# **Overview of the Access Point**

The Cisco Catalyst IW9167E Heavy Duty Access Point provides reliable wireless connectivity for mission-critical applications in a state-of-the art platform. It can operate as Cisco Catalyst Wi-Fi (CAPWAP) mode or Cisco Ultra-Reliable Wireless Backhaul (Cisco URWB) mode starting from IOS XE Cupertino 17.9.3 Software Release. The IW9167EH access point has the flexibility to change the operating mode from Wi-Fi to Cisco URWB, and vice versa.

Starting from Cisco IOS XE Dublin 17.11.1, Workgroup Bridge (WGB) and Universal WGB (uWGB) are supported on the Cisco Catalyst IW9167E Heavy Duty Access Points.

This document covers configuration of CAPWAP mode and WGB/uWGB mode specific to the IW9167EH access points.

For CAPWAP mode, the access points can operate in the following modes:

- Local
- Flexconnect
- Bridge
- Flexconnect + Bridge
- Sniffer
- Monitor
- Site survey

# **Determine Image on IW9167EH**

Software images are stored under different folders on the same partition on IW9167EH.

You need to choose the image to boot up with according to the mode your AP is running, CAPWAP, Cisco URWB, or WGB/uWGB. The following table provides the software images of each mode:

#### Table 1: IW9167EH Software Images

IW9167EH Mode	Software Image
CAPWAP	ap1g6a-k9w8-xxx.tar
Cisco URWB	Unified Industrial Wireless image ap1g6j-k9c1-xxx.tar
WGB/uWGB	apiguj-n7ci-aaa.uu

To determine the image that your IW9167EH is running, use the **show version** command.

• If the **show version** output displays **Cisco AP Software**, (**ap1g6a**) as shown in the following example, it means that AP is running the CAPWAP image **ap1g6a-k9w8-xxx.tar**, which supports the CAPWAP mode.

# **Configuring AP to Boot up with Different Image Options**

To configure the access point to boot up with CAPWAP, URWB, or WGB/uWGB mode, follow these steps:

**Note** Switching between different modes performs full factory reset. Any configuration and data will be removed completely.

### Procedure

Step 1	enable Enables privileged EXEC mode. Enter your password if prompted.
Step 2	configure boot mode {capwap   urwb   wgb}

Configures AP to CAPWAP, URWB, or WGB/uWGB mode. AP will reboot with specified mode.

# Upgrade IW9167EH with 17.9.x to Support WGB/uWGB

If your IW9167EH is shipped with Cisco IOS XE Cupertino 17.9.3 software and operating as CAPWAP mode, and you want to upgrade your AP to Cisco IOS XE Dublin 17.11.1 to support WGB/uWGB mode, you need to switch your AP to Cisco URWB mode first, and then you can upgrade to 17.11.1.

To determine whether your IW9167EH is running CAPWAP mode or Cisco URWB mode, use the **show** version command.

- If the **show version** output displays **Cisco AP Software (ap1g6a)**, your AP is running as CAPWAP mode.
- If the **show version** output displays **Cisco AP Software (ap1g6j)**, your AP is running as Cisco URWB mode.

Cisco WGB/uWGB mode shares the same image with Cisco URWB. You cannot upgrade the **ap1g6j** image to 17.11.1 in CAPWAP mode (**ap1g6a**). Because the **archive download** command checks image type, upgrade gets aborted if image types mismatch.

## Procedure

**Step 1** Convert CAPWAP mode to Cisco URWB mode.

### Example:

#configure boot mode urwb

```
Before image swapping device need factory reset. Are you sure to proceed? (Y/N):y Converting to Cisco URWB Mode... <rebooting...>
```

- **Step 2** Log in with default credential (Cisco/Cisco).
- **Step 3** Configure Cisco URWB, to make it work in **Offline** mode.

#### Example:

```
#configure iotod-iw offline
```

```
Switching to IOTOD IW Offline mode...
Will switch from Provisioning Mode to IOTOD IW offline Mode, device need to reboot: Y/N? Y
<rebooting...>
```

**Step 4** Configure networking in Cisco URWB (IP/netmask/gateway, passphrase)

#### Example:

```
Cisco-23.174.76#configure wireless passphrase unit1
Cisco-23.174.76#configure ap address ipv4 static 192.168.1.200 255.255.255.0 192.168.1.1
Cisco-23.174.76#write
Cisco-23.174.76#reload
<rebooting...>
```

### Note

Passphrase is optional, but it is recommended to assign different passphrases if you are upgrading multiple units at the same time and they are connected to the same Layer 2 network. Because Cisco URWB forms MPLS network automatically if all nodes have the same passphrase, without further MPLS configuration, your IP service might not work properly.

### **Step 5** Upgrade to 17.11.1.

### Example:

**Step 6** Convert the AP from Cisco URWB mode to Cisco WGB/uWGB mode.

#### Example:

# **Related Documentation**

To view all support information for the Cisco Catalyst IW9167E Heavy Duty Access Point, see https://www.cisco.com/c/en/us/support/wireless/catalyst-iw9167-series/series.html.

In addition to the documentation available on the support page, you will need to refer to the following guides:

- For information about IW9167EH hardware, see Cisco Catalyst IW9167E Heavy Duty Access Point Hardware Installation Guide.
- A full listing of the AP's features and specifications is provided in Cisco Catalyst IW9167E Heavy Duty Access Point Data Sheet.
- For more information about the configuration on Cisco Catalyst 9800 Series Wireless Controllers, see https://www.cisco.com/c/en/us/support/wireless/catalyst-9800-series-wireless-controllers/ products-installation-and-configuration-guides-list.html.
- For information about Cisco URWB mode configuration, see the relevant documents at: https://www.cisco.com/c/en/us/support/wireless/catalyst-iw9167-series/series.html.
