Denial of Service (DoS) Vulnerability in Cisco Unified Communications Manager

Cisco Unified Communications Manager ID : cisco-sa-

20070711-cucm

Published : 2007-07-11 16:00

Version : 1.0 : Final

CVSS Score : [10.0](#)

Workarounds : No Workarounds available

Cisco ID :

[CVE-2006-](#)

[5278](#)

[CVE-2006-](#)

[5277](#)

Denial of Service (DoS) vulnerability in Cisco Unified Communications Manager (CUCM) versions 3.0(1) through 6.0(2) allows an attacker to cause a denial of service by sending a specially crafted SIP message to the CUCM. The vulnerability is caused by a buffer overflow in the SIP message processing code. The attack can be performed remotely and does not require authentication. The severity of this vulnerability is Critical (CVSS 10.0).

Summary

Cisco Unified Communications Manager (CUCM) versions 3.0(1) through 6.0(2) are affected by a Denial of Service (DoS) vulnerability. The vulnerability is caused by a buffer overflow in the SIP message processing code. The attack can be performed remotely and does not require authentication. The severity of this vulnerability is Critical (CVSS 10.0).

The vulnerability is caused by a buffer overflow in the SIP message processing code. The attack can be performed remotely and does not require authentication. The severity of this vulnerability is Critical (CVSS 10.0).

The attack can be performed remotely and does not require authentication. The severity of this vulnerability is Critical (CVSS 10.0).

The severity of this vulnerability is Critical (CVSS 10.0).
