## New Software Features in Cisco iNode Manager 24.1

Feature	Description
<b>Infrastructure Enhancements</b>	
Integration with SCEP Key Server	<p>In this release, the Cisco Intelligent Node Manager integrates with a Simple Certificate Enrolment Protocol (SCEP) server version 2.2.0. The integration allows you to manage an SCEP server independently, which acts as a centralized and secure certificate management solution.</p> <p>The benefit of using an SCEP server is that you can create your own application like the iNode manager to manage the nodes.</p>

[Intelligent Node software version 4.0.0](#) is the only version compatible with iNode Manager 24.1.
