Cisco Secure Firewall ASA Compatibility

This document lists the Secure Firewall ASA software and hardware compatibility and requirements.

ASA and ASDM Compatibility Per Model

This section lists ASA and ASDM compatibility per model.

Note For guidance on security issues on the ASA, and which releases contain fixes for each issue, see the [ASA Security Advisories](#).

ASA 9.22

Releases in **bold** are the recommended versions.

-
- Note**
- ASA 9.20(x) was the final version for the Firepower 2100 series.
 - ASDM versions are backwards compatible with all previous ASA versions, unless otherwise stated. For example, ASDM 7.22(1) can manage an ASA 5516-X on ASA 9.10(1).
 - New ASA versions require the coordinating ASDM version or a later version; you cannot use an old version of ASDM with a new version of ASA. For example, you cannot use ASDM 7.20 with ASA 9.22. For ASA maintenance releases and interims, you can continue to use the current ASDM version, unless otherwise stated. For example, you can use ASA 9.22(1.2) with ASDM 7.22(1). If an ASA maintenance release has significant new features, then usually there will be a new ASDM version required.

ASA 9.20 and 9.19

Releases in **bold** are the recommended versions.

Note

- ASA 9.20(x) was the final version for the Firepower 2100 series.
- ASA 9.18(x) was the final version for the Firepower 4110, 4120, 4140, 4150, and Security Modules SM-24, SM-36, and SM-44 for the Firepower 9300.
- ASDM versions are backwards compatible with all previous ASA versions, unless otherwise stated. For example, ASDM 7.19(1) can manage an ASA 5516-X on ASA 9.10(1). See the following exceptions:
 - For the Firepower 1010E, ASDM 7.19(1) is not supported. You must use 7.19(1.90)+ or 7.18(2.1).
- New ASA versions require the coordinating ASDM version or a later version; you cannot use an old version of ASDM with a new version of ASA. For example, you cannot use ASDM 7.18 with ASA 9.19. For ASA maintenance releases and interims, you can continue to use the current ASDM version, unless otherwise stated. For example, you can use ASA 9.20(1.5) with ASDM 7.20(1). If an ASA maintenance release has significant new features, then usually there will be a new ASDM version required.

ASA 9.18 to 9.17

Releases in **bold** are the recommended versions.

Note

- ASA 9.16(x) was the final version for the ASA 5506-X, 5506H-X, 5506W-X, 5508-X, and 5516-X.
- ASDM versions are backwards compatible with all previous ASA versions, unless otherwise stated. For example, ASDM 7.17(1) can manage an ASA 5516-X on ASA 9.10(1). See the following exceptions:
 - For the Firepower 1010E, ASDM 7.19(1) is not supported. You must use 7.19(1.90)+ or 7.18(2.1).
- New ASA versions require the coordinating ASDM version or a later version; you cannot use an old version of ASDM with a new version of ASA. For example, you cannot use ASDM 7.17 with ASA 9.18. For ASA maintenance releases and interims, you can continue to use the current ASDM version, unless otherwise stated. For example, you can use ASA 9.17(1.2) with ASDM 7.17(1). If an ASA maintenance release has significant new features, then usually there will be a new ASDM version required.
- ASA 9.17(1.13) and 9.18(2) and later requires ASDM 7.18(1.152) or later. The ASA now validates whether the ASDM image is a Cisco digitally signed image. If you try to run an older ASDM image than 7.18(1.152) with an ASA version with this fix, ASDM will be blocked and the message “%ERROR: Signature not valid for file disk0:/<filename>” will be displayed at the ASA CLI. ASA 9.16 to 9.15

Releases in **bold** are the recommended versions.

**Note**

- ASA 9.16(x) was the final version for the ASA 5506-X, 5506H-X, 5506W-X, 5508-X, and 5516-X.
- ASA 9.14(x) was the final version for the ASA 5525-X, 5545-X, and 5555-X.
- ASDM versions are backwards compatible with all previous ASA versions, unless otherwise stated. For example, ASDM 7.15(1) can manage an ASA 5516-X on ASA 9.10(1).
- New ASA versions require the coordinating ASDM version or a later version; you cannot use an old version of ASDM with a new version of ASA. For example, you cannot use ASDM 7.15 with ASA 9.16. For ASA maintenance releases and interims, you can continue to use the current ASDM version, unless otherwise stated. For example, you can use ASA 9.16(1.15) with ASDM 7.16(1). If an ASA maintenance release has significant new features, then usually there will be a new ASDM version required.
- ASA 9.16(3.19) and later requires ASDM 7.18(1.152) or later. The ASA now validates whether the ASDM image is a Cisco digitally signed image. If you try to run an older ASDM image than 7.18(1.152) with an ASA version with this fix, ASDM will be blocked and the message “%ERROR: Signature not valid for file disk0:/<filename>” will be displayed at the ASA CLI. ASA 9.14 to 9.13

Releases in **bold** are the recommended versions.

**Note**

- ASA 9.14(x) was the final version for the ASA 5525-X, 5545-X, and 5555-X.
- ASA 9.12(x) was the final version for the ASA 5512-X, 5515-X, 5585-X, and ASASM.
- ASDM versions are backwards compatible with all previous ASA versions, unless otherwise stated. For example, ASDM 7.13(1) can manage an ASA 5516-X on ASA 9.10(1). ASDM 7.13(1) and ASDM 7.14(1) did not support ASA 5512-X, 5515-X, 5585-X, and ASASM; you must upgrade to ASDM 7.13(1.101) or 7.14(1.48) to restore ASDM support.
- New ASA versions require the coordinating ASDM version or a later version; you cannot use an old version of ASDM with a new version of ASA. For example, you cannot use ASDM 7.13 with ASA 9.14. For ASA maintenance releases and interims, you can continue to use the current ASDM version, unless otherwise stated. For example, you can use ASA 9.14(1.2) with ASDM 7.14(1). If an ASA maintenance release has significant new features, then usually there will be a new ASDM version required.
- ASA 9.14(4.14) and later requires ASDM 7.18(1.152) or later. The ASA now validates whether the ASDM image is a Cisco digitally signed image. If you try to run an older ASDM image than 7.18(1.152) with an ASA version with this fix, ASDM will be blocked and the message “%ERROR: Signature not valid for file disk0:./<filename>” will be displayed at the ASA CLI. ASA 9.12 to 9.5

Releases in **bold** are the recommended versions.

Note

- ASA 9.12(x) was the final version for the ASA 5512-X, 5515-X, 5585-X, and ASASM.
- ASDM versions are backwards compatible with all previous ASA versions, unless otherwise stated. For example, ASDM 7.12(1) can manage an ASA 5515-X on ASA 9.10(1).
- New ASA versions require the coordinating ASDM version or a later version; you cannot use an old version of ASDM with a new version of ASA. For example, you cannot use ASDM 7.10 with ASA 9.12. For ASA maintenance releases and interims, you can continue to use the current ASDM version, unless otherwise stated. For example, you can use ASA 9.12(1.15) with ASDM 7.12(1). If an ASA maintenance release has significant new features, then usually there will be a new ASDM version required.
- ASA 9.8(4.45) and 9.12(4.50) and later require ASDM 7.18(1.152) or later. The ASA now validates whether the ASDM image is a Cisco digitally signed image. If you try to run an older ASDM image than 7.18(1.152) with an ASA version with this fix, ASDM will be blocked and the message “%ERROR: Signature not valid for file disk0:/<filename>” will be displayed at the ASA CLI. Firepower 4100/9300 Compatibility with ASA and Threat Defense

The following table lists compatibility between the ASA and threat defense applications with the Firepower 4100/9300.

The **bold** versions listed below are specially-qualified companion releases. You should use these software combinations whenever possible because Cisco performs enhanced testing for these combinations.

For upgrading, see the following guidelines:

- **FXOS**—For 2.2.2 and later, you can upgrade directly to a higher version. When upgrading from versions earlier than 2.2.2, you need to upgrade to each intermediate version. Note that you cannot upgrade FXOS to a version that does not support your current logical device version. You will need to upgrade in steps: upgrade FXOS to the highest version that supports your current logical device; then upgrade your logical device to the highest version supported with that FXOS version. For example, if you want to upgrade from FXOS 2.2/ASA 9.8 to FXOS 2.13/ASA 9.19, you would have to perform the following upgrades:
 1. FXOS 2.2→FXOS 2.11 (the highest version that supports 9.8)
 2. ASA 9.8→ASA 9.17 (the highest version supported by 2.11)
 3. FXOS 2.11→FXOS 2.13

4. ASA 9.17→ASA 9.19

- ASA—ASA lets you upgrade directly from your current version to any higher version, noting the FXOS requirements above.

Note This section applies only to the Firepower 4100/9300. Other models utilize FXOS only as an underlying operating system that is included in the ASA and threat defense unified image bundles. For the Secure Firewall 3100 in multi-instance mode, see the Threat Defense compatibility guide.

Note FXOS 2.8(1.125)+ and later versions do not support ASA 9.14(1) or 9.14(1.10) for ASA SNMP polls and traps; you must use 9.14(1.15)+. Other releases, such as 9.13 or 9.12, are not affected.

Note FXOS 2.12/ASA 9.18/Threat Defense 7.2 was the final version for the Firepower 4110, 4120, 4140, 4150, and Security Modules SM-24, SM-36, and SM-44 for the Firepower 9300.

Firepower 1000/2100 and Secure Firewall 3100/4200 ASA and FXOS Bundle Versions

Firepower 1000/2100 and Secure Firewall 3100/4200 platforms utilize FXOS as an underlying operating system that is included in the ASA unified image bundles. The following table lists the ASA and FXOS versions in each released bundle.

Note You cannot install ASA or FXOS separately; you must install them both as part of the bundle.

Cisco Defense Orchestrator (CDO) Compatibility with the ASA

CDO can manage all platforms running ASA 8.4 and later (see [ASA and ASDM Compatibility Per Model, on page 1](#)), except for the ASA Services Module (ASASM), which is not supported by CDO.

CDO can onboard an ASA running ASA 8.3 but cannot deploy changes to it or manage it in any other way. Support is "read-only."

CDO does not support management of the ASA FirePOWER module, which runs a different operating system from ASA. You can still use the ASA FirePOWER module in your system, but you need to manage it separately with Firepower Management Center or ASDM.

There may be a CDO feature that does not support all versions of ASA, such as ASA upgrades from pre-9.12 versions. In those cases, the CDO documentation will list any version exceptions with the prerequisites for that feature.

ASA REST API Compatibility

This section lists ASA REST API and ASA compatibility.

Note The REST API is not supported on newer hardware models and is no longer being developed. We recommend that you instead use the ASA HTTP interface for automation. See [Cisco Secure Firewall ASA HTTP Interface for Automation](#).

The ASA REST API is supported only on the following models starting with 9.3(2) and ending with 9.16:

- ASA Virtual
- Firepower 9300
- ISA 3000
- Firepower 4110, 4120, 4140, 4150
- ASA 5585-X
- ASA 5525-X, 5545-X, 5555-X
- ASA 5512-X, 5515-X
- ASA 5506-X, 5506H-X, 5506W-X, 5508-X, 5516-X

Note The ASA 5506-X series does not support the REST API if you are running the FirePOWER module Version 6.0 or later. Disable the ASA REST API using the **no rest-api agent** command.

Firepower 2100 Network Module Compatibility

Note If a network module is listed for multiple Firepower models, and the part number only differs in the model number (FPRXK-NM-*module*), then that module is compatible with the other Firepower models. For example, the FPR9K-NM-6X10SR-F module is compatible on the Firepower 2100 (FPR2K-NM-6X10SR-F) and Firepower 4100 (FPR4K-NM-6X10SR-F). See the [FXOS compatibility guide](#) for information about Firepower 4100 and 9300 network modules.

ASA and Threat Defense Clustering External Hardware Support

Clustering will work with both Cisco and non-Cisco switches from other major switching vendors with no known interoperability issues if they comply with the following requirements and recommendations. Clustering is compatible with technologies such as vPC (Nexus), VSS (Catalyst), and StackWise & StackWise Virtual (Catalyst).

Switch Requirements

- All third party switches must be compliant to the IEEE standard (802.3ad) Link Aggregation Control Protocol.

- EtherChannel bundling must be completed within 45 seconds when connected to Firepower devices and 33 seconds when connected to ASA devices.
- On the cluster control link, the switch must provide fully unimpeded unicast and broadcast connectivity at Layer 2 between all cluster members.
- On the cluster control link, the switch must not impose any limitations on IP addressing or the packet format above Layer 2 headers.
- On the cluster control link, the switch interfaces must support jumbo frames and be configurable for an MTU above 1600.

Switch Recommendations

- The switch should provide uniform traffic distribution over the EtherChannel's individual links.
- The switch should have an EtherChannel load-balancing algorithm that provides traffic symmetry.
- The EtherChannel load balance hash algorithm should be configurable using the 5-tuple, 4-tuple, or 2-tuple to calculate the hash.

Note For the Firepower 9300 cluster, intra-chassis clustering can operate with any switch because Firepower 9300-to-switch connections use standard interface types.

Note Some switches, such as the Nexus series, do not support LACP rate fast when performing in-service software upgrades (ISSUs), so we do not recommend using ISSUs with clustering.

ASA and Cisco Application Policy Infrastructure Controller (APIC) Compatibility

The platforms supported include:

- ASA 5525-X, 5545-X, and 5555-X (8.6(x)—9.14(x))
- ASA 5512-X, 5515-X (8.6(x)—9.12(x))
- ASA 5585-X (8.4(x)—9.12(x))
- ASAv (9.2(x) and newer)
- Firepower 4100 and 9300 (9.6(x) and newer)
- Firepower 2100 (9.8(x) and newer)

The following table lists the supported ASA device packages, ASA versions, and APIC versions.

Table 13: ASA Device Package, ASA, and APIC Compatibility

1.2(5.5)	Policy Orchestration	1.2(2*)	8.4(x)—9.4(x)

Note We do not recommend using any ASA device package older than 2016.

Note Policy Orchestration = Service Policy Mode = Fully Managed Mode.

Note Fabric Insertion = Customized ASA device package for L2-3 automation only.
