

UltraM: Ripristino della VM dopo la scadenza dei tentativi ESC

Sommario

[Introduzione](#)

[Problema](#)

[Soluzione](#)

Introduzione

In questo documento viene descritto come ripristinare una macchina virtuale (VM) di Virtualized Packet Core (VPC) in Cisco Ultra Services Platform (UltraM) dopo che la VM è stata inaccessibile per un determinato periodo di tempo e quando Cisco Elastic Services Controller (ESC) tenta di ripristinarla.

Problema

Il nodo di calcolo viene rimosso (o non accessibile) nella configurazione UltraM. Quando ESC tenta di ripristinare il nodo, ma non è in grado di farlo perché il nodo non è accessibile. Questo scenario può essere simulato quando si lasciano cavi di alimentazione da un nodo di calcolo. Un modo per simulare questo scenario è rimuovere i cavi di alimentazione dal blade UCS (Unified Computing System). Dopo che ESC non è in grado di ripristinare la VM, passa allo stato "ERROR" in OpenStack e rimane "booting".

Nell'esempio, la scheda SF 5 è su vnfd1-deployment_s6_0_e03f87f5-63b6-4053-8d0f-0c9df963162c:

Dopo aver tentato di ripristinare la macchina virtuale guasta, ESC contrassegna la macchina virtuale come istanza di errore in OpenStack e non tenta di eseguire nuovamente il ripristino.

Di seguito sono riportati i log di ESC in cui il ripristino della VM non riesce:

Soluzione

1. Accendere il computer con il pulsante di accensione e attendere l'accensione dell'hypervisor:

```
[root@ultram-ospd ~]# su - stack
```

```
[stack@ultram-ospd ~]$ source stackrc
```

```
[stack@ultram-ospd ~]$ nova hypervisor-list
```

```

```

```

```
| 33 | ultram-rcdnlab-compute-0.localdomain | up | enabled |
```

```
+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
```

2. Identificare l'ID istanza nell'elenco Nova:

```
[root@ultram-ospd ~]# su - stack
```

```
[stack@ultram-ospd ~]$ source corerc
```

```
[stack@ultram-ospd ~]$ nova list | grep ERROR
```

```

```

3. Avviare il ripristino manuale su ESC con la CLI e l'ID istanza del passaggio precedente:

```
[admin@ultram-vnfm1-esc-0 ~]$ cd /opt/cisco/esc/esc-confd/esc-cli
```

```
[admin@ultram-vnfm1-esc-0 esc-cli]$ ./esc_nc_cli recovery-vm-action DO vnfd1-deployment_s6_0_e03f87f5-63b6-4053-8d0f-0c9df963162c
```

Recovery VM Action

```
/opt/cisco/esc/confd/bin/netconf-console --port=830 --host=127.0.0.1 --user=admin --privKeyFile=/home/admin/.ssh/confd_id_dsa --privKeyType=dsa --rpc=/tmp/esc_nc_cli.hZsdLQ2M1e
```

```
<?xml version="1.0" encoding="UTF-8"?>

```
<rpc-reply xmlns="urn:ietf:params:xml:ns:netconf:base:1.0" message-id="1">
```

```
<ok/>
```

```
</rpc-reply>
```

4. Controllare i log, OpenStack Horizon per confermare che l'istanza è stata recuperata:

```
[admin@ultram-vnfm1-esc-0 ~]$ tail -f /var/log/esc/yangesc.log
```

```
