

Cisco Unified Communications Manager IM & Presence Service Denial of Service Vulnerability

Cisco Security ID : [cisco-sa-cucm-imp-dos-49GL7rzT](#)

[CVE-2023-20108](#)

Published : 2023-06-07 16:00

Version : 1.0 : Final

CVSS Score : [7.5](#)

Workarounds : No workarounds available

Cisco Security ID : [CSCvy16642](#)

Summary: A Denial of Service (DoS) vulnerability exists in Cisco Unified Communications Manager (UCM) IM & Presence service. An attacker can exploit this vulnerability to cause a denial of service by sending a specially crafted SIP message to the UCM server. The vulnerability is caused by a buffer overflow in the SIP message processing logic. The severity of this vulnerability is High (CVSS 7.5). No workarounds are available at this time.

Details

Cisco Unified Communications Manager (UCM) IM & Presence service (Unified CM

IM&P) is vulnerable to a Denial of Service (DoS) attack. The vulnerability is caused by a buffer overflow in the SIP message processing logic. The severity of this vulnerability is High (CVSS 7.5).

Unified CM IM&P is vulnerable to a Denial of Service (DoS) attack. The vulnerability is caused by a buffer overflow in the SIP message processing logic. The severity of this vulnerability is High (CVSS 7.5).

Unified CM IM&P is vulnerable to a Denial of Service (DoS) attack. The vulnerability is caused by a buffer overflow in the SIP message processing logic. The severity of this vulnerability is High (CVSS 7.5).

Unified CM IM&P is vulnerable to a Denial of Service (DoS) attack. The vulnerability is caused by a buffer overflow in the SIP message processing logic. The severity of this vulnerability is High (CVSS 7.5).

Unified CM IM&P is vulnerable to a Denial of Service (DoS) attack. The vulnerability is caused by a buffer overflow in the SIP message processing logic. The severity of this vulnerability is High (CVSS 7.5).

Unified CM IM&P is vulnerable to a Denial of Service (DoS) attack. The vulnerability is caused by a buffer overflow in the SIP message processing logic. The severity of this vulnerability is High (CVSS 7.5).
