## Introducción

Multilink PPP (MLP) equilibra la carga en las interfaces del marcador, como por ejemplo, las interfaces de ISDN, sincrónica y asincrónica. MLP reparte los paquetes y envía los fragmentos a través de circuitos paralelos. De esta manera, MLP mejora la producción y reduce el tiempo de espera entre los sistemas. MLP proporciona un método para repartir, recombinar y establecer secuencias de datagramas a través de los links de datos lógicos múltiples. MLP permite que los paquetes se fragmenten y que los fragmentos se envíen a la vez a través de varios links punto a punto a la misma dirección remota.

Este documento ilustra una conexión Multilink entre interfaces seriales a través de la configuración de plantilla virtual.

## Prerequisites

### Requirements

No hay requisitos específicos para este documento.

## Componentes Utilizados

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Versión 11.2 o más reciente del software IOS® de Cisco.
- Dos routers Cisco 2503, que tienen dos interfaces seriales WAN cada uno. Estos routers ejecutan Cisco IOS Software Release 12.2(7b).

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

## Productos Relacionados

Esta configuración también se puede utilizar con las siguientes versiones de hardware y software.

- Dos routers cualesquiera que tengan dos interfaces seriales WAN. Puede utilizar WIC-1T, WIC-2T e interfaces seriales WAN fijas.

## Convenciones

Consulte [Convenciones de Consejos TécnicosCisco](#) para obtener más información sobre las convenciones del documento.

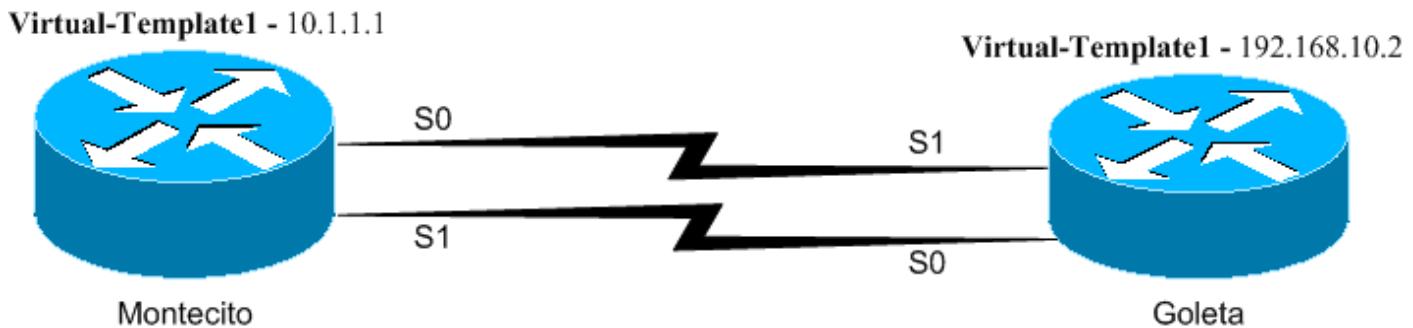

## Configurar

En esta sección encontrará la información para configurar las funciones descritas en este documento.

**Nota:** Use la [Command Lookup Tool](#) (sólo [clientes registrados](#)) para obtener más información sobre los comandos utilizados en este documento.

## Diagrama de la red

En este documento, se utiliza esta configuración de red:

Los routers Montecito y Goleta están adosados a través de las interfaces Serial0 y Serial1. Esta configuración utiliza una plantilla virtual en cada lado, el protocolo punto a punto (PPP) de enlaces múltiples y une y enruta IP e IPX entre los routers.

## Configuraciones

En este documento, se utilizan estas configuraciones:

- [Montecito](#)
- [Goleta](#)

## Montecito

```

## Verificación

Use esta sección para confirmar que su configuración funciona correctamente.

[La herramienta Output Interpreter Tool \(clientes registrados solamente\) \(OIT\) soporta ciertos comandos show.](#) Utilice la OIT para ver un análisis del resultado del comando show.

- **show ppp multilink:** muestra información sobre paquetes multilink que están activos. Utilice este comando para verificar la conexión multilink.
- **show interface virtual-access:** muestra información de estado, tráfico y configuración sobre una interfaz de acceso virtual específica.
- **show interface serial:** permite resolver cualquier problema con la interfaz serial

## Ejemplo de resultado del comando show

### Comandos show en Montecito después de que se realice la conexión

```

Montecito#show interface virtual-access 1
Virtual-Access1 is up, line protocol is up
Hardware is Virtual Access interface
Interface is unnumbered. Using address of Loopback0 (10.1.1.1)
MTU 1500 bytes, BW 3088 Kbit, DLY 100000 usec,
    reliability 255/255, txload 1/255, rxload 1/255
Encapsulation PPP, loopback not set
Keepalive set (10 sec)
DTR is pulsed for 5 seconds on reset
LCP Open, multilink Open
Open: BRIDGECP, IPCP, IPXCP
Last input 00:00:00, output never, output hang never
Last clearing of "show interface" counters 00:02:09
Input queue: 0/75/0/0 (size/max/drops/flushes); Total output drops: 0

```

```
Queueing strategy: fifo
Output queue :0/40 (size/max)
5 minute input rate 0 bits/sec, 0 packets/sec
5 minute output rate 0 bits/sec, 0 packets/sec
  22 packets input, 743 bytes, 0 no buffer
  Received 0 broadcasts, 0 runts, 0 giants, 0 throttles
  0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored, 0 abort
  8 packets output, 124 bytes, 0 underruns
  0 output errors, 0 collisions, 0 interface resets
  0 output buffer failures, 0 output buffers swapped out
  0 carrier transitions

Montecito#show interface serial 0
Serial0 is up, line protocol is up
Hardware is HD64570
MTU 1500 bytes, BW 1544 Kbit, DLY 20000 usec,

## [Troubleshoot](#)

Use esta sección para resolver problemas de configuración.

### [Recursos de resolución de problemas](#)

Utilice estos recursos de resolución de problemas según sea necesario:

- [Resolución de problemas de línea serial](#)
- [Conexión adosada HDLC](#)
- Resolución de problemas de líneas alquiladas

### [Comandos para resolución de problemas](#)

[La herramienta Output Interpreter Tool \(clientes registrados solamente\) \(OIT\) soporta ciertos comandos show.](#) Utilice la OIT para ver un análisis del resultado del comando show.

**Nota:** Consulte [Información Importante sobre Comandos Debug](#) antes de utilizar los comandos

## debug.

- **debug ppp negotiation:** indica si un cliente pasa la negociación PPP. También verifica la negociación de dirección.
- **debug ppp authentication:** indica si un cliente pasa la autenticación. Utilice este comando si utiliza Cisco IOS Software Release 11.2 o versiones posteriores.
- **debug ppp chap:** indica si un cliente pasa la autenticación. Utilice este comando si utiliza una versión del software Cisco IOS anterior a la versión 11.2.
- **debug ppp error** — **Muestra los errores de protocolo y las estadísticas de error relacionadas con la negociación y operación de conexiones PPP.**
- **debug vtemplate:** permite ver qué configuraciones de plantilla virtual se utilizan.
- **debug vprofile:** permite ver qué opciones de configuración se aplican a la interfaz de acceso virtual.

## Ejemplo de resultado del comando debug

A continuación se muestran algunos resultados de depuración para llamadas exitosas. Preste atención a las secciones en **negrita**. Compare el resultado que obtiene con el resultado que se muestra aquí:

### Depuraciones de PPP en Montecito

```
Montecito#debug ppp negotiation
