[Información Relacionada](#)

## [Introducción](#)

Este documento muestra cómo aplicar listas de acceso para marcar interfaces con un servidor TACACS+. Hay dos métodos posibles:

- Defina la lista de acceso numerada en el router y haga referencia a la lista de acceso numerada en el servidor. Esto es compatible con la mayoría de las versiones del software Cisco IOS®.
- Defina la lista de acceso completa en el servidor. Se requiere la versión 11.3 o posterior del software del IOS de Cisco para este método **por usuario**.

**Nota:** Para ISDN, debe utilizar el método **por usuario** y debe tener perfiles virtuales configurados en el router.

## [Prerequisites](#)

### [Requirements](#)

No hay requisitos específicos para este documento.

## [Componentes Utilizados](#)

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Versión 11.1 o posterior del software del IOS de Cisco (defina las listas de acceso en el router)
- Versión 11.3 o posterior del software del IOS de Cisco (defina las listas de acceso en el servidor)
- Cisco Secure ACS para UNIXCisco Secure ACS para Windows 2.x y posteriorTACACS+ Freeware

**Nota:** Este documento supone que el acceso de marcado se configuró previamente. Este documento no explica los detalles de la configuración de Marcar. Consulte [Configuración del NAS para el Acceso de Marcado Básico](#) para obtener información sobre cómo configurar un servidor de acceso a la red (NAS) para Marcar.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

## [Convenciones](#)

Consulte [Convenciones de Consejos TécnicosCisco](#) para obtener más información sobre las convenciones del documento.

## [Configurar](#)

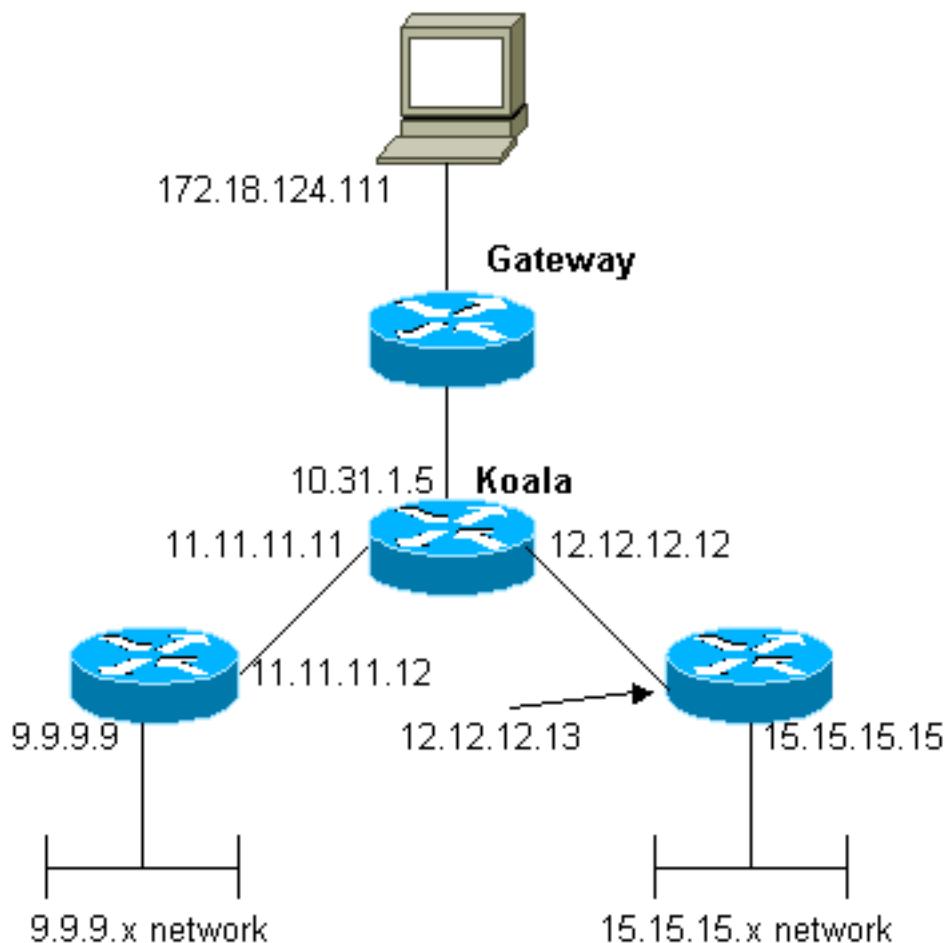

En esta sección encontrará la información para configurar las funciones descritas en este documento.

**Nota:** Use la [Command Lookup Tool](#) (sólo [clientes registrados](#)) para obtener más información sobre los comandos utilizados en este documento.

## [Diagrama de la red](#)

En este documento, se utiliza esta configuración de red:

## Authentication Server

**Nota:** Las configuraciones permiten al usuario que recibe una dirección 1.1.1.x de "mypool" a la red de ping (tráfico ICMP) 9.9.9.x y Telnet (tráfico TCP) a la red 15.15.15.x. No permite al usuario hacer ping a la red 15.15.15.x o Telnet a la red 9.9.9.x.

## Configuraciones

Este documento usa estas configuraciones.

- [Router de la serie 2500 de Cisco que ejecuta la versión 12.0\(5\)T del software del IOS de Cisco](#)
- [Cisco Secure ACS para UNIX 2.3](#)
- [Cisco Secure ACS para Windows 3.2](#)

## Comandos para otras versiones del software del IOS de Cisco

**Nota:** Para utilizar estos comandos, quite los comandos en negrita de la configuración [Cisco 2500 Series Router](#) y pegue estos comandos en, según lo dictado por su versión de Cisco IOS Software.

### **Cisco IOS Software Release 11.3.3.T a 12.0.5.T**

```
aaa authentication login default tacacs+ local
aaa authentication ppp default if-needed tacacs+ local
aaa authorization network default tacacs+
```

### **Cisco IOS Software Release 11.1 a 11.3.3.T**

```
aaa authentication login default tacacs+
aaa authentication ppp default if-needed tacacs+
aaa authorization network tacacs+
```

## Configuración del servidor - TACACS+ Freeware

```
user = chaprtr {
chap = cleartext chaprtr
service = ppp protocol = ip {
inacl=101
}
}
```

## Configuración del servidor - Cisco Secure UNIX - TACACS+

```
rtp-berry# ./ViewProfile -p 9900 -u chaprtr
User Profile Information
user = chaprtr{
profile_id = 182
set server current-failed-logins = 1
profile_cycle = 2
service=ppp {
protocol=lcp {
}
protocol=ip {
```

```

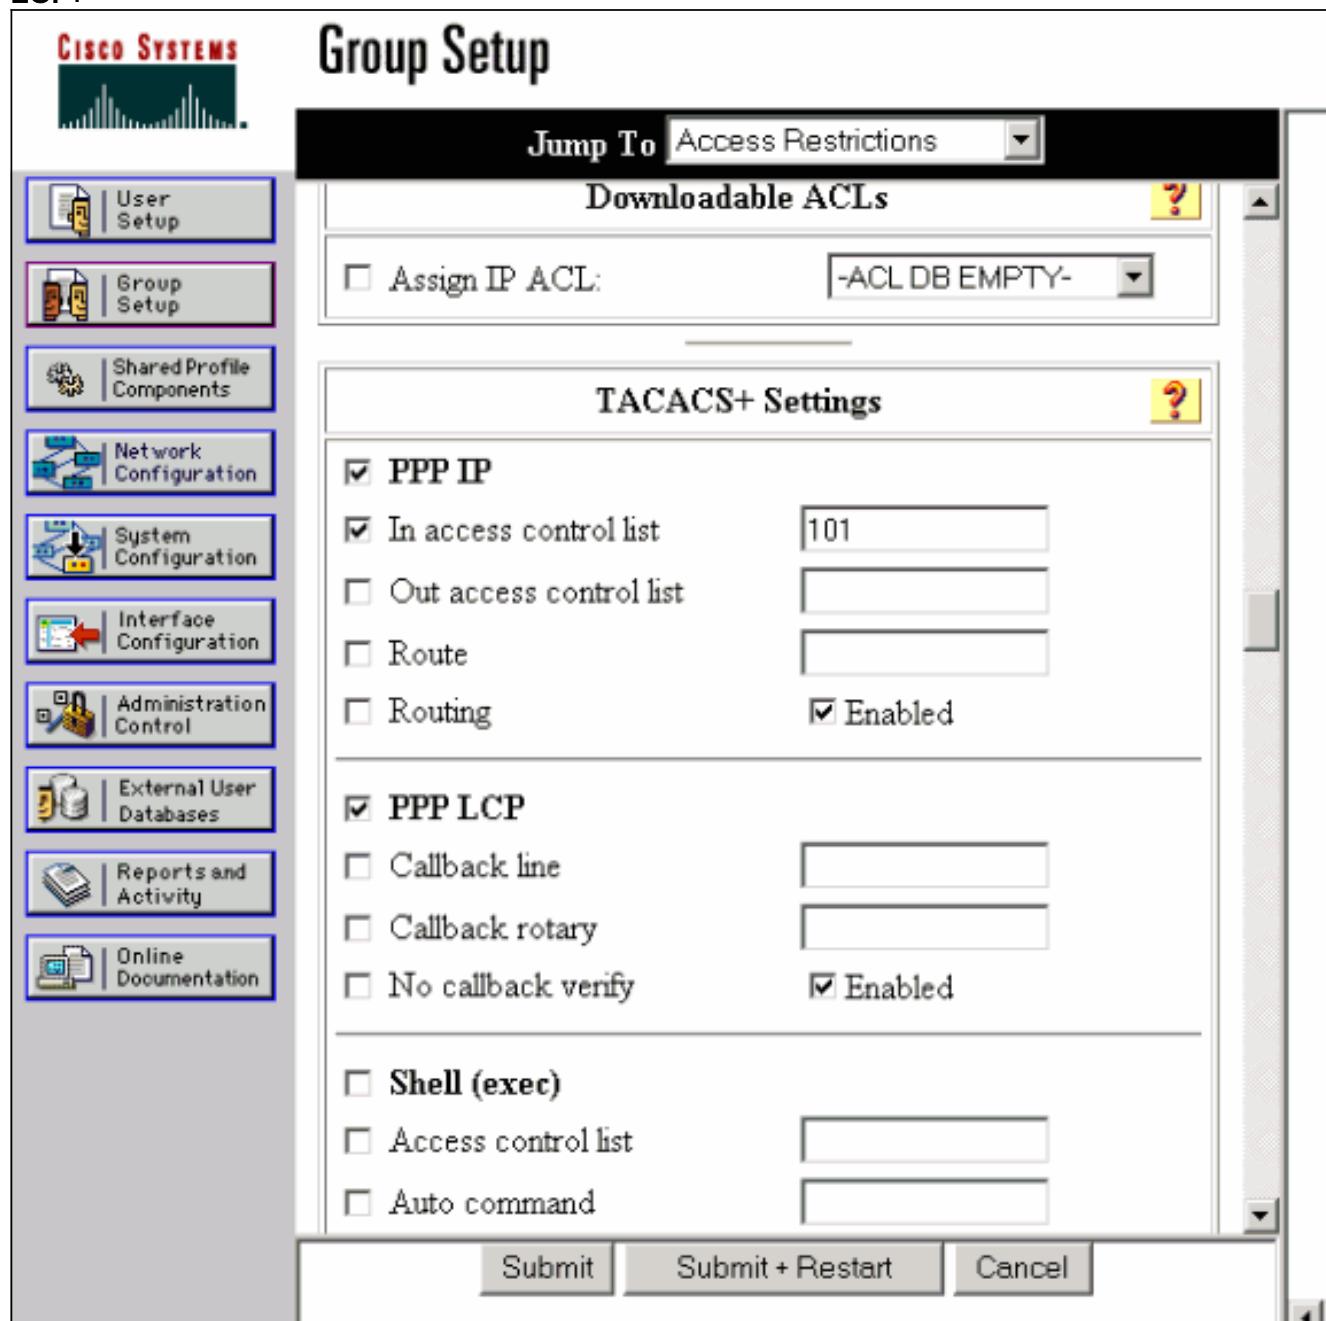

set inacl=101
}
}
password = chap "chaprtr"
}

```

## Configuración del servidor - Cisco Secure ACS para Windows 2.x y posterior - TACACS+

Complete estos pasos para configurar Cisco Secure ACS para Windows para especificar qué ACL debe aplicar el NAS.

1. Haga clic en **Group Setup**, seleccione el grupo al que pertenece el usuario y haga clic en **Edit Settings**.
2. Haga clic en las casillas de verificación **PPP IP**, **In access control list** y **PPP LCP** en la sección **TACACS+ Settings**. Especifique el número de ACL que se aplicará (en este caso, 101) en el cuadro 'Lista de control de acceso'.
3. Marque **Enabled** para habilitar las opciones **PPP IP** y **PPP LCP**.

## Depuración del router de ejemplo

```
koala#show debug
General OS:
TACACS access control debugging is on
AAA Authentication debugging is on
AAA Authorization debugging is on
koala#show ip access-lists
Extended IP access list 101

## [\*\*Definir listas de acceso en el servidor\*\*](#)

**Nota:** Las sentencias de ruta no tienen que ser transmitidas desde el servidor al router. Normalmente, el usuario de marcación recoge las rutas del router. La presencia de las sentencias de ruta en el router depende de si las rutas se transmiten desde el servidor o se recogen desde el router:

```

ip route 9.9.9.0 255.255.255.0 11.11.11.12
ip route 15.15.15.0 255.255.255.0 12.12.12.13

```

En esta configuración de ejemplo, el paso de las rutas hacia abajo desde el servidor es sólo con fines ilustrativos.

### [Configuración del servidor - Cisco Secure Windows 2.x - TACACS+](#)

Complete estos pasos para configurar Cisco Secure para Windows para que pase las ACL al NAS.

1. Haga clic en **Interface Configuration** y seleccione **TACACS+ Cisco**.
2. Marque **Mostrar una ventana para cada servicio seleccionado en la que puede ingresar atributos TACACS+ personalizados** en la sección 'Opciones de configuración avanzada' y

haga clic en

Enviar.

**CISCO SYSTEMS**

## Interface Configuration

User Setup      Group Setup      Shared Profile Components      Network Configuration      System Configuration      Interface Configuration      Administration Control      External User Databases      Reports and Activity      Online Documentation

PPP Apple Talk  
  PPP VPDN  
  PPP LCP  
  ARAP  
  Shell (exec)  
  PIX Shell (pixshell)  
  SLIP

**New Services**

Service	Protocol
<input type="checkbox"/> <input type="checkbox"/>	<input type="text"/>
<input type="checkbox"/> <input type="checkbox"/>	<input type="text"/>

---

**Advanced Configuration Options**

Advanced TACACS+ Features  
 Display a Time-of-Day access grid for every TACACS+ service where you can override the default Time-of-Day settings  
 Display a window for each service selected in which you can enter customized TACACS+ attributes  
 Display enable default (Undefined) service configuration

3. Haga clic en **Group Setup**, seleccione el grupo al que pertenece el usuario y haga clic en **Edit Settings**.
4. Vaya a la sección **PPP IP** y haga clic en las casillas de verificación **PPP IP, Atributos personalizados y Habilitar** desde **TACACS+ Settings**. Introduzca el texto que se muestra aquí en el cuadro **Atributos personalizados** y haga clic en **Enviar**.

## Verificación

Actualmente, no hay un procedimiento de verificación disponible para esta configuración.

## Troubleshoot

En esta sección encontrará información que puede utilizar para solucionar problemas de configuración.

### Comandos para resolución de problemas

[La herramienta Output Interpreter Tool \(clientes registrados solamente\) \(OIT\) soporta ciertos comandos show.](#) Utilice la OIT para ver un análisis del resultado del comando show.

**Nota:** Consulte [Información Importante sobre Comandos Debug](#) antes de utilizar los comandos debug.

- **debug aaa authentication** — Muestra información sobre autenticación de AAA/TACACS+.
- **debug aaa authorization**—Muestra información sobre la autorización AAA/TACACS+.
- **debug aaa per-user**: muestra información sobre los ajustes de configuración por usuario en el router o los servidores de acceso que se envían desde un servidor AAA.
- **debug tacacs+**—Muestra información detallada de depuración asociada con TACACS+.
- **debug ppp negotiation** — Muestra los paquetes PPP transmitidos durante el inicio PPP, durante el cual se negocian las opciones PPP.

Consulte [Listas de Acceso de Troubleshooting en Interfaces de Marcado](#) para obtener información sobre la resolución de problemas.
