[Problème](#)

[Scénarios de test](#)

[Solution](#)

## Introduction

Ce document décrit un scénario lié à l'ajout et à la suppression de schémas de bulkstat dans StarOS, ainsi que des problèmes et des solutions recommandées pour ces problèmes.

## Conditions préalables

### Conditions requises

Cisco vous recommande de prendre connaissance des rubriques suivantes :

- Linux
- StarOS

Cisco vous recommande de disposer d'un accès privilégié :

- mode masqué pour exécuter l'**interpréteur de commandes debug** afin d'accéder à l'invite de commandes linux shell
- Accès SFTP (Secure File Transfer Protocol) au noeud StarOS

### Components Used

Les informations de ce document sont basées sur StarOS version 21.16.6.77063.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. Si votre réseau est en ligne, assurez-vous de bien comprendre l'incidence possible des commandes.

# Informations générales

1. Pour configurer un fichier de configuration afin de stocker les configurations associées aux statistiques de bulkstats.
2. Le format de la commande est le suivant :

```
configure  
[no] bulkstats config [ schema | supplement ] <url>  
end
```

Where:

- Le mot clé **schema** facultatif vous permet de remplacer uniquement le schéma à l'aide du fichier fourni et de conserver la configuration du serveur.
- Le mot clé **de complément** facultatif vous permet de compléter la configuration de bulkstats en cours avec le contenu du fichier de configuration fourni. Ces mots-clés ne fonctionnent que sur les fichiers existants.
- URL spécifie l'emplacement du fichier de configuration bulkstats.

## Problème

Impossible d'ajouter de nouveaux schémas/de réajouter le schéma actuel (s'il est supprimé) via l'invite de commande CLI.

## Scénarios de test

1. Ce problème est dû à l'utilisation du **schéma de configuration cli bulkstat <URL>**.
2. Il s'agit d'un résultat attendu par conception lorsqu'un **schéma** de mot clé facultatif est utilisé.
3. Le même scénario a été testé au cours des travaux pratiques. Voici les résultats :  
Scénario A. Initialement, **bulkstat config <url> cli** a été configuré.

```

[local]MME#

Scénario E. Ainsi, le résultat est chaque fois que vous utilisez le mot clé optionnel **schéma**, vous ne pouvez pas ajouter de nouveaux schémas. Vous pouvez supprimer des schémas actuels (à partir du noeud) mais ne pouvez pas les ajouter à nouveau. Cependant, les schémas actuels présents dans le fichier de configuration (qui se trouve dans l'`<url>`, ne sont pas affectés par les modifications apportées au noeud).

## Solution

1. Le **schéma de configuration** cli `bulkstat <url>` est utilisé en raison de ce problème.
2. Il s'agit d'un résultat attendu par conception, que vous obtenez si le **schéma** de mot clé facultatif est utilisé.
3. Il existe trois solutions pour ce cas :

A.Pour supprimer le **schéma de configuration** cli `bulkstat <url>` et contrôler l'ajout/suppression de schémas via l'invite de commande/cli manuelle.

B. Pour utiliser le **complément** de mot clé facultatif dans l'interface de configuration de bulkstat. Avec le **complément de configuration cli bulkstat <url>** vous pouvez ajouter les schémas présents dans le fichier de configuration aux schémas du noeud actuel. Vous pouvez ajouter/supprimer de nouveaux schémas et les schémas actuels peuvent également être supprimés/ajoutés à nouveau via l'invite de commande CLI.

C. Pour ajouter/supprimer les schémas requis directement dans le fichier de configuration, puis recharger les configurations avec le fichier de configuration (supprimez d'abord le cli par **no bulkstat config**, ajoutez les schémas dans le fichier de configuration, puis ajoutez-le à nouveau par **bulkstats config schema <url>**). Pour ajouter les schémas dans le fichier de configuration, vous pouvez soit le faire avec l'éditeur vi, soit par SFTP le fichier

Avec l'éditeur vi :

```
[local]MME-01# cli test-commands password <pswd>
Warning: Test commands enables internal testing and debugging commands
USE OF THIS MODE MAY CAUSE SIGNIFICANT SERVICE INTERRUPTION

[local]MME-01# debug shell

Effectuez un FTP du fichier de configuration de l'<url> vers votre lecteur local, modifiez-le et retournez-le à l'<url>.
