Introducción

Este documento describe la configuración de VXLAN mediante el plano de control EVPN MP-BGP.

Prerequisites

Requirements

Cisco recomienda que tenga conocimiento sobre estos temas:

- VPNs de Capa 3 MPLS
- MP-BGP también ayudaría.

Componentes Utilizados

Este documento no tiene restricciones específicas en cuanto a versiones de software y de hardware.

La información que contiene este documento se creó a partir de los dispositivos en un ambiente de laboratorio específico. Todos los dispositivos que se utilizan en este documento se pusieron en funcionamiento con una configuración verificada (predeterminada). Si tiene una red en vivo, asegúrese de entender el posible impacto de cualquier comando.

Antecedentes

Este documento también muestra un ejemplo de escenario de red y su configuración con resultados relevantes para la verificación y mejor comprensión.

VXLAN está diseñado para proporcionar virtualización de red. Es MAC en encapsulación UDP. La infraestructura de capa 2 se amplía a través de la red subyacente de capa 3 para proporcionar un servicio simplificado que no depende de la ubicación física y geográfica de los servidores en los Data Centers.

Este documento describe VXLAN con el Plano de Control EVPN MP-BGP. Esto significa que el protocolo BGP se utiliza en la infraestructura de superposición para enviar y recibir actualizaciones.

En las implementaciones de red tradicionales se utilizaba STP, lo que provocaba que algunos enlaces ascendentes se bloquearan permanentemente. En el diseño de VXLAN, todos los enlaces ascendentes están operativos y ECMP se aprovecha, ya que la infraestructura subyacente es la red IP.

El examen de todos los detalles queda fuera del alcance de este documento, aunque a continuación se indican algunas terminologías importantes.

VXLAN: LAN virtual ampliable

MP-BGP: BGP multiprotocolo

EVPN - Ethernet VPN

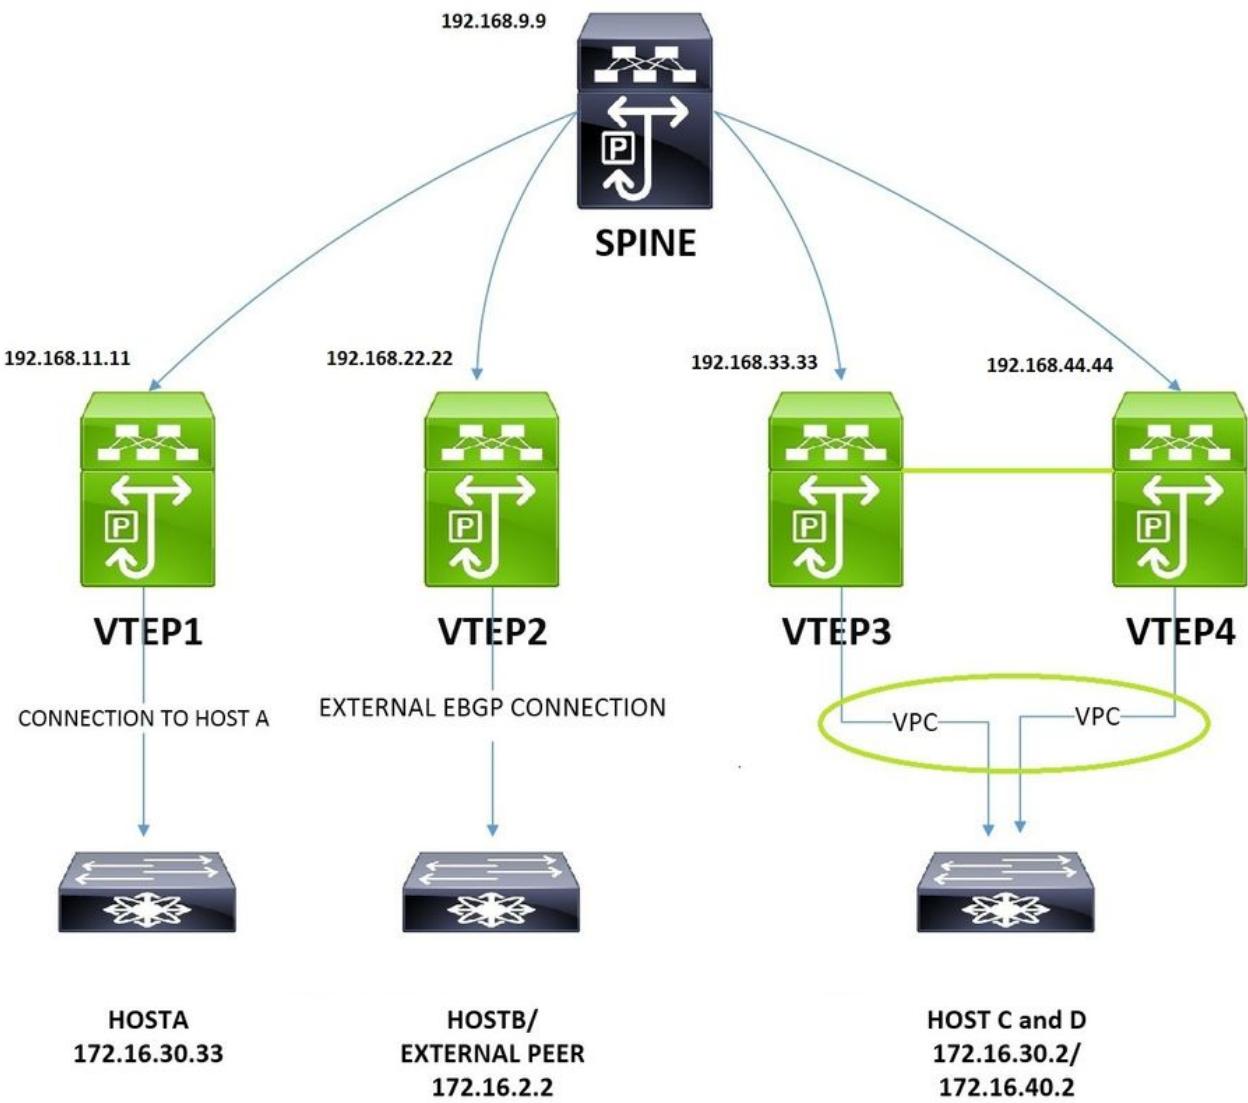

VTEP: Punto final del túnel virtual. También conocido como la hoja. Este es el lugar donde los paquetes se encapsulan y desencapsulan.

Columna - Esto es muy similar a Route-Reflector en MPLS L3 VPNs. Este dispositivo toma las actualizaciones de un VTEP y las pasa a otro VTEP.

VNI: identificador de red VXLAN. Esto se utiliza principalmente para proporcionar aislamiento para los límites de la capa 2. Este campo tiene una longitud de 24 bits, por lo que supera la limitación de rango de las vlan tradicionales. Una VNI en un VTEP se asigna a una vlan tradicional. Esto se discutirá más adelante.

Configurar

Diagrama de la red

La imagen mostrada se utiliza para los aspectos de configuración y verificación. Esto cubre las configuraciones de conectividad externa, inter-vni, intra-vpc, vpc e inter-vni desde la perspectiva de la infraestructura VXLAN.

Configuración

VTEP1

```
<#root>
```

```
!
```

Enabling features

```
nv overlay evpn
feature ospf
feature bgp
feature pim
feature interface-vlan
feature vn-segment-vlan-based
feature lacp
feature vpc
feature nv overlay

!
fabric forwarding anycast-gateway-mac 0001.0001.0001

!
```

This is needed for seamless VM mobility across VTEPS,
this configuration is same on all VTEPS.

```
ip pim rp-address 192.168.9.9 group-list 224.0.0.0/4
! SPINE is the RP.
```

```
!
ip pim ssm range 232.0.0.0/8
!
vlan 1,10,30,40,100,200
!
vlan 10
!
```

VLAN 10 is used as layer3 VNI to route Inter-VNI traffic.

```
name L3-VNI-VLAN-10
vn-segment 10000010
vlan 30
! The Host A resides on Vlan 30, The below command 'maps' vlan 30 with VNID 10000030.

vn-segment 10000030
!
vrf context EVPN-L3-VNI-VLAN-10
! Defining layer3 vrf for Inter-VNI traffic.

vni 10000010
rd auto
```

```

address-family ipv4 unicast
route-target both auto
route-target both auto evpn

!

interface Vlan10
! Layer3 VNI associated interface vlan does not have an ip address.

no shutdown
vrf member EVPN-L3-VNI-VLAN-10
ip forward

!

interface Vlan30
! Associating the Host A Vlan with layer3 vrf.

no shutdown
vrf member EVPN-L3-VNI-VLAN-10
ip address 172.16.30.1/24
fabric forwarding mode anycast-gateway

!

This is needed for seamless VM mobility across VTEPS, same on all VTEPS.

!

interface nve1
! Nve is logical interface where VXLAN packets are encapsulated and decapsulated.

no shutdown
source-interface loopback2
host-reachability protocol bgp

! This means BGP control plane is used to exchange updates.

member vni 10000010 associate-vrf
! associate-vrf is used for for layer3 vni.

member vni 10000030
suppress-arp
mcast-group 239.1.1.10

! A vlan or set of vlans mapped to VNI can be given identical multicast address, this is used for contr

!

interface Ethernet1/2
! Ospf with PIM is used as Underlay.

```

! Host route for Host D.

*via 192.168.1.2, [20/0], 00:00:22, bgp-65100, external, tag 65000,
```

Se puede observar que las rutas del host se han anunciado correctamente a este par BGP externo.

Verificación del plano de control

- Este comando muestra la asignación de VLAN tradicionales con VNID.

```
VTEP1# show vxlan
Vlan VN-Segment
=====
10 10000010
30 10000030
40 10000040
```

- El siguiente paso es verificar que mac se aprenda localmente en VTEP.

<#root>

```
VTEP1# show mac address-table vlan 30
Legend:
* - primary entry, G - Gateway MAC, (R) - Routed MAC, O - Overlay MAC
age - seconds since last seen,+ - primary entry using vPC Peer-Link,
(T) - True, (F) - False
VLAN MAC Address Type age Secure NTFY Ports
-----+-----+-----+-----+-----+
*
30 0006.f63f.e3c1 dynamic 0 F F Eth1/11 ! Mac of HOST A
* 30 8c60.4ff2.f541 dynamic 0 F F nve1(192.168.33.34)
! Mac of HOST C installed into mac address table, it was learned from BGP.

G 30 e00e.da2a.2393 static - F F sup-eth1(R)
```

- El siguiente paso es verificar que la ruta esté instalada en l2rib.

<#root>

```
VTEP1# show l2route evpn mac evi 30
Mac Address Prod Next Hop (s)
-----
0006.f63f.e3c1
Local Eth1/11
! Mac of HOST A
i
```

```
nstalled into l2rib.
```

```
8c60.4ff2.f541
