens that are not in use. And, remove and insert this token again. If the problem still persists, report the problem to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-FAIL_TO_CREATE_TALKER : Token File System callback: failed to create token talker, token name [chars], status [dec].

| | |
|---------------------------|--|
| Explanation | USB Token File System failed to establish connection with USB Token Device Driver. |
| Recommended Action | Remove and insert this token again. If the problem still persists, report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-FAIL_TO_DESTROY_TALKER : Token File System callback: failed to destroy token talker, token name [chars], status [dec].

| | |
|---------------------------|--|
| Explanation | USB Token File System failed to destroy the connection with USB Token Device Driver. |
| Recommended Action | Insert and remove this token again. If the problem still persists, report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-UNKNOWN_TOKEN_EVENT : Token File System callback: unknown event [dec].

| | |
|---------------------------|---|
| Explanation | USB Token File System callback function received an unknown event from USB Token Device Driver. |
| Recommended Action | Check USB ports to see if the token device is inserted or removed correctly. If the problem still persists, report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-FAIL_TO_CREATE_WATCHED_BOOLEAN : Could not create a watched boolean!

| | |
|---------------------------|---|
| Explanation | USB Token File System could not create a watched boolean. This condition indicates that memory resources are being exhausted. |
| Recommended Action | Reduce other system activities to ease memory demands or remove any token device that is not in use to free up some memory. |

%USB_TOKEN_FILESYS-3-ASYNC_IO_UNEXPECTED_EVENT : Token Asynchronous I/O: Unexpected Event [dec].

| | |
|---------------------------|---|
| Explanation | Token Asynchronous I/O process received an unexpected event. |
| Recommended Action | Report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-ASYNC_IO_FAIL_TO_REQUEUE_REQUEST : Token Asynchronous I/O: failing to requeue an I/O request.

| | |
|---------------------------|---|
| Explanation | Token Asynchronous I/O process failed to requeue an I/O request. |
| Recommended Action | Report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-ASYNC_IO_FAIL_TO_GET_ARGUMENT : Token Asynchronous I/O: Could not get argument.

| | |
|---------------------------|---|
| Explanation | Token Asynchronous I/O process failed to retrieve argument. |
| Recommended Action | Report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-ASYNC_IO_ERROR_WRITING_FILE : Error writing file: file [chars], ret code [hex], [chars].

| | |
|---------------------------|---|
| Explanation | Token Asynchronous I/O process encountered I/O write failure. |
| Recommended Action | Report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-ASYNC_IO_ERROR_CREATING_FILE : Error creating file: file [chars], ret code [hex], [chars].

| | |
|---------------------------|---|
| Explanation | Token Asynchronous I/O process failed to create a file in USB token device. |
| Recommended Action | Report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-ASYNC_IO_ERROR_CREATING_DIRECTORY : Error creating directory: dir [chars], ret code [hex], [chars].

| | |
|---------------------------|---|
| Explanation | Token Asynchronous I/O process failed to create a directory in USB token device. |
| Recommended Action | Report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

%USB_TOKEN_FILESYS-3-ASYNC_IO_ERROR_DECODE_OP_CODE : Unrecognized I/O Op-code: [dec].

| | |
|---------------------------|---|
| Explanation | Token Asynchronous I/O process could not decode the Op-code in an I/O request. |
| Recommended Action | Report the error message to your technical representative along with the output of 'show usb', 'show usb controller' and 'show file system' commands. |

UTD

%UTD-3-UTD_COND_DEBUG_REG_FAILED : Failed to initialize Conditional Debugging for UTD

Explanation A non-fatal error occurred when attempting to Register/Initialize conditional debugging.
Recommended Action LOG_STD_ACTION

%UTD-5-UTD_POLICY_NAT_DROP_PKT : NAT packet drop, MSGDEF_LIMIT_SLOW

Explanation Packet dropped by NAT during UTD policy phase
Recommended Action Inspect NAT diagnostics to determine reason for packet drop LOG_STD_ACTION

%UTD-5-UTD_POLICY_DROP_PKT : Policy: Dropped packet from vrf [chars] [chars] %CA:[int] => %CA:[int] proto [chars] due to ([int]) [chars] ident [int] [chars], MSGDEF_LIMIT_FAST

Explanation Packet dropped during packet policy phase for the given reason
Recommended Action This message is for informational purposed only, but may indicate a security problem. LOG_STD_NO_ACTION

%UTD-4-UTD_INSPECT_DROP_PKT : Inspection: Dropped packet from vrf [chars] [chars] %CA:[int] => %CA:[int] proto [chars] due to ([int]) [chars] ident [int] [chars], MSGDEF_LIMIT_FAST

Explanation Packet dropped during packet inspection for the given reason
Recommended Action This message is for informational purposed only, but may indicate a security problem. LOG_STD_NO_ACTION

%UTD-4-UTD_DIVERT_DROP_PKT : Diversion: VPATH decapsulation dropped packet from vrf [chars] [chars] %CA:[int] => %CA:[int] proto [chars] due to ([int]) [chars] ident [int] [chars], MSGDEF_LIMIT_FAST

Explanation Packet dropped during packet reinjection
Recommended Action This message is for informational purposed only, but may indicate a security problem. LOG_STD_NO_ACTION

%UTD-4-UTD_ENCAPS_DROP_PKT : Diversion: VPATH encapsulation dropped packet from vrf [chars] [chars] %CA:[int] => %CA:[int] proto [chars] due to ([int]) [chars] ident [int] [chars], MSGDEF_LIMIT_FAST

Explanation Packet dropped while attempting to add VPATH data

%UTD-4-UTD_ENCAPS_DROP_PKT : Diversion: VPATH encapsulation dropped packet from vrf [chars] [chars] %CA:[int] => %CA:[int] proto [chars] due to ([int]) [chars] ident [int] [chars], MSGDEF_LIMIT_FAST

Recommended Action This message is for informational purposed only, but may indicate a security problem.
LOG_STD_NO_ACTION

%UTD-1-UTD_HEALTH_CHANGE : Service node changed state [chars] => [chars] ([int])

Explanation Service node and changed health status

Recommended Action Service node has changed status Green - Service node is health. No action required.
Yellow - Service node not accepting new connections. Too many connections for enhanced inspection. Red - Service node is down Check IPS/IDS service node Not detected - Unknown state. Service node not detected Check IPS/IDS service node
LOG_STD_ACTION

%UTD-6-UTD_DF_WHITELIST_MATCH : UTD WebFilter Domain Whitelist [] [Domain: [chars]] [Matched Pattern: [chars]] {[chars]} %CA:[int] -> %CA:[int], MSGDEF_LIMIT_FAST/100**

Explanation DNS domain matched to one of the configured whitelist patterns

Recommended Action This message is for informational purposed only, but may indicate a security problem.
LOG_STD_NO_ACTION

%UTD-6-UTD_DF_BLACKLIST_MATCH : UTD WebFilter Domain Blacklist [] [Domain: [chars]] [Matched Pattern: [chars]] {[chars]} %CA:[int] -> %CA:[int], MSGDEF_LIMIT_FAST/100**

Explanation DNS domain matched to one of the configured blacklist patterns

Recommended Action This message is for informational purposed only, but may indicate a security problem.
LOG_STD_NO_ACTION

%UTD-3-IPC_INVALID_MSG : UTD-Invalid request [int]

Explanation We received an invalid message from another layer of the UTD software stack.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

%UTD-3-FEAT_DOWN : UTD-Invalid request [chars] ([int]) while feature is down

| | |
|---------------------------|---|
| Explanation | While the feature was not active, an invalid request was received from another layer of the UTD software stack. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UTD-3-FEAT_CTX_DOWN : UTD-Invalid request [chars] ([int]) while context is down

| | |
|---------------------------|---|
| Explanation | While the feature context was not active, an invalid request was received from another layer of the UTD software stack. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UTD-3-IPC_OPEN_REPLY : UTD-IPC Open Reply failed, request [int]

| | |
|---------------------------|--|
| Explanation | For a request from upper UTD software stack layers it was not possible to open the reply buffer. |
| Recommended Action | This is normally a software issue. LOG_STD_RECUR_ACTION |

%UTD-3-IPC_NORES : UTD-No space for the IPC reply, size [int], request [int]

| | |
|---------------------------|---|
| Explanation | For a request from upper UTD software stack layers it was not possible to allocate space for a reply for the specified size. |
| Recommended Action | If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UTD-3-IPC_INVALID_MSG_LEN : UTD-Invalid IPC length, [dec]:[dec] len [dec] flags [hex] source [dec]

| | |
|--------------------|----------------------------|
| Explanation | Invalid IPC message length |
|--------------------|----------------------------|

%UTD-3-IPC_INVALID_MSG_LEN : UTD-Invalid IPC length, [dec]:[dec] len [dec] flags [hex] source [dec]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%UTD-3-IPC_SEND_FAILED : UTD-IPC [chars] [int] send failed [int]

| | |
|---------------------------|---|
| Explanation | IPC message send failure |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UTD-2-IPC_INIT_FAILED : UTD-IPC message handler registration failure, rc [int]

| | |
|---------------------------|---|
| Explanation | Registering an IPC message handler for the UTD feature failed. This will cause the feature to not function. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UTD-2-IPC_FAILURE : UTD-IPC message [chars] handler failed, rc [int]

| | |
|---------------------------|---|
| Explanation | An IPC message handler for the UTD feature failed. This will cause the feature to not function. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

UTIL**%UTIL-3-RANGEINCON : internal inconsistency [dec] [hex]**

| | |
|---------------------------|---|
| Explanation | A fatal software error occurred. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

%UTIL-3-RANGENULLINPUT : null pointer input to range function

| | |
|---------------------------|---|
| Explanation | An attempt was made to access a range function with a NULL pointer. The range list creation failed. |
| Recommended Action | Review the error log for a corresponding malloc failed message. Copy the error message exactly as it appears, and report it to your technical support representative. |

%UTIL-0-ITEMLIST_RESIZE : An attempt was made to resize an itemlist but not enough memory is available

| | |
|---------------------------|---|
| Explanation | An attempt was made to resize itemlist memory to be larger than the memory available. Itemlists are often used when showing interface statistics. This event is unexpected and may be an indication of memory corruption. |
| Recommended Action | Note any recent commands that may have triggered this error. Copy the error message and traceback exactly as it appears, and report it to your technical support representative. |

%UTIL-3-RADIXTREE : Data structure error--[chars]

| | |
|---------------------------|---|
| Explanation | A software error occurred, resulting in a data structure inconsistency. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. Ask for their assistance in obtaining a version of code with the error fixed. |

%UTIL-3-TREE : Data structure error--[chars]

| | |
|---------------------------|---|
| Explanation | A software error occurred, resulting in a data structure inconsistency. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. Ask for their assistance in obtaining a version of code with the error fixed. |

%UTIL-6-RANDOM : A pseudo-random number was generated twice in succession

| | |
|---------------------------|--|
| Explanation | A pseudo-random number generator produced the same number twice in succession. |
| Recommended Action | Under normal circumstances a pseudo-random number generator will occasionally produce the same number twice in succession and this is not a problem. However if this message occurs frequently, the system should be manually reloaded. If the message is persistent across reloads, copy the error message exactly as it appears, and report it to your technical support representative. |

%UTIL-3-IDTREE_TRACE : [chars]

| | |
|---------------------------|---|
| Explanation | A software error occurred, resulting in a data structure inconsistency. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UTIL-3-IDTREE_NOTRACE : [chars]

| | |
|---------------------------|---|
| Explanation | A software error occurred, resulting in a data structure inconsistency. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%UTIL-3-DLL : Data structure error -- [chars]

| | |
|---------------------------|---|
| Explanation | A software error occurred, resulting in data structure inconsistency. |
| Recommended Action | Copy the error message exactly as it appears, and report it to your technical support representative. |

VASI**%VASI-2-DB_ENTRY_ALLOC_FAIL : VASI pair db entry allocation for interface [chars] failed**

| | |
|---------------------------|---|
| Explanation | VASI pair database error. Memory chunk allocation for VASI pair database entry has failed. |
| Recommended Action | Check for accurate memory management. Perform memory leak checks and look for memory corruption causes. Execute 'show proc memory' command. |

%VASI-2-DB_INSERT_FAIL : VASI pair db entry add for interface [chars] failed

| | |
|---------------------------|--|
| Explanation | VASI pair database error. Insertion of a new entry into VASI pair database has failed. |
| Recommended Action | Check for accurate memory management. Perform memory leak checks, look for memory corruption causes, verify correct database management. Execute 'show proc memory' command. |

%VASI-2-DB_DELETE_FAIL : VASI pair db entry delete for interface [chars] failed

Explanation VASI pair database error. Removal of entry from VASI database has failed.

Recommended Action Check for accurate memory management. Perform memory leak checks, look for mamory corruption causes and check for correct database management. Execute 'show proc memory' command.

%VASI-2-DB_ENTRY_FREE_FAIL : VASI pair entry free failed

Explanation VASI pair database error. Memory chunk free of VASI pair database entry has failed.

Recommended Action Check for accurate memory management. Perform memory leak checks and look for memory corruption causes. Execute 'show proc memory' command.

%VASI-2-DB_ALLOC_FAIL : VASI pair db allocation failed

Explanation VASI pair database error. Memory chunk creation for VASI pair database has failed.

Recommended Action Check for accurate memory management. Perform memory leak checks and look for memory corruption causes. Execute 'show proc memory' command.

%VASI-2-DB_DESTROY_FAIL : VASI pair database destroy failed

Explanation VASI pair database error. Memory chunk destroy has failed for VASI pair database.

Recommended Action Check for accurate memory management. Perform memory leak checks and look for memory corruption causes. Execute show proc memory command.

VDSL_DAEMON

%VDSL_DAEMON-3-NOPROC : VDSL Daemon [chars] SM create event process failed

Explanation The router does not have enough memory run this VDSL/ADSL feature

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VDSL_DAEMON-3-NOMEM : VDSL Daemon [chars] malloc failed : out of memory

Explanation The router does not have enough memory installed to run this VDSL/ADSL feature

%VDSL_DAEMON-3-NOMEM : VDSL Daemon [chars] malloc failed : out of memory

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%VDSL_DAEMON-3-MALLOCFAIL : There is not enough main memory for the new VDSL [chars] firmware images on flash

| | |
|---------------------------|---|
| Explanation | The router failed to malloc a buffer for the firmware images on the flash. More DRAM is required for the feature which allows specific VDSL firmware images on the flash to replace the VDSL firmware images embedded in IOS. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VDSL_DAEMON-3-INITFAIL : VDSL Daemon [chars] init failed.

| | |
|---------------------------|---|
| Explanation | The VDSL module hardware may be bad |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VDSL_DAEMON-3-INVALID_DS : Daemon [chars] invalid vdsl instance.

| | |
|---------------------------|---|
| Explanation | Encounter an invalid vdsl instance |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VDSL_DAEMON-4-QUEUE_EMPTY : Daemon [chars] configuration queue is empty.

| | |
|---------------------------|---|
| Explanation | program is unable to send a message to the queue process. |
| Recommended Action | nothing |

%VDSL_DAEMON-4-INVALID_CDB : Invalid daemon [chars] controller [chars].

Explanation Encounter an invalid daemon cdb instance.

Recommended Action nothing

%VDSL_DAEMON-3-FPGA_FAIL : VDSL FPGA Download failed.

Explanation The VDSL module hardware may be bad

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VDSL_DAEMON-3-MODEMRESET : VDSL Modem reset. [chars]

Explanation The VDSL module is under reset.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VDSL_DAEMON-4-TRAINMODE_NOT_SUPPORTED : [chars] transport mode is not supported on [chars].

Explanation Only ATM is supported on ADSL and PTM/Ethernet is supported on VDSL2).

Recommended Action Change DSLAM profile to select the correct mode for CPE

%VDSL_DAEMON-3-VDSL_CMD_ADD_FAIL : VDSL [chars] add failed.

Explanation adding a command exceeds the maximum number of commands allowed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VDSL_DAEMON-3-FIRMWARE_WARN : Need to reload IOS for VDSL PHY firmware file change to take effect

| | |
|---------------------------|---|
| Explanation | The old phy firmware is used until IOS is reload |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VDSL_DAEMON-4-MODE_SWITCH : Please save the configuration and reload the Router due to the ATM-PTM mode change on vdsl 0 controller

| | |
|---------------------------|---|
| Explanation | Operating mode switch between ATM and PTM mode require reload |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VDSL_DAEMON-3-VDSL_LINE_UPDOWN : Controller [chars], line [dec], changed state to [chars]

| | |
|---------------------------|---|
| Explanation | VDSL Line changed state |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

VFI

%VFI-4-CONFIG : [chars]

| | |
|---------------------------|--|
| Explanation | Invalid VFI configuration data passed. |
| Recommended Action | No action is required. |

%VFI-3-ILLEGAL : [chars]

| | |
|---------------------------|--|
| Explanation | An illegal event has been processed by the xconnect subsystem. |
| Recommended Action | No action is required. |

%VFI-6-VFI_STATUS_CHANGED : Status of VFI [chars] changed from [chars] to [chars]

Explanation VFI status has changed**Recommended Action** No action is required.

VIDB

%VIDB-3-FORKFAIL : Failed to fork process for [chars].

Explanation Quite likely, we ran out of memory. Other explanations are possible.**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VIDB-3-FREETIMENOTSET : Value not specified for vidb forcible free time by platform.

Explanation Platform has requested for delayed vidb recycling support, but hasn't specified any value for forcible free time.**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

- VRRP

VINES

%VINES-2-CORRUPTENTRY : Detected a corrupted entry in the [chars] table

| | |
|---------------------------|---|
| Explanation | The VINES code detected that an internal table entry was corrupted. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. If possible, clear the VINES routing table or neighbor table, depending on the table in which the corrupted entry was observed. This will result in a temporary loss of connectivity until the routing or neighbor table is rebuilt. |

%VINES-2-INVALIDPATH : Bad [chars] in path for neighbor entry %z

| | |
|---------------------------|--|
| Explanation | While searching the neighbor table, the code determined that a pointer that should point to a VINES path structure actually points to some other structure. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. If possible, clear the VINES neighbor table. This will result in a temporary loss of connectivity until all neighbors and routes are relearned. |

%VINES-2-INVALIDROUTE : Bad [chars] in route for server entry %Z

| | |
|---------------------------|---|
| Explanation | While searching the routing table, the code determined that a pointer that should point to a VINES route structure actually points to some other structure. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. If possible, clear the VINES routing table. This will result in a temporary loss of connectivity until all routes are relearned. |

%VINES-2-CONSISTENCY : Error [chars]

| | |
|--------------------|---|
| Explanation | The VINES code ran into a situation that should not happen. For example, an IPC port number needs to be allocated, but all 65535 port numbers are currently in use. Another possible cause is that VINES attempted to add a cache entry but had no path associated with the destination address. This may cause temporary slow performance to only those stations that have experienced this inconsistency until complete cache entries are added. However, connectivity should not be lost, because all data traffic can still be routed vvia process-level switching. |
|--------------------|---|

%VINES-2-CONSISTENCY : Error [chars]

Recommended Action Copy the message exactly as it appears, and report it your technical support representative. If the warning message is about IPC port number depletion, use the show vines ipc command to check how many IPC ports are currently in use by which services and determine whether the IPC connections are all legitimate. To release IPC ports, issue the clear vines ipc command. If the warning message is about vines cache entries, provide the contents of the vines route cache, neighbor, and route tables immediately after the error messages appeared. If the problem persists, issue the clear vines cache command, and monitor the router if the situation improves.

%VINES-2-NOBUFFERS : No buffers available for [chars]

Explanation There were no buffers available to send a VINES service query or reply.

Recommended Action Examine your system's memory and buffer capacity and compare it with current usage. If you notice a substantial discrepancy, monitor your system for possible memory leaks or buffer drainage and report the problem to your technical support representative, along with the output of the show memory, show memory processor, show buffers, show buffers assigned, and show buffers old commands.

%VINES-2-ENCAPFAILED : Encapsulation failed for %#z via %#z on [chars]

Explanation VINES fast switching encountered an encapsulation failure when building a cache entry for a neighbor.

Recommended Action Examine your configuration for causes of the encapsulation failure. Look for missing map statements, interfaces that have gone down, and so on. If this error results in lost connectivity, disable vines fast switching by issuing the no vines route-cache command. Because disabling fast switching will slow network perform, you should issue the vines route-cache command to re-enable fast switching as soon as you have identified the cause of the problem. If you cannot identify the cause, contact your technical support representative. Provide the output of the show vines cache, show vines neighbor, and show vines route commands for the destination address and neighboring routers you are using. Also provide the output of the show interface and show vines interface commands for the incoming and outgoing interfaces.

%VINES-2-CACHEFAILED : Cannot build cache entry ([dec] bytes) for %#z on [chars]

Explanation VINES fast switching detected that the packet destined to a given address did not have proper encapsulation information or its encapsulation size was too large to fit into the cache.

Recommended Action Verify that the VINES encapsulation and interface-specific mappings for the interface concerned are properly configured. Copy the message exactly as it appears, and report it your technical support representative.

%VINES-2-CACHEUNSUPP : Caching of [chars] not supported on [chars]

| | |
|---------------------------|--|
| Explanation | The cache population routing for VINES fast switching was called for an interface that does not support VINES fast switching. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. If other encapsulation types are available on the interface, try using them. If this problem is not limited to one or two destinations but rather occurs with all traffic using the interface, diable VINES fast switching for the interface until you have identified the real cause of the problem. |

%VINES-2-DUPADDR : Duplicate address detected on interface [chars]

| | |
|---------------------------|---|
| Explanation | The router detected that its VINES address is being used by another router. |
| Recommended Action | To identify the other router that is using this address, manually inspect each router's configuration. When you have identified the router with the duplicate address, issue the vines routing recompute command on both routers or issue the enable vines routing command, specifying specify a unique address. If one of the routers does not support the recompute keyword, disable VINES on that router, issue the write terminal command to save the configuration to memory, reboot the router, and then enter the vines routing command with a unique vines address on the offending routers until each router has a unique address. |

%VINES-2-BADPARAM : [chars] called with [chars] parameter set to [chars]

| | |
|---------------------------|---|
| Explanation | One of the VINES lookup functions was called with an illegal argument. |
| Recommended Action | Copy the message exactly as it appears, do a memory dump up to 128 bytes and the location specified in the error message, and report this information to your technical support representative. |

%VINES-2-BADTIMER : RTP timer for [chars] was found disabled, and was reset

| | |
|---------------------------|--|
| Explanation | An internal interface timer is not running. This condition usually occurs after an interface is reset. |
| Recommended Action | No action is required. The system automatically restarts the timer. |

%VINES-6-IPCNOROUTINE : IPC port [dec] registered without an upcall ([chars])

| | |
|--------------------|---|
| Explanation | There is an inconsistency in the active VINES data structure for handling IPC data messages. A message was received for a port that should have a listener, but the listener routine cannot be found. |
|--------------------|---|

%VINES-6-IPCNOROUTINE : IPC port [dec] registered without an upcall ([chars])

Recommended Action Examine the IPC ports currently supported on the router by issuing the show vines ipc command, and see whether the reported IPC port is indeed not active. Copy the message exactly as it appears, and report it to your technical support representative along with the output of the debug vines ipc command.

%VINES-6-RPCNOSERVICE : IPC port [dec] registered without a service

Explanation There is an inconsistency in the active VINES data structure for handling Net RPC messages. A message was received for a port that should have a service description, but that service description cannot be found.

Recommended Action Enter the show vines ipc command and see whether the reported IPC port has a registered service. Copy the message exactly as it appears, and report it to your technical support representative, if possible, along with output of the debug vines netrpc command.

%VINES-6-RTNNOTFOUND : [chars] service [chars] routine not found while [chars]

Explanation There is an inconsistency in the active VINES service description data structures. A service handler routine cannot find the description of its own service.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative. In addition, provide the output of the show vines service command and debug vines service traces for the service reported in the error message.

%VINES-6-FNNOTFOUND : [chars] service [chars] routine missing [chars] vector

Explanation There is an inconsistency in the static VINES data structures for handling application-layer packets.

Recommended Action Turn on VINES service level debugging for the service reported in the error message, and copy the debug traces and the error message exactly as they appear, and report them to your technical support representative.

%VINES-2-NOENCAP : Encapsulation failed on [chars] for address %#z

Explanation The VINES code tried to send a packet on an interface that does not have a new encapsulation routine for outbound packets.

Recommended Action Toggle the problematic interface by issuing the interface shut and no shut commands, and then issue the no vines metric and vines metric command see if the problem goes away. If the problem persists, copy the message exactly as it appears, and report it your technical support representative. If possible, turn on and provide interface- specific debug traces, particularly for VINES activities.

VIRT_SERVICE**%VIRT_SERVICE-3-INIT_FAIL : Failed to initialize required virtual service object: [chars]**

| | |
|---------------------------|---|
| Explanation | During the initialization of the resources required for the virtual service feature, a memory allocation failure occurred. This has prevented the virtual service feature from being enabled. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-ROMMON_UNSUPPORTED : ROM monitor configuration does not support virtualization

| | |
|---------------------------|---|
| Explanation | Virtualization is not supported by the current ROM monitor configuration. Verify both the ROM monitor version and ROM monitor variable ENABLE_VTX are correct to enable virtualization. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-STBY_ROMMON_UNSUPPORTED : Standby ROM monitor configuration does not support virtualization

| | |
|---------------------------|---|
| Explanation | Virtualization is not supported by the current ROM monitor configuration on the standby. Verify both the ROM monitor version and ROM monitor variable ENABLE_VTX are correct to enable virtualization. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-ACTIVATE_FAIL : Failed to send virtual service [chars] activate message

| | |
|---------------------------|---|
| Explanation | During the creation and transmission of the virtual service activate TDL message a failure occurred. The message was not successfully sent and therefore the virtual service was not activated. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-DEACTIVATE_FAIL : Failed to send virtual service [chars] deactivate message

Explanation During the creation and transmission of the virtual service deactivate TDL message a failure occurred. The message was not successfully sent and therefore the virtual service was not deactivated.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VIRT_SERVICE-3-UNPROVISION_FAIL : [chars]: [chars]

Explanation During the unprovision of the named virtual service, an unexpected failure occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VIRT_SERVICE-3-STBY_PKG_PATH : Failed to [chars] required by virtual service [chars] on standby

Explanation Specified package definition file was not found on standby. Configuration was accepted. Copy package definition file to standby at earliest convenience.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VIRT_SERVICE-4-SWITCHOVER_ACTIVATE : Virtual service [chars] will not be activated following a switchover

Explanation Following a switchover, this virtual service will not be activated as there is an issue with its package definition file. Copy package definition file to standby at earliest convenience.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VIRT_SERVICE-3-PKG_PATH : Failed to [chars] required by virtual service [chars]

| | |
|---------------------------|---|
| Explanation | Specified package definition file was not found following a switchover. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-PKG_PATH_ACTIVATE : Failed to [chars]. Virtual service [chars] will not be activated

| | |
|---------------------------|---|
| Explanation | Specified package definition file was not found following a switchover. Unable to activate virtual service without specified package definition file present. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-INVALID_APPLIANCE_TIMEOUT : A response timeout occurred for an invalid virtual service

| | |
|---------------------------|---|
| Explanation | An unexpected condition occurred where the virtual service context pointer in the expired timer was set to NULL. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-UNKNOWN_APPLIANCE_TIMEOUT : A response timeout occurred for unknown virtual service [chars]

| | |
|---------------------------|---|
| Explanation | A response timeout occurred for a virtual service that is no longer in the virtual service database. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-RESPONSE_TIMEOUT : Virtual service [chars] timed out waiting for a response from Virt-manager

| | |
|---------------------------|---|
| Explanation | Failed to receive a response message from Virt-manager for last activation operation performed on the named virtual service. The virtual service activation state was marked as deactivated. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-UPGRADE_TIMEOUT : Virtual service [chars] timed out waiting for a package upgrade response from Virt-manager

| | |
|---------------------------|---|
| Explanation | Failed to receive a response message from Virt-manager for last upgrade operation performed on the named virtual service. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-SEND_RF_MSG : Failed to send RF message to peer - [chars]

| | |
|---------------------------|---|
| Explanation | An unexpected condition occurred where an attempt to send an RF message to peer failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-INVALID_RF_MSG : Received an invalid RF message type from peer

| | |
|---------------------------|---|
| Explanation | An unexpected condition occurred where an invalid message type was detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-UNKNOWN_RF_MSG : Received an unknown RF message type ([dec]) from peer

| | |
|---------------------------|---|
| Explanation | An unexpected condition occurred where an unknown timer event was detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-UNKNOWN_TIMEOUT_TYPE : A response timeout occurred for an unknown timeout type ([dec])

| | |
|---------------------------|---|
| Explanation | An unexpected condition occurred where an unknown timeout type was detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-UNKNOWN_TIMER_EVENT : A timer event occurred for an unknown timer event ([dec])

| | |
|---------------------------|---|
| Explanation | An unexpected condition occurred where an unknown timer event was detected. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-5-ACTIVATION_STATE : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | The activation state of the named virtual service has changed as notified by Virt-manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-3-RESET : Virtual service [chars] reset

| | |
|--------------------|--|
| Explanation | An unexpected condition has occurred where Virt-manager has reported that it detected the named virtual service reset. This virtual service is not configured to be activated and as such, no attempt to reactivate it will be made. |
|--------------------|--|

%VIRT_SERVICE-3-RESET : Virtual service [chars] reset

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%VIRT_SERVICE-5-RESET_REACTIVATE : Virtual service [chars] reset and will be reactivated

| | |
|---------------------------|---|
| Explanation | Virt-manager has reported that it detected the named virtual service reset. An attempt will be name to reactivate this virtual service. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VIRT_SERVICE-5-INSTALL_STATE : [chars] [chars]

| | |
|---------------------------|---|
| Explanation | The installation state of the named virtual service has changed as notified by Virt-manager. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

VLAN

%VLAN-5-PRIMARY_LINK_NOT_IN_EC : Warning: VLAN [int]'s main interface is not the channel group of primary=[chars]Per-VLAN manual load-balancing will not take effect until channel-group is configured under the primary interface.

| | |
|---------------------------|--|
| Explanation | The interface configured as primary is not a memberlink in the port channel. |
| Recommended Action | Verify the configuration. |

%VLAN-5-SECONDARY_LINK_NOT_IN_EC : Warning: VLAN [int]'s main interface is not the channel group of secondary=[chars]Per-VLAN manual load-balancing will not take effect until channel-group is configured under the secondary interface.

| | |
|--------------------|--|
| Explanation | The interface configured as secondary is not a memberlink in the port channel. |
|--------------------|--|

%VLAN-5-SECONDARY_LINK_NOT_IN_EC : Warning: VLAN [int]'s main interface is not the channel group of secondary=[chars]Per-VLAN manual load-balancing will not take effect until channel-group is configured under the secondary interface.

Recommended Action Verify the configuration.

%VLAN-3-INTERFACE_NOT_PRESENT : The [chars] link [chars] does not exist. Sub-interface: [chars] VLAN-Id: [int]

Explanation This message appears when the below command is issued (under port-channel sub-interface) with the unknown primary and/or secondary links. `encap dot1q <vlan-id> primary <interface> secondary <interface>` The interface specified in the command is not available at present. The card might have been physically removed or may not have been inserted properly.

Recommended Action Verify if the interface shows up, using the command `- show ip int brief`. Please insert the card in case it is removed and run the command again once the card comes up.

VMAN

%VMAN-2-INVALID_PACKAGE : Virtual Service[chars]

Explanation The package definition file for the named virtual service has failed to be validated and the virtual service will not run

Recommended Action Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. The most likely cause would be that the package file has been corrupted during file transfer. The suggested action would be to redo the file transfer.

%VMAN-2-INVALID_ACT_MSG : Virtual Service[chars]

Explanation The virtual service activate message was received, however, the data it contained could not be interpreted

Recommended Action Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause.

%VMAN-2-INVALID_DEACT_MSG : Failed to process virtual service deactivate message

Explanation The virtual service deactivate message was received, however, the data it contained could not be interpreted

Recommended Action Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause.

%VMAN-2-CREATE_VIRT_INST_ENTRY : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The request to create a DB entry for the named virtual service failed. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-PROC_INT_LIST : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The interface list embedded in the activate request for the named virtual service could not be processed. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-ALLOC_VIRT_INST_RCS : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | A memory allocation request failed to allocate a data structure required to activate the virtual service. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-START_FAILED : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The named virtual service failed to start. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-PROCESS_PKG_DEF : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtual service package for the named virtual service has failed to be validated and the virtual service will not run. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-DEFER_VIRT_INST_PROC : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The final activation processing failed to successfully defer. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-COMMIT_VIRT_INST_RCS : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The request to commit the resources required by the named virtual service failed. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-INSERT_VIRT_INST_ENTRY : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | Inserting the named virtual service into the virtual service DB tracked by Virt-manager failed. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-VIRT_INST_INTERFACE : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The number of configured virtual port group interfaces must match the number of Ethernet Network Interfaces defined in the machine definition file |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-VIRT_INST_MEMORY : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtual service requires physical memory in excess of the free memory available to virtual services. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-VIRT_INST_DISK : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtual service requires Disk Storage in excess of the Free Disk Storage available to virtual services. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-INCONSISTENT_MEM_CONFIG : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtual service machine definition file is inconsistent in the specification of required memory via the <memory> and <currentMemory> nodes. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-MEMORY_LIMIT_WARN : Virtual service ([chars])[chars] defines [int] MB of Memory exceeding the maximum [int] MB.

| | |
|---------------------------|--|
| Explanation | The virtual service machine definition file is requesting more memory for the specified profile, than the system has available for virtual services. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-MEMORY_LIMIT : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtual service machine definition file is requesting more memory than the system has available for virtual services. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-VCPU_LIMIT : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtual service machine definition file is requesting more VCPUs than the system has reserved for virtual services. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-DISK_IMAGE_PATH : Virtual Service[chars]

| | |
|---------------------------|---|
| Explanation | The virtual service machine definition file contains an invalid disk image path for one of the disk devices. This may be a Harddisk, CDROM or USB storage device. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-5-VIRT_INST : LOG FROM VIRTUAL SERVICE [chars]: [chars]

| | |
|---------------------------|---|
| Explanation | The named virtual service has triggered the log. Please interpret the log in the context of the virtual services. |
| Recommended Action | No action is required |

%VMAN-2-VIRT_INST_CRIT : VIRTUAL SERVICE [chars] LOG: [chars]

| | |
|--------------------|---|
| Explanation | The named virtual service has triggered the log. Please interpret the log in the context of the virtual services. |
|--------------------|---|

%VMAN-2-VIRT_INST_CRIT : VIRTUAL SERVICE [chars] LOG: [chars]

Recommended Action No action is required

%VMAN-3-VIRT_INST_ERR : VIRTUAL SERVICE [chars] LOG: [chars]

Explanation The named virtual service has triggered the log. Please interpret the log in the context of the virtual services.

Recommended Action No action is required

%VMAN-4-VIRT_INST_WARN : VIRTUAL SERVICE [chars] LOG: [chars]

Explanation The named virtual service has triggered the log. Please interpret the log in the context of the virtual services.

Recommended Action No action is required

%VMAN-5-VIRT_INST_NOTICE : VIRTUAL SERVICE [chars] LOG: [chars]

Explanation The named virtual service has triggered the log. Please interpret the log in the context of the virtual services.

Recommended Action No action is required

%VMAN-6-VIRT_INST_INFO : VIRTUAL SERVICE [chars] LOG: [chars]

Explanation The named virtual service has triggered the log. Please interpret the log in the context of the virtual services.

Recommended Action No action is required

%VMAN-7-VIRT_INST_DEBUG : VIRTUAL SERVICE [chars] LOG: [chars]

Explanation The named virtual service has triggered the log. Please interpret the log in the context of the virtual services.

Recommended Action No action is required

%VMAN-2-VIRT_INST_LOG_UNTHROTTLE : Failed to unthrottle the log for virtual service [chars]

Explanation The named virtual service had sent overwhelming sys log messages and its log had been throttled as a result, but system has failed to unthrottle it for some reason.

Recommended Action For debugging collect the virt-manager logs and scan them for the cause.

%VMAN-2-VIRT_INST_STATE : Virtual Service[chars]

Explanation The named virtual service has failed. It is no longer running either because the guest OS has failed, the guest OS has shut down the machine or the emulator has failed.

Recommended Action An attempt at restarting the virtual service can be made from the IOS configuration by doing a no activate/activate. For debugging collect the Virt-manager logs and scan them for the cause.

%VMAN-2-FIND_VIRT_INST_ENTRY : Failed to find virtual service with id [int] in the Virt-manager DB

Explanation The virtual service with the ID named could not be located in the Virt-manager DB.

Recommended Action Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause.

%VMAN-2-REMOVE_VIRT_INST_ENTRY : Virtual Service[chars]

Explanation Removing the named virtual service from the virtual service DB tracked by Virt-manager failed.

Recommended Action Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause.

%VMAN-2-SET_VTX_ROMVAR_STRING : Failed to set ROM monitor variable ENABLE_VTX: Invalid string format: [chars]

Explanation Failed to set ENABLE_VTX rom monitor variable due to invalid string format.

Recommended Action Verify format of string from error message.

%VMAN-2-SET_VTX_ROMVAR_SPACE : Failed to set ROM monitor variable ENABLE_VTX: No space in table

Explanation Failed to set ENABLE_VTX ROM monitor variable due to no space in Monitor Variable Table.

%VMAN-2-SET_VTX_ROMVAR_SPACE : Failed to set ROM monitor variable ENABLE_VTX: No space in table

Recommended Action Verify number of entries in Monitor Variable Table.

%VMAN-5-AUX : Virtual Service[chars]

Explanation The AUX login to a virtual service may allow the user access to system functions that may not have been tested or may interact with the system in unintended ways. Use with caution.

Recommended Action No action is required

%VMAN-2-INVALID_UNPROV_MSG : Failed to process virtual service unprovision message

Explanation The virtual service unprovision message was received, however, the data it contained could not be interpreted

Recommended Action Enable the Virt-manager trace logs and repeat the activation followed by deactivation and then unprovision of the virtual service. Collect the Virt-manager logs and scan them for the cause.

%VMAN-2-VCPU_INVALID : Virtual Service[chars]

Explanation The virtual service machine definition file is requesting invalid VCPU value.

Recommended Action Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause.

%VMAN-2-CPUSHARES_LIMIT : Virtual Service[chars]

Explanation The virtual service machine definition file is requesting more CPU shares than the system has available for virtual services.

Recommended Action Deactivate any other virtual services to free up CPU share resources and activate this virtual service. If that does not address the problem, then enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause.

%VMAN-2-MORETHANONE_CPUTUNES_CONFIG : Virtual Service[chars]

Explanation The virtual service machine definition file is requesting more than one CPU tunes parameter.

%VMAN-2-MORETHANONE_CPUTUNES_CONFIG : Virtual Service[chars]

| | |
|---------------------------|--|
| Recommended Action | Use a different valid machine definition file for the virtual service. If the problem persists, then enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |
|---------------------------|--|

%VMAN-2-INCONSISTENT_CPUTUNES_CONFIG : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtual service machine definition file is requesting invalid CPU tunes parameter. |
| Recommended Action | Use a different valid machine definition file for the virtual service. If the problem persists, then enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-CPUTUNES_SHARES_LIMIT : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtual service machine definition file is requesting more CPU shares than the system has available for virtual services. |
| Recommended Action | Deactivate any other virtual services to free up CPU share resources and activate this virtual service. If that does not address the problem, then enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-CPUTUNES_INTERNAL_ERROR : Virtual Service[chars]

| | |
|---------------------------|---|
| Explanation | Virt-manager and its associated infrastructure experienced an internal error. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-MACHINE_TYPE_NOT_SUPPORTED : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | The virtual service cannot be activated as the machine type specified is not supported |
| Recommended Action | Enable the support for the machine type and repeat the activation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-INSTALL_FAILURE : Virtual Service[chars]

| | |
|---------------------------|---|
| Explanation | The installation of the virtual service failed. |
| Recommended Action | Enable the Virt-manager trace logs and repeat the installation of the virtual service. Collect the Virt-manager logs and scan them for the cause. |

%VMAN-2-INSTALL_MEDIA_RETRY : VMAN, VM install media still unavailable.[chars]

| | |
|---------------------------|--|
| Explanation | The install media was not detected. Waiting for udev to complete install media(harddisk) detection. |
| Recommended Action | After VMAN exceeds the maximum retry limit, verify if install media (harddisk) is accessible and retry the installation again. |

%VMAN-2-VIRT_INST_MGMT_INTERFACE : Virtual service [chars] has no management interface defined but it is configured in CLI.

| | |
|---------------------------|--|
| Explanation | A management interface is configured but none is defined. |
| Recommended Action | Deactivate the virtual service, remove the management interface configuration CLI, and reactivate the virtual-service. |

%VMAN-2-GENERAL_FAILURE : Virtual Service[chars]

| | |
|---------------------------|---|
| Explanation | The named virtual service has triggered the log. Please interpret the log in the context of the virtual services. |
| Recommended Action | No action is required |

%VMAN-4-UPDATE_WARNING : Virtual Service[chars]

| | |
|---------------------------|---|
| Explanation | The named virtual service has triggered the log. Please interpret the log in the context of the virtual services. |
| Recommended Action | No action is required |

%VMAN-2-MACH_PARSE_FAILURE : Virtual Service[chars]

| | |
|---------------------------|---|
| Explanation | The named virtual service has an invalid parameter specified in the .xml file inside the .ova package |
| Recommended Action | Fix the .xml file inside the .ova package to have valid values. Then retry installing and activating it |

%VMAN-3-SDWRAP_ERR : Description: [chars], errcode: [dec]

| | |
|---------------------------|--|
| Explanation | Debug infrastructure error |
| Recommended Action | Collect the Virt-manager logs and scan them for the cause. |

%VMAN-3-PSS_ERR : Purpose: [chars], URI: [chars], errcode: [dec]

| | |
|---------------------------|--|
| Explanation | Persistent Storage Service handling error |
| Recommended Action | Collect the Virt-manager logs and scan them for the cause. |

%VMAN-3-PSS_SNAPSHOT_ERR : Source URI: [chars], Destination URI: [chars], errcode: [dec]

| | |
|---------------------------|--|
| Explanation | Persistent Storage Service snapshot error |
| Recommended Action | Collect the Virt-manager logs and scan them for the cause. |

%VMAN-4-PACKAGE_SIGNING_LEVEL_CHANGED : Package signing level changed from allow '[chars]' to allow '[chars]'

| | |
|---------------------------|--|
| Explanation | The package certificate signing level global setting has been changed via configuration under the virtual-service global sub-mode. |
| Recommended Action | Ensure that this setting has been changed as expected by an authorized user. |

%VMAN-5-PACKAGE_SIGNING_LEVEL_ON_INSTALL : Package '[chars]' for service container '[chars]' is '[chars]', [chars] '[chars]'

| | |
|---------------------------|--|
| Explanation | A service container software package with the certificate signing level described is being installed. |
| Recommended Action | Take note of the service container and software package. Verify the software package is expected to be (un)signed as described and has the appropriate contents. Uninstall the package if unsure of the package origins. |

%VMAN-2-NETWORK_CONFIG_ERROR : Virtual Service[chars]

| | |
|---------------------------|--|
| Explanation | A network configuration error has been detected for the named virtual service. |
| Recommended Action | No action is required |

%VMAN-2-INSTALL_LOG : [chars] [chars] [chars] [chars]

| | |
|--------------------|--|
| Explanation | The installation log of the named virtual service, is to provide more information about long running operation, that could affect the control of CLI |
|--------------------|--|

%VMAN-2-INSTALL_LOG : [chars] [chars] [chars] [chars]

Recommended Action No action is required

%VMAN-2-UPGRADE_LOG : [chars] [chars] [chars] [chars]

Explanation The upgrade log of the named virtual service, is to provide more information about long running operation, that could affect the control of CLI

Recommended Action No action is required

%VMAN-2-INSTALL_STATE : [chars] '[chars]' [chars] [chars]

Explanation The installation state of the named virtual service has changed as notified by Virt-manager.

Recommended Action In the failed case, check Virt-manager's logs for the cause of the failure. In the successful case, this notification can be ignored.

%VMAN-2-UNINSTALL_ALL_VMS : All Virtual Services are being uninstalled [chars][chars] [chars]

Explanation All virtual services are being uninstalled by Virt-manager.

Recommended Action Examine the reason given as to why all virtual services are being uninstalled for more information. If the reason indicated is due to some error condition, check Virt-manager's logs for the cause of the failure.

%VMAN-2-ACTIVATION_STATE : [chars] '[chars]' [chars] [chars]

Explanation The activation state of the named virtual service has changed as notified by Virt-manager.

Recommended Action In the failed case, check Virt-manager's logs for the cause of the failure. In the successful case, this notification can be ignored.

%VMAN-4-WATCHDOG_TIMER : [chars] '[chars]' [chars] [chars]

Explanation The watchdog timer configured for the named virtual service has expired.

Recommended Action Check any logs produced by the virtual service to determine the cause.

%VMAN-2-HA_SYNC_ERR : [chars] '[chars]' [chars]

Explanation The ha-sync persistent storage disk for the virtual service cannot be watched for sync to standby RP.

Recommended Action Collect the Virt-manager logs and scan them for the cause.

%VMAN-4-VIRT_SERV_LIBVIRTD_WARN : VMAN not able to connect to the libvirt daemon after '[dec]' attempts

Explanation VMAN has been unable to connect to the libvirt daemon. Virtualization services will not be available until this connection is made.

Recommended Action Collect the logs produced by 'show virt tech'

%VMAN-2-DEACT_FOR_ISSU : [chars] Max ([int]s)

Explanation An ISSU event is pending. Any active VMs will be automatically deactivated to allow ISSU preprocessing to validate the environment. Any ISSU-deactivated VMs will be automatically restarted if the ISSU is cancelled.

Recommended Action None. Allow the ISSU to continue and the VMs will restart when the ISSU completes or cancel the ISSU and vman will automatically

%VMAN-2-RESET_FORCE : Virtual Services non-recoverable reset command processed

Explanation A 'virtual service reset force' command has been entered and processed. This action initiates a cleanup of last resort. Occasionally a VM will get into an unrecoverable state that prevents it from activating but also from uninstalling. This is a rare event but when it happens the only resort may be to remove the .conf control file and reboot, which forces a cleanup of all previously installed VM files and artifacts. Note that once this command is used, current VMs are considered to be in an unstable or unpredictable state, and all future install, uninstall, upgrade, and activation commands will be blocked.

Recommended Action Once the command is entered and accepted, there is no recourse but to restart the system.

%VMAN-2-MOVE_STATE : [chars] '[chars]' [chars] [chars]

Explanation The move of the core or log file of the named virtual service has as been successful or failed as notified by Virt-manager.

Recommended Action In the failed case, check Virt-manager's logs for the cause of the failure. In the successful case, this notification can be ignored.

%VMAN-2-RSYNC_STATE : [chars] [chars] [chars] [chars]

| | |
|---------------------------|---|
| Explanation | VMAN tries to remote sync the virtual-instance configuration file and the OVA repository to all online nodes. If rsync fails even after consecutive retries, this notification would be raised. |
| Recommended Action | In the failed case, check Virt-manager's logs for the cause of the failure. Check for the rsync error code and root cause the same. |

%VMAN-2-HA_SYNC_THREAD_STATE : HA remote synchronize thread has failed and exited.

| | |
|---------------------------|--|
| Explanation | VMAN tries to remote sync the OVA repository to all online nodes using a separate thread. If that thread fails, this notification would be raised. |
| Recommended Action | In the failed case, check Virt-manager's logs for the cause of the failure. Check for the pthread error msg and root cause the same. |

%VMAN-2-HA_STATE : [chars] [chars] [chars] [chars]

| | |
|---------------------------|--|
| Explanation | VMAN tries to detect the role/slot of various nodes on HA events from the platform. If any of those event callbacks fail, this notification would be raised. |
| Recommended Action | In the failed case, check Virt-manager's logs for the cause of the failure. Check for the HA event error msg and root cause the same. |

%VMAN-2-HA_SWITCHOVER_STATE : [chars] [chars] [chars] [chars]

| | |
|---------------------------|--|
| Explanation | VMAN HA switchover state related messages for a virtual-service whilst it is being recovered on newly active RP after a HA switchover. |
| Recommended Action | In the failed case, check Virt-manager's logs for the cause of the failure. Check for the HA event error msg and root cause the same. |

%VMAN-4-HA_SYNC_NEEDED : If using the guest shell, please use 'guestshell sync' if you want to preserve state on standby in case of supervisor switchover

| | |
|---------------------------|--|
| Explanation | Message notifying user that he needs to manually synchronize the Virtual service contents to standby supervisor in order to preserve these contents in case of a supervisor switchover. Currently only applicable to the guest shell |
| Recommended Action | User can type the 'guestshell sync' command on active supervisor to synchronize it's contents to the standby supervisor if desired. |

%VMAN-2-RESIZE_OPER_STATE : Virtual service '[chars]' [chars][chars] to '[int]' [chars]

Explanation VMAN attempts to resize various VM parameters like rootfs size, CPU share, memory if requested by user. Success/failure status messages for these resize operations are communicated by this syslog.

Recommended Action In the failed case, check Virt-manager's logs for the cause of the failure. Check for the HA event error msg and root cause the same.

%VMAN-2-GUESTSHELL_ENABLED : The guest shell has been enabled. The command '[chars]' may be used to access it, '[chars] destroy' to remove it.

Explanation Informs the user that the guest shell virtual service has been enabled (which is done by default).

Recommended Action The user may use or remove the guest shell with the commands specified.

%VMAN-5-PERMISSION_DENIED : Virtual Service '[chars]' is not owned by client IOSd

Explanation An attempt was made to modify a virtual-service that is not owned by the client. The request was rejected.

Recommended Action No action is required.

VOICE_HA

%VOICE_HA-7-STATUS : [chars].

Explanation VOICE HA INFRA info/status messages.

Recommended Action None

%VOICE_HA-1-SELF_STATE_PROTECTED : [chars] RG[[dec]] [chars].

Explanation VOICE HA functionality has been disabled in this router due to call checkpointing failure.

Recommended Action Router need immediate reload.

%VOICE_HA-1-INTERFACE_DOWN : [chars] RG[[dec]] [chars].

Explanation Interface went down

%VOICE_HA-1-INTERFACE_DOWN : [chars] RG[[dec]] [chars].

**Recommended
Action**

%VOICE_HA-5-PEER_STATE_READY : [chars] RG[[dec]] VOICE HA Peer exiting from PROTECTED state.

Explanation VOICE HA functionality is enabled on peer.

**Recommended
Action**

%VOICE_HA-5-PEER_STATE_PROTECTED : [chars] RG[[dec]]. HA functionality disabled for Voice.

Explanation VOICE HA functionality is disabled on the peer. due to call checkpointing failure.

**Recommended
Action** Peer Router need immediate reload.

%VOICE_HA-2-BULK_SYNC_ERR : [chars].

Explanation VOICE HA INFRA encountered a bulk-sync error.

**Recommended
Action** Collect requested data/traceback and forward to the voice-ha component.

%VOICE_HA-2-SYM_DATA_COLLECT_ERR : UC-INFRA HA module [chars] reported DATA COLLECT failure (CID:[dec]) with error code [dec].

Explanation Specified HA module reported error during call leg data collection.

**Recommended
Action** Collect requested data/traceback and forward to the appropriate DDTS-component/module owner of the specified HA module for investigation.

%VOICE_HA-3-DATA_COLLECT_ERR : ([chars]): HA Module [chars] reported DATA COLLECT failure (mainst ID:[dec], CID:[dec]).

Explanation Specified HA module reported error during call leg data collection.

**Recommended
Action** Collect requested data and forward to the appropriate DDTS-component/module owner of the specified HA module for investigation.

%VOICE_HA-2-SYM_DATA_RECREATE_ERR : UC-INFRA HA module [chars] reported RECREATE failure (CID:[dec]) with error code [dec].

| | |
|---------------------------|---|
| Explanation | Specified HA module reported error during call leg re-create. |
| Recommended Action | Collect requested data/traceback and forward to the appropriate DDTS-component/module owner of the specified HA module for investigation. |

%VOICE_HA-3-DATA_RECREATE_ERR : ([chars]): HA Module [chars] reported [chars] RECREATE failure (mainst ID:[dec], CID:[dec]).

| | |
|---------------------------|---|
| Explanation | Specified HA module reported error during call leg re-create. |
| Recommended Action | Collect requested data and forward to the appropriate DDTS-component/module owner of the specified HA module for investigation. |

%VOICE_HA-1-DATA_RECREATE_ERR_THRESHOLD : ([chars]): RECREATE_ERR have exceeded threshold counts; performance degradation may occur. Most recent error: Module [chars] reported [chars] RECREATE failure (mainst ID:[dec], CID:[dec]) on STANDBY.

| | |
|---------------------------|---|
| Explanation | Specified HA module reported error during call leg re-create. |
| Recommended Action | Collect requested data and forward to the appropriate DDTS-component/module owner of the specified HA module for investigation. |

%VOICE_HA-2-SWITCHOVER_IND : [chars].

| | |
|---------------------------|--|
| Explanation | VOICE HA detected a failover transition on the STANDBY to become the new ACTIVE. |
| Recommended Action | Verify calls on the new ACTIVE. Peer needs to be in STANDBY mode before the next failover. |

VOICE_IEC

%VOICE_IEC-3-GW : [chars]: Internal Error ([chars]): IEC=[dec].[dec].[dec].[dec].[dec].[dec] on callID [dec] [chars]

| | |
|--------------------|---|
| Explanation | An internally-detected error has caused a voice call to be released or terminated. An Internal Error Code (IEC) has been generated to report the error. This IEC will be logged in the accounting record for this call. In addition it is being reported through syslog because of the voice iec syslog configuration. |
|--------------------|---|

%VOICE_IEC-3-GW : [chars]: Internal Error ([chars]): IEC=[dec].[dec].[dec].[dec].[dec].[dec] on callID [dec] [chars]

Recommended Action Refer to the IEC Error Message Decoder at <http://www.cisco.com/univercd/cc/td/doc/product/voice/vtgemd.htm> and enter the IEC, or enter the **show voice iec description IECvalue** command, with **IECvalue** being the value of the IEC that was received, for more information on the details of this error. It is possible some debugging actions might also indicate the cause of the error.

%VOICE_IEC-3-GK : [chars]: Internal Error ([chars]): IEC=[dec].[dec].[dec].[dec].[dec].[dec] on GUID [chars] confid [chars]

Explanation An internally-detected error has caused a voice call to be released or terminated. An Internal Error Code (IEC) has been generated to report the error. This IEC will be logged in the accounting record for this call. In addition it is being reported through syslog because of the **voice iec syslog** configuration.

Recommended Action Refer to the IEC Error Message Decoder at <http://www.cisco.com/univercd/cc/td/doc/product/voice/vtgemd.htm> and enter the IEC, or enter the **show voice iec description IECvalue** command, with **IECvalue** being the value of the IEC that was received, for more information on the details of this error. It is possible some debugging actions might also indicate the cause of the error.

%VOICE_IEC-3-EXT : Externally-generated Internal Error Code received: [dec].[dec].[dec].[dec].[dec].[dec]

Explanation Some external entity has initiated the termination of a voice call. It has signalled its Internal Error Code to this gateway, to be reported in the accounting record for this call. In addition, it is being reported through syslog because of the **voice iec syslog** configuration.

Recommended Action Refer to the IEC Error Message Decoder at <http://www.cisco.com/univercd/cc/td/doc/product/voice/vtgemd.htm> and enter the IEC, or enter the **show voice iec description IECvalue** command, with **IECvalue** being the value of the IEC that was received, for more information on the details of this error. It is possible some debugging actions might also indicate the cause of the error.

VOICE_REG_CRED

%VOICE_REG_CRED-6-ADDED : VOICE-REG-POOL-[dec] Credentials of new user ([chars]) added to voice register pool

Explanation Credentials on Phone Pool Added

Recommended Action No action is required.

%VOICE_REG_CRED-6-UPDATED : VOICE-REG-POOL-[dec] Credentials of user ([chars]) updated in voice register pool

Explanation Credentials on Phone Pool Updated

Recommended Action No action is required.

%VOICE_REG_CRED-6-REMOVED : VOICE-REG-POOL-[dec] Credentials of user ([chars]) removed from voice register pool

Explanation Credentials on Phone Pool Removed

Recommended Action No action is required.

%VOICE_REG_CRED-6-AUTOREG_PWD_ADDED : Password added to auto register

Explanation AutoRegister Password Added

Recommended Action No action is required.

%VOICE_REG_CRED-6-AUTOREG_PWD_UPDATED : Password updated in auto register

Explanation AutoRegister Password Updated

Recommended Action No action is required.

%VOICE_REG_CRED-6-AUTOREG_PWD_REMOVED : Password removed from auto register

Explanation AutoRegister Password Removed

Recommended Action No action is required.

%VOICE_REG_CRED-6-ATA_IVR_PWD_ADDED : VOICE-REG-POOL-[dec] ATA IVR Pin added to voice register pool

Explanation ATA IVR Pin Added

Recommended Action No action is required.

%VOICE_REG_CRED-6-ATA_IVR_PWD_UPDATED : VOICE-REG-POOL-[dec] ATA IVR Pin updated in voice register pool

Explanation ATA IVR Pin Updated

Recommended Action No action is required.

%VOICE_REG_CRED-6-ATA_IVR_PWD_REMOVED : VOICE-REG-POOL-[dec] ATA IVR Pin removed from voice register pool

Explanation ATA IVR Pin Removed

Recommended Action No action is required.

%VOICE_REG_CRED-6-PIN_ADDED : VOICE-REG-POOL-[dec] Pin added to voice register pool

Explanation Pin Added

Recommended Action No action is required.

%VOICE_REG_CRED-6-PIN_UPDATED : VOICE-REG-POOL-[dec] Pin updated in voice register pool

Explanation Pin Updated

Recommended Action No action is required.

%VOICE_REG_CRED-6-PIN_REMOVED : VOICE-REG-POOL-[dec] Pin removed from voice register pool

Explanation Pin Removed

Recommended Action No action is required.

VPDN

%VPDN-6-CLOSED : [chars] [chars][chars] closed [chars] [chars] [chars][chars][chars]

Explanation The remote server, typically the HGW/LNS closed this session. The reason for the closure is encoded in a hexadecimal format and corresponds to the particular protocol descriptions i.e. for L2F the values are documented in section 4.4.5 of the Internet Draft. A description string may also be present which describes the closure reason.

%VPDN-6-CLOSED : [chars] [chars][chars] closed [chars] [chars] [chars][chars][chars]

Recommended Action Check configuration on the NAS/LAC or HGW/LNS

%VPDN-6-DOWN : [chars] [chars][chars] changed state to down [chars] [chars] [chars][chars][chars]

Explanation The remote server, typically the HGW/LNS closed this tunnel. The reason for the closure is encoded in a decimal format, which corresponds to the particular protocol descriptions i.e. for L2F the values are documented in section 4.4.5 of the Internet Draft. A description string may also be present which describes the closure reason.

Recommended Action Check configuration on the NAS/LAC or HGW/LNS

%VPDN-6-AUTHENERR : [chars] [chars][chars] cannot authenticate for [chars] [chars] [chars][chars][chars]

Explanation The NAS/LAC or HGW/LNS is unable to locate a AAA server for the purposes of authenticating the user or tunnel. An error of this type indicates that the router was unable to establish a network connection with the designated/configured server. A reason string may also be present to provide further information.

Recommended Action Check AAA configuration on the NAS/LAC or HGW/LNS and network connectivity to the AAA server(s).

%VPDN-6-AUTHENFAIL : [chars] [chars][chars], [chars]authentication failure [chars]for [chars] [chars] [chars][chars][chars]

Explanation The NAS/LAC or HGW/LNS has failed to authenticate a user or a tunnel, or the HGW/LNS has failed authentication with the client which initiated the session. For authentication failures of the user or tunnel a reason string should be present which will indicate the point of failure. When a client fails to authenticate the HGW a reason string may be present depending upon the point of failure.

Recommended Action Check username configuration on the NAS/LAC or HGW/LNS and possibly even the client if the HGW/LNS is failing authentication, removing the negotiation of outbound authentication is one possible solution i.e. only authenticate the user in the inbound direction. If AAA is applicable, check AAA configuration on the NAS/LAC or HGW/LNS and network connectivity to the AAA server(s).

%VPDN-6-AUTHORERR : [chars] [chars][chars] cannot authorize for [chars] [chars] [chars][chars][chars]

Explanation The NAS/LAC or HGW/LNS is unable to locate a AAA server for the purposes of authorizing the user or tunnel. An error of this type indicates that the router was unable to establish a network connection with the designated/configured server. A reason string may also be present to provide further information.

%VPDN-6-AUTHORERR : [chars] [chars][chars] cannot authorize for [chars] [chars] [chars][chars][chars]

Recommended Action Check AAA configuration on the NAS/LAC or HGW/LNS and network connectivity to the AAA server(s).

%VPDN-6-AUTHORFAIL : [chars] [chars][chars], [chars]authorization failure for [chars] [chars] [chars][chars][chars]

Explanation The NAS/LAC or HGW/LNS has failed to authorize a user or a tunnel. A reason string may be present to indicate the point of failure.

Recommended Action Check authorization configuration on the NAS/LAC or HGW/LNS. If AAA is applicable, check network connectivity to the AAA server(s).

%VPDN-5-UNREACH : [chars] [chars][chars] is unreachable

Explanation The NAS/LAC or HGW/LNS has timed out attempting to establish a tunnel connection to a HGW/LNS or NAS/LAC. This may be due to network or authentication/authorization issues.

Recommended Action Check configuration on the NAS/LAC or HGW/LNS, check network connectivity between the NAS/LAC and HGW/LNS. Check if the tunnel setup needs to have a different source IP address from that of the NAS/LAC.

%VPDN-5-NOIDB : [chars] [chars][chars] unable to terminate user [chars]

Explanation The HGW/LNS is out of resources to create sessions for VPDN forwarded users, in particular it has reached the maximum number of interfaces allowed on the router.

Recommended Action

%VPDN-4-SESSIONERROR : [chars] [chars][chars] unable to terminate user [chars][chars][chars]

Explanation The HGW/LNS was unable to complete the forwarding of the VPDN user due to an internal error. This error may be resource related or configuration related. A reason string may be present to indicate the point of failure.

Recommended Action Check the configuration on the HGW/LNS

%VPDN-3-NORESOURCE : [chars] [chars][chars] no resources for user [chars][chars][chars]

Explanation The NAS/LAC or HGW/LNS is out of resources for the forwarding of a VPDN user.

Recommended Action

%VPDN-6-TIMEOUT : [chars] [chars][chars] disconnected [chars] [chars] [chars][chars][chars]

Explanation The NAS/LAC or HGW/LNS has disconnected the user due to the expiration of a timer, this may be e.g. PPP negotiation related or an absolute timeout for the session.

**Recommended
Action**

%VPDN-6-SOFTSHUT : [chars] [chars][chars] has turned on softshut and rejected [chars] [chars] [chars][chars][chars]

Explanation The NAS/LAC or HGW/LNS can no longer accept new connection when softshut has been turned on. Existing session will continue until termination.

**Recommended
Action**

%VPDN-4-REFUSED : Session for [chars] Refused status = [hex]

Explanation The remote server refused this session.

**Recommended
Action** Check configuration on the HG or LNS

%VPDN-6-RESIZE : Updated [chars] MID table size to [int]

Explanation The NAS/LAC or HGW/LNS has altered the size of the session table through command line configuration.

**Recommended
Action**

%VPDN-6-MAX_SESS_EXCD : [chars] [chars][chars] has exceeded configured local session-limit and rejected [chars] [chars] [chars][chars][chars]

Explanation The NAS/LAC or HGW/LNS has refused this session since the configured maximum VPDN session limit has been reached.

**Recommended
Action**

%VPDN-3-IP_SWITCH_ERR : l2x ip switching vector not installed

Explanation Platform dependent l2x ip cef switching module is missing.

%VPDN-3-IP_SWITCH_ERR : I2x ip switching vector not installed**Recommended
Action**

%VPDN-3-DROP_ADDR_MISMATCH : [chars]

Explanation The remote server changed its address.**Recommended
Action** Change initiate-to configuration at the LAC to point to the exact IP address LNS will use

%VPDN-6-VPDN_DEADCACHE_EVENT : LSG dead cache entry [IP_address] [chars]

Explanation A dead cache entry status is changed in the VPDN Load Sharing Group (LSG) table. The event could be 'Added', where a LSG entry goes Down, 'Deleted', where an entry moves out of the Down status, or 'Cleared', where an entry is cleared by a user.**Recommended
Action**

%VPDN-6-TUNNEL_IN_RESYNC : [chars] [chars] [chars] tunnel is in HA resync, reject [chars] [chars] [chars]

Explanation The tunnel towards the peer is still in High Availability (HA) resync, hence it cannot bring up any new sessions until the resync is complete.**Recommended
Action** It is normal for this to occur during tunnel High Availability (HA) resync phase. New sessions cannot be brought up on a tunnel that is in HA resync. Once resync is complete, new sessions can be brought up on this tunnel.

%VPDN-6-QUEUED_PACKET_INFO : UnsetQ reached msg alert threshold. local_cc_id=[int], unsetQ=[int], resendQ=[int], max_unsetQ=[int], max_resendQ=[int]

Explanation UnsetQ size has reached the message alert threshold. Message alert threshold can be configured through CLI 'vpdn queuesize-alert <num>'.**Recommended
Action**

VRFS

%VRFS-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

Explanation Initialization of the specified subblock data structure could not be accomplished.

%VRFS-3-SBINIT : Error initializing [chars] subblock data structure. [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%VRFS-3-SBNOFN : Missing [chars] subblock [chars] function for [chars]

| | |
|---------------------------|---|
| Explanation | Functions for distributing this subblock are missing from the image. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

VRRP

%VRRP-6-STATECHANGE : [chars] Grp [dec] state [chars] -> [chars]

| | |
|---------------------------|-----------------------------------|
| Explanation | The VRRP router has changed state |
| Recommended Action | No action is required. |

%VRRP-4-BADAUTHTYPE : Bad authentication from [IP_address], group [dec], type [dec], expected [dec]

| | |
|---------------------------|--|
| Explanation | Two routers participating in VRRP disagree on the valid authentication type. |
| Recommended Action | Use the vrrp authentication command to repair the VRRP authentication discrepancy between the local system and the one whose IP address is reported. |

%VRRP-4-BADAUTH : Bad authentication from [IP_address], group [dec], type [dec]

| | |
|---------------------------|--|
| Explanation | Two routers participating in VRRP disagree on authentication |
| Recommended Action | Use the vrrp authentication command to repair the VRRP authentication discrepancy between the local system and the one whose IP address is reported. |

%VRRP-3-ERROR : Internal error, [chars]

| | |
|--------------------|--------------------------------------|
| Explanation | An internal software error occurred. |
|--------------------|--------------------------------------|

%VRRP-3-ERROR : Internal error, [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%VRRP-4-WARN : Internal warning, [chars]

| | |
|---------------------------|---|
| Explanation | An internal software warning occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VRRP-4-CFG_WARN : [chars]

| | |
|---------------------------|---|
| Explanation | There is a mismatch in the number of additional addresses advertised by the peer; or the addresses are mis-ordered in the peer advertisement. |
| Recommended Action | No action is required. |

%VRRP-6-STATE : [chars]

| | |
|---------------------------|------------------------------------|
| Explanation | The VRRP router has changed state. |
| Recommended Action | No action is required. |

%VRRP-6-INFO : Internal info, [chars]

| | |
|---------------------------|---|
| Explanation | An internal software information message occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

|---------------------------|------------------------------------|
| Explanation | The VRRS router has changed state. |
| Recommended Action | No action is required. |

%VRRS-6-INFO : Internal info, [chars]

| | |
|---------------------------|---|
| Explanation | An internal software information message occurred. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

VSTATS

%VSTATS-6-VCSR : SEQ=[int]:[chars]

| | |
|---------------------------|---|
| Explanation | The text data are pushed out as voice call statistics records(VCSR). |
| Recommended Action | The statistics text data should be reordered with the given SEQ number if one large message is chopped into multiple segments. The text data can be parsed/uploaded to be processed in more elegant form. |

%VSTATS-6-IEC : SEQ=[int]:[chars]

| | |
|---------------------------|---|
| Explanation | The text data are pushed out as internal error code(IEC). |
| Recommended Action | The statistics text data should be reordered with the given SEQ number if one large message is chopped into multiple segments. The text data can be parsed/uploaded to be processed in more elegant form. |

VTCP

%VTCP-3-VTCP_CREATE_CB_MALLOC_FAILED :

| | |
|---------------------------|--|
| Explanation | Malloc failed during VTCP create callback. |
| Recommended Action | LOG_STD_ACTION |

VTSP**%VTSP-3-NOEVENT : no free event structure available from [chars] for DSP message**

| | |
|---------------------------|---|
| Explanation | There were no event structures remaining in the system pools to alert the router of a voice or signaling event. |
| Recommended Action | Check that the voice port for which the event was reported is still operational. If not, clear the voice port. |

%VTSP-3-CAPABILITYMISMATCH : voice port [chars]: call connection id [[hex] [hex] [hex] [hex]]

| | |
|---------------------------|---|
| Explanation | There was a capabilities mismatch between the two call legs. capabilities are negotiated between call legs for CODEC, VAD and FAX rate. |
| Recommended Action | Check that the dial peer configuration is appropriate for the interface in question. Also check that and configuration on the interface is correct. |

%VTSP-3-DSPALARM : channel [chars], DSP ID [hex]: status=[hex] message=[hex] text=[chars]

| | |
|---------------------------|--|
| Explanation | The DSP reported a fatal error. All calls on the DSP were dropped and a DSP reload was attempted. |
| Recommended Action | Verify that the DSP reloaded properly by attempting to place a call on the affected voice port. Contact your technical support representative, include the full text of the error message. |

%VTSP-3-FSM_ERROR : [chars]

| | |
|---------------------------|--|
| Explanation | Internal Finite State Machine Error. |
| Recommended Action | Contact your technical support representative, include the full text of the error message. |

%VTSP-3-DSP_TIMEOUT : DSP timeout on channel [chars], event [hex]: DSP ID=[hex]: [chars] (call mode=[dec])

| | |
|---------------------------|--|
| Explanation | Timeout on DSP response. |
| Recommended Action | The DSP has been automatically reset. If problem persists, contact your technical support representative |

%VTSP-4-FSM_BAD_EVENT : Invalid FSM Input on channel [chars]: state=[chars] event=[dec]

| | |
|--------------------|--|
| Explanation | Internal state machine illegal input. This message represents an internal software fault and may manifest itself as dropped or hung calls. |
|--------------------|--|

%VTSP-4-FSM_BAD_EVENT : Invalid FSM Input on channel [chars]: state=[chars] event=[dec]

Recommended Action Contact your field service representative if indication is coincident with dropped or hung calls.

%VTSP-3-DOCALLHISFAIL : vtsp_do_call_history: [chars]

Explanation Allocate or insert an active VTSP call record into call history list failed.

Recommended Action No action is required.

%VTSP-3-MSGSNDFAIL : channel:[chars] DSP ID:[hex] Message ID:[hex]

Explanation A message could not be sent to the DSP. The call continued but may have experienced problems.

Recommended Action Verify that the DSP is still functioning properly by attempting to place a call on the affected voice port. Contact your technical support representative, include the full text of the error message.

%VTSP-3-VTSP_BLOCK : vtsp_call_block allocate failed

Explanation VTSP call block allocation failed.

Recommended Action Add more memory

%VTSP-3-VTSP_CALL_INFO_CHUNK : VTSP callInfo chunk creation failed.

Explanation Creation of VTSP callInfo chunk failed due to lack of memory.

Recommended Action Add more memory.

%VTSP-3-VTSP_DB_ERR : vtsp_call_block database error

Explanation Internal VTSP call block database error. This message represents an internal software fault and may manifest itself as dropped or hung calls.

Recommended Action Contact your technical support representative, include the full text of the error message.

%VTSP-3-VTSP_HAIRPINN : hairpin peer cdb does not exist, cdb [hex], dst_call_id [dec]

| | |
|---------------------------|--|
| Explanation | A hairpin call setup failed because the other call leg does not exist. |
| Recommended Action | Contact your technical support representative. Report the configuration, and the full text of the error message. |

%VTSP-3-VTSP_HAIRPIN_NOTPOSSIBLE : Call can't be hairpinned. cdb [hex], dst_cdb [hex], dst_call_id [dec]

| | |
|---------------------------|--|
| Explanation | A DSP-less call could not be hairpinned. |
| Recommended Action | Check the dial-peer configuration. |

%VTSP-3-VTSP_HAIRPIN_FAILED : Call hairpinning failed. cdb [hex], dst_cdb [hex], dst_call_id [dec]

| | |
|---------------------------|--|
| Explanation | A DSP-less call could not be hairpinned. |
| Recommended Action | Under heavy traffic, this failure may happen because no TDM resources were available. Contact your technical support representative, include the full text of the error message. |

%VTSP-3-VTSP_CALL_DISC_FAILED : VTSP call disconnect failed. channel id [chars], ret [dec]

| | |
|---------------------------|---|
| Explanation | VTSP call disconnect could not be successfully passed and it may result hung calls. |
| Recommended Action | Contact your technical support representative. Report the configuration and full text of the error message. |

%VTSP-4-VTSP_PLAR_TIE_FAILED : VTSP connection plar tie set up failed. channel id [chars], cause [dec]

| | |
|---------------------------|---|
| Explanation | Connection plar tie set up failed for non-normal reason |
| Recommended Action | Contact your technical support representative. Report the configuration and full text of the error message. |

%VTSP-6-UNKNOWN_EXT_AGENT_RESET_ATTEMPT : Request to reset an unknown external agent (ID [dec]) attempted. Attempt ignored.

| | |
|--------------------|--|
| Explanation | A request to reset an external agent (eg H323 Gatekeeper or MGCP CA etc) was attempted but IOS doesn't know how to process the request. This is not usually a problem for the router. It does however mean that the external agent for whom the reset was intended never got it. |
|--------------------|--|

%VTSP-6-UNKNOWN_EXT_AGENT_RESET_ATTEMPT : Request to reset an unknown external agent (ID [dec]) attempted. Attempt ignored.

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%VTSP-6-LONG_DUR_CALL_DETECTED : Long Duration Call is detected [chars]

| | |
|---------------------------|---|
| Explanation | The call is active for configured duration of long call |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VTSP-2-H320_MATCH_CALL_QUEUE_ERROR : Memory corruption is found on H.320 Primary Call Match Data Queue. Queue Size=[dec]

| | |
|---------------------------|---|
| Explanation | Failed to match an H.320 primary call for an incoming call due to memory corruption. |
| Recommended Action | Contact your technical support representative. Report the configuration and full text of the error message. |

VXE_CLOUD_HA

%VXE_CLOUD_HA-6-BFDEVENT : VXE BFD peer [IP_address] interface [chars] transitioned to down

| | |
|---------------------------|---|
| Explanation | The BFD interface transitioned to down triggering a VXE Cloud HA event. |
| Recommended Action | No action is required. |

%VXE_CLOUD_HA-6-BFDCONFIG : VXE BFD peer [IP_address] configuration [chars] from [chars]

| | |
|---------------------------|--|
| Explanation | The BFD configuration was removed while cloud HA is still configured |
| Recommended Action | No action is required. |

%VXE_CLOUD_HA-4-NOTCFGD : VXE Cloud HA BFD is enabled, but [chars] node [int] not fully configured flags=[hex]

Explanation The BFD state transitioned, but not all Cloud parameters were configured

Recommended Action No action is required.

%VXE_CLOUD_HA-3-FAILED : VXE Cloud HA BFD state transitioned, [chars] node [int] event [chars] failed

Explanation The BFD state transitioned, but failed to perform route replacement

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VXE_CLOUD_HA-6-SUCCESS : VXE Cloud HA BFD state transitioned, [chars] node [int] event [chars] successful

Explanation The BFD state transitioned and successfully performed the route replacement

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%VXE_CLOUD_HA-3-INIT : VXE Cloud HA [chars] failed

Explanation VXE Cloud HA initialization failure

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

VXE_VNIC_IF

%VXE_VNIC_IF-3-MSGINITERROR : VXE vNIC interface command: [chars] failed: [dec] for [chars]

Explanation The vNIC ethernet interface subsystem has failed to communicate with the infrastructure for port Configuration of vNIC ethernet.

%VXE_VNIC_IF-3-MSGINITERROR : VXE vNIC interface command: [chars] failed: [dec] for [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%VXE_VNIC_IF-5-MSG_LCN_WARN : VXE vNIC interface: [chars] disabled due to the expired license

| | |
|---------------------------|---|
| Explanation | The vNIC ethernet interface disabled due to expired license. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VXE_VNIC_IF-3-PROCESS_CREATE_FAIL : vNIC ethernet statistics process creation failed

| | |
|---------------------------|---|
| Explanation | Can not create IOS process for vNIC ethernet port statistics collection |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VXE_VNIC_IF-3-PERSINITERROR : Duplicate mac address in the VXE vNIC interface persistent name table: [enet]

| | |
|---------------------------|---|
| Explanation | There are two vNIC configured with the same mac address. This could cause inconsistency with the interface persistent. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VXE_VNIC_IF-6-RING_CONF_FAILED : Configuring ring entries failed

| | |
|--------------------|---|
| Explanation | An error occurred when the ring size configuration was attempted. |
|--------------------|---|

%VXE_VNIC_IF-6-RING_CONF_FAILED : Configuring ring entries failed

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%VXE_VNIC_IF-6-VXE_UUID_CHANGED : Router UUID changed from [chars] to [chars]

| | |
|---------------------------|---|
| Explanation | Router UUID is changed, so persistent interface data is not used. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VXE_VNIC_IF-6-VXE_UUID_INVALID : Router has invalid or no UUID

| | |
|---------------------------|---|
| Explanation | Router UUID is invalid or not preset, persistent interface data is not used. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VXE_VNIC_IF-4-DRIVER_NOT_SUPPORTED : Ignoring interface with address [chars] using unsupported [chars] driver.

| | |
|---------------------------|---|
| Explanation | Interfaces using an unsupported driver will not be configured. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%VXE_VNIC_IF-4-DRIVER_DEPRECATED : Interface with address [chars] using deprecated [chars] driver.

| | |
|---------------------------|---|
| Explanation | Interfaces using an deprecated driver will not be supported in the next release. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

WANPHY**%WANPHY-4-WANALARM : [chars]: [chars] [chars]**

| | |
|---------------------------|--|
| Explanation | The specified WANPHY Alarm has been declared or cleared. |
| Recommended Action | Recommended action is to repair the source of the alarm. |

WCCP**%WCCP-1-SERVICELOST : Service [chars][chars][chars] lost on WCCP client [chars]**

| | |
|---------------------------|--|
| Explanation | WCCP has lost the service associated the specified WCCP client |
| Recommended Action | Verify the operation of the specified WCCP client |

%WCCP-5-SERVICEFOUND : Service [chars][chars][chars] acquired on WCCP client [chars]

| | |
|---------------------------|--|
| Explanation | WCCP has acquired a service on the specified WCCP client |
| Recommended Action | No action is required. |

%WCCP-5-SERVICEMISMATCH : Service [chars][chars][chars] mismatched on WCCP client [chars]

| | |
|---------------------------|---|
| Explanation | WCCP has rejected a mismatched service on the specified WCCP client |
| Recommended Action | Amend the WCCP service definition |

%WCCP-3-MASKACLMERGE : Mask/ACL merge failed for the service [chars], VRF [chars], service Id [dec]

| | |
|---------------------------|---|
| Explanation | An internal error indicating that the Mask/ACL merge has failed |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%WCCP-1-SERVICELIST : Failed to derive service [chars][chars][chars] from service-list [chars]

Explanation The WCCP Access Control List used to define the specified closed service has been modified and can no longer be used to create the service. The service has been marked as inactive. Either change the configuration to an Open service or update the ACL to correctly identify the desired service

Recommended Action Update the service-list ACL to correctly define the desired service

%WCCP-3-SBCREATEFAIL : Unable to allocate [chars] WCCP subblock on interface [chars]

Explanation An internal error indicating that the WCCP process was unable to allocate memory to hold interface specific service information

Recommended Action Ensure that there is enough memory available for all processes

%WCCP-3-SBADDFAIL : Unable to add [chars] WCCP subblock on interface [chars]

Explanation An internal error indicating that the WCCP process was unable to attach interface specific service information

Recommended Action Ensure that there is enough memory available for all processes

%WCCP-3-BADACE : Service [chars][chars][chars], invalid access-list entry (seq:[dec] reason:[chars])

Explanation The Access Control List associated with the specified WCCP service contains an incompatible entry. The hardware cannot process the resultant merged access list and will fall back to software based netflow switching

Recommended Action Update the Access Control List to remove or change the incompatible entry

%WCCP-3-SBINIT : Error initializing [chars] WCCP subblock data structure. [chars]

Explanation Initialization of the specified subblock data structure could not be accomplished.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%WCCP-3-CAP_API_INI : Failed to initialize WCCP platform parameter [int]

| | |
|---------------------------|---|
| Explanation | Initialization of a WCCP platform parameter failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%WCCP-3-CAP_API_DEF : Failed to set WCCP platform parameter defaults [hex] ([chars])

| | |
|---------------------------|---|
| Explanation | The platform failed to set the WCCP platform parameter defaults. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%WCCP-3-CAP_API_GET : Failed to get WCCP platform parameter [int] ([chars])

| | |
|---------------------------|---|
| Explanation | The platform failed to read a WCCP platform parameter. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%WCCP-3-CAP_API_SET : Failed to set WCCP platform parameter [int] to [int] ([chars])

| | |
|---------------------------|---|
| Explanation | The platform failed to modify a WCCP platform parameter. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%WCCP-3-SIFIGNORED : source-interface [chars] ignored ([chars])

| | |
|---------------------------|--|
| Explanation | The configured source interface has been ignored whilst determining the WCCP router ID. |
| Recommended Action | Use the indicated reason message to determine why WCCP refused to use the configured interface as its router ID. |

WEBSERVER**%WEBSERVER-5-LOGIN_PASSED :**

| | |
|---------------------------|-----------------------|
| Explanation | Login successful |
| Recommended Action | No action is required |

%WEBSERVER-5-LOGIN_FAILED :

| | |
|---------------------------|--|
| Explanation | Login unsuccessful when user/password is invalid |
| Recommended Action | No action is required |

%WEBSERVER-5-SESS_LOGOUT :

| | |
|---------------------------|-----------------------|
| Explanation | Logout successful |
| Recommended Action | No action is required |

%WEBSERVER-5-SESS_TIMEOUT :

| | |
|---------------------------|-----------------------|
| Explanation | Session Timeout |
| Recommended Action | No action is required |

%WEBSERVER-5-CONNECTION_FAILED :

| | |
|---------------------------|-----------------------------------|
| Explanation | Failure reason for SSL connection |
| Recommended Action | No action is required |

%WEBSERVER-5-MAX_CONNECTION_REACHED :

| | |
|---------------------------|----------------------------------|
| Explanation | Maximum HTTP connection reached. |
| Recommended Action | No action is required |

WLS_FQDN_PROXY**%WLS_FQDN_PROXY-3-PROXY_IPC_INIT_FAILED : [dec]**

| | |
|---------------------------|---|
| Explanation | IPC handler initialization failed. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%WLS_FQDN_PROXY-4-PROXY_IPC_INVALID_MSG : [hex]

| | |
|---------------------------|---|
| Explanation | Received an invalid IPC messages subtype. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

WSMAN through ZONE

- [WSMAN](#)
- [WUILOGIN](#)
- [X25](#)
- [X40G](#)
- [XCCTSP_VOICE](#)
- [XCONNECT](#)
- [XDR](#)
- [ZONE](#)

WSMAN**%WSMAN-3-INVALID_TRUSTPOINT : Trustpoint associated with HTTP is either invalid or does not exist**

| | |
|---------------------------|--|
| Explanation | This message indicated that Trustpoint attached to the HTTP is not valid or it does not exist. Ideally there is need to create Trustpoint first and then attach to the HTTP process. In case Trustpoint is created later there is need to restart HTTPS server |
| Recommended Action | Configure a valid trustpoint and attach it to HTTP |

WUILOGIN**%WUILOGIN-2-INITIALIZATION_FAILED : WebUI standalone login initialization failed.**

| | |
|---------------------------|---|
| Explanation | The attempt to access the web user interface using the wuilogin access module failed. The wuilogin access module is used to authenticate web user interface access only when the IOS integrated webserver, which is enabled using the ip http server command, or the IOS process is down or disabled. |
| Recommended Action | Note the time of the error and check the web user interface log (wuilogin-*.log) for additional information on why the attempt to access the web user interface failed. |

%WUILOGIN-2-AUTHENTICATION_SYSTEM_FAILED : WebUI standalone authentication process failed. Reason: [chars]

| | |
|---------------------------|--|
| Explanation | During the id and password validation phase of the wuilogin access module authentication attempt, an exception occurred. This message usually occurs as a result of a failure of the underlying PAM authentication module. |
| Recommended Action | Note the time of the error and check the web user interface log (wuilogin-*.log) for additional information on why the attempt to access the web user interface failed. |

X25**%X25-2-ILLP4 : Interface [chars], Illegal state [chars] when P4**

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%X25-3-NOLCI : Interface [chars], Delete: lci [dec] not found in [chars] table

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%X25-3-UNKNOWNPROT : [chars] : Unable to identify lower layer protocol

| | |
|---------------------------|--|
| Explanation | IDB is not using X25 and IDB is not capable of supporting CMNS. |
| Recommended Action | Check your hardware configuration or contact your technical support representative for assistance. |

%X25-3-X25NOTAVAIL : [chars] : Lower layer protocol is not available

| | |
|---------------------------|---|
| Explanation | The required lower layer service is unavailable. |
| Recommended Action | Check your configuration or contact your technical support representative for assistance. |

%X25-3-BADCONFIGATTEMPT : Attempt to [chars].

| | |
|---------------------------|--|
| Explanation | The user attempted an illegal configuration. |
| Recommended Action | The error will indicate what illegal action was attempted. The user should check their configuration and if necessary contact technical support representative for assistance. |

%X25-3-NOTFINDBH : Can't find bfe host address [IP_address] to delete

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%X25-3-INTIMEQ : Interface [chars], LCN [dec] already in timer queue, new time %#Ta

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%X25-3-BADCONFIG : Interface [chars], X.25 [chars], current config. retained

| | |
|---------------------------|---|
| Explanation | The interface's X.25 configuration is not valid; the existing configuration was not changed. |
| Recommended Action | Verify the following: The interface's switched virtual circuit ranges do not overlap; for nonzero values, lic <= hic < ltc <= htc < loc <= hoc. (For more information, refer to Configuring Virtual Circuit Ranges in the Router Products Configuration Guide.) If an incoming-only range is defined, check that it is numerically less than the two-way range. If an outgoing-only range is defined, check that it is numerically greater than the two-way range. No virtual circuit high/low parameter is zero unless its partner low/high parameter is also zero. The default window sizes are less than the interface modulo. |

%X25-3-PVCBAD : Interface [chars], PVC [dec], [chars]

| | |
|---------------------------|--|
| Explanation | A switched PVC cannot be connected. The final [chars] text string in the message represents the state of the PVC. These text strings can also appear in show x25-vc output. For more information, refer to the show x25-vc documentation in the Router Products Command Reference publication. |
| Recommended Action | Validate the configuration of the PVCs at both ends of the connection, and reconfigure them if necessary. |

%X25-3-XOTPROTOCOL : XOT protocol error from [IP_address]: [chars]

| | |
|---------------------------|--|
| Explanation | A protocol error was detected over an X.25-over-TCP (XOT) connection, causing the connected VC to close. A flaw may exist in the remote host's XOT implementation. |
| Recommended Action | If this message recurs, call your technical support representative for assistance. |

%X25-4-VCLOSTSYNC : Interface [chars], VC [dec] TCP connection [chars]

| | |
|---------------------------|--|
| Explanation | An X.25 circuit that is being tunneled over a TCP connection between routers was cleared ungracefully. The last [chars] text string in the message can take one of two forms. If the text string is closed unexpectedly, the router at the remote end of the connection was rebooted, or the connection failed. If the text string is connection corrupted, it is likely that the connection was made to a router running an older software release. |
| Recommended Action | If the text string is closed unexpectedly, reestablish the connection after the remote router or intervening network is operational. If the text string is connection corrupted, upgrade the router at the other end of the connection to a more recent software release. |

%X25-4-BADUPCALL : Interface [chars], Unexpected call ([chars]) from LLC2 DTE=[hex][hex].[hex][hex].[hex][hex].

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%X25-4-DEBUG_LCI : LCI deleted at interrupt time

| | |
|---------------------------|--|
| Explanation | An internal software error occurred. |
| Recommended Action | If any of these messages recur, call your technical support representative for assistance. |

%X25-4-RANGEUNUSED : Interface [chars], [chars] VC range unused; set limits to zero

| | |
|---------------------------|---|
| Explanation | An outgoing-only or incoming-only virtual circuit range exactly overlaps the two-way virtual circuit range. This was the former method for specifying that a virtual circuit range was not used. The current method is to set the range limits to zero. |
| Recommended Action | Use the privileged copy running-config startup-config command to write the configuration to memory. This will store the modified (zero) range limits. |

%X25-4-LARGEPKSIZE : Interface [chars], [chars] packet sizes [dec]/[dec] too large; lower values will be negotiated

| | |
|---------------------------|---|
| Explanation | The interface's default packet sizes or outgoing packet size facility values are too large to be carried by Link Access Procedure, Balanced (LAPB). |
| Recommended Action | The router will negotiate lower packet size values automatically. The LAPB N1 value should be increased. For example, for an X.25 maximum packet size of 1024, modulo 8 X.25 operation will add 3 bytes of overhead and modulo 8 LAPB operation will add 4 bytes of overhead (the two bytes of CRC are defined to be included). This means that N1 must be at least $1031 \text{ bytes} * 8 = 8248$. |

%X25-4-PARTIALMAP : Interface [chars], [chars] encapsulation call from [chars] partially mapped to [chars]

| | |
|---------------------------|---|
| Explanation | An incoming X.25 call specified a protocol that was assigned to a multiprotocol map; the VC will not be able to carry the full set of protocols specified by the map. |
| Recommended Action | Modify the configuration of the router or the far host to match the encapsulation method used. |

%X25-5-NOBUF : Interface [chars] LCI [dec] [chars]

| | |
|---------------------------|--|
| Explanation | This is a warning only (the compressed packet was not lost). However, an X.25 packet layer RNR (wait) was generated and packet-level transmission on the LCN will not resume (RR issued) until a decompression buffer becomes available. |
| Recommended Action | If this message occurs frequently, you may need to modify the buffer pool. Copy the message exactly as it appears, and report it your technical support representative. |

%X25-5-PBPHOLDQ : Interface [chars] LCI [dec] X25 Hold queue needs to be at least default size

| | |
|---------------------------|--|
| Explanation | An attempt was made to configure the X.25 hold queue to less than the minimum value. |
| Recommended Action | Configure the X.25 hold queue to be ten or more. |

%X25-5-PBPDBIT : Interface [chars] LCI [dec] PBP Compression does not support X25 D bit

| | |
|---------------------------|---|
| Explanation | Compression is not enabled because D-bit support is configured for the LCI. |
| Recommended Action | Reconfigure without D-bit support, or do not attempt to run with compression. |

%X25-3-SYNCBAD : Interface [chars] LCI [dec] Decompression sync error. expected [dec] got [dec]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. The PBP header has a sync field. The sync field (8 bits) is checked on each received packet. |
| Recommended Action | Contact your technical support representative for assistance. |

%X25-3-VERSIONBAD : Interface [chars] LCI [dec] Compression Version mismatch expected [hex] received [hex]

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. The PBP header has a mismatched version field. The version is checked on each received packet. |
| Recommended Action | Copy the message exactly as it appears, and report it your technical support representative. |

%X25-3-SIZEBAD : Interface [chars] LCI [dec] Decompression size error

| | |
|---------------------------|---|
| Explanation | An internal software error occurred. The PBP header has an uncompressed packet size field. Each uncompressed packet size is checked against this field. |
| Recommended Action | Contact your technical support representative for assistance. |

%X25-5-PBPNOEND : Interface [chars] LCI [dec] End system not configured for X25 PBP

| | |
|---------------------------|--|
| Explanation | A compression or decompression operation was attempted by a router other than an end router. Only end routers can perform compression and decompression. |
| Recommended Action | Reconfigure the routers so that only the end routers in the network perform compression and decompression. |

%X25-3-COMPERR : Interface [chars] LCI [dec] low-level stac compression error

| | |
|---------------------------|--|
| Explanation | A Stacker compression algorithm internal error or shortage of buffer space was encountered during a compression operation. This should never happen. |
| Recommended Action | Report the error to your technical support representative. |

%X25-4-BADMBIT : Interface [chars], VC [dec], partial data packet has M-bit set

| | |
|---------------------------|---|
| Explanation | This message occurs when a virtual circuit is set up using the default maximum packet sizes, but the DTE and DCE are not configured with the same default values. A packet was received that had the M-bit set, signifying that more data follows, but the packet did not carry the maximum number of bytes allowed. Such partial data packets must have the M-bit cleared. The resulting loss of a message boundary might cause problems for the data recipient. |
| Recommended Action | Verify the default flow control parameters of the DTE and the DCE. If this message recurs, call your technical support representative for assistance. |

%X25-3-ADDRESSBAD : Interface [chars], x25 address [chars] subaddress %c is too long

| | |
|---------------------------|---|
| Explanation | This message occurs when a subaddress is configured. When this subaddress is combined with the interface's X.121 address, the total address exceeds the limit of 15 characters. |
| Recommended Action | Reconfigure the subaddress so that this does not happen. |

%X25-3-ERR_SUBST_XOT_DNS_DEST : Error substituting regular expression for XOT DNS destination pattern

| | |
|---------------------------|--|
| Explanation | This message occurs when the regular expression substitute utility fails to arrive at X.25 hostname pattern to be sent to DNS for address resolution |
| Recommended Action | Correct the X.25 route command's DNS substitution pattern |

%X25-3-TRUNCATE_ALT_XOT_DNS_DEST : Truncating excess XOT addresses ([dec]) returned by DNS

| | |
|---------------------------|---|
| Explanation | This message occurs when an X.25 route DNS lookup returns more than the 6 permissible XOT destination addresses |
| Recommended Action | Review the DNS database entries used for XOT destination lookup for possible modification |

%X25-4-XOTHOSTWRONG : Wrong host ([IP_address]) for XOT connection to [chars] PVC [dec]; expecting [IP_address]

| | |
|--------------------|--|
| Explanation | This message occurs when an incoming XOT connection identifies a PVC that is configured for a different host IP address, and whose configuration does not permit connection to a different host. |
|--------------------|--|

%X25-4-XOTHOSTWRONG : Wrong host ([IP_address]) for XOT connection to [chars] PVC [dec]; expecting [IP_address]

Recommended Action If the host attempting the connection should be allowed, either the remote host should be configured to use a single host address (by adding the `xot-source-ifc` option), or the local PVC should be configured to accept connections from any host (by using the `xot-promiscuous` option). If the host attempting the connection should not be allowed, the network administrator should take action appropriate for an attempt to create an unauthorized connection.

%X25-4-XOTPVCDUPLICATE : Duplicated remote PVC data for {[chars], pvc [dec]} and {[chars], pvc [dec]}

Explanation This message identifies two local XOT PVCs that are defined using duplicate specifications for the connecting remote XOT PVC.

Recommended Action This message probably reflects a configuration error; the network administrator should examine the identified PVCs to determine what XOT PVC configuration is required.

%X25-4-BFEIP : Warning: IP address is missing or incompatible with BFE mode

Explanation An interface configured for X.25 BFE mode does not have an IP address configured, or the IP address does not conform to BFE requirements, so cannot be mapped to an X.121 address.

Recommended Action Please configure a valid Class A IP address for the interface or remove the 'bfe' option from the 'encapsulation x25' command for the interface.

%X25-3-X25INT : Interface [chars], X.25 internal error [chars]

Explanation This is a general message covering numerous internal X25 error conditions. The message text contains additional details that can be used to identify the problem.

Recommended Action LOG_STD_RECUR_ACTION

%X25-3-XOTINT : XOT internal error [chars]

Explanation This is a general message covering numerous internal error conditions related to XOT. The message text contains additional details that can be used to identify the problem.

Recommended Action Contact your Cisco technical support representative and provide the representative with the error message text exactly as it appears on the console or in the system log and the output of `show version`, `show running-config`, `show x25` and `debug x25` commands

%X25-3-PROFILENO : profile [chars] does not exist

| | |
|---------------------------|---|
| Explanation | This message occurs when an X.25 interface is configured to use an X.25 profile that does not exist |
| Recommended Action | Create and configure the x25 profile using x25 profile <name> global subcommand before referencing the profile. |

%X25-3-X25NOCFG : Profile is not configured

| | |
|---------------------------|---|
| Explanation | This message occurs when an X.25 interface is configured to use an X.25 profile that isn't configured |
| Recommended Action | Configure the x25 profile using x25 profile <name> global subcommand before referencing the profile. |

%X25-3-X25ENCINV : [chars]

| | |
|---------------------------|---|
| Explanation | This message occurs when configuring an X.25 service. |
| Recommended Action | LOG_STD_ACTION |

%X25-3-X25DEENCINV : [chars]

| | |
|---------------------------|--|
| Explanation | This message occurs when deconfiguring X.25 service. |
| Recommended Action | LOG_STD_ACTION |

%X25-3-INVCFGID : [dec] is not a valid X.25 configuration ID

| | |
|---------------------------|--|
| Explanation | This message occurs when an invalid configuration id is used |
| Recommended Action | LOG_STD_ACTION |

%X25-5-UPDOWN : Interface [chars] - DLCI [dec] X.25 packet layer state changed to [chars]

| | |
|---------------------------|--|
| Explanation | The state of the X.25 context associated with the DLCI changed |
| Recommended Action | Notification message only. No action required |

%X25-7-DIAGEVENT : Interface [chars], X.25 diagnostic event, [chars], lci [dec][chars]

Explanation A standard X.25 diagnostic event has been detected. Per Recommendation X.25 a DCE detecting this will send a Diagnostic packet whereas a DTE cannot. The Recommendation defines diagnostic events for packets occurring on an unassigned channel, receipt of some classes of malformed packets, non-standard usage of channel 0 for Call setup or Data traffic, and some protocol timeout events. An unexpected, but benign, diagnostic event may occur when an attached station doesn't respond to a protocol event soon enough; e.g. a timeout waiting for a response to a Call, Clear or Reset sent. The most common malign cause of a diagnostic event is a mismatched configuration of the logical channel ranges between the DTE and DCE stations.

Recommended Action If an attached station is delaying responses to protocol events, check if the appropriate timeout value is sufficient for expected network behavior, and if the connected station is unduly delaying its response. For unassigned logical channel events, enter the **show x25 interface <CmdItalics>id<NoCmdItalics>** for the reporting station to verify the logical channel assignments configured are correct and operational. These ranges must match those defined on the connected station; refer to the Setting the Virtual Circuit Ranges section of the Cisco IOS Wide-Area Networking Configuration Guide for more information. For the rare case where logical channel 0 is designated for non-standard Call setup or Data traffic, both stations must be configured to reflect that usage. LOG_STD_RECUR_ACTION

%X25-7-DIAGRX : Interface [chars], X.25 Diagnostic received, [chars][chars]

Explanation An X.25 diagnostic packet has been received at the DTE from the DCE. Per Recommendation X.25, a DCE station must send a Diagnostic packet when it detects a standard diagnostic event, which the DTE must discard with no protocol action taken; a DTE cannot send a Diagnostic packet. Recommendation X.25 defines diagnostic events for packets occurring on an unassigned channel, receipt of some classes of malformed packets, non-standard usage of channel 0 for Call setup or Data traffic, and some protocol timeout events. An unexpected, but benign, Diagnostic packet may be received when the DTE station doesn't respond to a protocol event soon enough; e.g. the DCE timed out waiting for a response to a Call, Clear or Reset. The most common malign cause of a diagnostic event is a mismatched configuration of the logical channel ranges between the two stations.

Recommended Action If an attached station is delaying responses to protocol events, check if the appropriate timeout value is sufficient for expected network behavior, and if the connected station is unduly delaying its response. For unassigned logical channel events, enter the **show x25 interface <CmdItalics>id<NoCmdItalics>** for the reporting station to verify the logical channel assignments configured are correct and operational. These ranges must match those defined on the connected station; refer to the Setting the Virtual Circuit Ranges section of the Cisco IOS Wide-Area Networking Configuration Guide for more information. For the rare case where logical channel 0 is designated for non-standard Call setup or Data traffic, both stations must be configured to reflect that usage. LOG_STD_RECUR_ACTION

%X25-5-CALL_RECORD : [chars]

| | |
|---------------------------|---|
| Explanation | This message contains X.25 call record information. |
| Recommended Action | No action is required. |

X40G

%X40G-5-TCAM_MGR_INFO : [chars]

| | |
|---------------------------|---|
| Explanation | X40G TCAM driver error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%X40G-3-TCAM_MGR_ERR : GTM ERROR: [chars] ([dec])

| | |
|---------------------------|---|
| Explanation | X40G TCAM MGR interaction error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%X40G-3-TCAM_MGR_HW_ERR : GTM HW ERROR: [chars] ([dec]) [[dec]:[hex]]

| | |
|---------------------------|---|
| Explanation | X40G TCAM hardware error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%X40G-3-TCAM_MGR_HW_PERR : GTM HW ERROR: [chars] ([dec])

| | |
|--------------------|----------------------------------|
| Explanation | X40G TCAM interface parity error |
|--------------------|----------------------------------|

%X40G-3-TCAM_MGR_HW_PERR : GTM HW ERROR: [chars] ([dec])

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%X40G-2-TCAM_MGR_CRIT_ERR : GTM ERROR: [chars] ([dec])

| | |
|---------------------------|---|
| Explanation | X40G TCAM critical error |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%X40G-4-TCAM_MGR_ALLOC_ERR : [chars] NP ([dec]), Region Id ([dec])

| | |
|---------------------------|--|
| Explanation | NP TCAM entry allocation failure |
| Recommended Action | LOG_STD_SH_CMD_ACTION(remote command module <module#> sh platform software xtcammgr instance <NP#> info) |

XCCTSP_VOICE

%XCCTSP_VOICE-3-UNDEFVOICEINTRF : Invalid voice interface slot/controller:group([dec]/[dec]:[dec])

| | |
|---------------------------|--|
| Explanation | The voice interface defined by controller:group is not yet defined within the voice software but attempts were made to use this interface. |
| Recommended Action | Internal software fault. Contact your field service representative if this message is coincident with dropped calls. |

%XCCTSP_VOICE-3-UNDEFDSX0 : Undefined dsx0 interface for controller([dec])

| | |
|---------------------------|--|
| Explanation | The dsx0 interface for the specified controller is not defined but the voice software use it. |
| Recommended Action | Internal software fault. Contact your field service representative if this message is coincident with dropped calls. |

%XCCTSP_VOICE-3-NOSDB : No signaling data block is available to build the voice interface([dec]/[dec]:[dec]) or DSP may not be present

| | |
|---------------------------|--|
| Explanation | The voice software was unable to obtain a signaling data block from the Voice Telephony Service Provider. The system may be out of memory. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%XCCTSP_VOICE-3-ADDINTRFFAIL : The Voice Telephony Service Provider has rejected our request to add this voice interface ([dec]/[dec]:[dec])

| | |
|---------------------------|--|
| Explanation | The voice software was unable to report a new signaling interface to the Voice Telephony Service Provider |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%XCCTSP_VOICE-3-NOMEM : No memory is available to build the voice interface ([dec]:[dec])

| | |
|---------------------------|--|
| Explanation | The voice software was unable allocate memory to build a voice interface data structure. The system may be out of memory. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case) , or contact your Cisco technical support representative and provide the representative with the gathered information. |

%XCCTSP_VOICE-3-MALLOC : No memory is available to build any internal data structure for the voice software.

| | |
|--------------------|---|
| Explanation | The voice software was unable allocate memory to build any internal data structures. The system may be out of memory. |
|--------------------|---|

%XCCTSP_VOICE-3-MALLOC : No memory is available to build any internal data structure for the voice software.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%XCCTSP_VOICE-3-NOTDMCHNL : XCCTSP failed to get a free dsp tdm channel from the DSP Resource Manager (DSPRM) to handle an incoming call

Explanation The voice software was unable to obtain the tdm channel for a free dsp from the DSP Resource Manager. All of the dsp's have been used to process calls, or have been taken out of service.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%XCCTSP_VOICE-3-NOVOICEVDEV : Cannot find the voice data block which matches an asynchronous response for a call.

Explanation Internal software fault. Contact your field service representative if this message is coincident with dropped calls.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.

%XCCTSP_VOICE-3-OUTOFRANGE_CTRL : Going out of range for controller number for the slot subslot [dec], ctrl_num [dec]

Explanation Internal software fault. Contact your field service representative

%XCCTSP_VOICE-3-OUTOFRANGE_CTRL : Going out of range for controller number for the slot subslot [dec], ctrl_num [dec]

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>) , or contact your Cisco technical support representative and provide the representative with the gathered information.

XCONNECT

%XCONNECT-3-ILLEGAL : [chars]

Explanation An illegal event has been processed by the xconnect subsystem.

Recommended Action No action is required.

%XCONNECT-3-CONFIG : [chars]

Explanation An invalid xconnect configuration or an error in processing xconnect configuration has occurred.

Recommended Action No action is required.

%XCONNECT-5-REDUNDANCY : [chars]

Explanation An event has occurred that has caused the xconnect redundancy facility to generate a switchover event to the specified backup member

Recommended Action No action is required.

%XCONNECT-5-PW_STATUS : [chars]

Explanation An event has occurred that has caused the pseudowire to change status

Recommended Action No action is required.

%XCONNECT-5-PW_STATUS_LOST : [chars]

Explanation The system is dropping PW_STATUS messages because the status queue is full

%XCONNECT-5-PW_STATUS_LOST : [chars]

Recommended Action No action is required.

XDR

%XDR-3-XDRIPC : XDR IPC error on multicast-group [hex] due to [chars].

Explanation A general IPC related error occurred which may prevent transfer of data to other peers using the IPC mechanism

Recommended Action Get the output of show xdr multicast immediately after this error. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-6-XDRIPCPEER : XDR IPC error occurred for peer in slot [chars] due to [chars][chars].

Explanation A general IPC related error occurred which may prevent transfer of data to other peers using the IPC mechanism

Recommended Action Get the output of show xdr multicast and show xdr linecard immediately after this error. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-2-XDRDISABLEREQUEST : Peer in slot [chars] requested to be disabled due to: [chars]. Disabling linecard

Explanation Due to some error condition the linecard has requested to be disabled

Recommended Action Execute clear xdr linecard from the RP followed by clear xdr channel on the linecard in question to clear the error condition. If the problem persists get the output of show monitor event-trace xdr all from the RP and the linecard in question and report it to your technical support representative.

%XDR-2-XDRLCDISABLEREQUEST : Client [chars] requested to be disabled. [chars]

Explanation Due to some error condition the linecard has requested to be disabled

Recommended Action Execute clear xdr linecard from the RP followed by clear xdr channel on the linecard in question to clear the error condition. If the problem persists get the output of show monitor event-trace xdr all from the RP and the linecard in question and report it to your technical support representative.

%XDR-3-XDRNOMEM : XDR failed to allocate memory during [chars] creation.

| | |
|---------------------------|---|
| Explanation | Allocation of memory by the XDR subsystem failed. This may result in an unpredictable behavior of XDR |
| Recommended Action | Make sure that there is enough memory for the operations being performed by your machine. Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-3-PULLSENDFAIL : Sending data for pull client [chars] to [chars] failed due to slot(s) [chars] not being in group [hex] of slot(s) [chars]

| | |
|---------------------------|---|
| Explanation | Data sending for an XDR pull client failed for the reason specified. The data was not sent. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show xdr multicast-group) |

%XDR-3-NONINCRSEQ : Non-increasing maximum sequence ([dec], was [dec]) received from slot [chars]

| | |
|---------------------------|---|
| Explanation | Internal software error. May result in unpredictable behaviour. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show xdr linecard) |

%XDR-3-BADSEQVAL : Incorrect maximum sequence calculated ([dec], was [dec]) for slot [chars] with [dec] out of [dec] buffers available

| | |
|---------------------------|---|
| Explanation | Internal software error. May result in unpredictable behaviour. |
| Recommended Action | LOG_STD_SH_CMD_ACTION(show xdr linecard) |

%XDR-6-ISSUBADRCVTFM : Failed to rcv_transform message - slot [chars], reason: [chars]

| | |
|---------------------------|---|
| Explanation | Unable to perform ISSU transform on incoming XDR header. Message will be ignored |
| Recommended Action | Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-6-ISSUBADTXTFM : Failed to xmit_transform message - slot [chars], reason [chars]

| | |
|--------------------|--|
| Explanation | Unable to perform ISSU transform on outgoing XDR header. Message will be ignored |
|--------------------|--|

%XDR-6-ISSUBADTXTFM : Failed to xmit_transform message - slot [chars], reason [chars]

| | |
|---------------------------|---|
| Recommended Action | Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Copy the message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%XDR-3-ISSUBADREGPARAMS : XDR client [chars] trying to register with incomplete ISSU support.

| | |
|---------------------------|--|
| Explanation | This client does not properly support ISSU and will be registered as not supporting ISSU. |
| Recommended Action | We cannot allow a client to register with partial ISSU support so it will be registered without it. Please report this message to your technical support representative. |

%XDR-3-ISSUCAPNEGOFAIL : XDR client [chars] failed to [chars] capability/ies due to [chars]

| | |
|---------------------------|---|
| Explanation | Internal software error - capability negotiation failed unexpectedly. |
| Recommended Action | Copy the message exactly as it appears and report it to your technical support representative |

%XDR-3-ISSUINITFAIL : Unable to register XDR ISSU [chars], reason: [chars]

| | |
|---------------------------|---|
| Explanation | Unable to register the given XDR ISSU parameter due to the reason given. This will stop ISSU working for this client and may lead to unpredictable behaviour. |
| Recommended Action | Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-6-ISSUCLIENTABSENT : XDR client [chars] absent on slot [chars]. Client functionality may be affected.

| | |
|---------------------------|---|
| Explanation | The remote slot doesn't support this ISSU client. The software will handle this by reducing client functionality locally to continue in SSO mode, or by forcing the remote peer into RPR mode as appropriate. This is expected behaviour in ISSU-capable systems. |
| Recommended Action | No action required. This message just indicates that certain functionality may be reduced due to running different images together. |

%XDR-3-ISSU_ENUM_ERROR : Enum for [chars] ([chars] component) is not ISSU-compliant: [chars]

| | |
|---------------------------|--|
| Explanation | The given enumeration is not ISSU-compliant for the reason given. Unpredictable behaviour will result when interoperating with different IOS versions. |
| Recommended Action | This requires a code fix before the image can be shipped or ISSU will be broken. |

%XDR-3-CLIENTISSUBADGROUP : New m/cast group (slots [chars]) has multiple members before nego complete.

| | |
|---------------------------|---|
| Explanation | A new multicast group has been created with multiple slots before ISSU negotiation for each client has completed. This will lead to unpredictable results. |
| Recommended Action | Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-3-CLIENTISSUBADNEGOMSG : Unexpected nego msg - slot [chars], XDR client [chars], ctxt [dec]

| | |
|---------------------------|--|
| Explanation | XDR has received a negotiation message unexpectedly as this client is either not ISSU aware or has already completed negotiation for this slot. This is likely a precursor to unpredictable behaviour for this client. |
| Recommended Action | Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-3-CLIENTISSUSENDFAILED : Can't send XDR client ISSU nego msg: reason [chars], slot [chars], XDR client [chars]

| | |
|---------------------------|--|
| Explanation | XDR has failed to send an ISSU negotiation message for the given client. The slot will be marked as ISSU-unaware, and communication with this slot will proceed on that basis. However, this is likely to lead to unpredictable behaviour. |
| Recommended Action | Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Also copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-3-CLIENTISSUSTARTNEGOFAIL : Can't start nego: reason [chars], slot [chars], XDR client [chars], sid [dec]

| | |
|---------------------------|---|
| Explanation | XDR has failed to start ISSU negotiation with the remote slot for the reason given. The slot will be marked as ISSU-unaware, and communication with this slot will proceed on that basis. However, this is likely to lead to unpredictable behaviour. |
| Recommended Action | Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Also copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-6-CLIENTISSUBADRCVTFM : Failed to rcv_transform message - from slot [chars], XDR client [chars], context [dec]

Explanation Cannot perform ISSU receive transform. This is likely due to a failure in negotiation earlier, or when one side of an ISSU-enabled XDR connection is out of sync with the other.

Recommended Action Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-6-CLIENTISSUBADTXTFM : Failed to xmit_transform message - to slot [chars], XDR client [chars], context [dec]

Explanation Cannot perform ISSU transmit transform. This is likely due to a failure in negotiation earlier, or when one side of an ISSU-enabled XDR connection is out of sync with the other.

Recommended Action Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-CLIENTISSUNEGATIVEPADDING : Negative padding for [chars], slots [chars], msg [dec] (padded: [dec], unpadded: [dec])

Explanation Internal error. Mismatch of internal data structures.

Recommended Action Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-CLIENTISSUNEGONOTDONE : Attempting to push send XDR message ([dec]) to slots [chars] for [chars] before nego complete.

Explanation Internal error. May result in unpredictable behaviour.

Recommended Action Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-6-CLIENTISSUUNREG : Failed to unregister session - XDR client [chars], slot [chars], reason [chars]

Explanation Unable to unregister this session. This will likely cause problems when reregistering and should be reported.

Recommended Action Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-CLIENTISSU_REGERROR : ISSU client [chars] ([dec]), entity [dec], failed ISSU registration: [chars]

| | |
|---------------------------|---|
| Explanation | ISSU negotiation failed for this XDR client. |
| Recommended Action | This error indicates a coding problem. It is an error that will occur every time this image is run, and requires a code change to fix it. |

%XDR-3-ISSU_NEGOFAIL : ISSU negotiation failed for XDR, slot [chars], reason: [chars]

| | |
|---------------------------|---|
| Explanation | ISSU negotiation failed. XDR on this and the remote slot cannot interoperate. Syncing of information to/from this slot for all XDR clients will not be allowed. |
| Recommended Action | Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-3-PRIOCLIENTISSU_NEGOFAIL : ISSU negotiation failed for XDR client [chars], slot [chars], reason: [chars]

| | |
|---------------------------|--|
| Explanation | ISSU negotiation failed for a core XDR client. XDR on this and the remote slot cannot interoperate in SSO mode. Syncing of information to/from this slot will not happen for any XDR client. |
| Recommended Action | Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-3-CLIENTISSU_NEGOFAIL : ISSU negotiation failed for XDR client [chars], slot [chars], reason: [chars]

| | |
|---------------------------|---|
| Explanation | ISSU negotiation failed. This XDR client on this and the remote slot cannot interoperate in SSO mode. Syncing of information to/from this slot will not happen for this and dependent clients. See output of show xdr multicast for full details. |
| Recommended Action | Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-3-CLIENTISSU_FOF_REGERROR : ISSU client [chars] ([dec]), entity [dec], message [dec] ([chars]), failed ISSU FOF registration: [chars], reason: [chars],

| | |
|---------------------------|---|
| Explanation | This ISSU client has a message containing a foreign field owned by another client and failed to register this dependency. |
| Recommended Action | This error indicates a potential coding problem. It is an error that may occur every time this image is run, and may require a code change to fix it. |

%XDR-3-CLIENTISSU_FOF_NEGOFail : ISSU negotiation failed for FOF client [int], for peer [chars] (ISSU peer [dec]), blocking ISSU client [chars] ([dec]) reason - [chars]

| | |
|---------------------------|--|
| Explanation | ISSU negotiation failed for a client which has registered ISSU FOF client dependencies. The dependent clients on this and the remote slot cannot interoperate in SSO mode. Syncing of information to/from this slot will not happen for this and the dependent clients. See output of show xdr multicast for full details. |
| Recommended Action | Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-3-BYPASSFOFNEGO : Bypassing FOF ISSU client [chars] ([int]) nego for XDR client [chars], slot [chars] as FOF ISSU client is not present in [chars] image.

| | |
|---------------------------|---|
| Explanation | This XDR client has a dependency on another ISSU client due to having foreign-owned-fields. As the ISSU client that owns the foreign-owned fields is not in the image the XDR client will not wait for that client to finish ISSU negotiation. Appearance of this error message indicates that work is required to add the missing client to the image. |
| Recommended Action | Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-3-CLIENTISSU_NEGOREGERROR : XDR client [chars], failed ISSU negotiation result notification registration for ISSU client [chars] ([dec]), reason: [chars],

| | |
|---------------------------|---|
| Explanation | This client has dependency on the successful ISSU negotiation of another client and failed to register this dependency |
| Recommended Action | This error indicates a potential coding problem. It is an error that may occur every time this image is run, and may require a code change to fix it. |

%XDR-3-CLIENTISSU_NEGOUNREGERROR : Failed to unregister ISSU negotiation result notification registration for ISSU client [chars] ([dec]), reason: [chars],

| | |
|---------------------------|---|
| Explanation | This client has dependency on the successful ISSU negotiation of another client and failed to unregister this dependency when not required. |
| Recommended Action | This error indicates a potential coding problem. It is an error that may occur every time this image is run, and may require a code change to fix it. |

%XDR-6-CLIENTNOTREGONRP : Client [chars] has registered on slot [chars] before RP.

| | |
|--------------------|---|
| Explanation | XDR client has registered on non-RP card before RP card. If this has occurred while toggling the client's registration status rapidly then it may be a transient problem and will resolve itself. If not, then the client's status may be unpredictable, and ISSU negotiation (if platform is ISSU-aware) may not take place correctly. |
|--------------------|---|

%XDR-6-CLIENTNOTREGONRP : Client [chars] has registered on slot [chars] before RP.

| | |
|---------------------------|--|
| Recommended Action | Verify whether the client's registration status is the same on both the RP and the card on which the problem is reported by comparing the output of 'show xdr client all' to see if the client is present or absent in BOTH. If so, and no other error messages have been seen, then this is a transient issue and no further action is required. Otherwise, copy the message exactly as it appears, and report it to your technical support representative. |
|---------------------------|--|

%XDR-3-XDROOS : Received an out of sequence IPC message. Expected [dec] but got [dec] from slot [chars].

| | |
|---------------------------|---|
| Explanation | An out of sequence IPC message was received |
| Recommended Action | We weren't meant to get the IPC message we did. From this point onwards IPC can't be relied on. Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-3-CLIENTISSUNOMSGGRP : Cannot determine ISSU message group for slot [dec]. Unknown [chars]

| | |
|---------------------------|---|
| Explanation | Not able to determine the set of ISSU messages to be used between local and remote slot, due to not being able to determine linecard type for one or other slot. This might be due to a new linecard type. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%XDR-6-XDRREGISTRATION : XDR failed to register [chars] client due to [chars]

| | |
|---------------------------|---|
| Explanation | Failure to register the said XDR client. |
| Recommended Action | A failure occurred which prohibits the XDR client from registering with the core. Copy the message exactly as it appears, and report it to your technical support representative. |

%XDR-6-XDRINVALIDHDR : XDR for client ([chars]) dropped (slots:[chars] from slot:[chars] context:[int] length:[int]) due to: [chars]

| | |
|---------------------------|---|
| Explanation | The XDR message was dropped for the reason given. |
| Recommended Action | If the failure was due to an invalid context for the CEF push client and occurred during an ISSU upgrade then it may be safely ignored. Otherwise: LOG_STD_ACTION |

%XDR-6-XDRINVALIDHDIRISSU : XDR ISSU negotiation message for client ([chars]) dropped (slots:[chars] from slot:[chars] context:[int] length:[int]) due to: [chars]

Explanation The XDR ISSU negotiation message was dropped for the reason given.

Recommended Action If the message occurred during an ISSU upgrade then it may be safely ignored. Otherwise: LOG_STD_ACTION

%XDR-6-XDRMCASTINIT : XDR mcast subsystem initialisation error: [chars]

Explanation XDR non functional.

Recommended Action A failure occurred which prohibits the XDR client from registering with the core. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-CLIENTISSU_PUSHFAIL : Attempting to push send XDR message ([chars]) to slots [chars] via XDR client [chars] failed due to [chars][chars]

Explanation Internal error. May result in unpredictable behaviour.

Recommended Action Get the output of show xdr multicast, show xdr client all and show issu message types [XDR client ISSU ID]. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-XDRMCASTJOIN : Attempt to join [chars] to [chars] failed because client [chars] returned an error

Explanation Internal error. May result in unpredictable behaviour.

Recommended Action Get the output of show xdr multicast, show xdr client all and show monitor event-trace xdr all. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-XDRMCASTJOINREQ : Client [chars] returned an invalid response to a join request for groups [chars] and [chars]

Explanation Internal error. May result in unpredictable behaviour.

Recommended Action Get the output of show xdr multicast, show xdr client all and show monitor event-trace xdr all. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-MSGSIZEFAIL : The IPC message size is out of bounds The ipc_msg_size is : [dec] while the maximum size we can handle is the XDR_IPC_BUFFER_SIZE : [dec] .

Explanation The size of the IPC message that was received is out of bounds

%XDR-3-MSGSIZEFAIL : The IPC message size is out of bounds The ipc_msg_size is : [dec] while the maximum size we can handle is the XDR_IPC_BUFFER_SIZE : [dec] .

Recommended Action We were not meant to get the IPC message we did. The size of the IPC message is larger than the maximum size that can be handled. This is probably due to communication incompatibility issues between the active and the standby RPs. Please report it to your technical support representative.

%XDR-3-XDRMCAST_PEER_BINDING : XDR peer [chars] bind to group [chars] (was bound to [chars]): [chars]

Explanation Internal error. May result in unpredictable behaviour.

Recommended Action Get the output of show xdr multicast, and show monitor event-trace xdr all. Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-XDRMCASTGRPINVALID : Invalid XDR multicast group for slot(s) [chars]: [chars]

Explanation Internal error. May result in unpredictable behaviour.

Recommended Action Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-ILLEGAL_CAP_TYPE : Illegal ISSU capability type ([dec]) for XDR client [chars]

Explanation Capability type requested is invalid. The named XDR client may not function as expected.

Recommended Action Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-ILLEGAL_CAP_VALUE_CHANGE : ISSU capabilities for peers running same IOS version must be supported.

Explanation Basic assumption is that all peers running the same IOS version as the active RP will support the same ISSU capabilities as the active RP. This is an attempt to mark one such peer as not supporting all capabilities. This will break assumptions in XDR ISSU code and cannot be allowed. The traceback will indicate the offending XDR client.

Recommended Action Copy the message exactly as it appears, and report it to your technical support representative.

%XDR-3-MISMATCHED_ISSU_CAPABILITY_INFO : [chars]: [chars]

Explanation ISSU-aware XDR clients may have capabilities to negotiate. They can ask XDR to manage the state of these, but must provide all relevant supporting functions to do so. In this case, the given client has not done so.

%XDR-3-MISMATCHED_ISSU_CAPABILITY_INFO : [chars]: [chars]

| | |
|---------------------------|---|
| Recommended Action | Copy the message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%XDR-3-ONINT : Invalid operation [chars] at interrupt level by XDR client [chars]

| | |
|--------------------|--------------------------------------|
| Explanation | Invalid operation at interrupt level |
|--------------------|--------------------------------------|

| | |
|---------------------------|---|
| Recommended Action | Copy the message exactly as it appears, and report it to your technical support representative. |
|---------------------------|---|

%XDR-3-FRAG_CLIENT_NOT_ALLOWED : Received an XDR fragment from client [chars], slot [chars], which is not allowed to send fragments

| | |
|--------------------|---|
| Explanation | Certain clients are restricted by XDR from fragmenting their data, yet such a fragment was received received. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%XDR-3-DATA_TOO_LARGE : Data length [dec] exceeds limit of [dec] bytes

| | |
|--------------------|---|
| Explanation | An attempt was made by a client to send XDR data that was over the given length limit, which caused the send to fail. |
|--------------------|---|

| | |
|---------------------------|---|
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |
|---------------------------|---|

%XDR-4-FAILATTEMPTOPENIPCPOR : Attempt to open the IPC ports failed. [chars]

| | |
|--------------------|---|
| Explanation | XDR failed an attempt to open the IPC port to communicate to the specified peer |
|--------------------|---|

| | |
|---------------------------|------------------------|
| Recommended Action | No action is required. |
|---------------------------|------------------------|

ZONE

%ZONE-4-API : Zone [chars] [chars][chars] [chars] failed to notify the data plane

| | |
|---------------------------|--|
| Explanation | The notification of a zone operation has failed to update the data plane and as such the application of the zone information within the object will not be applied to the data plane. It is also possible that the common classification may fail to locate and bind to the zone rendering the configuration inconsistent in terms of application. |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show memory command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ZONE-6-CONFIG : Zone security [chars] is removed due to VRF config change on interface [chars]

| | |
|---------------------------|---|
| Explanation | The notification of a zone is removed from an interface due to a vrf is removed from the interface |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show running command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ZONE-4-LICENSE : License smart enable and zone-license enable should be enabled first

| | |
|---------------------------|---|
| Explanation | The notification indicates that zone smart license should be enabled |
| Recommended Action | Copy the error message exactly as it appears on the console or in the system log. Issue the show running command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (https://bst.cloudapps.cisco.com/bugsearch/). If you still require assistance, open a case with the Technical Assistance Center via the Internet (https://mycase.cloudapps.cisco.com/case), or contact your Cisco technical support representative and provide the representative with the gathered information. |

%ZONE-4-BINDING : Zone VPN Bind [chars] [chars] [dec] [chars] failed to notify the data plane

| | |
|--------------------|---|
| Explanation | The notification of a zone vpn operation has failed to update the data plane and as such the application of the zone vpn information within the object will not be applied to the data plane. |
|--------------------|---|

%ZONE-4-BINDING : Zone VPN Bind [chars] [chars] [dec] [chars] failed to notify the data plane

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Issue the **show zone security** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit (<https://bst.cloudapps.cisco.com/bugsearch/>). If you still require assistance, open a case with the Technical Assistance Center via the Internet (<https://mycase.cloudapps.cisco.com/case>), or contact your Cisco technical support representative and provide the representative with the gathered information.
