

Cisco Unified Survivable Remote Site Telephony 7.1 New Features

First Published: January 20, 2009

This document describes the following new features introduced in Cisco Unified Survivable Remote Site Telephony 7.1 (Cisco Unified SRST):

- Differentiated Services Code Point (DSCP)
- Translation profiles for SIP phones and directory numbers

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the “[Feature Information for Cisco Unified SRST 7.1](#)” section on page 8.

Use Cisco Feature Navigator to find information about platform support and Cisco IOS, Catalyst OS, and Cisco IOS XE software image support. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.

Prerequisites for Cisco Unified SRST 7.1

- Cisco Unified SRST 7.1
- Cisco IOS Release 12.4(22)YB

Information About Cisco Unified SRST 7.1

To configure Cisco Unified SRST 7.1 features, you should understand the following concepts:

- [DSCP, page 2](#)
- [Voice Translation Rules and Profiles, page 2](#)

DSCP

Differentiated Services Code Point (DSCP) packet marking is used to specify the class of service for each packet. Cisco Unified IP Phones get their DSCP information from the configuration file that is downloaded to the device.

In Cisco Unified SRST 7.1 and later versions, you can configure the DSCP value for media packets in the configuration file for SCCP phones. Because Cisco Unified IP Phones get their DSCP information from the configuration file that is downloaded to the device, the DSCP value for other types of traffic is set by Cisco Unified Communications Manager in the configuration file it downloads to the phone.

For configuration information, see the “[Configuring DSCP for Cisco Unified SRST](#)” section on page 3.

Voice Translation Rules and Profiles

Voice translation rules perform manipulations on telephone numbers. Voice translation profiles allow you to group voice translation rules together and use them to manipulate the calling number (ANI), called number (DNIS), or redirected called number for a voice call.

Translation rules are defined by using the **voice translation-rule** command. After you define a set of translation rules and assign them to a translation profile using the **voice translation-profile** command, you can apply the rules to all inbound or outbound calls to and from a specific SIP phone, or to individual inbound or outbound call legs according to the directory number.

For configuration information, see the “[Applying Voice Translation Rules in Cisco Unified SRST 7.1 and Later](#)” section on page 4.

How to Configure Cisco Unified SRST 7.1 New Features

This section contains the following tasks.

- [Configuring DSCP for Cisco Unified SRST, page 3](#)
- [Applying Voice Translation Rules in Cisco Unified SRST 7.1 and Later, page 4](#)

Configuring DSCP for Cisco Unified SRST

To set the differentiated services code point (DSCP) levels for phones, perform the following steps.

Prerequisites

- Cisco Unified SRST 7.1 or a later version.

Restrictions

- Cisco Unified IP Phones get their DSCP information from the configuration file that is downloaded to the device. Because Cisco Unified SRST does not download configuration files to phones during fallback, only the DSCP value set for media packets takes effect, and only for SCCP phones.
- If DSCP is configured for the gateway interface using the **service-policy** command or for the dial peer using the **ip qos dscp** command, the value set with those commands takes precedence over the DSCP value configured with this procedure.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **call-manager-fallback**
4. **ip qos dscp {{number | af | cs | default | ef} {media | service | signaling | video}}**
5. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode. • Enter your password if prompted.
	Example: Router> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example: Router# configure terminal	
Step 3	call-manager-fallback	Enters call-manager-fallback configuration mode.
	Example: Router(config)# call-manager-fallback	
Step 4	ip qos dscp {{number af cs default ef} {media service signaling video}}	Sets the DSCP priority levels for different types of traffic. Note Only the media keyword is supported by Cisco Unified SRST.
	Example: Router(config-cm-fallback)# ip qos dscp af11 media	

	Command or Action	Purpose
Step 5	<code>end</code>	Returns to privileged EXEC mode.

Example:
Router(config-cm-fallback)# end

Examples

The following example shows the DSCP value for media is set to af11.

```
call-manager-fallback
  ip source-address 10.10.10.1 port 2000
  max-ephones 100
  max-dn 240
  ip qos dscp af11 media
.
```

Applying Voice Translation Rules in Cisco Unified SRST 7.1 and Later

To apply a voice translation profile for incoming or outgoing call legs to a directory number on a SIP phone, perform the following steps.

Prerequisites

- Cisco Unified SRST 7.1 or a later version.
- Voice translation profile containing voice translation rules must be configured. See the [Configuring a Translation Rule](#) section in the *VoIP Gateway Trunk and Carrier Based Routing Enhancements* document.

SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `voice register dn dn-tag`
or
`voice register pool phone-tag`
4. `translation-profile {incoming | outgoing} name`
5. `end`

DETAILED STEPS

Command or Action	Purpose
Step 1 <code>enable</code> Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2 <code>configure terminal</code> Example: Router# configure terminal	Enters global configuration mode.
Step 3 <code>voice register dn dn-tag</code> or <code>voice register pool phone-tag</code> Example: Router(config)# voice register dn 1 or Router(config)# voice register pool 10	Enters voice register dn configuration mode to define a directory number for a SIP phone.
Step 4 <code>translation-profile {incoming outgoing} name</code> Example: Router(config-register-dn)# translation-profile incoming name1 or Router(config-register-pool)# translation-profile incoming name1	Assigns a translation profile to incoming or outgoing call legs to this directory number or phone.
Step 5 <code>end</code> Example: Router(config-register-dn)# end or Router(config-register-pool)# end	Exits to privileged EXEC mode.

Technical Assistance

Description	Link
The Cisco Support website provides extensive online resources, including documentation and tools for troubleshooting and resolving technical issues with Cisco products and technologies.	http://www.cisco.com/techsupport
To receive security and technical information about your products, you can subscribe to various services, such as the Product Alert Tool (accessed from Field Notices), the Cisco Technical Services Newsletter, and Really Simple Syndication (RSS) Feeds.	
Access to most tools on the Cisco Support website requires a Cisco.com user ID and password.	

Command Reference

The following commands are introduced or modified in the features documented in this module. For information about these commands, see the *Cisco Unified SRST and SIP SRST Command Reference* at http://www.cisco.com/en/US/docs/voice_ip_comm/cusrst/command/reference/srstcr.html.

For information about all Cisco IOS commands, use the Command Lookup Tool at <http://tools.cisco.com/Support/CLILookup> or the *Cisco IOS Master Command List, All Releases*, at http://www.cisco.com/en/US/docs/ios/mcl/allreleasemcl/all_book.html.

- **ip qos dscp (call-manager-fallback)**
- **translation-profile (voice register)**

Feature Information for Cisco Unified SRST 7.1

[Table 1](#) lists the release history for this feature.

Not all commands may be available in your Cisco IOS software release. For release information about a specific command, see the command reference documentation.

Use Cisco Feature Navigator to find information about platform support and software image support. Cisco Feature Navigator enables you to determine which Cisco IOS software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.

Note

[Table 1](#) lists only the Cisco IOS software release that introduced support for a given feature in a given Cisco IOS software release train. Unless noted otherwise, subsequent releases of that Cisco IOS software release train also support that feature.

Table 1 *Feature Information for Cisco Unified SRST 7.1*

Feature Name	Releases	Feature Information
Cisco Unified SRST 7.1	12.4(22)YB	<ul style="list-style-type: none"> • Adds DSCP packet marking for specifying the class of service for each packet. • Adds translation profiles at the directory number and phone level.
