Introducción

Este documento describe cómo configurar una conexión IPsec entre un router y Cisco Virtual Private Network (VPN) Client 4.x con Terminal Access Controller Access Control System Plus (TACACS+) para la autenticación de usuarios. La versión 12.2(8)T y las versiones posteriores del software Cisco IOS® admiten conexiones de Cisco VPN Client 4.x. VPN Client 4.x utiliza la política Diffie-Hellman (D-H) grupo 2. El comando **isakmp policy # group 2** permite que los clientes 4.x se conecten.

Este documento muestra la autenticación en el servidor TACACS+ con autorización, como las asignaciones de Windows Internet Naming Service (WINS) y Domain Naming Service (DNS), realizadas localmente por el router.

Refiérase a [Configuración de Cisco VPN Client 3.x para Windows a IOS Usando la Autenticación Extendida Local](#) para obtener más información sobre el escenario donde la autenticación de usuario ocurre localmente en el router Cisco IOS.

Refiérase a [Configuración de IPsec entre un Cisco IOS Router y un Cisco VPN Client 4.x para Windows Usando RADIUS para la Autenticación de Usuario](#) para obtener más información sobre el escenario donde la autenticación de usuario ocurre externamente con el protocolo RADIUS.

Prerequisites

Requirements

Antes de utilizar esta configuración, asegúrese de que cumple con los siguientes requisitos:

- Una agrupación de direcciones que se asignarán para IPsec
- Un grupo denominado "vpngroup" con una contraseña de "cisco123"
- Autenticación de usuario en un servidor TACACS+

Componentes Utilizados

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Cisco VPN Client para Windows versión 4.0.2D (cualquier VPN Client 3.x o posterior debería funcionar).
- Cisco Secure para Windows versión 3.0 (cualquier servidor TACACS+ debería funcionar)
- Cisco IOS 1710 Router versión 12.2(8)T1 cargado con el conjunto de funciones IPsec Aquí se muestra el resultado del comando **show version** en el router.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Convenciones

Consulte [Convenciones de Consejos Técnicos de Cisco para obtener información sobre las convenciones sobre documentos.](#)

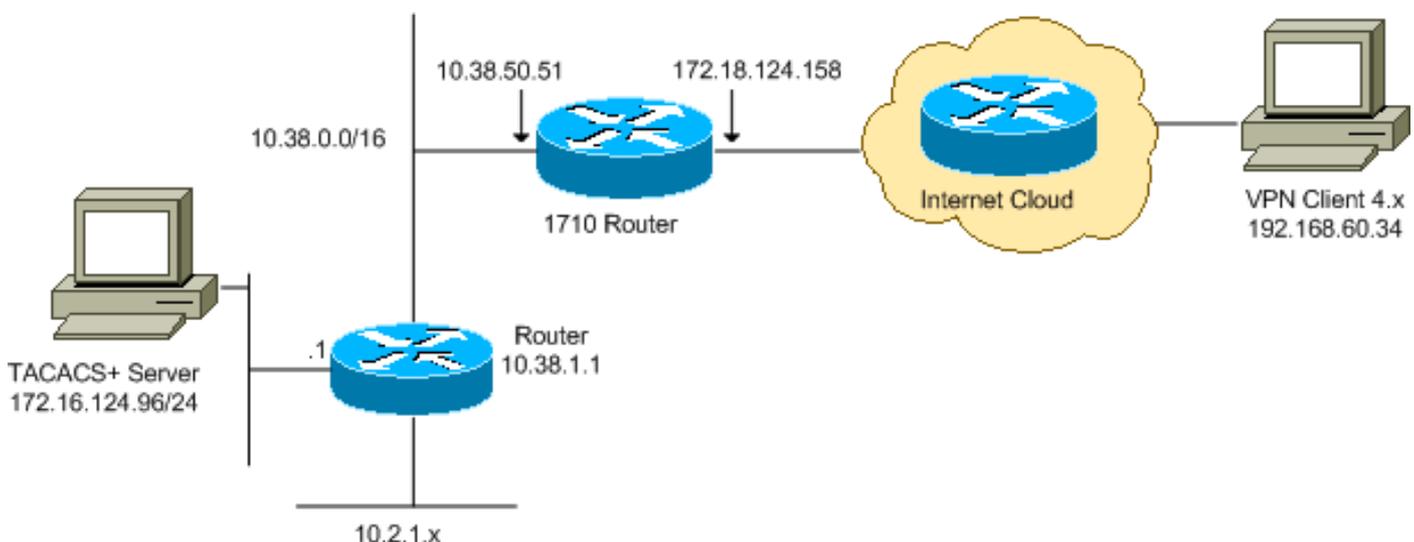

Configurar

En esta sección encontrará la información para configurar las funciones descritas en este documento.

Nota: Use la [Command Lookup Tool](#) (sólo para clientes registrados) para encontrar más información sobre los comandos usados en este documento.

Diagrama de la red

En este documento, se utiliza esta configuración de red:

Nota: Los esquemas de direccionamiento IP utilizados en esta configuración no son legalmente enrutables en Internet. Son [direcciones RFC 1918](#) que se han utilizado en un entorno de laboratorio.

Configuraciones

En este documento, se utilizan estas configuraciones:

- [Cisco 1710 Router](#)
- [Servidor TACACS+](#)
- [VPN Client 4.x](#)
- [Tunelización dividida](#)

[Servidor TACACS+](#)

Para configurar el servidor TACACS+, complete estos pasos:

1. Haga clic en **Add Entry** para agregar una entrada para el router en la base de datos del servidor TACACS+.

AAA Client Hostname	AAA Client IP Address	Authenticate Using
340	172.18.124.151	RADIUS (Cisco Aironet)
Aironet-340-Lab	10.36.1.99	RADIUS (Cisco Aironet)
others	<Default>	TACACS+ (Cisco IOS)

[Add Entry](#)

2. En la página Add AAA Client (Agregar cliente AAA), introduzca la información del router como se muestra en esta imagen:

Add AAA Client

AAA Client Hostname:

AAA Client IP Address:

Key:

Authenticate Using:

Single Connect TACACS+ AAA Client (Record stop in accounting on failure).

Log Update/Watchdog Packets from this AAA Client

Log RADIUS Tunneling Packets from this AAA Client

[Submit](#) [Submit + Restart](#) [Cancel](#)

En el campo Nombre de host del cliente AAA, introduzca un nombre para el router. En el campo AAA Client IP Address, ingrese **10.38.50.51**. En el campo Key (Clave), introduzca **cisco123** como clave secreta compartida. En la lista desplegable Authenticate Using, elija **TACACS+ (Cisco IOS)** y haga clic en **Submit**.

3. En el campo Usuario, ingrese el nombre de usuario para el usuario VPN en la base de datos Cisco Secure y haga clic en **Agregar/Editar**. En este ejemplo, el nombre de usuario es **cisco**.

User: [Find](#) [Add/Edit](#)

List users beginning with letter/number:

A B C D E F G H I J K L M
N O P Q R S T U V W X Y Z
0 1 2 3 4 5 6 7 8 9

[List All Users](#)

[Back to Help](#)

- [User Setup and External User Databases](#)
- [Finding a Specific User in the CiscoSecure User Database](#)
- [Adding a User to the CiscoSecure User Database](#)
- [Listing Usernames that Begin with a Particular Character](#)
- [Listing All Usernames in the CiscoSecure User Database](#)
- [Changing a Username in the CiscoSecure User Database](#)

User Setup enables you to configure individual user information, add users, and delete users in the database.

4. En la página siguiente, ingrese y confirme la contraseña para el usuario *cisco*. En este ejemplo, la contraseña también es *cisco*.

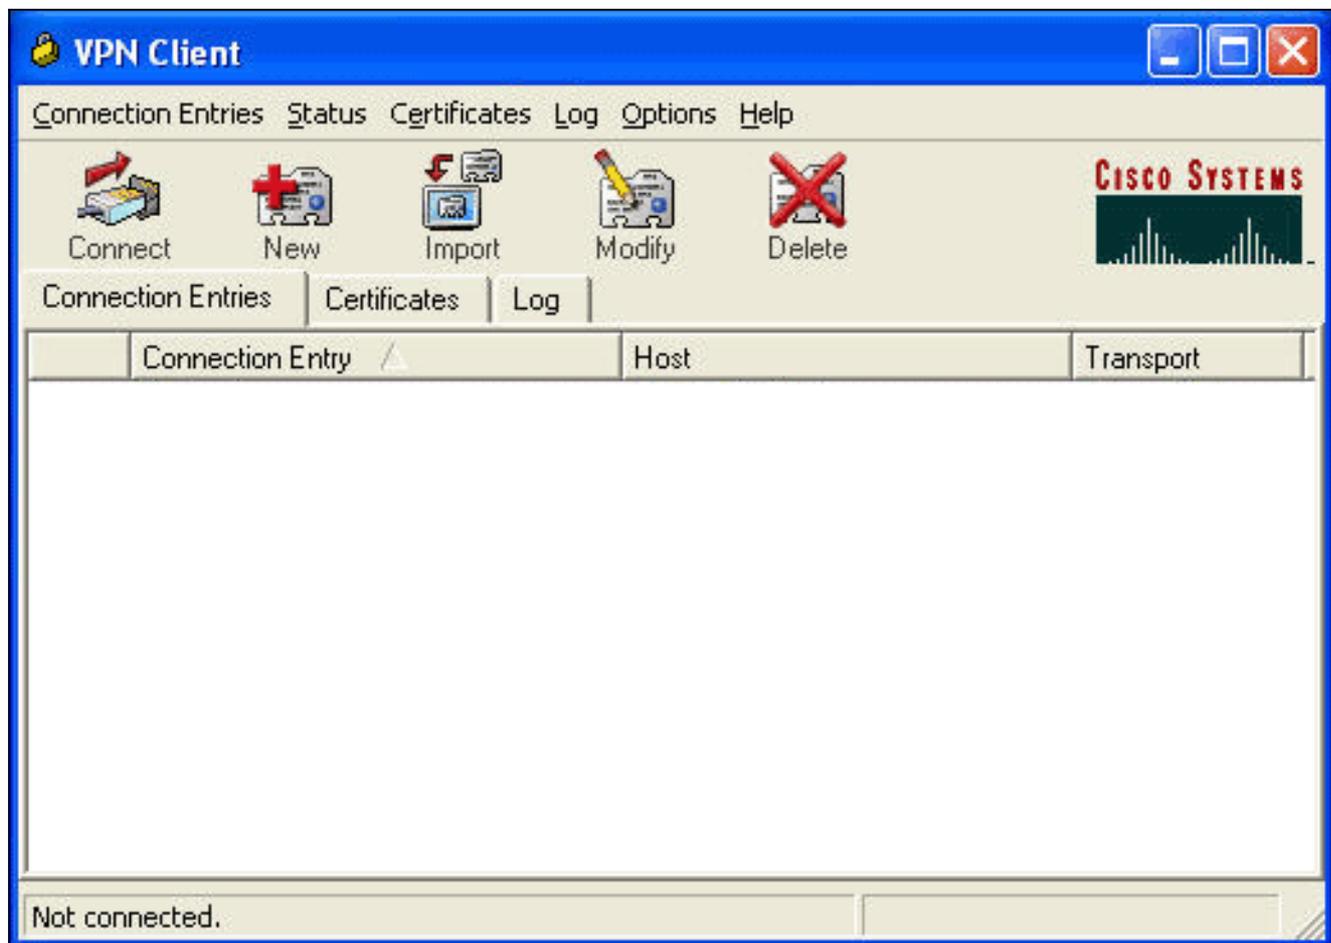

The screenshot shows a web-based configuration interface for a Cisco device. On the left is a vertical navigation menu with icons and labels for various configuration areas: User Setup, Group Setup, Shared Profile Configuration, Network Configuration, System Configuration, Interface Configuration, Administrative Control, External User Database, Reports and Activity, and Device Documentation. The main content area is divided into two sections: 'Supplementary User Info' and 'User Setup'. The 'Supplementary User Info' section has two empty text input fields labeled 'Real Name' and 'Description'. The 'User Setup' section is titled 'Password Authentication:' and features a dropdown menu set to 'CiscoSecure Database'. Below this, there is a note: 'CiscoSecure PAP (Also used for CHAP/MS-CHAP/ARAP, if the Separate field is not checked.)'. There are two sets of password fields: the first set is for the main authentication, and the second set is for a 'Separate (CHAP/MS-CHAP/ARAP)' authentication, which is currently unchecked. A paragraph of text explains that using a separate CHAP password for token card users allows CHAP authentication when token caching is enabled. At the bottom of the 'User Setup' section, there is a dropdown menu for 'Group to which the user is assigned' with 'Group 19' selected. 'Submit' and 'Cancel' buttons are at the bottom. To the right of the main form is a list of blue hyperlinks: Account Disabled, Deleting a Username, Supplementary User Info, Password Authentication, Group to which the user is assigned, Callback, Client IP Address Assignment, Advanced Settings, Network Access Restrictions, Max Sessions, Usage Quotas, Account Disable, Downloadable ACLs, Advanced TACACS+ Settings, TACACS+ Enable Control, TACACS+ Enable Password, TACACS+ Outbound Password, TACACS+ Shell Command Authorization, TACACS+ Unknown Services, IETF RADIUS Attributes, and RADIUS Vendor-Specific Attributes. Below this list is a section titled 'Account Disabled Status' with a paragraph explaining the 'Account Disabled' checkbox and a '[Back to Top]' link.

5. Si desea asignar la cuenta de usuario a un grupo, complete ese paso ahora. Cuando termine, haga clic en **Enviar**.

[VPN Client 4.x](#)

Para configurar VPN Client 4.x, complete estos pasos:

1. Inicie VPN Client y haga clic en **New** para crear una nueva conexión.

Aparecerá el cuadro de diálogo VPN Client Create New VPN Connection Entry (Entrada de conexión VPN de creación de nuevo cliente

VPN Client | Create New VPN Connection Entry

Connection Entry:

Description:

Host:

Authentication | Transport | Backup Servers | Dial-Up

Group Authentication Mutual Group Authentication

Name:

Password:

Confirm Password:

Certificate Authentication

Name:

Send CA Certificate Chain

Erase User Password | Save | Cancel

VPN).

2. En el cuadro de diálogo Crear nueva entrada de conexión VPN, introduzca la información de conexión como se muestra en esta

VPN Client | Create New VPN Connection Entry

Connection Entry:

Description:

Host:

Authentication | Transport | Backup Servers | Dial-Up

Group Authentication Mutual Group Authentication

Name:

Password:

Confirm Password:

Certificate Authentication

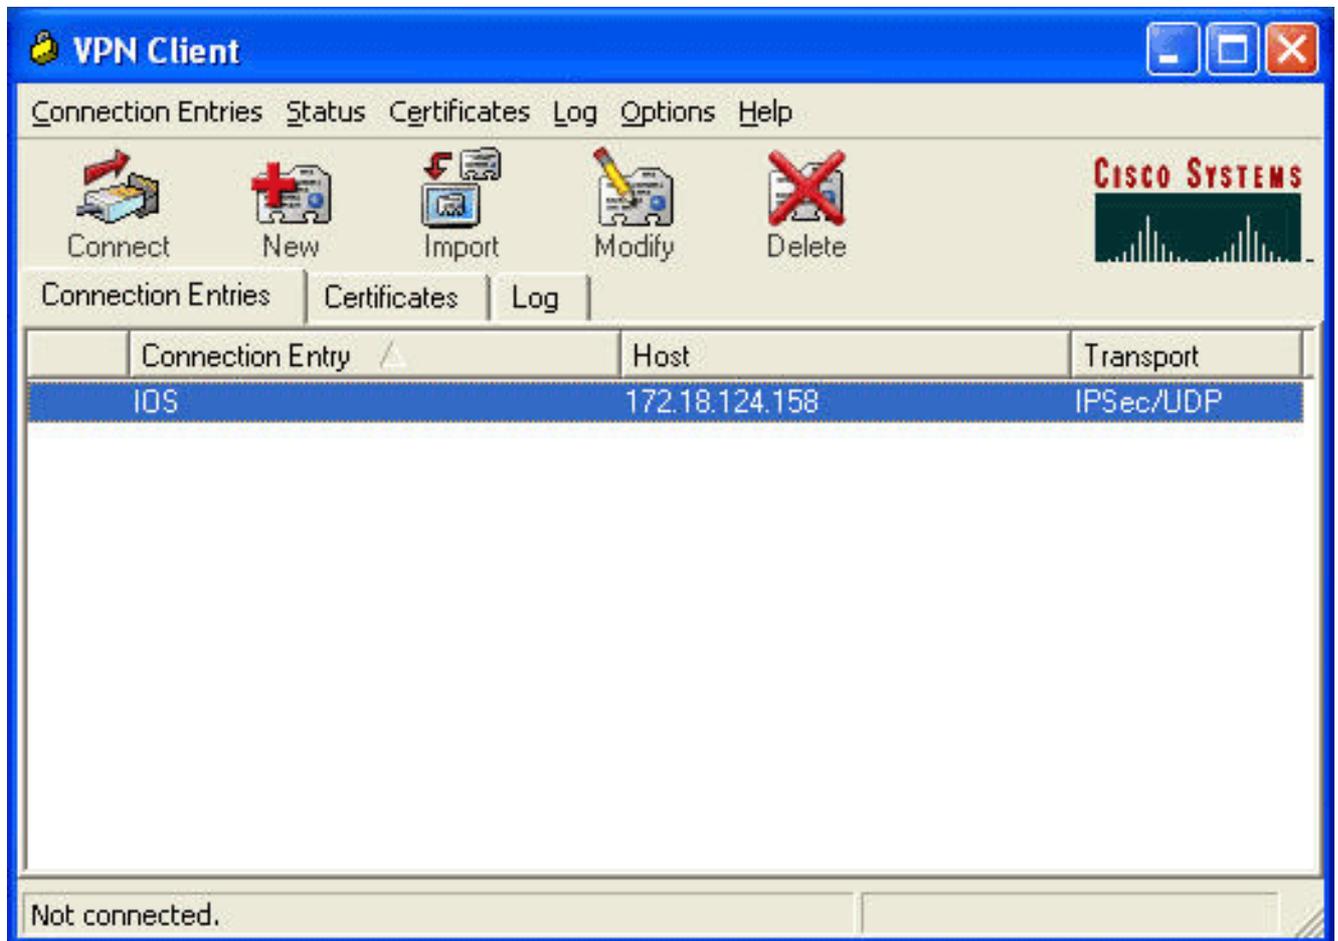

Name:

Send CA Certificate Chain

imagen:

En el campo Connection Entry (Entrada de conexión), introduzca un nombre para la conexión. En los campos Description (Descripción) y Host (Host), introduzca una descripción y la dirección IP del host para la entrada de conexión. En la ficha Authentication (Autenticación), haga clic en el botón de opción **Group Authentication (Autenticación de grupo)** e introduzca el nombre y la contraseña del usuario. Haga clic en **Guardar** para guardar la conexión.

3. En la ventana VPN Client, seleccione la entrada de conexión que creó y haga clic en **Connect** para conectarse al router.

4. A medida que IPSec negocia, se le solicita un nombre de usuario y una contraseña. Introduzca un nombre de usuario y una contraseña. La ventana muestra estos mensajes: "Negociando perfiles de seguridad". "Su enlace está ahora seguro".

Tunelización dividida

Para habilitar la tunelización dividida para las conexiones VPN, asegúrese de configurar una lista de control de acceso (ACL) en el router. En este ejemplo, el comando **access-list 102** se asocia con el grupo con fines de tunelización dividida y el túnel se forma a las redes 10.38.X.X /16 y 10.2.x.x. El tráfico fluye sin cifrar a los dispositivos que no están en la ACL 102 (por ejemplo, Internet).

```
access-list 102 permit ip 10.38.0.0 0.0.255.255 10.1.1.0 0.0.0.255
access-list 102 permit ip 10.2.0.0 0.0.255.255 10.1.1.0 0.0.0.255
```

Aplicar ACL en las propiedades del grupo.

```
crypto isakmp client configuration group vpngroup
key cisco123
dns 10.2.1.10
wins 10.2.1.20
domain cisco.com
pool ippool
acl 102
```

Verificación

En esta sección encontrará información que puede utilizar para comprobar que su configuración funciona correctamente.

La herramienta [Output Interpreter Tool \(solo para clientes registrados\)](#) soporta ciertos comandos [show](#). Esta herramienta le permite ver un análisis del resultado del comando **show**.

[Troubleshoot](#)

En esta sección encontrará información que puede utilizar para solucionar problemas de configuración.

[Comandos para resolución de problemas](#)

[La herramienta Output Interpreter Tool \(clientes registrados solamente\) \(OIT\) soporta ciertos comandos show.](#) Utilice el OIT para ver una análisis de la salida del comando show.

Nota: Consulte [Información Importante sobre Comandos Debug](#) antes de utilizar los comandos debug.

- **debug crypto ipsec**—Muestra información de depuración acerca de las conexiones IPsec.
- **debug crypto isakmp**: muestra información de depuración sobre las conexiones IPsec y muestra el primer conjunto de atributos que se niegan debido a incompatibilidades en ambos extremos.
- **debug crypto engine** — Muestra información del motor de criptografía.
- **debug aaa authentication** — Muestra información sobre autenticación de AAA/TACACS+.
- **debug aaa authorization**—Muestra información sobre la autorización AAA/TACACS+.
- **debug tacacs**: muestra información que le permite resolver problemas de comunicación entre el servidor TACACS+ y el router.
