June 2021

What's New in this Release

Partner Dashboard

Role-based access control is introduced for Cisco Spaces - Partner Dashboard users. As a partner, you can now assign one of the following roles to your users through the Cisco Spaces - Partner Dashboard:

- **PartnerDashboardReadWrite**: A Cisco Spaces - Partner Dashboard user with read and write permissions can perform the following actions in the Cisco Spaces - Partner Dashboard:

    - Create, edit, preview, and delete partner apps

    - View partner app configuration

    - Submit, activate, and update partner apps

    - Make a copy of partner apps

    - Modify the roles for all Cisco Spaces - Partner Dashboard users

- **PartnerDashboardReadOnly**: A Cisco Spaces - Partner Dashboard user with read-only permission is restricted to the following actions:

    - View partner app configuration

    - Preview and activate partner apps

Note Partners can invite new users to the Cisco Spaces - Partner Dashboard only from the Cisco Spaces Dashboard. This enables the new users to access both the Cisco Spaces Dashboard and the Cisco Spaces - Partner Dashboard.

What's Changed in this Release

Dashboard

Location-specific role-based access control is introduced for the following apps in the Cisco Spaces Dashboard:

- **Engagements**
- **Location Personas**
- **Captive Portal**

By default, Cisco Spaces Dashboard administrators have access to these apps and can assign read-write or read-only access to any of the above apps for specific locations. These permissions can be assigned for specific locations while inviting a user to use the selected app, or modified later through the specific app's **User Management** window.

Location Analytics

Under **Location Analytics**, the **Dwell Time Distribution** chart is shown instead of the **Dwell Time** and **Dwell Time Breakdown** charts on the home page and under the custom reports section.

The **Dwell Time Distribution** chart shows the total dwell time, total visits count, and the percentage of visits that are recorded for different categories of dwell ranges.

Issues

Issues describe unexpected behavior in the Cisco Spaces application. The Resolved Issues and Open Issues sections list the issues in this release.

The following information is provided for each issue:

- Identifier: Each issue is assigned a unique identifier (ID) with a pattern of CSC*xxNNNNN*, where *x* is any letter (a-z) and *N* is any number (0-9). These IDs are frequently referenced in Cisco documentation, such as Security Advisories, Field Notices, and other Cisco support documents. Cisco Technical Assistance Center (TAC) engineers or other Cisco staff can also provide you with the ID for a specific issue.

- Description: A description of what is observed when the issue occurs.

This section contains the following topics:

Cisco Bug Search Tool

Cisco Bug Search Tool (BST) is a gateway to the Cisco bug-tracking system, which maintains a comprehensive list of defects and vulnerabilities in Cisco products and software. The BST provides you with detailed defect information about your products and software.

Open Issues

This section lists the open issues in this release of Cisco Spaces.

Table 1: Cisco Spaces Open Issues

Issue Identifier	Issue Description
CSCvu98859	Telemetry such as **Button Click** and **Movement** data gets reset to 18+ hours when applying new configuration
CSCvv16880	During gateway deployment workflow, the AP is sometimes erroneously categorized as `needs config mode` due to timing issues.

Resolved Issues

There are no resolved issues in this release of Cisco Spaces.
