

Cisco Telepresence Video Communication

Server (VCS) 8.5.1 Patch 1 - Denial of Service (DoS) Vulnerability

Cisco-SA-20150527-CVE-2015-0752

[CVE-2015-0752](#)

Published: 2015-05-27 15:59

Product: Cisco Telepresence Video Communication Server (VCS) 8.5.1

CVSS Score: 4.3

Workarounds: No Workarounds available

Cisco Bug ID: [CSCut27635](#)

Denial of Service (DoS) vulnerability in Cisco Telepresence Video Communication Server (VCS) 8.5.1 Patch 1. An attacker can cause a denial of service by sending a specially crafted SIP message to the VCS. The vulnerability is caused by a buffer overflow in the SIP message processing code.

Impact

TelePresence Video Communication

Server (VCS) 8.5.1 Patch 1 is affected by a Denial of Service (DoS) vulnerability. An attacker can cause a denial of service by sending a specially crafted SIP message to the VCS. The vulnerability is caused by a buffer overflow in the SIP message processing code.

The vulnerability is caused by a buffer overflow in the SIP message processing code. An attacker can cause a denial of service by sending a specially crafted SIP message to the VCS. The vulnerability is caused by a buffer overflow in the SIP message processing code.

The vulnerability is caused by a buffer overflow in the SIP message processing code. An attacker can cause a denial of service by sending a specially crafted SIP message to the VCS. The vulnerability is caused by a buffer overflow in the SIP message processing code.

The vulnerability is caused by a buffer overflow in the SIP message processing code. An attacker can cause a denial of service by sending a specially crafted SIP message to the VCS. The vulnerability is caused by a buffer overflow in the SIP message processing code.

Exploitation

The vulnerability is caused by a buffer overflow in the SIP message processing code. An attacker can cause a denial of service by sending a specially crafted SIP message to the VCS. The vulnerability is caused by a buffer overflow in the SIP message processing code.

[CSCut27635](#) is the Cisco Bug ID for this vulnerability. An attacker can cause a denial of service by sending a specially crafted SIP message to the VCS. The vulnerability is caused by a buffer overflow in the SIP message processing code.

The vulnerability is caused by a buffer overflow in the SIP message processing code. An attacker can cause a denial of service by sending a specially crafted SIP message to the VCS. The vulnerability is caused by a buffer overflow in the SIP message processing code.

Workarounds

There are no workarounds available for this vulnerability. An attacker can cause a denial of service by sending a specially crafted SIP message to the VCS. The vulnerability is caused by a buffer overflow in the SIP message processing code.

The vulnerability is caused by a buffer overflow in the SIP message processing code. An attacker can cause a denial of service by sending a specially crafted SIP message to the VCS. The vulnerability is caused by a buffer overflow in the SIP message processing code.
