High Severity CVE-2019-1855: Cisco Jabber for Windows DLL

Summary

Cisco Jabber for Windows DLL is a vulnerable component that allows an attacker to execute arbitrary code with system privileges. The vulnerability is located in the DLL file and is triggered by a specific sequence of events.

The vulnerability is a result of a buffer overflow in the DLL file, which can be exploited by sending a specially crafted request to the application.

The attack can be performed remotely and does not require any special access or permissions.

The vulnerability is rated as High severity due to the potential for remote code execution and system compromise.

CVSS Score: 7.3 (High)

Workarounds: No workarounds are currently available. Users are advised to update to the latest version of Cisco Jabber for Windows.
