## What's New in this Release

### Location Hierarchy

The following new features are introduced in **Location Hierarchy**.

**Location Hierarchy** now supports Meraki MT. The configurations required for receiving the data from the MT sensors are updated using Cisco Spaces and Meraki integration. The MT sensors are automatically imported to **Location Hierarchy**.

**Location Hierarchy 2.0** is the enhanced beta release of **Location Hierarchy** with a revamped user interface and performance improvement along with the existing **Location Hierarchy** features.

The new features include:

- Interactive global map for updating geolocation
- Option to create and edit polygon zones and AP markers on floor maps
- Uncategorized AP groups

---

#### Note

In Cisco Spaces, click **Menu** (☰) and choose **Location Hierarchy > Beta UI** to enable Location Hierarchy 2.0. Use the **Beta UI** toggle button to switch between Location Hierarchy 2.0 and the Location Hierarchy GUI.

---

### Cisco Spaces Dashboard

The following new feature is introduced in the Cisco Spaces dashboard:

### Cisco pxGrid Cloud

The Cisco Spaces dashboard now supports Cisco pxGrid Cloud implementation. Cisco pxGrid Cloud allows you to share contextual information between Cisco Identity Services Engine (Cisco ISE) and other cloud-based solutions.

To configure Cisco pxGrid Cloud in the Cisco Spaces dashboard, you require a token from [Cisco DNA - Cloud](#). This token must be validated at pxGrid Cloud. After successful validation, the app is activated in the pxGrid Cloud, thereby allowing the services to be used in the Cisco Spaces dashboard.

---

**Note** Currently, only Cisco pxGrid Cloud GUI support is available in Cisco Spaces. Backend changes are expected to be included in the future.

---

### Firehose

A new event called WEBEX Telemetry is added in Firehose. This event is initiated when telemetry data is received from the Cisco Webex devices from the location.

---

**Note** Currently, GUI support for enabling this event in Cisco Spaces **Partner Dashboard** is not available. Contact [Cisco Spaces support](#) to enable this new event from the backend.

---

## What's Changed in this Release

### Cisco Spaces Dashboard

The following enhancements are made in the Cisco Spaces dashboard:

- **Camera Zone Support for Meraki Networks:** In **Location Hierarchy**, for the newly added networks with camera zones in Meraki, zones are added to **Location Hierarchy** along with the networks.

For existing networks, the camera zones that are added, modified, or removed in Meraki are synchronized with the **Location Hierarchy** during the background synchronization process.

---

**Note** Currently, GUI support to display the camera zones in the Cisco Spaces dashboard is not available.

---

- **IoT Explorer:** Cisco Spaces dashboard now supports the import of MT Sensor devices in the **Temperature Monitoring** section of the **IoT Explorer** app.

## Issues

Issues describe unexpected behavior in the Cisco Spaces application. The Resolved Issues and Open Issues sections list the issues in this release.

The following information is provided for each issue:

- Identifier: Each issue is assigned a unique identifier (ID) with a pattern of CSCxxNNNNN, where *x* is any letter (a-z) and *N* is any number (0-9). These IDs are frequently referenced in Cisco documentation, such as Security Advisories, Field Notices, and other Cisco support documents. Cisco Technical Assistance Center (TAC) engineers or other Cisco staff can also provide you with the ID for a specific issue.
- Description: A description of what is observed when the issue occurs.

There are no open issues in this release of Cisco Spaces.

## Resolved Issues

This section lists the issues that have been resolved in this release of Cisco Spaces.

**Table 1: Cisco Spaces Resolved Issues**

Issue Identifier	Issue Description
<a href="#">CSCwd19341</a>	Dashboard view is not showing up in the Detect and Locate App
<a href="#">CSCwc46949</a>	Custom widgets in location analytics keep loading when user selects multiple locations
<a href="#">CSCwc91835</a>	On clicking report button from 503 error page is showing invalid email address
<a href="#">CSCwc93338</a>	Meraki APs not positioned correctly in Detect and Locate
<a href="#">CSCwd02169</a>	Floor map images are not rendered, and clients are not visible in Detect and Locate
