Introduction

Il explique comment créer un tunnel IPSec avec des clés pré-partagées afin de joindre deux réseaux privés :

- Un réseau privé dans le concentrateur Cisco VPN 3000 (192.168.1.x).
- Un réseau privé dans le pare-feu Checkpoint 4.1 (10.32.50.x).

Il est supposé que le trafic provenant de l'intérieur du concentrateur VPN et du point de contrôle vers Internet (représenté dans ce document par les réseaux 172.18.124.x) circule avant le début de cette configuration.

Conditions préalables

Exigences

Aucune exigence spécifique n'est associée à ce document.

Composants utilisés

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Concentrateur VPN 3000
- Logiciel du concentrateur VPN 3000 version 2.5.2.F
- Pare-feu Checkpoint 4.1

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Diagramme du réseau

Ce document utilise la configuration réseau suivante :

Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

Configuration du concentrateur VPN 3000

Complétez ces étapes pour configurer le concentrateur VPN 3000.

1. Sélectionnez Configuration > System > Tunneling Protocols > IPSec > IKE Proposal > Modify pour créer une proposition IKE (Internet Key Exchange) nommée des-sha avec hachage SHA (Secure Hash Algorithm), DES (Data Encryption Standard) et Diffie-Hellman Group 1. Conservez la durée de vie par défaut de 86400 secondes.

Remarque : la plage valide pour la durée de vie IKE du concentrateur VPN est de 60 à 2147483647 secondes.

2. Sélectionnez Configuration > System > Tunneling Protocols > IPSec > IKE Proposal. Sélectionnez "des-sha" et cliquez sur Activate pour activer la proposition IKE.

The screenshot shows a Microsoft Internet Explorer window with the title "Cisco Systems, Inc. VPN 3000 Concentrator Series [192.168.1.1] - Microsoft Internet Explorer". The address bar contains "http://172.18.124.35/access.html". The main content area displays the "VPN 3000 Concentrator Series Manager" interface. On the left, a navigation tree under "Configuration" includes "Interfaces", "System" (selected), "Tunneling Protocols" (expanded to show PPTP, L2TP, IPSec), "Events", and "General". Under "System", "Administration" is expanded to show "Cisco SYSTEMS". The right pane shows a help text for "IKE Proposals" and a table for managing them.

Add, delete, prioritize, and configure IKE Proposals.

Select an **Inactive Proposal** and click **Activate** to make it **Active**, or click **Modify**, **Copy** or **Delete** as appropriate.

Select an **Active Proposal** and click **Deactivate** to make it **Inactive**, or click **Move Up** or **Move Down** to change its priority.

Click **Add** or **Copy** to add a new **Inactive Proposal**. IKE Proposals are used by **Security Associations** to specify IKE parameters.

Active Proposals	Actions	Inactive Proposals
des-sha IKE-DES-MD5 IKE-3DES-MD5	<< Activate Deactivate >> Move Up	— Empty —

3. Sélectionnez Configuration > System > Tunneling Protocols > IPSec LAN-to-LAN > Add.

Configurez un tunnel IPsec appelé « to_checkpoint » avec l'adresse de point de contrôle comme homologue. Pour Clé pré-partagée, saisissez la clé réelle. Sous Authentication (Authentification), sélectionnez ESP/SHA/HMAC-160, puis DES-56 pour Encryption (Cryptage). Saisissez la proposition IKE (« des-sha » dans cet exemple), ainsi que les réseaux local et distant.

Monitoring

Cisco Systems

Configuration | System | Tunneling Protocols | IPSec LAN-to-LAN | Modify

Modify an IPSec LAN-to-LAN connection.

Name	<input type="text" value="to_checkpoint"/>	Enter the name for this LAN-to-LAN connection.
Interface	<input type="text" value="Ethernet 2 (Public) (172.18.124.36)"/>	Select the interface to put this LAN-to-LAN connection on.
Peer	<input type="text" value="172.18.124.157"/>	Enter the IP address of the remote peer for this LAN-to-LAN connection.
Digital Certificate	<input type="text" value="None (Use Preshared Keys)"/>	Select the Digital Certificate to use.
Preshared Key	<input type="text" value="ciscorules"/>	Enter the preshared key for this LAN-to-LAN connection.
Authentication	<input type="text" value="ESP/SHA/HMAC-160"/>	Specify the packet authentication mechanism to use.
Encryption	<input type="text" value="DES-56"/>	Specify the encryption mechanism to use.
IKE Proposal	<input type="text" value="des-sha"/>	Select the IKE Proposal to use for this LAN-to-LAN connection.
Network Autodiscovery	<input type="checkbox"/>	Check to automatically discover networks. Parameters below are ignored if checked.

Access Hour Policies

4. Sélectionnez Configuration > Policy Management > Traffic Management > Security Associations > Modify. Vérifiez que la fonction Perfect Forward Secrecy est désactivée et conservez la durée de vie IPsec de 28 800 secondes par défaut.

Remarque : la plage valide pour la durée de vie IPsec du concentrateur VPN est de 60 à 2147483647 secondes.

Configuration | Policy Management | Traffic Management | Security Associations | Modify

Modify a configured Security Association.

SA Name: L2L: to_checkpoint
Specify the name of this Security Association (SA).

Inheritance: From Rule
Select the granularity of this SA.

IPSec Parameters

Authentication Algorithm: ESP/SHA/HMAC-160
Select the packet authentication algorithm to use.

Encryption Algorithm: DES-56
Select the ESP encryption algorithm to use.

Encapsulation Mode: Tunnel
Select the Encapsulation Mode for this SA.

Perfect Forward Secrecy: Disabled
Select the use of Perfect Forward Secrecy.

Lifetime Measurement: Time
Select the lifetime measurement of the IPSec keys.

Data Lifetime: 10000
Specify the data lifetime in kilobytes (KB).

Time Lifetime: 28800
Specify the time lifetime in seconds.

Cisco Systems

Document: Done

5. Enregistrez la configuration.

Configuration du pare-feu Checkpoint 4.1

Complétez ces étapes pour configurer le pare-feu Checkpoint 4.1.

1. Les durées de vie par défaut d'IKE et d'IPsec étant différentes selon les fournisseurs, sélectionnez Properties > Encryption pour définir les durées de vie du point de contrôle afin qu'elles correspondent aux valeurs par défaut du concentrateur VPN.

La durée de vie IKE par défaut du concentrateur VPN est de 86400 secondes (=1 440 minutes).

La durée de vie IPsec par défaut du concentrateur VPN est de 28800 secondes.

2. Sélectionnez Manage > Network objects > New (or Edit) > Network pour configurer l'objet pour le réseau interne ("cpinside") derrière le point de contrôle. Cela devrait correspondre au « réseau distant » dans le concentrateur VPN.

3. Sélectionnez Manage > Network objects > Edit pour modifier l'objet pour le point de terminaison de passerelle ("RTPCPVPN" Checkpoint) que le concentrateur VPN a dans son paramètre Peer.

Sous Emplacement, sélectionnez Interne. Dans Type, sélectionnez Passerelle. Sous Modules installés, vérifiez VPN-1 & FireWall-1 et vérifiez Management Station.

4. Sélectionnez Manage > Network objects > New (or Edit) > Network pour configurer l'objet pour le réseau externe ("inside_cisco") derrière le concentrateur VPN. Cela devrait correspondre au réseau « local » dans le concentrateur VPN.

5. Sélectionnez Manage > Network objects > New > Workstation pour ajouter un objet pour la passerelle externe ("cisco_endpoint") VPN Concentrator. Il s'agit de l'interface « publique » du concentrateur VPN.

Sous Emplacement, sélectionnez Externe. Dans Type, sélectionnez Passerelle.

Remarque : ne cochez pas la case VPN-1/FireWall-1.

6. Sélectionnez Manage > Network objects > Edit pour modifier l'onglet VPN du point de terminaison de la passerelle Checkpoint (appelé « RTPCPVPN »). Sous Domaine, sélectionnez Autre, puis l'intérieur du réseau de point de contrôle (appelé « cpinside ») dans la liste déroulante. Sous Schémas de cryptage définis, sélectionnez IKE, puis cliquez sur Edit.

7. Modifiez les propriétés IKE du cryptage DES pour qu'elles correspondent à DES-56 et à l'algorithme de cryptage sur le concentrateur VPN.
8. Modifiez les propriétés IKE en hachage SHA1 pour qu'elles correspondent à l'algorithme SHA/HMAC-160 dans le concentrateur VPN.
 - a. Désélectionnez le mode agressif.
 - b. Cochez Pre-Shared Secret sous Authentication Method. Cela correspond au mode

d'authentification du concentrateur VPN, Clés prépartagées.

9. Cliquez sur Edit Secrets pour définir la clé pré-partagée en accord avec la clé pré-partagée réelle du concentrateur VPN.

```
isakmp key address masque réseau masque réseau
```

10. Sélectionnez Manage > Network objects > Edit pour modifier l'onglet VPN « cisco_endpoint ». Sous Domaine, sélectionnez Autre, puis sélectionnez l'intérieur du réseau Cisco (appelé « inside_cisco »). Sous Schémas de cryptage définis, sélectionnez IKE, puis cliquez sur Edit.

11. Modifiez les propriétés IKE du cryptage DES pour qu'elles correspondent à DES-56, Encryption Algorithm sur le concentrateur VPN.
12. Modifiez les propriétés IKE en hachage SHA1 pour qu'elles correspondent à l'algorithme SHA/HMAC-160 dans le concentrateur VPN.

Modifiez ces paramètres :

- a. Désélectionnez Mode agressif.
- b. Cochez Prend en charge les sous-réseaux.

- c. Cochez Pre-Shared Secret sous Authentication Method. Cela correspond au mode d'authentification du concentrateur VPN des clés pré-partagées.

13. Cliquez sur Edit Secrets pour définir la clé pré-partagée en accord avec la clé pré-partagée du concentrateur VPN réelle.

14. Dans la fenêtre Éditeur de stratégie, insérez une règle avec Source et Destination comme "inside_cisco" et "cpinside" (bidirectionnel). Définissez Service=Any, Action=Encrypt et Track=Long.

15. Sous l'en-tête Action, cliquez sur l'icône verte Encrypt et sélectionnez Edit properties pour configurer les stratégies de cryptage.

16. Sélectionnez IKE, puis cliquez sur Edit.

17. Dans la fenêtre Propriétés IKE, modifiez ces propriétés pour qu'elles correspondent aux transformations IPsec du concentrateur VPN.

Sous Transform, sélectionnez Encryption + Data Integrity (ESP). L'algorithme de chiffrement

doit être DES, l'intégrité des données doit être SHA1 et la passerelle d'homologue autorisée doit être la passerelle Cisco externe (appelée « cisco_endpoint »). Click OK.

18. Après avoir configuré le point de contrôle, sélectionnez Policy > Install dans le menu Checkpoint pour que les modifications prennent effet.

Vérifier

Aucune procédure de vérification n'est disponible pour cette configuration.

Dépannage

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration.

Récapitulation de réseau

Lorsque plusieurs réseaux internes adjacents sont configurés dans le domaine de cryptage du point de contrôle, le périphérique peut les résumer automatiquement en fonction du trafic intéressant. Si le concentrateur VPN n'est pas configuré pour correspondre, le tunnel risque d'échouer. Par exemple, si les réseaux internes 10.0.0.0 /24 et 10.0.1.0 /24 sont configurés pour être inclus dans le tunnel, ils peuvent être résumés en 10.0.0.0 /23.

Débogage du concentrateur VPN 3000

Les débogages possibles du concentrateur VPN incluent IKE, IKEDBG, IKEDECODE, IPSEC, IPSECDBG, IPSECDECODE. Ce paramètre est configuré dans Configuration > System > Events > Classes.

The screenshot shows the Cisco Systems, Inc. VPN 3000 Concentrator Series [192.168.1.1] - Netscape browser window. The URL is http://172.18.124.35/access.html. The main title is "VPN 3000 Concentrator Series Manager". The top menu bar includes File, Edit, View, Go, Communicator, Help, Back, Forward, Reload, Home, Search, Netscape, Print, Security, Stop, Bookmarks, Location, Instant Message, WebMail, Contact, People, Yellow Pages, Download, Channels, Main, Help, Support, Logout, and Logged in: admin. The sub-menu Configuration | Administration | Monitoring is also visible. On the left, a navigation tree shows: Configuration (Interfaces), System (Server, Address Management, Tunneling Protocols (PPTP, L2TP, IPsec (LAN-to-LAN, IKE Proposals)), IP Routing, Management Protocols (Events (General, FTP Backup, Classes, Trap Destinations, Syslog Servers, SMTP Servers, Email Recipients, General), User Management, Policy Management (Access Hours, Traffic Management, Network Lists). The main content area is titled "Configuration | System | Events | Classes". It contains a note: "This section lets you configure special handling of specific event classes. Click the Add button to add an event class, or select an event class and click Modify or Delete. Click here to configure general event parameters." Below this is a table:

Event Classes	Actions
IKE IKEDBG IKEDECODE IPSEC IPSECDBG IPSECDECODE	Add Modify Delete

At the bottom of the main content area, there is a link: "Click to collapse nested items".
