[Gerelateerde informatie](#)

[Inleiding](#)

Dit document bevat instructies hoe u RADIUS-verificatie kunt configureren via de Cache Engine aan Cisco Secure Access Control Server (ACS) voor Microsoft Windows NT. Web Cache Communication Protocol, versie 2 (WCCPv2), moet u deze procedure correct uitvoeren.

Raadpleeg [de modus Web Cache Communication Protocol, versie 2, op een Cisco Cache Engine en router](#) voor meer informatie over WCCP, versie 2.

[Voorwaarden](#)

[Vereisten](#)

Zorg er voordat u deze configuratie probeert voor dat u aan deze vereisten voldoet:

- Bekendheid met Cisco Secure ACS voor Windows of UNIX.
- Bekendheid met de configuratie van WCCPv2 op zowel router als cache Engine.

[Gebruikte componenten](#)

De informatie in dit document is gebaseerd op de volgende software- en hardware-versies:

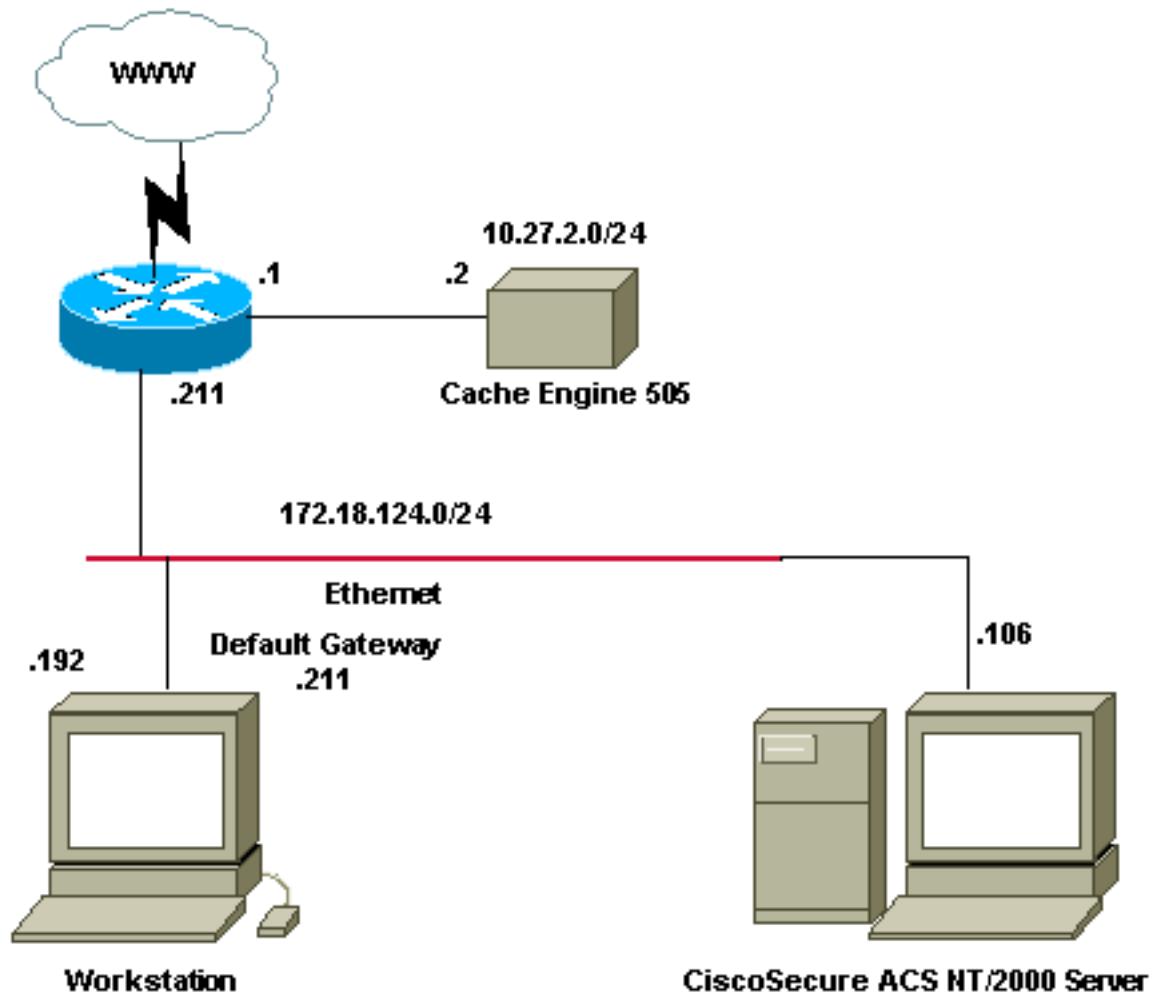

- Cisco Cache Engine 505 in een labomgeving met geklaarde configuraties
- Cisco 2600 router
- Cisco Cache Engine-softwarerelease 2.3.1
- Cisco IOS®-softwarerelease 12.1(3)T3

- Cisco Secure ACS voor Microsoft Windows NT/2000-servers

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u de potentiële impact van elke opdracht begrijpen.

Netwerkdiagram

Het netwerk in dit document is als volgt opgebouwd:

Conventies

Raadpleeg [Cisco Technical Tips Conventions](#) (Conventies voor technische tips van Cisco) voor meer informatie over documentconventies.

RADIUS-verificatie instellen via de cache Engine-procedure

Gebruik deze stappen om de Cache Engine voor RADIUS-verificatie te configureren:

1. Configureer de Cache Engine als de netwerktoegangsserver (NAS) in Cisco Secure ACS voor Windows NT.
2. Configureer de gebruikersinformatie in Cisco Secure ACS voor Windows NT.
3. Configureer de cache Engine voor RADIUS en specificeer de host en de belangrijke

informatie.

```
radius-server host 172.18.124.106
radius-server key cisco123
```

4. Configureer de router voor WCCP.Uw opdrachtregels voor de Cache Engine moeten hier ongeveer op lijken:

```
cipro#configure terminal
!---- Enter configuration commands, one per line. !---- End with CNTL/Z.
cipro(config)#radius-server host 172.18.124.106
cipro(config)#radius-server key cisco123
cipro#
```

Dit is de Cache Engine/NAS-configuratie op Cisco Secure ACS voor Windows NT:

The screenshot shows the 'Cisco Secure ACS for Windows 2000/NT - Microsoft Internet Explorer' window. The title bar says 'Cisco Secure ACS for Windows 2000/NT - Microsoft Internet Explorer'. The address bar shows 'http://172.18.106.252:5555/index2.htm'. The main content is titled 'Network Configuration' with a sub-section 'Access Server Setup For cipro'. On the left, there's a sidebar with icons for User Setup, Group Setup, Network Configuration, System Configuration, Interface Configuration, Administration Control, External User Database, Report and Activity, and Online Documentation. The main form has fields for 'Network Access Server IP Address' (10.27.22) and 'Key' (cisco123). Under 'Authenticate Using', it says 'RADIUS (Cisco IOS/PIX)'. Below these are three checkboxes: 'Single Connect TACACS+ NAS (Record stop in accounting on failure)', 'Log Update/Watchdog Packets from this Access Server', and 'Log Radius Tunneling Packets from this Access Server'. At the bottom are 'Submit', 'Submit + Restart', 'Delete', and 'Cancel' buttons, along with a 'Help' button. To the right, a 'Help' panel lists links: Network Access Server IP Address, Key, Network Device Group, Authenticate Using, Single Connect TACACS+ NAS, Log Update/Watchdog Packets from this Access Server, Deleting an Access Server, Renaming an Access Server, and Log RADIUS Tunnelling Packets from this Access Server. Below this is a section for 'Network Access Server IP Address' with a description and a 'Back to Top' link. Another 'Key' section follows with a description. The bottom of the screen shows the Windows taskbar with icons for Start, Internet, and other applications.

Password Authentication:

- CiscoSecure Database
- CiscoSecure PAP (Also used for CHAP/MS-CHAP/ARAP, if the Separate field is not checked.)

Password: [REDACTED]
Confirm Password: [REDACTED]

Separate (CHAP/MS-CHAP/ARAP)

Password: [REDACTED]
Confirm Password: [REDACTED]

When using a Token Card server for authentication, supplying a separate CHAP password for a token card user allows CHAP authentication. This is especially useful when token caching is enabled.

Verifiëren

Deze sectie verschaft informatie die u kunt gebruiken om te bevestigen dat uw configuratie correct werkt.

Bepaalde opdrachten met **show** worden ondersteund door de tool [Output Interpreter](#) (alleen voor geregistreerde klanten). Hiermee kunt u een analyse van de output van opdrachten met **show** genereren.

Cache Engine opdrachten:

- **Laat versie zien**—Hier wordt de softwareversie weergegeven die op de Cache Engine wordt uitgevoerd.
- **Laat hardware zien** - Hier wordt zowel de softwareversie als het hardwaretype op de Cache Engine weergegeven.
- **Laat in werking stellen**-configuratie-Toont de eigenlijke actieve configuratie op de Cache Engine zien.
- **toon statistiek van gebruik van statistiek http://displays.**
- **Straalbegin tonen [alle | primair | secondaire]**—Beeldverificatiestatistieken voor de primaire en secundaire RADIUS-servers.

Dit is voorbeeldopdrachtnoutput van de opdracht **show versie**:

```
cepro#show version
Cisco Cache Engine
Copyright (c) 1986-2001 by Cisco Systems, Inc.
Software Release: CE ver 2.31 (Build: FCS 02/16/01)
Compiled: 11:20:14 Feb 22 2001 by bbalagot
Image text-base 0x108000, data_base 0x437534
```

System restarted by Reload
The system has been up for 3 hours, 52 minutes, 33 seconds.
System booted from "flash"

Dit is voorbeeldopdrachtoutput van de opdracht **tonen hardware**:

```
cepro#show hardware
Cisco Cache Engine

Problemen oplossen

Deze sectie bevat informatie waarmee u problemen met de configuratie kunt oplossen.

Opdrachten voor troubleshooting

Bepaalde opdrachten met **show** worden ondersteund door de tool [Output Interpreter](#) (alleen voor geregistreerde klanten). Hiermee kunt u een analyse van de output van opdrachten met **show** genereren.

Opmerking: Voordat u **debug**-opdrachten afgeeft, raadpleegt u [Belangrijke informatie over debug-opdrachten](#).

Cache Engine opdrachten:

- **debug van verificatie allemaal** — Debugs de authenticatie.
- **debug straal alle**-displays Web interface RADIUS-module debug.
- **type var/log/translog/working.log** - verifieert dat URL's gecached zijn en dat de gebruiker tot de pagina's toegang heeft. Alle andere typen berichten moeten worden doorverwezen naar [Cisco Technical Support](#) voor meer informatie. Het meest voorkomende type foutmeldingen in dit logbestand is authenticatie mislukt vanwege onbekende gebruiker of de onjuiste servertoets.

Dit is voorbeeldopdracht uitvoer van de **debug straal all** en **debug authenticatie alle** opdrachten:
