[Informations connexes](#)

[Introduction](#)

Ce document présente un exemple de configuration permettant au HUB ASA d'autoriser les connexions des tunnels site à site et des IPsec Easy VPN à la même interface. L'IPsec entre un Cisco ASA 5520 et un serveur de sécurité adaptatif dédié (ASA) de la gamme Cisco 5505 utilise Easy VPN en mode d'extension du réseau (NEM).

[Conditions préalables](#)

[Conditions requises](#)

Aucune spécification déterminée n'est requise pour ce document.

[Components Used](#)

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Gamme ASA 5500 qui exécute les versions 7.x et ultérieures (concentrateur)**Remarque :** La configuration du concentrateur ASA peut également être utilisée avec le dispositif de sécurité PIX 515, 515E, 525 et 535 qui exécute les versions 7.x et ultérieures
- Easy VPN ASA 5505 qui exécute les versions 7.x et ultérieures

- Dispositif de sécurité PIX 515, 515E, 525 et 535 qui exécute les versions 7.x et ultérieures

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

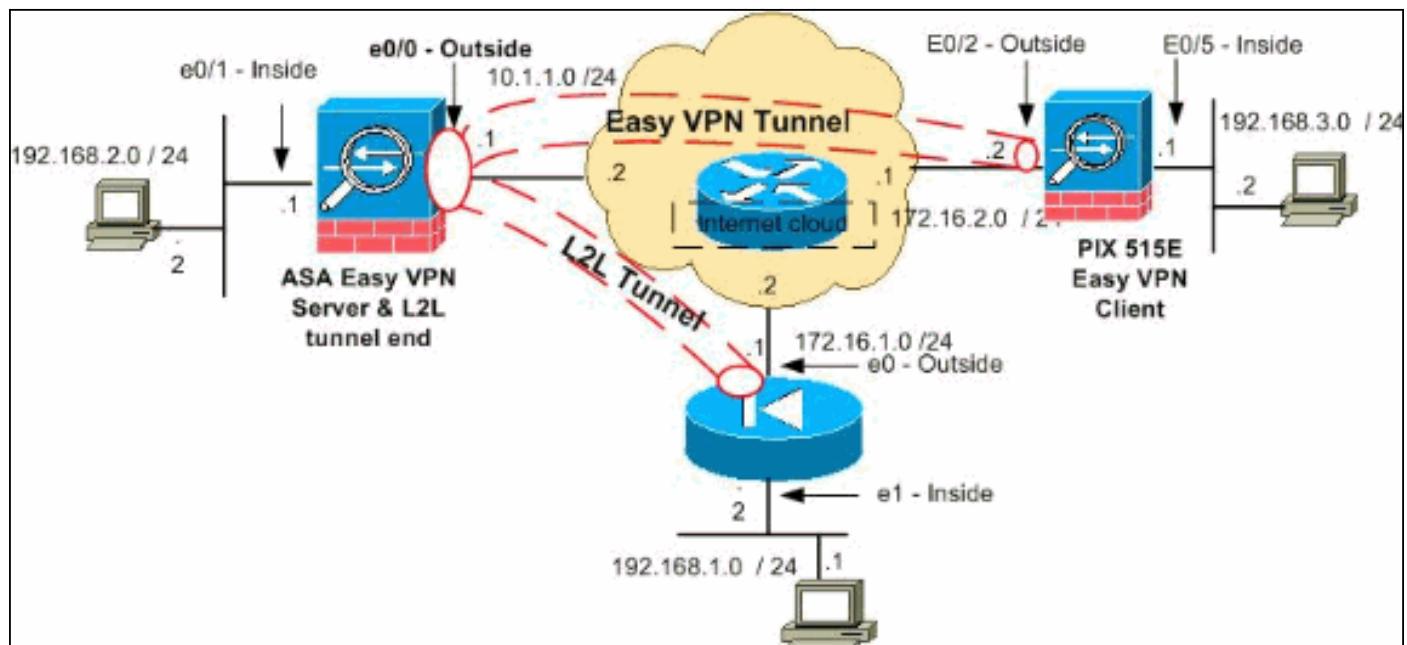

Configuration

Cette section vous présente les informations que vous pouvez utiliser pour configurer les fonctionnalités décrites dans ce document.

Remarque : utilisez l'[outil de recherche de commandes](#) (clients [enregistrés](#) uniquement) afin d'obtenir plus d'informations sur les commandes utilisées dans cette section.

Diagramme du réseau

Ce document utilise la configuration réseau suivante :

Remarque : les schémas d'adressage IP utilisés dans cette configuration ne sont pas routables légalement sur Internet. Il s'agit d'adresses [RFC 1918 qui sont utilisées dans un environnement de laboratoire](#).

Configurations

Ce document utilise les configurations suivantes :

- [Concentrateur ASA](#)
- [Easy VPN Client ASA 5505](#)

- PIX

Vérification

Cette section fournit des informations qui vous permettront de vérifier que votre configuration fonctionne correctement.

L'[Outil Interpréteur de sortie \(clients enregistrés uniquement\) \(OIT\)](#) prend en charge certaines commandes `show`. Utilisez l'OIT pour afficher une analyse de la sortie de la commande `show`.

- `show crypto isakmp sa` - Affiche toutes les associations de sécurité actuelles d'IKE (SA) sur un pair.
- `show crypto ipsec sa` - Affiche toutes les SA actuelles.

Cette section montre des configurations de vérification d'exemple pour :

- [Concentrateur ASA](#)
- [Easy VPN Client ASA 5505](#)
- [PIX](#)

Concentrateur ASA

Dépannage

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration.

Dépannage des commandes

Certaines commandes **show** sont prises en charge par l'[Output Interpreter Tool](#) (clients enregistrés uniquement), qui vous permet de voir une analyse de la sortie de la commande show.

Note : Reportez-vous à [Informations importantes sur les commandes de débogage](#) avant d'émettre des commandes de débogage.

Émettez des commandes PIX en mode de configuration :

- **clear crypto isakmp sa** : efface les SA de phase 1
- **clear crypto ipsec sa** - Efface les SA de phase 2

Les commandes **debug** pour les tunnels VPN :

- **debug crypto isakmp sa**—Débogages des négociations ISAKMP SA
- **debug crypto ipsec sa** - Débogue les négociations de SA IPSec
