Authentication Bypass on Cisco Business Wireless Access Points (AP) (CVE-2023-20003)

Summary

Cisco Business Wireless Access

Points (AP) are affected by a vulnerability that allows an attacker to bypass authentication and gain access to the network.

The vulnerability is located in the authentication process of the APs and affects all models of Business Wireless Access Points (AP) running software version 140AC and later.

The vulnerability is caused by a buffer overflow in the authentication process, which allows an attacker to bypass authentication and gain access to the network.

For more information, please refer to the [Cisco Security Advisory](https://sec.cloudapps.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-cbw-auth-bypass-ggnAfdZ).

Impact

Authentication Bypass on Cisco Business Wireless

Access Points (AP) (CVE-2023-20003)

The vulnerability allows an attacker to bypass authentication and gain access to the network.
