# Dépannage d'un appel SIP entre deux terminaux

## Contenu

## Introduction

Ce document fournit un exemple de configuration de deux télécopieurs afin d’expliquer comment un appel de protocole SIP (Session Initiation Protocol) a lieu entre deux passerelles. Ce document fournit également une explication sur la sortie de la commande debug ccsip messages pour le dépannage des échecs d’appel SIP.

## Conditions préalables

### Conditions requises

Aucune spécification déterminée n'est requise pour ce document.

### Components Used

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Deux télécopieurs
- VG224 qui exécute le logiciel Cisco IOS® Version 12.4(4)T1
- Routeur Cisco 3745 qui exécute le logiciel Cisco IOS Version 12.3(11)T8

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

### Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à Conventions relatives aux conseils techniques Cisco.

# Configuration

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

**Remarque :** Utilisez l’outil de recherche de commandes (clients inscrits seulement) pour en savoir plus sur les commandes figurant dans le présent document.

## Diagramme du réseau

Ce document utilise la configuration réseau suivante :

## Configurations

Ce document utilise les configurations suivantes :

- VG224
- Cisco 3745

| VG224 |

## Vérification

Aucune procédure de vérification n'est disponible pour cette configuration.

## Dépannage

Utilisez cette section pour dépanner votre configuration.

L'Outil Interpréteur de sortie (clients enregistrés uniquement) (OIT) prend en charge certaines commandes show. Utilisez l'OIT pour afficher une analyse de la sortie de la commande **show .**

**Remarque :** Consulter les renseignements importants sur les commandes de débogage avant d’utiliser les commandes de **débogage**.

Voici la sortie de la commande **debug ccsip messages** :

```
!--- This is the first invite message sent out !--- to the terminating SIP gateway. !--- This is
similar to a setup message in H.323 or Q.931. *Mar 1 00:33:42.419: //-
1/xxxxxxxxxxxx/SIP/Msg/ccsipDisplayMsg: Sent: INVITE sip:8000@172.16.184.83:5060 SIP/2.0 !---
8000 is the DN of the call, 172.16.184.83 is !--- the IP address of the remote gateway, and !---
5060 is the port the SIP works on. !--- This configuration uses SIP version 2.0. Via:
SIP/2.0/UDP 172.16.13.87:5060;branch=z9hG4bKB21AF !--- The VIA field is used for devices in the
patch that !--- need to be aware of the call. !--- In this case, there are no SIP devices in
between the two gateways. Remote-Party-ID:
